Not always was the Kangaroo as now we do behold him, but a different Animal with four short legs. . . . He was grey and he was woolly, and his pride was inordinate: he danced on a sandbank in the Middle of Australia, and he went to the Big God Nqong. He went to Nqong at ten before dinner-time, saying: 'Make me different from all other animals; make me popular and wonderfully run after by five this afternoon.' Up jumped Nqong from his bath in the salt-pan and shouted, 'Yes, I will!' Nqong called Dingo—Yellow Dog Dingo—always hungry, dusty in the sunshine, and showed him Kangaroo. Nqong said, 'Dingo! Wake up, Dingo! Do you see that gentleman dancing on an ash-pit? He wants to be popular and very truly run after. Dingo, make him so!' (Rudyard Kipling, 'The Sing-Song of Old Man Kangaroo', *Just So Stories*, 1902).

(2) Punctuating two or more sentences as if they were one, as in *I came, I saw, I conquered* (translating Latin *Veni, vidi, vici*) and *Come on, let's get going!* See BIBLE, COMMA, COORDINATION, HYPOTAXIS, ORATURE. [GRAMMAR, STYLE, WRITING]. T.MCA.

**PARCHMENT** [13c: from French *parchemin*, Latin *pergamena*, from *Pergamena charta* a leaf or sheet from Pergamon, a Greek city in Asia Minor, where the material was developed as an alternative to papyrus after an embargo on its export from Egypt to Pergamon in the 3c BC]. Animal skin treated to make it suitable as a writing surface. Parchment was the commonest writing surface until the late Middle Ages, when it was replaced by paper. It was usually made from the skin of sheep or goats. If made from calfskin, it was *vellum* [from Latin *vitellinum*, from *vitellus* a calf]. Both terms, however, are applied to other

treated animal skins. The skin was soaked in lye or a similar corrosive to soften it and reduce and weaken the hairs, which were then scraped off. The skin was rinsed, stretched, and dried, scraped again, then rubbed with a pumice-stone for smoothness. Often it was treated with chalk to add lustre and further smoothness to the surface, then cut for folding into quires. Such a surface is durable and can be very thin and supple, but has always been expensive. A large parchment Bible, two feet high and a foot and a half wide, would consume a large herd of animals: 150 skins at one per folio to provide 300 leaves and 600 pages. Modern parchment is a vegetable product, usually an expensive cotton- or linen-based writing paper that imitates some of such qualities as heaviness, stiffness, and smoothness. See BOOK. Compare PAPER, VOLUME. [TECHNOLOGY]. W.W.B.

**PARENTHESIS** [16c: through Latin from Greek *parèntesis* ('a placing between')] qualifying matter introduced into a passage and the device that marks it. Stress: 'pa-REN-the-sis'. Plural *parentheses* ('seez'). (1) In grammar, a qualifying, explanatory, or appositive word, phrase, clause, or sentence that interrupts a construction without otherwise affecting it. A written or printed parenthesis may be marked by pairs of commas, dashes, or round brackets/parentheses: *Our new manager (he has just this minute arrived) would like to meet you*. A spoken parenthesis has the same intonation as an aside. (2) In the plural, a name for round brackets: the general term in AmE, but a less common, more technical term in BrE (short form *parens*). The phrase *in parentheses*, however, refers to material within any pair of parenthetical marks: brackets, dashes, or commas. See ACADEMIC USAGE, ASIDE, BRACKETS, COMMA, DASH, PUNCTUATION. [GRAMMAR, STYLE, WRITING]. T.MCA.

**PARLARY, PARLYAREE**. See POLARI.

**PARODY** [16c: from Latin *parodia*, from Greek *parōidia* ('something sung alongside') a burlesque poem or song]. An amusing or mocking imitation of the style of a writer or speaker, usually requiring a basic parallelism of form and style and sudden unexpected twists, as in the second of the following stanzas:

Beneath these rugged elms, that yew-tree's shade  
Where heaves the turf in many a mouldering heap,  
Each in his narrow cell for ever laid,  
The rude forefathers of the hamlet sleep.  
(Thomas Gray, *Elegy Written in a Country Church-Yard*, 1751)

Here where the flattering and mendacious swarm  
Of lying epitaphs their secrets keep,  
At last incapable of further harm

The lewd forefathers of the village sleep.  
(John Squire, in *Collected Parodies*, 1921)

Parody often emphasizes and exaggerates typical features of the original text or performance in order to make a point and, whether friendly or hostile, exploits any possible weakness. It is usually brief but may encompass a whole literary work: Henry Fielding parodied Samuel Richardson's *Pamela* (1740) in *Joseph Andrews* (1742), Jane Austen parodied the Gothic novel in *Northanger Abbey* (1818), and Kingsley Amis parodied the traditional bildungsroman in *Lucky Jim* (1954). The inconsequential arguments and failures of communication in plays like *Waiting for Godot* by Samuel Beckett (1955) and *The Caretaker* by Harold Pinter (1960) seem like parodies of plays by George Bernard Shaw, John Galsworthy, and others, which offered solutions to social problems through dramatic debate. Political or other styles of speech are often parodied on the stage or on television. Compare PASTICHE. [LITERATURE]. R.C.

**PAROLE.** See **LANGUE AND PAROLE.**

**PARONOMASIA.** See **PUN.**

**PARSING** [16c: from the verb *parse*, from Latin *pars/partis* a part, abstracted from the phrase *pars orationis* part of speech]. (1) Analysing a sentence into its constituents, identifying in greater or less detail the syntactic relations and parts of speech. (2) Describing a word in a sentence, identifying its part of speech, inflectional form, and syntactic function.

**Traditional parsing.** Parsing was formerly central to the teaching of grammar throughout the English-speaking world, and widely regarded as basic to the use and understanding of written language. When many people talk about formal grammar in schools, they are referring to the teaching of *parsing* and *clause analysis*, which virtually ceased in primary and secondary education in the English-speaking world in the 1960s, and in tertiary education has been superseded by linguistic analysis. The argument against traditional parsing is threefold: that it promotes old-fashioned descriptions of language based on Latin grammatical categories, that students do not benefit from it, and that it is a source of frustration and boredom for both students and teachers. The argument in favour of parsing is fourfold: that it makes explicit the structure of speech and writing, exercises the mind in a disciplined way, enables people to talk about language usage, and helps in the learning and discussion of foreign languages. A compromise position holds that the formal discussion of syntax and function can be beneficial,

but should take second place to fluent expression and the achievement of confidence rather than dominate the weekly routine.

**Computational parsing.** When a computer parses, it analyses a string of characters in order to associate groups in the string with the syntactic units of a grammar. Computers do this mostly for programming languages but also sometimes for English. Programming languages are defined by simple but precise grammars, and the translation of these languages into machine language requires knowing which rules apply to each statement. Typical grammars for computer languages take a few dozen rules and parse input at the rate of several seconds per statement. The grammars for such languages are designed to be unambiguous: only one 'parse' is possible for each statement. Computer scientists have often thought of applying similar techniques to natural language, but a language like English requires hundreds or thousands of rules, does not conform to the neat mathematical models that allow the rapid parsing of computer languages, often contains ambiguities, and has not yet been described in sufficient detail to be successfully parsed by a machine. See **CLAUSE ANALYSIS, COMPUTING, KOREA.** [EDUCATION, GRAMMAR, TECHNOLOGY]. T.MCA., M.L.

**PARTICIPLE** [14c: from French *participle*, with epenthetic *l*, from Latin *participium*, translating Greek *metokhē* a part-taking]. In grammatical description, the term for two non-finite verb forms, the *-ing* participle (known traditionally as the *present participle*) and the *-ed* participle (known traditionally as the *past participle* or *passive participle*).

**The *-ing* (present) participle.** This verb form ends with the inflection *-ing* and is used in combination with a form of the auxiliary *be* for the progressive continuous, as in: *am driving, was playing, will be going, has been talking*. It is also used as the verb in an *-ing* participle clause, as in: *Marvin and Jane liked playing with their grandchildren; Despite his protestations, Stanley was not averse to having a birthday party; John and Linda were happy to see Daniel behaving himself during the meal; After giving her lecture, Venetia had lunch with me at the College; The young man driving me to the shopping centre was Jeremy*.

**The *-ed* (past) participle.** This verb form ends with the inflection spelled *-ed, -d,* or *-t* for all regular verbs and many irregular verbs, but many irregular verbs form it with an *-en* or *-n* inflection (as in *stolen, known*) or with a change in the middle vowel (as in *sung*, in which case it is often identical with the simple past form, as with *sat*), or a combination of the two methods

(as with *written*). The *-ed* participle combines with a form of the auxiliary *have* for the perfect: *has cared, had said, may have walked*. It combines with a form of the auxiliary *be* for the passive: *is paid, was told, are being auctioned, could have been seen*. It is also used as the verb in an *-ed* participle clause: *I had my study redecorated; Asked for his opinion, Ian was non-committal; Among the objects recovered from the ship was a chair stamped with the captain's initials*.

**Attributive uses.** Both participles may be used in the attributive position like an adjective, but only if the participle indicates some sort of permanent characteristic: *running water, the missing link, a broken heart, lost property*. The phrase *The Laughing Cavalier* is possible as the name of a picture (the man is laughing for all time), but *\*Who is that laughing man?* would be odd in most contexts. The *-ed* participle usually has a passive meaning (*listed buildings, burnt almonds, written instructions*), but may be used actively with some intransitive verbs (*an escaped prisoner*). Some participles that are not permanent enough to be used attributively alone are acceptable when modified (*their long-awaited visit*).

**Participles and word-formation.** There is a range of usage between participles which remain fully verbal (*running* in *swiftly running water*) and those that in some contexts are completely adjectival (*interesting* in *a very interesting idea; disappointed* in *a very disappointed man*). There are also some participle-like formations for which there are no corresponding verbs: *an unexplained discrepancy, an unconvincing narrative*, for which there are no conventional verbs *\*to unexplain* and *\*to unconvince*; *a bearded man, a forested hillside, a blue-eyed cat, a one-armed bandit*, common constructions which are aspects of word-formation rather than grammar.

**Participial clauses.** Traditionally known as *participial phrases*, such clauses function in various ways: (1) They can follow noun phrases (like abbreviated relative clauses): 'The train (which is) *now standing at Platform 5* is . . .', 'The food (that was) *served on the plane* was . . .'. (2) They can function rather like finite subordinate clauses, with or without a conjunction, and with various meanings, often of time ('*While running for the train*, he lost his wallet'), reason ('*Jostled by the crowd*, he did not really see what happened'), or result ('The train started suddenly, *throwing an elderly passenger to the floor*'). (3) They can follow an object + verb of the senses: 'We could all hear him *singing in the bath*'; 'He didn't see the soap *lying on the floor*.' Occasionally this multiplicity of functions may lead to ambiguity: 'I witnessed a sergeant push his way past supporters drinking openly in the

aisle' (letter in the *Daily Telegraph*, 27 May 1988).

**The dangling participle.** When a participial clause contains its own subject, it is called an *absolute clause*, as in '*Weather permitting*, we'll go sailing this weekend'. See ABSOLUTE, ABSOLUTE CLAUSE. When, as is more usual, such a clause does not contain a subject, it normally refers grammatically to the subject of the main clause: in 'I made my way, *depressed*, to the ticket office', it is clear who was depressed, and in 'The woman on the chair beside me was tipped on to my lap, *complaining all the time*' it is clear who was complaining (both from Colin Thubron, *Behind the Wall*, 1987). Failure to maintain such a clear relationship leads to the so-called *dangling, hanging, misrelated, or unattached participle*, as in: 'Her party was the first to discover that there were no sleepers left. The entire section had been booked. *Faced with a forty-four hour journey*, this was not good news' (Patrick Marnham, *So Far from God*, 1985).

Although 'misattached participle' would usually be an appropriate label, in the above example the participle does seem to hang in mid-air. It presumably refers to the author, but he has not mentioned himself for several sentences. With participles that attach themselves to the wrong noun, the effect may be momentarily confusing even if the writer's meaning is clear: '[Sir Mortimer Wheeler's] celebrity on television was so great that, *boarding an empty bus late one rainy night when in a white tie with rows of medals*, a conductress arranged with the driver to take him to the door of Wheeler's small house off Haymarket' (Anthony Powell, *To Keep the Ball Rolling*, 1982). Here, the meaning may be fairly obvious, but on first reading it is the conductress who boards the bus. In the following, it is a theory that is apparently called *locust bean* in the first example and the lines that apparently provided the clues in the second: 'Carob crops have been grown in the arid areas around the Mediterranean for centuries. *Known also as the "locust bean"*, one theory has it that these were the locusts on which John the Baptist is said to have survived while in the wilderness' (*Daily Telegraph*, 23 May 1986); '*By taking a great many such observations and analysing them statistically*, the lines gave crucial clues about the intervening space between us and quasars, and therefore of the early universe's history' (in 'Bonfire of the Cosmos', *Observer*, 16 Apr. 1989).

Sometimes, greater ambiguity results: '*Forced to sit on upturned buckets in front of fiercely glowing wood fires*, various friends of the President had pressed them to sample the young wine and the old' (Beryl Bainbridge, *Winter Garden*, 1980). On reflection, we may decide that it is the

'they' of the story who had to sit on the buckets, but it could be the President's friends. At other times, we are given absurd pictures: 'After travelling by road all day . . . , the 123-room Sahara Palace is an air-conditioned all-mod-cons watering hole' (*Daily Telegraph*, 22 Sept. 1984); 'There, coasting comfortably down the attractive green coastline, the town of Malacca with its prominent hill was very evident' (Tim Severin, *The Sindbad Voyage*, 1982).

**Participial prepositions and conjunctions.** Apparent exceptions to the rule that participles should be properly attached are a number of participle forms that now function as prepositions, such as *following* in 'There was tremendous clearing up to do following the storm', and *including* in 'We all enjoyed ourselves, including the dog'; and participle forms that are now conjunctions, such as *providing (that)* and *provided (that)* in 'Everything will be all right, providing/provided you don't panic', and *given* in 'Given the difficulties, I'd say it was a success.' See ENDING, GERUND, VERB. [GRAMMAR, STYLE, USAGE]. S.C., S.G.

**PARTICLE** [14c: through French from Latin *particula* a small part]. A word that does not change its form through inflection and does not fit easily into the established system of parts of speech. Among individual words commonly so classed are the negative particle *not* (and its contraction *n't*), the infinitival particle *to* (*to go*; *to run*), the imperative particles *do*, *don't* (*Do tell me*; *Don't tell me*) and *let*, *let's* (*Let me see now*; *Let's go*). There is also a set of adverbial and prepositional particles that combine with verbs to form phrasal verbs (*out* in *look out*; *up* in *turn up*) and prepositional verbs (*at* in *get at*; *for* in *care for*). The term *pragmatic particle* is sometimes used for words that play a role in maintaining discourse and are also known as *fillers* and *discourse markers*: *oh*, *ah*, *well*, *yes*, *no*, *actually*, *anyway*. See ADVERBIAL PARTICLE, PART OF SPEECH, PHRASAL VERB, PREPOSITION, PREPOSITIONAL VERB. [GRAMMAR]. S.G.

**PARTITIVE** [16c: from Latin *partitivus* relating to a part (not a whole)]. A grammatical term for constructions which are used to refer to a part of a whole (as opposed to all of it). In French, the preposition *de* often has a partitive function: *J'ai bu de la bière* (I drank of beer: 'I drank some beer', not all the beer or all possible beer). In such usages, *de* is *l'article partitif* (the partitive article). In English, the use of determiners like *some* (*I drank some beer*) is comparable. However, the term is usually restricted to countable nouns followed by *of*, used to ascribe quantity or quality to mainly uncountable nouns: *bit* in 'a bit of cheese'; *kind* in 'a kind of loving'. In

terms of quantity, there are four kinds of partitive nouns: general words that can go with many nouns (a *piece* of paper); nouns with specific collocations (a *lump* of sugar, a *loaf* of bread, a *blade* of grass); words for measures (a *pint* of milk, 50 *hectares* of land); parts of singular countable things (a *branch* of a tree, a *page* of a book). In terms of quality, there are three common partitives: *kind* (a kind of loving); *sort* (new sorts of experiments), *type* (some types of business). When used with *these*, *those*, two usages are common: traditionally approved concord (*these kinds of book*; *these kinds of books*), and a casual singular use (*these kind of books*). *Kind of* and *sort of* are extensively and informally used not only as part of a noun phrase but also adverbially to make statements less precise: *It's kind of nice to be here again*; *I was sort of sad to see them go*; *She was annoyed—a mountain of work left for her to do, kind of thing*. Because such usage is casual, colloquial, and often repetitious, people interested in precision widely condemn it as sloppy. A distinct orthography has developed, because of the prevalence of the usage and its controversial nature: *It's kinda nice*; *I was sorta sad*. This usage includes both the partitive *a cuppa tea*, *a pinta milk*, and their elliptical reduction in BrE to countable nouns ('Have another *cuppa*'; 'Have you had your daily *pinta*?'). The commercial slogan *Drinka pinta milka day* plays with partitives, orthography, and the strong-weak syllabic rhythms of the language. [GRAMMAR, STYLE]. S.C., T.MCA.

**PART OF SPEECH** [16c: a translation of Latin *pars orationis* a part or element of discourse, in turn a translation of the two Greek phrases *méros tês léxeōs* (Aristotle) and *méros lôgou* (Dionysius Thrax)]. A grammatical category or class of words. Traditional grammars of English generally list eight parts of speech: *noun*, *pronoun*, *verb*, *adjective*, *adverb*, *preposition*, *conjunction*, *interjection*. The idea that there are, or should be, eight categories originates in a list made by the grammarian Dionysius Thrax, in Alexandria (c.100 BC). In the accompanying table, Thrax's parts of speech appear on the left, their Roman loan translations next, and the English terms on the right, each with the century in which it was first used.

The original eight categories were suited to the description of classical Greek. In Latin, however, there is no article, and its place in the list was taken by the interjection. Medieval grammarians altered the categories by, in effect, inventing the adjective and downgrading the interjection to make room for it. When the list was applied to English, the article proved useful again, but not as a major part of speech (because

Greek	Latin	English
ónoma	nomen	14c: noun
rhēma	verbum	14c: verb
—	adjectivum	14c: adjective
metokhē	participium	14c: (participle)
árrhron	(articulum)	13c: (article)
antónumia	pronomen	16c: pronoun
próthesis	praepositio	14c: preposition
epirrhēma	adverbium	16c: adverb
súndesmos	coniunctio	14c: conjunction
—	interiectio	15c: interjection

the English articles do not have complex forms like the Greek article), the participle became a subcategory of the verb, and the interjection regained its former status, so that there were eight parts once more.

The parts of speech are traditionally defined by a mixture of formal and notional criteria. This mixture has posed problems for 20c grammarians, and since the development of structural linguistics, many have come to prefer the term *word class*, for which the criteria are rigorously restricted to form alone. Some contemporary linguists and grammarians prefer to avoid the traditional term; others use it by and large in the same sense as word class, and treat the two as interchangeable. The contemporary categories, based on formal criteria and however named, are more numerous than the traditional parts of speech and can be subcategorized. In English, for example, grammarians recognize a class of *determiners* that introduce noun phrases, and subclasses of determiners include: the definite article *the* (*the weather*); the indefinite article *a/an* (*a pipe*); the demonstratives (*that painting*); the possessives (*our family*); and the indefinite pronouns (*some money*). Similarly, verbs may be distinguished as full verb and auxiliary verb, and within the auxiliary class there is the class of modal auxiliary or modal verb (*can, may, will, etc.*).

See ADJECTIVE, ADVERB, ADVERBIAL, ARTICLE<sup>1</sup>, AUXILIARY VERB, CONJUNCTION, DEMONSTRATIVE, DETERMINER, GRAMMATICAL CATEGORY, INTERJECTION, MODAL VERB, NOUN, PARTICIPLE, PARTICLE, POSSESSIVE PRONOUN, PREPOSITION, PRONOUN, VERB, WORD CLASS. [GRAMMAR].

S.G., T.MCA.

**PARTRIDGE, Eric (Honeywood)** [1894-1979]. New Zealand-born lexicographer, and writer on usage and other subjects, born in Waimata Valley, North Island, and educated in Australia. His studies at the U. of Queensland were interrupted by four years as a private in the Aus-

tralian infantry during the First World War, in which he saw action at Gallipoli and the Somme. In the Second World War, though over military age, he again volunteered. After a spell as an army education officer he was invalided out, only to join the Royal Air Force, in which, after serving as a storeman, he became clerk to 'Writer Command', a group of writers including H. E. Bates, John Pudney, and W. Vernon Noble. The group was commissioned to publicize the Service. His military experiences, and encounters with all sorts and conditions of men, reinforced a lifelong interest in the underside of the language.

After graduating, he became a Queensland Travelling Fellow at Oxford. Having gained an MA and B.Litt. simultaneously there, he taught at the universities of Manchester and London, but boredom and dislike of lecturing made him found his own publishing firm, Scholartis, in 1927. He launched several young authors, including Norah Hoult, Gerald Hanley, H. E. Bates, and Norah James. Besides these and the reissue of a number of classics (some 90 titles in all), Partridge's most important publications were (with John Brophy) the discursive glossary *Songs and Slang of the British Soldier in the Great War* (1930) and his annotated version of *A Classical Dictionary of the Vulgar Tongue*, by Francis Grose (1931). Cecil Franklin, chairman of the London publishers Routledge & Kegan Paul, saw the potential of these works, and, when Scholartis closed because of the Depression in 1931, commissioned Partridge to produce a comprehensive dictionary of slang.

Published in 1937, *A Dictionary of Slang and Unconventional English* (see entry) was a worldwide success. It was followed by *Usage and Abuse: A Guide to Good English* (1942); *Shakespeare's Bawdy* (1947); *A Dictionary of the Underworld* (1950); *Origins: An Etymological Dictionary of English* (1958); *A Dictionary of Catch Phrases* (1977: see entry); and over 20 other books of essays on language, some prescriptive, some descriptive. Partridge's influence has been twofold: generating curiosity about the language among its speakers in all walks of life; working for the adequate lexicographical coverage of colloquial and taboo usage, a procedure now, partly as a result of his influence, standard for major dictionaries. See index. [BIOGRAPHY, EUROPE, OCEANIA, REFERENCE, USAGE]. P.B.

**PASSIVE VOCABULARY.** See VOCABULARY.

**PASSIVE (VOICE)** [14c: from Latin *passivus* capable of suffering or being affected]. A grammatical term that contrasts with *active (voice)*: where the sentence *Helen met the visitors* is in the active voice, the sentence *The visitors were met by Helen* is in the passive voice. The American grammarian Dennis Baron (in 'Going out of style?', *English Today* 17, Jan. 1989) has argued that since the 1940s, especially in the US, writers of guides to good writing have increasingly urged their readers to avoid or minimize passive constructions: the passive voice has not only become associated with general wordiness and confusion but also, especially in its 'agentless' form, with evasiveness and deception, as in *The bombs were dropped on innocent civilians* (by whom?). In 1946, George Orwell, in his essay 'Politics and the English Language' (*Horizon*, vol. 13), proposed the principle 'Never use the passive where you can use the active.' However, as has often been pointed out, Orwell (like other commentators opposed to the passive) has nonetheless used it freely: for example, when in the same essay he says that in certain poor styles 'the passive voice is wherever possible used in preference to the active'.

Baron notes that critics who downgrade the passive apply to its use such adjectives as 'lazy', 'hazy', 'vague', 'distant', 'watery', and 'wordy'. He also draws attention to William Zinsser's observation: 'The difference between an active-verb style and a passive-verb style—in pace, clarity and vigor—is the difference between life and death for a writer' (in *On Writing Well*, Harper & Row, 1980). Opposition to the passive has been strong in recent years in two areas: among campaigners for plain English and in *style checkers*, word-processing aids to the editing of especially business documents. *Webster's Dictionary of English Usage* (1989), however, lists three situations in which the passive has generally been regarded as useful: (1) When the receiver of the action is more important than the doer, as in *The child was struck by the car*. (2) When the doer is unknown (*The store was robbed last night*), unimportant (*Plows should not be kept in the garage*), or too obvious to be worth mentioning (*Kennedy was elected president*). (3) In scientific writing, because it helps establish a tone of detachment and impersonality. The dictionary's entry on *passive* concludes: 'The point, finally, is that sentences cast in the passive have their uses and are an important tool for the writer. Everyone agrees you should not lean too heavily on passive sentences and that you should especially avoid awkwardly constructed passives. The few statistical studies we have seen

or heard of indicate that you are likely to use the active voice most of the time anyway' (p. 721). See **ACADEMIC USAGE**, **ORWELL**, **PASSIVIZATION**, **STYLE CHECKER**, **TENSE**, **VERB**, **VOICE**. [GRAMMAR, STYLE, USAGE]. T.MCA.

**PASSIVIZATION** [1965: coined by Noam Chomsky]. (1) Turning an active sentence or clause into a corresponding passive sentence or clause: *Diana opened the door* becoming *The door was opened by Diana*. (2) The corresponding transformational rule formulated at the earliest period of generative grammar, intended to reflect the relationship of the two sentences and to derive the passive sentence from its basic active sentence. In effect, the rule moved the active object to subject position, moved the active subject into a *by*-phrase (which can be optionally deleted), and added the auxiliary verb *be* and (on the following main verb) the passive participle inflection (*-ed* in regular verbs). Passivization applies when the active sentence contains an object. If the sentence contains two objects (an indirect object followed by a direct object) each object may become the passive subject: the active sentence *Natalie showed Derek [IO] the photographs [DO]* becoming either *Derek was shown the photographs (by Natalie)* or *The photographs were shown to Derek (by Natalie)*. Prepositional verbs, such as *look at* and *approve of*, often occur in the passive. The noun phrase following the preposition is the prepositional object and can often be made passive subject, the preposition being left 'stranded' at the end: *All the professors approved of the Provost's action* becoming *The Provost's action was approved of (by all the professors)*. See **PASSIVE (VOICE)**. [GRAMMAR]. S.G.

**PASSY, Paul Édouard** [1859-1940]. French phonetician and specialist in language teaching, the son of Frédéric Passy, co-founder of the International Peace League and first winner of the Nobel Peace Prize. Born at Versailles, he studied languages at the *École des hautes études* and chose to teach English as an alternative to military service. In 1886, he formed an organization of modern language teachers which was joined by Otto Jespersen, Wilhelm Viëtor, and Henry Sweet, and became the forerunner of the International Phonetic Association. Discussion resulted in the now widely used IPA system of phonetic transcription. Passy issued a journal, later called *Le Maître phonétique*, and wrote a number of manuals for the teaching of French and English for foreign learners. He appears to have been the first to use the term *Direct Method (méthode directe)* in a pamphlet written for the French Ministry of Education in 1899. He was

referring specifically to the Reform Movement initiated by Viëtor and others, but the term has also been widely associated with the rather different method practised by the Berlitz schools. See *index*. [BIOGRAPHY, EDUCATION, EUROPE, SPEECH]. P.C.

**PAST** [13c: a variant of *passed*]. A term for a tense of the verb concerned with events, actions, and states that no longer occur. The *simple past* (or *preterite*) is regularly formed with *-ed* (*walked*). The complex past forms are: the *past continuous* (or *past progressive*) which combines a past form of auxiliary *be* with the *-ing* participle (*was walking*); the *past perfect* (or *pluperfect*), which combines auxiliary *had* with the *-ed* participle (*had walked*); the *past perfect continuous*, which combines these two (*had been walking*). Compare FUTURE, PRESENT. See PRETERITE, TENSE. [GRAMMAR]. S.G.

**PASTICHE** [18c: through French, from Italian *pasticcio*, from Vulgar Latin *pasticium*, pie. Cognate with *pasta*]. A text consisting wholly or largely of direct borrowings from one or more other works. Language, imagery, motifs, situations, and/or character-types may be derivative. It is different from *plagiarism*, which conceals borrowings in an attempt to deceive. Pastiche is closer to *parody*, with adherence to the exact forms of the original, and need not be humorous or derisive; indeed, pastiches are often sincere expressions of admiration for the original works. Used seriously, the term recognizes the totality of literature and illustrates in an extreme form the principle of *intertextuality*. The pastiche was largely out of favour after the Romantic quest for unique individual inspiration, but some 20c writers have used it to good effect. In *The Waste Land* (1922), Eliot included allusions and direct quotations from a variety of backgrounds: for example, nursery rhymes, Dante, Gérard de Nerval, Kyd, and the Upanishads, all within a few lines of each other. Some writers and topics have been particularly prone to pastiche, such as Conan Doyle's Sherlock Holmes stories and Ian Fleming's James Bond novels; demand for additions to the 'canon' appears to prompt such 'apocryphal' works, which seldom enjoy the prestige of the originals. The term is often used to imply a lack of originality and excessive dependence on previous writers. See INTERTEXTUALITY, MOCK, PARODY, PLAGIARISM. [LITERATURE, STYLE]. R.C.

**PASTORAL** [14c: from Latin *pastoralis* of shepherds and sheep]. A poem or other work about idealized rural life, sometimes 'contrasting its purity and innocence with urban corruption. The pastoral convention began with the *Works*

and *Days* of the Greek poet Hesiod (8–7c BC), and developed in the poems of the Sicilian Greek poet Theocritus (3c BC) and the *Eclogues* of Virgil (1c BC, which were widely read and imitated by poets of the Renaissance, first in Italy and later in England. A pastoral poem is sometimes called an *eclogue* or an *idyll*. Pastoral poetry in English began in the 16c: for example, Edmund Spenser's *Shepherd's Calendar* and Sir Philip Sidney's prose romance *Arcadia*. Shakespeare adopted it in *As You Like It*, with an added sense of realism that shows the discomforts as well as the joys of the countryside. In the 18c, the pastoral was more artificial, as in the young Pope's *Pastorals*:

First in these fields I try the sylvan strains,  
Nor blush to sport on Windsor's blissful plains:  
Fair Thames, flow gently from thy sacred spring,  
While on thy banks Sicilian Muses sing;  
Let vernal airs through trembling osiers play,  
And Albion's cliffs resound the rural lay.

(*The First Pastoral, or Damon*, 1709)

Pope further attempted pastoral poetry in *The Messiah* (1712), imitating Virgil's fourth *Eclogue* and drawing on the Book of Isaiah. The pastoral stories and imagery of the Bible, especially Psalm 23 and the idea of Christ as the Good Shepherd, have been influential on English pastoral. Other 18c pastoral poems include *The gentle Shepherd* (1715) by Alan Ramsay (1686–1758) and the *Persian Eclogues* (1742) of William Collins (1721–59). Samuel Johnson, however, thought poorly of the pastoral, both for its pictures of a golden age and also for its language:

Other writers, having the mean and despicable condition of a shepherd always before them, conceive it necessary to degrade the language of pastoral by obsolete terms and rustick words, which they very learnedly call Dorick. Without reflecting, that they thus become authors of a mangled dialect, which may as well refine the speech as the sentiments of their personage, and that none of the inconsistencies which they endeavour to avoid is greater than that of joining elegance of thought with coarseness of diction (*Rambler* 37, 1750).

Wordsworth called his tragic poem 'Michael' (1800) a pastoral, and present-day critics have used the word to describe any celebration of simple life or work written in a mood of escapism. However, the pastoral in English literature may also be seen as any work that reflects a love of the unspoiled country scene, occurring in novels well removed from the original tradition:

She was stronger, she could walk better, and in the wood the wind would not be so tiring as it was across the park, flattening against her. She wanted to forget, to forget the world, and all the dreadful, carrion-bodied people. . . . Little gusts of sunshine blew, strangely bright, and lit up the celandines at the wood's edge,

under the hazel-rods, they spangled out bright and yellow.

(D. H. Lawrence, *Lady Chatterley's Lover*, 1928).

In the ragged hedge on the opposite side the boughs of the elm trees swayed just perceptibly in the breeze, and their leaves stirred faintly in dense masses like women's hair. Surely somewhere nearby, but out of sight, there must be a stream with green pools where dace were swimming? . . . 'It's the Golden Country—almost,' he murmured.

(George Orwell, *Nineteen Eight-Four*, 1949).

The pastoral style has kept words like *glade*, *rill*, *swain*, *sward*, and *sylvan* in many people's passive vocabulary, and has fostered a certain sentimentality about sheep and shepherds. See POETRY. [LITERATURE, STYLE].

R.C.

**PAST PARTICIPLE.** See PARTICIPLE.

**PAST PERFECT.** See PERFECT, PLUPERFECT.

**PATHETIC FALLACY** [1856: coined by John Ruskin in *Modern Painters*]. A phrase associated with the figure of speech *personification*, a pejorative comment on the inclination common among poets to attribute human qualities to nature: *the spendthrift crocus; the cruel, crawling foam*. The term 'pathetic' refers to the arousal of feeling, not to pity. Ruskin coined it to comment on 'the difference between the ordinary, proper, and true appearance of things to us; and the extraordinary, or false appearances, when we are under the influence of emotion, or contemplative fancy'. He objected to such usage because, however attractive or dramatic it may be, it 'morbidly' imputes life and human intent to nature and is part of 'a falseness in all our impressions of external things'. See LAWRENCE, PATHOS, PERSONIFICATION. [LITERATURE, STYLE].

T.MCA.

**PATHOS** [16c: from Greek *páthos* feeling, suffering. Stress: 'PAY-thoss']. A quality in life, art, and language which evokes sadness, pity, or sympathy for loss. Its apt presentation in speech and writing is considered a figure of speech. Shakespeare uses pathos when in *Hamlet* the Queen reports Ophelia's death to Laertes:

There is a Willow growes aslant a Brooke  
That shows his hore leaues in the glassy streame,  
Therewith fantastique garlands did she make  
Of Crowflowes, Nettles, Daises, and long Purples  
that liberrall Shepheards giue a grosser name,  
But our cold maydes doe dead mens fingers call them.  
There on the pendant boughes her cronet weedes  
Clambring to hang, an enuious sliuer broke,  
When downe the weedy trophies and her selfe  
Fell in the weeping Brooke, her clothes spread wide,  
And Marmaide like awhile they bore her vp,  
Which time she chaunted snatches of old tunes,  
As one incapabl of her owne distresse,

Or like a creature natiue and indewed  
Vnto that elament, but long it could not be  
Till that her garments heauy with theyr drinke,  
Puld the poore wretch from her melodious lay  
To muddy death. (Act 4, Scene 7.)

When pathos slips into sentimentality, it evokes contempt as easily as it evokes compassion, whence the general contemporary meaning of *pathetic* (pitiable). Compare PATHETIC FALLACY. [LITERATURE, STYLE].

T.MCA.

**PATOIS** [17c: from Old French *patois* rustic speech, perhaps from *patoier* to handle clumsily, from *pate* paw (Modern *patte*). Pronunciation: 'patwa']. (1) A non-technical term for a dialect, especially if it has low status in relation to a standard, literary language: *peasants speaking a local patois*. Although it is strongly associated with French, the term has been used for such a variety of any language, often to suggest low, mixed usage: 'Alas cried she, in a *patois* dialect, between French and Spanish' (Charlotte Smith, *Ethelinde*, 1789); 'To ascertain that she had nothing *patois* in her dialect' (Hannah More, *Female Education*, 1799). (2) The slang or jargon of a particular group: a *criminal patois*. (3) A common name for a Caribbean creole, especially Jamaican Creole (usually without the definite article): 'She said something in patois and went on washing up' (Jean Rhys, *Voyage in the Dark*, 1934). The meaning varies according to location. In Dominica, St Lucia, Grenada, and Trinidad, it refers to the French-based Creole of the Lesser Antilles. In Guyana, the term is not popular, *Creolese* being preferred. In those countries where French-based Creole is the major vernacular (St Lucia and Dominica), there is a growing feeling that the term is pejorative and *Creole* or *Kweyol* is often used instead. Compare ARGOT, BRITISH BLACK ENGLISH, CANT, CREOLE, DIALOG(UE) (NAIPAUL), LINGO. See MÉTIS. [AMERICAS, STYLE, VARIETY].

T.MCA., L.D.C.

**PATRONYMIC** [17c: from Latin *patronymicus*, Greek *patrōnumikós* of the name of one's father]. A name derived from the name of a father or male ancestor. In English, such names are formed on a Germanic basis with *-son*, such as *Jackson* (Jack's son) and *Robinson* (Robin's son), or are Celtic in origin, including: Scottish and Irish clan names that begin with *Mac* or *Mc* (*MacGregor* or *McGregor* son of Gregor); Irish names that begin with *O* (*O'Neill* Neill's grandchildren); and Welsh names that begin with *ap* (*ap Huw* son of Hugh, Anglicized as *Pugh*). Originally, a patronymic referred to someone's immediate father; for some centuries, however, it has come to have an etymological rather than a personal significance. See MCWORD, -ONYM, PERSONAL NAME. [NAME].

T.MCA.

**PATTER** [14c: a clipping of Latin *Paternoster* Our Father (the name of a common Christian prayer), used as a verb meaning 'to gabble, recite quickly', then as a noun for any gabbling ritual or routine]. (1) Rapid, fluent speech that may or may not make sense or be sincerely intended, like someone going meaninglessly through a ritual learned by heart. (2) The stylized lingo of salesmen, hucksters, sideshow barkers, conjurers, and comedians: 'Look at these lovely hand-made shirts, I ask you, £60 a piece you'd pay in the shops for them, £60, but am I asking £50? Am I asking £40, or even £30?—no, I am not, Sir—I'm asking *only* £20 a piece for these lovely, these *beautiful* . . . Here, just feel the fabric, Madam, just feel it . . .'; 'Nothing up my sleeve, ladies and gentlemen, nothing down my trousers, and we take the bunny rabbit like so, you see—everybody see?—and—hey presto! No more bunny rabbit!' (3) Stylized dialogue, such as the rehearsed routines of stand-up comics, one of whom is the straight man (*A*), the other the funny man (*B*): *A* [pompously] Ladies and gentlemen, a little recitation . . . *B* [rushing on and interrupting] I say, I say, I say! *A* [in feigned irritation] What is it? Can't you see I'm giving a recitation? *B* [undeterred] I say, how d'you make a Swiss roll? *A* [with a sigh of resignation] Well, how *do* you make a Swiss roll? *B* Push him down a mountain! *A* [in a lordly and dismissive manner] I don't wish to know that—kindly leave the stage! (4) Especially in Glasgow in Scotland, words used with skill: *Ah like yur patter, Jimmy—yur patter runs like watter*. Someone fluent and garrulous, whether sincere or otherwise, is a *patter merchant*. From this usage, the term has been extended to Glasgow dialect, often called *the patter*. See BADINAGE, BLARNEY, GLASGOW, NONSENSE, REPARTEE. Compare R.A.P. [EUROPE, STYLE, VARIETY]. W.N., T.MCA.

**PEDAGOGICAL GRAMMAR**, short form *ped grammar*. A term in language teaching and applied linguistics for a book or set of books designed to help learners of a foreign or second language, or for a way of presenting grammar that is intended to help students. [EDUCATION, GRAMMAR]. T.MCA.

**PEDANT** [16c: through French from Italian *pedante* teacher, perhaps from Latin *paedagogare* to teach, from Greek *paidagōgós* teacher (of boys), pedagogue. When the word entered English, it was used in the sense 'teacher', but rapidly acquired its current sense]. Someone who uses language to display knowledge and learning, and overemphasizes minor points and rules, especially with regard to grammar and usage. A pedantic usage is often needlessly complicated and filled with specialized terms

designed to make the common or simple appear complex and difficult. Pedantry in writing is sometimes known as *academese* and *educationese*, a style commonly associated with scholarly articles: for example, from a review in 1972, 'Monod is constrained to use the word "telenomy," which stands for living "objects endowed with a purpose or project," and which includes the genetic replication of such purpose. Yet in no way is this to be confused with "teleology" à la Aristotle, or with final causation, and certainly not with "animism," which is the projection of organic telenomy into the universe itself.' See ACADEMIC USAGE, HOLOFERNES, JARGON, PURISM. [EDUCATION, STYLE, USAGE]. W.D.L.

**PEJORATION** [17c: from Latin *peioratio/peiorationis* making worse]. A term in linguistics for the process of semantic change in which there is a depreciation or 'downward' shift in the meaning of a word, phrase, or lexeme: for example, Old English *cnafa* (boy: compare German *Knabe*) became Modern English *knave* someone dishonest; Latin *villanus* (a farm servant) became Middle English *vilain/vilein* (a serf with some rights of independence), then Modern English *villain* (a scoundrel, criminal). Some processes of pejoration have been extremely complex. For example, from the 15c to the 19c, *silly* meant holy, innocent, and piteous (as with the 'sely child' in Chaucer's *Prioress's Tale*); from the 16c to the 19c, it also meant helpless, defenceless, and weak (as in the once-common poetic phrase 'silly sheep'); from the 16c to the 18c it also meant simple, rustic, humble, and homely, then weak in the mind (19c); from the 16c to the 20c, it has meant foolish, absurd, and trivial. The old 'higher' senses of holy, innocent, piteous, and the more neutral senses of helpless, defenceless, weak, rustic, and humble, have all given way to the 'lower' senses of foolish and trivial. See MELIORATION, SEMANTIC CHANGE. [HISTORY, LANGUAGE]. T.MCA.

**PEJORATIVE** [19c: from French *péjoratif*, Latin *peiorativus* making worse, from *peior* worse. Stress: 'pe-JAW-ra-tiv'; formerly also 'PEE-jo-ra-tiv']. (1) A term in philology and semantics that refers to a complex word whose meaning is 'lower' than that of its base: *poetaster* a poor sort of poet; *princeling*, a minor or very young prince. (2) A term in linguistics and lexicography that refers to an expression, tone, or style that serves to devalue, disparage, or dismiss the subject being talked or written about: *illiterate* is pejorative when used to describe people who can read and write, but not to a level acceptable to the speaker (*What an illiterate scrawl!*); *Dago*, a pejorative nickname that distances and

devalues people from or in Iberia and Latin America. Compare DEROGATORY, PEJORATION, [STYLE]. T.MCA.

**PEN, PENCIL.** See WRITING.

**PENGUIN.** A British company that publishes both paperback reprints and originals, founded in 1935 by Allen Lane with the aim of providing the general public with cheap editions of quality writing. Choosing the penguin as a 'dignified but flippant' symbol, Lane produced paperbacks at a fifth of the price of their hardback originals. No one expected him to succeed. Jonathan Cape, the first publisher to pass titles to Lane, in the firm expectation that he would fail, later said: 'You're the b—— that has ruined this trade with your ruddy Penguins' (Michael B. Howard, *Jonathan Cape, Publisher*, 1971). The first ten Penguins to be launched were colour-coded as biographies, detective stories, and novels, and included Dorothy L. Sayers's *The Unpleasantness at the Bellona Club* and Mary Webb's *Gone to Earth*. After a year, 3m books had been sold. In 1937, the *Pelican* imprint appeared, to pre-empt its use by rivals and as a vehicle for more serious books. The first Pelican was Shaw's *The Intelligent Woman's Guide to Socialism and Capitalism*. Between 1940 and 1950, the literary magazine *Penguin New Writing* was published; contributors included Graham Greene, George Orwell, and Tennessee Williams. In 1960, D. H. Lawrence's *Lady Chatterley's Lover* sold 2m copies in six weeks. In 1970, when Lane died, the company was taken over by Pearson Longman. In 1975, Penguin acquired the New York-based publisher The Viking Press, after which the joint name *Viking-Penguin* came into use, especially in the US. Penguin originals that deal with English include the *Penguin English Dictionary* (1965) and David Crystal's *Listen to Your Child* (1986). Pelican originals include Simeon Potter's *Our Language* (1950), F. R. Palmer's *Grammar* (1971), George W. Turner's *Stylistics* (1973), J. D. O'Connor's *Phonetics* (1973), and David Crystal's *The English Language* (1988). See CENSORSHIP, LAWRENCE. [EDUCATION, EUROPE, MEDIA]. T.MCA.

**PEN NAME**, also **pseudonym**, **nom de plume**. (1) A name assumed by a writer to conceal his or her real identity. The name may be obviously false, often with classical associations: for example, *Junius* in the 18c *Letters of Junius* (never definitively identified), *Elia* (Charles Lamb, 1775–1834), and *Palinurus* (Cyril Connolly, 1903–74). More commonly, however, it is a real name for an individual, such as *Hugh MacDiarmid* for Christopher Murray Grieve (1892–1978). Pseudonymity may be desired for

many reasons. Academics wish to avoid confusion between their scholarly and lighter works: the 19c mathematician C. L. Dodgson who became *Lewis Carroll*; the 20c literary critic J. I. M. Stewart who has written detective novels as *Michael Innes*. In the 19c, a masculine pen name served to avert prejudice against women writers: Mary Ann Evans (1819–80), who wrote as *George Eliot*. Such adoptions and others like *Mark Rutherford* (W. H. White, 1831–1913), *Mark Twain* (S. L. Clemens, 1835–1910), and *George Orwell* (Eric Blair, 1903–50) have become the accepted names of the authors. (2) A comparable name in a newspaper or other periodical serving to identify a column written, at one time or successively, by several people, such as *Mandrake* in *The Sunday Telegraph* and *Pendennis* in *The Observer*. See CARROLL, MACDIARMID, ORWELL, QUILLER-COUCH, TWAIN. [LITERATURE, NAME, WRITING]. R.C.

**PENNSYLVANIA DUTCH** [1810s]. (1) With definite article: the rural religious community descended from Anabaptist Protestants from the Rhineland, South Germany, and Switzerland, who settled in the US state of Pennsylvania in the 17–18c, also known as *Mennonites* (from German *Mennonit*, after Menno Simons, a 16c Frisian religious leader) and *Amish* (from German *Amisch*, after Jakob Amman, a Swiss Mennonite bishop). (2) Their High German dialect, more accurately known as *Pennsylvania German*. The term *Dutch* is a variant of *Deutsch* (German) and has no direct link with either the Dutch or their language. The dialect is spoken mainly in the eastern part of the state and is strongly influenced by English, while the English used by 'the Dutchmen' is strongly influenced by the dialect, especially in word order and idioms. See AMERICAN ENGLISH, GERMAN. [AMERICAS, LANGUAGE, VARIETY]. T.MCA.

**PERFECT** [13c: from Latin *perfectus* fully done]. A term for an aspect of the verb concerned with completion. In the Slavonic languages, the *perfective* and *imperfective* are signalled by inflections on the verb, the perfective denoting the completion of the activity and the imperfective its non-completion. In English, the perfect (also sometimes termed the perfective) contrasts with the non-perfect, and is formed by a combination of the auxiliary *have* and an *-ed* participle: *present perfect* (*has/have discovered*); *past perfect* or *pluperfect* (*had discovered*); *present continuous progressive perfect* (*has/have been discovering*); *past continuous progressive perfect* (*had been discovering*); *future perfect* (*will have discovered*); *future continuous progressive perfect* (*will have been discovering*). In general, the perfect indicates a previous indefinite period within

which the action of the verb takes place. For the present perfect, that period begins in the past and extends to the present: *I have lived in London since I was born* (until the present time); *She has broken her arm* (and the effect is still noticeable); *I haven't seen the film* (but may still do so). The past perfect indicates an action previous to another action within a past period: *Tom had not seen his parents since they were divorced*. The past perfect can also denote a past action (past before the past) without any aspectual force, in which case it is often replaced by the simple past: *After he (had) consulted his solicitor, Colin refused to sign the contract*. The future perfect refers to an event before a future event: *Pat will have finished her essay by the time we arrive*. See TENSE, VERB. [GRAMMAR]. S.G.

**PERFORMANCE.** See COMPETENCE AND PERFORMANCE.

**PERFORMANCE VARIETY.** See VARIETY.

**PERFORMATIVE.** See: (1) LOCUTION, SPEECH ACT. (2) PERFORMATIVE VERB.

**PERFORMATIVE VERB** [20c]. A term used in philosophy and linguistics for a type of verb (*apologize, forbid, inform, promise, request, thank*) that can explicitly convey the kind of speech act being performed. In saying *I apologize for my behaviour*, someone is making an apology, which could also be done in part at least without such a verb: *My behaviour was utterly deplorable*. Generally, the performative verb in such sentences is in the simple present active and the subject is *I*, but the verb may be in the simple present passive and the subject need not be *I*: *Smoking is forbidden; The committee thanks you for your services*. A test for whether a verb is being used performatively is the possible insertion of *hereby*: *I hereby apologize; The committee hereby thanks you*. In *hedged performatives*, the verb is present but the speech act is performed indirectly: in saying *I must apologize for my behaviour*, the speaker is expressing an obligation to make an apology, but implies that the acknowledgement of that obligation is the same as an apology. In contrast, *I apologized* is a report, and *Must I apologize?* is a request for advice. [GRAMMAR]. S.G.

**PERIOD** [16c: from French *période*, Latin *periodus*, Greek *períodos* ('way round') a round or length of time, cyclic recurrence, rounded sentence, from *peri* round, *hodós* way]. In the classical study of language, dominant in English during the 16–19c, the term for a sentence regarded as 'complete' because it is composed of a balanced group of main and dependent clauses.

If a period (also known as a *periodic sentence* or a *point*) was well formed, it was called *well-rounded* or *well-turned*: 'If you will not take this as an excuse, accept it at least as a well-turned period, which is always my principal concern' (Thomas Gray, letter to N. Nicholls, 1764). The term also applied, especially in the 16c, to a pause at the end of a spoken sentence: 'the longest Sommer hath his Autumne, the largest sentence his Periode' (Robert Greene, *Penelopes Web*, 1587). By the early 17c, it was being used, alongside *full stop* and *full point*, for the punctuation mark (.), which served to signal the closing pause. In elocution, this mark is associated with the silent counting of time: 'A Comma stops the Voice while we may privately tell one, a Semi-colon two; a Colon three; and a Period four' (John Mason, *An Essay on elocution*, 1748). The theory and practice of pauses associated with punctuation marks has lost most of its force in the 20c, but some teachers continue to use aspects of it, and when reading aloud many people pause for breath or effect at the end of sentences. Currently, *period* is the most widely used and understood term for the point at the end of a sentence: it is the dominant term in North America, but in the UK takes second place to *full stop*. Especially in colloquial AmE, the word *period* is often used as an interjection to indicate that someone has made a decision and has nothing more to say on the matter: 'I forbid them to go, period.' See DOT, ELLIPSIS, PERIODIC SENTENCE, POINT, PUNCTUATION, SENTENCE, STOP. [WRITING]. T.MCA.

**PERIOD DICTIONARIES OF ENGLISH.** The series of multi-volume historical dictionaries, one for each of several stages or periods in the history of English, proposed by William A. Craigie in an address to the Philological Society, 1919. In recent years, the term has been extended to any other dictionary of a period of English. Craigie's periods were: Old English, to 1150; Middle English, 1150–1500; Early Modern English, 1500–1700; Late Modern English, from 1700; Older Scottish, 1375–1700; Modern Scottish, from 1700. Work began in the 1920s on the *Middle English Dictionary* (1952–), which had reached *So* in 1989 (in 10 volumes of 80 parts), on *A Dictionary of the Older Scottish Tongue* (1931–) and *The Scottish National Dictionary* (1931–76), and *A Dictionary of American English* (1936–44). Craigie had regarded the Old English period as adequately covered by *An Anglo-Saxon Dictionary*, by Joseph Bosworth and T. N. Toller (1898) with *Supplement* by T. N. Toller (1921), a dictionary (with quotations) of 2,123 pages, but since 1969 an entirely new and exhaustive Old English dictionary has been in preparation

at the U. of Toronto, based on a computer-readable version of the entire surviving corpus of the period (around 3m words of text); two parts, for C and D, have so far appeared on microfiche.

