About the Authors

We dedicate this work to our students both present and past, who always inspire us to “push the envelope.”

Elaine N. Marieb

For Elaine N. Marieb, taking the student’s perspective into account has always been an integral part of her teaching style. Dr. Marieb began her teaching career at Springfield College, where she taught anatomy and physiology to physical education majors. She then joined the faculty of the Biological Science Division of Holyoke Community College in 1969 after receiving her Ph.D. in zoology from the University of Massachusetts at Amherst. While teaching at Holyoke Community College, where many of her students were pursuing nursing degrees, she developed a desire to better understand the relationship between the scientific study of the human body and the clinical aspects of the nursing practice. To that end, while continuing to teach full time, Dr. Marieb pursued her nursing education, which culminated in a Master of Science degree with a clinical specialization in gerontology from the University of Massachusetts. It is this experience that has informed the development of the unique perspective and accessibility for which her publications are known.

Dr. Marieb has partnered with Benjamin Cummings for over 30 years. Her first work was *Human Anatomy & Physiology Laboratory Manual (Cat Version)*, which came out in 1981. In the years since, several other lab manual versions and study guides, as well as the softcover *Essentials of Human Anatomy & Physiology* textbook, have hit the campus bookstores. This textbook, now in its 9th edition, made its appearance in 1989 and is the latest expression of her commitment to the needs of students studying human anatomy and physiology.

Dr. Marieb has given generously to provide opportunities for students to further their education. She contributes to the New Directions, New Careers Program at Holyoke Community College by funding a staffed drop-in center and by providing several full-tuition scholarships each year for women who

are returning to college after a hiatus or attending college for the first time and who would be unable to continue their studies without financial support. She funds the E. N. Marieb Science Research Awards at Mount Holyoke College, which promotes research by undergraduate science majors, and has underwritten renovation and updating of one of the biology labs in Clapp Laboratory at that college. Dr. Marieb also contributes to the University of Massachusetts at Amherst where she generously provided funding for reconstruction and instrumentation of a cutting-edge cytology research laboratory. Recognizing the severe national shortage of nursing faculty, she underwrites the Nursing Scholars of the Future Grant Program at the university.

In 1994, Dr. Marieb received the Benefactor Award from the National Council for Resource Development, American Association of Community Colleges, which recognizes her ongoing sponsorship of student scholarships, faculty teaching awards, and other academic contributions to Holyoke Community College. In May 2000, the science building at Holyoke Community College was named in her honor.

Dr. Marieb is an active member of the Human Anatomy and Physiology Society (HAPS) and the American Association for the Advancement of Science (AAAS). Additionally, while actively engaged as an author, Dr. Marieb serves as a consultant for the Benjamin Cummings *Interactive Physiology*® CD-ROM series.

When not involved in academic pursuits, Dr. Marieb is a world traveler and has vowed to visit every country on this planet. Shorter term, she serves on the scholarship committee of the Women’s Resources Center and on the board of directors of several charitable institutions in Sarasota County. She is an enthusiastic supporter of the local arts and enjoys a competitive match of doubles tennis.

Katja Hoehn

Dr. Katja Hoehn is an associate professor in the Department of Chemical and Biological Sciences at Mount Royal University in Calgary, Canada. Dr. Hoehn's first love is teaching. Her teaching excellence has been recognized by several awards during her 17 years at Mount Royal University. These include a PanCanadian Educational Technology Faculty Award (1999), a Teaching Excellence Award from the Students' Association of Mount Royal (2001), and the Mount Royal Distinguished Faculty Teaching Award (2004).

Dr. Hoehn received her M.D. (with Distinction) from the University of Saskatchewan, and her Ph.D. in Pharmacology from Dalhousie University. In 1991, the Dalhousie Medical Research Foundation presented her with the Max Forman (Jr.) Prize for excellence in medical research. During her Ph.D. and postdoctoral studies, she also pursued her passion for teaching by presenting guest lectures to first- and

second-year medical students at Dalhousie University and at the University of Calgary.

Dr. Hoehn has been a contributor to several books and has written numerous research papers in Neuroscience and Pharmacology. She oversaw a recent revision of the Benjamin Cummings *Interactive Physiology*® CD-ROM series modules, and coauthored the newest module, *The Immune System*.

Following Dr. Marieb's example, Dr. Hoehn provides financial support for students in the form of a scholarship that she established in 2006 for nursing students at Mount Royal University.

Dr. Hoehn is also actively involved in the Human Anatomy and Physiology Society (HAPS) and is a member of the American Association of Anatomists. When not teaching, she likes to spend time outdoors with her husband and two sons, compete in triathlons, and play Irish flute.

Introduce yourself to the chapter

Improved readability and navigability makes the text more accessible and easier to study.

14

The Autonomic Nervous System

Chapter Outlines

Chapter outlines provide a preview of the chapter and help you locate information easily.

Learning Objectives

Learning objectives are integrated into the chapter and give you a preview of what content is to come and what you are expected to learn.

Bulleted Narrative

The narrative has been bulleted wherever possible to make the text easier to read and navigate.

Check Your Understanding

Concept check questions are tied to the sections' Learning Objectives and ask you to stop, think, and check your understanding before moving on.

- **Overview** (pp. 524–527)
Comparison of the Somatic and Autonomic Nervous Systems (pp. 525–526)
ANS Divisions (pp. 526–527)
- **ANS Anatomy** (pp. 527–533)

ANS Anatomy

- ✓ For the parasympathetic and sympathetic divisions, describe the site of CNS origin, locations of ganglia, and general fiber pathways.

Anatomically, the sympathetic and parasympathetic divisions differ in

- **Sites of origin.** Parasympathetic fibers are craniosacral—they originate in the brain (cranium) and sacral spinal cord. Sympathetic fibers are thoracolumbar—they originate in the thoracic and lumbar regions of the spinal cord.
- **Relative lengths of their fibers.** The parasympathetic division has long preganglionic and short postganglionic fibers. The sympathetic division has the opposite condition—the preganglionic fibers are short and the postganglionic fibers are long.

Check Your Understanding

1. Name the three types of effectors of the autonomic nervous system.
2. Which relays instructions from the CNS to muscles more quickly, the somatic nervous system or the ANS? Explain why.
3. Which branch of the ANS would predominate if you were lying on the beach enjoying the sun and the sound of the waves? Which branch would predominate if you were on a surfboard and a shark appeared within a few feet of you?

For answers, see Appendix H.

The human body is exquisitely sensitive to changes in its internal environment, and engages in a lifelong struggle to balance competing demands for resources under ever-changing conditions. Although all body systems contribute, the stability of our internal environment depends largely on the **autonomic nervous system (ANS)**, the system of motor neurons that innervates smooth and cardiac muscle and glands (Figure 14.1).

At every moment, signals stream from visceral organs into the CNS, and autonomic nerves make adjustments as necessary to ensure optimal support for body activities. In response to changing conditions, the ANS shunts blood to “needy” areas, speeds or slows heart rate, adjusts blood pressure and body temperature, and increases or decreases stomach secretions.

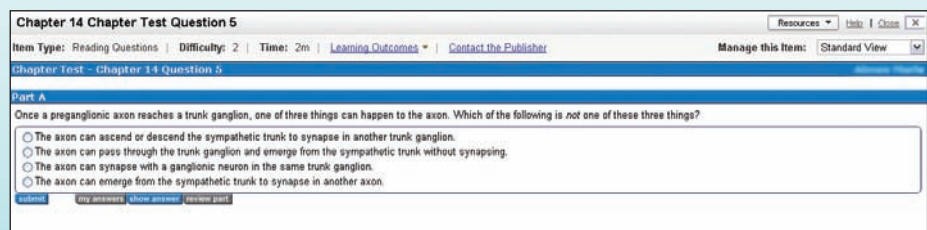

Most of this fine-tuning occurs without our awareness or attention. Can you tell when your arteries are constricting or your pupils are dilating? Probably not—but if you’ve ever been stuck in a checkout line, and your full bladder was contracting as if it had a mind of its own, you’ve been very aware of visceral activity. The ANS controls all these functions, both those we’re aware of and those we’re not. Indeed, as the term *autonomic* (*auto* = self, *nom* = govern) implies, this motor subdivision of the peripheral nervous system has a certain amount of functional independence. The ANS is also called the **involuntary nervous system**, which reflects its subconscious control, or the **general visceral motor system**, which indicates the location of most of its effectors.

Overview

- ✓ Define autonomic nervous system and explain its relationship to the peripheral nervous system.
- ✓ Compare the somatic and autonomic nervous systems relative to effectors, efferent pathways, and neurotransmitters released.
- ✓ Compare and contrast the functions of the parasympathetic and sympathetic divisions.

MasteringA&P®

Reading Questions keep you on track.

Follow complex processes step by step

Focus Figures help you grasp tough topics in A&P by walking you through carefully developed step-by-step illustrations that use a big-picture layout and dramatic art to provide a context for understanding the process.

FOCUS Bulk Flow Across Capillary Walls

Overview

Each Overview quickly summarizes the key idea of the figure.

Big Picture Orientation

The big picture provides you with a concrete starting point for the process.

Blue Text

This text acts as the teacher's voice and explains difficult concepts. In some figures the text is broken into numbered steps to help you more easily understand difficult processes.

Figure 19.17 Bulk fluid flow across capillary walls causes continuous mixing of fluid between the plasma and the interstitial fluid compartments, and maintains the interstitial environment.

The big picture
Fluid filters from capillaries at their arteriolar end and flows through the interstitial space. Most is reabsorbed at the venous end.

For all capillary beds, 20 L of fluid is filtered out per day—almost 7 times the total plasma volume!

17 L of fluid per day is reabsorbed into the capillaries at the venous end.

About 3 L per day of fluid (and any leaked proteins) are removed by the lymphatic system (see Chapter 20).

Net filtration pressure (NFP) determines the direction of fluid movement. Two kinds of pressure drive fluid flow:

Hydrostatic pressure (HP)

- Due to fluid pressing against a boundary
- HP "pushes" fluid across the boundary
- In blood vessels, is due to blood pressure

Osmotic pressure (OP)

- Due to nondiffusible solutes that cannot cross the boundary
- OP "pulls" fluid across the boundary
- In blood vessels, is due to plasma proteins

Focus Figure Tutorials

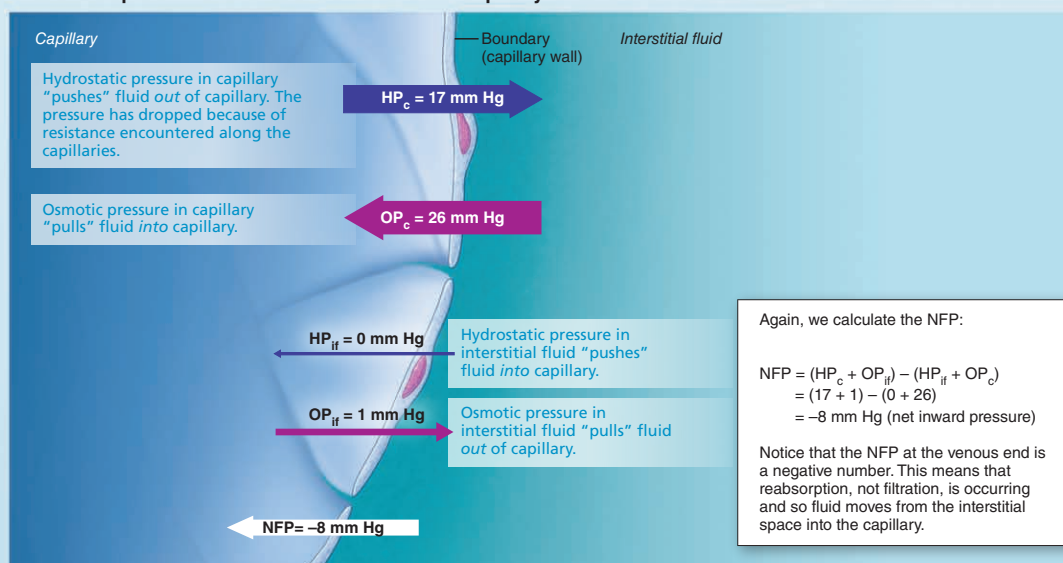

All Focus Figures have related tutorials in MasteringA&P that your teacher can assign and that will guide you through the figures step by step.

How do the pressures drive fluid flow across a capillary?

Net filtration occurs at the arteriolar end of a capillary.

Net reabsorption occurs at the venous end of a capillary.

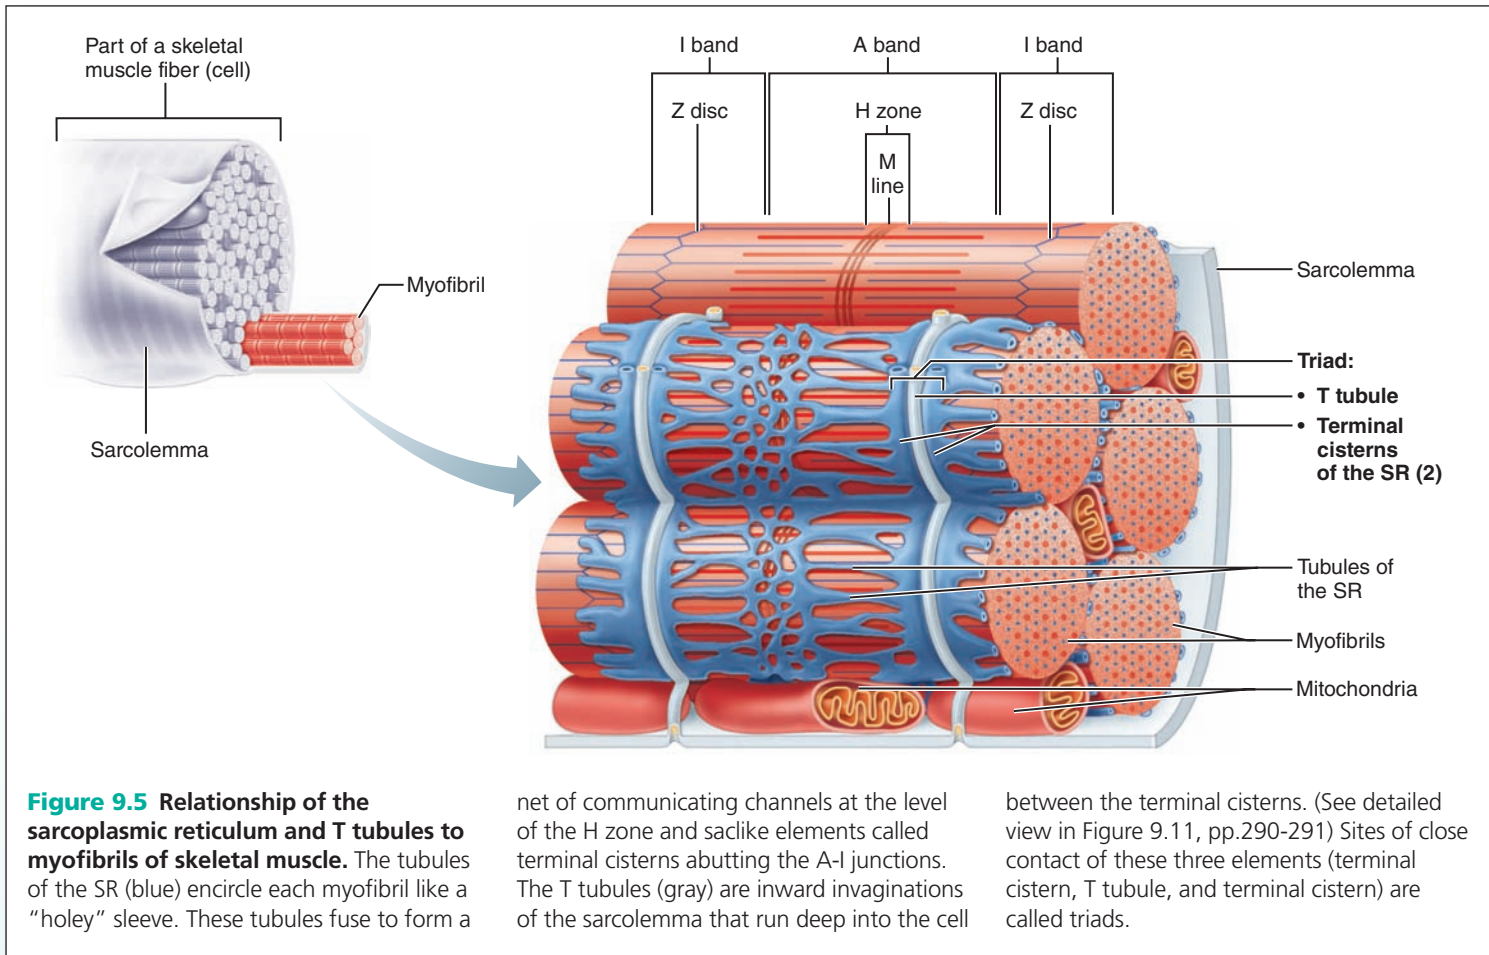

Study figures as you read the text

Select pieces of art provide more visual content and often have step-by-step text that helps you better understand structure, functions, and processes.

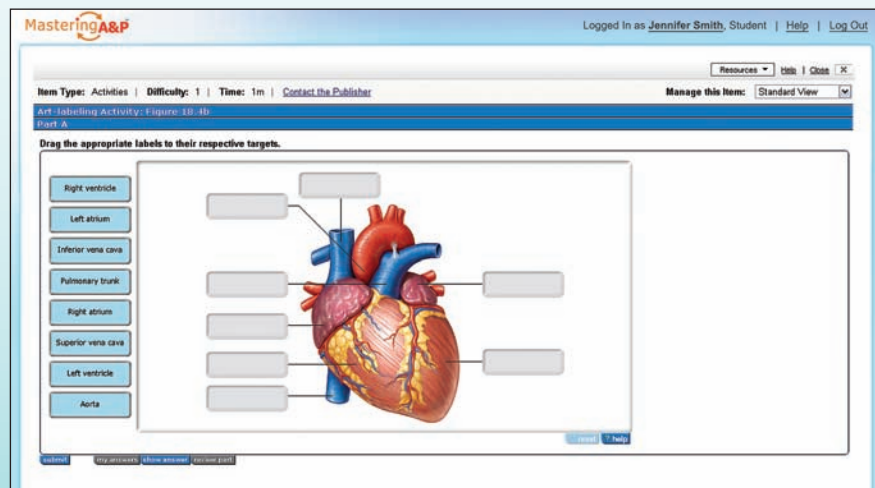

▼ 3-D anatomy art

Stunning 3-D anatomy art is rendered in a dramatically more dynamic, realistic style that uses vibrant, saturated colors to help you visualize key anatomical structures.

MasteringA&P®

NEW! Art Labeling and Ranking/Sorting Questions are drag and drop activities that allow you to assess your knowledge of terms and structures as well as the order of steps and elements involved in physiological processes.

Prepare for your future career

Clinical coverage and case studies have been expanded throughout.

Homeostatic Imbalance 6.1

Minute changes from the homeostatic range for blood calcium can lead to severe neuromuscular problems ranging from hyperexcitability (when blood Ca^{2+} levels are too low) to nonresponsiveness and inability to function (with high blood Ca^{2+} levels). In addition, sustained high blood levels of Ca^{2+} , a condition known as *hypercalcemia* (hi'per-kal-se'me-ah), can lead to undesirable deposits of calcium salts in the blood vessels, kidneys, and other soft organs, which may hamper their function. +

Homeostatic Imbalance

Homeostatic Imbalance sections are integrated within the text and alert you to the consequences of body systems not functioning optimally. These pathological conditions are integrated with the text to clarify and illuminate normal functioning.