For the Tudor and Stuart period in England, preparatory work towards an *Early Modern English Dictionary* was carried out at the U. of Michigan (1928–39), resulting in a collection of over 3m quotations, and some trial entries, but was then suspended, pending completion of *MED*. For Late Modern English down to 1820 no separate dictionary is yet in view. However, because of its systematic excerption programme for 1820 onwards, the *Supplement to the Oxford English Dictionary* (four volumes, 1972–86), now incorporated into *The Oxford English Dictionary* (2nd edition, 20 volumes, 1989), fills the place of a period dictionary for recent English. All these works depend on vast collections of quotation-examples, comprehensively excerpted from the original texts: for example, *MED*, it is claimed, has over 3.5m quotations from over 3,000 original titles. From these quotations, the compilers substantiate each word's sense divisions and definitions and all other aspects of its history in copious arrays of dated and referenced quotations.

Previous period dictionaries have included, among others: for Old English, *Dictionary Saxonico-Latino-Anglicum*, by William Somner (1659), and *A Concise Anglo-Saxon Dictionary for the Use of Students*, by J. R. C. Hall (1894); for Middle English, *A Dictionary of the Old English Language*, by F. H. Stratmann (1864–7, 1873, 1878), revised as *A Middle-English Dictionary*, by Henry Bradley (1891); for Older and Modern Scots, John Jamieson's *An Etymological Dictionary of the Scottish Language* (1808, 1825); and, for all periods, *The Oxford English Dictionary*. The new dictionaries, however, far surpass all of these in their exhaustiveness and precision, containing many words and usages previously unrecorded, and displaying innumerable details of meaning, collocation, formal history, and chronological, regional, and stylistic distribution previously unknowable, as well as much new encyclopedic information. See *DICTIONARY, DICTIONARY OF AMERICAN ENGLISH, EARLY MODERN ENGLISH DICTIONARY, JAMIESON, MIDDLE ENGLISH DICTIONARY, OXFORD ENGLISH DICTIONARY, REGIONAL DICTIONARIES OF ENGLISH, SCOTTISH DICTIONARIES*. [REFERENCE]. A.J.A.

**PERIODICAL** [c.1600: from *periodic* and *-al*: see *PERIODIC SENTENCE*]. A publication, especially a magazine or journal, that appears on a weekly, monthly, quarterly, or six-monthly basis, and is concerned as much with opinions, values, and theories as with news and other information. The

first periodicals in English date from the early 17c and were varied in character. The scholarly variety contained philosophical essays and digests from recent books; a reformist strain offered studies under such titles as *The Night-Walker: Or Evening Rambles in Search After Lewd Women* (1696–7), which suggests a pornographic interest. The serious scientific periodical dates from 1665, the year in which the *English Scientific Transactions* and the French *Journal des Sçavans* first appeared. Defoe's *The Review*, offering commentary on political, social, and literary topics, was a prototype emulated by Steele's *Tatler* (1709–11), Addison and Steele's *Spectator* (1711–12), the *Examiner* (1710–11), and Johnson's *The Rambler* (1750–2). These were ephemeral, but were followed by the influential 19c journals. Currently, the terms *periodical*, *review*, and *journal* suggest a publication more serious and high-toned than a magazine. See *BULLETIN, JOURNAL, MAGAZINE, MASTHEAD, NEWSPAPER, REVIEW, ROYAL SOCIETY, VOLUME*. [MEDIA]. G.H.

**PERIODIC SENTENCE** [Late 19c: from French *périodique*, Latin *periodicus*, Greek *peri-odikós* coming round at intervals, cyclic, sentential, from *períodos* a cycle, sentence, and *sentence*. See *PERIOD*]. Also **period**, **point**. In traditional grammar, rhetoric, and composition, a complete sentence, usually characterized by an intricate relationship among its clauses. It is the classical 'rounded sentence', avowedly expressing a complete thought, adopted by writers in the European vernaculars from the prose stylists of Greece and Rome. The subordinate forms in a period are often nested one within the other, like Chinese boxes; in its most complex forms it can be cumbersome and hard to follow. Intricate periods were much used and admired until the late 19c. The following is a typical Augustan period, in which the first *who* is separated from its verb *had* by 51 other words:

This discovery was now luckily owing to the presence of Joseph at the opening of the saddle-bags; *who*, having heard his friend say he carried with him nine volumes of sermons, and not being of that sect of philosophers who can reduce all the matter of the world into a nutshell, seeing there was no room for them in the bags, where the parson had said they were deposited, *had* the curiosity to cry out, 'Bless me, sir, where are your sermons?'

(Henry Fielding, *Joseph Andrews*, 1742, italics added).

The period is unusual in present-day English, although it may occur in the language of the law and similar registers. When it occurs, it is usually designed to hold the reader in suspense as to the point being made. In the following, the serial descriptions ('Never to feel . . . ; never to be able to . . . ; to be aware of . . .') are concluded by an

assertion ('whether or not . . .') in which the subject and negated verb are postponed to the very end:

Never to feel wholly what you wish to feel—and to wish it all the more intensely for that very reason; never to be able to believe in the veracity of whatever feelings you do have—and to make threatening gestures towards anyone who has his own doubts about them; to be aware of a sickening gap between assertion and inner state every time you open your mouth—not least when you open your mouth precisely to deny that there is such a gap . . . whether or not it is a crime to feel the 'throes' and 'pangs' of that kind of insincerity I do not know (Dan Jacobson, *Adult Pleasures*, 1988).

See PERIOD, POINT, SENTENCE. [GRAMMAR, STYLE, WRITING]. S.G., T.MCA.

**PERIPETEIA.** See PLOT, POETICS.

**PERIPHRAISIS** [16c: through Latin from Greek *periphrasis* talking around. Stress: 'pe-RI-fra-sis']. In rhetoric, the use of more rather than fewer words, especially to talk about something in an indirect and circuitous way. The adjective *periphrastic* is used both directly in relation to this sense of periphrasis and to refer to the use of *more/most* for the comparative and superlative degrees of adjectives and adverbs, which is less compact than the use of *-er, -est*. See CIRCUMLOCUTION, DEGREE, TAUTOLOGY. [GRAMMAR, STYLE]. T.MCA.

**PERIPHRASTIC.** See DEGREE, PERIPHRAISIS.

**PERSIAN** [Known to its speakers as *Fārsī*, from *Fārs*, the heartland province of the classical Persian Empire, known to the Greeks as *Persis* (Old Persian *Parsa*)]. An Indo-European language of West Asia, the official language of Iran, widely used in Afghanistan, culturally significant in West and South Asia, and noted for its literary and especially poetic tradition. Although a much older language, its development parallels that of English in several ways: (1) Scholars divide it, like English, into three stages: *Old Persian*, early first millennium BC to c.3c BC (written in cuneiform); *Middle Persian*, 3c BC to 9c AD (written in Aramaic script); and *Modern Persian*, 10c to the present day (written in Arabic script). (2) Modern Persian has lost most of the complex inflections of the older stages, much as Modern English has lost most of the inflections of Old English. (3) Just as English contains a vast lexical inheritance from Latin, Persian has absorbed, under the influence of Islam, a great number of Arabic loanwords. (4) Just as English has acquired many literary and rhetorical practices from Latin and ultimately Greek, Persian has acquired equivalent practices from Arabic and ultimately Greek. (5) Both have been widely used

in the Indian subcontinent and have greatly influenced its vernaculars. Used officially by the Moghuls (16–18c), Persian was the imperial language of India immediately before English.

Persian loanwords in English have usually been mediated by other languages, as with: (1) *Azure*, through Old French *azur*, through Arabic *al-lazward*, from Persian *lājward* or *lāzhward* lapis lazuli, the colour blue. (2) *Magic*, through Old French *magique*, through late Latin *magica*, from Greek *magikḗ* (*tékhnē*) magic (art), from *māgos* (Latin *magus*), from Old Persian *magu-s* a member of the priestly caste, perceived as a sorcerer. (3) *Khaki*, through military usage in Urdu from Persian *khākī* dusty, dust-coloured, from *khāk* dust. (4) *Paradise*, through French *paradis*, through Latin *paradisus*, through Greek *parádeisos*, from Old Persian *pairīdāēza* enclosure, park, pleasure ground (used by Christians to mean both the Garden of Eden and heaven), from *pairi* around, *diz* to mould or form. (5) *Pilaf*, *pilaff*, *pilau*, *pillau*, *pilaw*, *pillaw*, *pilao*, *pulao* etc.: through the usage of a variety of languages and localities, such as Turkish *pilāv* and *pilāf* and Urdu *pilāo* and *palāo*, from Persian *pilāw* boiled rice (and meat). (6) *Turban*, through French *turban*, probably through Portuguese *turbante* (acquired in India), with an *l/r* change from Persian *dulband*. (7) In loanwords that have passed through Indian languages, the possessive linking vowel of Modern Persian (the *ezāfeh*) appears as *-i-*, as in *koh-i-noor/kohinoor*, the name of an Indian diamond in the British Crown Jewels, from Persian *kōh-i nūr* mountain (*kōh*) of light (*nūr*). See ARABIC, ARYAN, BISOCIATION, BORROWING, HINDI, HINDI-URDU, INDIAN LANGUAGES, INDO-EUROPEAN LANGUAGES, URDU. [ASIA, LANGUAGE]. T.MCA.

**PERSON** [12c: from Old French *persone*, Latin *persona* a mask (used in drama), a character acted, someone who has a role or legal status, a human being: compare PERSONIFICATION]. A grammatical and semantic category applying to pronouns and verbs and used in describing the roles of people and things.

**Pronouns.** In standard English, the first-person pronouns are the speaker(s) or writer(s) together with any others included in the plural (*I, me, we, us*). The second-person pronouns are the addressee(s) and possibly others in the plural (*you* and archaic singular *thou/thee*). The third-person pronouns are others being referred to (*she, her, he, him, it, one, they, them*). Melanesian Pidgin English makes a further distinction by having two words to correspond to *we*, one including speaker, listener, and possibly others (*yumi*: you-me) and one excluding the listener (*mipela*, me-fellow: 'me and someone else').

There can also be different words for *you*, implying greater or lesser degrees of intimacy or formality, as with French *tu/vous*, comparable to the archaic and dialectal English distinction *thou/you*. The distinctions of person are shown not only in personal pronouns but also in reflexive pronouns (*myself*) and possessive pronouns (*my, mine*).

There is no necessary correspondence between the grammatical and semantic category of person. In Spanish, the formal pronouns *usted/ustedes* (*you*, singular/plural) semantically address people but are grammatically third-person pronouns. *Usted* derives from an original *vuestra merced* (*your grace*), and parallels the highly formal convention in English in *Does His Majesty wish to leave?* (directly addressing the monarch) and *Does Madam wish to look at some other hats?* (addressed to a customer). Comparable usages in present-day English are the royal and editorial *we* and the generalized *you*. This use of *we* is semantically singular while grammatically plural, as in Queen Victoria's remark, 'We are not amused.' The generalized *you*, as in *You never can tell, can you?*, is second person grammatically but semantically includes others. Usage is sometimes ambiguous between the addressed and generalized *you*, prompting the question *Do you mean me or everybody?* Generic or inclusive *he* is a long-established usage in which the third-person masculine represents both man and woman (*Ask anybody and he'll give you the same answer*). Those who defend its use argue that sexist bias is not present in it or intended by it, and that the meaning is clear. Those who object to it argue that it misrepresents half the human race and reinforces male bias and social dominance. See GENERIC PRONOUN. In colloquial usage, *they* is often used instead (*Ask anybody and they'll give you the same answer*).

**Verbs.** In highly inflected languages like Latin, person is indicated in the verb itself: *amo* I love, *amas* thou lovest, *amat* he/she/it loves, *amamus* we love, *amatis* you (plural) love, *amant* they love. As a result, pronouns are used for other purposes, such as emphasis. In English, however, only the third-person singular of the present tense normally has a distinct form: *he loves, she likes, it does*. See PERSONAL PRONOUN, PRONOUN, VERB, VOICE. [GRAMMAR, STYLE]. S.C.

**PERSONAL NAME.** The proper name of a person, either inherited or given. Inherited personal names include *surnames* or *family names/last names*, and *patronymics* and *metronymics*. Given names include *forenames* (traditionally known in English as *baptismal names* or *Christian/christian names*), which may be *first names* or

*middle names*. In current usage, *baptismal name* seldom occurs, *Christian name* is less and less common (especially in official usage), and *forename, first name, or given name* are increasingly taking over, all used more or less synonymously. A *double-barrelled name* (BrE) combines two personal inherited surnames: *Boyd-Orr* and *Smith-Sykes*. Double given names occur: (1) in French (*Jean-Louis, Marie-Louise*), and are therefore common in Canada, and (2) in the American South (*Billy-Bob, Sue Ellen*).

**Changing one's name.** In most legal systems, provisions are made for individuals to change their names officially if they so wish: for example, in Britain by *deed poll*, a deed made by one party only. When people use names other than their given and inherited names, they may be doing so for professional purposes (a performer's *stage name*, a writer's *pen name*) or for socially dubious purposes (to avoid the police, the payment of debt, a spouse, etc.). In such cases, the new name is an *alias* (Latin: otherwise) and the police and other authorities may refer to someone as *John Smith aka/a.k.a. John Bland* where *aka* means 'also known as'.

**Surnames.** In Britain, surnames were uncommon before the 13c. They were originally epithets used to distinguish persons of the same given name, especially for legal purposes, and appeared earliest among the urban, moneyed classes with property to defend or bequeath. Surnames often indicated the occupation of the bearer (*Smith, Tailor*), place of habitation (*Lincoln, Washington*), appearance (*Black, Short*), character (*Fox, Goodfellow*), or father's name (*McDonald, Robertson*). The last are often called *patronymics*, although true *patronymics*, like those in Iceland (*Magnusson*, the son of Magnus) and Russia (*Ivanovich*, the son of Ivan) change with each generation, so that if such a system operated in English, the son of William Johnson would be Richard Williamson, his son Thomas Richardson, and so forth, as was once the case. Patrick Hanks and Flavia Hodges observe:

Surnaming crept northwards from Germany through Denmark and into Norway . . . in the 15th and 16th centuries. In Iceland, the traditional patronymic naming system has still not fully given way to hereditary surnames. Magnus Pálsson is Magnus the son of Pál, and his eldest son may well be called Pál Magnusson, preserving a traditional alternation that in some families goes back over a thousand years. His daughter would be, for example, Gudrun Magnúsdóttir. . . . The patronymic naming system still found in Iceland was common throughout Scandinavia until about two hundred years ago, and Swedish family histories still contain anecdotes about the incredulity and derision met by women who first called themselves Anna Andersson rather than Anna Andersdotter (1988, p. viii; below).

The parental feminine, the *metronymic*, is less common but was found in early Hindu culture, as when the epic hero Arjuna is called *Kaunteya* (son of Kunti).

**Given names.** In 20c English-speaking communities, these are often subject to fashions, so that the generation of a person can often be guessed from a first name. *Shirley* was popular in the 1930s because of the child actress Shirley Temple. Given names also vary between nations and social groups: *Giles* and *Nigel* are common middle-class names for men in England; *Alistair* and *Ian* are traditional Scottish men's names (Gaelic for *Alexander* and *John*); spelt *Alasdair* and *Iain*, they more fully reflect their origin. The Gaelic woman's name *Fiona* became popular in the middle classes of both Scotland and England and is no longer perceived as markedly Highland, while *Morag* is. The men's names *Chad*, *Earl*, and *Todd* are likely to be North American.

In some US families, there is a tradition of using a surname as a given name (usually a middle name). *John Foster Dulles*, a former US Secretary of State, and the ex-President *Richard Milhous Nixon* are instances. Such names are likely to be mistaken by people in Britain for double-barrelled names, and Dulles was often mistakenly referred to in the British press as *Mr Foster-Dulles*. Female double given names in the American South often follow a pattern in which the first name is the diminutive of a man's name and the second a one-syllable woman's name (*Bobby Sue*, *Johnny May*, *Jimmy Ruth*). Also Southern US is the use of invented names for both men and women, and such names are often androgynous in application: *Charleen*, *LaMoira*, *Shawanda*. The free invention of such names has been credited to the anti-pedobaptist culture of the area, where baptism occurs on conviction of faith, not as a christening service. Where the clergy has no part in naming, the fancies of the parents may run free. On the other hand, because of its Puritan tradition, older use in New England favoured such Old Testament names as *Hezekiah* and virtue names like *Prudence*.

**Names and initials.** The use of initials varies according to time and place. In the US, the traditionally favoured pattern for an official name is full first name and middle initial, as in *Dwight D. Eisenhower*. The use of both given names in full, as in *Richard Milhous Nixon*, seems 'showy', and the use of first initial and full middle name, as with *J. Danforth Quayle*, is widely considered pompous, and can lead to the middle name being used in full or short form as a first name, as in *Dan Quayle*. In the UK, custom allows for all of these, but has favoured both full forms without necessarily implying showiness, as in *Winston*

*Spencer Churchill* and *Arthur Conan Doyle*, and such double-barrelled forms as *Frank Mitchell-Hedges* and *Ivy Compton-Burnett*, which, because they require people to be addressed with both surnames, are widely viewed as 'posh' and pretentious. The predominant practice has been initials for both given names, as in *D. H. Lawrence*, *C. S. Lewis*, and *H. G. Wells*. There is a growing tendency on both sides of the Atlantic and in Australasia to use two names only, as in *Agatha Christie*, *Saul Bellow*, *George Bush*, *Norman Mailer*, *Margaret Thatcher*, often with the increased informality of President *Jimmy Carter* in the US and Prime Minister *Bob Hawke* in Australia. See INITIAL, PATRONYMIC. [NAME]. J.A., T.MCA.

**PERSONAL PRONOUN** [17c]. A pronoun that refers mainly but not exclusively to a person or people, and that in many languages makes distinctions of person (often first, second, and third person), number, gender, and case. In English, most such pronouns distinguish subject and object case (*I/me*, *he/him*, *she/her*, *we/us*, *they/them*, and archaic *thou/thee*) and are the only words that do so (except for *who/whom* and *whoever/whomever*). Two pronouns, *you* and *it*, are without case distinction. In addition to its references to things, *it* can refer to information: *They're cheaper this week: I read it in the paper/heard it on the radio*. It also has some purely grammatical functions, as in *It's raining*, *It's marvellous that you won*, and *I hate it when people shout*, in which it is known as *existential it*. The term personal pronoun is sometimes extended to cover *possessive pronoun*. See DUMMY, PERSON, PRONOUN. [GRAMMAR]. S.C.

**PERSONIFICATION** [18c: from Latin *personificatio* 'making' a person, loan-translating Greek *prosōpopoia* making a mask, face, person]. In rhetoric, discourse in which animals, plants, elements of nature, and abstract ideas are given human attributes: 'bask in Heaven's blue smile' (Shelley). It has been regarded as both a

figure in its own right and as an aspect of *metaphor* in which non-human is identified with human: 'Life can play some nasty tricks'. In classical Greek, a *prósōpon* was a face, mask, dramatic character, or person; in drama, an actor wearing a mask could represent an absent or imaginary person, a force of nature, an abstract quality, or an institution. The device called *prosopopoeia* was therefore both dramatization (putting imaginary speeches into the mouths of characters, human or non-human) and personification as understood today. It is common in verse: 'Slowly, silently, now the moon / Walks the night in her silver shoon' (Walter de la Mare, 'Silver', 1913). The representation of the moon as female is similar to the application of *she* to ships, cats, countries, and certain abstractions: 'He seems to want to destroy poetry as poetry, to exclude her as a vehicle of communication' (Eric A. Havelock, *Preface to Plato*, 1963); 'For most of her history, the Church's record with regard to sexuality . . . has been wretched' (*Independent*, 20 May 1988). In everyday idiom, the world is *Mother Nature* and necessity is *the mother of invention*. *Old Father Time* looks after the years, and the symbolism of a father-like God is traditional among Christians, Jews, and Muslims. In such imagery, human types and relationships have been projected on to the universe at large. See METAPHOR, PATHETIC FALLACY. [STYLE]. T.MCA.

**PET NAME.** An affectionate and usually intimate nickname, such as *Eddikins*, adding a second diminutive suffix to *Eddy*, short for *Edward*. It is often special or even unique to its referent, as used by parents and children, lovers, owners of pets, etc. Pet names may be used to achieve literary effects: for example, in Shakespeare's *Henry IV*, *Henry V*, part 1, young Prince Henry (the future Henry V) is called *Harry* or, especially by his Boarshead Tavern companions, *Hal*, a form that symbolizes his roisterous youth. In *The Taming of the Shrew*, the shrew Katherine becomes by the end of the play plain *Kate*, perhaps punning on the obsolete term *cates* (delicacies to eat). See DIMINUTIVE, NICKNAME. [NAME]. J.A.

**PHARYNX** [17c: through Latin from Greek *phárunx*]. An anatomical term for the cavity of the upper throat through which air passes from the larynx to the mouth and nose. Sounds made in the pharynx are *pharyngeal*, such as the open back vowel of *palm* in RP and certain fricative consonants in Arabic. See ARABIC, GUTTURAL. [SPEECH]. G.K.

**PHATIC COMMUNION** [1923: from Greek *phátos* spoken: coined by the Polish anthro-

pologist Bronislaw Malinowski]. Language used more for the purpose of establishing an atmosphere or maintaining social contact than for exchanging information or ideas: in speech, informal comments on the weather (*Nice day again, isn't it?*) or an enquiry about health at the beginning of a conversation or when passing someone in the street (*How's it going? Leg better?*); in writing, the conventions for opening or closing a letter (*All the best, Yours faithfully*), some of which are formally taught in school. See CONVERSATION. [LANGUAGE, SPEECH, STYLE, WRITING]. D.C.

**PHILIPPINE** [1810s: adapted from Spanish *Filipino*]. Also *Filipino*. Terms relating to the people, islands, cultures, etc., of the Philippines: *Philippine languages*, *the Filipino capital Manila*. See FILIPINO, PHILIPPINES. [ASIA, NAME]. T.MCA.

**PHILIPPINE ENGLISH**, also **Filipino English**. The English language as used in the Philippines. The 1980 census counted the number of Filipinos with some competence in English as around 65%: some 35m people. Ability ranges from a smattering of words and phrases through passive comprehension to near-native mastery.

**Background.** Filipino experience of Western colonialism and its linguistic effects has been unique, in that there have been two colonizers in succession: Spain from the 16c and the US from 1898, when English arrived in the islands. It spread rapidly, to the detriment of Spanish, because it was the new language of government, preferment, and education. Incentives to learn English included recruitment into the civil service and study in the US. In 1935, US-educated *pensionados* (scholars) became leaders of the Senate and the House of Representatives as well as members of the cabinet. English was used universally in the elementary-school system set up by the colonial government, which brought in American teachers. Education was the last government department to be indigenized, with US superintendents still functioning under the Commonwealth government before the outbreak of World War II. In the Philippines there are some 85 mutually unintelligible though genetically related languages of the Malayo-Polynesian family, such as Tagalog, Cebuano, Ilocano, Hiligaynon, Waray, and Bicol. These languages of the home serve as substrates whose features have variously influenced the development of Philippine English.

**Pronunciation.** (1) Philippine English is rhotic, but the local /r/ is an alveolar flap, not an AmE retroflex. (2) It is syllable-timed, following the rhythm of the local languages; full value is there-

fore given to unstressed syllables and schwa is usually realized as a full vowel. (3) Certain polysyllables have distinctive stress patterns, as with *eligible, establish, ceremony*. (4) Intonation is widely characterized as 'singsong'. (5) Educated Filipinos aim at an AmE accent, but have varying success with the vowel contrasts in *sheep/ship, full/fool*, and *boat/bought*. (6) Few Filipinos have the /æ/ in AmE *mask*; instead, they use /ɑ/ as in AmE *father*. (7) The distinction between /s, z/ and /ʃ, ʒ/ is not made: *azure* is 'ayshure', *pleasure* 'pleshure', *seize* 'sees', *cars* 'karss'. (8) Interdental /θ ð/ are often rendered as /t, d/, so that *three of these* is spoken as 'tree of dese'.

**Grammar.** The following features occur at all social levels: (1) Loss of the singular inflection of verbs: *The family home rest on the bluff of a hill; One of the boys give a report to the teacher every morning*. (2) Use of present perfect for simple past (*I have seen her yesterday* I saw her yesterday) and past perfect for present perfect (*He had already gone home* He has already gone home). (3) Use of the continuous tenses for habitual aspect: *He is going to school regularly* He goes to school regularly. (4) Use of the present forms of auxiliary verbs in subordinate noun clauses rather than past forms, and vice versa: *He said he has already seen you* He said he had already seen you; *She hoped that she can visit you tomorrow* She hoped that she could visit you tomorrow; *He says that he could visit you tomorrow* He says that he can visit you tomorrow. (5) An apparent reversal of the norms for the use of the definite article: *He is studying at the Manuel Quezon University; I am going to visit United States*. (6) Verbs that are generally transitive used intransitively: *Did you enjoy?; I cannot afford; I don't like*.

**Vocabulary and idioms.** (1) Loans from Spanish: *asalto* a surprise party, *bienvenida* a welcome party, *despedida* a farewell party, *Don/Doña* title for a prominent man/woman, *estafa* a fraud, scandal, *merienda* mid-afternoon tea, *plantilla* faculty assignments and deployment in an academic department, *querida* a mistress, *viand* (from *vianda* provisions for a journey) a dish served to accompany rice in a Filipino meal. (2) Loans from Tagalog: *boondock* (from *bundok*) mountain (compare the AmE extension: *the boondocks*), *carabao* (from *kalabaw*) a water buffalo, *kundiman* a love song, *sampaloc* (from *sampalok*) the fruit of the tamarind, *tao man* (as in *the common tao*). (3) Loan translations from local usages: *open the light/radio* turn on the light/radio (also found in IndE), *since before yet* for a long time, *joke only* I'm teasing you, *you*

*don't only know* you just don't realize, *he is playing and playing* he keeps on playing, *making foolishness* (of children) misbehaving, *I am ashamed to you* I am embarrassed because I have been asking you so many favours. (4) Local neologisms: *aggrupation* (from Spanish *agrupación*) a group, *captain-ball* team captain in basketball, *carnap* to steal (kidnap) a car, *cope up* to keep up and cope with (something), *hold-upper* someone who engages in armed hold-ups, *jeepney* (blending *jeep* and *jitney*, AmE a small bus) a jeep converted into a passenger vehicle.

**Written models.** Because of the influence of reading and writing and the academic context in which English is learned, local speech tends to be based on written models. Filipinos generally speak the way they write, in a formal style based on Victorian prose models. Because of this, spelling pronunciations are common, such as 'leo-pard' for *leopard*, 'subtill' for *subtle*, and 'wor-sester-shire sauce' for *Worcestershire sauce*. Style is not differentiated and the formal style in general use has been called the *classroom compositional style*. When style differentiation is attempted there may be effects that are comical from the point of view of a native speaker of English: 'The commissioners are all horse owners, who at the same time will appoint the racing stewards who will adjudicate disputes involving horses. Neat no?' (from a newspaper column); 'Now the tandem [pair] is making its dreams come true, so it's not Goin' Bananas forever for Johnny' (from a gossip column).

**Code-switching.** A register has developed for rapport and intimacy that depends on code-switching between Filipino and English. It is largely confined to Metro Manila and other urban centres and used extensively in motion pictures and on television and radio as well as in certain types of informal writing in daily newspapers and weekly magazines. Examples:

(1) 'Peks man,' she swears. '*Wala pang nangyayari sa amin ni Marlon*. We want to surprise each other on our honeymoon.' ['Cross my heart,' she swears. 'Nothing yet has happened between Marlon and me . . .'] (from a movie gossip column).

(2) Donna reveals that since she turned producer in 1986, her dream was to produce a movie for children: '*Kaya, nang mabasa ko ang Tuklaw sa Aliwan Komiks, sabi ko*, this is it. And I had the festival in mind when finally I decided to produce it. *Pambata talaga kasi ang Pasko*,' Donna says. ['That is why when I read the story "Snake-Bite" in the Aliwan Comic Book, I told myself, this is it. . . . Because Christmas is really for children] (from a movie gossip column).

**Social issues.** Philippine English is currently competing in certain domains with the rapidly spreading and developing Filipino, which is in a process of register-building sometimes called

*intellectualization*. Filipino is not fully developed for academic discourse, especially in the sciences, and there is an ongoing debate on the use of Filipino instead of English for school work and official purposes. There is also conflict between the learning of Filipino for symbolic purposes and the learning of English for utilitarian, largely economic, purposes. The two official languages are propagated through a bilingual education scheme begun in 1974: mathematics and science continue to be taught in English although it is envisaged that when possible the teaching of these subjects at certain grade levels shall be in Filipino. The print media are dominated by English, but television, radio, and local movies are dominated by Filipino.

English in the Philippines shares patterns of development and constriction with English in Malaysia. From a situation similar to that of Singapore, where a premium is placed on learning English and using it extensively, the Philippines has now moved on to a stage at which English is used only in such domains as academic discourse and international relations. Philippine English has developed a vigorous literature. It is in the process of standardization, with a variety no longer marked by regional accents associated with regional languages, but a converging variety that originates in Manila. This form is propagated largely through the school system, the mass media, and tourism. Because of code-switching, it seems unlikely that a colloquial variety of English alone will develop. The future is open, without clear trends. On the one hand, code-switching may end up in code-mixing, resulting in a local creole. On the other hand, the need for international relations, the dominance of the print media, and the continued use of English in education may exercise a standardizing role, making it possible for the Philippine variety to be mutually intelligible with other varieties of English. It is also possible that the present system of bilingual education will be converted into a purely monolingual Filipino scheme in which English is taught as a foreign language and becomes available only to an élite.

**PHILIPPINES, The.** Official titles: Filipino *Republika ng Pilipinas*, English *Republic of the Philippines*, Spanish *República de Filipinas*. A state of South-East Asia, an archipelago of more than 7,000 islands, including Luzon, Mindanao, Samar, Palawan, Mindoro, Panay, Cebu, Negros, and Leyte. Capital: Manila, on Luzon. Currency: the peso (100 centavos). Economy: mixed. Population: 59.5m (1988), 78.4m (projection for 2000). Ethnicity: mainly Malay, with many mixed descendants of Malays, Spanish, Chinese, and Americans, and a small Chinese community. Religion: 83% Roman Catholic, 9% Protestant, 6% Muslim. Languages: Filipino, English (both official), and local languages, including Cebuano, Tagalog, Ilocano, and Hiligaynon, with some Chinese and Spanish. Education: primary 95%, secondary 65%, tertiary 38%, literacy 88%. Ferdinand Magellan claimed the islands for Spain in 1521. The name *Philippines* derives from that given to the central island of Leyte in honour of Philip II of Spain. Spanish control lasted until 1898 when the islands were ceded to the US at the Treaty of Paris, after the Spanish-American War. The islands became a self-governing Commonwealth in 1935, were occupied by the Japanese during the Second World War, and gained their independence from the US in 1946. Since then, there have been periods of instability, including conflict between Muslims and Christians. See ENGLISH, FILIPINO, FILIPINO LITERATURE IN ENGLISH, PHILIPPINE, PHILIPPINE ENGLISH, TAGALOG, TELECOMMUNICATIONS, TESL. [ASIA, HISTORY, LANGUAGE, NAME]. T.MCA.

**PHILOLOGICAL SOCIETY.** A British society founded in 1842 for the study of comparative and historical philology. The main initiative came from Edwin Guest (1800–80), barrister and antiquary, who became its first secretary. Its inception was part of the growing but still largely amateur 19c interest in language study. Thomas Arnold, the headmaster of Rugby School, and his pupil and friend A. P. Stanley, later Dean of Westminster, were among its first members, joined a little later by F. J. Furnivall and J. A. H. Murray. A paper 'On some Deficiencies in our English Dictionaries', read to the Society by R. C. Trench in 1857, led in due course to the compilation of *The Oxford English Dictionary*. Papers read to the Society were published at first as *Proceedings* and later as *Transactions of the Philological Society*. This series continues, in accordance with the affirmation that the Society, 'while encouraging all aspects of language, has a

particular interest in historical and comparative linguistics, and maintains its traditional interest in the structure, development, and varieties of modern English'. See COLERIDGE (H.), FURNIVALL, LANGUAGE TEACHING, MURRAY, OXFORD ENGLISH DICTIONARY, PERIOD DICTIONARIES OF ENGLISH, PHILOLOGY, REGIONAL DICTIONARIES OF ENGLISH, SKEAT, TRENCH. [EUROPE, LANGUAGE, MEDIA].

R.C.

**PHILOLOGY** [14c: from French *philologie*, Latin *philologia*, Greek *philologia* love of language]. The traditional study of language, especially of written languages in their cultural settings. The term first appears in English as in Chaucer's *Merchant's Tale*: 'Hold thou thy pees, thou poete Marcian, / That wrytest us that ilke wedding murie / Of hir, Philologye, and him, Mercurie.' Here, the pursuit of learning is presented by Marcianus Capella as the bride of the god of commerce. In 1623, Cockeram defined *philologie* as 'loue of much babling', but its present-day uses in the English-speaking world date from another 17c meaning (Fuller's 'polite learning') and Johnson's narrower 18c meaning, 'grammatical learning'. In mainland Europe, the term has continued to be generously interpreted as the study of language, literature, and even national culture.

**Method.** Because philology deals with the relationship of languages, it is usually comparative; because these relationships evolve over time, it is typically historical. Languages appear to change in the direction of greater diversity: one language tends to be superseded by several; a written 'dead' language preserves evidence of the earlier forms from which 'living' languages developed. Thus, Latin *planctus* gave way to French *plainte* and Italian *pianto*; Latin *planus* to French *plain* and Italian *piano*. The descendants of the Latin words have diverged to the point that, though Italian is related to French, they are now foreign to each other, as is their common 'parent' to both. The changes, moreover, are regular: Italian reduces the Latin *-us* ending to *-o*, French reduces it to *-e* or deletes it entirely; Latin *a* becomes French *ai* and remains unchanged in Italian; and Latin *pl* becomes Italian *pi* and remains unchanged in French.

Not so regular is the change of meaning: Italian *piano* has at least one meaning ('soft' as opposed to 'loud') not in the related Latin or French. In the combination *piano e forte* (soft and loud), *piano* in due course became the name for a keyboard instrument, the *pianoforte*, more capable of dynamic variation than instruments like the harpsichord that came before it. By abbreviation, this new instrument is now usually

called a *piano* in English and various other languages. The special meaning of the Italian phrase results from its cultural context and the distinctive feature of the instrument it names. The English word still names the same instrument, but the clipping discards 'and loud' from the original Italian phrase and hence becomes an arbitrary label and no longer a description. Over the centuries, philologists have learned to trace and tease out such facts and processes as these, and over the last century philology has concerned itself with all such changes and with the linguistic relationships they result in. In recent years, comparative philology and historical or comparative linguistics often merge in their pursuits.

Written documents provide the information needed for this study, but, by mapping such relationships, philologists can also reconstruct further relationships among stages of earlier languages that left no written records. Thus, philologists give the name *Germanic* to the language that is the source of English as Latin is the source of French; but Germanic, unlike Latin, vanished without leaving written testimony. Present-day understanding of the family of Indo-European languages therefore results from studies that systematically combine textual analysis and hypothetical reconstruction.

**History.** The ancient Greeks wrote about their own language, having little interest in comparing Greek with what they considered lesser (barbarian) languages. Roman writers, impressed by such thinking, undertook some comparisons of their Latin with Greek, for though not mutually intelligible, the two have many similarities of vocabulary (Latin and Doric Greek both have *māter* for mother) and of grammar (both have three grammatical genders and similar declensional systems). From such hints, some Roman writers concluded that Latin had descended from Greek, a view abandoned only with the development of comparative philology around 1800, which demonstrated that Greek and Latin descended collaterally from a putative common ancestor, Indo-European (IE).

In the Middle Ages, Latin ceased to be a spoken language, and the vernaculars descended from it, such as French and Italian, grew in prestige. Writers like Dante gave some consideration to the relationship among vernaculars and their kinship with Latin, that is, to comparative and historical concerns. Such consideration, aided from the Renaissance onwards by the publication of many early manuscript texts as printed books, yielded further knowledge of individual language families such as the Celtic and Germanic. But speculation concentrated on vocabulary and took no account of systematic

relationships, and hence failed to discern larger 'genetic' connections. On the rare occasions where a common parent language was postulated, the language was (for cultural and even doctrinal reasons) usually Hebrew. As late as 1807, the writer Alexander Pirie could maintain that 'The originality of the Hebrew language being incontrovertible, nothing can be more natural than that all other languages should in some respects be derivatives.' Such arguments distracted from the successful study of IE, with which Hebrew has no genetic connection.

European imperialism put 18c scholars in touch with such Asian languages as Sanskrit, and in 1786 Sir William Jones announced his belief that the grammar of Sanskrit revealed its close affinity with Greek and Latin, suggesting the derivation of all three from 'some common source . . . which no longer exists'. Jones's belief, which served to unite previously fragmented studies of individual language families, underwent elaboration in the 19c, especially by F. von Schlegel, Franz Bopp, Rasmus Rask, and Jacob Grimm early in the century and later by A. F. Pott, K. Verner, Ferdinand de Saussure, K. Brugmann, and B. Delbrück.

These scholars concentrated on refining knowledge of the relationship of later languages (such as French and Italian) with their earlier written forms (such as Latin), the relationship of these earlier written forms (such as Latin and Sanskrit) with each other, and the relationship of them all with the unrecorded 'common source', whether the lost Germanic original of the Scandinavian, Gothic, German, and English languages, or the lost Indo-European original of Germanic, Latin, Greek, and Sanskrit. These relationships are usually set out in a form devised by A. Schleicher, resembling a genetic 'family tree' owing much to biological classification and Darwinism. The materials for establishing such a schematic form are the usual objects of language study: vocabulary, grammar (especially morphology), and sounds with their orthographic equivalents, as in the French and Italian words derived from Latin (above). However, vocabulary is at once the most tempting and the most treacherous evidence for the study, because, unlike sounds or grammatical forms, words readily migrate from one language to another.

**Current status.** Philology, as an ancient, evolving discipline, has to a great extent been eclipsed in the 20c by *linguistics*, which may be regarded as either an organic development out of philology or a rival to it. Many linguists, following Ferdinand de Saussure (the 'father of linguistics' who was himself trained in traditional philology), consider that philology has had little to

say about languages as living systems of communication. In consequence, they generally prefer the synchronic study of spoken language to the diachronic comparison of words in texts, and have tended to regard philology as pre-scientific. Others have sought to bring elements of old and new together in panchronic studies that give equal importance to past and present. However regarded, philology (in association with traditional grammar and etymology) has built a formidable edifice which few scholars ignore when writing about or teaching the history of languages such as English.

**PHONAESTHESIA** BrE, **phonesthesia** AmE [1930s: through Latin from Greek *phōnē* voice or sound, *aisthēsis* feeling or perception]. Also *phonetic symbolism*, *sound symbolism*. Vocal sound that suggests meaning, as in onomatopoeic or echoic words like *cock-a-doodle-doo*, *cuckoo*. The term is often used to refer to the occurrence of the same consonant cluster in a series of words with similar meanings: *sl-* in *sleaze*, *slide*, *slime*, *slip*, *slope*, *sludge*, *slump*, *slurp*, *slurry*, suggesting downward movement and a rushing, sucking sound; *-sh* in *bash*, *dash*, *crash*, *flash*, *gush*, *hush*, *rush*, *splash*, *whoosh*, suggesting swift or strong movement. These clusters are sometimes referred to as *phon(a)esthemes*, two of which may occur in one word: *sl* and *sh* in *slash*, *slosh*, *slush*. Such phonetic and aesthetic elements, often used to effect in verse and rhetoric, are semantically imprecise, and do not necessarily apply to all the words of a certain type: *sleep* and *sleeve*, *dish* and *sash* do not normally have the same nuances as *slime* and *splash*. Compare ALLITERATION, ASSONANCE, ECHOISM, ONOMATOPOEIA, ROOT-CREATION. [SPEECH, WORD]. T.MCA.

**PHONE** [1860s: from Greek *phōnē* voice]. Also **speech sound**. In phonetics, an elementary spoken sound, the smallest segment of speech recognized by a listener as a complete vowel or consonant. Because all speakers sound slightly different, and any one speaker produces vowels and consonants differently on different occasions, the number of phones in a language is indefinitely large. They are grouped into a small number of *phonemes* or units of distinctive

sound. See PHONEME, PHONOLOGY, SPEECH SOUND, TELEPHONE. [SPEECH]. G.K., T.MCA.

**PHONEME** [1890s: from French *phonème*, Greek *phōnēma* a sound]. In phonetics and linguistics, the basic theoretical unit of distinctive sound in the description of speech, out of which syllables are formed, such as the three units /b, ɪ, t/ (consonant, vowel, consonant) in /bit/ (*bit*). The *OED* (1989) defines the phoneme as 'A phonological unit of language that cannot be analysed into smaller linear units and that in any particular language is realized in non-contrastive variants': see *PHONE*. The *Longman Dictionary of Applied Linguistics* (1985) defines the phoneme as 'the smallest unit of sound in a language which can distinguish two words', giving the examples *pan* and *ban*, that differ only in the contrast of the phonemic consonants /p/ and /b/, and *ban* and *bin*, that differ only in the phonemic vowels /æ/ and /ɪ/. The number of phonemes varies from language to language, and from variety to variety within a language. Any such number, as for example the 24 consonants and 20 vowels of RP, are known as a *phoneme inventory*. A *phone* is a realization in sound of a phoneme, and an *allophone* is one such realization among others: for example, English /n/ is normally alveolar, but is dental before the dental fricative /θ/ in *tenth* [tɛnθ]. There are no *minimal pairs* contrasting dental and alveolar [n], and so the difference is not phonemic: because of this, the two forms are said to be allophones of the same phoneme /n/. When allophones occur in different environments, only one ever occurring in one environment, they are said to be in *complementary distribution*. The term *allophone* is also used to include the *free variant*, a sound that can be substituted for another without bringing about a change of meaning. Examples include the various *r*-sounds of English and the use of the glottal stop as a variant of [t] in a word like *water*. See BLOOMFIELD, -EME, FEATURE (DISTINCTIVE FEATURE), JONES (D.), MINIMAL PAIR, PHONE, PHONETIC TRANSCRIPTION, PHONOLOGY. [LANGUAGE, SPEECH]. T.MCA., G.K.

**PHONEMICS**. See PHONEME, PHONOLOGY.

**PHONEMIC TRANSCRIPTION**. See PHONETIC TRANSCRIPTION.

**PHONETIC** [1820s: from Neo-Latin *phoneticus* (1797), Greek *phōnētikós* vocal, to be spoken]. (1) Relating to speech sounds and their production: *phonetic elements*, *phonetic change*. (2) Corresponding to or representing pronunciation in written or printed form: *phonetic as opposed to ideographic writing*, a *phonetic alphabet*, a *phonetic transcription*, *phonetic spelling*. (3)

Relating to phonetics: *phonetic training*. See PHONETICS, PHONIC. [LANGUAGE, SPEECH].

T.MCA.

**PHONETIC NOTATION**. See PHONETIC TRANSCRIPTION.

**PHONETICS** [1830s]. The science or study of the sounds of speech. There three kinds: (1) *Articulatory phonetics*, the oldest branch of the subject, which investigates the ways in which sounds are made. Here, the phonetician is trained to recognize, produce, and analyse speech sounds. During the 20c, phonetics has developed as a laboratory subject, in which instruments are used to study the production of speech in the vocal tract: for example, by monitoring the positions and movement of organs, or breath flow and air pressure. Electropalatography uses an artificial palate to record, display, and store data on articulatory movements inside the mouth. (2) *Acoustic phonetics* is concerned with the study of the speech as heard: that is, its *waveform*. For the study of vowels and consonants, the waveform is presented as a spectrogram, on which sounds appear as recognizable visual patterns. For the study of intonation, the pitch, or more precisely the *fundamental frequency*, usually called *F<sub>0</sub>* ('*f* nought'), is extracted and displayed. A *speech workstation* is a machine, usually based on a computer, that analyses and displays speech, and allows the user to replay, edit, or annotate the waveform. (3) *Experimental phonetics* usually involves the manipulation of the waveform and makes psycho-acoustic tests to identify which aspects of sounds are essential for understanding, and for the recognition of linguistic categories. Major applications of phonetics have been made in such areas as language teaching, speech therapy, and automatic speech synthesis and recognition.

description of the system of a speech community. It is the kind used in pronouncing dictionaries, and is referred to informally as *broad transcription*.

Contemporary phoneticians generally take their symbols from the International Phonetic Alphabet, but other symbols are also in use, especially in North America. All such symbols are mnemonic labels that ignore phonetic detail, as when the initial consonants of *tea*, *two*, and *train* are phonemically written /t/, even though they are all phonetically slightly different. In many cases, diacritics are added to phonemic symbols to give further detail: for example, a superscript *h* added to /t/ to indicate aspiration, /t<sup>h</sup>/. A third kind of transcription is *prosodic transcription*, for which there is no generally agreed system of symbols. Its purpose is the representation of rhythm, stress, and intonation, and it has elements in common with musical notation. Generally, a text representing speech is divided into its actual or probable tone groups, the boundaries between groups being marked with a bar (/), usually doubled to mark the end of a major tone group (//), the rough equivalent to a sentence. Next, the accented syllables are identified, then the pitch contours associated with these syllables are marked in. See INTERNATIONAL PHONETIC ALPHABET, NOTATION, OBLIQUE, PHONEME, PHONETICS, PROSODY, TRANSCRIPTION. [SPEECH, WRITING].

G.K., T.MCA.

**PHONETIC SYMBOLISM.** See PHON(A)ES-THESIA.

**PHONETIC TRANSCRIPTION.** A written or printed representation of speech using a phonetic alphabet. Whereas, in standard orthography, the same letters can be used to represent different sounds (the *y* in *sky* and *syrup*), and different combinations of letters can be used to represent the same sound (the *ee* of *meet* and the *ea* of *meat*), a phonetic symbol always represents the same sound, and a sound is always represented by the same symbol. Speech can be transcribed phonetically at different levels of detail and accuracy. In general terms, there are two kinds of transcription: (1) *Phonetic transcription* proper, which draws on the total resources of a phonetic alphabet to mark minute distinctions in sound and places symbols in square brackets, [t]. Such transcriptions are used especially to represent the usage of individual speakers, and are informally known as *narrow transcriptions*. (2) *Phonemic transcription*, which provides a symbol for each phoneme in a text and places the symbols between obliques, as in /t/. Such transcriptions are used to represent an idealized

**PHONIATRY.** See LANGUAGE PATHOLOGY.

**PHONIC** [1810s: comparable to French *phonique*, ultimately from Greek *phōnē* 'voice']. (1) Relating to vocal sound: *phonic substance*, *phonic vibrations*. (2) In phonetics, a term used in contrast with *phonetic* to mean 'relating to speech sounds': *the phonic medium*, *the phonic method of teaching reading*, *a phonic reader* (a book). (3) In physiology, relating to a nerve centre that excites the organs of speech and to vibration of the vocal folds or cords. Compare PHONETIC. [LANGUAGE, SPEECH]. T.MCA.

**PHONIC MEDIUM.** See MEDIUM.

**PHONICS** [17c]. (1) An obsolete term for the science of *phonetics*. (2) A method of teaching reading and spelling based on the phonetic interpretation, element by element, of spelling, often contrasted with the *look-and-say* method. See PHONIC, READING, SPELLING. [EDUCATION, LANGUAGE, SPEECH]. T.MCA.

**PHONOGRAM.** See WRITING.

**PHONOGRAPHY** [18c: from Greek *phōnē* voice, and *-graphy* writing]. (1) The art or practice of writing so as to represent sound as precisely as possible; phonetic spelling. The adjective *phonographic* is used to discuss the relationships between sound and writing. (2) The system of phonetic shorthand invented by Isaac Pitman in 1837 and so named by him in 1840. (3) A 19c term for recording sound by means of a phonograph recording machine. (4) A rare synonym for *phonology*. See SPELLING. [SPEECH, WRITING]. T.MCA.

**PHONOLOGY** [18c: from the Greek combining forms *phono-* sound, voice, and *-logy* study]. The study of sound patterns in languages, sometimes regarded as part of phonetics, sometimes as a separate study included in linguistics. Phonologists study both *phonemes* (vowels and consonants) and *prosody* (stress, rhythm, and intonation) as subsystems of spoken language. Phonological patterns relate the sounds of speech to the grammar of the language; a common 20c model has three levels or components: phonology, syntax, and semantics. Patterns that can be measured on laboratory instruments are generally regarded as part of phonetics, whereas phonological patterns tend to be more abstract and idealized. Until the 1960s, phonology was largely concerned with *phonemics*, the study of phonemes and phonemic systems, and often considered synonymous with it, especially in the US. Since then, however, attention has concentrated on the formulation of rules to account for sound patterns, its scope widening to include prosodic phenomena and patterns of connected texts. See COMPOUND WORD, LEVEL OF LANGUAGE, LINGUISTIC TYPOLOGY, MODEL, PHONEME, PHONETICS, PRONUNCIATION, PROSODY, SENTENCE, WORD. [LANGUAGE, SPEECH]. G.K.

**PHONOTYPE** [1830s]. (1) A character or letter of a phonetic alphabet. (2) Phonetic print or type. (3) To print in phonotype. A periodical of the 1840s associated with the work of Isaac Pitman was called *The Phonotypic Journal*, and systems of phonetic shorthand were for a time in the 19c widely referred to as *phonotypy*. Compare PHONOGRAPHY. See PITMAN (1.), SHORT-HAND, TYPE. [SPEECH, WRITING]. T.MCA.

**PHOTOCOPYING** [1920s: from the Greek combining form *photo-* light, and *copy*]. Making a copy or copies of a sheet or set of sheets of writing or print, formerly by photographic or chemical means, currently by an electrostatic machine. Most photocopiers have the same basic technology. A sheet for copying is placed on a transparent surface. When the machine is activated and flashes, a reflected image of the sheet is

received on a photo-sensitive drum which translates the image into positive and negative electrical fields. The drum picks up a *toner* (a bondable pigmented powder) which adheres to the electrical image. The toner image is transferred to paper fed for this purpose into the machine, is bonded to the paper by heat, and a virtual facsimile of the original emerges. Variations include multiple copying and reduction in image size. The electrostatic process is known as *xerography* [1940s: from Greek *xērōs* dry, *graphia* writing] because unlike earlier methods no liquid is involved. The US company Xerox gained a major position in the manufacture and distribution of such machines, with the result that the trade name *Xerox* is widely applied to the copier, the verb *to xerox* to the copying process, and noun *a xerox* to the product. Until the advent of the laser, the photocopier was the most significant 20c advance in the reproduction of text and images. The ubiquitous copier has dramatically changed the way in which the written language is reproduced and stored and along with other reproductive media has challenged notions of copyright and the ownership of text that were formed in the heyday of the printing press. Compare FAX. See COPY, MIMEOGRAPH. [MEDIA, TECHNOLOGY]. W.W.B.