MasteringA&P

NEW! Homeostatic Imbalance Clinical Questions can be assigned to you by your teacher on MasteringA&P. They help strengthen your understanding of how the body works to stay in balance and what happens when it falls out of balance.

The screenshot shows the MasteringA&P interface for a question titled "Homeostatic Imbalance Question 1". The question text reads: "During rigor mortis, cross bridge formation between myosin heads and actin molecules is caused by the elevation of calcium ion concentration in the cytosol. During rigor mortis, this elevation of calcium ion concentration in the cytosol is permanent because:". Below the text are four multiple-choice options: "mitochondria stop producing ATP molecules required by the SR's calcium ion pumps", "troponin molecules bind irreversibly to calcium ions to prevent them from being removed from the cytosol", "tropomyosin molecules bind irreversibly to calcium ions to prevent them from being removed from the cytosol", and "acetylcholine continues to stimulate the release of calcium ions from the SR". The interface includes navigation buttons like "Continue" and "See Score and Provide Feedback".

AT THE CLINIC

Case Study Muscular System

Let's continue our tale of Mrs. DeStephano's medical problems, this time looking at the notes made detailing observations of her skeletal musculature.

- Severe lacerations of the muscles of the right leg and knee
- Damage to the blood vessels serving the right leg and knee
- Transection of the sciatic nerve (the large nerve serving most of the lower limb), just above the right knee

Her physician orders daily passive range-of-motion (ROM) exercise and electrical stimulation for her right leg and a diet high in protein, carbohydrates, and vitamin C.

- Describe the step-by-step process of wound healing that will occur in her fleshy (muscle) wounds, and note the consequences of the specific restorative process that occurs.
- What complications in healing can be anticipated owing to vascular (blood vessel) damage in the right leg?
- What complications in muscle structure and function result from transection of the sciatic nerve? Why are passive ROM and electrical stimulation of her right leg muscles ordered?
- Explain the reasoning behind the dietary recommendations.

(Answers in Appendix H)

NEW! At the Clinic

End-of-chapter sections now contain an At the Clinic feature, which help you apply what you've learned. By learning related clinical terms and reading short Case Studies and answering questions, you will begin to prepare for your future career.

MasteringA&P

NEW! Case Study Coaching Activities increase your problem-solving skills and prepare you for your future career.

The screenshot shows the MasteringA&P interface for a case study titled "Case Study Prototype: Dangerously Thin". The text describes a 68-year-old man, Henry Shika, who is in excellent health and enjoying his first year of retirement. Upon returning from his dream trip to the Great Barrier Reef in Australia, he noticed that his left leg was swelling just below the knee. He already had scheduled an appointment for a complete physical, so he knew that in a few days he would be able to have his physician have a look at the leg. Dr. Stockland had been the Shika family doctor for more than 40 years. Knowing that Henry had played for six years in football, Dr. Stockland opened with a question that Henry initially found to be a bit out of the ordinary: "Any chance this swelling showed up after a long flight?" "No matter of fact it did," Henry replied. "My dad tells me that you may have a clot in that leg, but we'll have to have a look at it before we'll know for sure." Dr. Stockland knew that Henry's family had a history of clotting disorders, and he had recently treated Henry's brother for a Deep Vein Thrombosis (DVT), a disorder that gets its name from the blood clots that form in a vein deep within the leg. A DVT was confirmed by the Doppler ultrasonography results (a test that uses sound to create images of blood flow) of concern for the DVT. Dr. Stockland then asked Henry a question: "How many amino acids will be coded for by this section of the gene?" The question is followed by a list of options: 24, 48, 96, and 192. The interface includes navigation buttons like "Continue" and "See Score and Provide Feedback".

Practice what you don't understand with MasteringA&P®

MasteringA&P includes a Study Area that has many tools to help you succeed, including:

Only a few kinds of cells have **class II MHC** proteins. These are the **antigen-presenting cells**: dendritic cells, macrophages, and B cells. These cells communicate with **CD4 cells**, which are destined to become, or have already become, **helper T cells**. The antigens that are presented on class II MHC proteins are **exogenous antigens**—they originate from outside the cell.

Let's follow an exogenous antigen on its way to being displayed on a class II MHC protein.

Click the dendritic cell to begin this process.

◀ Interactive Physiology® iP 10-System Suite

IP helps you understand the hardest part of A&P: physiology. Fun, interactive tutorials, games, and quizzes give you additional explanations to help you grasp difficult concepts.

Modules:

- Muscular System
- Nervous System I
- Nervous System II
- Cardiovascular System
- Respiratory System
- Urinary System
- Fluids & Electrolytes
- Endocrine System
- Digestive System
- Immune System

◀ A&P Flix

A&P Flix™ are 3-D movie-quality animations with self-paced tutorials and gradable quizzes that help you master the toughest topics in A&P:

Cell Physiology

- Membrane Transport
- DNA Replication
- Mitosis
- Protein Synthesis

Muscle Physiology

- Events at the Neuromuscular Junction
- Excitation-Contraction Coupling
- Cross-Bridge Cycle

Neurophysiology

- Resting Membrane Potential
- Generation of an Action Potential
- Propagation of an Action Potential

Origins, Insertions, Actions, Innervations

- 63 animations on this topic

Group Muscle Actions & Joints

- 54 animations on this topic

◀ PAL | practice anatomy lab

Practice Anatomy Lab™ (PAL™) 3.0 is a virtual anatomy study and practice tool that gives you 24/7 access to the most widely used lab specimens, including the human cadaver, anatomical models, histology, cat, and fetal pig. PAL 3.0 retains all of the key advantages of version 2.0, including ease of use, built-in audio pronunciations, rotatable bones, and simulated fill-in-the-blank lab practical exams.

Annotation Function

Allows you to take notes.

Google®-based search function.

Allows you to search for specific terms.

Highlight Function

Lets you highlight what you want to remember.

Zoom

Lets you zoom in and out for better viewing.

Pearson eText ▶

Pearson eText gives you access to the text whenever and wherever you can access the Internet. The eText pages look exactly like the printed text, plus you get powerful interactive and customization features.

The screenshot shows the Pearson eText interface for 'UNIT 1 Organization of the Body'. It features a search bar at the top, a table of contents on the left, and several anatomical diagrams. Diagram 1.10 shows the dorsal and ventral body cavities, and Diagram 1.11 shows the four abdominopelvic quadrants. Diagram 1.12 illustrates serous membrane relationships. The text explains the organization of the body cavities and the function of serous membranes.

Interactive Glossary

Provides pop-up definitions and terms.

Teacher Notes

Your teacher might also share his or her notes and highlights with the class.

Hyperlinks

Links to quizzes, tests, activities, and animations.

Get 24/7 lab practice

NEW! PAL | practice
anatomy
lab

PAL 3.0 is an indispensable virtual anatomy study and practice tool that gives you 24/7 access to the most widely used lab specimens, including the human cadaver, anatomical models, histology, cat, and fetal pig. PAL 3.0 retains all of the key advantages of version 2.0, including ease of use, built-in audio pronunciations, rotatable bones, and simulated fill-in-the-blank lab practical exams.

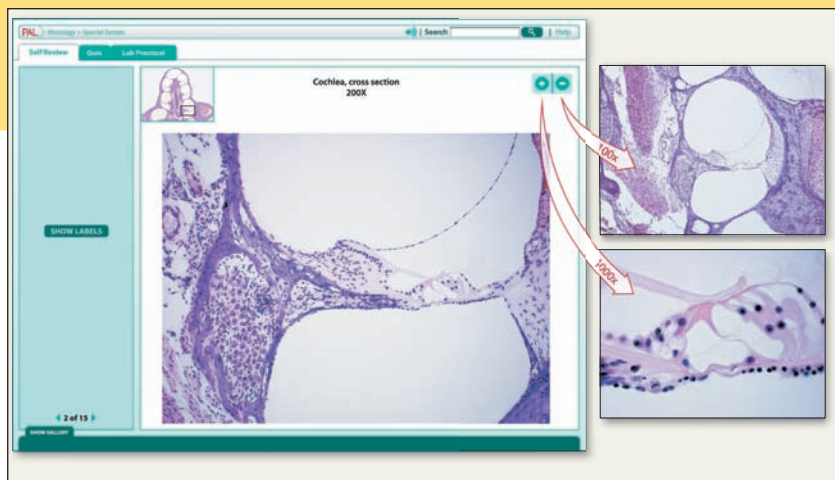

- **NEW!** Carefully prepared dissections show nerves, blood vessels, and arteries across body systems.

- **NEW!** Layering slider allows you to peel back layers of the human cadaver and view and explore hundreds of brand-new dissections especially commissioned for 3.0.

- **NEW!** Photo gallery allows you to quickly see thumbnails of images for a particular region or sub region.

PAL 3.0 is available in the Study Area of MasteringA&P (www.masteringaandp.com). The PAL 3.0 DVD is also available for purchase.

◀ NEW! Interactive Histology

Interactive Histology module allows you to view the same tissue slide at varying magnifications, thereby helping you identify structures and their characteristics.

◀ 3-D Anatomy Animations

3-D Anatomy Animations of origins, insertions, actions, and innervations of over 65 muscles are now viewable in both Cadaver and Anatomical Models and modules. A new closed-captioning option provides textual presentation of narration to help you retain information and supports ADA compliance.

PAL | practice anatomy lab

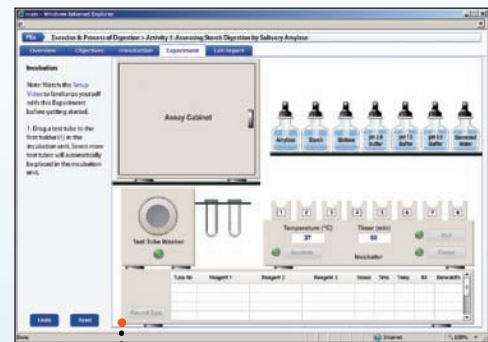

PAL 3.0 also includes:

- **NEW!** Question randomization feature gives you more opportunities for practice and self-assessment. Each time you retake a quiz or lab practical, a new set of questions is generated.
- **NEW!** Hundreds of new images and views are included, especially of the human cadaver, anatomical models, and histology.
- **NEW!** Turn-off highlight feature in quizzes and lab practicals gives you the option to see a structure without the highlight overlay.

physioEX™
VERSION 9

NEW! PhysioEx 9.0

PhysioEx 9.0: Laboratory Simulations in Physiology is easy-to-use laboratory simulation software with an accompanying lab manual that consists of 12 exercises containing 63 physiology lab activities. It can be used to supplement or substitute for wet labs. PhysioEx allows you to repeat labs as often as you like, perform experiments without harming live animals, and conduct experiments that are difficult to perform in a wet lab environment because of time, cost, or safety concerns.

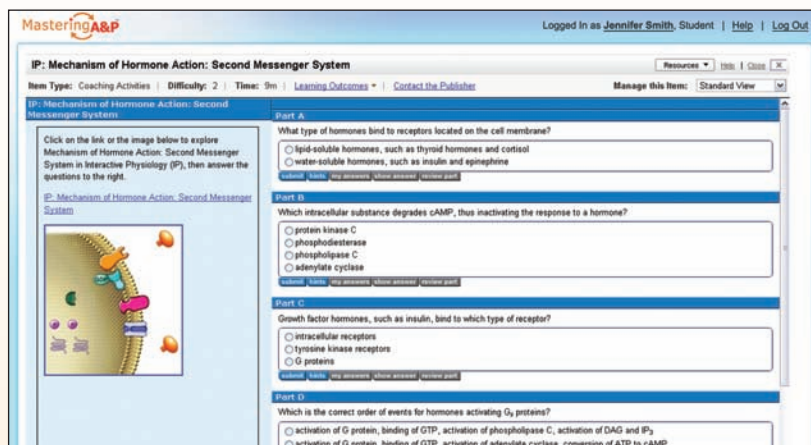

To the Teacher: Everything from the Book is now Integrated with MasteringA&P®

All text features of *Human Anatomy & Physiology* are now assignable in MasteringA&P, providing students with unlimited opportunities to study.

NEW! Focus Figure Tutorials

Focus Figure Tutorials guide students through key parts of each Focus Figure, assessing their understanding of the major concepts through a variety of assessment tools—multiple choice questions with hints and specific wrong-answer feedback, interactive ranking and sorting exercises, and labeling activities.

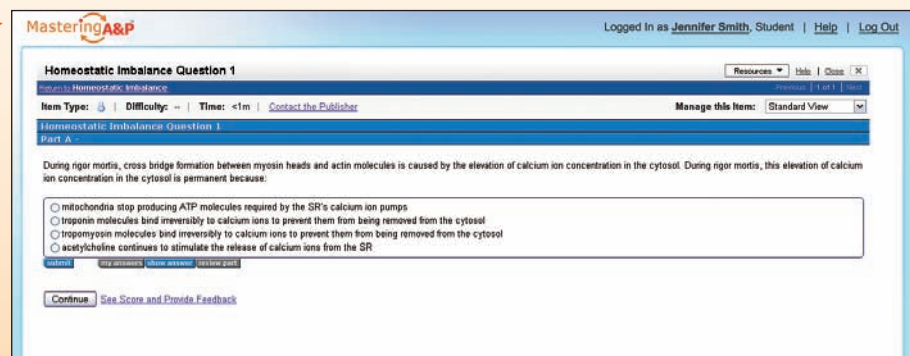

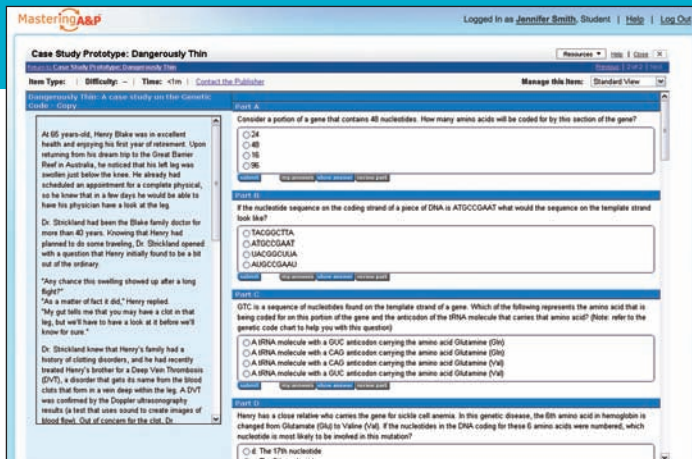

Interactive Physiology Coaching Activities

20 new *Interactive Physiology* Coaching Activities have been added to the Item Library.

NEW! Homeostatic Imbalance Clinical Questions

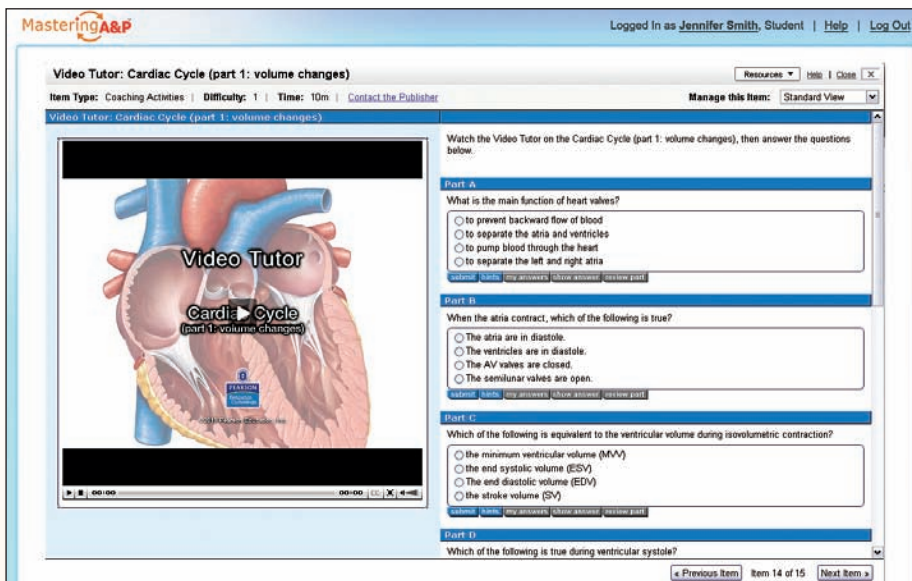

Homeostatic Imbalance Clinical Questions are higher-order thinking questions that assess students on their comprehension of the Homeostatic Imbalance content in each chapter, making one of the text's hallmark features now assignable.

NEW! Case Study Coaching Activities

Case Study Coaching Activities increase problem-solving skills and prepare students for future careers in allied health. Corresponding Teaching Notes give teachers valuable tips on when and how to use case studies in the classroom.

Video Tutor Coaching Activities

Video Tutors instruct and coach students on key A&P concepts using art from the book and are accompanied by questions with video hints and feedback specific to their misconceptions.

Other Text Features Now Assignable in MasteringA&P:

- A&P Flix™ Coaching Activities offer stunning 3-D visuals of core concepts and tough physiological concepts with in-depth assessments to test student understanding. Seven new topics have been added to the Ninth Edition.
- Art-Based Questions are conceptual questions related to art and instruct students with wrong-answer feedback.
- Art Labeling and Ranking/Sorting Questions are drag and drop activities that allow students to assess their knowledge of terms and structures as well as the order of steps and elements involved in physiological processes.
- PAL™ 3.0 and assessments
- PhysioEx™ 9.0 and assessments
- Clinical Application questions (under Test Bank) give students the opportunity to apply their knowledge to clinical scenarios.
- Reading Questions keep students on track and are pre-built for easy set-up and delivery.
- Test Bank questions have been heavily revised with up to 600 new questions to help better assess your students.

Tools for Teachers and Students

Teacher Resources

Most of the teacher supplements and resources for this text are available electronically to qualified adopters on the Instructor Resource Center (IRC). Upon adoption or to preview, please go to www.PearsonSchool.com/Access_Request and select Option 1. Teachers will be required to complete a brief one-time registration subject to verification of educator status. Upon verification, access information and instructions will be sent to the teacher via email. Once logged into the IRC, enter the text's ISBN in the "Search our Catalog" box to locate the downloadable resources.

The following teacher resources are available:

- Instructor Resource DVD (978-0-321-80289-7 / 0-321-80289-6)
- Printed Test Bank (978-0-321-80290-3 / 0-321-80290-X)
- Transparency Acetates (978-0-321-80308-5 / 0-321-80308-6)
- Instructor Guide to Text & Media (978-0-321-79440-6 / 0-321-79440-0)
- Instructor Resource DVD for Practice Anatomy Lab 3.0 (978-0-321-74963-5 / 0-321-74963-4)
- Instructor Guide for PhysioEx™ 9.0, 1/e (978-0-321-75095-2 / 0-321-75095-0)
- Instructor Guide for Essentials of Human Anatomy & Physiology Lab Manual Lab Manual (download only) (0-321-75128-0 / 978-0-321-75128-7)

For Teachers and Students

Upon textbook purchase, students and teachers are granted access to MasteringA&P. High school teachers can obtain preview or adoption access for MasteringA&P in one of the following ways:

Preview Access

Teachers can request preview access online by visiting PearsonSchool.com/Access_Request and selecting Option 2. Preview Access information will be sent to the teacher via email.