**PHOTO-OFFSET PRINTING** [1920s]. A form of lithography in which an image is *offset* or transferred from a laser- or photographically prepared lithographic plate to an intermediate surface (usually a roller in a printing press), then transferred from the roller to the surface to be printed on. Except for small runs of material reproduced by photocopying and large runs sometimes printed in a form of letterpress, photo-offset lithography is the commonest kind of printing in current use. See LITHOGRAPHY, PRINTING. [TECHNOLOGY]. W.W.B.

**PHRASAL VERB** [Early 20c: first used in print by Logan Pearsall Smith, in *Words and Idioms* (1925), in which he states that the *OED* Editor Henry Bradley suggested the term to him]. Also **verb phrase, compound verb, verb-adverb combination, verb-particle construction (VPC)**, AmE **two-part word/verb** and **three-part word/verb** (depending on number of particles: see below). A type of verb in English that operates more like a phrase than a word, such as *go up* (as in *The balloon went up*), *put off* (as in *Don't put it off any longer*), and *take down* (as in *That'll take him down a peg or two*). Such composites derive primarily from verbs of movement and action (*go, put, take*) and adverbial particles of direction and location (*up, off, down*). The base verbs are mainly monosyllabic and may underlie

a range of phrasal verbs: for example, *get* underlying *get up*, *get down*, *get in*, *get out*, *get on*, *get off*, *get away*, *get back*. The combinations are used both literally and figuratively, and are often idioms or elements in idioms: *to get away with murder*, *to get on like a house on fire*, *to get back at someone*, *to get up to mischief*.

**History.** Although the phrasal verb has been present in English for many centuries, it has only recently been described in detail. Citations in the *OED* date from Middle English: for example, *turne aboute* 1300; *gon down* 1388. They are common in Shakespeare: 'So long, that ninteene Zodiacks haue gone round' (*Measure for Measure*, 1603). Such verbs have often been used to translate Latin verbs (*to putte downe* . . . *calare*, *deponere*: *Catholicon Anglicum*, 1483) and to define verbs of Latin origin in English (*abrogate* . . . *take away*: Cawdrey, *Table Alphabeticall*, 1604). The 18c lexicographer Samuel Johnson was among the first to consider such formations seriously:

There is another kind of composition more frequent in our language than perhaps in any other, from which arises to foreigners the greatest difficulty. We modify the signification of many words by a particle subjoined; as *to come off*, *to escape by a fetch*; *to fall on*, *to attack*; *to fall off*, *to apostatize*; *to break off*, *to stop abruptly* . . . These I have noted with great care (Preface, *Dictionary of the English Language*, 1755).

**Grammar.** Grammarians have adopted two main positions with regard to the nature and use of phrasal verbs: (1) That the literal use of a form like *go up* is not a phrasal verb as such, but a verb operating with a particle: *The balloon went up into the air*. The term *phrasal verb* should properly be reserved for figurative and idiomatic uses: *The balloon went up* (= The crisis finally happened). Here, it is the holistic and semantic aspect of *go up* which is considered to identify the type, not syntax or morphology. (2) That the term covers both the literal and figurative/idiomatic uses and therefore includes syntax, morphology, and semantics: that is, both senses of *go up*, as above. This is the position adopted in the following review, which begins with a consideration of the grammatical aspects of phrasal verbs under three headings: transitivity and word order; particles functioning as adverbs and/or prepositions; and the position of adverbs.

**Transitivity and word order.** Phrasal verbs may be intransitive ('When they went away, she got up and went out') or transitive ('She put the book down, then picked it up again'). If the verb is transitive, the object can go before or after the particle without affecting meaning: *She put the book down*, *She put down the book*. If, however, the object is a pronoun, it comes between verb

and particle: *She put it down*, not \**She put down it*. However, young children and occasionally adults for emphasis have been known to place the pronoun last: *Put down IT!*

**Adverbial and prepositional particles.** A sentence containing a verb followed by a prepositional phrase can usually (but not always) be shortened so as to turn preposition into adverb: *He carried the box up the stairs* becoming *He carried the box up* (stairs understood). If a further prepositional phrase is added, two particles (the first adverbial, the second prepositional) may occur in sequence: *He carried the box up to his room*. The syntactic relationships in such sentences can be shown by bracketing: (*He carried the chair up*) (*to his room*). Usage may appear inconsistent with regard to compound forms: *into*; *out of*; BrE *on to*, AmE *onto*; *off of*, non-standard in BrE, often standard in AmE. However, in terms of phrasal verbs, such usage is straightforward: the sentences *She took the books into the room*, *She took the books out of the room*, *She lifted the books on to/onto the table*, and *She lifted the books off (of) the table* all reduce to *She took the books in/out* and *She lifted the books on/off*. The particle *out* is followed in England by *of* in such sentences as *They looked out of the window*, but in AmE, CanE, ScoE the form is generally *They looked out the window*.

**The position of adverbs.** Adverbs often appear alongside the particles of phrasal verbs. With intransitive usages, the adverb can take any of the positions in: *He happily ran away*, *He ran happily away*, *He ran away happily*, the last probably commonest. With transitive usages, the adverb goes either before the verb or after the object or particle, whichever is last: *She eagerly picked the letter up*, *She picked up the letter eagerly*, *She picked the letter up eagerly*, *She picked it up eagerly*, no usage predominating, but in most contexts there are no such forms as \**She picked the letter/it eagerly up*. (Note such relatively rare possibilities as *He pushed the letters clumsily through*.)

**Adverbial particles.** The particles commonly used are: *aback*, *about*, *ahead*, *along*, *apart*, *aside*, *around*, *away*, *back*, *beyond*, *down*, *forth*, *in*, *off*, *on*, *out*, *over*, *past*, *round*, *through*, *up*. The commonest are *down*, *in*, *off*, *on*, *out*, *up*. BrE favours *about* (*running about*), AmE (*a*)*round* (*running around*). A verb-particle combination may have: any of the meanings of the verb plus any of the meanings of the particle, and any meanings that emerge jointly in particular contexts, including a distinct figurative and often holistic meaning. For example: (1) The phrasal verb *get up* may be intransitive (*They got up*) or transitive (*Get them up*), may mean 'move from lower to higher' (*He got the child up on to the wall*), 'move from

far to near' (*One of the other runners got up to him and passed him*), 'gather, accumulate' (*The engine got up steam*), 'organize, make' (*He can get up the plot of a new film in no time at all*), and something like 'put on special clothes' (*They got themselves up as pirates*). (2) The particle *up* can mean upward direction (*The smoke rose up*), approaching direction (*He swam up to the boat*), completion in the sense that nothing is left (*They used up all the oil*), completion in the sense that something is done as fully as possible (*They tidied the room up*), and emphasis (*Hurry up!*). It may also have several nuances, as with *Drink up!*, both completive and emphatic.

**The use of phrasal verbs.** Such verbs are often informal, emotive, and slangy, and may contrast with Latinate verbs, as in *They used up/consumed all the fuel*; *They gathered together/assembled/congregated in the hall*; *The soldiers moved forward/advanced*. *Putting off* a meeting parallels *postponing* it; *driving back* enemy forces *repels* them; *putting out* a fire *extinguishes* it; *bringing back* the death penalty *restores* it. However, such pairing often depends on context and collocation. In some cases, one phrasal verb may match several Latinate verbs: *bring back* = *restore* (the death penalty), *return* (money to someone), *retrieve* (a shot bird or animal from where it has fallen). In other cases, one Latinate verb may match several phrasal verbs: *demolish* matching *knock down*, *tear down*, *blow up* as variants in destructive style. It is sometimes possible to match the elements of phrasal verbs and Latinate verbs: *climb up* with *ascend*, *climb down* with *descend*. See BISOCIATION.

**Literal and figurative usages.** The verb *bring in* is used literally in *The milkman brought in the milk*, figuratively in *The prime minister brought in a new policy*. Only in the second sense can *bring in* be matched with *introduce* (itself originally metaphorical in Latin): no \**The milkman introduced the milk*, unless a joke is intended. Jokes and cartoons are often based on a deliberate confusion of phrasal-verb meanings: as when someone says, 'Put the kettle on' (taken to mean heat some water in a kettle for tea), then notes with appreciation, 'Mmm, it suits you' (crossing over to *putting on* clothes and leaving the listener to imagine someone wearing a kettle). An artist might build a cartoon round the literal/figurative contrast in *Where did you pick up that idea?*, with someone searching through garbage for inspiration, and the headline *OIL WILL RUN OUT SOON* might be supported by a picture of barrels with legs leaving a room.

**Derived phrasal verbs.** In addition to the traditional combination of verb of movement plus directional particle, phrasal verbs are commonly created from adjectives, nouns, and Latinate

verbs: (1) *From adjectives.* Basically, with *-en* verbs: *brighten/brighten up*, *flatten down/out*, *freshen up*, *harden off*, *loosen off/up*, *slacken off/up*, *smarten up*, *soften up*, *tighten up*, *toughen up*. Where verbs in *-en* cannot be formed (that is, from adjectives ending in *n*, *ng*, *m*, *l*, *r*, *th*, or a spoken vowel), the particle is added directly: *calm down* to become/make calm, *cool off* to become/make cool, *even out* to become/make even, *tidy up* to make tidy. (2) *From nouns.* By telescoping an expression containing a phrasal verb and a special noun: *hammer out* encapsulating *beat out with a hammer*, *channel off* telescoping *carry or run off by means of a channel*; *brick up* meaning *close up with bricks*. Many phrasal verbs emerge in this way: *bed down*, *board up*, *book out*, *button up*, *dish out*, *fog up*, *gang up*, *hose down*, *iron out*, *jack up*, *mist up*, *saddle up*, *sponge down*, *wall in*. (3) *From Latinate verbs.* Particles are added, usually as completives and intensives, to two- and three-syllable verbs of Latin origin: *contract out*, *divide off/up*, *level off*, *measure off/out*, *select out*, *separate off/out*. Such usages are sometimes described as barbarous and pleonastic, but such criticism does not affect their widespread use.

**Nouns from phrasal verbs.** Two kinds of noun are formed from such verbs: (1) *The major pattern.* In speech, the level stress of *break down* changes to the compound stress of *BREAKdown*. In writing and print, nouns like this are either solid (*breakdown*) or hyphenated (*round-up*). The solid form is common when a usage is well established and is favoured in AmE. Hyphenation is common for newer usages and is favoured in BrE, in which a solid form may seem confusing or odd, especially when vowels come together: *cave-in* as *cavein*, *make up* as *makeup*. Typical nouns are: *blackout*, *breakout*, *break-up*, *build-up*, *getaway*, *get-together*, *hold-up*, *mix-up*, *sit-in*, *take-off*, *white-out*. (2) *The minor pattern.* By a process of inversion: when a disease *breaks out*, there is an *outbreak* of that disease. Again, compound stress occurs: *OUTbreak*. In writing and print, the presentation is usually solid. Typical nouns are: *input*, *onrush*, *outflow*, *output*, *overflow*, *overspill*, *throughput*, *upkeep*, *upsurge*, *uptake*. The contrasting patterns sometimes prompt different forms with different meanings: a *breakout* usually of people, an *outbreak* usually of disease and trouble; a *layout* in design and decoration, an *outlay* of money and goods; a *lookout* posted to observe, an *outlook* usually relating to weather, attitude, and prospects. Most phrasal nouns relate to situations. The few which relate to things and people tend to be dialectal, idiomatic, and slangy: BrE *layabout* someone who lays/lies idly about; AmE *dropout* someone who drops out of society or education;

write-off a car so badly damaged that it is written off the books of an insurance company; *blow-up* a photograph blown up like a balloon. As with the verb forms, phrasal nouns can run parallel with Latinate nouns that tend to be elevated, technical, and formal where the phrasal nouns are colloquial, informal, and slangy: *break-up/disintegration*, *checkup/examination*, *letdown/disappointment*, *let-up/relaxation*, *sellout/betrayal*, *shake-up/ reorganization*.

**Compounds and attributives.** Phrasal nouns can occur in compound and attributive formations:

(1) With the phrasal noun first: *blackout regulations*, *breakdown service*, *check-up period*, *get-away car*, *input time*, *overflow pipe*, *round-up time*. (2) With the phrasal noun second: *aeroplane take-off/airplane takeoff*, *traffic holdup*, *cholera outbreak*, *enemy build-up*, *population overspill*, *student sit-in*. (3) With the phrasal noun between other nouns: *cattle round-up time*, *truck breakdown service*, *population overspill problem*.

**Phrasal-verb idioms.** Idiomatic usages are usually colloquial and informal, more or less obvious figurative extensions of ordinary uses. Expressions used to gloss them are often more formal, less direct, and less emotive, as with: *bring down* or defeat (a government), *bring in* or introduce (a new law), *bring off* or clinch (a deal), *bring on* or encourage and train (a student), *bring out* or publish (a book), *bring up* or raise (a child); be *carried away* or overwhelmed (by one's emotions), *carry off* or win (a prize), *carry on* or continue (one's work), *carry out* or perform (one's duty), *carry through* or sustain (a project, to the end); a machine *coming apart* or disintegrating, a deal *coming off* or succeeding, work *coming on* or improving, soldiers *coming through* or surviving, something *coming up* or happening; *cutting back* or economizing (on expenses), *cutting down* or reducing (one's expenses), *cutting in on* or interrupting (a conversation), *cutting people off* or isolating them, *cutting something out* or excising or eliminating it; *getting down* or alighting (from a train), *getting* all the information in or collecting it, *getting on* or succeeding (in life), *getting off* or disembarking, or being allowed to go free, after an offence, *getting out of* or escaping from (a prison), and *getting out* or producing and publishing (a magazine), *getting up* or increasing (pressure), and *getting up* or rising from one's bed in the morning. Similar lists can be made for such other everyday verbs as *be*, *do*, *go*, *keep*, *make*, *pass*, *pull*, *put*, *run*, *set*, *take*, *turn*.

**Phrasal verbs and prepositions.** There is a continuum between the phrasal verb as described above and verbs followed by phrases in which the preposition may or may not be part of the phrase. A phrasal verb can be formed elliptically

from a verb plus prepositional phrase (like *He took the box up* from *He took the box up the stairs*). A transitive usage may not be separable (like *pick up the book/pick the book up*), but may have distinct meanings depending on where the particle is placed (*get round someone*, *get someone round*). Particles may not be clearly either adverbial or prepositional, as with *off* in BrE *get off the bus* (compare widespread AmE *get off of the bus*). Some prepositions may be attached to verbs preceding them, usually for figurative reasons: where the sentence *He came across the street* is analysable as (*He came*) (*across the street*), the sentence *He came across an old friend* makes more sense as a phrasal form: (*He came across*) (*an old friend*), *come across* glossed as *meet by chance*. Some grammarians and lexicologists call a usage like *come across a prepositional verb*, because the particle is not adverbial but prepositional. Such a terminology, if extended, should turn phrasal verbs proper into 'adverbial verbs', but has not yet done so. Other commentators call the usage a *fused* or *non-separable phrasal verb*, because the preposition has been 'stolen' from its own phrase and fused with the preceding verb in an idiom. Others still consider some particles so equivocal that they are neither adverbs as such nor prepositions as such, but 'adpreps'. Usages include: *act for* represent, *bargain for* expect, *call for* demand, *come by* obtain, *get at* imply, *go for* attack. The issue is further complicated by occasions when the fusion occurs between a phrasal verb proper and a following preposition, as with *look down on* hold in contempt, *check up on* investigate, *go along with* accept, *face up to* confront, *look back on* recall, *look forward to* have good expectations of, *look up to* admire, *meet up with* encounter.

**Stress.** In normal speech, if no special emphasis is employed, the adverbial particle in a phrasal verb proper is stressed: *to pick up a book/pick a book up*. The preposition in a two-part fused (prepositional) verb is not usually so stressed: *They didn't bargain for that*. In a three-part fusion, the stresses combine the patterns: *to look UP to someone*, *look DOWN on someone*.

**Productivity.** Phrasal verbs have always been common, but have increased in number since the mid-19c and even more so since the mid-20c, especially in AmE. As a result, a number of dictionaries of phrasal verbs have been published since 1974 (see below) and increasingly dictionaries for both native and foreign users have given phrasal verbs main-entry or high secondary status. They are increasingly the subject of special attention in courses for foreign learners of English, and it was in this area that the

category came of age as a distinct aspect of grammar, word-formation, and usage. See ADVERBIAL PARTICLE, POSTPOSITION, PREPOSITIONAL VERB, SLANG, WORD-FORMATION. [GRAMMAR, WORD].

**PHRASE** [16c: from Latin *phrasis*, Greek *phrasis* speech, way of speaking]. (1) In general usage, any small group of words within a sentence or a clause, such as 'in general usage', 'small groups', and 'a clause'. Such a group is usually recognized as having a syntactic structure: groups like *usage any and or* would not normally qualify as phrases. (2) In grammatical theory, a unit that does not have the structure of a sentence or clause, and cannot therefore be analysed in terms of subject, verb, and object. There are five types of phrase, named after their main word: *noun phrase* (*a very bright light*); *verb phrase* (*may be eating*); *adjective phrase* (*extraordinarily happy*); *adverb phrase* or *adverbial phrase* (*quite casually*); *prepositional phrase* (*in our city*). In traditional analyses, a phrase must consist of more than one word, as in the everyday use of the term, but in contemporary grammars one, two, or more words that function in the same way are all phrases. A noun phrase is therefore the subject of all three sentences '*The work is in progress*', '*Work is in progress*', '*It is in progress*'.

A phrase may have another phrase embedded in it: the prepositional phrase *for your information* contains the noun phrase *your information*; the noun phrase *a somewhat easy question* contains the adjective phrase *somewhat easy*. A phrase may also have a clause embedded in it: the noun phrase *the play that I saw last night* contains the relative clause *that I saw last night*. In most traditional grammars, constructions that do not have a finite verb are considered phrases, so that the infinitive construction '*To miss the party would be a pity*' and the participle construction in '*His hobby is painting landscapes*' are phrases. In many contemporary grammars, these are regarded as

clauses. In generative grammar, the term is treated even more widely: in '*I know that they are waiting*' the verb phrase consists of everything but the subject *I*, since it is taken to include the complementation of the verb, in this instance a *that*-clause. See BINOMIAL, CLAUSE, IDIOM, FIXED PHRASE, PHRASEOLOGY, PHRASE WORD, SENTENCE. [GRAMMAR].

S.G.

**PHRASEOLOGY** [17c: from the Neo-Greek *phraseologia*, coined by the 16c German humanist Michael Neander. Stress: 'frayze-OL-o-ji'. If the classical Greek form *phrasilogia* had served as the source of the modern word, its form in English would have been \**phrasilogy*]. A way of expressing oneself; the way in which words and phrases are used, especially by particular individuals or groups: *confused phraseology*, *legal phraseology*. Compare NOMENCLATURE, TERMINOLOGY. See PHRASE. [LANGUAGE, STYLE].

T.MCA.

**PHRASE WORD**. An occasional term in word-formation for a word formed from a phrase. There are at least six types: (1) Attributive phrase words, as italicized in '*a state-of-the-art description*' (more below). (2) Nouns followed by prepositions and other nouns, on the model of certain French compound words, as in *man-at-arms* and *tug-of-war* (more below). (3) Phrases turned into lexical bases by the addition of suffixes, as in *never-say-die-ism* and *state-of-the-artistry*. (4) Stunt formations of various kinds, such as *whodun(n)it*, the informal name for a murder mystery, and its derivative *whodunitry*, the activity of producing such books. (5) Such vague words as *whatchamacallit* and BrE *thingummyjig*, AmE *thingamajig*. (6) Phrasal verbs and their noun derivatives: *get together* ('*They got together* and discussed the matter'); *a get-together* ('*I enjoy these family get-togethers*').

**Attributive phrase words**. There are as many attributive phrase words as there are types of phrase. They are often based on idioms, proverbs, and common expressions (*run of the mill* in '*a run-of-the-mill TV show*'), or cover a concept or situation ('*the arms-to-Iran-for-hostages-plus-money-for-the-contras scandal*'). Their orthography is diverse. They may be linked by hyphens, (which is probably the general rule) enclosed in quotation marks, capitalized, a mix of these, or left as straight phrases. In writing, an attempt is usually made to highlight such phrase words visually. In speech, they may be spoken quickly and deliberately as a unit. The lists which follow (taken from 1980s citations without major changes in their printed forms) cover the main types:

*Noun-based.* An able-baker-charlie-dog sequence; a Hound of the Baskervilles image; a 'Power of the Human Mind' theory; a plurality of wives revelation.

*Verb-based.* (1) *Infinitive:* a made-to-measure suit; ready-to-wear clothes; right-to-die legislation. (2) *Participial:* the 'standing up for America' syndrome; the having-your-cake-and-eating-it-too category; dyed-to-match co-ordinates; a producer-turned-network-executive. (3) *Modal:* a must-win context; more a will-try than a can-do situation.

*Adjective-based.* A 'best-buy' business computer system; 'good news, bad news' jokes; a 'good news' newspaper; odd-man-out tactics; blind-man's-buff diplomacy; stiff-upper-lip Brits; a happy-little-girl grin; a larger-than-life picture; a holier-than-thou approach.

*Number-based.* A seven-days-a-week service; a three-week vacation; a 40-pound weight; a three-year-old boy; a 1989 Audi Quattro.

*Preposition-based.* (1) *Preposition first:* behind-the-scenes information peddling; over-the-counter medication; round-the-clock surveillance. (2) *Preposition midway:* a back to the land movement; the signal-to-noise ratio; a rags-to-riches story; an Aid-to-El Salvador group; hole-in-the-corner affairs; a balance-of-payments problem; an end-of-May opening date; University of Utah doctors; an Equal-Time-for-God sermonette; a made-for-TV movie; a once-upon-a-time story; a heavy-on-the-tease-light-on-the-sleaze version.

*Coordination-based.* An 'accuse and demand' approach; a down-and-out alcoholic; a glass and aluminum sky-scraper; hit-and-run drivers; an open-and-shut case; protection and assassination rackets; a rock-and-roll eccentric; a 'them' and 'us' mentality; a tough-but-vulnerable look; a life-or-death decision.

*Wh-words-based.* You-know-who; a 'what-if' question; a what-went-wrong puzzle; how-to-massage books; some how-to stuff; that how-do-I-get-out-of-here feeling.

*Negation-based.* A no-man's-land; a no-win situation; a won't-go-away loneliness; a nobody-cares feeling.

**Phrase words on the French model.** One variety of French *mot composé* (compound word) is phrasal in form and joins nouns by means of a preposition: *pomme de terre* potato, *arc-en-ciel* rainbow. English acquired this pattern through Norman French: *editor-in-chief* (compare French *rédacteur-en-chef*). Common usages: *brothers-in-arms*, *cost of living*, *jack-in-the-box*, *man-at-arms*, *man-of-war*, *poet-in-residence*, *president-for-life*. Stunt variations include: *computer-on-a-chip*, *cylic-in-residence*,

*hamburgers-on-the-hoof* (beef cattle), *trainee-in-terror*.

See COMPOUND WORD, PHRASAL VERB, PHRASE, STUNT WORD, TIMESPEAK, VAGUE WORD, WORD-FORMATION. [GRAMMAR, WORD]. T.MCA.

**PICA** [16c: from Anglo-Latin *pica* a list of ecclesiastical rules, from Latin *pica* a magpie, because of its habit of picking up and keeping odds and ends. Pronounced: 'PIE-ka']. (1) A type-size equal to 12 point. (2) Also *pica em*. A printer's unit of linear measurement for areas of printed surfaces, based on the depth of pica-type and equal to 12 points (slightly less than one-sixth of an inch). (3) A 12-point type-size for typewriters, with ten characters to the inch. See EM, EN, TYPOGRAPHY. [TECHNOLOGY]. T.MCA.

**PICT** [From 3c Latin *Picti*, identified by Latin writers with the plural of *pictus* painted, but perhaps a native name, in Old Norse *Péttar*, earlier \**Peht-*, Old English *Pehtas*, *Pihtas*]. One of the people of partly Celtic stock inhabiting Britain north of the Forth and Clyde during and immediately after Roman times, of whom there are some brief historical records and to whom are attributed the several hundred stone monuments known as *symbol stones*, found from Fife to Shetland. Many of the earlier Iron Age monuments found in parts of the same region, such as the defensive dry-stone towers known as *brochs* (in use 1c BC to 2c AD) and *southernains* (underground passages, perhaps storehouses) are doubtless relics of ancestors of the Picts, including the people known to the Romans as *Caledonians*. As a separate nation the Picts virtually disappear from record shortly after their union with the Scots in the mid-9c, along with their language or languages and, largely, such customs as matrilineal succession. See CALEDONIA, PICTISH, SCOT. [EUROPE, NAME]. A.J.A.

**PICTISH** [17c, originally in Scottish writings: from *Pict*, on the analogy of *English*, *Scottish*, etc.]. (1) Relating to the Picts: *the Pictish question*. (2) The language of the Picts, whose principal records consist of a few early loanwords in Gaelic and, later, Scots and English, such as *mormaer* a high official, *davach* a land measure, *pett* a portion of land, and (of the same origin) *peat*, perhaps *mounth* a mountain range, some Caledonian and Pictish personal names (such as *Calgacus*, *Argentocoxos*, *Drostan*, *Gartnait*, *Nechton*, *Uurguist*), and some tribal and regional names (such as the Latinized *Cornavii*, *Decantae*, *Smertae*, the Scotticized *Buchan*, *the Mearns*, *Moray*, the place-names *Lossie* and *Orkney*, and a number of toponymic elements: see SCOTTISH PLACE-NAMES). Pictish appears to have been a P-Celtic language, similar to but

not identical with Cumbric, possibly introduced from southern Britain or the European mainland in the first millennium BC. Until recently it has been accepted that the unintelligible inscriptions in Ogam writing on some 27 stone monuments and other Pictish objects are in a pre-Celtic non-Indo-European language whose speakers may also be the source of such non-Celtic Pictish customs as matrilineal succession and perhaps body painting or tattooing. Some place-names, such as ancient *Hebudae* or *Ebudae* (present-day *Hebrides*), *Spey* (a river), *Thule* (Iceland or Shetland), tribal names (*Caledonii*), and personal names (*Bargoit*, *Bruide*, *Derile*, *Itharnan*, *Spuscio*), whose origins and meanings are unknown, may also be relics of this aboriginal language. See BRITISH LANGUAGES, CELTIC LANGUAGES, PICT. [EUROPE, LANGUAGE, NAME]. A.J.A.

**PIDGIN** [1870s: widely considered to be from the Chinese pronunciation of *business*, also rendered as *pigeon*, as in *that's not my pigeon* (that's not my business or concern). Other suggested sources are Portuguese *ocupação* business, and *pequeno* small (suggesting baby talk), and Hebrew *pidjom* barter]. A term used in a general and a technical sense for a contact language which draws on elements from two or more languages: *pidgin Portuguese*; *a Spanish pidgin*.

**The general sense.** As generally understood, a pidgin is a hybrid 'makeshift language' used by and among traders, on plantations (especially with and among slaves of various backgrounds), and between Europeans and the indigenous peoples of Asia, Africa, and the Americas, especially during the heyday of European expansion (17–20c). Because the word has often been used and discussed pejoratively, it carries such connotations as 'childish', 'corrupt', 'lazy', 'inferior', 'oversimplified', and 'simple-minded'. The term has been extended with such a negative sense into wider use, as in 'writing pidgin Latin' and 'not satisfied with pidgin Marxism'. This view of pidgin languages has often appeared in works of reference, as in *Brewer's Dictionary of Phrase and Fable* (1965):

*Pidgin-English.* The semi-English lingua franca used in China and the Far East, consisting principally of mispronounced English words with certain native grammatical constructions. For instance, the Chinese cannot pronounce *r*, so replace it with *l*—*te-lee* for 'three', *solly* for 'sorry', etc.—and, in Chinese, between a numeral and its noun there is always inserted a word (called the 'classifier') and this, in Pidgin-English, is replaced by *piece*—e.g. *one-piece kniffee*, *two piece hingkich* (handkerchiefs). *Pidgin* is a corruption of *business*.

Etymologically, there appears to have been only one pidgin: *Pidgin English*, also known as *Business English*, *Pidgin-English*, *pidgin-English*,

*Pigeon English*, *Pigeon-English*, *bigeon*, *pidgeon*, *pidjin*, *pidjun*. This was a trade jargon used from the 17c onward between the British and Chinese in such ports as Canton. In 1826, B. Hall wrote: 'I afterwards learned that "pigeon", in the strange jargon spoken at Canton by way of English, means business'; in 1845, J. R. Peters noted: 'Pidgeon, is the common Chinese pronunciation of business'; and in 1872, A. D. Carlisle observed: 'The dialect . . . current between Englishmen and Chinamen . . . goes by the name of Pigeon-English' (*OED*). It should be noted, however, that *Chinese (Coastal) Pidgin English* or *China Coast Pidgin* is now a technical term referring to a contact language used between speakers of English and Chinese from the first half of the 18c until the early 1970s. See CHINA.

**The technical sense.** Sociolinguists in particular use the term to describe a phenomenon whose study has greatly increased since the Second World War. For them, a pidgin is a marginal language which arises to fulfil certain restricted communicative functions among groups with no common language. This more clinical approach now tends to predominate in works of reference, as in the *Concise Columbia Encyclopedia* (1983):

*pidgin*, a lingua franca that is not the mother tongue of anyone using it and that has a simplified grammar and restricted, often polyglot, vocabulary. An example is the pidgin English used in Far Eastern ports, principally for trading between the English and Chinese. The basic English vocabulary had Malay, Chinese, and Portuguese elements.

In sociolinguistic terms, there have been many pidgins and the process known as *pidginization* is seen as liable to occur anywhere under appropriate conditions. This process of simplification and hybridization involves reduction of linguistic resources and restriction of use to such limited functions as trade. The term is sometimes extended to refer to the early stages of any instance of second-language acquisition when learners acquire a minimal form of the target language often influenced by their own primary language. There is, however, some disagreement among scholars over the number of languages in sufficient contact to produce a pidgin. Some investigators claim that any two languages in contact may result in a degree of linguistic improvisation and compromise, and so lead to pidginization. Such a viewpoint includes in the category of pidgin *foreigner talk* and other classes of makeshift and often transitory communication. Other investigators argue that only in cases where more than two languages are in contact do true pidgins spring up. In situations where speakers of more than two languages must converse in a medium native to none of them, the kinds of restructuring are more radical than in other cases and likely to be more durable.

The names given to pidgin languages by linguists refer to their location and their principal *lexifier* or *base language*: that is, the language from which they draw most of their vocabulary. *Papuan Pidgin English* therefore refers to the pidgin that is spoken in what was formerly the Territory of Papua, and that draws most of its vocabulary from English and is therefore an English-based pidgin; *Hawaii Pidgin English* is the pidgin English spoken in Hawaii. In addition and often prior to such academic names, pidgins may or may not be identified as such and often have specific names retained by scholars when discussing them, such as *Bazaar Hindustani/Hindi*, *Korean Bamboo English*, *français petit-nègre*. Even after a pidgin develops into a *creole*, the name may continue to be used, such as *Roper Pidgin*, also known as *Roper River Creole*. A language may also have both pidgin and creole varieties, as with Tok Pisin in Papua New Guinea.

**Features.** A pidgin is characterized by a small vocabulary (a few hundred or thousand words) drawn largely from the superstrate language (that is, the language of the socially dominant group), together with a reduction of many grammatical features, such as inflectional morphology, as in Tok Pisin *mi kam* can mean 'I come', 'I am coming', 'I came', and *wanpela haus* means 'house' while *tupela haus* means 'two houses'. One source of grammar is the socially subordinate substrate language(s). Often though not always, where pidgins develop, one group is socially superior and its full language is more or less inaccessible to the other group(s), so that there is little motivation or opportunity to improve performance. Where the needs of communication are minimal and confined to a few basic domains such as work and trade, a casual and deficient version of language can be enough, as has been the case with *Kisettla* (settlers' language), the pidgin Swahili used between the British and Africans in Kenya. Many pidgin languages arose in the context of contact between European colonizers who enslaved or employed a colonized or transported population on plantations, in ports, in their homes, etc.

A notable feature of pidgins is lack of grammatical complexity; for this reason, they are often referred to at best as simple or simplified languages, at worst as bastardized or broken forms of another language. In popular accounts, simplicity is attributed to lack of grammar, but linguists agree that pidgins have a distinctive grammatical structure. The grammar of a pidgin language is constructed according to a principle which dictates that there should be a close relation between form and meaning. There is a tendency for each morpheme (or word element) to

occur only once in an utterance, and for it to have only one form. Non-pidgin languages generally have built-in redundancy and require the expression of the same meaning in several places in an utterance: for example, in the English sentences *One man comes* and *Six men come*, singular and plural are marked in both noun and modifier, and concord is shown in both noun and verb. However, the equivalents in Tok Pisin (Papua New Guinea Pidgin English) show no variation in the verb form or the noun: *Wanpela man i kam* and *Sikspela man i kam*.

Because they lack redundancy, pidgins depend heavily on context for their interpretation. Most pidgins have little or no inflectional morphology. Where English marks possession by adding 's (as in *John's house*), Tok Pisin has *haus bilong John*. Here, *bilong* has been taken from English, but has shifted its function from verb to preposition, and can be paraphrased as 'belonging to'. Pidgin languages tend to have only a small number of prepositions and they use them to mark a variety of grammatical relations which in other languages would be expressed by a much greater number of prepositions. Pidgins are highly regular and have fewer exceptions than many other languages, which makes them easier to learn. Another property is multifunctionality: the same word can function in many ways. In English, the word *ill* functions as an adjective (in *He is ill*, *an ill wind*). The corresponding noun is *illness*, derived by a regular process of word-formation. In Tok Pisin, however, the word *sik* can function as both noun and adjective: *Mi sik* I am ill; *Em i gat sik malaria* He has malaria. Pidgins may compensate for lack of vocabulary by circumlocution: in Tok Pisin, *Singsing taim maus i pas* to sing with the mouth closed (= to hum). Where English has *branch*, Tok Pisin has *han bilong diwai* hand of a tree.

In analysing the syntactic elements of pidgins, it is often impossible to separate the influence of substrate from superstrate language: as in the case of Tok Pisin, the influence of local languages from that of English. In Tok Pisin, the particle *i* is a so-called *predicate marker*, occurring in such sentences as *Ol man i kisim bigpela supia* (The men—predicate marker—got big spears). It is plausible to derive this marker from the use of resumptive pronouns in non-standard English, such as *he* as in *John, he got a new car*, as well as from similar syntactic patterns in Austronesian languages. Such a use of pronouns as predicate markers is widespread across pidgins, occurring in some of the French-based Indian Ocean creoles as well as in Chinook Jargon.

**Classification.** Pidgins can be classified into four types according to their development: jargon,

stable pidgin, extended or expanded pidgin, and creole, each characterized by a gradual increase in complexity. (1) *Jargon*. In this stage, there is great individual variation, a very simple sound system, one- or two-word utterances, and a very small lexicon. Jargons are used for communicating in limited situations: trade jargons generally, and *Chinook Jargon*, a trade language spoken along the north-west Pacific coast of North America from the 18c. (2) *Stable pidgin*. This is more regular and more complex and there are social norms regarding its use, as with *Russenorsk*, a trade pidgin used in northern Norway by Russian merchants and Norwegian fishermen over some 130 years (1785-1917). Because the language was used for seasonal trade, it did not expand much structurally and had a core vocabulary of c. 150-200 words. (3) *Extended or expanded pidgin*. Other pidgins, such as *Tok Pisin*, not only stabilized but expanded to become more grammatically complex, and to serve as well-established lingua francas, sometimes with official or other status. (4) *Creole*. At this stage, the pidgin is creolized: that is, it is acquired as a first language by children, particularly in urban areas. This is the stage of, for example, *Tok Pisin* in Papua New Guinea and *Kriol* (also known as *Roper River Creole*) in the Northern Territories of Australia. It is generally impossible to identify structural features which distinguish expanded pidgins from emerging creoles, since both exhibit increased structural complexity and share many features. The difference lies more in social use than in form.

**Theories of origin.** Various theories have been proposed to account for the origin of pidgin languages, and fall into three broad types: *monogenetic*, *polygenetic*, and *universalist*.

*Monogenesis.* This theory asserts a common origin for all European-based pidgins. Some monogenetic theorists claim that they all descend from a nautical jargon used for communication among sailors from different backgrounds. Others have argued that they descend from a 15c Portuguese pidgin which could in its turn have been a relic of *Sabir*, the lingua franca of the Crusaders and a Mediterranean trading language. It is claimed that this language was relexified (that is, renewed with vocabulary from different sources) as it came into contact with such other European languages as English and Dutch. Both the nautical-jargon and *Sabir* theories take as supporting evidence the fact that many pidgins share common words like *save* (to know: compare English *savvy*) and *pikinini* (child: compare English *piccaninny*). Both words are of Spanish/Portuguese origin, from *saber/sabir* (to know) and *pequeño* (small), and are widely used in English-based pidgins and creoles

in the Caribbean and Pacific. Such words could either have been directly inherited locally or transmitted from one location to another by sailors, who undoubtedly account for some of the lexical sharing across unrelated pidgins, although their role in the formation of stable pidgins was probably not great. However, it is difficult to account for the many differences among pidgins by appealing entirely to relexification, and neither approach explains the origin of the many non-European-based pidgin languages.

*Polygenesis.* This theory stresses distinctness and appeals to the influence of substrate languages, such as the influence of African languages in the formation of the Atlantic pidgins. According to one view, pidgins arise out of the imperfect learning of a model language by slaves or as a result of deliberate simplification, for example by Europeans in a master/slave relationship. There is evidence that the Portuguese taught a simplified version of their language to those they traded with along the west coast of Africa.

*Universalism.* This view argues for the universal nature of the social and psychological factors which occur in language contact. The *baby-talk theory* is based on the idea that certain systems of communication emerge in response to particular social and historical circumstances. There is evidence for this hypothesis in the fact that baby talk, foreigner talk, and pidgins show certain similarities of structure. Baby talk expressions such as *Daddy go bye-bye* are similar to the reduced versions of language used to address foreigners.

There is no doubt that the native languages of colonized, enslaved, and transplanted populations provided important input to pidgins, but there are also many features which can be explained only by reference to the superstrate languages of the colonizers, enslavers, and transplanters. At present, therefore, no single theory can adequately explain the origin of pidgin languages.

**PIG LATIN** [1930s]. A private code or 'language' (especially among children), derived from everyday English by moving a consonant or consonant cluster from the beginning of a word to the end, usually followed by 'ay': *Eythay antcay eakspay igpay Atinlay* They can't speak pig Latin. When words begin with vowels, 'ay' is simply added: *Itsay oodgay* It's good. There are many variations. See PRIVATE LANGUAGE. [STYLE, VARIETY]. T.MCA.

**PIOZZI, Hester (Lynch)**, also known as **Harriet Lynch Thrale, Hester Thrale Piozzi, Mrs Thrale**, née *Salisbury* [1763–1821]. British writer, born in Bodvel, Carnarvonshire, Wales. In 1763, she married Henry Thrale, a wealthy brewer. In 1765, she met Samuel Johnson, who in the following year, after a severe illness, spent much of the summer with the Thrales, after which he became virtually part of the family, living much of the time in their homes. Her husband died in 1781 and in 1784 she married, amid some social consternation, her daughter's music master, Gabriel Piozzi, and went with him to Italy. This development estranged her from Johnson in the closing months of his life. When she heard of his death in the same year, she compiled and sent to England material for *Anecdotes of the late Samuel Johnson, LL.D., during the last Twenty Years of his Life* (1786), a work that made her a rival of his friend and biographer James Boswell. After returning to England, she brought out a two-volume edition of *Letters to and from the late Samuel Johnson, LL.D.* (1788). Thousands of her letters have survived and her journal, kept

from 1776 to 1809, and given the name *Thraliana*, was edited in two volumes by K. C. Baldernston (1942). She compiled the *British Synonymy* (1794), basing her sense discriminations on conversation rather than on textual evidence and noting that 'synonymy has more to do with elegance than truth'. Her style was light but trenchant:

ABANDON, FORSAKE, RELINQUISH, GIVE UP, DESERT, QUIT, LEAVE Of these seven verbs, so variously derived, though at first sight apparently synonymous, conversing does certainly better show the peculiar appropriation, than books, however learned; for whilst through them by study all due information may certainly be obtained, familiar talk tells us in half an hour—That a man FORSAKES his mistress, ABANDONS all hope of regaining her lost esteem, RELINQUISHES his pretension in favour of another; GIVES UP a place of trust he held under the government, DESERTS his party, LEAVES his parents in affliction, and QUILTS the kingdom forever.

See index. [BIOGRAPHY, EUROPE, LITERATURE, REFERENCE]. T.MCA.

**PITCAIRNESE**, also **Pitcairn-Norfolk Creole**. The creole spoken by the descendants of the mutineers from HMS *Bounty*, who settled on uninhabited Pitcairn Island in 1790. There were 28 original inhabitants: nine mutineers led by Fletcher Christian, six Polynesian men and 12 Polynesian women from Tahiti, and one small child. For 33 years, the settlers lived in almost complete isolation. Half the Englishmen died within four years and all but one within ten years. Most Pitcairnese were moved permanently to Norfolk Island in 1856, where they are now outnumbered by settlers from mainland Australia. The English-speakers had the greatest influence on Pitcairnese, which draws most of its vocabulary from English. It is not clear to what extent pidginization and creolization played a role in its development, since the women presumably spoke Tahitian as well as rudimentary English to their children. Pitcairnese shares a number of features with other English-based pidgins and creoles. [OCEANIA, VARIETY]. S.R.

**PITCH** [12c: from Middle English *piche(n)* to throw, whence an act or place of pitching, a place where something happens, a high place or position, and a height or level from which to go up or down, as in music]. A term used generally and in phonetics for the level of the voice. Pitch depends on the frequency with which the vocal cords (or folds) vibrate to produce *voice*: the more rapidly, the higher the pitch perceived. When voices quaver, there is a fluctuation of pitch, especially in a *falsestto* (an especially male voice which is unnaturally high), the vocal cords having been greatly contracted. When a voice has a very low pitch, it is said to *creak*. *Creaky*

voice, common among male RP-speakers, tends to occur at the end of a statement, as the voice falls low. *Pitch range* refers to the difference between high and low pitch. The greater the range, the greater the impression given of emotion. See ACCENT, TONE, VOICE. [SPEECH].

**PITMAN, (Sir) Isaac** [1813–97]. English educational reformer, businessman, and inventor of the Pitman shorthand system. Born in Trowbridge, Wiltshire, the son of a hand weaver, he left school at 13 and served for a time as a clerk in a textile mill. He then trained as a teacher in 1831, taught as headmaster in various schools, and finally had a school of his own. Intrigued by John Walker's pronouncing dictionary and Samuel Taylor's shorthand, he developed a system of his own based on the representation of sound, described first in *Stenographic Sound-Hand* (1837), then in *Phonography* (1840). The latter was also called 'the Penny Plate' (because it was sent out by the new penny post) and was the world's first correspondence course. It was initially offered free of charge, a mark of Pitman's concern for 'educating anyone of any class from anywhere who could read and had the desire to learn' (Frances Moss, *Pitman: 150 Years of Innovation in Business Education*, 1987).

The system classifies speech sounds into groups, consonants being shown as strokes and generally paired (for example, a lightly written stroke for *f* and a heavier variant for *v*), vowels as dots and dashes, and abbreviations of consonant clusters (*str*), syllables (*der*), and affixes (*tion*) as circles, loops, and hooks. The system was refined through many editions, changes often causing confusion among users. The 10th edition of *Phonography* (1857) established the vowels as they have continued to be used, and the *New Era edition* (1922) contained extra devices for high-speed reporting at up to 250 words per minute. The Pitman system benefited from the spread of British imperial administration in the later 19c.

In 1843, Pitman set up his *Phonetic Institute* in Bath as a publishing house and marketing operation. His success in recording verbatim an anti-Corn Law speech by William Cobden gained converts to his system and in due course his shorthand was used for preparing Hansard, the official record of Parliament. He founded *The Phonotypic Journal* in 1840, which was for a time *The Phonetic Journal*, became *Pitman's Shorthand Weekly* in 1892, and *Office Training* in the 1930s. In 1870, *Pitman's Metropolitan College* opened, perhaps the first school of business education in the world, with a syllabus covering office routine, accounting and law, and shorthand and typing. In addition to being used

throughout the world for English, Pitman's system of shorthand has been adapted for such languages as Arabic, Dutch, French, German, Hebrew, Hindi, Japanese, Latin, Persian, Spanish, Welsh, and Tamil. His system of phonetic English spelling had little impact, however, although it served as the basis of the *Initial Teaching Alphabet*, devised by his grandson James Pitman in 1959. See index. [BIOGRAPHY, EDUCATION, EUROPE, WRITING]. T.M.C.A.

**PITMAN, (Sir) (Isaac) James** [1901–85]. English publisher and educational reformer, grandson of Isaac Pitman. He was born in London, and educated at Eton and Oxford, where he studied modern history. He played rugby for Oxford and for England, and was a noted boxer, runner, and skier. He joined his father Ernest and his uncle Alfred in the family business and was for a time headmaster of one of the Pitman's Colleges (in Maida Vale in the 1920s). He became chairman and managing director of Sir Isaac Pitman & Sons (c.1932), was Chairman of the Joint Examining Board (1935–50), a director of the Bank of England (1941–5), first Director of Organization and Method in the Civil Service (1943–5), President of the Society of Commercial Teachers (1951–5), and Conservative Member of Parliament for Bath (1945–64). In 1959, he published *The Ehrhardt Augmented (40-sound 42-character) Lower-Case Roman Alphabet* (in which *Ehrhardt* is the name of a typeface), which described a system that later became known as the *Initial Teaching Alphabet* (see entry), designed to help children learn to read more easily and successfully. Based on original work by his grandfather, it became a lifelong passion to whose promotion in the UK and elsewhere he contributed large sums of his own money, lobbying education ministers, school inspectors, and chief education officers, and attending conferences of teachers. His *Initial Teaching Alphabet Foundation* benefited from a large donation in the US, but disagreements led to litigation, and the movement lost momentum: 'Most teachers continued to prefer books in ordinary type. They never wholly believed claims that there were no difficulties in transferring from i.t.a. to traditional orthography' (Archibald Clark-Kennedy, obituary, *The Times*, 3 Sept. 1985). By the 1980s, the system had disappeared from most of the schools that had taken it up. See index. [BIOGRAPHY, EDUCATION, EUROPE, WRITING]. T.M.C.A.

**PITMAN PUBLISHING.** An English publishing company that has specialized in business education since it was founded by Isaac Pitman in 1837. Its materials for business and commerce

include: training materials in shorthand, key-boarding, and office administration; textbooks for accountancy, finance, economics, and business management; reference works for managers; textbooks and professional books in information technology and computing; and multimedia instructional materials. The best-selling accountancy textbook *Business Accounting* by Frank Wood has sold 5m copies since 1967. The *Pitman Examinations Institute*, founded in Bath in 1885, examines in commercial and secretarial skills and includes a range of written and spoken examinations in English as a foreign language. The company has been involved in EFL teaching since 1914, when classes started at *Pitman's Central College* in London. In 1986, it conducted over 750,000 examinations, about half from overseas. Half of the Pitman publishing range is exported. A family firm for four generations, Pitman became a member of the Longman group in 1985. See BUSINESS ENGLISH, INITIAL TEACHING ALPHABET, PITMAN (I.), PITMAN (J.), SHORTHAND. [EDUCATION, EUROPE, MEDIA]. T.MC.A

**PLACE-NAME**, also **place name**, **placename**.

Technically **toponym**. The proper name of a locality, either natural (as of bodies of water, mountains, plains, and valleys) or social (as of cities, counties, provinces, nations, and states). In an island like Britain, settled by successive waves of peoples, the place-names embody its history. Celtic, Roman, Anglo-Saxon, Scandinavian, and Norman names vie with one another today as their name-givers did in past centuries. The elements that make up place-names reflect a polyglot heritage: *-coombe* from Celtic *\*kumbos* (Welsh *cwm*) for a hollow or small valley, as in *Cwmbrân* and *Cwm Rhondda* in Wales, *Coombe* and *High Wycombe* in southern England, and *Cumloden* and *Cumwhitton* in northern England. The variants *-chester* appear in *Chester* and *Manchester*, *-caster* in *Lancaster*, and *-cester* in *Cirencester* and *Gloucester*, and come from Latin *castra* (a military camp). Forms of the Old English *burh* (dative case *byrig*), a fortified settlement, appear in England as *-bury* in *Canterbury*, *-borough* in *Scarborough*, and *-brough* in *Middlesbrough*, and in Scotland as *-burgh*, in *Edinburgh* (with mainland European cognates in *Hamburg* in Germany and *Skanderborg* in Denmark). The Scandinavian *-by* (a farm or village) can be found throughout northern and eastern England, in such names as *Derby*, *Grimbsby*, *Romanby*, *Walesby*, and *Whitby*.

In more recently settled English-speaking countries, names are often commemorative of places in the motherland, as with the city of *Boston* in Massachusetts in the US (after the town in Lincolnshire in England) and the town of

*Hamilton* in Ontario, Canada (after the town near Glasgow in Scotland). They may also commemorate well-known people in the motherland or the new settlement: for example, the settlements and features called or incorporating the name of Queen Victoria in Cameroon (now Limbe), southern Africa, Canada, and Australia. Sometimes the names are simply descriptive, wherever they are found: *the Black Isle* a peninsula in Scotland, *North Island* in New Zealand, and *the Rocky Mountains* in the US and Canada.

Some place-names have two or more elements: a generic for the kind of place and a specific for a particular locale. The generic usually comes last, as in *Atlantic Ocean*, *British Isles*, *Malvern Hills*, *Madison Avenue*, *New York City*; sometimes, however, it comes first, as in *Cape St Vincent*, *Mount Everest*, *Lake Huron*; and sometimes the elements are joined by *of*, as in *Bay of Fundy*, *Cape of Good Hope*, *Gulf of Carpentaria*. Some names which might be expected to have a generic lack one: for example, *the Matterhorn*, *the Himalayas*. In a few instances, British and American practice differs: *River Thames* as against *Mississippi River*; *County of Warwick* and *Warwickshire* as against *Clinton County*, with *county* used attributively in Ireland, as in *County Clare* and *County Tyrone* (and in the one instance of *County Durham* in England).

**PLACE OF ARTICULATION.** See **SPEECH**.

**PLAGIARISM** [17c: from the obsolete noun *plagiary* kidnapper or a kidnapping, theft or a thief of ideas, from Latin *plagiarius* a kidnapper, literary thief, and *-ism*. In the cast of Richard Sheridan's play *The Critic* (1779) there is a dubious literary figure called Sir Fretful Plagiary]. The appropriation of someone's artistic, musical, or literary work for personal ends. Because most artists are affected by other artists, with all kinds of consequences in their work, it is not always easy to decide where legitimate influence ends and plagiarism begins. The term is usually reserved, however, for the flagrant lifting of material in an unchanged or only slightly changed form and its dissemination as the plagiarist's own work. In oral and scribal societies, most performers 'plagiarized', in the sense that they borrowed material but failed to identify their sources. It is unlikely, however, that this interaction was considered reprehensible. In addition, insofar as educational institutions invite students to model themselves on others, a degree of plagiarism and pastiche are built into the acquiring of creative skills. The concept of plagiarism as a serious legal offence became clear-cut with the growth of printing and the establishment of authors and publishers as people and institutions with property rights.