Adoption Access

With the purchase of this program, a Pearson Adoption Access Card, with codes and complete instructions, will be delivered with the textbook purchase. If the Access Card (ISBN: 0-13-034391-9) does not arrive with the shipment, please visit PearsonSchool.com/Access_Request, select Option 2/3, and complete the form. Adoption access information will be sent to the teacher via email within 2 to 3 business days.

Students, ask your teacher for access.

Student Resources

The following student resources are available for purchase:

- Student Study Guide (978-0-321-79439-0 / 0-321-79439-7)

- A Brief Atlas of the Human Body 2e (978-0-321-66261-3 / 0-321-66261-X)

- Practice Anatomy Lab™ 3.0 CD (978-0-321-68211-6 / 0-321-68211-4)

- Get Ready for A&P 3e (978-0-321-81336-7 / 0-321-81336-7)

- Interactive Physiology 10 System Suite Replacement CD (0-131-36275-5 / 978-0-131-36275-8)

- PhysioEx™ 9.0: Laboratory Simulations in Physiology, 1e, Workbook with DVD (978-0-321-81557-6 / 0-321-81557-2)

- Anatomy & Physiology Coloring Workbook: A Complete Study Guide, 10e (978-0-321-74305-3 / 0-321-74305-9)

- Essentials of Human Anatomy & Physiology Lab Manual (978-0-321-75001-3 / 0-321-75001-2)

Preface

As educators, clinically trained individuals, and perennial students, we are continually challenged by the learning mind. What works best to help students apply new information to the world they personally understand? Our clinical backgrounds have served our teaching and writing purposes well. Perhaps even more important, our clinical experience has allowed us to see our presentations through our students' eyes and from the vantage points of their career interests.

For this edition, as for those preceding it, feedback from student and instructor reviews indicated areas of the text that needed to be revised for clarity, timeliness, and just plain reduction of verbal meanness. Overall, feedback was positive, verifying that our approach is effective: Explaining fundamental principles and unifying themes first creates a strong base for what comes later. Backing these explanations up with comfortable analogies and familiar examples enhances students' understanding of the workings of the human body.

Unifying Themes

Three integrating themes that organized, unified, and set the tone of the first edition of this text continue to be valid and are retained in this edition. These themes are:

Interrelationships of body organ systems. The fact that nearly all regulatory mechanisms require interaction of several organ systems is continually emphasized. For example, Chapter 25, which deals with the structure and function of the urinary system, discusses the vital importance of the kidneys not only in maintaining adequate blood volume to ensure normal blood circulation, but also in continually adjusting the chemical composition of blood so that all body cells remain healthy. The unique *System Connections* feature is the culmination of this approach and should help students think of the body as a dynamic community of interdependent parts rather than as a number of isolated structural units.

Homeostasis. The normal and most desirable condition of body functioning is homeostasis. Its loss or destruction always leads to some type of pathology—temporary or permanent. Pathological conditions are integrated with the text to clarify and illuminate normal functioning, not as an end in and of themselves. For example, Chapter 19, which deals with the structure and function of blood vessels, explains how the ability of healthy arteries to expand and recoil ensures continuous blood flow and proper circulation. The chapter goes on to discuss the effects on homeostasis when arteries lose their elasticity: high blood pressure and all of its attendant problems. These homeostatic imbalances are indicated visually by a pink symbol with a fulcrum:

Whenever students see the imbalance symbol in text, the concept of disease as a loss of homeostasis is reinforced. Every Homeostatic Imbalance section has a new, related clinical question that is assignable in MasteringA&P. These new clinical questions help strengthen students' understanding of how the body works to stay in balance.

Complementarity of structure and function. Students are encouraged to understand the structure of an organ, a tissue, or a cell as a prerequisite to comprehending its function. Concepts of physiology are explained and related to structural characteristics that promote or allow the various functions to occur. For example, the lungs can act as a gas exchange site because the walls of their air sacs present an incredibly thin barrier between blood and air.

NEW TO THE NINTH EDITION

With every edition, our goal is powerful but simple—to make anatomy and physiology as engaging, accurate, and relevant as possible for both [instructors](#) and students. The Ninth Edition represents a monumental revision, with changes to the text and art presentation that build upon the hallmark strengths of the previous eight editions. The changes to the Ninth Edition are all driven by the needs of today's students, as we seek to make the learning of key concepts in A&P as easy as possible for them. Key concepts are important because of the overwhelming amount of material in this course. Mastering this material gives

students structure for organizing this wealth of information. Below are the ways in which we've revised the Ninth Edition to make this book the one where learning happens most effectively, followed by a detailed list of specific chapter-by-chapter content changes.

An expanded art program. The drive for this revision began as a simple list. We sat down together and created a chapter-by-chapter list of the key concepts in A&P where students struggle the most. This list became the basis for our art revision plans for both the Eighth and Ninth editions. We first boiled it down to some of the toughest topics to get our list of Focus figures. These Focus figures are illustrations that use a “big picture” layout and dramatic art to walk the student through difficult physiological processes in a step-by-step way. These have been wildly popular with both [instructors](#) and students. In response to repeated requests for more, we are pleased to present 12 new Focus figures. We hope you'll be as pleased with the results of the added Focus figures in the Ninth Edition as you were in the Eighth.

All of the art in the Eighth Edition was carefully examined and reviewed by both [instructors](#) and students. Many of their suggested changes have been incorporated into this edition. As always, we have updated many figures to reflect the latest scientific findings and to improve their ability to teach important concepts. Finally, many new photos—histology, cadaver, and others—were painstakingly chosen for this edition to enhance the learning process.

Flipping through the Ninth Edition, you can see that we have built upon the dynamic, three-dimensional, and realistic art style, utilizing dramatic views and perspectives and vibrant, saturated colors.

Improved text presentation. New text features initiated in the Eighth Edition that focus students on key concepts have been retained and expanded in the Ninth Edition. In the current edition, student objectives still appear by topic throughout the chapter and some new *Check Your Understanding* questions have been added at the end of sections. These changes along with a brand-new design make the book easier than ever to study from and navigate. Our hallmark analogies and accessible, friendly style while using simpler, more concise language and shorter paragraphs make the information easier for students to manage.

Factual updates and accuracy. As authors we pride ourselves on keeping our book as up-to-date and as accurate as possible in all areas—a monumental task that requires painstaking selectivity. Although information changes even as a textbook goes to press, be assured that our intent and responsibility to update has been carried out to the best of our ability. We have incorporated current research in the field as much as possible; many of these updates are included in the [chapter-by-chapter changes](#). A more complete list is available ~~from your Pearson sales representative and in the *Instructor Guide to Text and Media*.~~

Terminology changes. For this edition we've substantially updated the terminology to be in accordance with *Terminologia Anatomica* and *Terminologia Histologica*. Teachers can find a

complete list of terminology changes detailed in the *Instructor Guide to Text and Media*.

Chapter-by-Chapter Changes

Chapter 1 The Human Body: An Orientation

- Updated information on diagnostic uses of MRI scans (*A Closer Look*).
- New MRI photo of frontal section through the torso (Figure 1.8a).
- Enhanced art showing layers of the pericardium (Figure 1.10).

Chapter 2 Chemistry Comes Alive

- Updated information on stress and aging.
- Improved art showing structure of an atom (Figure 2.1).
- New photos of blood (Figure 2.4).
- New photo of a water strider (Figure 2.10).
- Updated art for levels of protein structure (Figure 2.19).

Chapter 3 Cells: The Living Units

- New information on RNA in translation, rRNA, and tRNA.
- Revised Focus Figure 3.10: Primary Active Transport: The Na⁺-K⁺ Pump.
- Revised art for three types of endocytosis (Figure 3.13).
- Improved Focus Figure 3.16: G Proteins.
- New photo of smooth and rough endoplasmic reticulum (Figure 3.18).
- New TEM of lysosomes (Figure 3.21).
- Revised art and new TEM for centrioles (Figure 3.25).
- Revised Focus Figure 3.33: Mitosis.
- New Focus Figure 3.37: Translation.

Chapter 4 Tissue: The Living Fabric

- New photomicrographs of epithelium (Figure 4.3).
- New photomicrographs of connective tissues (Figure 4.8).
- New photomicrographs of muscle (Figure 4.10).
- Simplified explanation of polarity.
- Improved rendering of goblet cell (Figure 4.4), with more realistic details.
- Improved teaching effectiveness of Figure 4.11 (classes of membranes).
- Improved layout of Figure 4.12 (tissue repair).
- Added explanation to art for embryonic germ layers (Figure 4.13).

Chapter 5 The Integumentary System

- Updated information on the skin's epithelial cells and stratum corneum.
- New information on tinea versicolor (“sunspots”) and friction ridges.
- Updated information on importance of the stratum corneum as a physical barrier.
- Added new term scleroderma, an autoimmune disorder characterized by hardened skin, in *At the Clinic: Related Clinical Terms*.
- New research on the role of friction ridges in the sense of touch.

Chapter 6 Bones and Skeletal Tissues

- Updated information on bone resorption and remodeling.
- New bone-related information on serotonin, glucose intolerance, and diabetes mellitus.
- Updated information on osteogenic cells and microscopic anatomy of bone cells.
- New information on osteoporosis in prostate cancer patients who receive androgen-suppressing therapy.
- New information on osteocalcin, a hormone which helps regulate bone formation and also protects against obesity, glucose intolerance, and diabetes mellitus.
- New information on the monoclonal antibody drug denosumab as a treatment for osteoporosis.

Chapter 7 The Skeleton

- New Clinical Case Study.
- New photos of the skull, temporal bone, sphenoid and ethmoid bones, mandible, and orbits (Figures 7.5–7.12).
- New photos of defects in spinal curvature (Figure 7.17).
- New photos of proximal tibia (Figure 7.33).

Chapter 8 Joints

- New Clinical Case Study.
- New Focus Figure 8.7: Types of Synovial Joints.
- Added information on meniscal transplant surgery.
- Updated information on treatment of sprains.
- Updated statistics on arthritis; updated treatment of rheumatoid arthritis.
- Updated description of sinovitis.
- Updated statistics on joint replacements in the U.S.
- Updated research aimed at future treatments of joint problems.

Chapter 9 Muscles and Muscle Tissue

- New discussion of EPOC (excess postexercise oxygen consumption).
- New photomicrograph of skeletal muscle (Figure 9.1).
- New Figure 9.9 (skeletal muscle action potentials).
- Added information of myosin head orientation in smooth muscle.
- Updated information on treatments for Duchenne muscular dystrophy.
- Streamlined discussion of muscle fatigue.
- Added skeletal muscle fibers to Figure 9.17 for better teaching effectiveness.

Chapter 10 The Muscular System

- New Focus Figure 10.1: Muscle Action.
- New Clinical Case Study.
- New photo of hip and thigh muscles (Figure 10.21).

Chapter 11 Fundamentals of the Nervous System and Nervous Tissue

- Update on multiple sclerosis risk factors and treatment.
- New information on addiction treatment and prescription drug abuse (*A Closer Look*).
- New Clinical Case Study.
- Updated discussion on neuronal transport.
- New information on neurotransmitters.
- Update on shingles and vaccination available for its prevention.

- Discuss direct and indirect neurotransmitter receptor mechanisms in two figures (Figures 11.20 and 11.21). Added relay-runner motif to G-protein linked receptor figure (Figure 11.21) to tie it to previous G-protein figure in Chapter 3.

Chapter 12 The Central Nervous System

- New Clinical Case Study.
- Updated information on premotor cortex and the role of the basal nuclei.
- New information on Alzheimer's disease and Parkinson's disease.
- Update on amyotrophic lateral sclerosis.
- Updated information on genetic causes of autism.
- New photos of brain sections (Figures 12.9, 12.10, and 12.12).
- New photo of spinal cord (Figure 12.26).

Chapter 13 The Peripheral Nervous System and Reflex Activity

- New information on vanilloid receptors, pain tolerance, and Bell's palsy.
- New SEM of nerve cross-section (Figure 13.4).
- New photos of brachial and sacral plexuses (Figures 13.10 and 13.12).
- New Clinical Case Study.

Chapter 14 The Autonomic Nervous System

- Updated information on aging and blood pressure receptors.
- Streamlined discussion of sympathetic trunks and pathways.
- More explicit statement about the "background" firing rate of neurons along sympathetic and parasympathetic axons in ANS.

Chapter 15 The Special Senses

- New Clinical Case Study.
- New information on link between vitamin C and cataract formation.
- New photos of retina (Figure 15.7), cataract (Figure 15.9), and refraction (Figure 15.11).
- New summary Table 15.1—differences between rods and cones.
- Updated discussion of olfactory processing.
- New summary Table 15.2—structures of internal ear and their functions.

Chapter 16 The Endocrine System

- New research on ghrelin and growth hormone release.
- New photo showing effects of growth hormone excess and deficiency (Figure 16.7).
- Updated information on type 1 diabetes.
- New Focus Figure 16.5: Hypothalamus and Pituitary Interactions.
- New photomicrographs of thyroid (Figure 16.8), parathyroid (Figure 16.12), adrenal gland (Figure 16.14), and pancreas (Figure 16.18).
- New flowchart of parathyroid hormone effects (Figure 16.13).

Chapter 17 Blood

- New Clinical Case Study.
- New SEMs of normal and sickled RBCs (Figure 17.8).

- New photomicrographs of leukocytes (Figure 17.10).
- Updated Figure 17.11 (leukocyte formation).
- Updated statistics on sickle cell anemia and malaria.
- Improved teaching effectiveness of Figure 17.14 (pathways of coagulation).

Chapter 18 The Cardiovascular System: The Heart

- New Clinical Case Study.
- New Focus Figure 18.9: Blood Flow Through the Heart.
- Updated information on ischemic cell death in myocardial infarction.
- New photos of the heart (Figures 18.4 and 18.6).
- Expanded overview of systemic and pulmonary circuits (in response to focus group feedback).
- Reorganized presentation of heart anatomy.
- Updated the effects of hyperkalemia and hypercalcemia on the heart.

Chapter 19 The Cardiovascular System: Blood Vessels

- Update on obesity-linked hypertension.
- New Focus Figure 19.17: Bulk Flow Across Capillary Walls.
- New photomicrograph of artery and vein (Figure 19.1).
- Added information on C-reactive protein as a marker of systemic inflammation and a predictor of future heart attacks and strokes.
- Reorganized Figure 19.15 for better teaching effectiveness.
- Reorganized section on venous return.
- Reorganized discussion of baroreceptor reflex.
- Consolidated discussion of renal regulation of blood pressure by adding material previously in Chapter 25. Moved details of renin-angiotensin-aldosterone mechanism from Figure 25.10 to Figure 19.10.
- Reorganized presentation on homeostatic imbalances of blood pressure.

Chapter 20 The Lymphatic System and Lymphoid Organs and Tissues

- New information on the spleen as a monocyte reservoir.
- New photomicrographs of thymus (Figure 20.7) and tonsil (Figure 20.8).
- Improved discussion of lymphoid cells and lymphoid tissues.
- Reorganized section on mucosa-associated lymphoid tissue (MALT).
- Updated statistics for non-Hodgkin's lymphoma.

Chapter 21 The Immune System: Innate and Adaptive Body Defenses

- Major revision of chapter to streamline presentation.
- New Clinical Case Study.
- Added coverage of lectin pathway (Figure 21.6).
- New SEM of macrophage engaged in phagocytosis (Figure 21.2).
- Two new summary tables (Tables 21.3 and 21.5).

Chapter 22 The Respiratory System

- Update on early detection of lung cancer.
- Updated discussion of cystic fibrosis.
- New Focus Figure 22.20: Oxygen-Hemoglobin Dissociation Curve.

- New photomicrograph of lung tissue (Figure 22.8).
- New SEM of pulmonary capillary casts (Figure 22.9).

Chapter 23 The Digestive System

- New photomicrograph of esophagus-stomach junction (Figure 23.12).
- New photograph of gastric ulcer (Figure 23.16).
- New photomicrograph of pancreas (Figure 23.26).
- New art on the absorption of monosaccharides (Figure 23.35).

Chapter 24 Nutrition, Metabolism, and Body Temperature Regulation

- Coverage of the USDA's new MyPlate logo (Figure 24.1) and dietary recommendations.
- New Focus Figure 24.8: Oxidative Phosphorylation.
- New Clinical Case Study.
- Updated information on obesity (*A Closer Look*).

Chapter 25 The Urinary System

- Major revision of chapter to streamline presentation.
- New Focus Figure 25.16: Medullary Osmotic Gradient.
- New information on symptoms and manifestations of renal failure.
- New Clinical Case Study.
- New SEM of nephron blood vessel casts (Figure 25.7).
- New illustration of net filtration forces (Figure 25.11).
- New illustration on tubular reabsorption and secretion (Figure 25.15).
- New photo of kidney (Figure 25.3).

Chapter 26 Fluid, Electrolyte, and Acid-Base Balance

- Updated discussion of regulation of sodium and water balance, and dehydration.
- New text and summary table (Table 26.2) contrasting extracellular fluid sodium concentration and body sodium content.

Chapter 27 The Reproductive System

- New photo of testis (Figure 27.3).
- New illustration of male perineum (Figure 27.4).
- New SEM of seminiferous tubules (Figure 27.8).
- New graph of plasma testosterone versus age (Figure 27.11).
- New photomicrograph of ovary (Figure 27.13).
- Update on circumcision and statistics on reduction in risk of HIV and other infections.

Chapter 28 Pregnancy and Human Development

- New Focus Figure 28.2: Sperm Penetration and the Cortical Reaction.
- Updated contraception methods (*A Closer Look*).
- New Clinical Case Study.
- Updated information on role of hCG.
- Updated information on assisted reproductive technologies.
- Simplified Figure 28.10 to improve teaching effectiveness.
- New photo of nursing mother (Figure 28.19).

Chapter 29 Heredity

- New Clinical Case Study.
- New photos of karyotyping (Figure 29.1).

Acknowledgments

Each new edition of this textbook holds out a promise to its authors. “You’re done—the book is perfect!” Not! Although it would appear that this would be so after all the work bestowed upon it over eight editions, it still takes the better part of two years, demands our participation in many focus groups, mobilizes our library research skills, and tests our creativity once again before we finally put the last page of the new edition to rest. It never really gets easier as we grind away—the grist finer with each edition.

In all fairness, we don’t work alone. Many people shared the work of this edition and deserve their proper due. Once the first draft of each chapter was complete in our estimations, it was sent off to Alice Fugate, the text developmental editor, who wielded her pen to ensure readability and consistency—factors very important to student success. Backing up Alice’s work was the director of development Barbara Yien, well known for her ability to see the whole picture. After we perused and processed Alice’s suggestions, the manuscript went to Shannon Cutt. Shannon, our cheery associate project editor, checked every aspect of the newly modified text before sending it on to production. Nobody escapes Shannon’s ministrations—especially her amazing ability to chase down things that threaten to fall through the cracks. If we failed to meet her deadlines, a barrage of emails rained down, all asking us in the sweetest way to get the missing item in. After Shannon had assured herself that all was well, the manuscript went to Anita Wagner, our skilled copyeditor for the last several editions. Anita knows our text as well or better than we do. She checks grammar, spelling of new drugs or procedures, and verifies statistics; much of the superb accuracy of this text is to her credit as a copyeditor par excellence.