In recent years, a device for detecting plagiarism, primarily in scientific texts, has been developed by Walter Stewart and Ned Feder at the National Institutes of Health, Bethesda, Maryland, in the US. An optical scanner reads the suspect text into a computer programmed to divide it into overlapping strings of 30 characters, which are then checked against comparable strings in one or more texts relating to the same subject matter. Whenever exact matches occur, they are highlighted in boldface type. The procedure has been usefully employed in a number of cases of suspected misconduct. The creators of the device 'have learned . . . that plagiarism is rare; and that people who copy do so from

obscure places and chiefly from dead authors' (*International Herald Tribune*, 8 Jan. 1992). See **ALLUSION**, **COPYRIGHT**, **DERIVATIVE**, **PASTICHE**, **QUOTATION**. [**MEDIA**, **STYLE**, **TECHNOLOGY**, **WRITING**].

T.M.CA.

**PLAID CYMRU** [Pronounced 'Plied Kumry']. In English *Welsh Nationalist Party*. A political party founded in 1925 with the objective of self-government and dominion status for Wales and the preservation of Welsh language and culture. A referendum held in 1979 showed that 20% of Welsh voters favoured some form of political devolution within the UK. At the present time, the party seeks independence within the European Community. See **WELSH LANGUAGE SOCIETY**. [**EUROPE**, **NAME**].

T.M.CA.

**PLAIN** [14c: through Old French from Latin *planus* flat, even, level, lowly, clear, intelligible, evident (all of which senses have carried over into English)]. A term for direct and unambiguous language: 'þis gospel telliþ a playen storie' (Wycliffe, of the New Testament, c.1380); 'Speketh so playn at this tyme, I yow preyre, / That we may understonde what ye seye' (Chaucer, the Host speaking to the Clerk of Oxford in *The Canterbury Tales*); *The Complete Plain Words* (title of a British usage manual by Sir Ernest Gowers, 1954). *Plain* has been used since the late Middle Ages to contrast with *ornate*, *academic*, *technical*, *Latinate*, etc., and phrases such as *plain English*, *plain language*, *plain style* have been used to contrast with such expressions as *double Dutch*, *gobbledygook*, *jargon*, and *mumbo jumbo*. The contrast of *plain style* with other styles of language originates in ancient Greece and Rome, when rhetoric recognized three styles: the grand or high style, the middle style, and the plain or low style, each appropriate to certain audiences, occasions, and purposes. The grand declamatory style was suited to high themes, people, and occasions (with the risk of becoming grandiose), the moderate middle style was suited to instruction and education (with the risk of becoming bland or pedantic), and the simple style was suited to ordinary life and public speaking (with the risk of becoming coarse, colourless, or patronizing). During the Renaissance and Reformation (15–16c), styles tended to polarize between the classical, academic, and ornate on the one side and the popular, vernacular, and plain on the other, a division that mirrored religious disputes. Protestants, especially of the 'Low Church' in England, favoured *Puritan plain style* and *Quaker plain language* in their worship, speech, and writing. Both forms influenced the development of prose writing in the British Isles, North America, and elsewhere.

See AMERICAN LITERATURE, ANGLO-SAXON, COMPLETE PLAIN WORDS, PLAIN ENGLISH, PLAIN LANGUAGE, RHETORIC, ROYAL SOCIETY, SAXONISM. [STYLE, USAGE]. T.M.C.A.

**PLAIN ENGLISH** [16c]. (1) English that is straightforward and easy to understand: 'Which ye shalle here in pleyne Engliche' (*Chaucer's Drewe*, 1500); 'Conteyning and teaching the true vvriting, and vnderstanding of hard vsuall English wordes, borrowed from the Hebrew, Greeke, Latine, or French. &c. With the interpretation thereof by plaine English words, gathered for the benefit & helpe of Ladies, Gentlewomen, or any other vnskilfull persons' (Robert Cawdrey, subtitle to *A Table Alphabeticall*, 1604, the first English dictionary); 'A considerable body of information—central to the idea of plain English and derived from empirical research—has shown how a plain-English document stands out in sharp contrast to a fancy or rhetorical document' (James T. Dayananda, 'Plain English in the United States', *English Today* 5, Jan. 1986). (2) Blunt, no-nonsense language: 'If we double the thickness, the outside will be but one twenty-fifth as useful, or in plain English, nearly useless' (US government report, 1868). (3) Strong or foul language: 'With Princess Anne, who was apt to express herself in plain English when she found herself upside down in a water jump surrounded by clicking Nikons, there were some explosions' (Profile, *Observer*, 3 Sept. 1989). (4) In the later 20c, a term closely associated with an at-first diffuse but increasingly focused international movement against overly complex and misleading, especially bureaucratic, usage: 'Award winners for plain English included the Association of British Insurers for the booklet "About insurance—some key facts"' (*Plain English Campaign Magazine* 26, June 1989).

**Historical background.** In the 17–18c, the British middle and upper classes generally favoured an ornate style of language, but towards the end of the 18c, as the Romantic movement and the Industrial Revolution gained momentum, this 'Augustan' style was modified by two concerns: for Wordsworth's 'language really used by men' and a general style that was serviceable rather than ornamental. Even so, however, English prose generally continued to be highly Latinate and often difficult and intimidating for people who, though they could read and write, had received little more than a basic education. For this and other reasons, purists and revivalists such as the dialectologist William Barnes advocated the use of a more native or Germanic English, arguing for such words as *fore-elders* instead of *ancestors* and *birdstow* rather than *aviary*. This approach did not, however, necessarily

make usage clearer, because many Saxonisms, such as *hearsomeness* for *obedience*, were as difficult to learn and use as their classical equivalents. A late form of purism or nativism found expression in the 1920s in C. K. Ogden's *Basic English*, which was intended to embody the virtues of plain usage; its vocabulary of 850 words is very largely Germanic. In the later 20c, however, advocates of a plainer English have not proposed the native rather than the Latinate, but rather avoiding any usage, whatever its source or inspiration, that confuses and misleads readers or listeners; the demonology of the plain English movements includes such opponents as *baffle gab*, *gobbledygook*, *doublespeak*, and *psychobabble*.

**Plain English movements.** In recent decades there have been significant campaigns promoting plain English in both the UK and the US, with similar but smaller movements in Australia and Canada. The term *plain English campaign* (with the definite article) covers all drives towards the use of simpler language, especially in official, legal, and commercial writing (as in forms, contracts, business letters, and descriptions of products) and medical usage (including labels on medicinal products). In the UK, campaigning tends to be from the bottom up, a grass-roots activism with some official support; in the US, it tends to be from the top down, especially government-initiated moves with popular approval. The name *Plain English Campaign* or *PEC* (without the definite article) stands for a pressure group in the UK that campaigns for plain English while also offering commercial and other services that help sustain its momentum and funds. These services provide a means through which government, business, and individuals can obtain help in writing and checking plain-English texts (including forms and leaflets for public use) and document design that makes the transmission of information easier.

PEC was founded in 1974 by two campaigners in Liverpool. Chrissie Maher did not learn to read and write until she was 17, but once she had done so founded a community newspaper in 1971 to campaign for improved housing and amenities in the part of the city in which she was brought up. Martin Cutts studied psychology, English, and Italian at the U. of Liverpool and became a freelance journalist. Together, they edited *Liverpool News* (1974–6), a monthly newspaper for adults with reading difficulties, and in 1979 launched the Campaign with a public shredding of official forms in Parliament Square, London. PEC has since become, especially as a result of media interest, a national institution with considerable influence. In 1986, the founders reported: 'Today it is difficult to find a truly

atrocious British government form being issued to the public. OUT are the acres of grey small print, the 60-word sentences, the endless use of that bureaucratic knee jerk, the passive verb. IN are forms that look good, read well, and even save money through their greater efficiency' (in Maher & Cutts, 'Plain English in the United Kingdom', *English Today* 5, Jan. 1986). In 1989, sponsored by the Midland Bank, PEC published *The Plain English Course*, a package of materials with which training officers in any organization might teach their staff how to write plain English. Currently, Maher directs PEC and Cutts runs *Words at Work*, one of whose proposals is a 12-point *Charter for Clear Legal English*.

In the US, plain-English initiatives have included: (1) In 1978, President Jimmy Carter's Executive Order No. 12044, that required regulations to be written in plain English (revoked in 1981 by President Ronald Reagan's Executive Order 12291). (2) In 1980, Secretary of Commerce Malcolm Baldrige's memo to staff requiring the use of plain English. (3) The *Document Design Center* in Washington, DC, created by the National Institute of Education, a federal research agency, to conduct research and training in the writing of simplified and well-designed documents, and to provide technical assistance on such matters. Publications by the Center include *Simply Stated*, a monthly newsletter on plain-English laws and document design (first issue, Nov. 1979), and *Guidelines for Document Design* (1981). (4) In 1978, a New York state law requiring that business contracts be written in plain language (since matched by a number of other states). (5) In 1983, a forum on the profitability of plain English sponsored by the Department of Commerce, its proceedings summarized in the brochure *Productivity of Plain English*. Participants in the forum set up the *Plain English Forum (PEF)*, a group whose concern for promoting clear usage has included conducting 'plain English audits' for businesses and organizations.

**Awards and endorsements.** In the US, the Doublespeak Committee of the NCTE (National Council of Teachers of English) offers annual *Doublespeak Awards*, ironic tributes focusing on unsatisfactory and evasive language, especially as used by government (first awards, 1974). In the UK, PEC and the National Consumer Council present annual awards both to encourage organizations that have met their standards in the use of plain English and to draw critical attention to some that have not, by means of *Golden Bull Awards* for particularly unsatisfactory texts (first awards, 1982). PEC has also launched a scheme through which

organizations can seek an endorsement of the language and design used in their documents. This takes the form of the *Crystal Mark*, a logo-like symbol displayed on leaflets, products, and the like: 'The presence of the Crystal Mark shows that, in the opinion of Plain English Campaign, the document has reached a high standard of clarity in its language and layout. The Crystal Mark tells readers that the clarity of the document has been carefully examined by outside experts' (PEC leaflet, 1990).

Roberts, Philip Davies. 1987. *Plain English: A User's Guide*. Harmondsworth: Penguin.

**PLAIN LANGUAGE** (1) Usage without social pretensions, overly complex structures, and such actual or supposed frills as poetic flourishes, foreignisms, and technical jargon: 'The mandate of the Joint Committee was to assess the use of English and French plain language in the legal profession' (Resolution M-08-91 on Plain Language Documentation, Canadian Bar Association, Feb. 1991). (2) Plain English: *Drafting Documents in Plain Language* (title of book published by the US Practising Law Institute, 1980). (3) The usage of the Protestant denomination known as the Quakers or Society of Friends (founded in the 17c), which favoured the use of *thou* and *thee* long after it ceased to be part of mainstream English, and referred to days of the week and months of the year as *First*, *Second*, etc., rather than the pagan *Monday*, *Tuesday* and *January*, *February*, etc. See PLAIN, PLAIN ENGLISH. [STYLE]. T.MCA.

**PLAINTEXT, PLAIN TEXT.** See CRYPTOGRAPHY.

**PLAIN WORDS.** See COMPLETE PLAIN WORDS, PLAIN.

**PLANTATION SOUTHERN.** See SOUTHERN ENGLISH.

**PLATEN** [15c: from Old French *platine* a chalice cover]. (1) A flat plate in a printing press for pressing the paper against the inked type or surface, to produce an impression. (2) A rotating

cylinder used for the same purpose. (3) The roller of a typewriter, over which the paper passes and against which the keys strike. See PRINTING PRESS. [TECHNOLOGY]. T.MCA.

**PLATITUDE** [1800s: from French]. A commonplace statement or remark, especially if presented as though newly minted or uttered with an air of solemnity, as in 'I've said it before and no doubt I'll say it again: *There is no smoke without fire*. Someone who often 'mouths' platitudes is a *platitudinarian*. Compare CLICHÉ, PROVERB, TRITE. [STYLE]. T.MCA.

**PLAY** [From Old English *plega*]. (1) Light, free, and brisk movement (*sword play*; *a play of muscles*); space to move in (*an inch or more of play*); activity related to ideas, etc. (*a play of fancy*); exercise, sport, fun, pleasure, etc. (*children at play*; *word-play*; *a play on words*). (2) A dramatic composition written for performance in a theatre, on radio, and on television. During the 16–18c, the now archaic term *player* was a common synonym for *actor*. See DRAMA, PLAYING WITH WORDS, PUN, THEATRE/THEATER. [LITERATURE, MEDIA]. T.MCA.

**PLAYING WITH WORDS**, also **word-play**. Any adaptation or use of words to achieve a humorous, ironic, satirical, dramatic, critical, or other effect. Whereas a *play on words* is a pun, playing *with words* is verbal wit or dexterity at large and includes puns. One may play with the sound, spelling, form, grammar, and many other aspects of words: (1) *Sound*. 'Oh why can they not be made to see that all they have found is another man? A fellow man. A yellow man. A Jell-O man. A hollow man . . .' (Colleen McCullough, *A Creed for the Third Millennium*, 1985), alluding to T. S. Eliot's religious poem 'The Hollow Men' (1925). (2) *Spelling*. In 1653, Isaak Walton published *The Compleat Angler*, 'complete' being his normal spelling for 'complete'. In 1987, Valerie Grove published *The Compleat Woman*, echoing Walton. In a review, Carol Rumens noted: 'Depicted on the back-jacket with her brood of four, Valerie Grove is clearly on her way to becoming complete in her own right' (*Observer*, 18 Oct. 1987). (3) *Form*. Writing for the *New York Times* in 1988, William Safire referred to advertising usage as 'the work of the copywrongers . . . copywriters who make mistakes in grammar on purpose'. (4) *Grammar*. The British reference book *Who's Who* (founded 1849) contains biographies of 'people of influence and interest in all fields'. Its sister publication, *Who Was Who*, records the deceased. In 1987, a publisher brought out *Who's Had Who*, discussing known and alleged sexual relations

among the famous. (5) *All of language*. In *Ulysses* (1922), Joyce employs such expressions as *Lawn Tennyson, gentleman poet, and a base barreltone voice*. In *Finnegans Wake* (1939) he has *the hanging garments of Marylebone and all moanday, tearsday, wailsday, thumpsday, fright-day, shatterday*. See BLEND, HUMO(U)R, NONCE WORD, NONSENSE, PLAY, PUN, TECHNOSPEAK, TIMESPEAK. [STYLE, WORD]. T.MCA.

**PLAY ON WORDS**. See PLAY, PLAYING WITH WORDS, PUN.

**PLEONASM** [16c: from Latin *pleonasmus*, Greek *pleonasmós* ('more-ness') excess, redundancy]. A traditional term for the use of more words than necessary, either for effect or more usually as a fault of style, and any instance of that use, as in: *Could you repeat that again? rather than Could you say that again? or Could you repeat that?; They both got one each rather than They both got one or They got one each; That's a more superior product (superior already denotes 'more'); It's a really new innovation (an innovation is already new)*. Some common pleonasm attract little comment, such as *free gift* (gifts are by definition free) and *plans for the future* (plans cannot be about the present or past). Many famous writers have been pleonastic, including Shakespeare's double superlative 'The most unkindest cut of all' (*Macbeth*). See CIRCUMLOCUTION, PERIPHRASIS, REDUNDANCY, TAUTOLOGY. [STYLE]. T.MCA.

**PLOSIVE** [Early 20c: clipped from *explosive*, from Latin *explodere/explosum* to release with a noise like a clap]. In phonetics, a stop consonant that is released quickly, with a brief explosive sound known as a *release burst*. English voiceless plosives, such as /p, t, k/, are often followed by aspiration, particularly in IrE. The process is known as *plosion*. See ARTICULATION, CONSONANT. [SPEECH]. G.K., T.MCA.

**PLOT** [17c in this sense]. The narrative element in fiction and drama, whether in prose or verse. A plot is distinguished from a *story* by the causal quality which links episodes, reveals significances, and reaches a planned conclusion. The time sequence may be broken by a *flashback* to events preceding the narrative, or by glimpses of the future (sometimes called a *flashforward*), a device used by William Faulkner (1897–1962). A plot may be tightly structured, every detail contributing to the whole, as in classical Greek tragedy and the novels of Henry James (1843–1916), loosely structured, with some episodes not fully integrated (as in early Tudor comedy and the proto-novels of Aphra Behn and Daniel Defoe), or complex in structure, with two or

more stories interacting while following their own course as plot and *sub-plot* (as in Elizabethan and Jacobean drama, 19c novels like Dickens's *Bleak House*, 1852-3, and George Eliot's *Middlemarch*, 1871-2). In the 20c, dramatists connected with Expressionism and the theatre of the absurd have rejected formal plot structure, in favour of an inconsequential series of episodes, emphasizing the non-logical world which they depict.

The classical theory of plot was based on Aristotle's study of *mythos* in his *Poetics*. He emphasized unity of action, requiring a single, continuous story with beginning, middle, and end. In the plot of dramatic tragedy, he identified *peripeteia* (the reversal of the protagonist's fortunes, usually from good to bad), *anagnorisis* (recognition of a change or of the real relationships among people, such as the revealing of a blood relationship), and *catastrophe* (final downfall or suffering, such as punishment for a transgression). A more recent influence on theory was the 'pyramid' of the German critic Gustav Freytag (1816-95), who in his *Technique of the Drama* saw the plot of a five-act play as a pyramidal shape with action rising to a climax and falling away (designated *introduction*, *complication*, *climax*, *resolution*, *catastrophe*). Although Freytag's stages can be precisely applicable to only a comparatively few plays, they can be useful descriptive terms for the analysis of the novel as well as drama.

In the 20c, there has been much interest in *narratology*, the study of the process by which a story becomes a plot. The Chicago Critics of the 1930s favoured a neo-Aristotelian approach; the Russian Formalists distinguished *fabula*, the simple chronological narrative, from *syuzhet*, the material organized into shape by a narrator; and the Structuralists examined plots as conventions for storytelling and tried to classify them on a linguistic model. The linguistic approach shows that plot cannot be separated from other elements in the text. Character and plot are connected: the responses and relationships of characters affect the course of the narrative and the demands of the plot direct the characters' fortunes. E. M. Forster, in *Aspects of the Novel* (1927), saw tension between plot and character with the result that 'nearly all novels are feeble at the end'. In novels and plays with a strong element of suspense and a mystery to be solved, character may indeed be subordinated to plot, with excessive use of coincidence and facts withheld from the reader. In general, however, plot criticism is an integrated part of textual study. See ANACHRONY, NARRATIVE, NOVEL, STORY, STORY LINE. [LITERATURE, WRITING]. R.C.

**PLUMMY** [18c]. (1) Full of or like plums. (2) A

mainly 19c slang term for 'rich and desirable': a *plummy situation*. (3) An informal pejorative term for speech (especially the BrE accent known as 'advanced RP') considered to have a fruity, self-satisfied, and affected quality: 'It doesn't take a lexicographer's ear to notice that BBC English sounds less proper and plummy than it once did' (Vivian Ducat, 'Words from the Wise', *The Atlantic Monthly*, Sept. 1986); 'All India Radio—modelled on the BBC, even down to the plummy accents of its announcers' (*Daily Telegraph*, 1 Sept. 1970). See ADVANCED, (A)ESTHETICS, BBC ENGLISH<sup>1</sup>. Compare FRUITY. [SPEECH]. T.MCA.

**PLUPERFECT** [16c: from Latin *pluperfectum*, a syncopation of *plus quam perfectum* more than perfect]. A traditional term for the past perfect tense: *had come* in *Aren't they here? I thought they had come*. See PERFECT. [GRAMMAR]. S.G.

**PLURAL** [14c: from Old French *plurel*, from Latin *pluralis*, an adjective from *plus* more]. A term contrasting with *singular* (and *dual*) in the number system of a language. In English, it refers to 'more than one' (*one and a half hours*) as well as 'two or more' (*five hours*). Where there is a contrast with dual words such as *both* and *neither*, plurals refer to a minimum of three: *all her brothers*, *any of her brothers*, and *none of her brothers* entail that she has at least three. The word *every*, though it takes singular concord, also implies three or more. Although the principles for forming plurals in English are relatively simple, the history of the language has led to some complications.

**Pronunciation.** (1) The majority of countable nouns make their plurals by adding *-s* to the singular, except words ending in a sibilant, which add *-es* unless there is already an *e* in the spelling: *buses*, *ditches*, *wishes*; *bases*, *garages*, *judges*. The spelling *-es* is generally pronounced like *iz*, but the *-s* ending is pronounced in two different ways: usually an *s*-sound after a voiceless sound (*taps*, *cats*, *locks*), but a *z*-sound if the preceding sound is voiced (*tabs*, *cads*, *logs*, *boys*, *lines*). (2) Nouns ending in a consonant plus *y* usually change the *y* to *i*, and add *-es* (*mysteries*, *parties*), but proper nouns may retain the letter *y* (*the Henrys*; *the two Germanys*: but compare *the two Maries*, *the Ptolemies*) as do compounds with *-by* (*lay-bys*, *stand-bys*). (3) Some nouns ending in *-o* and generally of foreign origin simply add *s* (*photos*, *radios*), but others have *-es* (*heroes*, *zeroes*), and some have either (*mosquitos/mosquitoes*). (4) Nouns written with a final *f* or *fe* take regular or weak plurals (*cliffs*), irregular or strong plurals (*halves*, *knives*), or either (*dwarfs/dwarves*, *hoofs/hooves*, *scarfs/scarves*).

**Compounds.** Most compound nouns form their plurals in the usual way (*boyfriends, crime reporters, sit-ins*), but some pluralize both elements (*women pilots*). In traditional and rather formal usage, some pluralize the first element (*runners-up, courts martial, brothers-in-law*), but often they have a more colloquial alternative (*runner-ups, court martials, brother-in-laws*).

**Place-names.** Most place names ending in *-s* are singular: *Athens, Paris, Naples, the Thames, Wales*. Even names of countries which appear plural normally take singular concord (*The Netherlands/the United States is . . .*), although plural concord is possible if the meaning is, for example, a national or other comparable sports team (*The Netherlands are playing well*). However, mountain ranges and groups of islands are normally plural only: *the Himalayas/the Hebrides are . . .*

**Plural-only usages.** (1) Some plural nouns in *-s* have no singular form: *clothes, remains, thanks*. (2) Other plural-only words may appear to have singular forms, but these are either part of a singular/plural countable pair with a different meaning (plural only for *arms* meaning weapons, *arm/arms* for the parts of the body) or the singular form is an uncountable noun with a different meaning (£500,000 *damages* compared with *storm damage*). (3) Some words referring to tools and clothes with two parts are plural only (*scissors, tights*). The normal way of counting them is a pair of *scissors, two pairs of trousers*, etc.

**Words ending in *-s*.** (1) Although some singular words ending in *-s* add *-es* for plural (*buses, busin-nesses*), others have the same form in both singular and plural: (BrE) *an innings, two innings* (compare AmE *an inning*), and *means in every means in my power, by all means, by no means*. (2) Some uncountable nouns end in *-s*, the best-known of which is *news*. Others include names of games (*billiards, bowls*) and words for subjects and sciences with an *-ics* ending (*mathematics, physics, politics*). (3) Some *-ics* words are singular or plural according to sense (*Economics is an arid subject; What are the economics of buying a house in Spain?*), while others give rise to uncertainty: *Metaphysics is/are too difficult for me*. In some cases, a singular may have been back-formed from the *-ics* form: *a statistic*, from *statistics*. (4) Diseases can give rise to doubt: *Measles is/are nasty; I had it/them as a child*. The feeling that an *-s* ending means a plural is strong, and even such countable nouns as *crossroads, headquarters, golf links* may be followed by a plural verb when the reference is to a single place: *The headquarters is/are in London*.

**Other plural forms.** (1) From Old English: *child/children, ox/oxen, man/men, woman/women,*

*foot/feet, tooth/teeth, goose/geese, louse/lice, mouse/mice, penny/pence*. (2) 'zero' plurals (mainly with the names of animals) where singular and plural are the same: *one sheep/twenty sheep; a deer/some deer; a salmon/several salmon*. In the usage of hunters, the names of animals, birds, and fish are often singular in form: *went shooting lion; shot three buffalo*. The word *fish* has two plurals, one unchanged (*hundreds of dead fish*) and with a collective implication, the other regular (*lots of little fishes*) and implying individuals together. Zero plurals are common with measurements: *She only weighs 98 pound(s), though she is 5 foot/feet 5 inches; I'll take three dozen*. (3) Some plural-only words such as *cattle, clergy, people* (a plural of *person*, alongside *persons*), and *police*. (4) Some foreign plurals, such as *formulae, kibbutzim, mujahedin, phenomena, and radii*. The plural of French words ending in *-eau* may be written with an *-x* or an English *-s*: *chateaux, bureaux. Graffiti* is an Italian plural, but the singular *graffito* is rarely used in English.

**Classical plurals.** Latin plurals in English are: *-i* for words ending in the masculine inflection *-us* (*stimulus/stimuli*); *-ae* for singular words ending in feminine *-a* (*larva/larvae*); *-a* for words ending in neuter *-um* (*bacterium/bacteria*); *-ces* for words ending in *-x* (*appendix/appendices*). Greek plurals in English are: *-a* for words ending in neuter *-on* (*criterion/criteria*); and *-es* for words ending in *-is* (*analysis/analyses*). The situation with words of Latin and Greek origin which have kept their inflected nominative endings (*formula, memorandum, radius*) is complex and falls into three types: (1) With fully Anglicized plurals: *bonuses, rhinoceroses*. (2) Generally with classical plurals: *synthesis/syntheses, radius/radii, stimulus/stimuli*. (3) With two plurals, the classical for formal contexts and specialized meanings, the vernacular for informal and general use: *appendix* with *appendices* and *appendixes*; *cactus* with *cacti* and *cactuses*; *formula* with *formulae* and *formulas*; *referendum* with *referenda* and *referendums*. There is widespread uncertainty about words ending in *-a*, which may represent a Latin singular or plural or a Greek plural. In terms of their origin, Latin *agenda, data, media, strata* and Greek *criteria, phenomena* are plurals, but have to some extent been reclassified in English. In this matter, however, acceptability varies. *Data* is often an uncountable noun (*There isn't much data*), but use of *criteria, media* (press and television), *phenomena, strata* (level of society) as singular nouns is often stigmatized. See CLASSICAL ENDING, ENDING, S. [GRAMMAR, NAME]. S.C.

**POCKET OXFORD DICTIONARY, The.** See AUSTRALIAN DICTIONARIES, NEW ZEALAND DICTIONARIES, OXFORD DICTIONARIES, SOUTH AFRICAN ENGLISH DICTIONARIES.

**POET** [13c: from Latin *poeta*, Greek *poiētēs* a maker]. Someone who writes poetry. A contrast is often made between a *poet*, who writes verse regarded as high in quality, or at least adequate, and a *versifier*, whose work is thought not to merit the name *poetry*. The pejorative term *poet-aster* (Greek: 'a poetling') has been in rare but continuous use since the 16c for someone considered even lower on the cultural ladder than a versifier. See MAKAR, POETICS, POET LAUREATE, POETRY, SEXISM, VERSE. [LITERATURE]. T.MCA.

**POETIC DICTION.** A term for a poetic style prevalent in the 18c and marked by some or all of the following features: fanciful epithets, such as *the finny tribe* for 'fish' and *feathered songsters* for 'birds'; stock adjectives and participles, as in *balmy breezes*, *purling brooks*, *honied flowers*; artificial and ornate usage, such as 'Hail, sister springs, / Parents of silver-footed rills' (Crashaw); classical references, such as 'Of Cerberus and blackest midnight born, in Stygian caves forlorn' (Milton); complex figures of speech, as in 'My love was begotten by Despair / Upon Impossibility' (Marvell); archaism, as in 'and thither came the twain' (Tennyson); sentimentality, such as 'Absent from thee, I languish still' (Wilmot); unusual word order, such as 'This noble youth to madness loved a dame / Of high degree' (Dryden). The view that because poetry and prose have distinct conventions they should also have distinct styles and usages was favoured well into the 18c. In 1742, Thomas Gray wrote that 'the language of the age is never the language of poetry', a view challenged by Wordsworth (Preface, *Lyrical Ballads*, 1798), who argued against 'what is usually called poetic diction'. He considered that there should be no significant difference between the language of poetry and that of everyday life. However, despite an increasing 19–20c tendency to use similar styles and usages in poetry and prose, poetic usage continues to be widely regarded as more rarefied or 'flowery' than most kinds of prose. See DICTION, POETRY, WORDSWORTH. [LITERATURE, STYLE]. T.MCA.

**POETIC JUSTICE** [1678: coined by Thomas Rymer in *The Tragedies of the Last Age Considered*, a critical attack on Elizabethan drama. The concept dates from ancient Greece and is literary and dramatic]. The view that good is (or should be) rewarded and evil is (or should be) punished, in both fiction and real life; retribution should be fitting and ironically satisfying, in the

spirit of *hoist with one's own petard*. Much traditional drama and literature is didactic and moralistic, with the aim of elevating the reader, such as *The Golden Ass* of Apuleius in the 2c and Samuel Richardson's *Pamela, or Virtue Rewarded* in 1740. Although the concept of poetic justice was effectively attacked by the French poet Pierre Corneille in 1660 and by Joseph Addison in English in 1711 (*Spectator* 40), it remains a strong thread in literature, drama, and social attitude. The happy ending in many novels and films owes much to the doctrine. See IRONY. [LITERATURE]. T.MCA.

**POETIC LICENCE** BrE, **license** AmE [18c]. Sometimes **dramatic licence/license**, **literary licence/license**. The traditional practice among poets, dramatists, and others of departing from conventional rules of form, fact, realism, logic, and the presentation of truth, for the sake of the effect to be gained. Such licence may entail exaggeration, shifts or collapses in time, the blending of two or more real people into one fictional character, or attributing specific words to someone who never in fact used them. Devices of this kind are accepted as part of the armoury of the artist, but dubious ploys are sometimes criticized as licence in the sense of excessive freedom. See POETRY. [LITERATURE, STYLE]. T.MCA.

**POETIC PROSE.** Prose that exhibits characteristics widely associated with poetry, such as vivid imagery and marked rhythms. Some regard such prose as unsatisfactory and even flawed (because prose is not poetry, and should not take on its trappings); others see it as an often effective medium for heightened emotion. See DICKENS, POETRY, PROSE, PURPLE PATCH. [LITERATURE, STYLE, WRITING]. T.MCA.

**POETICS** [18c: from Greek *poiētikós* of verse, from *poiēsis* making, poetry]. The study of the principles of poetry, as exemplified in the traditional genres of lyric, epic, and drama. The term originates in the *Poetics*, a treatise by Aristotle (4c BC) that has survived in fragmentary form. This work dominated Western criticism for centuries and did much to shape Neoclassical ideas in the 17c and 18c. It is the source of the principle developed by later critics as *the (three) unities* (of time, place, and action) and of such concerns as *catharsis* (the purging of the emotions through drama), *hamartia* (a tragic flaw), *hubris* (overweening pride), *mimesis* (imitation), and *peripeteia* (reversal of circumstances). Since the Renaissance, some British critics have propounded general ideas about poetry that have been influential in their time. Significant works include Philip Sydney's *Apologie for Poetrie* (1595), John Dryden's *Of Dramatick Poesie* (1668), William Wordsworth's

Preface to *Lyrical Ballads* (1801), and Percy Bysshe Shelley's *Defence of Poetry* (1821). In the 20c, I. A. Richards's *Principles of Literary Criticism* (1924) gave close attention to the process of reading, which has become a fundamental emphasis of modern theory.

The Russian Formalists, examining the specific techniques of literary language, sought a scientific basis for poetics in place of the traditional subjective aesthetic approach. The most influential 20c work has been done by critics who have tried to apply contemporary linguistic theories to literature and to 'construct a poetics which stands to literature as literature stands to language' (Jonathan Culler, *Structuralist Poetics*, 1975). The term *poetics* has been extended to cover all literary genres and in principle the search has been for a general theory of literature and not of poetry alone; in practice, the application has usually been to a specific genre. Structural linguistics, derived from a restatement of the work of the linguist Ferdinand de Saussure, is the foundation of much present-day work on poetics. In Saussurean terms, the concern of poetics with the method rather than the content of literary texts favours the *signifier* (that which serves as a sign) over the *signified* (that which is represented by a sign).

Roman Jakobson propounded a theory of *literariness* based on the occurrence of repetition, parallelism, and equivalence in texts. He also studied the formal patterning of sounds and prosodic features in his search for a general theory of poetry, sometimes proceeding through specific texts, as in his controversial close analysis of Shakespeare's Sonnet 129. Noam Chomsky's theory of grammar, which includes the *competence/performance* distinction, has been made the foundation for a *generative poetics*, in which it is suggested that the informed reader possesses a kind of *literary competence*, a sense of literary universals which makes the specific text accessible and allows detection of what is unacceptably 'deviant'. There has also been much interest in narrative structure; the work of the Formalist Vladimir Propp (*The Morphology of the Folk Tale*, 1928) was revised by Claude Lévi-Strauss and then by A. J. Greimas in the light of structuralist theory. Tzvetan Todorov's *Grammaire de Décameron* (1969), although referring to a specific text, was intended as an attempt to create a *narratology* or science of narrative. In the latter part of the 20c, the tendency of literary criticism has been towards general theory and the formulation of an approach applicable to any text, poetry or prose.

See (A)ESTHETICS, CATHARSIS, CHOMSKY, COMPETENCE AND PERFORMANCE, DEVIANT, DRAMA, EPIC, GENRE, HAMARTIA, HUBRIS, LITERARY CRITICISM, LITERATURE, LYRIC, MIMESIS, PLOT,

POETRY, STRUCTURALISM, STYLISTICS, TEXT, TRAGEDY, UNIVERSAL. [LITERATURE]. R.C.

**POET LAUREATE** [14c in the sense of 'acclaimed poet']. The official term for a poet appointed by the British Crown as an officer of the Royal Household, and for the appointment itself. *Laureate* refers to the classical custom of crowning a poet with a wreath of laurel. John Skelton was created such a laureate by the universities of Oxford (1490), Cambridge (1493), and Louvain (c.1491). Ben Jonson received a pension from James I, and William D'Avenant from Charles I, but John Dryden was the first to be called Poet Laureate. His successors include William Wordsworth (1770-1850) and Alfred, Lord Tennyson (1809-92). The Poet Laureate was once expected to write odes for the New Year and the sovereign's birthday; this duty was removed under George IV (1820), but Poets Laureate have generally continued to celebrate the principal royal and national occasions. Ted Hughes (b.1930) became Poet Laureate on the death of John Betjeman (1906-84). [EUROPE, LITERATURE]. R.C.

**POETRY** [14c: from Latin *poetria* the art of the poet, from Greek *poiētēs* a maker]. Literary composition in verse form. It is often the case that to discuss a piece of work as poetry implies evaluating its quality, while to discuss it as verse relates to technique used in creating it. The terms, however, are blurred: the phrase *bad poetry* may refer to technique and the phrase *superb verse* may imply poetic excellence. In general, however, verse is the basis that supports a structure of sufficient quality to be called a poem.

**The poetic medium.** Poetry need not be written: early poetry was oral, transmitted and preserved through the mnemonic and performative skills of bards with no awareness of script or print. The written code accommodates poetry and adds the aesthetic effect of lines grouped on a page, or even of poems shaped in a visual pattern, like George Herbert's 'Easter Wings'. Other phonic features are added to the basic metrical pattern of verse, with or without rhyme. Thus, the sound of words may be directly onomatopoeic or may give a less overt effect of sound symbolism. Both are heard in Tennyson's 'Come Down, O Maid' (1847):

The moan of doves in immemorial elms  
And murmuring of innumerable bees.

Slow or rapid movement can be suggested by a deliberate pattern of sounds and syllables as in Alexander Pope's *Essay on Criticism* (1711):

When Ajax strives some rock's vast weight to throw,  
The line too labours, and the words move slow;

Not so, when swift Camilla scours the plain,  
Flies o'er th'unbending corn, and skims along the  
main.

Alliteration is not a part of most modern verse structure, but has a tradition dating back to Old English. Many poets have made it a feature for rhetoric or emphasis. Imagery in poetry conveys ideas obliquely, drawing from almost any area of human experience to create a response more effective than direct exposition. Shakespeare makes frequent references to disease and corruption in *Hamlet* to suggest evil in the state of Denmark. In 'Dover Beach', Matthew Arnold likens his uncertainty and loss of faith to an ebbing tide. Images are often presented through figures of speech like simile and metaphor. These are also found in prose and to a lesser extent in everyday discourse. They are especially distinctive of poetry, however, because of their frequency and the stronger focus of attention given by verse forms.

**The poetic message.** The appeal of poetry is semantic as well as phonic. The poet has something to convey in language, which may range from the half-concealed situation in many of Shakespeare's sonnets, through Wordsworth's specific description and reflection of experience in 'The Daffodils', to the overt message of the 'Song of the Shirt' by Thomas Hood. In general, the poem gains by not being too explicit in its personal statement. The meanings and associations of a word may not be in harmony with its sound: although *paraffin* contains a pleasing phonemic sequence, it would not usually be regarded as a 'poetic' word; *equilibrium* refers to a good state of being but has not a traditional poetic sound. Polysemy, abundant in English, enriches poetic language, as when T. S. Eliot uses the theological and linguistic meanings of *word* to write of Christ in his nativity as:

The word within a word, unable to speak a word.  
(*'Gerontion'*, 1920)

The pun is not currently in fashion for serious writing, but could once be used with telling effect:

Therefore I lie with her, and she with me,  
And in our faults by lies we flattered be.  
(Shakespeare, Sonnet 138)

**The language of poetry.** Concentration of special linguistic effects in a regular pattern tends to produce artificial diction. Rigid conventions about poetic usage have been less powerful in English than in some languages, but there have been times when poets have moved away from the familiar and everyday: particularly so in the 18c, with circumlocutions like *the finny tribe* for *fish* and *the bleating kind* for *sheep*. New generations of poets often demand a return to 'ordinary' language, as Wordsworth led the

Romantic reaction against 18c poetic diction with a call for 'a selection of the real language of men in a state of vivid sensation'. In the 1930s, the 'New Country' poets, such as W. H. Auden, Stephen Spender, and Cecil Day Lewis, wanted to write language that was accessible to ordinary people.

In the 20c, language has been accepted in poetry that would once have been considered too colloquial, commonplace, or even obscene, but this too can become mannered and removed from common usage. Poetry will always be to some extent artificial; selection and compression within the chosen form, even of free verse, distances the poem from daily usage. True poetry, however, is never entirely severed from the speaking voice; a certain latitude, however, sometimes called *poetic licence*, allows the poet to take liberties with language. In the classical set of genres, poetry was epic or lyric according to the degree in which the poet's direct voice was heard. Later theory has absorbed both genres under the general heading of poetry and added forms for specific purposes, such as elegy and pastoral. The frontier between poetry and prose is not always closely guarded or easy to delineate. If prose has a markedly high proportion of rhythm and other features associated with poetry, it is *poetic prose* or even *prose poetry*. An extended simile with imagery and careful choice of words can give poetic quality to a passage in a novel, as:

Her words faded. So a rocket fades. Its sparks, having grazed their way into the night, surrender to it, dark descends, pours over the outlines of houses and towers; bleak hill-sides soften and fall in.

(Virginia Woolf, *Mrs Dalloway*, 1925).

Some of the highest literary uses of English have been in poetry. Poets have wanted not only to create beauty but also to express themselves memorably; the attitudes, fashions, and beliefs of many periods are made permanent in poetry. It appeals to the senses as well as the intellect. Of the two, sensory attraction is the more important; without emotive beauty, versified philosophy has little to recommend it. Although a relatively objective metalanguage can be devised to describe and discuss poetry, individual response to it is necessarily subjective.

**POINT** [12c: from Old French, partly from *point* (a dot, mark, place, moment) and partly from *pointe* (a sharp end), both ultimately from Latin *pungere/punctum* (to prick, stab)]. (1) A sharp end to a blade, pencil, etc. (2) A moment (*At that point, she decided to leave*); a suggestion or recommendation, often one in a series (*He listed several points for discussion*). (3) The key element or moment in a story, argument, or joke: *He was interrupted so often he never got to the point; She just didn't get the point*. (4) The sign (.), in writing made with the point of a pen or pencil, known as a *period*, *full stop*, or *full point* when used to close a sentence that expresses a statement, including elliptical sentences and sentence fragments, as in: *They did not want to refuse. They didn't want to. On the contrary*. The point marks the close of, or elements in, many abbreviations (*Thurs., Gen., a.m., B.B.C.*) and follows initial letters, as with the *M* in *William M. Thackeray*. It is, however, increasingly omitted in initialisms (*BBC, GMT*), almost always omitted in acronyms (*Nato, yuppie*), and, especially in BrE, generally omitted in abbreviations such as *Mr* and *Dr*. A set of *ellipsis points* is used to mark gaps in writing, especially words omitted from a quotation, as in: 'All the business of war, and indeed all the business of life, is to endeavour to find

out what you don't know' reduced to 'All the business of war . . . is to . . . find out what you don't know' (quoting the Duke of Wellington, *Croker Papers*, 1885). When such points are used to mark a pause, they are called *suspension points*, as in *Tell him, uh . . . to wait a moment*.

(5) Also *decimal point*. The sign (.) or (·) used in decimal numbers, as in 2.22 or 2·22. Compare the *decimal comma* in Continental European practice, as in 2,22. (6) A periodic sentence. (7) In phonetics and orthography, a diacritical mark with various values: for example, in the modern transcription of Old English, sometimes placed above the letter *c* to indicate that it is pronounced 'ch' as in *church*, in such words as *cild* (child) and *cirice* (church). (8) One of the dots used in Braille and other systems of raised writing and printing for the blind. (9) A papermaker's term for a unit of measurement of the thickness of paper or card, equal to 0.001 of an inch. (10) A printer's term for the unit of measurement of type (0.0138 inches or 0.351 mm in the UK and US), first used as a standard (though of a slightly different size) in Continental Europe in the 18c, then in the English-speaking world at the end of the 19c. If type is set solid, with no extra spacing (*leading*) between the lines, it can be measured from the base of one line to the base of the next so as to get the size in points, such as *12-point Baskerville*. Typographic designers take account of the fact that different typefaces of the same *point size* will appear to be of different size when printed: for example, *11-point Bembo* is visually smaller than *11-point Times Roman*. See ABBREVIATION, ACRONYM, BRAILLE, DIACRITIC, DOT, ELLIPSIS, INITIAL, INITIALISM, PERIODIC SENTENCE, PUNCTUATION, SENTENCE, STOP, TYPOGRAPHY. [SPEECH, TECHNOLOGY, WRITING]. T.M.C.A., R.E.A., W.W.B.

**POINT OF ARTICULATION**. See SPEECH.

**POINTS OF SUSPENSION**. See ELLIPSIS, POINT.

**POLARI**, also *Palarie, Parlyaree, Parlary*, etc. [18c: from Italian *parlare* to talk]. A once-extensive argot or cant in Britain and elsewhere, among sailors, itinerants, people in show business (especially the theatre and circuses), and some homosexual groups. It survives as a vocabulary of around 100 words, some of which have entered general BrE slang: *mank(e)y* rotten, worthless, dirty (from Italian *manicare* to be lacking), *ponce* an effeminate man, pimp (from Spanish *pu(n)to* a male prostitute, or French *pront* prostitute), *scarper* to run away (probably from Italian *scappare* to escape, perhaps influenced by Cockney rhyming slang *Scapa Flow* go). A composite of different Romance sources, it was

first taken to England by sailors, may derive ultimately from *Lingua Franca*, and has been called 'a secret language born out of oppression' (Peter Burton, in 'The Gentle Art of Confounding Naffs: Some Notes on Polari', *Gay News* 120, p. 23, 1979). A sample of present-day argot runs: 'As feely homies, we would zhooosh our riahs, powder our eeks, climb into our bona new drag, don our batts and troll off to some bona bijou bar' (Ian Hancock, 'Shelta and Polari', in P. Trudgill (ed.), *Language in the British Isles*, 1984) [*feely homies* young men, *zhooosh our riahs* fix our hair, *eeks* faces, *bona nice*, *drag* clothes, *batts* shoes, *troll* wander, *bijou* small]. See ARGOT, CANT, LINGO, LINGUA FRANCA. [EUROPE, STYLE, VARIETY]. T.MCA.

**POLARITY** [17c]. A term used in linguistics for the contrast between positive and negative in sentences, clauses, and phrases. [GRAMMAR].

S.G.

**POLEMIC**. [17c: from Latin *polemicus*, Greek *polemikós* warlike]. The art or practice of combative argument and controversy; a disputatious attack on the opinions, principles, beliefs, and reputation of a person or group. During the Middle Ages, the Renaissance, and the Reformation, polemical debate was primarily concerned with religious doctrine, theologians disputing in order to refute error. A leading polemic in English is John Milton's *Areopagitica* (1664), named after the Areopagus in ancient Athens, where debates were held. It is a speech against censorship, particularly of religious matter, and moves from an attack on the licensing of printed material to a plea for the freedom of speech, publishing, and ideas. See ARGUMENT, CENSORSHIP, DIALECTIC, DIATRIBE. [LITERATURE, STYLE].

T.MCA.

**POLISH**. See AMERICAN LANGUAGES, BORROWING, CANADIAN LANGUAGES, DIALECT IN AMERICA, INDO-EUROPEAN LANGUAGES, SLAVONIC LANGUAGES.

**POLITE** [15c: from Late Medieval Latin *politus* accomplished, refined, from *polire/politum* to polish]. (1) Showing good manners; civil: *a polite reply*. (2) (Often used of speech, usage, etc., especially 16–19c) refined, cultured, elegant: 'That they speke none englisse but that which is cleane, polite, perfectly and articulately pronounced' (Sir Thomas Elyot, *The Governour*, 1531); 'Every polite tongue has its own rules' (Lyndley Murray, *English Grammar*, 5th edition, 1824). Compare CULTIVATED, EUPHEMISM, GENTLENESS, NICE-NELLYISM, REFINED. See (A)ESTHETICS. [STYLE]. T.MCA.

**POLITICALLY CORRECT** [c.1990]. Short forms *PC*, *P.C.* 'Marked by or adhering to a typically progressive orthodoxy on issues involving esp. race, gender, sexual affinity, or ecology' (*Random House Webster's College Dictionary*, 1991). The phrase is applied, especially pejoratively by conservative academics and journalists in the US, to the views and attitudes of those who publicly object to: (1) The use of terms that they consider overtly or covertly *sexist* (especially as used by men against women), *racist* (especially as used by whites against blacks), *ableist* (used against the physically or mentally impaired), *ageist* (used against any specific age group), *heightist* (especially as used against short people), etc. (2) Stereotyping, such as the assumption that women are generally less intelligent than men and blacks less intelligent than whites. (3) 'Inappropriately directed laughter', such as jokes at the expense of women, the disabled, homosexuals, and ethnic minorities. The abbreviation *PC* is also used as a term for people perceived as 'politically correct': "'Community" is a rallying cry among PCs. They tend to use it. . . . as an all-purpose buzz word' (Mike Bygrave, 'Mind your Language', *Guardian Weekly*, 26 May 1991). Both the full and abbreviated terms often imply an aggressive intolerance on the part of PCs of views and facts that conflict with their 'progressive orthodoxy'. The *Random House* dictionary quoted above was accused by the reviewer Anne Hopkins ('Defining Womyn (and Others)', *Time*, 24 June 1991) of failing to 'protect English from the mindless assaults of the trendy' because its editors listed such usages as *chairpersonship*, *herstory*, *humankind*, and *womyn* alongside *chairmanship*, *history*, *mankind*, and *women*, thereby giving them, in the opinion of the reviewer, a respectability that they did not merit. Compare MULTICULTURALISM. See GENDER BIAS, RACISM, SEXISM, STEREOTYPE. [AMERICA, EDUCATION, STYLE]. T.MCA.

**POLYGLOSSIA**. See DIGLOSSIA.

**POLYGLOT** [17c: from Latin *polyglottus*, Greek *poliglōttos* many-tongued]. (1) Able to speak or write several languages; multilingual. (2) Containing, composed of, or based on several languages: *a polyglot Bible*. (3) Someone who is familiar with a number of languages. (4) A book, especially a Bible, with the same text in several languages. See -GLOT, LINGUAL, MONOGLOT, MULTILINGUALISM. [LANGUAGE]. T.MCA.

**POLYNESIA** [From Greek *Polunēsia* place of many islands]. A name for the island groups of the eastern and south-eastern Pacific Ocean, extending from New Zealand north to Hawaii

and east to Easter Island. Compare MELANESIA, MICRONESIA. See BORROWING. [NAME, OCEANIA].

S.R.

**POLYNESIAN LANGUAGES.** See MALAYO-POLYNESIAN LANGUAGES.

**POLYSEMY** [1890s: from Neo-Latin *polyse-mia*, from Greek *polúsēmos* having many meanings]. Also **multiple meaning**. A term in linguistics for words or other items of language with two or more senses, such as *walk* in *The child started to walk* and *They live at 23 Cheyne Walk*. Such senses may be more or less distant from one another: *walk* (action), *walk* (street) are relatively close, but *crane* (bird), *crane* (machine) are much farther apart. It is generally agreed, however, that in each case only one word is being discussed, not two that happen to have the same form (to which the name *homonym* is given). Senses of the same word are seldom ambiguous in context, but the less specific the context, the greater the possibility of ambiguity: if someone who is looking at a picture says *What big cranes!*, it may not be immediately clear to someone who cannot see the picture whether the comment refers to birds or machines.

**Polysemy and homonymy.** There is an extensive grey area between the concepts of *polysemy* and *homonymy*. A word like *walk* is polysemous (*went walking*, *went for a walk*, *walk the dog*, *Cheyne Walk*), while a word like *bank* is homonymous between at least *bank* for money and *bank* of a river. Dictionaries usually put polysemous words with all their senses in one article and homonymous words in two or more articles, dividing each into senses and subsenses as appropriate. In doing this, lexicographers generally take the view that homonymy relates to different words whose forms have converged while polysemy relates to one word whose meanings have diverged or radiated. The way in which the dictionary has been organized may mean that words like *walk* and *crane* get a section each, or separate sections for their noun and verb uses. Although such decisions may be made for convenience of presentation, they have theoretical ramifications.

**Polysemy in dictionaries.** Just as homonyms like *bank*<sup>1</sup> and *bank*<sup>2</sup> are ordered in separate articles in dictionaries, so the separate senses are ordered inside an article. In the process of ordering, some senses may be treated as more distinct than others (technically, as lexemes), while others cluster as shades of meaning within one more or less delineated sense. The kinds of ordering include: (1) *Historical or etymological*, the older before the newer, a universal practice until the end of the 19c. (2) *Frequency*, the common before the

rare, the primary criterion in many 20c dictionaries. (3) *Logico-semantic*, the general before the specialized and the literal before the figurative, or some pragmatic mix of these. In the case of *walk*, verb precedes noun, and physical movement precedes place; in the case of *crane*, history, logic, and semantics combine to place the bird-sense before the machine-sense. See HOMONYM, JANUS WORD, POETRY, RADIATION, SEMANTIC CHANGE, SEMANTICS, SENSE. [LANGUAGE, REFERENCE, WORD]. T.MCA.