Whew! But that’s not all, folks. Once the writing and editing part of the revision is complete, the manuscript goes to the production department, where the text and art come together. This business-like domain is headed by Michele Mangelli, our production manager once again. Always knowledgeable, Michele guides the production process with great skill and works seamlessly with the members of her excellent staff. She makes sure the artists are on schedule producing art with the appropriate look and accuracy, directs the industrious photo researcher Kristin Piljay, and oversees the work of David Novak (the conscientious production supervisor) and that hard-working art coordinator Jean Lake.

The last edition of this text touched every figure—making each piece of art more timely, more colorful, more accurate, or better pedagogically. The really big success in the art arena was the fabulous one- to two-page Focus figures introduced in the Eighth Edition. These new figures selected physiological concepts that students have the most difficulty with and “unpacked them.” They say you never really have too much of a good thing, so this edition has 12 new Focus Figures. We hope you will like these as much as you did the last offerings. Helping to ensure that you will is Laura Southworth, the art developmental manager who worked tirelessly on these figures. She is not only the art manager but also a skilled professional artist who can illustrate just about any concept we ask for. This capability ensures that the art manuscript delivered to the talented artists of Imagineering and Electronic Publishing Services, who drew the final art, had all the information they needed to produce a quality product. Laura is truly amazing. Important in a different art arena was Lisa Lee, who supplied several of our histology photos and served as a consultant on images from other sources. Tom Fink (East Carolina University), William Karkow (Dubuque University), and Olga Malakhova and Charles Poulton (both from University of Florida College of Medicine, Gainesville) provided histology and cadaver images on an incredibly tight schedule. Thanks so much!

We also thank two people who contributed significantly to this edition: James Hewlett and William Karkow. Working on a tight schedule, James Hewlett contributed 13 new case studies, which were expertly reviewed for clinical accuracy by thoracic surgeon William Karkow.

Thanks also to Yvo Riezebos, cover designer, and tani hasegawa, text designer. Their creativity helped to produce a truly beautiful book. We are very happy that our cover photo is of the best known female goalkeeper in the world—Hope Solo. Hope won an Olympic gold medal in 2008, was named Women’s Professional Soccer’s Goalkeeper of the Year in 2009, and was awarded the Golden Glove at the 2011 World Cup. Sustaining the effort to produce a beautiful book all the way to press were our excellent proofreader, Martha Ghent, and S4Carlisle Publishing Services, the proficient compositor who assembled the final pages with their customary expertise.

The sponsoring editor for the last edition, Serina Beauparlant, has a jazzy new title, “Editor-in-Chief.” Even with a slew of new duties, she is resolute about producing the best educational product possible—both in textbook and media. Her replacement for this edition, who took over a large number of Serina’s duties, is Gretchen Puttkamer, a real go-getter. We haven’t seen too much of Gretchen because she spends most of her time in the field talking to professors, students, and anyone else that will listen to her. Also contributing were several others that we rarely get to talk to, including: editorial assistants Lisa Damerel and John Maas, managing editor Debbie Cogan, Stacey Weinberger, who has been our expert manufacturing buyer for years, and our crackerjack marketing manager, Derek Perrigo, who goes the extra mile to make sure professors are enlightened about special features of the text. Kudos also to our media staff—Lauren Fogel, director of media development, Aimee Pavy, media producer, and the entire media team for PAL 3.0 and PhysioEx 9.0.

Benjamin Cummings spares no effort in its drive to publish an accurate and instructive book. Over 400 reviews were commissioned, enlisting comments and suggestions from both generalist academicians and specialists in various niches of anatomy and physiology. These reviewers’ contributions have been of inestimable value in the continuing development of this text. We also want to thank the many students and colleagues who were generous with their time and comments. They did not always tell us what we wanted to hear, but assured of the sincerity of their criticism, we always listened. Input from the following reviewers resulted in the continued excellence and accuracy of this text.

We also want to acknowledge Katja’s colleagues at Mount Royal University (Trevor Day, Janice Meeking, Izak Paul, Michael Pollock, Ruth Pickett-Seltner, Sarah Hewitt, and Kartika Tjandra) for stimulating discussions of the text; Associate Dean Tom MacAlister and Chair Tracy O’Connor for supporting Katja’s involvement in this project; and Mount Royal University for providing an Internal Research Grant. We are also grateful to Katja’s focus group students at Mount Royal University for their valuable and detailed feedback on the Eighth Edition’s art program:

Rebecca Aje
Sarah Ankerman
Nikolina Arbutina
Sara Bird
Krizia Carlos
Darrah Crocker
Justine Hamill
Donalea Muir
Jessica Mulli
Sandra Okilj
Melissa Rowson

Robyn Shields
Sengchou Vilay-Wong
Fiona Villamar

Additionally, we would like to thank the following students at Ivy Tech Community College and Massasoit Community College, who each completed a useful and informative survey: Amanda Blevins, Jane Botelho, Paul Bowler, Erica Dupree, Elvia Garza-Sandoval, John Golbranson, Meagan Home, Joseph Madden, George Mager, Joe McManus, Ann Pavia, and Wendy Treesh.

Once again, Dr. Marieb’s husband, Harvey Howell, served as a sounding board for some of her ideas, manned the copy machine, and ran the manuscript to the FedEx box daily with nary a complaint during the unbelievably busy days. Thanks also to Katja’s husband, Dr. Lawrence W. Haynes, who as a fellow physiologist has provided invaluable assistance to her during the course of the revision. She also thanks her sons, Eric and Stefan Haynes, who are an inspiration and a joy.

Well, our tenure on this edition is over, but there will be another edition three years hence. We would really appreciate hearing from you concerning your opinion—suggestions and constructive criticisms—of this text. It is this type of feedback that provides the basis of each revision, and underwrites its improvement.

TEACHER *to* TEACHER

I have developed a hands-on Anatomy & Physiology course that includes: observing several hours in a hospital trauma center, riding with paramedics in an ambulance, working with cadavers at two universities, and interacting with a number of speakers in the health profession. What I was lacking was a text that could bring relevance of the human body systems to everyday life. That changed when I found Elaine Marieb and Katja Hoehn's *Human Anatomy & Physiology*.

There are three unifying themes that are focused throughout the text: the Complementarity of Structure and Function, Interrelationships of Body Systems, and a greater understanding of Homeostasis and how it relates to the systems. The total integration of the themes provides a clear and consistent approach to the study of the human body.

My high school students think it is easy to read and are captivated by the System Connection segments at the end of each body system. Elaine and Katja have done an exceptional job of using real world applications backed by the latest research and clinical innovations, and have improved that feature with end-of-chapter case studies for the 9th edition. Their new Focus Figures take very difficult topics or concepts and by using beautiful step-by-step illustrations and striking 3-D artwork provide

an understanding of the process unmatched by any other text, in my opinion.

The support materials include: formative and summative testing, new A&PFlix animations that bring 3-D representations of structure to life, a MasteringA&P website that includes the award-winning tutorial program called Interactive Physiology, and a new Practice Anatomy Lab. All of these features provide teachers flexibility in creating hands-on activities based on best practices, and gives students a clearer understanding of the systems.

This *Human Anatomy & Physiology* text is a very comprehensive, clinical approach that motivates and promotes student engagement in the study of the human body. Teachers will have all the tools necessary to develop a curriculum that will engage and inspire their students to become our future health care professionals.

Dewey Christensen

East High School
Sioux City, Iowa

Table 10.17 Summary: Actions of Muscles Acting on the Thigh, Leg, and Foot 380

UNIT 3 Regulation and Integration of the Body

11 Fundamentals of the Nervous System and Nervous Tissue 386

Functions and Divisions of the Nervous System 387

Histology of Nervous Tissue 387
 Neuroglia • Neurons

Membrane Potentials 395
 Basic Principles of Electricity •
 The Resting Membrane Potential •
 Membrane Potentials That Act as Signals

The Synapse 407
 Electrical Synapses • Chemical Synapses • Postsynaptic Potentials and Synaptic Integration

Neurotransmitters and Their Receptors 414
 Classification of Neurotransmitters by Chemical Structure •
 Classification of Neurotransmitters by Function •
 Neurotransmitter Receptors

Basic Concepts of Neural Integration 421
 Organization of Neurons: Neuronal Pools •
 Types of Circuits • Patterns of Neural Processing

Developmental Aspects of Neurons 423

A CLOSER LOOK Pleasure Me, Pleasure Me! 418

12 The Central Nervous System 428

The Brain 429

Embryonic Development • Regions and Organization • Ventricles • Cerebral Hemispheres • Diencephalon • Brain Stem • Cerebellum • Functional Brain Systems

Higher Mental Functions 452

Brain Wave Patterns and the EEG • Consciousness • Sleep and Sleep-Wake Cycles • Language • Memory

Protection of the Brain 458

Meninges • Cerebrospinal Fluid (CSF) • Blood Brain Barrier

Homeostatic Imbalances of the Brain 462

Traumatic Brain Injuries • Cerebrovascular Accidents (CVAs) • Degenerative Brain Disorders

The Spinal Cord 464

Gross Anatomy and Protection • Spinal Cord Cross-Sectional Anatomy • Neuronal Pathways • Spinal Cord Trauma and Disorders

Diagnostic Procedures for Assessing CNS Dysfunction 474

Developmental Aspects of the Central Nervous System 475

13 Peripheral Nervous System and Reflex Activity 483

PART 1 SENSORY RECEPTORS AND SENSATION 484

Sensory Receptors 484

Classification by Stimulus Type • Classification by Location • Classification by Receptor Structure

Sensory Integration: From Sensation to Perception 487

General Organization of the Somatosensory System • Perception of Pain

PART 2 TRANSMISSION LINES: NERVES AND THEIR STRUCTURE AND REPAIR 490

Nerves and Associated Ganglia 490

Structure and Classification • Regeneration of Nerve Fibers

Cranial Nerves 492

An Overview • Composition of Cranial Nerves

Spinal Nerves 501

Innervation of Specific Body Regions

PART 3 MOTOR ENDINGS AND MOTOR ACTIVITY 511

Peripheral Motor Endings 511

Innervation of Skeletal Muscle • Innervation of Visceral Muscle and Glands

Motor Integration: From Intention to Effect 511

Levels of Motor Control

PART 4 REFLEX ACTIVITY 513

The Reflex Arc 513

Components of a Reflex Arc

Spinal Reflexes 513

Stretch and Tendon Reflexes • The Flexor and Crossed-Extensor Reflexes • Superficial Reflexes

Developmental Aspects of the Peripheral Nervous System 519

14 The Autonomic Nervous System 524

Overview 524

Comparison of the Somatic and Autonomic Nervous Systems • ANS Divisions

ANS Anatomy 527

Parasympathetic (Craniosacral) Division • Sympathetic (Thoracolumbar) Division • Visceral Reflexes

ANS Physiology 533

Neurotransmitters and Receptors • The Effects of Drugs • Interactions of the Autonomic Divisions • Control of Autonomic Function

Homeostatic Imbalances of the ANS 539

Developmental Aspects of the ANS 539

UNIT 4 Maintenance of the Body

17 Blood 631

- Overview: Blood Composition and Functions 632
 - Components • Physical Characteristics and Volume • Functions
- Blood Plasma 633
- Formed Elements 634
 - Erythrocytes (Red Blood Cells) • Leukocytes (White Blood Cells) • Platelets
- Hemostasis 646
 - Step 1: Vascular Spasm • Step 2: Platelet Plug Formation • Step 3: Coagulation • Clot Retraction and Fibrinolysis • Factors Limiting Clot Growth or Formation • Disorders of Hemostasis
- Transfusion and Blood Replacement 651
 - Transfusing Red Blood Cells • Restoring Blood Volume
- Diagnostic Blood Tests 653
- Developmental Aspects of Blood 654

18 The Cardiovascular System: The Heart 658

- The Pulmonary and Systemic Circuits 659
- Heart Anatomy 659
 - Size, Location, and Orientation • Coverings of the Heart • Layers of the Heart Wall • Chambers and Associated Great Vessels • Heart Valves • Pathway of Blood Through the Heart • Coronary Circulation

- Cardiac Muscle Fibers 671
 - Microscopic Anatomy • Mechanism and Events of Contraction • Energy Requirements
- Heart Physiology 674
 - Electrical Events • Heart Sounds • Mechanical Events: The Cardiac Cycle • Cardiac Output
- Developmental Aspects of the Heart 685
 - Before Birth • Heart Function Throughout Life

19 The Cardiovascular System: Blood Vessels 692

PART 1 BLOOD VESSEL STRUCTURE AND FUNCTION 693

- Structure of Blood Vessel Walls 693
- Arterial System 693
 - Elastic Arteries • Muscular Arteries • Arterioles
- Capillaries 696
 - Types of Capillaries • Capillary Beds
- Venous System 698
 - Venules • Veins
- Vascular Anastomoses 699

PART 2 PHYSIOLOGY OF CIRCULATION 701

- Introduction to Blood Flow, Blood Pressure, and Resistance 701
 - Definition of Terms • Relationship Between Flow, Pressure, and Resistance
- Systemic Blood Pressure 702
 - Arterial Blood Pressure • Capillary Blood Pressure • Venous Blood Pressure
- Maintaining Blood Pressure 704
 - Short-Term Regulation: Neural Controls • Short-Term Regulation: Hormonal Controls • Long-Term Regulation: Renal Mechanisms • Clinical Monitoring of Circulatory Efficiency • Homeostatic Imbalances in Blood Pressure
- Blood Flow Through Body Tissues: Tissue Perfusion 711
 - Velocity of Blood Flow • Autoregulation: Local Regulation of Blood Flow • Blood Flow in Special Areas • Blood Flow Through Capillaries and Capillary Dynamics • Circulatory Shock

PART 3 CIRCULATORY PATHWAYS: BLOOD VESSELS OF THE BODY 721

- The Two Main Circulations of the Body 721
- Systemic Arteries and Veins: Differences in Pathways and Courses 721
- Principal Vessels of the Systemic Circulation 721
- Table 19.3 Pulmonary and Systemic Circulations 722

Table 19.4 The Aorta and Major Arteries of the Systemic Circulation 724

20 The Lymphatic System and Lymphoid Organs and Tissues 751

Lymphatic System 752

Distribution and Structure of Lymphatic Vessels • Lymph Transport

Lymphoid Cells and Tissues 754

Lymphoid Cells • Lymphoid Tissue

Lymph Nodes 755

Structure of a Lymph Node • Circulation in the Lymph Nodes

Other Lymphoid Organs 757

Spleen • Thymus • Mucosa-Associated Lymphoid Tissue (MALT)

Developmental Aspects of the Lymphatic System and Lymphoid Organs and Tissues 759

SYSTEM CONNECTIONS 761

21 The Immune System: Innate and Adaptive Body Defenses 764

PART 1 INNATE DEFENSES 765

Surface Barriers: Skin and Mucosae 765

Internal Innate Defenses: Cells and Chemicals 766

Phagocytes • Natural Killer (NK) Cells • Inflammation: Tissue Response to Injury • Antimicrobial Proteins • Fever

PART 2 ADAPTIVE DEFENSES 773

Antigens 773

Complete Antigens and Haptens • Antigenic Determinants • Self-Antigens: MHC Proteins

Cells of the Adaptive Immune System: An Overview 774

Lymphocytes • Antigen-Presenting Cells (APCs)

Humoral Immune Response 778

Activation and Differentiation of B Cells • Immunological Memory • Active and Passive Humoral Immunity • Antibodies

Cellular Immune Response 784

MHC Proteins and Antigen Presentation • Activation and Differentiation of T Cells • Roles of Specific Effector T Cells • Organ Transplants and Prevention of Rejection

Homeostatic Imbalances of Immunity 792

Immunodeficiencies • Autoimmune Diseases • Hypersensitivities

Developmental Aspects of the Immune System 796

22 The Respiratory System 801

Functional Anatomy of the Respiratory System 802

The Nose and Paranasal Sinuses • The Pharynx • The Larynx • The Trachea • The Bronchi and Subdivisions • The Lungs and Pleurae

Mechanics of Breathing 816

Pressure Relationships in the Thoracic Cavity • Pulmonary Ventilation • Physical Factors Influencing Pulmonary Ventilation • Respiratory Volumes and Pulmonary Function Tests • Nonrespiratory Air Movements

Gas Exchanges Between the Blood, Lungs, and Tissues 824

Basic Properties of Gases • Composition of Alveolar Gas • External Respiration • Internal Respiration

Transport of Respiratory Gases by Blood 828

Oxygen Transport • Carbon Dioxide Transport

Control of Respiration 834

Neural Mechanisms • Factors Influencing Breathing Rate and Depth

Respiratory Adjustments 838

Exercise • High Altitude

Homeostatic Imbalances of the Respiratory System 839

Chronic Obstructive Pulmonary Disease (COPD) • Asthma • Tuberculosis (TB) • Lung Cancer

Developmental Aspects of the Respiratory System 841

SYSTEM CONNECTIONS 843

23 The Digestive System 849

PART 1 OVERVIEW OF THE DIGESTIVE SYSTEM 850

Digestive Processes 851

Basic Functional Concepts 852

Digestive System Organs: Relationships 852

Relationship of the Digestive Organs to the Peritoneum • Blood Supply: The Splanchnic Circulation • Histology of the

Alimentary Canal • Enteric Nervous System of the Alimentary Canal

PART 2 FUNCTIONAL ANATOMY OF THE DIGESTIVE SYSTEM 856

The Mouth and Associated Organs 856

The Mouth • The Tongue • The Salivary Glands • The Teeth

The Pharynx 861

The Esophagus 862

Digestive Processes: Mouth to Esophagus 863

The Stomach 864

Gross Anatomy • Microscopic Anatomy • Digestive Processes in the Stomach • Regulation of Gastric Secretion • Regulation of Gastric Motility and Emptying

The Small Intestine and Associated Structures 874

The Small Intestine • The Liver and Gallbladder • The Pancreas • Regulation of Bile and Pancreatic Secretion and Entry into the Small Intestine • Digestive Processes in the Small Intestine

The Large Intestine 887

Gross Anatomy • Microscopic Anatomy • Bacterial Flora • Digestive Processes in the Large Intestine

PART 3 PHYSIOLOGY OF DIGESTION AND ABSORPTION 892

Digestion 892

Mechanism of Digestion: Enzymatic Hydrolysis • Digestion of Carbohydrates • Digestion of Proteins • Digestion of Lipids • Digestion of Nucleic Acids

Absorption 895

Carbohydrate Absorption • Protein Absorption • Lipid Absorption • Nucleic Acid Absorption • Vitamin Absorption • Electrolyte Absorption • Water Absorption • Malabsorption of Nutrients

Developmental Aspects of the Digestive System 898

Digestive System After Birth • Aging and the Digestive System

SYSTEM CONNECTIONS 900

24 Nutrition, Metabolism, and Body Temperature Regulation 906

Diet and Nutrition 907

Carbohydrates • Lipids • Proteins • Vitamins • Minerals

Overview of Metabolic Reactions 913

Anabolism and Catabolism • Oxidation-Reduction Reactions and the Role of Coenzymes • ATP Synthesis

Metabolism of Major Nutrients 917

Carbohydrate Metabolism • Lipid Metabolism • Protein Metabolism

Metabolic States of the Body 930

Catabolic-Anabolic Steady State of the Body • Absorptive State • Postabsorptive State

The Metabolic Role of the Liver 935

Cholesterol Metabolism and Regulation of Blood Cholesterol Levels

Energy Balance 938

Obesity • Regulation of Food Intake • Metabolic Rate and Heat Production • Regulation of Body Temperature