**POLYSYLLABLE** [16c: from Latin *polysyllaba* (*vox*) (word) of many syllables, from Greek *polusyllabos* many-syllabled]. A word with many syllables. Although words in English that have many syllables derive from many sources, the term is used especially of longer words of Latin and Greek origin, such as *polysyllable* itself. See DISYLLABLE, LONG WORD, MONOSYLLABLE, SYLLABLE. [LANGUAGE, SPEECH, WORD]. T.MCA.

**POLYSYNTHETIC.** See SYNTHETIC.

**POP** [1860s: a clipping of *popular*]. An informal term for popular culture and entertainment, as in *pop art*, *pop culture*, *pop novel*, *pop song*, *pop music*, and for pop music itself, as in *listening to pop* and *pop concert*. Since the Second World War, English has played a leading role in the global enthusiasm for American-style pop music: 'English pervades rock music the world over. In September, 11 of the top 20 LP's in Japan had English titles. West German rock songs average 56 English words a tune. And earlier this year a punk group in Spain called Asfalto released a record on learning English; it became a hit. Rock singers usually give the same reasons for singing in English: "I grew up listening to Neil Sedaka and the Beatles," says Yukihiro Takegawa, lead singer for the Japanese group Godeigo. "English was lyrics to me before it was a language." English also sounds better, says Bjorn Ulvaneus of the Swedish group ABBA. The words are shorter, the accent is not on the last syllable and it rhymes easily. Still, says Polish disc jockey Wojciech Mann, only one singer in a hundred understands the lyrics. "They just keep blubbering it out," he says. "It's a miracle how English fits that kinds of music" ('English, English Everywhere', section 'Pop Culture', *Newsweek*, 15 Nov. 1982). See POP GRAMMARIAN, POPULAR. [STYLE, VARIETY].

T.MCA.

**POPE, Alexander** [1688-1714]. English poet, born in London in a Roman Catholic family, and brought up at Binfield in Windsor Forest. He received little formal education, but his reputation was established by the craftsmanship

of his *Pastorals* (1709) and by *An Essay on Criticism* (1711), which showed a neo-classical respect for the critical judgements of the ancient world. He was drawn into the literary circle that centred on Joseph Addison, whom he later attacked as 'Atticus' in the *Epistle to Dr Arbuthnot* (1735). His translations of the *Iliad* (1715-20) and *Odyssey* (1725-6) were couched in heroic couplets, a form over which no poet has achieved greater mastery, and were widely admired. Pope had an acute ear for the evocative and onomatopoeic qualities of English:

'Tis not enough no harshness gives offence,  
The sound must seem an Echo of the sense;  
Soft is the strain when Zephyr gently blows,  
And the smooth stream in smoother numbers flows;  
But when loud surges lash the sounding shore,  
The hoarse, rough verse should like the torrent roar  
When Ajax strives some rock's vast weight to throw,  
The line too labours, and the words move slow;  
Not so, when swift Camilla scours the plain,  
Flies o'er th'unbending corn, and skims along the  
main.

(*An Essay on Criticism*)

He used the same metre in the satires, which attacked some of the leading writers and critics of his time: for example, in the first volume of *The Dunciad* (1728), he ridicules the Shakespearean editor Theobald. The savagery of much of Pope's writing may be partly attributed to his chronic ill health. *An Essay on Man* (1733-4) is, however, a theistic justification of the essential goodness of the universe. See index. [BIOGRAPHY, EUROPE, LITERATURE, STYLE]. R.C.

**POP GRAMMARIAN** [Late 20c: a clipping of *popular grammarian*]. A term, especially common in the US and often pejorative, for a writer on the English language with a wide readership, especially in a newspaper column, who adopts a prescriptive approach to language usage. It is sometimes used in tandem with *usage guru*, a term for a writer who tends to pontificate on points of usage. See POP, POPULAR. [GRAMMAR, USAGE]. S.G., T.MCA.

**POPULAR** [14c: from Latin *popularis* of the people: compare VULGAR]. (1) Relating to the people of a community (*popular elections*, in which every adult can vote) or the mass of the people, excluding the more privileged, highly educated, or aesthetically 'discerning' (*popular entertainment*, entertainment for mass consumption). Such terms as *popular fiction*, *popular newspaper*, and *popular romance*, as used by scholars and others (often neutrally, sometimes with condescension, sometimes dismissively), to refer to reading matter intended for 'ordinary' people, and therefore of a non-literary or sub-literary nature. In its positive sense, however, the term signals an interest in broadening the

educated base of a community, as in such magazine titles as *Popular Science Monthly*. (2) Widely liked or approved: *a popular decision*. The second sense is commoner, and often impinges on the first, suggesting for example that popular elections are widely enjoyed. See POP, POP GRAMMARIAN, POPULAR FICTION. Compare FOLK. [EDUCATION, LANGUAGE, STYLE]. T.MCA.

**POPULAR ETYMOLOGY.** See FOLK ETYMOLOGY.

**POPULAR FICTION** Works of fiction written for popular consumption, and widely regarded by critics, teachers, and often the authors of such works themselves, either as without claims to being 'literature' or as a genre that cannot by its very nature aspire to the term: that is, the works are *sub-literary*. When the concept is seen as literary, however, the term *popular literature* is sometimes used instead (although for some the phrase may be seen as a contradiction in terms). In addition to such sub-genres as the *popular novel* and *popular romance*, such works have been associated in English since the 19c with a range of terms that usually distance them from the literary canon: for example, *dime novel* (AmE 1860s: a sensational and melodramatic adventure novel, usually a paperback, and sold for a dime), *penny dreadful* (BrE 1870s: such a novel sold for a penny), *shilling dreadful* or *shilling shocker* (BrE 1880s: a more substantial penny dreadful, sold for a shilling), *bestseller* (AmE 1880s: a high-selling book, often a popular novel), *thriller* (1880s: a novel, play, film, etc., that is full of excitement and suspense), *cliff-hanger* (AmE 1930s: a melodramatic adventure series, in print or film, in which each instalment or chapter ends in suspense), *blockbuster* (1940s: an aerial bomb, then a book or film expected to have widespread and powerful appeal), *pot-boiler* (1860s: a run-of-the-mill work that sells steadily and was written to maintain a steady income), *bodice-ripper* or *bodice-buster* (later 20c: a Gothic novel or historical romance, usually paperback, with torrid scenes of sex and violence), and *airport novel* (1980s: a bestseller or blockbuster that sells in large quantities in airport bookshops).

Because works of fiction, popular or literary, usually have the same general features of style, structure, plot, and characterization, it is often difficult (if not impossible) to draw a firm line between the two. Rather than maintain the division between a 'higher' level of literary classics and a 'lower' level of ephemeral, popular works, some scholars regard all fictional genres as one, pointing to the fact that some works that are currently considered classics, such as the novels of Dickens, were once published in popular

form, to popular acclaim, and for many years were not endorsed by the critical establishment. Unarguably, popular literature is more 'popular' in the sense of being more widely enjoyed and read than most classics: 'Surveys by Peter Man of Sheffield University show how little English "literature" plays a part in the lives of even the educated British public. . . . In light reading, crime novels, thrillers, westerns and romances dominate, as would be expected. Favourite authors include Alistair Maclean, Agatha Christie, James Herriot, Dennis Wheatley, Barbara Cartland, Hammond Innes and Jean Plaidy. Popular reading tastes rarely coincide with the established canon of what constitutes "literature". This can be gauged by the fact that the last four authors named do not even get a mention in Robin Myers' *A Dictionary of Literature in the English Language from Chaucer to 1940* (volume I) and *1940-1970* (volume II), Pergamon. These volumes together list some 4,900 authors and 74,000 titles!' (Douglas Pickett, 'What is Literature—Established Canon or Popular Taste?', *English Today* 5, Jan. 1986). See DETECTIVE STORY, FICTION, NOVEL, POPULAR, ROMANCE, STORY. [LITERATURE]. T.MCA.

**POPULAR PRESS.** See NEWSPAPER.

**PORTMANTEAU WORD.** See BLEND.

**PORTUGUESE** [Called by its speakers *português*]. A Romance language of Western Europe, closely related to Spanish and the earliest of the major colonial languages originating in Europe. It is spoken by 135m people worldwide: in Europe, as the national language of Portugal (including the Azores and Madeira, islands in the Atlantic), with related Galician (*Galego*), sometimes considered a dialect of Portuguese, sometimes a distinct language, in north-western Spain; in the Americas, as the official language of Brazil; in Africa, as the official language of Angola, Cape Verde, Guinea-Bissau, Mozambique, and São Tomé and Príncipe; in Asia, as the official language of the Portuguese colony of Macao, near Hong Kong, and in ex-colonial territories such as Goa in India and East Timor in the Indian Ocean. It is also spoken by immigrant communities in Canada, France, the US, and elsewhere, and has given rise to or influenced pidgins and creoles in many parts of the world, such as a Portuguese creole in Cape Verde and Papiamentu in the Netherlands Antilles. Like Spanish, it was influenced by Arabic during the centuries of Muslim dominance in the Iberian peninsula. Portuguese mariners in the 15c were the first Europeans to explore the Atlantic coast of Africa and take the passage to Asia around the Cape of Good Hope. Portuguese settlers

played a significant part in colonizing the northern part of South America and adjacent parts of the Caribbean. Although Portugal is the oldest ally of England (since the 14c), the impact of Portuguese on English has been slight. Loan-words (some of them undergoing adaptation) include *albino*, *auto-da-fe*, *ayah*, *caste*, *madeira*, *marmalade*, *molasses*, *palaver*, and *port* (wine). Many such words have reached English indirectly, as with *ayah* and *caste*, which are the outcome of Portuguese influence on English in India. Portuguese has also mediated words from other languages into English. *Albatross*, for example, is apparently an adaptation of obsolete *alगतross*, a variant of *alcatras* (the frigate bird). This word in turn derives from Portuguese and Spanish *alcatraz*, a term applied variously to the frigate bird, pelican, gannet, and solan goose. Its origin is Arabic *al-ghaṭṭās* ('the diver': the white-tailed sea eagle), the substitution of *b* for *g* perhaps arising from an association with Latin *albus* white. See AFRICAN LANGUAGES, AMERICAN LANGUAGES, ARABIC, BORROWING, CANADIAN LANGUAGES, CREOLE, EARLY MODERN ENGLISH, ENGLISH, EUROPEAN COMMUNITY, EUROPEAN LANGUAGES, GEOGRAPHY, HAWAII, IBERIAN LANGUAGES, INDIAN ENGLISH', MACAO, PIDGIN, ROMANCE LANGUAGES, SPANISH. [AFRICA, AMERICAS, ASIA, EUROPE, LANGUAGE]. T.MCA.

**POSH** [1910s: perhaps from *posh*, the late 19c BrE slang name for a dandy, influenced by or identical with Romany *posh* half, meaning 'money' in 19c criminal cant. There appears to be no basis for the derivation from *port out(ward)*, *starboard home(ward)* abbreviated to *P.O.S.H.*, an apocryphal phrase for the cooler, more expensive berths on P & O (Peninsular & Orient) ships formerly travelling between the UK and India.]. An especially BrE slang term that in the earlier 20c meant 'splendid, wonderful, lavish, luxurious, fashionably smart, etc.' (*a really posh time*, *a posh London flat*) and in the later 20c has meant 'upper-class, wealthy, snobbish' (*a posh job with posh people*). It is widely used by the British to refer to uses of language that are regarded as snobbish or upper-class: *a posh accent*; *talking posh*. See RECEIVED PRONUNCIATION, U AND NON-U. [STYLE]. T.MCA.

**POSITIVE** [13c: from Latin *positivus* formally stated, definite]. (1) Also *affirmative* [15c: from Latin *affirmativus* making firm]. Terms for a sentence, clause, verb, or other expression that is not *negative*: *They are coming* as opposed to *They are not coming*. (2) A base form, as with the positive as opposed to the comparative or superlative forms of an adjective (*new* as opposed to *newer* and *newest*). See POLARITY, POSITIVE DEGREE. [GRAMMAR]. S.G.

**POSITIVE DEGREE**, also **absolute degree**. Terms for an adjective or adverb that is not marked for comparison (*new, happy, beautiful*), in contrast with the *comparative* (*newer; happier, more happy; more beautiful*) and the *superlative* (*newest; happiest, most happy; most beautiful*). See DEGREE. [GRAMMAR]. S.G., T.MCA.

**POSSESSION** [14c: from Latin *possessio/possessionis* holding (things) as property, occupancy]. The grammatical concept of one person or thing belonging to another, shown in English in four ways: (1) By verbs such as *have, own, belong to*. (2) By possessive pronouns that function as determiners: *my house*. (3) By the genitive or possessive case of nouns marked in writing by the possessive apostrophe: *John's book; The Smiths' farm*. (4) By the *of*-construction: *the end of the road*. These cover a wide range of meaning from practical ownership (*my clothes; I have a dog*) through kinds of association (*their parents; our country; Shakespeare's birthplace*), to more general and often figurative and idiomatic relationships (*have an appointment; a day's journey; a lover's quarrel; the story of his life*). The genitive is also used to introduce the subject of a gerund, as in *It's funny your saying that*. In some instances, a genitive and an *of*-construction are both possible, though not interchangeable in all contexts. The genitive construction is likeliest when the possessor is personal or at any rate animate, or is in some way perceived as having personal aspects: *Dr Johnson's house; a dog's breakfast; God's love; Scotland's national poet; the world's pressing needs*. The *of*-construction is preferred with things not considered capable of possessing anything: *the lid of a box* rather than *a box's lid*. See APOSTROPHE<sup>1</sup>, GENITIVE CASE, GERUND, POSSESSIVE CASE, SAXON GENITIVE. [GRAMMAR]. S.C.

**POSSESSIVE APOSTROPHE**. See APOSTROPHE<sup>1</sup>.

**POSSESSIVE CASE** [16c: from Latin *casus possessivus* the case that holds or possesses]. In the case system of Latin and other inflected languages, an alternative name for the *genitive*. In English, the term *possessive* refers to grammatical relations expressed through the preposition *of* and the apostrophe *s*. It is also a distinguishing label for certain kinds of parts of speech, such as possessive pronouns, which serve to indicate possession: '*my house*', '*your car*'. See APOSTROPHE<sup>1</sup>, CASE<sup>1</sup>, GENITIVE CASE, POSSESSION, SAXON GENITIVE. [GRAMMAR]. S.C.

**POSSESSIVE PRONOUN**. A pronoun which expresses possession. Strictly applied, the term covers eight items used independently, as in *The*

*house is ours: mine, thine* (archaic), *yours, his, hers, its, ours, and theirs*. More loosely, it includes eight items used attributively, as in *This is our house: my, thy* (archaic), *your, his, her, its, our, and their* (a set also labelled *possessive determiners and possessive adjectives*). The distinction between the two groups is the same as with any pronouns and determiners. Possessive determiners never take apostrophes: *its* is the determiner, while *it's* is short for *it is* or *it has*. See DETERMINER, PRONOUN. [GRAMMAR]. S.C.

**POST-COLONIAL LITERATURES IN ENGLISH**. See COMMONWEALTH LITERATURE, ENGLISH LITERATURE, WORLD LITERATURE WRITTEN IN ENGLISH.

**POST-CREOLE CONTINUUM**, also **creole continuum**. A chain of language varieties which arises linking a creole (also known as the *basilect*) to its superstrate language (also known as the *acrolect*) via intermediate varieties referred to collectively as the *mesolect*: for example, the Jamaican post-creole continuum, ranging from Jamaican creole proper to a Jamaican standard English based on standard BrE. The following are Guyanese English Creole forms for standard English *I gave him*: basilect *Mi gii am*; mesolect *A giv im*; acrolect, *A geev him*. The differences between coexistent varieties in such a continuum are generally greater than might be expected in a community with 'normal' processes of dialect formation, particularly in terms of the amount and degree of syntactic and semantic variation. A post-creole continuum may develop when, after a period of relatively independent linguistic development, a post-pidgin or post-creole variety comes under a period of renewed influence from the superstrate (the *relexifier language*, or principal source of vocabulary). This is generally described as *decreolization*. See CREOLE, LECT. [LANGUAGE, VARIETY]. S.R.

**POST-DETERMINER**. See DETERMINER.

**POST-MODERNISM**. See ENGLISH LITERATURE, MODERN.

**POST-MODIFICATION**. See MODIFICATION.

**POSTPOSITION** [16c: from *post-* after, and *position*, on the analogy of *preposition*]. (1) The use of words or other linguistic elements after the elements they modify or govern: for example, following the style of French, the adjective *martial* is postposed in *court martial* (not \**martial court*). (2) A part of speech, word class, or word element, that follows nouns and pronouns, to form a grammatical unit, as the equivalents of

English prepositions do in Hindi. Some grammarians have described the adverbial particles in English phrasal verbs (*off* as in *They took their hats off*) as postpositions, to emphasize their adverbial rather than prepositional role. Compare PREPOSITION. [GRAMMAR]. S.G.

**POSTSCRIPT**, formerly **post scriptum** [16c: from Latin *post scriptum* written afterwards]. Short form *PS*. (1) A sentence or paragraph at the end of a letter, after the signature, containing an afterthought or additional information. It is introduced by the letters *P.S.* or *P.S.* A further postscript begins with *P.P.S.*, and so forth. (2) A paragraph at the end of any text, containing some appended matter. Compare APPENDIX, EPILOG(UE). [WRITING]. T.MCA.

**POST-STRUCTURALISM**. See LITERARY CRITICISM, STRUCTURALISM.

**POSTVOCALIC** [19c: from *post-* after, *vocalic* relating to a vowel]. A term in phonetics referring to consonants that occur after a vowel: post-vocalic *r* in *work*. See R-SOUNDS, VOWEL. [SPEECH]. T.MCA.

**POTTER, Stephen** [1900–69]. English humorist and critic, educated at Westminster School and Merton College, Oxford, and author of the pioneering *D. H. Lawrence: A First Study* (1930) and several works on Coleridge, including *Coleridge and SIC* (1935). He had serious reservations, however, about the academic study and teaching of English, and in *The Muse in Chains: A Study of Education* (1932), made sport with ‘the racket, the flummery, the techniques and gambits’ in the teaching of what he called ‘Eng. Lit.’, an expression he claims to have invented. The identity of Potter the scholar is now generally lost in that of Potter the comic sage, author of *The Theory and Practice of Gamesmanship; or, the art of winning games without actually cheating* (1947), *Some Notes on Lifemanship, with a summary of recent researches in gamesmanship* (1950), and *One-upmanship: Being some account of the activities and teaching of the Lifemanship Correspondence College and of one-upness and gameslifemastery* (1952).

In these books, he makes fun of the flummery and gambits of scholars and the solemnities of sociologists. *Gamesmanship* (modelled on *sportsmanship*) refers to the *plays* to which players may legitimately resort in trying to put opponents off their game: for example, coughing just as one’s partner is about to tee off at golf. The principle extends to *lifemanship* and *one-upmanship*, the art of coming off best in life’s little encounters: for example, If people talk of Moscow, you talk of Vladivostok, banking on the probability that

no one has been there; if the talk is of Italy, you confound the enthusiasts for Tuscany by saying, in response to any assertion, ‘but not in the south’. These books caught the public fancy through their appeal to the everyman view of life as a series of minor competitions in which small face-saving victories are won by petty devices. Potter’s choice of topics was typically English in his gravely systematic, quasi-scholarly analysis of trivia. Through his ploys he won for his coinages a place in the language: his own lifemanship might therefore be said to have left him *one up*. See MUSE. [BIOGRAPHY, EUROPE, LITERATURE, WORD]. W.N.

**POUND, Louise** [1872–1958]. American philologist and folklorist, born in Lincoln, Nebraska, and educated at the universities of Nebraska, Chicago, and Heidelberg (Ph.D., 1890). She became an instructor in English literature at the U. of Nebraska in 1894 and remained at that institution until her retirement 50 years later, becoming full professor in 1912. She was the first at the university to teach courses in American language and literature, and the most prominent woman academic during the first half of the 20c, when linguistics was establishing itself in the US and there was an unprecedented expansion in the observation and recording of American language and folkways. Throughout her career, she balanced research in the origins of English literary genres and the development of AmE. Her study of rhyme and stanza form in *Poetic Origins and the Ballad* (1921) disproved a commonly held belief in the cooperative origin of ballads.

Pound began her study of American speech as a student in George Hempf’s Chaucer class at Chicago. Interested in those living American dialects that preserved many of the words, phrases, pronunciations, and intonations of late Middle English, she became an avid observer of language and a collector of its folklore, writing numerous articles on etymology, historical linguistics, and dialectology. As editor of the U. of Nebraska journal *Studies in Language, Literature, and Criticism* (1917–40) and adviser and contributor to *New England Quarterly*, *American Literature*, *Folk-Say*, *College English*, and *Southern Folklore Quarterly*, she traced the roots of American expression. Describing her work as a co-founder and main editor of *American Speech*, and acknowledging his indebtedness to her, H. L. Mencken wrote that she ‘put the study of current American English on its legs’ (*The American Language*, Supplement 1, 1962). Her dedication to the accurate recording of language was noted when she was elected 65th president of the Modern Language Association in 1955 at the age of 82, the first woman to hold the position. Pound considered that professional

organizations could encourage research and teaching; she was president of the American Dialect Society (1938-42) and the American Folklore Society (1924-6), and active in the International Phonetic Association, the Linguistic Society of America, the Medieval Academy of America, and the Spelling Reform Association. See index. [AMERICAS, BIOGRAPHY, LANGUAGE, VARIETY]. C.C.E., R.W.B.

**PRAGMATICS** [1930s: from Greek *pragmatikós*, from *prâgma* matter in hand, action, on the analogy of *linguistics*]. A branch of linguistics which originally examined the problem of how listeners uncover speakers' intentions. It is sometimes defined as the study of 'speaker meaning', as opposed to linguistic meaning: the utterance *I'm thirsty* might need to be interpreted as *Go and buy me a drink* and should not necessarily be taken at face value as a simple statement. The term is usually attributed to the British philosopher Charles Morris (1938-71), who distinguished between *syntax* (the relations of signs to one another), *semantics* (the relations of signs to objects), and *pragmatics* (the relations of signs to interpretations). Recently, pragmatics has expanded into a wide and somewhat vague topic which includes anything relating to the way in which people communicate that cannot be captured by conventional linguistic analysis. Within pragmatics, *discourse analysis* (the study of language in discourse) has become a major focus of attention. See DISCOURSE ANALYSIS, LINGUISTICS, SEMANTICS, SPEECH ACT. [LANGUAGE]. J.M.A.

**PRAKRIT** [From Sanskrit *prākṛt* uncultivated, natural. Compare SANSKRIT]. (1) A collective term for the Middle Indo-Aryan languages from 600 BC to AD 110, sometimes called the *Prakrits*. This group is contrasted with both *Sanskrit*, the classical language of the Hindus, and *Pali*, a scriptural language of Buddhism that itself began as a Prakrit. The use of Prakrit in Sanskrit plays indicates a diglossic situation in which kings and officials used Sanskrit and women, children, servants, eunuchs, and the sick or insane used Prakrits. The extent of the influence of Prakrit on Sanskrit in grammar and literature makes it clear that the latter was not, as has often been suggested, a standard language kept pure and apart from other languages. The relationship between Sanskrit and the Prakrits can be compared to that of Latin and the Romance languages in Europe and standard English and many varieties of English around the world. See INDIAN LANGUAGES, PALI, SANSKRIT, VERNACULAR. [ASIA, LANGUAGE]. R.P., T.MCA.

**PRÉCIS**, also *precis* [18c: from French 'cut short', Latin *praecidere*/*praecisum* to cut down,

shorten, the same source as *precise*. Pronunciation: 'PRAY-see'. Plural identical in spelling, but pronounced '-seez']. (1) A concise summary or abstract: *to make a précis of a report*. The term *précis-writing* has been commonly used in schools, especially in Britain, to refer to the teaching and practice of writing summaries. (2) To summarize: *to précis a report*. See ABRIDG(E)MENT, SUMMARY. [WRITING]. T.MCA.

**PRE-DETERMINER**. See DETERMINER.

**PREDICATE** [15c: from Old French *predicat*, Latin *praedicatus* made known]. A traditional grammatical term for a major constituent of the sentence, part of a binary analysis that divides the sentence into subject and predicate. In the sentence *Pat has joined our club*, *Pat* is the subject and *has joined our club* is the predicate. In both grammar and logic, the predicate serves to make an assertion or denial about the subject of the sentence. In some analyses, the predicate does not include optional constituents, so that *today* is not part of the predicate in *Pat has joined our club today*. [GRAMMAR, LANGUAGE]. S.G.

**PREDICATIVE ADJECTIVE** [19c]. Also *predicate adjective*. An adjective that occurs in the predicate: *silent* in *Eliot remained silent*; *uncomfortable* in *Naomi made her brother uncomfortable*. The adjective follows a linking verb (*remain, make*), and the relationship is with the subject (*Eliot*, who was silent), or the direct object (*her brother*, who became uncomfortable). Some adjectives can only be used predicatively: *asleep* (*The children were all asleep*, but not *\*the asleep children*); *aware* (*They were not aware of the danger*, but not usually *\*an aware person*). Increasingly commonly, the term *predicative adjective* is used to refer only to such adjectives, in contrast to *attributive adjective* (an adjective used before a noun). Some adjectives can only be used attributively: for example, *undue*, as in *undue pressure* (no *\*the pressure is undue*). See ADJECTIVE, ATTRIBUTIVE, COMPLEMENT, PREDICATE. [GRAMMAR]. S.G., T.MCA.

**PREFACE** [14c: from Medieval Latin *prefatia*, from Latin *praefatio*/*praefationis* something said beforehand, from *fari* to say, speak]. (1) Also *foreword, prologue*. A preliminary statement in a book, usually about one to three pages in length, by the author or editor, usually describing its nature, purpose, and scope. It may also acknowledge help, or there may be a separate *Acknowledgements* section for that purpose. (2) Anything similar, such as an opening speech, meeting, or prayer. See FRONT MATTER, PROLOG(UE), SAXONISM. [MEDIA, WRITING]. T.MCA.

**PREFIX** [14c: from Latin *praefixum* (something) fixed in front]. (1) A term in word-formation for

an affix added at the beginning of a word or base to form a new word: *re-* added to *write* to form *re-write/rewrite*. (2) A general term for a word, letter, number, or other item placed before something else: the letter *A* in the sequence *A133*; the combining form *auto-* prefixed to *biography* to form *autobiography*.

**Productivity.** In word-formation, a prefix is *productive* when it contributes to the meaning of a word (the *un-* in *unhappy* having the meaning 'not') and can be added freely to other, comparable words (*unable, unkind*). It is *non-productive* when it occurs in a word but does not contribute to its meaning: *con-* in *condition*. The meaning of the word *condition* is unrelated to the union of *con-* and *-dition* and there is no independent base word *\*dition*. A prefix is *vestigial* when only a trace of it can be detected by scholars: the *s* of *spend*, which was once *expend*. The same prefix may be productive in some words (*dis-* in *disconnect, dislocate*), non-productive in others (*dis-* in *disaster, distribute*), and vestigial in others still (*sport*, once *disport*). There are 'twilight' states: *re-* when productive means 'again' (*re-do, reconnect*) and when non-productive (as in *remiss*) has no meaning, but in *rejuvenate, repair* the meaning 'again' is present even though the bases to which *re-* attaches (*\*juvenate, \*pair*) are not independent words.

**Provenance.** The prefixes of English derive from: (1) Old English: *a-* in *asleep, be-* in *bespatter, un-* in *unready*. (2) French: *dis-* in *disappear, mis-* in *misgovern*. (3) Latin: *ante-* in *anteroom, in-* in *inactive, pre-* in *preconceive*. (4) Greek: *a-* in *amoral, anti-* in *anti-war, meta-* in *metaphysical*. Prefixes with different backgrounds can, however, fall into relational sets: vernacular *over-*, as in *over-sensitive* more sensitive than necessary or desirable; Latin *super-*, as in *super-sensitive* very sensitive (especially of instruments, film, etc.); Greek *hyper-*, as in *hypersensitive* excessively sensitive (especially to allergens). The negative prefixes of English form a range of usages that are sometimes irregularly paired (*ungrateful/ingratitude, unlikeable/dislike, unstable/instability*), are sometimes a source of confusion (*disinterested/uninterested*), and are sometimes delicately contrastive (*unmoral, immoral, amoral, non-moral*).

**Pairing.** In English, suffixes often occur in chains (such as the *-istically* in *characteristically*), but prefixes do not. They usually occur singly (*un-* in *unhappy, re-* in *re-write*), but sometimes occur in pairs: *un-, re-*, in *unremarried* not married again; *anti-, dis-*, in *antidisestablishment*. In these examples, both prefixes are productive (that is, *married* and *establishment* are independent base words), but pairing is commonly the addition of

a productive to a non-productive prefix: productive *in-* to non-productive *re-* in *irredeemable* (no *\*deemable*); *in-* added to *con-* in *inconclusive* (no *\*clusive*). Sometimes, the same prefix may be added twice, usually with a hyphen: *meta-metalanguage, re-reconstructed, co-conspirator* (the productive *co-* beside the non-productive *con-*). Very occasionally, a three-prefix chain occurs: *non-reproductive*, in which *non-* is fully productive, *re-* is partly productive (*reproduction* being more than an extension of *production*), and *pro-* is non-productive (no *\*ductive*). See COMBINING FORM, DIMINUTIVE, MORPHOLOGY, PRIVATIVE, PRODUCTIVE, SUFFIX, WORD-FORMATION. [WORD]. T.MCA.

**PRELIMINARIES, PRELIMS.** See FRONT MATTER.

**PREMISS, also premise** [14c: from Latin noun *praemissa*, from *praemissus* sent ahead (that is, preceding or leading to)]. In logic, a proposition that supports or helps to support a conclusion. Compare AXIOM. See LOGIC, PROPOSITION, SYLLOGISM. [LANGUAGE]. T.MCA.

**PRE-MODIFICATION.** See MODIFICATION, TECHNOSPEAK, TIMESPEAK.

**PREPOSITION** [14c: Middle English *preposicioun*, from Latin *praepositio*, a loan translation of Greek *prothesis* putting before]. One of the traditional parts of speech into which words are classified. It is a closed class, in that few new prepositions ever enter a language.

**Kinds of preposition.** (1) *Simple preposition.* Traditionally, the preposition proper: one- or two-syllable words, such as *at, from, through, without*. Many such words, however, also have adverbial roles: *up* is prepositional in *They took the boxes up the stairs*, adverbial in *They picked the boxes up/They picked up the boxes*. (2) *Compound preposition.* Two prepositions used together as one: *in* and *to* as *into*. Such forms are primarily conventions of writing and print and may vary according to the kind of English: BrE generally has *on to* and AmE *onto*. Forms like *into, on to/onto, and out of* are all compounds in speech, because of their rhythm and stress: the first preposition is stressed (*INto*), and the second is usually reduced. This point is reflected in the non-standard spelling of *out of* (*Will ya get outa here?*), where *a* stands for *of* reduced to schwa. (3) *Complex preposition.* A two- or three-word phrase that functions in the same way as a simple preposition: *according to*, as in *According to John, they are coming tomorrow; as well as*, as in *We're going as well as John; except for*, as in *They did everything, except for some work we'll*

*finish tomorrow; in favour of, as in They voted in favour of the local candidate.*

**Prepositions and complements.** Unlike such major word classes as verbs and nouns, which have a more independent status, prepositions do not stand alone but need a *complement*. Typically, this is a noun or pronoun (*dawn in at dawn, you in after you*) but can be other parts of speech (*then in by then, short in in short*). Prepositions can also be followed by an *-ing* clause (after *of* in *A man has no reason to be ashamed of having an ape for his grandfather*) or by a *wh*-clause (*For what we are about to receive . . .*). They are not normally followed by *that*-clauses, although apparent exceptions are clauses introduced by complex conjunctions: *in that*, as in *The box was difficult to find, in that nobody knew where to look; except that*, as in *I wouldn't have gone, except that I'd promised*. Prepositions are not followed by *to*-infinitives, and there is a distinction between preposition *to* (as in *We look forward to seeing you/to your visit*, not \**We look forward to see you*) and the *to* particle plus an infinitive (*We hope to see you soon*, not \**We hope to seeing you soon*).

**Semantics.** In terms of meaning, prepositions range through various relationships: (1) Space and time, many being used for both: *at* in *They met at Heathrow Airport at six o'clock*. (2) Cause and purpose: *for* in *She did it for reasons of her own*. (3) Agent and instrument: *by* in *work done by an assistant; with* in *opened with a knife*. (4) The versatile *of*: possessive (*a friend of mine, the lid of the box*); assigning origin (*of royal descent*); indicating creation (*the works of Shakespeare*); referring to depiction (*a picture of Loch Fyne in winter*); indicating a subject of conversation (*telling them of his travels*); stating source and manufacture (*made of cotton*). (5) There are also many figurative meanings, such as the zeugma of *He left in a rage and a taxi*. (6) Normally, when the same preposition governs two consecutive phrases and has the same signification in both, it does not need to be repeated (*She works in London and Glasgow*), but on occasion, repetition is essential for the sake of clarity: *They lived in hope in Edinburgh* (because the significations are different: no \**They lived in hope and Edinburgh*).

**Usage: the ends of sentences.** Because, in etymological terms, *preposition* means 'placing before', and Greek and Latin prepositions precede their complement, the classical prescriptive rule emerged for standard English that sentences should not end with a preposition. However, although English prepositions often do precede their complement, there are structures in which this is impossible (*What did you say that for?; What are you getting at?*) and some which have

no grammatical complement (*The bed hadn't been slept in; It hardly bears thinking about; He's nothing to look at*). Traditionally, such usages have been described as more or less ungrammatical, often with the result that alternatives have been preferred or recommended (*Why did you say that?* instead of *What did you say that for?*). The resultant insecurity sometimes produces stilted inversions like *To whom do you think you are talking?* for *Who do you think you're talking to?* One such manoeuvre in a government report is said to have led Winston Churchill to make his famous marginal comment: *This is the sort of bloody nonsense up with which I will not put* ('bloody nonsense' often being changed to 'English' in quotations). With relative clauses, there are usually two positions for a preposition, the end position being less formal: *This is the house in which she lived* as against *This is the house (that) she lived in*. In using such constructions, both native and non-native speakers of English sometimes either forget the preposition (*He is the person you have to give it, forgetting to*) or repeat it (*He is the person to whom you have to give it to*).

**Usage: prepositions and other parts of speech.** Prepositions overlap with other parts of speech, especially adverbs and conjunctions. The grammatical classification of an item therefore often depends on use in context: in the sentence *Jack and Jill went up the hill*, *up* is a preposition, but in *They climbed up (and up)*, it is an adverb. Such adverbs are sometimes called *prepositional adverbs*, sometimes *adverbial particles*. In other instances, there are related prepositional and adverbial forms. In standard English in England, *out* is adverbial only (*I opened the window and looked out*), the related prepositional form being *out of* (*I looked out of the window*). However, in AmE and ScoE, *out* is both adverbial and prepositional (*I looked out the window*). *Near (to)* and *close (to)* function like prepositions, but are like adjectives and adverbs in having comparative and superlative forms, and can be modified by an intensifier: *He sat nearer (to) the fire/very near the fire*. Other prepositions overlap with conjunctions. The distinction is again one of usage and function: *We waited until she arrived* (conjunction plus clause), *We waited until her arrival* (preposition plus noun phrase). Some words are conjunctions, prepositions, and adverbs: *since* in *We haven't heard from him since he left* (conjunction); *We haven't heard since January* (preposition); *We haven't heard since* (adverb). At times, the distinction between preposition and conjunction is not easy to make and may lead to controversy, as with *as* and *than*. Depending on whether they are seen as

conjunctions (needing subject pronouns) or prepositions (able to take object pronouns), in such comparisons as *I'm not as rich as she/her* and *He's taller than I/me* the first option may be viewed as correct (but stilted), the second as usual (but sometimes stigmatized).

**Usage: like.** Some people, regarding *like* as a preposition (*Do it like this*), object strongly to its use as a conjunction, as in *Do it like I told you*, rather than *Do it the way I told you*; *Like he said, it's good for you*, rather than *As he said, . . .*; *It's like he wanted to get away*, as opposed to *It's as if/though he wanted to get away*. These uses are, however, widespread. There are also some prepositions that introduce non-finite clauses but are never conjunctions, as with *on* in *On seeing us, he rushed away without saying a word*.

**Marginal prepositions.** These are words that have some of the characteristics of prepositions but also strong affinities with other word classes. They include some *-ing* and *-ed* forms which also have verbal use: *considering* (as in *Considering all the trouble he has caused, he should . . .*), *following*, *regarding*, *given*, *granted*. There are also such hard-to-classify words as *bar* (as in *all of them bar one*), *worth* (as in *It's worth much more*), and *minus* and *plus* (as in *minus four, plus ten*). *But* and *except* as prepositions can be followed not only by noun phrases (*There's nobody here but/except me*) but also by a bare infinitive (*They do nothing but complain*).

**The prepositional phrase.** This is a preposition and its complement together: *in the house*; *near the end*. Such a unit functions in different ways in a sentence: it can follow a noun in a noun phrase ('the man *in the white suit*'); it can follow particular verbs and adjectives ('Come and look *at my etchings*', 'Are you fond *of animals?*'); and it can function as an adverbial ('Put that thing *on the floor*'). This versatility sometimes leads to absurdity, when a prepositional phrase meant to have one function is misplaced and can be understood in another: *Staff are requested not to eat anything outside the canteen except for the duty telephone operator*. See next entries, and ADVERB, PHRASAL VERB, POSTPOSITION. [GRAMMAR, USAGE]. S.C., T.MCA.

**PREPOSITIONAL ADVERB**, also **adverb/adverbial particle**. A term for an adverb that can also function as a preposition: *off* is a preposition in *It fell off the back of a truck*, but an adverb in *It was on a truck and fell off*. See PHRASAL VERB, PREPOSITIONAL VERB. [GRAMMAR]. S.C.

**PREPOSITIONAL VERB.** In one school of grammatical theory, the term for an often idiomatic combination of verb and preposition: *approve of* in *They fully approved of his actions*;

*get at* in *I really don't know what you are getting at*. Sometimes, such a verb is synonymous with a single verb: *come across* with *find* in *They came across the manuscript by accident*. The phrase that follows the preposition (*the children* in *Look after the children*) is a *prepositional object*. According to this view, some such verbs have two objects, one of them coming between the verb and the preposition: *blame on* in *Blame the noise on the children*. Other grammarians, however, argue that here the *on* is part of a traditional prepositional phrase. A *phrasal-prepositional verb* is a combination of a verb and two particles, the first an adverb, the second a preposition: *put up with*, meaning 'tolerate', as in *I can't put up with this noise any longer*. See PARTICLE, PHRASAL VERB. [GRAMMAR, USAGE]. S.G., T.MCA.

**PRESCRIPTIVE GRAMMAR.** See DESCRIPTIVE AND PRESCRIPTIVE GRAMMAR.

**PRESCRIPTIVISM.** See DESCRIPTIVISM AND PRESCRIPTIVISM.

**PRESENT** [13c: from Old French *present* (Modern *présent*), from Latin *praesens*, being at hand, immediate]. A term for the tense of the verb concerned primarily with events, actions, and states that apply at the time of speaking or writing (*The work goes on*), but also used to express future time (*We go to France tomorrow*), universal truths (in the simple present only: *Water is wet*), and past time in certain narratives, often of an informal or colloquial nature ('The narrative present': *He crosses the street and shoots them*). There are several types of present tense. The *simple present tense* has the form of the verb without inflections (*mention*) or with the third-person singular *-s* (*Everybody mentions his name*). The complex present tenses are: the *present continuous* or *present progressive*, which combines a present form of auxiliary *be* with the *-ing* participle (*is mentioning*); the *present perfect*, which combines a present form of auxiliary *have* with the *-ed* participle (*has mentioned*); the *present perfect continuous*, which combines these two (*has been mentioning*). Compare FUTURE, PAST. See TENSE. [GRAMMAR]. S.G., T.MCA.

**PRESENT PARTICIPLE.** See PARTICIPLE.

**PRESS** [c.13c, in the sense of an instrument that pushes hard: from Old French *presser*, Latin *pressare*, to keep pushing heavily on, frequentative of *premere* (past participle *pressus*), to push or rest heavily on]. A term with a range of loosely associated meanings. Primarily, it refers to the act of pushing hard and steadily

and, because of its early application to the technology of movable type, has become closely associated with printing. Through the term *printing press* it has come to refer generally to newspapers and other print products, viewed collectively (*the popular press, the quality press, the tabloid press*), including their representatives *en masse* (*meet the press*). Finally, it has extended to news media in general, such as wire services and broadcasts on radio and television. Critical comment by reviewers employed by the media is commonly referred to as a *good/bad press*. The invention of the printing press (c.1450) had potent social and linguistic consequences. The new medium had the effect of concentrating powers of definition, controversial commentary, and authoritative statement into the hands of those who controlled the machines and the distribution of their products. The early presses were copiously used in the ecclesiastical controversies of the Reformation and the political ructions of the Civil War to generate pamphlets, translations of the Bible, and other matter considered subversive. The current sense of *the press* as the aggregate of newspaper coverage ('The press is full of the Watergate scandal') developed gradually through the 17-18c out of the phrase *the liberty of the press*, to the point where journalists and the business interests behind them were defined by Lord Macaulay as 'a fourth estate of the realm' (1828). The power of the press over social and political events is freely admitted and is the source of frequent comment. As the *Daily News* observed of developments in America in 1898: 'The yellow Press is for a war with Spain at all costs.' The emergence of 'press barons' such as W. Randolph Hearst and Joseph Pulitzer in the US, and Lords Northcliffe and Beaverbrook in the UK, has often occasioned the suspicion of possible indirect political influence by the press, as opposed to the kind of 'fearless exposure of the truth' often referred to technically as *investigative journalism*. See AMERICAN PRESS, AUSTRALIAN PRESS, CANADIAN PRESS, CARIBBEAN PRESS, INDIAN PRESS, IRISH PRESS, JOURNALESE, JOURNALISM, NEWSMAGAZINE, NEWSPAPER, NEW ZEALAND PRESS, SOUTH AFRICAN PRESS. [MEDIA, TECHNOLOGY]. G.H., T.MCA.

**PRESUPPOSITION** [16c: through French from Latin *praesuppositio/praesuppositionis* assuming beforehand]. (1) Supposing something in advance, with or without sufficient information. (2) An assumption of truth or rightness as a prerequisite to something else, usually a belief or an action. To believe in the Bible presupposes a belief in God, but a belief in God does not presuppose a belief in the Bible. (3) In philosophy, logic, and linguistics, the need for something to serve as a precondition so that a

statement can be true or false or a speech act successful. The question *Have you stopped smoking?* presupposes that the person asked has been smoking. See LOGIC, SEMANTICS, SPEECH ACT. [LANGUAGE]. T.MCA.

**PRETERITE**, also AmE **preterit** [14c: from Latin *praeteritus* gone by]. A traditional term for the simple past tense of the verb (such as *climbed* in *They climbed the hill yesterday*) and for a verb in this tense. See OLD ENGLISH<sup>1</sup>, PAST, TENSE. [GRAMMAR]. S.G.

**PRIMARY LANGUAGE AND SECONDARY LANGUAGE**. Terms in applied linguistics and language teaching. The first language learned by a child is its primary language; all languages learned later are secondary languages. The primary language is commonly referred to as a *mother tongue* or *native language*, although one's primary language may not be the language of one's mother or of one's ethnic group or place of origin. See FIRST LANGUAGE/SECOND LANGUAGE. [EDUCATION, LANGUAGE]. P.S.

**PRIMITIVE GERMANIC**, short form *PG*. The modern name for the language, presumably never written and now lost, that became distinct from its parent Indo-European (IE) several centuries BC. It was superseded by the East Germanic, North Germanic, and West Germanic branches early in the Christian era. Stress in IE, which fell on different syllables according to inflection, much as in *Shakespeare/Shakespearian*, in late PG became fixed on the first syllable of the word, as in *Bödley/Bödleian*. PG made elaborate use of case endings to signify the grammatical function of its nouns, adjectives, articles, and pronouns, much as modern English does with pronouns to mark the difference between 'The state is I' and 'The state is mine'. PG showed the effect of Grimm's Law (see entry), so that IE \**pisk* appeared as PG \**fska*. It included, however, some vocabulary not common to the IE languages, such as \**ertho* (earth). It also had a distinctive suffix to mark the past tense and past participle with a *d* sound as in *had*, and its system of verbal inflection was much simplified from that of IE. The distinctive vocabulary and simplified conjugational system suggest contact between speakers of PG and speakers of some non-IE language. See GERMANIC LANGUAGES, INDO-EUROPEAN LANGUAGES. [HISTORY, LANGUAGE]. W.F.B.

**PRINCE EDWARD ISLAND ENGLISH, DICTIONARY OF**. See CANADIAN DICTIONARIES IN ENGLISH.

**PRINCIPAL CLAUSE**. See MAIN CLAUSE.

**PRINT** [13c: from Old French *preinte*, *printe* the impression of a seal, etc., from *preindre* to press, from Latin *premere*/*pressum* to press]. (1) To create marks on surfaces by means of pressure, especially the reversed impressions made by imposing a seal on wax or pressing inked fingertips on paper; the outcome of such a process. (2) To write so that each letter of an alphabet is separate, without connecting lines (the opposite of writing *cursively*); the outcome of such a process. (3) Now rare: an instrument, machine, stamp, or die that makes an impression. (4) The result of impressing a design or other pattern on a surface: (on fabrics) *a cotton print*; (in electronics) *a printed circuit*. (5) The result of any process of making impressions on surfaces such as paper and parchment: *an artist's print*; *read the small print*; *out of print*. Language material produced by such a process is *printed matter*. (6) Formerly: a newspaper: 'I believe, Mr Puff, I have often admired your talents in the daily prints' (Richard Sheridan, *The Critic*, 1779). (7) A positive photographic image, in colour or black and white, produced usually on paper from a negative image on film. (8) In motion pictures and television, a copy of a film that is ready for showing. (9) An attributive term for printed publications such as newspapers and magazines, in contrast to radio and television: *a print journalist*; *the print media*. See PRESS, PRINTER, PRINTING. [TECHNOLOGY]. T.MCA.

**PRINTER** [15c]. (1) A person who produces printed matter of any kind. (2) A plate or image that prints a specific colour or image: *the yellow printer*. (3) A machine (not a printing press) that prints information: for example, a *teleprinter*, a device that records telegraphic or telexed messages (converting incoming signals to text); the *output device* attached to a computer to provide *hard copy* (a printed version of alphanumeric and graphic data). See COMPUTING, PRINTING. [TECHNOLOGY]. T.MCA.

**PRINTER'S ERROR**. See LITERAL<sup>2</sup>, TYPOGRAPHICAL ERROR.

**PRINthead** [Later 20c]. In typing and printers for word processors, a mechanical element such as a *daisy wheel*, *golfball*, or *thimble*, that imprints letters on paper. [TECHNOLOGY]. T.MCA.

**PRINTING**. The process, business, and art of producing standardized letters and texts, often accompanied by diagrams, pictures, and other addenda, by applying ink to paper and other surfaces so as to produce many copies of the same piece of work. Printing is often treated as an aspect or offshoot of writing, but differs from it in at least four ways: (1) Writing varies from

person to person, but print retains invariant shapes regardless of who uses it. (2) Writing follows relatively informal rules of positioning and sequencing on paper, but printing keeps rigidly to such conventions as margin sizes, line spaces, number of lines per page, and type chosen for a project. (3) Where as writing is slow and produces approximate copies only through hand-copying or the use of carbon paper or photocopying, printing is rapid and produces identical copies in sequence until the process stops or ink and paper run out. (4) The legibility of handwriting varies, but the legibility of print is consistent.

**Origins**. The art of making inked reproductions from woodblocks and movable signs was developed in the 6–8c by the Chinese and Koreans. It is uncertain how the practice was disseminated from East to West. The Islamic world was not interested in printing, but reports that reached Europe of such an invention appear to have prompted speculation and experiment. The Western invention of printing from movable type is generally ascribed to Johann Gutenberg, a goldsmith from Mainz in Germany. Although scholars dispute the details of the early production of his press, the first dated item is a copy of a 42-line Bible, which a scribe finished *rubricating* (entering capitals and other matter) on 24 August 1456. There had been printing from woodblocks before Gutenberg. His genius was to perfect a number of separate but available technologies for printing from type. He appears to have devised a successful mould for casting regularly sized and spaced metal type, a heavy ink that would adhere to this type, and a variation of a press that would give an impression on paper. His 42-line Bible and other productions, far from being rudimentary initial experiments, are technically superior works of layout and typography.

**Development**. By the early 16c, printing and systems for distributing printed materials had spread throughout the main cities of Europe and stabilized. The English merchant William Caxton learned the art in Cologne and practised it in Bruges before setting up the first printing press in England, in Westminster in 1476. The first printing in India (by Portuguese Jesuits in Goa) was in 1556; in the North American colonies of England was in Boston in 1638; in French Canada in Quebec City in 1752; in Australia, 1796; in New Zealand, 1835. At first, printed materials imitated manuscripts in subject matter, design, and distribution, but printing gradually established its own conventions. By the 1520s, large numbers of relatively cheap, fairly rapidly distributed books had become available to an expanded reading public. The technology

remained stable until the end of the 18c, though markets for printed matter grew, especially for journals and newspapers. Because of the quantities involved and the capital-intensive nature of the business, the early printing and publishing of books tended to be centralized. In Britain, in the early centuries of printing, the government encouraged centralization in London and the universities of Oxford and Cambridge, because printing and publishing could easily be controlled and censored from there. In the 19c, however, a great expansion took place because of the spread of education, large and small printers set up shop in many places, and publishers (becoming from the 18c steadily more distinct from printers) became established outside the major centres in England, Scotland, and Ireland. The technology also changed with new kinds of presses and, by the end of the century, with new systems for typesetting. In the 20c, there has been a pronounced shift towards general literacy and a vast provision of printed materials throughout the world and in particular throughout the English-speaking world.

**Nature and impact.** A printed book not only involves a different technology from a manuscript, but results in a different product. Whereas manuscripts were copied in very small quantities, early books were printed in editions that averaged 250 to 1,250 copies. In the late 20c, however, an academic book might have 1,500 copies and a best-selling popular paperback a first print-run of 250,000. This economy of scale means that material can be rapidly disseminated. In the early centuries of printing, pamphlets and other more ephemeral material, often religious or political, could present issues of immediate importance. Many debates in the Reformation took place in print and in England little pamphlet wars, such as the late 16c Marprelate Controversy (in which anonymous tracts, printed on a secret press, irreverently attacked bishops and defended Puritanism), set the stage for sustained radical writing during the following century. The quantity of books available helped increase the numbers of the reading public, which in turn increased the number of books and the importance of literacy as a social tool. Although writing and reading have been associated with a minority educated class, printers from Caxton onwards, and especially from the 19c onwards, have often tried to extend readership by publishing popular and entertaining works. Currently, most books in English are aimed at specific audiences, but some would-be best-sellers are directed at an undifferentiated mass of millions of potential readers. For newspapers and magazines, the size of the audience is greater still. Increasingly sophisticated textbooks, books

of self-instruction, and works of reference have also been a consequence of printing. Although rudimentary in the early centuries, they have become so refined that a surgeon can perform complex procedures based on text alone.

**Printing and culture.** Some scholars, following Harold Innis and Marshall McLuhan, suggest that print has created its own mental world, that it has been an agent of cultural change at a profound level. Although the attractiveness of such a theory may arise as much from a need to define literacy during a period of flux (the advent of cinematic and electronic media), the notion of a 'culture' associated with print bears cautious examination, especially in the way the press disseminates written language and at the same time changes it. Because of the nature of their work, printers affect the shape and style of printed matter. Traditional spelling and punctuation have been standardized by print and syntax and style influenced by it: see PUNCTUATION, SPELLING. The history of dictionaries and encyclopedias is closely bound up with the history of printing; a profound reliance on alphabetic order, though generated in the late Middle Ages, is basic to the culture of print: see DICTIONARY. The most pervasive text in English was once the Bible, but is now the telephone book. Although spoken English has retained its diversity, printed English shows less variation. Notions of correctness, for centuries part of the study of Latin manuscripts, have been passed on in the vernacular legacy of print; such notions spill over from print into speech, so that 'correct' speech follows bookish patterns.

Gaskell, Philip. 1972. *A New Introduction to Bibliography*. Oxford: University Press.

**PRINTING PRESS** [16c: combining *print* and *press*, both words deriving ultimately from one Latin verb, *premere/pressum*]. An apparatus for the production of printed matter, standard in form from the mid-15c to the early 19c: an upright wooden device supported by two main wooden beams which supported a screw mechanism holding a platen. The *platen* (a flat plate that presses paper against type) was lowered on top of packing that in turn covered paper resting on the surface of the inked type. Pressure exerted by the screw on the platen ensured that the surface of the paper was uniformly presented to the type. After the paper was printed on, the platen was raised, the bed of type was rolled out, the paper removed, fresh ink uniformly reapplied by dabbing the surface with large leather inking balls, new paper was inserted and lowered on to the type, and the bed rolled under the platen again for another impression. About 250 impressions per hour could be made. A quarto volume of 240 pages in an edition of 1,000 copies required 60,000 impressions: about 240 hours of work by two men (one inking, one working the press). Many printers had more than one press. In the early 19c, experiments were made with form and material. Iron presses were introduced which were more compact and durable and had more efficient hand-operated levers. Two innovations, however, greatly altered the speed and efficiency of presses: external power supply (steam, electricity), providing far greater energy than human operators, and *rotary presses* that allowed paper to pass between cylinders in continuous one-way movement rather than the constant traditional up and down. The fastest system is the *web-fed press* through which a single roll or web of paper runs over cylindrical surfaces to produce rapid printings in tens of thousands of impressions an hour. See DESKTOP PUBLISHING, LASER, PHOTOCOPYING, PRESS, PRINTING. [TECHNOLOGY].

W.W.B.

**PRINTOUT** [Later 20c]. A term in computing and word processing for the output of a computer through a printer attached to it (*a computer printout*), usually in the form of continuous fan-fold sheets with perforated edges but also as

single sheets fed in sequence into such a printer. Material printed out in this way usually has two qualities: *draft* and *letter quality*. See PRINTER. [TECHNOLOGY].

T.MCA.

**PRINT STANDARD.** See STANDARD ENGLISH.

**PRIVATE LANGUAGE.** Language used for private or in-group purposes; a particular language or variety of a language used for such purposes, such as adolescent *slang*, criminal *argot*, and technical *jargon*. A private language that is intended to be opaque to all or most outsiders is known technically as a *cryptolect* ('hidden dialect'). Such languages are difficult to study because they often change rapidly and investigators have difficulty gaining admission to the groups that use them. The *travellers* or *travelling people* of Europe and North America, a group that includes but is not limited to *Gypsies* or *Romanies*, use various cants and forms of Romani as a *language of the roads*, to mark their ethnic identity and exclude outsiders. The linguist Ian Hancock, of Romany descent, has reported on these cryptolects: for example, in 'Romani and Angloromani' (in P. Trudgill (ed.), *Language in the British Isles*, 1984).

In California, a more localized private language called *Boontling* (also *Boonville Lingo*) was used from the 1880s to the 1920s around Boonville in the upper Anderson Valley of Mendocino County in California. As the linguist Charles Adams (*Boontling: An American Lingo*, 1971) describes it, Boonville was at that time fairly isolated from the rest of the state, and local residents evolved the Boontling jargon to serve a variety of functions. Men used it as the secret language of sheep-shearing crews and baseball teams, from which women were excluded, though in practice women quickly learned it. Adults also used the jargon to keep discussions secret from children, though children also managed to work it out. Boontling was most effective in separating locals from outsiders, who could not easily fathom the altered pronunciations, abbreviations, and personal associations that formed the basis of Boontling. Among its evasive usages were: *burlap* (sometimes shortened to *burl*) to have sexual intercourse, *dreef* coitus interruptus, *keeboarp* premature ejaculation, *moldunes* breasts, *nonch harpins* objectionable talk, especially about sexual matters.

Perhaps the most common form of private usage in English occurs in families. Parents often coin private usages, such as nicknames and child-orientated euphemisms for bodily parts and functions, and adopt expressions used by their children when they were learning to speak. Twins are also sometimes credited with developing a private language that only they can

understand. Family usages are often sustained for years without outsiders knowing much or anything about them. Perhaps the most opaque and isolated form of private language is that of schizophrenics. Although private language is widespread, no definitive study of the subject as a whole currently exists. A recent publication that deals, in popular form and format, with private usage in the home is Paul Dickson's *Family Words: The Dictionary for People Who Don't Know a Frone from a Brinkle* (Reading, Mass.: Addison-Wesley, 1988). *Frones* are particles that stick to plates; *brinkles* are marks on the face from sheets, a couch, etc., when one wakes up: compare BURGESSISM.

See ARGOT, BACK SLANG, CANT, COCKNEY, CRYPTOGRAPHY, DOUBLE DUTCH, DOUBLE TALK, INFIX, JARGON, PIG LATIN, POLARI, RHYMING SLANG, ROMANI, SLANG. [LANGUAGE, STYLE].

D.E.B., T.MCA.

**PRIVATIVE** [14c: from Latin *privativus* showing loss]. An element of language which expresses lack, privation, or negation: *un-* in *unhappy*, *-less* in *useless*. The terms *alpha privative* or *privative alpha* are used for the Greek prefix *a-* (*an-* before vowels and *h*), as in *atheism* (*a-the-ism* 'no-god-ness', a disbelief in God), *an(a)esthesia* (*an-aesthes-ia* 'no-feeling-ness', loss of sensibility), *anhydrous* (*an-hydr-ous* 'no-water-having', without water). [WORD]. T.MCA.

**PROCLITIC** [1840s: from Greek *proklitikós* leaning forward]. A monosyllable attached, usually in a reduced form, to a following word: *it* in 'twill it will, 'twas it was, 'twould it would. Compare ENCLITIC. [WORD]. T.MCA.

**PRODUCTIVE**. A term in linguistics for the capacity of a word element or a word-forming paradigm to produce new words. The suffix *-ness* is productive because it can form many nouns on the same principle as *darkness* from *dark*, but the suffix *-ledge* is not, because it does not form new words on the same principle as *knowledge* from *know*. The productivity of some elements can be greater than others at particular times and in particular places. The combining form *megal(o)-* (as in *megalomania*, *megalosaurus*) is not highly productive, but its variant *mega-* (as in *megacycle*, *megawatt*) has been fashionable and prolific for decades, producing such technical usages as *megafrustule*, *megakarocytic*, *measporange*, *measporophyll* and such informal, often stunt, expressions as *megabash*, *mega best seller*, *mega-city*, *megamachine*, *megamouthpiece*, *megastar*, *megatrend*. Some forms may be non-productive for decades or centuries, then become fashionable, then decline again. In the late 19c US, *-ine* was a popular feminine

suffix on the analogy of *heroine*, forming such words as *actorine*, *chorine*, *doctorine*, *knitterine*, *speakerine*. See PHRASAL VERB, PREFIX, SUFFIX, WORD-FORMATION. [WORD]. T.MCA.

**PROFESSIONAL AND LINGUISTIC ASSESSMENT BOARD**. A department of the General Medical Council in Britain that sponsors an English-language test designed as a qualification for medical practice in the UK by doctors who are not from the European Community and whose mother tongue is not English. See EXAMINING IN ENGLISH. [EDUCATION]. W.S.

**PROFICIENCY**. See CAMBRIDGE CERTIFICATE OF PROFICIENCY IN ENGLISH.

**PROGRESS AND DECAY IN LANGUAGE**. Two kinds of assumption are commonly made about languages: that they move from worse to better states (progress, amelioration); that they move from better to worse states (decay, deterioration). The Stoics of ancient Greece took the view that languages decay, whereas some social Darwinians in the 19-20c have held that languages improve as they evolve. A mixed viewpoint is also intermittently found: that some aspects of a language are deteriorating while others are improving. However, language change is an inevitable process and is the result of many factors, both linguistic and social. The interpretation of such change in terms of the improvement or deterioration of a language appears to be more a matter of social standpoint than linguistic observation.

**Life cycles in language**. In the 19c, it was widely believed in Western society that languages have a life cycle like animals and plants, in which they progress to a mature stage, then gradually decay. An inflected language such as classical Latin was a favoured example of a mature language, and English was thought by some to be in a state of disintegration because it was gradually losing its word endings ('English has no grammar'). This view, once held by scholars and lay people alike, is currently regarded as mistaken by most linguists. A later view, endorsed by Otto Jespersen, held that a fairly analytic language such as English represented the best and most evolved type of structure. This view is also now regarded as unfounded by most linguists.

**States of language**. There appears to be no reason for supposing that any one language is inherently superior to any other, either socially or structurally. Pidgins and creoles, which are languages in the process of development, are linguistically 'impoverished' in that they do not initially have the range of vocabulary and constructions found in 'full' languages. Some

languages are widespread for political or social reasons, rather than because of any intrinsic superiority. Over the centuries, very different kinds of languages have held dominant cultural positions and had high prestige. See CLASSICAL LANGUAGE. Conversely, languages which decline and die out do so when they become subject to powerful social pressures, as with Gaelic, which has declined in Scotland because English has for many years been the dominant language of the United Kingdom.

**The decline of English?** The view that English is 'going to the dogs' is widely held, especially by older people with conservative views. It is frequently expressed in newspapers, both in letters to the editor and feature articles, which often assert that change arises from lack of care and proper education ('slovenly language', 'sloppy speech', 'illiteracy in the classroom'). The changes referred to, however, appear to be continuous and inevitable. Sometimes, changes occur which happen repeatedly in the languages of the world, such as loss of the final consonant in a word. At other times, the need to maintain patterns may cause large-scale restructuring: vowel changes in English obscured the connection between many singular and plural words, such as *cow/kine* and *brother/brethren*, so new plurals (*cows, brothers*) replaced the old ones. These either fell out of general use (*kine*) or acquired a specialized sense (*brethren*), though two of the old *-en* plurals remain in general use (*children, oxen*). At other times, changes take place under the influence of other languages, or other varieties of English: at an early stage, English borrowed numerous Latin words, and currently BrE is heavily influenced by AmE. In such changes, however, there is nothing either progressive or decadent. They simply occur.

**Features of change.** A social group with overt or covert prestige usually initiates a change, sometimes consciously, sometimes unconsciously, though it can only bring about an innovation that was liable to occur in any case. There are usually several directions in which a language can move at any one time, and social factors can push it towards one rather than another. Currently, BrE and AmE are adopting different paths over intervocalic /t/, which is inherently unstable. In a word such as *bitter*, the /t/ is increasingly being replaced by a glottal stop in BrE, but by /d/ in AmE, where the words *bitter* and *bidder* can be indistinguishable. Some people are indifferent to such changes. Others regard them as reprehensible and a symptom of a wider malaise in society, even though the changes are independent of social conditions. Disapproval of a change may therefore be more indicative of the

disposition of the commentator than the state of the language. Such disapproval may, however, influence individuals in their response to changes, if they are aware of them. Occasionally, social pressure may postpone or reverse a change: for example, initial /h/ is an unstable element in some varieties of BrE, but is preserved by a popular belief that it is 'wrong to drop aitches'. See (A)ESTHETICS, LANGUAGE CHANGE, SEMANTIC CHANGE. [LANGUAGE]. J.M.A., T.MCA.

**PROGRESSIVE**, also **continuous**. Terms for a verb form that basically denotes duration. In English, the contrast is between progressive (*She is repairing computers*) and non-progressive (*She repairs computers*). The progressive is constructed in English by a combination of a form of the verb *be* and the *-ing* form of the following verb: *was talking, may be calling, has been seeing, is being investigated*. The English progressive is generally considered to be an *aspect* (the way in which the temporal situation is viewed by the speaker), as contrasted with a *tense* (the location of the situation in time). However, the marking of aspect is always combined with the marking of tense: *is reading* is present progressive; *was reading* is past progressive. See ASPECT, TENSE. [GRAMMAR]. S.G.

**PROLEGOMENON**. See PROLOG(UE).

**PROLEPSIS** [16c: through Latin, from Greek *prōlēpsis* anticipation]. (1) A term in rhetoric for treating a future event as if it has already happened: *I'm dead—Get away before they kill you too!* (2) A debating device in which one raises an objection to one's own case before an opponent can do so: *I am well aware that the cost of the project is high, but consider the consequences of not going ahead.* (3) In traditional grammar, a structure anticipating another that comes later: *that old man* in '*That old man, I just saw him again.*' (4) Also *prochronism*. Assigning a person or event, etc., to an earlier period, usually by mistake; the representation of something in the future as if it already exists. Compare ANACHRONISM. [GRAMMAR, STYLE]. T.MCA.

**PROLOGUE**, also AmE **prolog** [13c: through French from Latin *prologus*, Greek *prólogos* ('fore-speech') introduction]. (1) Also *foreword, introduction, preface*, and most formally *prolegomenon*. A preliminary statement in a novel, long poem, treatise, or other text, that introduces its subject matter. In Chaucer's *Canterbury Tales* (14c), nearly all the tales told by the pilgrims are preceded by a prologue that in the setting of the pilgrimage to Canterbury prepares the reader for the tale in question; only three of the tales have no prologue of their own. The *General Prologue*

to the whole work is one of the longest and best-known examples of the type in English. The plural *prolegomena* (sometimes with a singular verb) can name a preliminary academic treatise or paper, as in *Prolegomena to a Theory of Metaphor* (title). (2) An introductory speech, often in verse, that draws attention to the theme of a play; (archaic) the player who delivers this speech; an introductory scene that precedes the first act of a play. Compare EPILOG(UE). See PREFACE. [LITERATURE, MEDIA, WRITING]. T.MCA.

**PRONOUN** [16c: from Old French *pronom*, Latin *pronomēn* a loan translation of Greek *antōnumia* before the name or noun]. A traditional part of speech that is typically used as a substitute for a noun or noun phrase. In contemporary grammatical theory, pronouns are sometimes viewed as a subclass of nouns. They constitute a closed class, in that few new pronouns ever enter a language.

**Subclasses.** There are eight subclasses: personal pronouns (*I, we, they*, etc.); possessive pronouns (*my/mine, our/ours, their/theirs*, etc.); reflexive pronouns (*myself, ourselves, themselves*, etc.); demonstrative pronouns (*this, that, these, those*); reciprocal pronouns (*each other, one another*); interrogative pronouns (*who, what*, etc.); relative pronouns (*who, that*, etc.); indefinite pronouns (*any, somebody, none*, etc.). Some forms belong to more than one subclass: *who* is an interrogative pronoun in *Who is that?* and a relative pronoun in *the child who did that . . .* Some may belong to other parts of speech: *any* is a pronoun in *Do you want any?* and a determiner (like the definite article, introducing a noun phrase) in *Do you want any money?* The possessive pronouns have two sets of forms: one strictly speaking a determiner (*my* in *You have my book*), the other a pronoun (*mine* in *That book is mine*).

**Form.** Some of the sets of pronouns have distinctions in person, number, case, or gender. Personal pronouns have distinctions in: person (*I, you, she*); number (*I, we*); gender (in the third-person singular only: *he, she, it*); case (subjective *I*, objective *me*). Possessives may be viewed as genitives of personal pronouns and make similar distinctions, as do reflexives (which do not have case). Demonstratives have distinctions in number (*this, that* versus *these, those*) and in physical or metaphorical distance (*this, these* are nearer to speaker than *that, those*). The reciprocals have genitives (*each other's, one another's*), as do the indefinites ending in *-body* and *-one* (such as *somebody's, anyone's*). Finally, the interrogatives and relatives have distinctions in gender (personal *who* and normally non-personal *what* for interrogatives, personal *who* and non-personal

*which* for relatives), and in case (subjective *who*, objective *whom*, genitive *whose*).

**Function.** In contemporary grammar, the pronoun by itself usually constitutes a noun phrase, though with certain restrictions some pronouns may be modified: *something colourful; those who know; what else*. As the main or only word in the noun phrase, it has the same set of syntactic functions as a noun. Many of the pronouns have important discourse functions. They contribute to cohesion in discourse by referring back to a previous unit in anaphora (*he* in *While Matthew was in Jerusalem, he joined a peculiar cult*) or forward to a subsequent unit in cataphora (*Although she is studying hard, Deborah finds time to help me*). Some of the pronouns are used in deixis to refer directly to persons or things in the situation of the discourse: *I* for the speaker or writer and *you* for the person or persons addressed, and *it* in *Pick it up* (where the thing referred to by *it* is not previously named). See DEMONSTRATIVE PRONOUN, GENDER, GENERIC PRONOUN, PART OF SPEECH, PERSON, PERSONAL PRONOUN, RECIPROCAL PRONOUN, REFLEXIVE PRONOUN, SHAKESPEARE. [GRAMMAR]. S.G., T.MCA.

**PRONOUNCING DICTIONARY.** See BBC PRONUNCIATION UNIT, DICTIONARY, ENGLISH PRONOUNCING DICTIONARY, ORTHOEPY.

**PRONUNCIATION** [15c: from Latin *pronuntiatio/pronuntiationis* delivering a speech]. (1) The act or result of producing the sounds of speech, including articulation, intonation, and rhythm. (2) The sound system of a language: *German pronunciation*. (3) An accepted standard of sound and rhythm for elements of spoken language: *the proper pronunciation of 'controversy'; the mispronunciation of vowels*. (4) The phonetic representation of a sound, word, etc.: see TRANSCRIPTION. Because of the vagaries of the spelling system of English, most larger dictionaries have since the 18c provided guidance on the pronunciation of words, usually immediately after the headword of an entry, and either in a system of *respelling* or, since the end of the 19c, in phonetic symbols. EFL learners' dictionaries published in the UK currently use the International Phonetic Alphabet to represent the phonemes of RP, an accent of England that has served as a *pronunciation model* (the target at which the learner aims) since the early 20c. Some learners' dictionaries provide AmE equivalents. Works that concentrate on pronunciation alone include Daniel Jones, *An English Pronouncing Dictionary* (EPD, 14th edition, revised by A. C. Gimson, 1977), and J. C. Wells, *The Longman Pronunciation Dictionary* (1990). In dictionaries

for native speakers, respelling systems are generally preferred in the US, while in the UK publishers are currently divided, some favouring respelling, others (such as Oxford University Press) moving over to IPA symbols.

See: (1) ACCENT, ACRONYM, ARTICULATION, ARTICULATORY SETTING, BBC ENGLISH<sup>1</sup>, BBC PRONUNCIATION UNIT, ELOCUTION, ENGLISH PRONOUNCING DICTIONARY, INTERNATIONAL PHONETIC ALPHABET, LEARNER'S DICTIONARY, MISPRONUNCIATION, ORTHOEPY, PHONETICS, PUBLIC SCHOOL PRONUNCIATION, RECEIVED PRONUNCIATION, RESPELLING, SHAKESPEARE, SPEECH THERAPY, SPELLING PRONUNCIATION, USAGE. (2) The pronunciation sections of entries describing major varieties of English, such as CANADIAN ENGLISH. [SPEECH]. G.K., T.MCA.

**PRONUNCIATION MODEL.** See MODEL, PRONUNCIATION.

**PROOF-READING.** The reading of typeset or transcribed material (a *proof*) before it appears in its final printed form, to find and correct errors and make any necessary changes in presentation or content. Errors occur for many reasons (such as inattention, distraction, tiredness, misinterpretation, and mechanical failure) and can profoundly affect meaning: a *not* missing from a clause; *hate* spelled *ate*; a line, paragraph, or even page omitted; a word, phrase, or sentence misplaced or repeated. The so-called *Wicked Bible* (1631) reads 'thou shalt commit adultery' (Exodus 20: 14); another of 1682 reads 'if the latter husband ate her' (Deuteronomy 24: 3). Simple errors (*Germm* for *German*; *millenium* for *millennium*; *tendonitis* for *tendinitis*; *misssing* for *missing*) threaten meaning less, but too many of them may affect the reader's confidence in author and publisher.

**Correcting proofs.** Because of the complex nature of English orthography and the standard of accuracy demanded in cultural, educational, and publishing institutions, most readers expect printed material to be consistent in form as well as sound in content. Proof-reading is a stage in attaining that basic consistency. In the era of the hand-press (15–17c), when spelling was not entirely regular, many books were nevertheless proof-read with care. Errors were often corrected while the work was in press; the printers would 'pull' (print off) a sheet and continue working while the corrector scanned the proof. Errors such as broken type or missing words would be put right on the press and the printing resumed. This procedure for correction demanded that someone competent be nearby; authors were often at the printing house or small batches of proof were sent to them nearby for immediate attention. Corrected and uncorrected sheets are

found mixed in single copies of old books. Responsibility for proof-reading changed when typesetting and printing became separate functions. Until the 1980s, the typesetter generally always read proofs, as did the author and the publisher's editor. Currently, in the context of computer typesetting, there is little significant proof-reading by typesetters. In addition, before the 18c, printers tended to be the custodians of spelling, and when dictionaries sought to standardize spelling from the 18c onwards printers continued to standardize other aspects of typeset presentation. In the 20c, however, this responsibility has passed to publishers.

**Erratum sheets.** Errors would also be caught after the book was completed. A list of *errata* (Latin: 'things that have wandered', mistakes) would be placed at the end of the book, with the understanding that the owner could enter the corrections where necessary. An *erratum sheet* or *slip* is still sometimes sent out, but the practice has become unusual. Errors are now commonly left until they can be fixed in a later printing, if at all. Sometimes, early publishers removed a whole leaf and replaced it with corrected matter, or pasted over the error with a small piece of paper containing the correction. Such changes are called *cancel*s and in unusual instances still occur, most commonly when publisher's data have to be revised. Comments in errata sheets have sometimes been revealing. The poet Robert Herrick wrote in *Hesperides* (1648): 'For these transgressions which thou here see, / Condemne the Printer, Reader, and not mee.' Accusations, however, could as easily fly in the other direction: 'Good Reader the Authors copy being not so legible as we could have wished, we were forc'd to transcribe it in his absence, and by this means these grosser escapes hapned' (Leonard Lichfield, printer of G. Ironside's *Seven Questions Disputed*, 1637). Such casting of blame continues to be common in private comment though it is rarely seen in print.

**The persistence of error.** Errors persist, even after reading by typesetter, proof-reader, and author, for two main reasons: (1) Translating visual into mental data, then into motor activity (the act of choosing the right piece of type or striking the right key on the keyboard) is fraught with difficulty, and an experienced proof-reader learns to watch for certain resulting kinds and patterns of error. (2) Most people do not read letter by letter but word by word or by groups of words at a time. Their eyes move across the page in short hops and words are identified in clumps, sometimes just by outline or even by what is expected to be there. Proof-reading, however, requires people to unlearn the habits appropriate to speedy consumption of material.

It is slower, identifying every letter form in the word, and requires steady attention to both the new and the original copy.

**Proof-reading procedures.** Many procedures for reading proof go to great lengths to break up normal reading habits. Some publishers recommend that a proof-reader be read to in a slow even tone by an assistant, or that the proof-reader read the material aloud to record his or her voice and then have the recorded voice played back while checking the text. Some present-day editors of early texts, for which accuracy is paramount, have gone so far as to read the material backwards; the normal habits of reading are then completely overturned. However, the drawback is exhaustion, one of the prime causes of inattention and error. The usual procedure is to read the proof against the copy as slowly as is needed to pay attention to every letter in every word and every mark of punctuation. Sometimes marking off the line of type with a ruler or strip of paper is helpful in isolating the visual field.

Spotting obviously misspelled words is easy. It is harder to pick up misspelled foreign words, unfamiliar and technical terms, missing items, confusable forms like *it's/its* or *personal/personnel*, mistakes that conform to a pattern (*futility* instead of *futurity*), and missing second members of pairs such as quotation marks and parentheses. By the time a work is in proof it is usually too late in terms of cost and schedule to make systematic alterations: for example, BrE spellings with *-our* for AmE *-or*. The point is to ensure that the chosen system has been consistently applied in preparing the text. Incorrect spacing, wrong type-fonts, and other typographical errors must also be seen and marked. In addition, proof-readers generally check end-of-line hyphenation, spacing, length of dashes, and other technical details. Bad word breaks at the ends of lines (*Oxf-/ord* for *Ox-/ford*) are often allowed by computer typesetting systems (although they are being increasingly eliminated), and must be watched for. Similarly, the inadequate entry or translation of computer printing codes can cause serious problems: neglecting the command to close a field causes all subsequent text to be set in the wrong typeface.

**Proof correction.** Traditionally, a proof-reader marks the errors and their corrections on a *galley proof*, using a highly standardized system of proof-reader's marks. While professional proof-readers are trained in the system, authors may sometimes be less knowledgeable or disciplined in using it. Some of the marks are centuries old, such as the *caret mark* (showing where something has to be inserted), a *circled dot* (to indicate a period), and the word *stet* (indicating that a

proposed correction is to be ignored). Two present-day systems are British Standard BS 5261: Part 2: 1976 and that laid out in the *Chicago Manual of Style* (13th edition, below). Once the corrections are entered in conformity with the system used, the proof is returned for *page proofs* or another set of galleys known as a *revised proof*. The corrections must then be double-checked to make sure that they have been entered properly and that new errors have not been entered with them. Error threatens every step of the way. See EDITING, GALLEY, PAGE PROOF, TYPESETTING. [TECHNOLOGY, WRITING].

**PROP.** See DUMMY.

**PROPAGANDA** [18c: through Italian from Neo-Latin, from the phrase *Congregatio de propaganda fide* Congregation for propagating the faith, from *propagandus* requiring to be spread, from *propagare/propagatum* to reproduce (especially a plant by means of cuttings), spread; ultimately from *pro* forward, outward, and *pangere/pactum* to fasten, fix. Compare *dissemination*, from Latin *semen/semis* seed. The usage derives from the work of the Congregation/College of the Propaganda (Latin name as above), a post-Reformation committee of cardinals founded in 1622 by Pope Gregory XV to oversee the foreign missions of the Roman Catholic Church: 'An Italian missionary of the Propaganda' (T. Hope, *Anastasius*, 1819). Many non-Catholics were suspicious of the aims and activities of the College, a factor that encourage negative nuances in the use of the word]. (1) Until the end of the 19c: an association, system, plan, or project for spreading a religion, ideology, doctrine, or practice. (2) In the 20c, in which the term has acquired increasingly sinister connotations: the systematic, often unscrupulous propagation of information and ideas by an interest group so as to encourage a desired response among as many people as possible, including the use of rumour, innuendo, disinformation, and smear campaigns against opponents. Governments, political parties, and other organizations have often used the mass media for propaganda purposes especially in

wartime. For many years during the Cold War, in the decades following the Second World War, English was the major language of anti-capitalist propaganda issued by the Soviet Union and the People's Republic of China, because it was so widely understood. Both the British Council and the United States Information Agency (USIA) have been regarded in especially post-colonial countries as propaganda arms of the British and US governments respectively. Compare DOUBLESPEAK, DOUBLE TALK, DOUBLETHINK, EUPHEMISM, INFORMATION, INNUENDO, NEWSPEAK, TRACT. See BRITISH COUNCIL, UNITED STATES INFORMATION AGENCY, VOICE OF AMERICA. [MEDIA] T.MCA.

**PROPER** [13c: from Old French *propre*, Latin *proprius* one's own, special]. A general term for what is right, suitable, or appropriate (*the proper clothes for the job; the proper technical term; proper conduct*), often implying a wish or need to 'do the right thing' socially (*They were always very proper in everything they did; Oh, it just wouldn't be proper to do that*). The term has sometimes been attached to groups and places: 'She was only a mild rebel: there was still too much of the Proper Bostonian in her' (J. Cleary, *High Road to China*, 1977). Traditionally, a *proper accent* has been the accent considered most suitable for polite, dignified, educated usage, among ladies and gentlemen: in England, Received Pronunciation. Such non-standard expressions as *He don't talk proper* have long been widespread, marking the social and linguistic gap between speakers of vernacular and standard English: 'Perhaps she'll 'ave another go at teachin' me to speak proper, pore soul' (Margery Allingham, *The Tiger in the Smoke*, 1952); ironically, 'How to talk proper in Liverpool' (subtitle of *Lern Yerself Scouse*, 1966, by Frank Shaw, Fritz Spiegl, & Stan Kelly). The term *proper English* is often used to mean *standard English*: 'Debates about the state and status of the English language are rarely debates about language alone. Closely linked to the question, what is proper English? is another, more significant social question: who are the proper English?' (publisher's statement opening Tony Crowley's *Proper English: Readings in Language, History and Cultural Identity*. Routledge, 1991). See (A)ESTHETICS, CORRECT, GOOD ENGLISH, STANDARD. Compare GENTEELISM. [STYLE] T.MCA.

**PROPER ADJECTIVE** [Early 20c]. A traditional term for an adjective that derives from a proper noun and is written in English with an initial capital letter. It refers to a nationality (*American, Chinese*), a place (*Iberian, Parisian*), an ethnic or religious group (*Muslim, Roman*

*Catholic*), or an individual (*Churchillian, Byronic, Elizabethan, Kafkaesque, Napoleonic, Shavian*). [GRAMMAR] S.C.

**PROPER NAME**. See NAME, ONOMASTICS, PROPER NOUN.

**PROPER NOUN** [15c]. A category of noun, distinguished on grammatical and semantic grounds from *common noun*, and written with a capital letter. Proper nouns are primarily names of persons (*John, Churchill*), places (*India, Edinburgh*), and various periods of time (*Sunday, August, Christmas*). Their reference is said to be unique in context and definite; sometimes *the* is used with the noun (*the Hague*), but most names are definite without requiring the definite article. Grammatically, indefinite *a/an* and most other determiners are not used with proper nouns, nor is there normally a singular/plural contrast: (*Mount*) *Kilimanjaro, the Matterhorn, the Seychelles*, but not \**a Kilimanjaro, \*that incredible Matterhorn, \*a Seychelle*. There is, however, no clear demarcation between proper and common nouns, regardless of the initial capital. People can speak of *Churchills*, who could be members of the Churchill family, people with that surname, or people figuratively compared to Winston Churchill. See ANTONOMASIA. There might be *a different Churchill* (not Winston), *a Sunday in June, that memorable August, the Edinburgh of her childhood*, and so on. Here, for specific purposes, proper nouns have effectively been converted into common nouns. Common nouns can also on occasion behave like proper nouns, as in: *I do not fear you, Death*. See APOSTROPHE<sup>2</sup>. Nationality nouns (*Americans, a New Zealander, the Japanese*) lie on the borderline between proper and common nouns. Some grammarians distinguish the *proper noun* (a single noun like *London; the* and a single noun: *the Pennines*) from the *proper name*, a wider category which includes these and also such word groups as *the United States (of America), the Houses of Parliament, the Royal Navy, A Tale of Two Cities, The Concise Oxford Dictionary*. See NAME. [GRAMMAR] S.C.

**PROPOSITION** [14c: from Latin *propositio/propositionis*, translating Greek *próthesis* a putting forward. Compare PROTASIS]. (1) Something proposed for consideration, acceptance, negotiation, discussion, or rejection. (2) In logic, an expression (couched in natural language or in symbolic form) that may be true or false: for example, the statement *I am hungry* is regarded as always expressing the same proposition no matter who produces it. See LEMMA, LOGIC, OPPOSITION, PREMISS, SEMANTICS, SYLLOGISM, THEME, THESIS. [LANGUAGE] T.MCA.

**PROSAIC** [17c: from Latin *prosaicus* relating to prose]. In general usage, if something is *prosaic* it is dull and unimaginative. The conception of prose as the dull language of treatises took hold before the novel began to enliven writers' styles and give them qualities more commonly associated with poetry. See PROSE. [STYLE]. T.M.C.A.

**PROSCRIPTIVE** [18c: from Latin *proscribere/proscriptum* to display in writing, to publish (someone's name) as an outlaw]. A grammatical or other rule is proscriptive if it forbids the use of a particular feature of language on the grounds that it is incorrect or undesirable: proscribing the use of the verb *infer* in such a sentence as *What are you inferring?* and prescribing instead the verb *imply*. See DESCRIPTIVE AND PRESCRIPTIVE GRAMMAR. [GRAMMAR]. S.G.

**PROSE** [14c: through French from Latin *prosa* (*oratio*) direct or straightforward (speech), from *prosus* or *prorsus* direct, straight, contracted forms of *provorsus* or *proversus* (literally 'turned forward': compare VERSE). *Prosa oratio* was the Latin equivalent of Greek *pezós lógos* speech that goes on foot, as opposed to *émmetros lógos* ('measured speech') or verse, whose high prestige was reflected in the image of riding on horseback]. A form of written discourse based on the sentence and without the stylized patterning of verse (with which it often contrasts). A negative perception of prose, which has persisted from classical times virtually to the present day, sees it as a medium that lacks strong features and creative vigour: whence the use of *prosaic* to mean 'dull, commonplace, unimaginative'. This ancient perception has, however, diminished greatly in the 20c, in the course of which prose has become the dominant form of printed discourse and verse has become largely peripheral].

The term covers two kinds of procedure: employing physical features such as the non-metrical line, the paragraph, and sentence-based punctuation, and styles of discourse that serve narrative, expository, descriptive, persuasive, dramatic, and other ends. Prose writing is so similar in many ways to carefully organized speech, and the two have been linked for so long in the world of education, that prose is often thought of as simply speech transferred to paper: see SPOKEN PROSE. Everyday speech, however, is much less tightly structured than most types of prose, and its dynamics are quite distinct from those of formal writing. Colloquial English, for example, is not arranged according to the classical theory of the well-formed sentence ('a sentence is a complete thought'), long a key criterion for producing and evaluating prose. Such a criterion has been used by elocutionists and others in attempts to 'improve' speech, but without

great success: spoken usage that is too 'prosy' sounds artificial and perhaps pretentious. In the classical world, the study and use of prose were linked with rhetoric, grammar, and logic, but whereas the rhetorical tradition was oral in origin, the beginnings of grammar and logic lay in the use and study of writing. Lacking the mnemonic quality and often the histrionic roles of verse, prose has depended largely on writing (not oral delivery) for its transmission, and has come only within the last 300 years to serve as a regular vehicle for 'high' literary genres such as drama and the epic (the latter essentially in the form of the novel).

**Kinds of prose.** Because of its wide present-day use, prose ranges across many activities, including: the writing of technical instructions; the presentation of information in newspapers and other periodicals; legal, business, and other reports; personal letters; and the writing of fiction and drama. *Literary prose*, considered by many to be its highest form, shares with verse (despite the classical view) an intensification and stylization of rhythm and a greater than usual attention to rhetorical features and aesthetic factors such as euphony and assonance. Its status as prose is sustained, however, by the absence of recurring metrical patterns, however 'poetic' in form and content such texts may be. Many writers of literary prose have followed Aristotle's dictum that it 'must neither possess metre nor be without rhythm' (*Rhetoric*, 3. 8), and at times it can have a quality close to *free verse* or *blank verse*: see DICKENS. Just as the line of demarcation is not always easy to find between prose and verse, so there is no easy demarcation between one kind of prose and another. Prose discourses occupy a spectrum in which the extremes are easily identified: 'poetic' prose on one side, 'technical' or 'functional' prose on the other, with the middle ground often uncertain.

**Prose and style.** Although style is sometimes thought to reside only in 'good' literary writing (however judged), it is a factor in all writing; every specimen of prose from instructions on how to put together a piece of furniture to James Joyce's *Ulysses* has features that can be described, analysed, and evaluated by stylistic and aesthetic criteria. The evolution of Western prose has produced a variety of styles, often characteristic of a particular period, writer, or function. The traditional division of styles has been into *high*, *middle*, and *low*, according to the rhetorical principle of *decorum* (that the manner of writing should be adapted to subject and recipient). This socially ranked system, however, has not proved useful in contemporary analysis because it lacks objectivity (though it partly incorporates the present-day linguistic category

of *register*: see entry). Like other Western European vernaculars, English developed in the shadow of Latin, and its models for prose were therefore Latinate, at first through translation, imitation, and experiment, later as a consequence of its hybrid inheritance. Because of the classical legacy (and despite specific differences), the prose styles of English have much in common with those of French, Italian, Spanish, German, and other languages also influenced by Latin models. It is possible therefore to talk of a broad European prose tradition of which English is part.

**Old and Middle English prose.** Old English prose writing was largely a matter of translation from Latin, as in the works of Alfred the Great (9c), but original vernacular prose was produced by such writers as Aelfric of Eynsham (10–11c) and the clerics who compiled the Anglo-Saxon Chronicle. By and large, the style is straightforward and unadorned. In the centuries immediately after the Norman Conquest (1066), the development of Middle English prose waited on the decline of French as the language of aristocracy and government and of Latin as the dominant language of religion and learning. There was therefore little demand for vernacular prose in the Middle Ages and as a result it was generally poorly structured in comparison with Latin. However, the vernacular sermon added persuasive rhetorical strength to some English prose texts, notably in the writings of John Wycliffe, Geoffrey Chaucer, Thomas Malory, and William Caxton.

The following excerpts are typically from translations, or associated with them: the Old English version of the Venerable Bede's *Historia Ecclesiastica Gentis Anglorum* (*Ecclesiastical History of the English People*, early 8c); Chaucer's rendering in the 14c of Boethius, *De Consolatione Philosophiae* (*The Consolation of Philosophy*: 6c); and Caxton's prologue to the *Eneydos*, his version of a French version of Virgil's *Aeneid* (1490), which moved towards Early Modern English. The slashes (virgules) in Caxton's text were an experiment in punctuation, and are roughly equivalent to commas.

*Old English.* Breten is gārsecges ðegland, þæt wæs gēo geāra Albion hāten: is gesett betwix norþdæle and westdæle, Germānie and Gallie and Hispānie, þæm mæstum dælum Eurōpe, micle fæce ongeān. þæt is norþ eahta hund mīla lang, and twā hund mīla brād. Hit hæf fram sūpdæle þā mægþe ongeān þe man hætt Gallia Belgica. Hit is welig, þis ðegland, on wæstmum and on trēowum missenlicra cynna, and hit is gescreþe on læswe scēapa and nēata, and on sumum stōwum wīngeardas grōþaþ.

*A close translation:* Britain is a sea island, that was in former years called Albion: it is set between the

north-parts and west-parts [that is, to the north and west] of Germany, Gaul, and Spain, the greatest parts of Europe, by much space opposite [that is, at a considerable distance]. It is north eight hundred miles long, and two hundred miles broad. It has on south-part the nation opposite that one calls Belgian Gaul. It is rich, this island, in fruit and trees of various kinds, and it is suitable for pastures of sheep and cattle, and in some places vineyards grow.

*Chaucer.* The poete of Trace, *Orpheus*, that whylom hadde right great sorwe for the deeth of his wyf, after that he hadde makid, by his weeply songes, the wodes, moevable, to rennen; and hadde makid the riveres to stonden stille; and hadde makid the hertes and the hindes to joignen, dredeles, hir sydes to cruel lyouns, *for to herkennen his songe*; and hadde makid that the hare was nat agast of the hounde, which that was plesed by his songe: so, whan the moste ardaunt love of his wif brende the entrailes of his brest, ne the songes that hadden overcomen alle thinges ne mighten nat asswagen hir lord *Orpheus*, he pleynede him of the hevene goddes that weren cruel to him; he wente him to the houses of helle. And there he temprede hise blaundisshinge songes by resowninge strenges, and spak and song in wepinge al that ever he hadde received and laved out of the noble welles of his moder *Calliope* the goddess; and he song with as moche as he mighte of wepinge, and with as moche as love, that doubled his sorwe, mighte yeve him and techen him; and he commoevede the helle, and requerede and bisoughte by swete preyere the lordes of sowles in helle, of releasinge; *that is to seyn, to yilden him his wyf*.

*Caxton.* How wel that many honderd yerys passed was the sayd booke of eneydos with other werkes made and lerned dayly in scolis specyally in ytalie & other places / whiche historye the sayd vyrgyle made in metre / And whan I had aduised me in this sayd boke. I delybered and concluded to translate it in to englysshe And forthwyth toke a penne & ynke and wrote a leef or twayne / whyche I ouersawe agayn to correcte it / And whan I sawe the fayr & straunge termes therin / I doubted that it sholde not please some gentylmen whiche late blamed me sayeng y<sup>a</sup> in my translacyons I had ouer curyous termes whiche coude not be vnderstande of comyn peple / and desired me to vse olde and homely termes in my translacyons. and fayn wolde I satsfyfe euery man / and so to doo toke an olde boke and redde therin / and certaynly the englysshe was so rude and brood that I coude not wele vnderstande it. And also my lorde abbot of westmynster dede do shewe to me late certayn euydences wryton in olde englysshe for to reduce it in to our englysshe now vsid / And certaynly it was wroten in suche wyse that it was more lyke to dutche than englysshe I coude not reduce ne bryngye it to be vnderstonden /

**Elizabethan and Jacobean prose.** In the 16c and 17c, more and more writers chose to develop English prose rather than continue with Latin. Although their prose still followed Latin models, it necessarily accommodated itself increasingly to such vernacular usages as the compound noun and the phrasal verb, as well as less formal syntactic constructions. Elizabethan prose often seems self-conscious in attempting to imitate

Latin, with the Roman lawyer and orator Cicero as the supreme model. Style was based on the periodic sentence, formal and ordered in structure, building to its climax before the full meaning is revealed. This apparent neo-classical artificiality tightened up the loose, rambling style of Middle English and took on a powerfully disciplined form in the preface to the Authorized Version of the Bible:

But how shall men meditate in that, which they cannot vnderstand? How shall they vnderstand that which is kept close in an vnknown tongue? as it is written, *Except I know the power of the voyce, I shall be to him that speaketh, a Barbarian, and he that speaketh, shalbe [sic] a Barbarian to me.* The Apostle excepteth no tongue; not Hebrew the ancientest, not Greeke the most copious, not Latine the finest. Nature taught a naturall man to confesse, that all of vs in those tongues which wee doe not vnderstand, are plainly deafe; wee may turne the deafe eare vnto them. The *Scythian* counted the *Athenian*, whom he did not vnderstand, barbarous: so the *Romane* did the *Syrian*, and the *Jew*, (euen S. *Hierome* himselfe calleth the Hebrew tongue barbarous, belike because it was strange to so many) so the Emperour of *Constantinople* calleth the *Latine* tongue, barbarous, though Pope *Nicolas* do storme at it: so the *Iewes* long before *Christ*, called all other nations, *Lognazim*, which is little better then barbarous. Therefore as one complaineth, that alwayes in the Senate of *Rome*, there was one or other that called for an interpreter: so lest the Church be driuen to the like exigent, it is necessary to haue translations in a readinesse. Translation it is that openeth the window, to let in the light; that breaketh the shell, that we may eat the kernel; that putteth aside the curtaine, that we may looke into the most Holy place; that remooueth the couer of the well, that wee may come by the water, euen as *Jacob* rolled away the stone from the mouth of the well, by which meanes the flockes of *Laban* were watered. Indeede without translation into the vulgar tongue, the vnlearned are but like children at *Iacobs* well (which was deepe) without a bucket or something to draw with: or as that person mentioned by *Esay*, to whom when a sealed booke was deliuered, with this motion, *Read this, I pray thee*, hee was faine to make this answere, *I cannot, for it is sealed.*

A highly artificial but influential style was that of John Lyly, named *euphuism* from the hero of his prose romances. It was characterized by long periodic sentences, with abundant tropes and figures of rhetoric, classical allusions, and improbable analogies from the natural world. Shakespeare parodied it in *Love's Labour's Lost* (c.1595) and elsewhere: see EUPHUISM. A more restrained style, formal but somewhat less mannered, was achieved by Sir Philip Sidney in his *Arcadia* (1581) and *Defence of Poetry* (1579–80). The Elizabethans could also produce fresh colloquial prose, especially in controversies like the Marprelate pamphlets (1588–9) and in tales of low life like those of Robert Greene (1558–92) and Thomas Deloney (?1560–1600). The excitement of English as an emerging literary language

in its own right brought exuberance to contemporary writing. Francis Bacon (1561–1626) criticized the tendency of the periodic style to mask sense with rhetoric. His own style was sometimes rhetorical, but produced greater simplicity, combined with balance and antithesis, in his *Essays* (1597–1625). In the early 17c, a preference for the Latin of Seneca and Tacitus rather than Cicero helped to bring more brevity and precision into English prose, as seen in the work of Thomas Overbury (1581–1613) and John Earle (?1601–1665), and in the learned, allusive prose of the *Anatomy of Melancholy* by Robert Burton (1577–1640).

**Restoration and Enlightenment prose.** The Restoration period saw the emergence of a distinctly native prose style, whose seeds were sown in the polemical writings of the Civil War. The new prose was simpler and less ornate, further from Latin syntax, more familiar in tone, though still polished and urbane. The beginnings of journalism strengthened the closer relationship between writer and reader; the political prose of Hobbes and the critical prose of Dryden are typical. Prose was increasingly used for instruction as well as for persuasion and entertainment. The members of the Royal Society (founded in 1662) were expected to prefer 'the language of artizans, countrymen, and merchants, before that of wits and scholars'. The polite, familiar style was further developed in the early 18c by Addison, Defoe, Steele, and Swift. The following is from Defoe's *An Essay upon Projects* (1697), relating to the establishing of an English equivalent of the Académie française (see ACADEMY):

I had the Honour once to be a Member of a small Society, who seem'd to offer at this Noble Design in England. But the Greatness of the Work, and the Modesty of the Gentlemen concern'd, prevail'd with them to desist an Enterprize which appear'd too great for Private Hands to undertake. We want indeed a *Richlieu* to commence such a Work: For I am persuaded, were there such a *Genius* in our Kingdom to lead the way, there wou'd not want Capacities who cou'd carry on the Work to a Glory equal to all that has gone before them. The *English Tongue* is a Subject not at all less worthy the Labour of such a Society than the *French*, and capable of a much greater Perfection. The Learned among the *French* will own, That the Comprehensiveness of Expression is a Glory in which the *English Tongue* not only Equals but Excels its Neighbours; *Rapin*, *St. Evermont*, and the most Eminent *French* Authors have acknowledg'd it: And my Lord *Ros-common*, who is allow'd to be a good Judge of *English*, because he wrote it as exactly as any ever did, expresses what I mean, in these Lines;

*'For who did ever in French Authors see  
The Comprehensive English Easie?  
The weighty Bullion of one Sterling Line,  
Drawn to French Wire wou'd through whole Pages shine.*

And if our Neighbours will yield us, as their greatest Critick has done, the Preference for Sublimity and Nobleness of Stile, we will willingly quit all Pretensions to their Insignificant Gaiety.'

'Tis great pity that a Subject so Noble shou'd not have some as Noble to attempt it: And for a Method, what greater can be set before us, than the Academy of *Paris*? Which, to give the *French* their due, stands foremost among all the Great Attempts in the Learned Part of the World.

With the rise of the essay and the novel in the 18c, prose took the assured and accepted place in literature that it already held in legal, commercial, and other uses. Critical responses, both casual and professional, which had previously been mainly confined to poetry, came to be applied to literary prose as well. In addition, a good prose style was considered a desirable accomplishment for the cultivated, and attention to models of 'good writing' in essays, letters, etc., became more and more a required part of education. However, in the late 18c there was a return to the periodic Latinate style. Johnson wrote with involved syntax and the frequent use of classical words, and Burke (1729-97) in political prose and Gibbon (1737-94) in historical prose followed a similar style. At the same time, a comparable prose was developing in North America, and is enshrined in the Declaration of Independence of 4 July 1776 (signed by John Hancock on behalf of Congress), which opens with the following statement:

When in the Course of human Events, it becomes necessary for one People to dissolve the Political Bands which have connected them with another, and to assume among the Powers of the Earth, the separate and equal Station to which the Laws of Nature and of Nature's God entitle them, a decent Respect to the Opinions of Mankind requires that they should declare the causes which impel them to the Separation. We hold these Truths to be self-evident, that all Men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty, and the Pursuit of Happiness—That, to secure these Rights, Governments are instituted among Men, deriving their just Powers from the Consent of the Governed, that whenever any Form of Government becomes destructive of those Ends, it is the Right of the People to alter or to abolish it, and to institute new Government (*A Declaration by the Representatives of the United States of America, in General Congress Assembled, 4 July 1776*).

**Prose in the nineteenth century.** This century brought as much variety and abundance in prose style as in other things. The reading public expanded on an unprecedented scale, the popularity of the novel in particular giving impetus to prose writing for entertainment and the growth of journalism making it a major vehicle of news and opinion. Although there are marked differences between the leading novelists of the period, they shared a desire to write accessibly

and to keep the interest of the reader, who is addressed directly, as a friend. Narrative style became more assured in the hands of Austen, Dickens, Thackeray, Eliot, Hardy, and many other both 'literary' and 'popular' writers. A more didactic type of prose, designed to inform and convince, was practised by Arnold, Carlyle, Macaulay, and others. The following is from Macaulay's essay on Bacon, in the *Edinburgh Review* (1837):

Lady Bacon was doubtless a lady of highly cultivated mind after the fashion of her age. But we must not suffer ourselves to be deluded into the belief that she and her sisters were more accomplished women than many who are now living. On this subject there is, we think, much misapprehension. We have often heard men who wish, as almost all men of sense wish, that women should be highly educated, speak with rapture of the English ladies of the sixteenth century, and lament that they can find no modern damsel resembling those fair pupils of Ascham and Aylmer who compared, over their embroidery, the styles of Isocrates and Lysias, and who, while the horns were sounding and the dogs in full cry, sat in the lonely oriel, with eyes riveted to that immortal page which tells how meekly and bravely the first great martyr of intellectual liberty took the cup from his weeping gaoler. But surely these complaints have very little foundation. We would by no means disparage the ladies of the sixteenth century or their pursuits. But we conceive that those who extol them at the expense of the women of our time forget one very obvious and very important circumstance. In the time of Henry the Eighth and Edward the Sixth, a person who did not read Greek and Latin could read nothing, or next to nothing. The Italian was the only modern language which possessed anything that could be called a literature. All the valuable books then extant in all the vernacular dialects of Europe would hardly have filled a single shelf.

Carlyle wrote in an idiosyncratic and sometimes turgid style, but his vigorous use of 'Saxon' forms and his defiance of classical smoothness made him a strong influence on polemical prose: see CARLYLE. In addition, prose writing in English took firm root during this century in many parts of the world, particularly in the US but also in Australia, Canada, India, and New Zealand.

**Prose in the twentieth century.** More prose-writing in English has probably been published in this century than in all past centuries combined. Because, however, the quantities involved are so vast and the objectives and styles have been so varied, it is virtually impossible to make more than a few provisional general statements about 20c prose. It can, for example, be argued that there has been in literary and journalistic writing a move away from (often in tandem with a distaste for) the elevated literary and classical style, towards the more direct, immediate, and colloquial. In other areas, however, such as scholarly, scientific, medical, and

legal writing, there continues to be an assumption that technical prose is necessarily complex and abstruse: see **ACADEMIC USAGE**, **PLAIN ENGLISH**. Despite the work of experimental stylistists like Virginia Woolf and James Joyce, creative writing has on the whole become more functional rather than more artistic, and although the 'literary novel' continues to be distinguished from its 'popular' cousin, many writers with a distinct popular bent have from the mid-19c onward come to be regarded as classics in their own right and to be presented as such in university courses in English literature. By and large, although every kind of prose can be found in English in the late 20c, there is a general tendency towards factual and referential writing, favouring shorter sentences and a vocabulary as simple as the subject allows.

**PROSODY** [15c: from French *prosodie*, Latin *prosodia*, Greek *prosōidia* towards (that is: relating to) song. Compare **ACCENT**]. (1) The theory and study of versification, concerned in English with rhythm and metre, rhyme, and the form of stanzas. Devices like alliteration, assonance, and onomatopoeia are sometimes regarded as part of prosody, but more usually as part of rhetoric. Prosody began as an attempt to classify and make coherent the practices of Greek and Latin poets; later, it supplied rules for European vernacular poets to follow, influencing poets' choice of form. Because features of stress, pitch, and quantity (which cause likeness or difference between syllables) do not operate equally in all languages, general theories of prosody are of limited value. In addition, change in politics and culture may affect prosody: for example, Old English alliterative verse became peripheral in the Middle Ages because of the dominance of French rhymed verse. The prestige of a system in one language may recommend its application to another; Latin prosody was long thought to be applicable to English, and classical names such as *iamb(us)* and *spondee* are still used for the principal metrical feet in English verse. Poets sometimes challenge the prosodic orthodoxy of their time by reviving old forms or by innovations of their own, as Gerard Manley Hopkins did with *sprung rhythm*. In the 20c,

there has been considerable questioning of traditional prosody by both poets and theorists, but although the use of free verse has increased and the regular older forms have been generally abandoned, no accepted new system has emerged. (2) In especially British phonetics, the area of phonology that goes beyond the study of phonemes to deal with such features as length, rhythm, stress, pitch, intonation, and loudness in speech. In American phonetics, this area is generally known as *suprasegmental phonology*. The study of prosody in verse has benefited from new knowledge about the characteristics of speech. See **ALLITERATIVE VERSE**, **FOOT**, **METRE/METER**, **PHONETIC TRANSCRIPTION**, **RHYME**, **RHYTHM**, **SCANSION**, **SEMANTICS**, **STRESS**, **THESIS**, **TONE**, **VERSE**. [**LITERATURE**, **SPEECH**]. R.C., T.MCA.

**PROSOPOPOEIA**. See **PERSONIFICATION**.

**PROTASIS AND APODOSIS** [17c: from Greek *prōtasis* a putting or stretching forward, a proposition; *apōdosis* a giving back, an answer. Stress: 'PRO-ta-sis', 'a-POD-o-sis']. A pair of contrasting grammatical terms. In a sentence, the *protasis* is the opening clause of two clauses and the *apodosis* is the closing or answering clause, as in the conditional sentence *If you come tomorrow (protasis), I'll help you look for them (apodosis)*. However, the order of protasis and apodosis is often reversed: *I'll help you look for them, if you come tomorrow*. [**GRAMMAR**]. T.MCA.

**PROTESTANT ASCENDANCY, The, also The Ascendancy**. (1) The political and linguistic dominance in Ireland from the 16c to the 20c of a minority of English-speaking Protestants (descended from settlers from England and Scotland) over a majority of indigenous, originally Gaelic-speaking Roman Catholics. (2) The associated landed gentry of Ireland. See **ANGLO-IRISH**, **IRISH ENGLISH**. [**EUROPE**, **NAME**]. T.MCA.

**PROTOGRAM**. See **ACRONYM**.

**PROVERB** [13c: from Latin *proverbium* a saying supporting a point, from *pro-* on behalf of *verbum*, word]. A short traditional saying of a didactic or advisory nature, in which a generalization is given specific, often metaphorical, expression: *A stitch in time saves nine*, meaning that action taken now will prevent a small problem becoming larger. Proverbs are found in many languages and cultures. A common idea may be given different local references: English *carrying coals to Newcastle* equivalent to Greek *sending owls to Athens*. A collection of proverbs may come to be associated with a person famous for wisdom: the Book of Proverbs in the Bible was attributed to King Solomon and a Middle

English series of proverbs in verse was known as the *Proverbs of Alfred* (c.1180). Proverbial sayings were popular in the Middle Ages and treated as accepted wisdom. In the 16c and 17c, they were often used in literature, to support arguments and give emphasis to the author's views. Proverbs are quoted in the speech of literary characters. Chaucer's Pandarus says: 'It is nat good a slepyng hound to wake' (*Troilus and Criseyde*, iii. 110), the ancestor of 'Let sleeping dogs lie'. Shakespeare's Shylock says: 'Fast bind, fast find, / A proverb never stale in thrifty mind' (*Merchant of Venice*, 2. 5).

Proverbs are often of linguistic interest and may show lexical change. The saying 'Do not spoil the *hog* for a halfpennyworth of tar' is recorded in 1600, but changed to *sheep* in 1651 and *ship* in 1823. The mnemonic needs of oral transmission may appear in: *rhyme* 'Birds of a feather flock together'; *assonance* 'A stitch in time saves nine'; *alliteration* 'Look before you leap'. Two proverbs may seem contradictory when in fact they contain truths applicable to different situations: *Too many cooks spoil the broth* as against *Many hands make light work*. Proverbs in present-day usage may often be regarded as clichés, but their persistence indicates their sociolinguistic importance. Commonly, when they occur in informal conversation, only the opening phrase is used: *Well, a stitch in time, you know*; *Don't count your chickens* (before they are hatched). They are often used allusively, as in *the proverbial stitch in time*. Proverbs continue to be created: for example, the First World War saying *No names, no pack drill*, the more recent *If it ain't broke, don't fix it*, and the computer-related *Garbage in, garbage out*. The adjective *proverbial* may mean 'traditional' or 'characteristic': *the proverbial British stiff upper lip*. See ALLITERATION, METAPHOR, QUOTATION, SAYING. [LITERATURE]. R.C., T.MCA.

**PROVINCE** [14c: through French from Latin *provincia* a conquered territory outside Italy]. (1) An imperial territory: Spain as a province of the Roman Empire. (2) A territorial division in certain states, often originating as colonies of the British Empire: the provinces of Canada, such as Quebec and Newfoundland. (3) Although England is divided into counties, the phrase *the provinces* is used contrastively with *London*; theatrical groups often *tour the provinces* before putting on a show in the capital. The usage is often pejorative, suggesting that life and culture in the provinces are duller and less refined and desirable than in the metropolis. In this context, *provincial* as an adjective implies lack of sophistication, especially in accent, education, style, and usage; as a noun it labels someone from outside London who exhibits such a lack. See

COLONIAL, HOME COUNTIES, LONDON, PROVINCIALISM. [STYLE]. T.MCA.

**PROVINCIALISM** [18c]. A usually pejorative term for a lack of social and linguistic sophistication regarded as typical of provinces and provincials, and for a word or other usage that is not accepted in the capital or the main cultural centre(s) of a nation. See PROVINCE, -ISM. [STYLE, WORD]. T.MCA.

**PROXEMICS** [1950s: from *proximity* and *-emics* as in *phonemics*]. In psychology and linguistics, the study of the spatial arrangements people (and sometimes animals) need in their social activities and particularly for communication, including the social distances acceptable in face-to-face conversations in different cultures. See BODY LANGUAGE. [LANGUAGE]. T.MCA.

**PSALM** [From Old English *ps(e)alm*, Late Latin *psalmus*, Greek *psalmós* a plucking, a song sung to the harp, from *psallein* to pluck, pull: compare LYRIC]. A sacred song, especially one of the numbered songs in the *Book of Psalms* in the Bible. *Psalmody* is the act or art either of setting psalms to music or of singing psalms, and is a collective term for psalms and hymns. A writer of psalms is a *psalmist*. See BIBLE, HYMN. [LITERATURE]. T.MCA.

**PSEUDO-CLEFT SENTENCE**. See CLEFT SENTENCE.

**PSEUDONYM** [1840s: from Greek *pseudónymon* a false name]. An assumed name. The pseudonym taken by a writer is often called a pen name. See -ONYM, PEN NAME. [NAME]. R.C.

**PSYCHOBABBLE** [1977: from the title *Psychobabble: Fast Talk and Quick Cure in the Era of Feeling*, a book by the US journalist Richard D. Rosen: compare TECHNOBABBLE]. A form of jargon in which terms from psychology, psychiatry, psychotherapy, and related fields are used to impress the listener, give an appearance of scientific objectivity to mundane ideas, or inflate what someone has to say. According to Rosen, it is 'a set of repetitive verbal formalities that kills off the very spontaneity, candour and understanding it pretends to promote'. It is also part of the language of pseudo-science, using terms that sound scientific but may be meaningless, such as *polarity balancing manipulation*, *externalizing internals*, *meaningful interpersonal equilibrium*. A person engaged in psychobabble might seek 'ego reinforcement through consciousness raising by going where the energies are in my extrinsic peer group orientation'. See BABBLE, JARGON. [STYLE, USAGE]. W.D.L.

**PSYCHOLINGUISTICS** [1930s: from Greek *psyché* mind, Latin *lingua* tongue, and *-istics* as in *statistics*]. The branch of knowledge which studies the mental aspects of language, especially its acquisition, storage, comprehension, and production. It is a branch of both linguistics and psychology, though their mode of study tends to differ: linguists usually draw inferences from observations of spontaneous speech, whereas psychologists mostly prefer to use controlled experiments. It overlaps with a wider, more general field known as the *psychology of language*, which includes the relationship of language to thought, and with an even wider one, the *psychology of communication*, which covers almost anything connected with communication, including its non-verbal aspects. Psycholinguistics, as the study of language and the mind, is usually distinguished from *neurolinguistics*, the study of language and the brain.

**History.** Useful observations about how the mind deals with language date from at least the end of the 18c, especially in the form of diary studies of child language. For example, the natural historian Charles Darwin reported on the linguistic progress of one of his children in the journal *Mind* (1877). The British psychologist Francis Galton is usually regarded as the first person to do psycholinguistic experiments, when he tried to probe his own and other people's word associations, for example, 'Tell me the first word you think of when I say *black*.' The results, he maintained, could 'lay bare the foundations of a man's thoughts with a curious distinctness' (*Inquiries into Human Faculty and its Development*, 1883).

Psycholinguistics remained a minor branch of psychology for the first half of the 20c, concerned with words rather than with sentence structure. Many people date psycholinguistics proper from the mid-1960s, when an upsurge of interest followed on from the work of Noam Chomsky, who argued that language was likely to be genetically programmed. Chomsky's ideas triggered an avalanche of work by both linguists and psychologists on child language acquisition, and also an interest in finding out whether his theory of transformational-generative grammar had 'psychological reality', in the sense of reflecting the way people store or process language. Much of this early work turned out to be somewhat naïve and had disappointing results. Because Chomsky repeatedly revised his theories, a number of psychologists decided that linguistic theory was too changeable to provide a secure basis for their work. The field has therefore become somewhat splintered, even though it continues to expand. Considerable progress has been made in major areas like child language

acquisition, speech comprehension, and speech production.

**Child language acquisition.** Children all over the world show similarities in the way they acquire language, whose development appears to be maturationally controlled (pre-programmed to emerge at a particular point in development, providing that the environment is normal and the child unimpaired). Moreover, at each stage, child language is not just a substandard form of adult language, but an independent system with rules of its own. The nature of the genetic input is still under discussion, as is the question of how children abandon immature rules, such as *What kitty can eat?* for *What can kitty eat?*, since they are apparently impervious to direct corrections. See CHILD LANGUAGE ACQUISITION, LANGUAGE ACQUISITION DEVICE.

**Speech comprehension.** Understanding speech is now known to be an active rather than a passive process, in which hearers reconstruct the intended message, based on outline clues and their own expectations. This can be demonstrated by presenting them with a confusing sentence such as *Anyone who shoots ducks out of the line of fire* (Any person who uses a gun gets down quickly out of the line of fire). This is a so-called *garden-path sentence*, in which hearers are 'led up the garden path' (misled) as they try to impose their expectations of a subject-verb-object pattern on a sentence which requires a different interpretation. Further evidence of the active nature of comprehension comes from experiments with homonyms, such as *It's a rose/They all rose*, when all meanings of a linguistic form turn out to be briefly considered before the unwanted ones are suppressed.

**Speech production.** Producing speech is a complex procedure, in which future stretches of speech are prepared while others are being uttered, as shown by slips of the tongue such as *The curse has walked for you* (The course has worked for you). At the same time, more than one candidate is possibly being considered for each word slot: in an error such as *I looked in the calendar* (catalogue), the speaker has possibly activated several three-syllable words beginning with *ca-*, narrowed it down to those involving lists, then accidentally suppressed the wrong one. See MALAPROPISM, SLIP OF THE TONGUE.

**Conclusion.** The human mind is a highly powerful device which is thought to use a large amount of parallel processing, in that many processes are taking place at the same time. An important issue is to discover not only how the mind activates a required word or construction, but also how it suppresses the numerous alternatives which are subconsciously considered. See

BEHAVIO(U)RISM, CHILD LANGUAGE ACQUISITION, CHOMSKY, LANGUAGE PATHOLOGY, LINGUISTICS, PSYCHOLOGY OF LANGUAGE. [LANGUAGE, SPEECH].

Ellis, Andrew, & Beattie, Geoffrey. 1986. *The Psychology of Language and Communication*. London: Weidenfeld & Nicolson.

Garnham, Alan. 1985. *Psycholinguistics: Central Topics*. London: Methuen.

**PSYCHOLOGY OF LANGUAGE.** A term sometimes used interchangeably with *psycholinguistics*, but more commonly to refer to a broader area than that covered by 'core' psycholinguistics. It is also sometimes used to mean *cognitive psycholinguistics* (based on inferences about the content of the mind) as opposed to *experimental psycholinguistics*. Somewhat confusingly, the terms *psycholinguistics* and *psychology of language* do not parallel the terms *sociolinguistics* (studied mainly by linguists) and *sociology of language* (the domain primarily of sociologists), since both linguists and psychologists perceive themselves as dealing with both types of study. See PSYCHOLINGUISTICS. [LANGUAGE].

J.M.A.

**PUBLIC SCHOOL ACCENT.** See PUBLIC SCHOOL ENGLISH, PUBLIC SCHOOL PRONUNCIATION.

**PUBLIC SCHOOL ENGLISH** [Probably early 20c: from the term *public school*, a loan translation of Latin *scola publica*, used at least since the 16c]. The English language as used in the public (in fact private) boarding- and day-schools of Britain, and especially England, the foremost of which are Eton, Winchester, Westminster, Harrow, Rugby, Charterhouse, and Shrewsbury ('the Seven Public Schools'). The variety is distinguished primarily by the so-called *public school accent* (known technically as *Received Pronunciation*) and to some extent by *public school slang*, which tends to vary from school to school. Originally, a public school was a *grammar school* founded or endowed for the use and benefit of the public, especially in the sense that the institution was under some kind of public management or control. Although this usage once contrasted with *private school* (a school carried on at the risk of its master or proprietors), the term has since the 19c been applied especially to those old endowed grammar schools that developed into large, fee-paying boarding-schools drawing pupils from all

parts of the country and from abroad, and to other private schools established on similar principles. Traditionally, pupils in the higher forms were prepared mainly for the universities (especially Oxford and Cambridge) and for public service. Although still true to some extent, in recent years this has become less of a determining feature. See PUBLIC SCHOOL PRONUNCIATION, RECEIVED PRONUNCIATION, RECEIVED STANDARD AND MODIFIED STANDARD. [EDUCATION, EUROPE, VARIETY].

T.MCA.

**PUBLIC SCHOOL PRONUNCIATION**, short form *PSP*. The name chosen by Daniel Jones for the model of English in his *English Pronouncing Dictionary* (1917). In the edition of 1926 he changed it to *Received Pronunciation (RP)*. See BBC ENGLISH<sup>1</sup>, ENGLISH PRONOUNCING DICTIONARY, JONES (D.), PUBLIC SCHOOL ENGLISH, RECEIVED PRONUNCIATION. [EDUCATION, EUROPE, SPEECH].

T.MCA.

**PUBLIC SPEAKING** [18c]. Both the activity and the art of speaking in public, whether formally (such as giving an after-dinner speech) or in more informal situations, such as giving a talk or taking part in a discussion. In the 20c, as a name for the art, it has largely replaced the more traditional terms *oratory* (from Latin) and *rhetoric* (from Greek), the first of which tends to be kept for grand and eloquent public speech while the second is commonly used to mean 'the art of persuasion', both in speech and writing. Compare ELOCUTION, ORATORY, ORTHOEPY, RHETORIC. See QUOTATION. [SPEECH].

T.MCA.

**PUBLISHING.** [15c: from *publish*, from Old French *publier*, Latin *publicare/publicatum* to make available to the people, from *publicus* of or belonging to the people, done for the sake of or at the expense of the state (with the earlier forms *poplicus/poplicus/populicus*), from *populus* people]. The activity of making information widely available, especially as a commercial or official undertaking, and in the form of printed texts. In ancient Rome, literary and other works were 'published' by reading them aloud to an audience, a practice that continues in the tradition of the *public lecture*: that is, reading aloud from a script or notes and by this means disseminating one's views. Since the development of printing, however, the term has focused on the issuing (usually for sale to the general public) of books, periodicals, pamphlets, pieces of music, etc., or making something available in printed form, especially in a periodical: 'I shall here publish a short Letter which I have received from a Well-wisher' (Richard Steele, editor, *Tatler*, 115, 1709-10).

[MEDIA]. T.MCA.

**PUERTO RICO**, formerly *Porto Rico*, a name still often used in the US. Official title: *Commonwealth of Puerto Rico*. The easternmost island of the Greater Antilles, between the Dominican Republic and the US Virgin Islands. Capital: San Juan. Currency: US dollar. Economy: textiles, clothing, electrical goods, petrochemicals, agriculture, tourism. Population: 3.2m (1980). Ethnicity: European, African, and mixed. Languages: Spanish (official), English widely used. Originally inhabited by Carib and Arawak Indians, the island was visited by Columbus in 1493 and was a Spanish colony until ceded to the US in 1898. In 1952, Puerto Rico became a semi-autonomous Commonwealth in association with the US; discussion as to whether the island should seek to become a state of the Union, become an independent nation, or maintain the status quo tends to dominate local politics. The English of Puerto Ricans at home and in the US ranges from that of the learner to the native speaker; like *Chicano English*, it presents difficulties in distinguishing the usage of individuals from that of groups. The American linguist Rose Nash has characterized Puerto Rican usage as ranging through four types: English comparable to standard usage in

the US and other anglophone Caribbean communities; Spanglish, which adds Spanish to English, as in lexical code-switching ('He has that special *manera de ser*') and adaptations from Spanish ('Please prove the light', from *probar* to test; 'I assisted to the reunion', from *asistir* to attend, *reunión* meeting); *Englañol*, which adds English to Spanish, as in lexical code-switching ('Se solicitan dos *clerk typists*'), and is common among bilingual adults; Spanish comparable to standard usage elsewhere in Latin America. Puerto Rican English was prominent in the musical *Westside Story* (Broadway 1958, film 1961, lyrics by Stephen Sondheim, music by Leonard Bernstein), a contemporary version of Shakespeare's *Romeo and Juliet* set among teenage gangs in New York. See AMERICAN ENGLISH, CARIBBEAN ENGLISH, ENGLISH, NEW YORKICAN, SPANGLISH. [AMERICAS, NAME, VARIETY].

T.MCA., J.A.M.

**PULMONIC** [17c: from Latin *pulmo/pulmonis* lung]. An anatomical term used to refer to a stream of air produced by the action of the lungs. See AIR-STREAM MECHANISM. [SPEECH]. G.K.

**PUN** [17c: perhaps a slang clipping of obsolete *punnet* and *pundigrion*, or Italian *puntiglio*, a quibble. Puns also were formerly known as *clinch*es and *quibbles*]. Also *paronomasia* [16c: through Latin from Greek *paronomasia*, adapting a name or word slightly. Stress: 'pa-ro-no-MAY-si-a']. (1) The conflating of homonyms and near-homonyms to produce a humorous effect: (in speech and writing) *Is life worth living?—It depends on the liver*; (in speech alone) *At his funeral, four of his drinking companions carried the bier/beer*. (2) A comparable play on words and phrases with similar sounds, sometimes requiring the (often forced) adaptation of one word or phrase to fit the other: *Life is such good pun; My wife's gone to the West Indies.—Jamaica? (Did you make her?)—No, it was her own idea*.

**In scripture**. In ancient times, puns were used to suggest deep truths. Especially in oral societies, sound was power, and similar sounds have often been taken to mean similar natures and origins. In the Book of Genesis, God takes some earth and from it makes a man. In Hebrew, the similarity of the word for *man* and *earth* (both represented in the name *Adam*) strengthened a belief that humanity was formed from clay. Such puns, however, are often lost in translation. One Biblical pun which has travelled well (though not into English) occurs in Matthew (16: 18), where Jesus says to his chief disciple: 'Thou art Peter (Greek *Petros*), and upon this rock (Greek *petra*) I will build my church.' Here, New Testament Greek could express a pun apparently first made

in Aramaic with the word *kephas*, and French still expresses it with *pierre/Pierre*.

**In drama and poetry.** In the 16–17c, puns were common among dramatists and writers. In Shakespeare's *Romeo and Juliet*, when Mercutio is dying, he says, 'Ask for me tomorrow and you shall find me a grave man.' In *Macbeth*, when Lady Macbeth plans to incriminate King Duncan's attendants in his murder, she says: 'If he do bleed, I'll gild the faces of the grooms withal, for it must seem their guilt.' On this liberal approach to puns, Ernest Gowers has observed (in his 1965 edition of Henry Fowler's *Modern English Usage*: 'Now that we regard puns merely as exercises in jocularitry, and a pretty debased form even of that, we are apt to be jarred by the readiness of Shakespeare's characters to make them at what seem to us most unsuitable moments.' In Shakespeare's time, however, few moments were unsuitable. The poet John Donne sustained the religious pun when he wrote in *Hymn to God the Father*: 'Thy Son shall shine as he shines now.'

**Equivocal status.** The pun lost status in English, despite (or perhaps because of) a wealth of homonyms and the pun's ability to create irony: an anti-Nazi looking at pictures of Hitler and Goering, and musing, 'Should one hang them or put them up against the wall?' In the 18c, Joseph Addison considered puns false wit, and increasingly since then critics have taken the same view. Currently, puns are widely considered so low a form of wit that they prompt a ritual groan, but despite this apparent disapproval the pun continues to thrive. Lewis Carroll used it widely and whimsically in his Alice books:

Here the Red Queen began again. 'Can you answer useful questions?' she said. 'How is bread made?'

'I know *that!*' Alice cried eagerly. 'You take some flour—'

'Where do you pick the flower?' the White Queen asked. 'In a garden or in the hedges?'

'Well, it isn't *picked* at all,' Alice explained: 'it's *ground*—'

'How many acres of ground?' said the White Queen. 'You mustn't leave out so many things'

(*Through the Looking-Glass*, 1872).

Despite their equivocal status, puns are common as a means of attracting attention in journalism and commerce: (1) In newspaper headlines: *Honoring a Pole Apart* (*Time*, Oct. 1980), on Nobel Prize winner Czesław Miłosz; *Rejoicing with the Ulysses set* (*International Herald Tribune*, 22 June 1984), on James Joyce's novel *Ulysses*; *Regimental ties* (*Observer*, 6 Oct. 1985), a title for reviews of military books. (2) In the names of businesses: *Lettuce Entertain You* (a restaurant); *Curl Up and Dye* (a hair stylist); *Drive Me Crazy Auto School* (in New York City); *Molly's Blooms* (a Dublin florist, playing on the name of the

Joycean character Molly Bloom). Part of the problem of the pun, however, is straining for effect, working with near-puns rather than with puns properly so called. Sometimes, however, a near-pun can be so stretched and distorted that it becomes a classic of its kind: as the woman said when she received greenery instead of flowers, 'with fronds like these, who needs anemones?' See CARTOON, DOUBLE MEANING, HUMO(U)R, PLAYING WITH WORDS, RIDDLE, WORD GAME. [STYLE]. T.M.C.A.

**PUNCH**, full title *Punch, or the London Charivari*. A British weekly magazine founded in 1841 as a radical political journal enlivened by humorous writings and cartoons. The subtitle acknowledges as its model the Parisian journal *Charivari*, founded in 1832 as a vehicle of social satire, with each issue built round a large cartoon. Within a few decades, however, it had become the preferred reading of a conservative establishment that was inclined to view the rest of the world as either funny or presumptuous. Among its founders, who were mainly dramatists and journalists, were Henry Mayhew, Gilbert Abbott à Beckett, Douglas Jerrold, William Thackeray, and the illustrator Ebenezer Landells, who probably originated the idea. One of its major early illustrators, Sir John Tenniel, also did the drawings in Lewis Carroll's *Alice* books. The early issues were jointly edited; the first sole editor was Mark Lemon, a playwright and innkeeper whose pub, *The Shakespeare's Head* in Wych Street, was a salon for aspiring journalists. He edited the magazine until his death in 1870. The unchanging cover picture of *Mr Punch* lasted until 1949 and the puppet motif in various forms until 1969. The original was Richard Doyle's drawing of *Punchinello*, crooked, paunchy, nutcracker-jawed, capped and belled, with his dog Toby in slouch hat and ruff. There were precedents for this image in Abbott à Beckett's magazine *Punchinello* (1832) and Jerrold's *Punch in London* (1832), but Mayhew appears to have decided on the name while discussing the ingredients of a bowl of punch.

The volumes of *Punch* from 1841 to 1940 are an anthology of humorous assumptions about cabmen, clergymen, clubmen, Cockneys, country gentlemen, foreigners, Irishmen, Scotchmen, the labouring poor, social swells, soldiers, sweethearts, wives, and yokels. The captions of many cartoons have used eye dialect to point up accents, as when a farmer, proposing the health

of the local squire, says: 'An' if a' squiears 'ud dew as our Squiear dew, there wudna be so many on 'em as dew as they dew dew!' (30 Dec. 1876). Such captions are now evidence of especially 19c usage: for example, in a cartoon by John Leech in 1857, portraying two London prostitutes, one asks the other: 'Ah! Fanny! How long have you been gay?', documenting a use of *gay* distinct from its present-day reference to homosexuality. Major serials in the magazine include Thackeray's *Book of Snobs* (1846–7), George and Weedon Grossmith's *Diary of a Nobody* (1852), and W. B. Sellar and R. Yeatman's anti-scholarly history of England, *1066 and All That* (1930), which gently ridiculed an evaluative style common among teachers: 'The Norman Conquest was a Good Thing, as from this time onwards England stopped being conquered and thus was able to become top nation'; 'Henry [ate] a surfeit of palfreys. This was a Bad Thing since he died of it.' In recent years, *Punch* experienced considerable financial losses and a great decline in subscribers, as a result of which it ceased publication in 1992. See CARTOON, HUMO(U)R, MAGAZINE. Compare NEW YORKER. [EUROPE, MEDIA, STYLE]. W.N., T.MCA.

**PUNCH LINE** [1920s: AmE]. The final sentence of a humorous anecdote, presenting the point of the story with a more or less powerful impact (its 'punch'). A Catholic known for his drinking asks his priest, 'Father, what's sciatica?' The priest, sensing an opportunity, describes sciatica as a foretaste of hell, specially visited on drunkards. 'Why do you ask?' he finishes, and the sinner replies (*punch line*), 'Because they're saying in the pub the Pope's got it.' See JOKE, LINE, STORY LINE. [STYLE]. W.N.

**PUNCTUATION** [16c: from Latin *punctuatio/punctuacionis* making a point, marking with points, from *pungere/punctum* to pierce: compare POINT]. The practice in writing and print of using a set of marks to regulate texts and clarify their meanings, principally by separating or linking words, phrases, and clauses, and by indicating parentheses and asides. Until the 18c, punctuation was closely related to spoken delivery, including pauses to take breath, but in more recent times has been based mainly on grammatical structure. There are two extremes in its use: *heavy punctuation* and *light punctuation*. In the 18–19c, people tended to punctuate heavily, especially in their use of commas. Currently, punctuation is more sparing, but individuals and house styles vary in what they consider necessary; the same writer may punctuate more heavily or lightly for some purposes than for others.

**Origins.** In antiquity and the early Middle Ages, points were used, either singly or in combination, to separate sentences, or in some cases (such as Roman inscriptions) to separate words. Key figures in the development of punctuation up to 1600 are St Jerome in the 5c AD (in Latin translations of the Bible), Alcuin in the 8c (Anglo-Saxon tutor at the court of the Emperor Charlemagne, responsible for a new spelling and punctuation system for Biblical and liturgical manuscripts), two Venetian printers (grandfather and grandson) both named Aldus Manutius in the 15–16c (who developed a system using marks equivalent to the present-day period, colon, semicolon, and comma), and the Elizabethan critic George Puttenham (whose *Arte of English Poesie*, 1589, included advice on punctuation as a means of marking a text for sense and metre). The declamatory basis for punctuation was, however, replaced in the 17c by the syntactic approach of the playwright and grammarian Ben Jonson (incorporated posthumously in his *English Grammar* of 1640). Before the 17c, and especially in the work of William Caxton and other early printers, punctuation was haphazard and erratic, with little attention paid to syntax.

**Terms and marks.** Most of the principal terms and marks now in use in English date from the 15–16c, and some of the names are first attested in the writing of Puttenham or his contemporaries. Most are of Greek origin, and referred originally not to marks but to the sections of text that they marked off. For example, the terms *colon* and *comma* originally denoted the parts of a line or sentence in verse, not prose: a *kôlon* was at first a part of a strophe (a section of a poem), and only later came to refer, by analogy, to a clause in a sentence; a *kômma* (from *kôptein* to cut) was a 'piece cut off' (a short clause). The term *apostrophe* (from *apô* away, *strêphein* to turn) denoted a mark of 'turning away' (elision), and the term *hyphen* (from *huphên* in one) was used by the grammarians of Alexandria to denote a symbol that links elements meant to be read as one word. The use of the hyphen to divide words at the ends of lines of text dates from the 14c, and evolved from a marginal tick or check mark used to show that the final word of a line was not complete. Eventually, the terms for sections of text were transferred to the signs that mark the sections off one from another; no one now calls a phrase a *comma* or a clause a *colon*, nor do the marks now precisely relate to such segments of text. Generally, however, the historical connection continues.

Other terms are more recent and have superseded older equivalents. The Greek-derived *period* came to refer to a punctuation mark

around 1600, another example of a term that originally referred to sentence structure (in this case, a complete sentence): see PERIOD<sup>2</sup>. The terms *stop* and *full stop*, for the same mark, date from about the same time: both occur in Shakespeare with reference to the ending of a speech or discourse: for example, in *The Merchant of Venice* (3. 1. 17), 'come, the full stop'. Earlier terms were *point* (found in Chaucer and still in use, especially in the terminology of printing) and the Latin *punctus*. *Full point* has also long been in use. Currently, *period* is the common usage in AmE and *full stop* in BrE. The term *question mark* has been used for less than a century: the earlier term was *mark/point of interrogation* (late 16c). It is a descendant of the *punctus interrogativus*, one of the marks found in 10–13c liturgical manuscripts, where it indicated inflection of the voice. The terms *mark/note of exclamation* and *semicolon* both date from the 17c. The term *dash*, which originally meant 'a blow', reached its present meaning in punctuation via the sense 'hasty stroke of the pen', often the case in writing. *Bracket* is not attested in this context until the 18c; the earlier term *parenthesis* (which continues in use, usually in the plural) generally refers also to the part of the sentence that the punctuation delimits, but in AmE is also used for what are in BrE called *round brackets*. The symbols now in use have evolved from many centuries of practice. The points derive from classical practice, the *comma* was a development of the late medieval *virgule* or *stroke* (/), also used as a separator, and the *semicolon* came into use in the Byzantine era; in Greek, it was and is used to mark a question.

**Uses: linking and separating.** Currently, punctuation serves to clarify the meaning of written language by marking strings of words into associated groups. It is based mainly on grammatical structure and has both a *linking function* and a *separating function*: linking in the listing use of commas, as in *They bought a newspaper, two magazines, and a cassette*; separating in the short sentences *We didn't know. But they knew from the start.*

**Points and commas.** The marks most commonly used are the point/period/full stop and the comma. These generally signal or establish boundaries, the period marking out sentences and the comma marking out associated words within sentences. The single comma may cause difficulty because it is a flexible and often optional mark and has applications that need to be weighed carefully in a specific piece of writing. Usage varies as to its inclusion in statements such as *a large, untidy house* and *a little black dog*: it is generally included when the notions underlying the words are of different kinds, as

with *large* and *untidy* (whereas *little* and *black* go together in describing the type of dog in question). As a rule of thumb, if *and* can be inserted idiomatically between the adjectives, a comma tends to be used (*a large and untidy house*, therefore *a large, untidy house*); but if *and* cannot be so inserted, a comma is not used (*\*a little and black dog*, therefore *a little black dog*). Paired commas are more straightforward; they mark parenthesis in ways similar to dashes and brackets, although with less effect. Note the increased emphasis on the words 'and helpful' in the following:

- (1) People in the north are more friendly and helpful than those in the south.
- (2) People in the north are more friendly, and helpful, than those in the south.
- (3) People in the north are more friendly (and helpful) than those in the south.
- (4) People in the north are more friendly—and helpful—than those in the south.

Brackets often replace pairs of commas when the words marked off are added comment, especially explanation: *He is (as he always was) a rebel*. The following extract shows commas, brackets, and dashes used in one fairly long sentence:

The why and wherefore of the scorpion—how it had got on board and came to select his room rather than the pantry (which was a dark place and more what a scorpion would be partial to), and how on earth it managed to drown itself in the ink-well of his writing-desk—had exercised him infinitely.

(Joseph Conrad, *The Secret Sharer*).

**Colons, semicolons, and dashes.** The colon and especially the semicolon are often avoided in writing by hand because of uncertainty as to their precise uses, a view that they are rather formal and old-fashioned, and best left to certain kinds of printed text. In less formal writing, the dash is often a catch-all mark to take the place of both colon and semicolon, obviating the need to distinguish them or think about more subtle kinds of punctuation. They can be effective when used sparingly, in linking thoughts that go more closely together than separate sentences would allow and, in the case of the colon, in leading from one idea to its consequence or logical continuation, especially in the use of the colon at the end of a sentence, leading to a quotation or a list. The following sentences show how a semicolon can link two parallel statements, whereas a colon serves better when the intention is to lead from one thought to the next:

*semicolon* There was no truth in the accusation; it was totally false.

*colon* There was no truth in the accusation: they rejected it utterly.

Division into separate sentences, though grammatically satisfactory, implies a separateness

(which the voice conveys with a longer pause) that is not always appropriate:

*point* There was no truth in the accusation. They rejected it utterly.

Compare the following, in which the second sentence is quite distinct:

There was no truth in the accusation. The other problem was why they had not been warned.

In the following extract, the semicolons provide continuity of thought in the first sentence, with distinctness in the short sentences that follow:

Her husband . . . was intent on listening to a Beethoven symphony on the gramophone and frowned across the room at Maggie to keep her voice down; he made an irritable gesture with his hand to accompany the frown; he was not in the least disenthralled with Maggie; he only wanted to savour the mighty bang-crash and terror of sound which would soon be followed by the sweet 'never mind', so adorable to his ears, of the finale. He was a sentimental man. Maggie and Mary lowered their voices.

(Muriel Spark, *The Takeover*).

Some writers, such as Henry James, are sometimes accused of overusing the semicolon, producing sentences that continue for half a page or more. In the following sentence, however, the colon and commas are effectively used:

The sense of the past revived for him nevertheless as it had not yet done: it made that other time somehow meet the future close, interlocking with it, before his watching eye, as in a long embrace of arms and lips, and so handling and hustling the present that this poor quantity scarce retained substance enough, scarce remained sufficiently *there*, to be wounded or shocked.

(Henry James, *The Golden Bowl*).

Without careful use of separating punctuation marks, the following, from the same source, would be almost unintelligible:

What had happened, in short, was that Charlotte and he had by a single turn of the wrist of fate—'led up' to indeed, no doubt, by steps and stages that conscious computation had missed—been placed face to face in a freedom that partook, extraordinarily, of ideal perfection, since the magic web had spun itself without their toil, almost without their touch.

*Avoiding ambiguity.* Punctuation also plays an important role in the avoidance of ambiguity or misunderstanding, especially by means of the comma (which separates) and the hyphen (which links), as in *They did not go, because they were lazy* as opposed to *They did not go because they were lazy*, in *twenty-odd people* as opposed to *twenty odd people*, and in sentences like *From then, on meeting a friend he would smile* as opposed to *From then on, meeting a friend was a great pleasure for him*. A carefully entered hierarchy of punctuation adds clarity to a long or complex sentence, as in the following:

I came out of the house, which lay back from the road, and saw them at the end of the path; but instead of continuing towards them, I hid until they had gone.

A period/full stop would also be possible here in the place of the semicolon, but it would break the continuity.

*Hyphen and apostrophe: recent developments.* In everyday use and in ephemeral writing such as newsprint, punctuation is generally less precisely used than in more formal and permanent forms of writing and printing. The use of some marks is declining, especially the hyphen and the apostrophe. The hyphen is currently less common in forming compound words (such as *newspaper, worldwide*) and in separating vowels that may have the values of digraphs when placed together (as in *coordinate, makeup*). Arguably, the possessive apostrophe is needed only to distinguish number, as in *the girl's books* and *the girls' books*. In other cases, it could be (and increasingly is) dispensed with without any loss of clarity in such phrases as *Johns books* and *their mothers voice*; these are as comprehensible today as they were before the mark was introduced. It is also disappearing in names, such as *Smiths* and *Lloyds Bank*.

**PUNCTUATION MARK** [1850s]. Any one of a set of conventional marks or characters used in organizing written and printed language, such as a *comma* (,) or an *exclamation mark/point* (!). See MARK, PUNCTUATION. [WRITING]. T.MCA.

**PUNJABI.** See PANJABI.

**PURE** [13c: from Old French *pur*, Latin *purus* clean, plain, unmixed]. If something is pure, it is unadulterated, unmixed, untainted, clean, clear, intact, homogeneous, true, real, genuine. The adjective is used to describe such things as air, water, and food, and by extension language: 'An author of the Sixteenth Century would normally take pains to acquire the pure English of the Court and capital' (Bernard Groom, *A Short History of English Words*, 1965). See BARBARISM,

CORRUPT, HYBRID, PURISM, SOCIETY FOR PURE ENGLISH. [STYLE]. T.MCA.

**PURE AUSTRALIAN.** See AUSTRALIAN.

**PURISM** [18c: from French *purisme*]. Scrupulous observance of, or insistence on, purity or correctness in language and style, an attitude often considered by others as excessive. Purists may have specific plans for reforming languages in such areas as spelling, vocabulary, and grammar: for example, movements in English and German to get rid of foreign and especially Latinate borrowings, replacing them with native words, including archaic and dialect usages. This form of purism was prominent in English in the 16c and 19c, when *archaism* was also in vogue. One of the earliest English treatises on logic, Ralph Lever's *The Arte of Reason, Rightly Termed Witcraft* (1573), rejected Latinate terms in favour of a native technical vocabulary: in addition to *witcraft*, he coined among other terms *foreset* subject, *backset* predicate, *gainset* opposite, and *foresay* premiss/premise. In the 19c, the philologist William Barnes wrote an English grammar, the *Outline of English Speech-Craft* (1878), using invented vocabulary such as *thought-wording* proposition, *speech-thing* subject, and *timetaking* predicate. For everyday use, Barnes proposed hundreds of Saxonisms, including *cellar-thane* butler, *push-wainling* pram, *baby carriage*, and *tithe* decimate. Some words did catch on: the rhetorician John Earle (1890) credited the 19c movement with popularizing *open-mindedness*, *seamy*, *shaky*, and *unknowable*.

In present-day terms, purists are reformers who seek to root out presumed errors in grammar and usage and offer what they feel to be more correct alternatives. Some watch their own writing so carefully as to make it virtually unreadable, while others are so intent on uncovering other writers' mistakes that they commit the very errors they expose elsewhere. They usually object to the state of the language at a particular time and/or the direction in which it appears to be going, suspect and disapprove of new words or of old words with new meanings, insist on the literal meaning of words, and insist on logic in usage. In addition, they tend to see themselves individually as acting on behalf of an unclear ultimate authority. As a result, they may contradict one another: for example, in 1907, the American pronunciation expert Frank Vizately proscribed the common temporal phrase *a quarter of seven* on the grounds that it literally means 'one and three quarters': seven divided by four. He accepted only *a quarter to seven* as correct. Taking an opposite position on the issue, in the same year the grammarian Josephine Turck

Baker (*Correct English*, 1907), contended that since *to* is a preposition indicating 'direction toward', *a quarter to seven* is really 'one quarter of an hour in the direction of seven on the clock dial' (that is, 6.15), and mandated the form Vizately rejected. There are few self-confessed purists among the critics of the English language today; *purism* is generally a negative term, and by and large *purists* are regarded as hypercorrective extremists. It is not unusual, however, to find grammar and usage critics denying that they are purists while engaging in all the traditional forms of purism. See PLAIN, PURE. [STYLE]. D.E.B.

**PURITAN, PURITAN PLAIN STYLE.** See AMERICAN LITERATURE, BIBLE, ENGLISH LITERATURE, NEW ENGLAND, NICE-NELLYISM, PLAIN, ROYAL SOCIETY, THEATRE/THEATER. [HISTORY, STYLE]. T.MCA.

**PURPLE PATCH** [A translation of Latin *pannus purpureus* purple patch, a phrase used by the poet Horace to suggest a bit of imperial purple cloth sewn on to a commoner fabric]. Also **purple passage**, **purple prose**. A piece of writing marked by a florid, fanciful style:

There are few of us who have not sometimes wakened before dawn, either after one of those dreamless nights that make us almost enamoured of death, or one of those nights of horror and misshapen joy, when through the chambers of the brain sweep phantoms more terrible than reality itself, and instinct with that vivid life that lurks in all grotesques, and that lends to Gothic art its enduring vitality, this art being, one might fancy, especially the art of those whose minds have been troubled with the malady of reverie. Gradually white fingers creep through the curtains, and they appear to tremble. In black fantastic shapes, dumb shadows crawl into the corners of the room, and crouch there. Outside, there is the stirring of birds among the leaves, or the sound of men going forth to their work, or the sigh and sob of the wind coming down from the hills, and wandering round the silent house, as though it feared to wake the sleepers, and yet must need call forth sleep from her purple cave.

(from Oscar Wilde, *The Picture of Dorian Gray*, 1890, ch. 11).

See EUPHUISM, POETIC DICTION, PROSE. [STYLE, WRITING]. T.MCA.

**PUTTENHAM, George** [1532-1600]. Elizabethan writer, the presumed author of *The Arte of English Poesie* (1589). This work reflected the late 16c confidence that English no less than Greek and Latin was 'significant' and so could serve for poetry; in it, Puttenham praised his poetic contemporaries. He defended the borrowing of foreign words when it was necessary and euphonious, but condemned it when the result was, in his view, a 'mingle mangle' of poetic

vocabulary. However, he preferred vernacular compounding as a source for new words. He addressed an aristocratic but unlearned audience, and therefore insisted that English poetry must use the language of the court, not the inkhornisms of the universities, the ruralisms of the countryside, or the archaisms of Lydgate or Chaucer. See *index*. [BIOGRAPHY, EUROPE, HISTORY, STYLE].

W.F.B.

**PYGMALION** [The name of a legendary king of Cyprus who fell in love with a statue of Aphrodite, or, according to the Roman poet Ovid, fell in love with an ivory statue of his own making, expressing his ideal woman. The sculptor then prayed to Aphrodite for a wife like the statue, and the goddess accommodatingly brought it to life. At an unknown stage in the development of the story, *Galatea*, the name of a sea nymph, was given to the statue-woman. The Pygmalion theme has regularly recurred in English. The Elizabethan dramatist John Marston told the tale in *The Metamorphoses of Pygmalion's Image* (1598), the Victorian socialist poet William Morris included it in *The Earthly Paradise* (1868-70), and it was the subject of a comedy by W. S. Gilbert entitled *Pygmalion and Galatea* (1871)]. The title of a popular play by George Bernard Shaw (1912) that deals with the English language. It is generally classed as a romantic comedy but Shaw saw it as a didactic drama about the power of phonetics and the

foolishness of contemporary social attitudes. It was first performed in German in Vienna in 1913, then in London in the original English in 1914, when it created a sensation because the phrase 'not bloody likely' occurs in Act 3. A result of this was the minced oath *not Pygmalion likely* and the use of the name to talk about swearing: 'The trouble really began when alderman Mrs. K. Sheridan was speaking about the council fleecing tenants and used a pygmalion word' (*The Times*, 28 Apr. 1960). The play recounts how Professor Henry Higgins (a character influenced in part by Henry Sweet) in order to win a bet trains the Cockney flower girl Eliza Doolittle to behave like a duchess, largely by teaching her 'to speak beautifully' in Received Standard pronunciation. In the play there is no cross-class romance between phonetician and pupil, but such a romance develops in a film version in 1938, of which Shaw approved; it is also strongly hinted at in the later musical based on the play, Alan Jay Lerner's *My Fair Lady* (1956) and the subsequent film (1964) starring Audrey Hepburn as Eliza and Rex Harrison as Higgins. Shaw also had a character called Pygmalion in the futuristic final part of *Back to Methuselah* (1921), a scientist who artificially creates a humanoid man and woman. The social and linguistic theme has been continued in the title and content of John Honey's *Does Accent Matter?—The Pygmalion Factor* (Faber, 1989). See ACCENT, COCKNEY, ELOCUTION, SHAW, SWEET. [LITERATURE, SPEECH].

T.MCA.

# Q

**Q, q** [Called 'kew', rhyming with *few*]. The 17th letter of the modern Roman alphabet as used for English. It originated as the Phoenician symbol *qop*, which had the value of a voiceless uvular plosive: a *k*-like sound made well back in the mouth. It was initially adopted by the Greeks as *koppa*, to represent /k/ before a back vowel; but classical Greek preferred the letter *kappa*, the ancestor of *K*, and *koppa* fell into disuse. The Etruscans used three Greek letters, *gamma*, *kappa*, and *koppa*, for variants on /k/. *Koppa* was used specifically before /u/, a practice followed by Latin, which gave the letter its characteristic curved tail as *Q*. This letter was little used in Old English, which used the digraph *cw* in words now spelt with *qu*: *cwen/queen*, *cwic/quick*. French inherited the digraph *qu* from Latin, and after the Norman Conquest it was increasingly used in written English by French-influenced scribes, so that by 1300 *cw* had been supplanted. For a time, *qu* spread further, especially in Northern English, to words now spelt with *wh*. This pattern persisted longest in Scots, in which, for example, *what* was written *quhat* until the 18c, and *quh* survives in such surnames as *Colquhoun* ('Cahoun'), *Farquhar* ('Farker') and *Urquhart* ('Urkart').

**Sound value and occurrence.** (1) In English, *q* has the same value as *k* or hard *c*, and is generally followed by *u*, with the joint pronunciation /kw/: *quaint*, *quibble*. (2) Loss of /w/ in French led to spelling changes that obscure the common ancestry of such English/French pairs as *quash/casser*, *quire/cahier*. On the other hand, English has developed *qu* in words that in French had, and still have, *cu*: *esquire/écuyer*, *squirrel/écureuil*. (3) In English, *qu* typically occurs word-initially before *a*, *e*, *i*, *o* (*quack*, *quash*, *quail*, *quest*, *queer*, *quit*, *quite*, *quote*) and after *s* (*squat*, *squeal*, *squirrel*). (4) Medial *qu* also occurs: *adequate*, *banquet*, *equal*, *frequent*, *liquid*,

*request*. (5) When the Latin prefix *ad-* precedes *qu*, it is assimilated as *ac*: *acquaint*, *acquire*, *acquit*. However, initial *a* sometimes also precedes *qu* without *c* (*aquatic*, *aquiline*) with no distinction in pronunciation.

**Exotic Q, QU.** (1) Though rarely so used, *q* without *u* has the same value as *k* and as *c* before *a*, *o*, *u*. It is used as a transliteration of the Hebrew letter *qoph* and Arabic *qaf* (cognate with Phoenician *qop*), both uvular plosives given the value /k/ in everyday English: *Iraq*, *qaf*, *Qatar*, *Qur'an* (Koran): see ARABIC. (2) In the Pinyin script for Chinese, *q* represents the *ch* sound in *cheese*, as in *Qian-long*, *Qin-huang-dao*: see CHINA. (3) Words that have entered English in recent centuries from Romance languages have mostly kept the value of *qu* as /k/: word-finally with *e* (*arabesque*, *grotesque*, *mosque*, *opaque*, *picturesque*, *unique*), medially (*bouquet*, *coquette*, *mosquito*), and occasionally initially (*quiche*, but not *queue*), especially in names (*Quezon City* in the Philippines). The recent French loan *questionnaire* is sometimes pronounced with /k/, but usually with /kw/ by analogy with the earlier loan *question*. *Quay* is an 18c respelling of *kay* or *key*, by analogy with French *quai*. There is an alternation between /kw/ in *conquest* (compare *quest*, *request*) and *liquid*, and /k/ in *conquer/conqueror* and *liquor*. (4) In the acronyms *Qantas* (Queensland and Northern Territory Aerial Services) and *QARANC* (Queen Alexandra's Royal Army Nursing Corps) the *q* is pronounced as /kw/, as if followed by a *u*: 'Kwontas', 'Kwar-ank'. (5) Forms with medial *cqu* pronounced /k/, include: *lacquer*, *lacquey* (now *lackey*), and *racquet* (also *racket*). (6) AmE generally has *bark*, *check*, *licorice* where BrE keeps the *q* in *barque*, *cheque*, *liquorice*. See ALPHABET, LETTER, SPELLING. [WRITING]. C.U.

**QUAIR.** See **QUIRE.**

**QUALIFY** [16c: from Latin *qualificare/qualificatum* to say of which kind, from *qualis* of what kind]. A traditional term used to indicate that one grammatical unit depends on another: in the phrase *brave attempts*, the adjective *brave* is said to qualify the noun *attempts*; in traditional terms, the adjective indicates the 'quality' or nature of the noun. Contemporary grammars generally use the term *modify*. See **MODIFICATION**. [GRAMMAR]. S.G., T.MCA.

**QUALITY PRESS, The.** A mainly British term for newspapers considered authoritative, sober, and influential, and read by the middle and upper classes. The uppermost echelon of the Quality Press has traditionally been *The Times* (founded 1785), which was in its heyday a major national institution with quasi-official status. It was widely if facetiously asserted in the early 19c that Britain was ruled by *The Times* and that its editor was the most powerful man in the land. *The Morning Post* was, throughout its life (1772–1937), a 'society' paper, including such major authors as Coleridge, Disraeli, Hardy, and Kipling among its contributors and leader-writers. In the course of the 20c, other broadsheet newspapers, such as *The Guardian* (founded as *The Manchester Guardian* in 1821), *The Daily Telegraph* (1855), and *The Independent* (1986) have joined the category. Although the readership of the quality press has steadily declined to about 10% of newspaper readers, it remains socially and politically the most influential sector. See **BROADSHEET, HEAVY, NEWSPAPER, PRESS, TABLOID, TIMES**. [MEDIA]. G.H.

**QUANTIFIER** [20c: from *quantify* and *-er* as in *modifier*]. A category of determiner or pronoun used to express quantity. Most quantifiers have a limited distribution that depends on the countability of the nouns they relate to. *Many*, *a few*, *few*, and *several* relate only to plural countable nouns (*many newspapers*, *a few drinks*, *few people*, *several men*), in contrast to *much*, *a little*, and *little*, which relate to uncountable nouns (*much confusion*, *a little information*, *little news*). *Enough* can relate to both types of noun (*enough newspapers*, *enough information*), as can *some* and *any* (*some help*, *any houses*). However, *some* and *any* can also be used with singular countable nouns with non-quantitative functions: *Some chicken!* means 'What a poor chicken!' or 'What a wonderful chicken!', depending on tone and emphasis; *Any fool knows that* means 'There is nothing special about knowing that'. Distinctions in the use of certain quantifiers are contrastive and subtle: *few newspapers* (not many

*newspapers*), *a few newspapers* (some newspapers); *little help* (virtually no help at all), *a little help* (some help but not much). It is useful to treat *a few* and *a little* as distinct quantifiers and not simply as the indefinite article followed by *few* and *little*. Neither is used with a singular countable noun (*a few raisins*, *a little rice*, but not *\*a raisins*, *\*a rice*, *\*a few raisin*, *\*a little raisin*). In addition, both *little* and *a little* have to be distinguished from the ordinary adjective *little* (small). Ambiguity is possible with nouns that can be both countable and uncountable: out of obvious context, *a little chicken* could mean either a small bird or a small quantity of the meat of a chicken.

*Few* and *little* have negative force, as is shown by the fact that, like negatives, they take positive question tags: *Few of us really think that, do we?* Contrast: *A few people believe that, don't they?* *Few* and *little* have comparative and superlative forms (*fewer*, *fewest*; *less*, *least*), while *much* and *many* share *more* and *most*. Traditionally, *fewer* and *fewest* have been described as modifying only countable nouns (*fewer houses*, *the fewest men possible*) and *less* and *least* as modifying only uncountable nouns (*less wine*, *the least fuel possible*), and many people regard this as the only acceptable usage in standard English. However, widely throughout the English-speaking world *less* and *least* are used with countable nouns (*less people*, *the least working hours*), regardless of criticism and in many instances without the least awareness of the basis for the criticism. *Much* tends to be non-assertive in informal English; it prefers negative or interrogative contexts: *We don't have much money*, *How much money do you need?* In affirmative statements, a quantitative phrase such as *a lot (of)* and *a great deal (of)* is often preferred: *That explains a lot (of what I've heard)* or *That explains a great deal* rather than *That explains much*. Quantifiers can be pre-modified by *very*, *so*, *too*, *as*, as in *very few people*, *so little help*, *too many cooks*, and *as much work as possible*. Some words and phrases used as quantifiers can also be used as intensifiers, as in: *much nicer*; *much less*; *many more*; *a little better*; *a lot older*; *a lot too old*; *a bit too much*. Some of these words are also used for duration and frequency: *We waited a little*; *They eat a lot*. This can lead to ambiguity; in *She eats a lot* and *He doesn't read much*, if the items are quantifying pronouns, the meaning is *a lot of food* and *a lot of books*, but if they are adverbs of frequency, the meaning is *She's constantly eating* and *He doesn't often read*. Compare **NUMBER**<sup>1</sup>. [GRAMMAR]. S.C.

**QUANTITATIVE METRE/METER.** See **METRE/METER, QUANTITY.**

**QUANTITY** [13c: from French *quantité*, from Latin *quantitas*, translating Greek *posótēs* ('how-much-ness') amount]. In prosody and phonetics, a distinction between sounds and syllables based partly on duration (length). The concept has traditionally been important in discussing Latin vowels, whose values are either long or short; it is less important in English. The first syllables of such words as *thimble*, *bauble*, *table* tend to have greater duration than short syllables ending in a short vowel (the first syllables of *bubble*, *nibble*), on account of the durations of the vowels and consonants that they contain. Syllable duration is also conditioned by context, syllables being shortened when unstressed and lengthened in word-final position. All is relative: there are no fixed durations corresponding to 'long' and 'short' respectively. Longer syllables are more able to carry a pitch change or tone, and may for this reason be more likely to attract stress: the long second syllable of *arena* is stressed but the short second syllable of *cinema* is not. Partly because the concept of length is ill defined, and partly because other patterns are involved, some phoneticians consider it preferable to follow the example of the ancient Hindu grammarians and define quantity in terms of *weight* ('heavy' and 'light' syllables) rather than length. See DURATION, LONG AND SHORT, METRE/METER, RHYTHM, VOWEL QUANTITY. [SPEECH]. G.K.

**QUARTERLY REVIEW OF DOUBLE-SPEAK.** Begun in 1974 by the Committee on Public Doublespeak of the National Council of Teachers of English, the *Review* was originally titled the *Doublespeak Newsletter* and published irregularly. The title was changed in 1980 and a publication schedule of January, April, July, and October was instituted. Each issue has 12 pages and contains articles on and examples of doublespeak, book reviews, cartoons, and a bibliography of resources. The January issue carries the announcement of the winner of the annual Doublespeak Award and the winner of the annual George Orwell Award. The review is edited by William Lutz, and has over 7,000 subscribers in the US and 22 other countries. See DOUBLESPEAK, NCTE. [MEDIA, STYLE]. W.D.L.

**QUARTO** [16c: from the Latin ablative phrase *in quarto* in a quarter (of a sheet of paper)]. (1) Abbreviated as *4to*, *4°*. A format for printed material, until recently commonly used for books, made up of gatherings or quires of sheets of paper (usually of crown or demy) folded twice to provide four leaves or eight pages. Quartos have usually been a fairly sturdy size, but many of Shakespeare's plays and similar 16-17c works were first published in quarto in pamphlet form.

(2) A size of cut paper 10 inches × 8 inches (25.4 cm × 20.3 cm). See FORMAT, PAPER. [TECHNOLOGY]. W.W.B.

**QUATRAIN** [16c: from French, from *quatre* four (from Latin *quattuor*), and *-ain* (from Latin *-anus*)]. A stanza of four lines, the most popular form in traditional English verse, probably because it does not require such repetition of rhyme as the sonnet or the Spenserian stanza, and allows for antithesis or parallelism. It can have any rhyme scheme or metre. The *heroic quatrain*, in iambic pentameter, rhyming *abab*, has been used by many poets, such as Thomas Gray, 'Elegy Written in a Country Church-Yard' (1751):

Let not Ambition mock their useful toil,  
Their homely joys and destiny obscure;  
Nor Grandeur hear with a disdainful smile  
The short and simple annals of the poor.

The *ballad stanza* has alternate tetrameter and trimeter lines, rhyming *abcb* or sometimes *abab*; the latter is much used for hymns, where it is known as *common measure*, as in these lines by Isaac Williams (1802-65):

Still let me ever watch and pray,  
And feel that I am frail;  
That if the tempter cross my way,  
Yet he may not prevail.

Other quatrains include the trochaic metre (rhyming *aabb*) used by William Blake:

When the stars threw down their spears,  
And water'd heaven with their tears,  
Did he smile his work to see?  
Did he who made the Lamb make thee?

(‘The Tyger’, 1794)

and the iambic tetrameter (rhyming *abba*) used by Alfred Tennyson:

Thy voice is on the rolling air;  
I hear thee where the waters run;  
Thou standest in the rising sun,  
And in the setting thou art fair.

(‘In Memoriam’, 1850)

Unrhymed quatrains are rare. Although usually part of a longer poem, the quatrain can stand alone as a vehicle for epigrams, epitaphs, and general observations. Compare COUPLET. See VERSE. [LITERATURE]. R.C.

**QUEBEC**, also **Québec**. The name of both the largest province of Canada (home of the largest French-speaking community in North America) and of its capital city (founded by Samuel Champlain in 1608). Out of a population of c.6m, 82% speak French, 16% English. Italian and Greek are prominent immigrant languages, and Cree and Mohawk are prominent indigenous languages. The first Europeans to settle in the region were the French in the 17c, and their colony was known as *Nouvelle France* (New France)

until well into the 18c. In its heyday, the French empire in North America stretched from the valley of the St Lawrence down the Ohio and Mississippi rivers to the Gulf of Mexico, limiting British expansion west. In the late 20c, however, Quebec is the only politically significant French-speaking community in North America.

**Quebec French.** The French of Quebec descends from the speech of 17c Normandy and Picardy. Distinctive and varied, it has a broad form known as *joual* (pronounced 'zhwal': a variant of *cheval* horse). The traditional standard of education and the media has been that of Paris, often referred to as *le français international*. Local French of all varieties and most social levels has been stigmatized both in France and in Quebec as a patois marred by its accents, its archaisms, and its Anglicisms. As a result, many Québécois have had experiences similar to those reported by Léandre Bergeron, who in reaction treats the French of Quebec as in effect a distinct language:

'You don't speak *real* French in Quebec.' This often heard pronouncement, said either with scornful condescendence or, even worse, with matter-of-fact naïveté, has always struck me. What can you say to it? How can you reply to someone who rubs you off the map with one sentence? To make matters worse, we get this not only from English Canadians but from Frenchmen as well. The two main cultural influences in our lives tell us that the language our parents taught us was not a *real* civilized language, but a peasant patois, a primitive gibberish. . . . The fact is that the majority of the inhabitants of Quebec are no more French than the majority of the inhabitants of Canada are British. Most people in Quebec do not speak Parisian French any more than people in Canada speak London English (from the preface to *The Québécois Dictionary*, 1982).

**Quebec English.** British Empire Loyalists from the US, after the end of the War of Independence in 1783, were the first significant English-speaking settlers in Quebec. They founded the Eastern Townships south-east of Montreal. By 1831, anglophones of British descent were in the majority in Montreal itself, but an influx of rural francophones, who filled the ranks of the urban working class, had by 1867 reversed that trend. By 1981, 66% of the city's population was French-speaking. Such facts explain why English as used in Montreal (and more generally in Quebec) is not as homogeneous as other Canadian regional Englishes. Rather it exists as a continuum, from long-established unilingual anglophones broadly similar to anglophones in Ontario through bilinguals of various kinds to francophones using English as a second language. Until 1970, Montreal was the economic capital of Canada, but many controlling anglophone companies relocated, especially in Toronto, as a result of mounting separatist pressures

in the 1970s and early 1980s among the French majority and under the government of the secessionist Parti Québécois (1976-85).

Much has been written in French on the effects of English on French in Quebec. In such works, the dominating role of English in North America has generally been considered pernicious, and francophones have often been urged to *éviter les anglicismes* (avoid Anglicisms) and not *commettre un anglicisme* (commit an Anglicism) in their French. The French of Quebec and Canada as a whole, however, continues to be heavily influenced by both CanE and AmE, as for example the widespread use of *bienvenu(e)*, the equivalent of *You're welcome* (in response to *merci* thank you), rather than the *de rien* (It's nothing) of France. There has been little comparable concern in Quebec about the effects of French on English and there have been few studies of Quebec English. However, the research that has been done indicates that in Montreal, for socio-economic reasons, English was until c.1975 regarded in both communities as the language of prestige. In the last 15 years, however, under the impact of pro-French legislation, French has gained greatly in prestige. In addition, English in Montreal tends to favour the norms of AmE more than English in Ontario, and Montrealers are less likely to employ Canadian Raising in their speech.

The most marked feature of local English is the influence of French. Many expressions have simply moved into English, such as: *autoroute* highway, *caisse populaire* credit union, *dépanneur* convenience store, corner shop, and *subvention* subsidy. Anglophones who speak French constantly use such loan expressions as: *give a conference* give a lecture (from *donner une conférence*), *sc(h)olarity* schooling (from *scolarité*), and *syndicate* a trade union (from *syndicat*). The Gallicisms of francophones when speaking English range from such easily grasped expressions as *collectivity* (for *community*) and *annex* (for the *appendix* to a document) to a commonplace misuse of *faux amis*, such as *deceive* in *I was deceived when she didn't come* (from *décevoir* to disappoint), *reunion* in *We have a reunion at 5 o'clock* (from *réunion* a meeting), and *souvenir* in *We have a good souvenir of our trip to Louisiana* (from *souvenir* a memory).

**The battle of the signs.** In 1977, the passing of Quebec's *Bill 101* (the *Charter of the French Language*) required among other things that public signs be in French only. This led to violations, especially in English-speaking areas of Montreal, and the imposition of much-resented fines. As part of the so-called 'battle of the signs', the English language rights group *Alliance Quebec* organized and financed the defence of five

merchants accused of violating the law. The 'Chaussure Brown' case went to the Supreme Court of Canada, which in 1988 declared that the section of Bill 101 dealing with signs was unconstitutional. The Quebec government responded by passing a new law, *Bill 178*, which allows non-French signs inside stores but not outside (an ordinance mocked by some anglophones as 'the inside outside law'). To pass this law, the provincial government used a provision in the Canadian Constitution Act (1982: see below) that allows provinces to pass and enforce laws that contravene the constitution for periods of up to five years. In the furore that followed, three anglophone ministers resigned from Quebec's Liberal government. A subsequent election brought four new anglophones into the predominantly francophone legislature, all members of the *Equality Party*, founded to support minority language rights in Quebec. By and large, the province's francophones support the language law with its ban on non-French signs, while anglophones are either against it or ambivalent.

**Quebec and the rest of Canada.** In May 1980, a referendum was held in Quebec to decide whether the province would remain a part of Canada or seek a more independent status called *sovereignty-association*. The referendum rejected the latter option, opening the way for Ottawa to seek the *patriation* of the Canadian Constitution, the *British North America Act of 1867*. Renamed the *Constitution Act*, and incorporating a new *Charter of Rights and Freedoms*, the Act was 'brought home' from Britain in 1982. René Lévesque, the separatist Parti Québécois premier at the time, was however the sole provincial premier to refuse to sign the national agreement to patriate the constitution.

In 1987, the *Meech Lake Accord* was worked out by the federal and provincial governments in an attempt to resolve the differences that led to this refusal and to establish a more generally acceptable association between Quebec and the rest of Canada. Robert Bourassa, the Liberal Party successor to Lévesque as Quebec premier, put forward five requirements, among which was recognition of Quebec as a 'distinct society'. This point was accepted by the Prime Minister, Brian Mulroney, and all provincial premiers, although the premiers of several provinces had cited what they saw as Quebec's suppression of English language rights as a reason for resisting Quebec's demands. Once agreement was reached, the accord had to be ratified by every province by the agreed date of 23 June 1990. During the last-minute debate on the accord, however, the premier of Manitoba, Gary Filmon, insisted on holding hearings and on putting acceptance of

the accord to a vote in his legislature. Elijah Harper, a Native member of the Manitoba Assembly, blocked debate until time ran out on the agreement, on the grounds that aboriginal rights had been inadequately served by the accord. The premier of Newfoundland, Clyde Wells, had insisted on presenting the accord to his legislature for a free vote, but, angered by federal pressure to ratify it before the deadline, adjourned his legislature without holding the vote. The deadline passed and because of the necessity for pan-Canadian agreement, the Meech Lake Accord died, throwing Canada into considerable uncertainty. As a result, the constitutional and emotional gulf between Quebec and the rest of the country remains unbridged. T.MCA., M.F.

**QUEEN'S ENGLISH.** See KING'S ENGLISH.

**QUEEN'S ENGLISH SOCIETY.** A non-professional association with charitable status formed in England in 1972 by Joe Clifton, an information scientist in the pharmaceutical industry. Originally known as the 'Society for the Protection of the Queen's English', it sought to attract the support of 'people who appreciate good English and wish to maintain the standard' (Society's public statement). Its primary concern is a 'decline in the standard of literacy . . . increasingly evident in the press, on radio and on television' (leaflet). The Society has lobbied the British government for a return to the teaching of formal grammar in schools. It publishes *Quest: Journal of the Queen's English Society*. See KING'S ENGLISH, PURISM. Compare SOCIETY FOR PURE ENGLISH. [EUROPE, MEDIA]. T.MCA.

**QUEENSLAND CANEFIELDS ENGLISH/KANAKA ENGLISH.** See AUSTRALIAN PIDGIN.

**QUESTION** [13c: through French from Latin *quaestio/quaestionis* an occasion of asking]. In general usage, a form of language that invites a reply, marked in spoken English with specific patterns of intonation and in written and printed English by a closing question mark (?). In grammar, a term in the classification of sentences, referring to types distinguished by form and function from such other sentence types as *statement* and *command*. If the term is used functionally, sentences said with a rising intonation (*You don't believe me?*) can be included, while rhetorical questions (*How could I possibly forget!*) and exclamations in interrogative form

(*Isn't he lucky!*) are not. In formal terms, questions are of three main types:

**Yes-no questions.** Questions to which the answer could be a *Yes* or *No*, with or without further detail, as with *Did you telephone Robert?* Formally, they begin with a verb: *be*, *have*, or *do*, or a modal verb, followed by the subject: *Are you all right?*; *Do you understand?*; *Have you enough money?*; *Do you have enough money?*; *Will you telephone Robert?*; *Can I help you?* Their usual intonation pattern is a rising tone on and after the tonic syllable, but, when rhetorical or emphatic, they are said with a falling tone.

**Wh-questions.** Questions beginning with an interrogative word. With the exception of *how*, these all begin with the letters *wh-*: *who(ever)*, *whom*, *whose*, *what(ever)*, *which*, *when*, *where(ver)*, *why(ever)*: *Why did he leave and where has he gone?* Such questions are sometimes called *information questions* because they are seeking new information. They contrast with *yes-no* questions, but like them usually involve inversion of subject and verb. Their usual intonation pattern is a falling tone on and after the tonic syllable, but when rhetorical or emphatic are said with a rising tone.

**Alternative questions.** These offer a choice of answer: *Are you expecting Robert or his brother?*; *Shall I telephone or write?*; *Who are you expecting—Robert or his brother?* If the question begins with a verb, the usual intonation pattern is a rising tone on each of the alternatives before the last and then a falling tone on the last alternative. If the question begins with an interrogative word, the usual pattern is a fall on the first part, followed by the same pattern in the second part as for a question beginning with a verb.

**Inversion.** All three types generally involve inversion of the subject and an auxiliary or modal verb. This inversion applies also to questions containing *be* as the sole verb (*Are you ready?*) and in BrE sometimes to *have* (*Have you any wool?* as opposed to *Do you have any wool?* and *Have you got any wool?*). All other verbs use *do* if there is no auxiliary or modal: *Where does she live?*; *What did you do?* The only exception to this inversion rule is when *who*, *what*, or *which* is part of the subject. Contrast: *Who told you that?* (where *who* is subject) and *Who(m) did you tell?*

See BEGGING THE QUESTION, INTERROGATIVE, INVERSION, LEADING QUESTION, QUESTION MARK, QUESTION TAG, TAG QUESTION, TONE. [GRAMMAR].

S.C., T.MCA.

**QUESTION MARK,** also especially AmE **interrogation mark, interrogation point.** The punctuation mark (?). Its primary use is to show that a preceding word, phrase, or sentence is a direct question: *Do you want more to eat?*; *'Why?' I asked;* *He's her husband?* It is not used in indirect speech, because a reported question is part of a statement: *I asked you whether you wanted more to eat.* The question mark is sometimes repeated in informal usage or followed by an exclamation mark/point in order to indicate a specially strong question (*What did you say??*; *What did you say?!*). It is also used, often in brackets, to express doubt or uncertainty about a word or phrase that immediately follows or precedes it: *Julius Caesar, born (?)100 BC;* *They were then seen leaving the house (in tears?) and walking away.* See MARK, PUNCTUATION, QUESTION. [WRITING].

R.E.A.

**QUESTION TAG.** A short question tagged on to the end of a statement (declarative sentence). Some languages have an invariable question tag that can be added to almost any statement: French *n'est-ce pas?* (*isn't it?*); Spanish *verdad?* (*truly?*). In IndE and some other varieties, *isn't it?* is used in this way (*You are going tomorrow, isn't it?*), while *yes* and *no* are used for confirmation (*You are coming, yes?*; *She is going there, no?*). In many kinds of English, an enclitic tag is used for confirmation and other purposes: *eh?* is a shibboleth of CanE and common in BrE (*You like that kind of thing, eh?*), and in some varieties of ScoE *eh no?* is common (*You're comin as well, eh no?—aren't you?*). Many AmE speakers use *huh?* or *uh?* (*You coming, huh?*). Other common informal tags are *right?* and *OK?* (*He'll be there, right? I'll see you soon, OK?*).

Standard English throughout the world requires the question tag to correspond to the subject and verb of the preceding sentence. Such tags consist of a single-word verb (*be* or *have* as main verbs, an auxiliary, or a modal) plus a subject pronoun, as in *It's a nice day today, isn't it?*, *You have enough books, haven't you?* (especially BrE) and *You have enough books, don't you?* (especially AmE), *She went home last night, didn't she?*, and *You could help if you wanted, couldn't you?* Question tags are normally negative after a positive statement, and vice versa. When spoken on the rising tone of *yes-no* questions, they may genuinely be asking for information or be expressing surprise or uncertainty: *You're not going to tell them, are you?* However, tags are more usually spoken on the falling intonation of statements, to invite or expect agreement with the preceding statement: *Lovely day we're having, aren't we?*; *It's been a mild winter, hasn't it?* Question tags can also be used with imperatives: *Wait a minute, will you?*

**QUESTION-BEGGING.** See BEGGING THE QUESTION.

*Send us a postcard, won't you?; Let's go together, shall we?* Another possibility is for the tag to agree with a subordinate clause: *I don't think they'll come now, will they?; That's a nice mess you've got us into, haven't you?* Occasionally, a positive statement is followed by a positive tag, with a rising intonation. This may simply signify an inference or even a request for clarification (*He'll be 21 next year, will he?*), but the structure often suggests sarcasm or suspicion: *So he's innocent, is he?; It fell off the back of a truck, did it?* (implication: I doubt that very much). See QUESTION, TAG QUESTION. [GRAMMAR]. S.C.

**QUIBBLE.** See PUN.

**QUILLER-COUCH, (Sir) Arthur (Thomas)** [1863-1944] Pen name *Q.* English novelist, academic, journalist, and critic, born in Bodmin, Cornwall, and educated at Clifton and Oxford. His novels with a Cornish background include *Dead Man's Rock* (1887) and *Troy Town* (1888). He edited several anthologies for OUP, beginning with the *Oxford Book of English Verse* (1900). He was knighted in 1910. Quiller-Couch became the first King Edward VII Professor of English Literature at Cambridge (1912) and was influential in the development of the English Tripos. His inaugural lectures were published as *On the Art of Writing* (1916) and he was joint editor of the *New Cambridge Shakespeare* from 1921. Quiller-Couch did not practise the close critical scholarship of such younger teachers of 'Cambridge English' as I. A. Richards and F. R. Leavis. His contribution was a deep appreciation of English literature, which he saw as drawing its strength from classical rather than Anglo-Saxon influence. His views about good English were prescriptive; he made a forceful attack on official clichés and jargon. He had little interest in philology, but was concerned for the teaching of English at all levels. He served on a Board of Education committee in 1919 to investigate English in schools and wrote in 1920: 'The real battle for English lies in our Elementary Schools, and in the training of our Elementary teachers.' See index. [BIOGRAPHY, EDUCATION, EUROPE, LITERATURE]. R.C.

**QUIRE** [15c: from Old French *qua(i)er* (Modern *cahier*) a quire of six sheets, a copy-book, ultimately from Latin *quaterni* four at a time. A parchment folded four times was a *quaternion*]. (1) A set of four sheets of paper or other material doubled to form eight leaves and 16 pages, a common unit in medieval manuscripts. (2) Any similar collection or gathering of leaves, one within the other, in a manuscript or printed work. (3) A set of 24 or 25 sheets of paper, a 20th of a ream. (4) A set of all the sheets in a

book, regardless of number. If a publication is available in *quires*, it consists of unbound sheets. (5) Also *quair*. An obsolete term for a pamphlet or small book in a single quire, usually a poem or tract: 'Heirefter followis the quair maid be King James of Scotland the first, callit the kingis quair' (MS Selden B24, c.1500). See FORMAT, PAGE, REAM, SIGNATURE. [LITERATURE, TECHNOLOGY]. W.W.B., T.MCA.

**QUIRK, (Sir Charles) Randolph** [b.1920]. British linguist. Born in the Isle of Man, he studied at U. College London, and was awarded the degrees BA, MA, Ph.D., D.Litt. from the U. of London. He was a lecturer in English at UCL (1947-52), Reader in English Language and Literature at the U. of Durham (1954-8), Professor of English Language at Durham (1958-60) and at UCL (1960-8), and Quain Professor of English Language and Literature at UCL (1968-81). He chaired a governmental Committee of Inquiry which reformed the training of speech therapists in the UK (HMSO, 1972), served as Vice-Chancellor of the U. of London (1981-5), as President of the British Academy (1985-9), was awarded the CBE in 1976, and was knighted in 1985. Quirk's scholarly activities cover a wide range of studies in the English language and related subjects. They include: the phonology, morphology, vocabulary, and syntax of Old English; editions of Old Icelandic texts; the language of Dickens and Shakespeare; the teaching of the English language; lexical studies of English in various periods; English as an international language; research and publications on modern English syntax.

He founded the *Survey of English Usage* in 1959, continuing as its Director until 1981 (see entry). At this research unit, he supervised the compilation and analysis of a corpus of spoken and written samples of the language used by adult educated native speakers of BrE. In association with researchers at the Survey, he developed techniques for eliciting usage and attitudes to usage. The analyses derived from the data in the Survey corpus and in elicitation experiments have resulted in numerous publications by Quirk himself and by scholars from all over the world, in particular the two major reference grammars on which he collaborated: *A Grammar of Contemporary English* (1972) and *A Comprehensive Grammar of the English Language* (1985: see entry). His approach to research has been theoretically eclectic and focused on the functions of language. He assigns priority to the meticulous examination of language data and to total accountability of the data. The pursuit of these priorities has induced him to assert the prominence of analogy and gradience in the functioning of the language system; language

categories are viewed as overlapping rather than discrete, and peripheral subcategories or individual items are shown to share to varying extents the features of the central members of a category. In his view, the description of English must take account of the stylistic variation occasioned by the relationship between participants in a discourse, the medium, the educational and social standing of the participants, and the subject matter of the discourse. He envisages the English language as having a common core shared by regional and stylistic varieties.

Publications include: *An Old English Grammar* (with C. L. Wrenn, Methuen, 1955, 2nd edition 1957); *The Use of English* (Longman, 1962, 2nd edition 1968); *Systems of Prosodic and Paralinguistic Features in English* (with David Crystal, Mouton, 1964); *Investigating Linguistic Acceptability* (with Jan Svartvik, Mouton, 1966); *Essays on the English Language—Medieval and Modern* (Longman, 1968); *Elicitation Experiments in English: Linguistic Studies in Use and Attitude* (with Sidney Greenbaum, Longman, 1970); *The English Language and Images of Matter* (OUP, 1972); *A Grammar of Contemporary English* (with Sidney Greenbaum, Geoffrey Leech, and Jan Svartvik, Longman, 1972); *A University Grammar of English* (with Greenbaum, Longman, 1973; US title *A Concise Grammar of Contemporary English*, Harcourt Brace Jovanovich, 1973); *The Linguist and the English Language* (Edward Arnold, 1974); *A Corpus of English Conversation* (with Svartvik, Gleerups/Liber, 1980); *A Comprehensive Grammar of the English Language* (with Greenbaum, Leech, and Svartvik, Longman, 1985); *Words at Work: Lectures on Textual Structure* (Longman, 1986); *English in Use* (with Gabriele Stein, Longman, 1990), *A Student's Grammar of the English Language* (with Greenbaum, Longman, 1990). See index. [BIOGRAPHY, EUROPE, GRAMMAR, LANGUAGE]. S.G.

**QUOTATION** [15c: from Medieval Latin *quotatio/quotationis*, from Latin *quotare/quotatum* to distinguish by means of numbers, to divide into sections (chapters, verses, etc.), from *quot* how many. There is no connection between *quote* and the archaism *quoth* meaning 'said', which is the simple past of *quethe* to say, from Old English *cwethan*. The obsolete forms *cote*, *cott*, *coate*, as in 'He coateth Scriptures', are from French *coter*, also from *quotare*]. The act or practice of repeating a phrase, sentence, or passage from a book, speech, or other source, an occasion of doing this, and the words used: *a speech full of quotations*. The informal noun *quote* is also widely used, especially by journalists: *Can I have a quote on that? That's the quote of the week*. In classical and medieval times,

reciting and quoting were closely related; because books were rare and not always at hand when needed, it was necessary to memorize and be able to repeat large parts of important texts, especially scripture. Unlettered people, the vast majority, could only learn them if the literate could quote them *verbatim* (Latin: word for word). Preachers and orators would use and identify specific quotations for insertion in their sermons and speeches, to add weight and substance to what they said. When necessary, especially in matters of religion and law, texts would be produced, places of reference marked, and relevant sections read aloud or pointed out. Because of this, *quotation* also referred to the provision of references to parts of texts, to the listing of such references, and to copying out quotable excerpts by hand.

**Quotation, plagiarism, allusion.** The concept of quotation depends on identifying (briefly or in detail) the source to which reference is made and from which words have been taken. It also usually requires justification, explicitly stated or implicitly accepted: one quotes in order to substantiate a claim, bolster an argument, illustrate a point, demonstrate a truth, catch out an opponent, amuse an audience, or impress one's listeners or readers. A spoken quotation may be presented in a variety of ways: for example, with a lead-in that relates quotation to topic, followed by something on the person to be quoted, then the quoted matter itself, as in: 'Talking about the Canadian predicament, the former prime minister Mackenzie King put it this way: "If some countries have too much history, we have too much geography."' Another possibility is: 'The humorist Stephen Leacock described the matter as follows in 1944: "In Canada, we have enough to do keeping up with two spoken languages without trying to invent slang, so we just go right ahead and use English for literature, Scotch for sermons, and American for conversations."' The written forms used here to frame these quotations show how they are conventionally integrated into running text. Quotations in isolation, however, are usually set apart in paragraphs of their own, with plenty of white space, have the quoted matter first, then the name of the originator, often followed by such information as source and date, all of which may be presented in a variety of formats. For example:

*Without quotation marks and with a dash, etc.*

America is God's Crucible, the great Melting-Pot where all the races of Europe are melting and re-forming! - Israel Zangwill, *The Melting Pot*, 1908.

*Without quotation marks and with parentheses, etc.*

The most important thing to know about Americans—the attitude which truly distinguishes them from the

British and explains much superficially odd behaviour—is that *Americans believe that death is optional* (Jane Walmsley, 'A Native's Guide to Ameri-think', *Company*, Mar. 1984).

*With quotation marks (British style), and both a dash and parentheses, etc.*

'The Irish are a fair people—they never speak well of one another' - Samuel Johnson, quoted in James Boswell, *Life of Johnson* (1775, vol. 2, p. 307).

*With quotation marks (American style), and both a dash and parentheses, etc.*

"And while we don't exactly hate New Zealanders, we're not exactly fond of each other. While they regard us as vulgar yobboes, almost Yank-like, we think of them as secondhand, recycled Poms". - Phillip Adams, *The Age* (Melbourne: 18 June 1977).

If sources are not identified by such means as these, and the borrowed material is substantial and presented explicitly or implicitly as a writer's own, the person who does so may have engaged in *plagiarism*, the theft of someone else's words. If, however, the unassigned quotation is brief, appropriate to a situation, and belongs by more or less general agreement to a shared cultural tradition, it is neither quotation nor plagiarism, but *allusion*: the oblique and entirely legitimate reference to a source, part of whose effect is the pleasure (or frustration) listeners or readers feel as they identify (or fail to identify) the source in question. In addition, many expressions that belong entirely in the public domain, such as proverbs and idioms, may have a quotation-like flavour, or be quotations so often quoted that they have become detached from their sources. This is generally the case, for example, with *The pen is mightier than the sword*, a statement as proverbial as *A stitch in time saves nine*. It may be thought to have a Biblical or Shakespearian feel to it, but comes from the work of the 19c English politician, novelist, and poet Edward Bulwer-Lytton:

Beneath the rule of men entirely great

The pen is mightier than the sword.

(*Richelieu, or the Conspiracy*, a play in blank verse, 1838, 2. 2)

**Misquotation and non-quotation.** Until the 20c, quotation was largely from written and printed sources; in recent decades, however, quotations have increasingly been taken from live performance, especially speeches and interviews, the taking of excerpts being done in shorthand or, more recently still, with the help of tape recorders. As a result, 'quotees' are increasingly aware of the risks of being *misquoted* or may take refuge from the consequences of what they have said by claiming that they were misquoted. People in the public eye may seek to establish ground rules for interviews and statements to the media: these range from the more informal *Don't quote me (on this)* to the more formal *This*

*is off the record* and perhaps the requirement that a statement be *unattributed*, except perhaps to 'a usually reliable source'. Such requirements may or may not be respected; they may or may not even be meant to be respected, but intended instead to serve as an indirect way of gaining publicity.

**The 'quotation industry'.** Out of the tradition of quoting chapter and verse from the Bible, of quoting lines from great writers and orators, and of quoting the remarks of the famous, there has grown a minor industry that marshals and highlights the comments, aphorisms, quips, *bons mots*, and verbal *faux pas* of the celebrated, notorious, or fashionable. It includes: (1) The compiling and publishing of anthologies of observations by famous people, works promoted and purchased as a means through which public speaking may be enlivened ('quotes for all occasions') or readers can enjoy instances of language used to good effect. (2) Brief, topical features in newspapers and other periodicals with such names as *Quotes of the Week* or *They Said It*, listing significant, thought-provoking, egregious, or fatuous observations or remarks made by people currently in the limelight. The existence of such items not only requires journalists to find material to fill them but may prompt public or would-be public figures to formulate snappy one-liners that might be listed and attributed.

**Books of quotations.** Published collections of quotations take various forms. *The Oxford Dictionary of Quotations* was first published in 1941, with revised editions in 1953 and 1979; it lists people (such as Shakespeare and Shaw) and major authorless texts (such as the Bible) in alphabetic order, with the quotations under each heading numbered, identified, and keyed to an index listing words as topics, followed by brief contextualizing extracts, source name, page, and number. Within sections, the ordering is often but not always chronological: for example, Churchill is quoted as saying 'to jaw-jaw is better than to war-war' (in 1954, in Washington) a few lines above 'It is a good thing for an uneducated man to read books of quotations' (from *My Early Life*, 1930). *The Oxford Dictionary of Modern Quotations* (ed. Tony Augarde, 1991) has the same format. H. L. Mencken's *A New Dictionary of Quotations on Historical Principles from Ancient and Modern Sources* (Alfred A. Knopf, 1942) lists topics such as *advice* and *hell* alphabetically, with instances of what people have had to say about them. *Benham's Book of Quotations, Proverbs and Household Words* (Sir Gurney Benham, Harrap, 1948) has a number of themes: British and American authors, the Holy Bible, the Book of Common Prayer, Waifs and Strays (a miscellany), Greek Quotations,

Latin Quotations, Quotations from Modern Languages, and Proverbs. These are followed by an index of topics. Rhoda Thomas Tripp's *The International Thesaurus of Quotations* (Thomas Y. Crowell 1970, Allen & Unwin 1973, Penguin 1976) lists quotations under numbered topics such as 217 *Deafness* and 663 *Parenthood*, but-tressed by three indexes: of authors and sources; of key words; and of categories and cross-references. The *Bloomsbury Dictionary of Quotations* (1987) follows the Oxford format while a spin-off *Bloomsbury Thematic Dictionary of Quotations* (1988), created by computerized rearrangement, lists the same information in a form similar to Mencken's, but with a keyword index. Manuals of public speaking often contain lists of quotations whose use might serve to 'make your speech sparkle'.

See ALLUSION, BIBLE, BOOK OF COMMON PRAYER, CARTOON, CITATION, COPYRIGHT, DIA-LOG(UE), DIRECT AND INDIRECT SPEECH, ELLIPSIS, ENGLISH LITERATURE, EPIGRAPH, PLAGIARISM, POINT, PROSE, PUNCTUATION, QUOTATION MARKS, QUOTE UNQUOTE. [REFERENCE, SPEECH, WRITING].

T.MCA.

**QUOTATION MARKS** [1880s]. Also less formally **quote marks**, **quotes**. In BrE also called **inverted commas** and informally **speech marks**. Punctuation marks used to open and close quoted matter and direct speech, either *single* ( ' ') or *double quotation marks* ( " "). Double marks are traditionally associated with American printing practice (as in the Chicago style) and single marks with British practice (as in the Oxford and Cambridge styles), but there is much variation in practice; double marks are more often found in British texts before the 1950s, and are usual in handwriting. Quotation marks are a relatively recent invention and were not common before the 19c. Traditional texts of the Bible do not use them and do not suffer from the omission. Quotation marks can be untidy, especially in combination with other punctuation marks and when marks occur within marks. Some writers have therefore avoided them, notably James Joyce, who used dashes to introduce direct speech. Single quotation marks are tidier, less obtrusive, and less space-consuming than double marks, and for this reason are increasingly preferred in Britain and elsewhere in printing styles, especially in newspapers. The uses of quotation marks for direct speech, quoted material, and other purposes are discussed separately below; there is considerable overlap among the various categories.

**Direct speech.** Quotation marks indicate direct speech (that is, the words of a speaker quoted, more or less exactly) in such forms as BrE *He*

*said*, '*Come with me*' and AmE *He said*, "*Come with me*", and BrE '*Come with me*,*' he said* and AmE "*Come with me*,*" he said*. The marks are normally placed outside other punctuation in sentences of direct speech, such as a final period or full stop, or a comma when the direct speech is interrupted:

BrE 'Go away,' she said, 'and don't come back.'

AmE "Go away," she said, "and don't come back."

In BrE, they are often placed inside other punctuation marks when they refer to a part of the sentence that is contained within the other marks, as in *When you said 'Go away', I was shocked*. In AmE, however, the quotation marks are normally placed outside other punctuation in all circumstances, as in *When you said "Go away," I was shocked*. Quotation marks are not used in indirect (reported) speech, except occasionally when the enclosed words are regarded as equivalent to a quotation, as in:

BrE He then declared that 'I was incompetent'.

AmE He then declared that "I was incompetent."

In BrE, the quotation marks are placed within other punctuation because the words referred to are a quotation within the structure of the whole sentence.

Opening marks are given when direct speech is resumed after an interruption such as a reporting clause, as in the examples above. Normally, a comma or other punctuation mark separates the ending or resumption of direct speech from its interruption:

BrE 'Certainly not,' he exclaimed. 'I would sooner die.'

AmE "Certainly not," he exclaimed. "I would sooner die."

Different practices have been advocated from time to time (for example by the Fowler brothers in *The King's English* of 1906), but the practice described here now prevails. In extended dialogue, the words of each speaker are normally given on a new line when the speaker changes: see DIALOG(UE). Speakers are often not named after their first appearance in a run of speech, except to describe some special feature or manner of speaking (as in *he exclaimed* or *she said proudly*). The first two illustrations are from BrE:

'Where is Joseph?'

'I don't know.'

'Why isn't he here?'

'I don't know.'

'You drove out with him last night.'

'Yes.'

'You returned alone.'

'Yes.'

'You had a rendezvous with the rebels.'

'You're talking nonsense. Nonsense.'

'I could shoot you very easily. It would be a pleasure for me. You would have been resisting arrest.'

'I don't doubt it. You must have had plenty of practice.'

(Graham Greene, *The Comedians*, 1960)

In more extreme cases, where several exchanges are going on at once, it can be difficult to follow the threads of the dialogue:

'Jean is here, sir,' said Alice, trying to hide Jean's confidential file under her mauve cardigan with the blue buttons.

'Hello, my dear young lady.'

'No, don't ring off, I haven't finished with you yet!'

'I had a lot of trouble, Alice. They said it wouldn't be ready till morning.'

'Have my seat, it's not awfully comfortable.'

'They distinctly said four-thirty. It's always the same. The more time one gives them the more unreliable they are.'

(Len Deighton, *The Ipcress File*, 1962)

The following is from AmE:

"He's a dear old friend," she said to Spizer. "We've known each other since we were kids."

"Childhood sweethearts?" Spizer said generously.

"No, just dear friends."

"I did have a dinner date with Marty," Martha said. "If you had only called."

"Not a word more," Spizer said. "I'm taking both of you to dinner. How many real friends do we have in this world? And you don't know," he said to Stephan, "how lucky you are."

(Howard Fast, *The Immigrants*, 1977)

Quotation marks are often omitted in *free direct speech*, in which the words of the speaker, often representing inward thought rather than actual utterance, are continuous with the surrounding text. In extended dialogue they are sometimes replaced by dashes introducing each change of speaker, a practice more common in Continental printing. Joyce favoured light punctuation and disliked quotation marks, calling them *perverted commas*. He therefore insisted on dashes, but his publishers did not always acquiesce.

**Quotations.** When quotation marks are used, as their name suggests, to indicate quoted material (words taken from another source in writing or print) they generally appear without any introductory conventions of the kind usual in direct speech:

BrE We then plan to visit the 'eternal city'.

AmE We then plan to visit the "eternal city."

Some of the uses given above for direct speech are often equivalent to quotation, and the boundary between the two uses is often indistinct. The position of the quotation marks in both BrE and AmE in relation to other punctuation follows the principles outlined above.

**Headings and titles.** Quotation marks are also generally used to designate cited headings and titles, which are in effect equivalent to quotations. Printing practice varies in this regard, italics being widely used to denote titles of books,

journals, and newspapers, and quotation marks to denote titles of individual articles or sections within larger works, as in: See Chapter 3, 'The Middle Ages', and J. Smith, 'Some Observations on Magic and Ritual in the Middle Ages', in *Journal of the Historical Society* 3 (1967), 6-16. In many scientific works, however, titles of papers are printed without quotation marks.

**Highlighting.** Quotation marks may also serve to alert the reader to a special or unusual word or use of a word, such as a foreign expression (as in *You need a lot of 'savoir faire'*), or to indicate a word or use that is not the writer's own (as in *Several 'groupies' followed the band on their tour*). The latter usage is often formally referred to as *scare quotes*, because the marks frequently serve as a warning to the reader that there is something unusual or dubious (in the opinion of the writer) about the quoted word or phrase. In conversation, speakers may indicate their use of such scare quotes by making finger movements that suggest quotation marks: see QUOTE UNQUOTE. This use is close to quotation, the implication being something like *Several groupies, as they are often called, followed the band on their tour*. The following extract from Howard Fast's *The Immigrants* (1977) further illustrates this usage, along with other features of AmE practice:

He was a self-styled "pioneer," which meant that with nine other young men, he was preparing to go to Palestine and become part of the tiny community that a handful of Jews had founded there. (In BrE, the punctuation would normally be *He was a self-styled 'pioneer', which meant that . . .*)

**Special conventions.** (1) When quoted material or direct speech extends continuously over several paragraphs, new paragraphs begin with opening quotation marks, and closing marks are given only at the end of the last paragraph. (2) When quoted material occurs within other quoted material, BrE and AmE adopt opposite conventions. The normal practice in BrE is to use single quotation marks in the first (enclosing) instance and double marks in the second (enclosed) instance: *He asked, 'Have you seen "The Laughing Cavalier"?'* In AmE, double marks are commonly used in the first instance and single in the second instance: *He asked, "Have you seen 'The Laughing Cavalier'?"* In both cases, the question mark comes after the marks that relate to the quoted names, and before the mark or marks that close the sentence of speech. See COMMA, CONVERSATION, DASH, DIALOG(UE), DIRECT AND INDIRECT SPEECH, FOREIGNISM, ITALIC, MARK, QUOTATION, QUOTE UNQUOTE. [SPEECH, STYLE, USAGE, WRITING]. R.E.A.

**QUOTES, QUOTE MARKS.** See QUOTATION MARKS.

**QUOTE UNQUOTE.** As a convention of dictation, a speaker may warn that a quotation is coming by saying *quote* and indicate that it has been completed by saying *unquote*. The usage has been carried over into conversation and public speaking: 'He expressed the personal opinion that the picture was quote great for America unquote' (Peter Ustinov, *Loser*, 1961). Here, the words are kept apart, but in a further development they come together as a phrase, *quote unquote*, used to indicate that what has just been said would be in quotation marks if written: 'If you're a liberal, quote unquote, they're suspicious of you' (*The Random House Dictionary*, 1987). The practice, in either form, distances speakers from words that they wish to emphasize are not their own. It is not unusual, in such cases, for speakers to raise their hands and twitch two curled fingers to represent quotation marks, with or without the spoken disclaimer. See QUOTATION, QUOTATION MARKS (HIGHLIGHTING). [SPEECH, WRITING]. T.MCA.

**QWERTY** [20c: a letter-name, from the first six letters in the second of the four rows (*qwertyuiop*) of keys on most typewriters. Compare *alphabet*, from the first two letters of Greek writing]. The standard keyboard configuration for typewriters and computers. Originally called the *Universal* system, it was one of many competing

keyboard arrangements at the end of the 19c. It seems to have been devised by Christopher Latham Sholes in the late 1860s, and appeared on the first commercially sold typewriter, the Remington of 1873. Its chief competitor, the *Ideal* system, had the top row *dhiatensor*. The advantage of *qwerty* has not been speed (it tends to overwork the left hand with the frequently used letters *esatd*) but slowness; it forced operators of early machines to reduce speed so as to avoid jamming them. More ergonomically efficient mechanical systems exist, most notably the *dvorak* keyboard, which was developed by August Dvorak of the U. of Washington in the 1930s and was a serious rival to *qwerty* until rejected by the US government in 1956. It can give the skilled operator an increase of speed of up to 30%. A general replacement of *qwerty* would be expensive, yet computer keyboards can be easily restructured because there is no mechanical relationship between keystroke and letter. Though keyboards generally retain one key for one letter, more efficient keyboards such as are used for court reporting have a 'chord' system in which a small number of keys can be combined to produce a wide range of letters and stenographic marks. *Qwerty* is closely associated with English. French has an *azerty* system prompting the Gallic comment that only Anglo-Saxons would have their *Q (cul) dans le coin* (arse/ass in the corner). See KEYBOARD. [TECHNOLOGY]. W.W.B.

# R

**R, r** [Called 'ar']. The 18th letter of the Roman alphabet as used for English. It originated in Phoenician and was adopted and adapted by the Greeks as *rho* (*P*). When the Romans adopted it, they adapted it further to distinguish *R* from *P*.

**Sound values.** In English, the letter *r* is pronounced in different ways in different accents, but normally has only one sound value in the speech of any individual. As well as occurring before and after vowels (*rear*, *roar*), *r* is also heard after initial consonants as in *brown*, *crown*, *frown*, *ground*, *proud*, *shroud*, *trout*, *thrown*, and after *s*+consonant as in *spray*, *stray*, *scream*. After a vowel, *r* may precede other consonants as in *barb*, *bard*, *dwarf*, *morgue*, *arc*, *ark*, *arch*, *barque*, *hurl*, *harm*, *barn*, *farce*, *hears*, *furs*, *burst*, *harsh*, *hurt*, *earth*, *serve*, *Xerxes*, *furze*. Final *r* cannot immediately follow a consonant in English as it does in Welsh (for example, *theatr*), but to form a syllable requires a vowel letter either after it (*acre*, BrE *theatre*) or before it (*later*, AmE *theater*).

**Rhotic and non-rhotic.** A major variation with implications for spelling concerns not how, but when, *r* is pronounced. The accents of English fall into two groups: *rhotic* or *r-sounding* accents (in which *r* is pronounced in all positions in *red*, *credit*, and *worker*) and *non-rhotic* or *r-less* accents in which *r* is pronounced only before a vowel (that is, in *rice* and *price*, but not in either position in *worker*). The presence or absence of /r/ in the pronunciation of words like *worker* has an effect on the pronunciation of preceding vowels. Rhotic speakers generally distinguish certain words which are homophones for non-rhotic speakers, such as *farther*/father, *iron*/ion, *tuner*/tuna. They do not, however, always distinguish words in the same way: for example, Scots and non-Southern Americans distinguish

*sauce*/source (homophones in RP) with different vowel sounds and different realizations of /r/. In some non-rhotic accents, final *r* is pronounced when the following word begins with a vowel ('linking *r*') and an unwritten /r/ ('intrusive *r*') is commonly pronounced in contexts like *Africa*/*r* and *Asia*, *law*/*r* and *order*, and *draw*/*r*/ing. See RHOTIC AND NON-RHOTIC, R-SOUNDS.

**Rhotacizing and de-rhotacizing.** Non-rhotic speakers often cannot tell from pronunciation when to put *r* in a word and when to leave it out, and are prone to misspellings such as *rhotacizing* (inserting an *r*) in \**surport* for *support*, and *de-rhotacizing* (removing an *r*) in \**supprise* for *surprise*. Some written forms reflect this ambivalence. *Marm* as a clipped form of *madam* reflects non-rhotic pronunciation and rhymes with *charm*, whereas the *r-less* spelling *ma'am* accords with both types of accent and can rhyme with either *calm* or *jam* (however pronounced). Paradoxically, the AmE vulgarism *He bust his ass* doubly de-rhotacizes *He burst his arse*, but is common in rhotic AmE speech. Poets on both sides of the Atlantic have sometimes exploited the non-rhotic pronunciation for the sake of rhyme, as in *crosses*/*horses* (Keats) and *quarter*/*water* (Longfellow). The insertion of a vowel after *r* in *alarum*, *chirrup*, *sirrah* (for *alarm*, *chirp*, *sir*) preserves (and emphasizes) the *r*-sound in non-rhotic speech.

**Double R.** (1) In word-final position, in some monosyllables when preceded by a single vowel: *err*, *purr*, *whirr* (also *whir*) (but contrast *blur*, *cur*, *her*, *slur*, *spur*, *stir* and note *bur*/*burr*). (2) Medially, in disyllables ending in -y (*carry*, *berry*, *lorry*, *hurry*) and -ow (*narrow*, *borrow*, *furrow*). (3) Some medial doubling derives from Latin: *error*, *horror*, *terror* and the root *terra* (Earth, land), as in *terrestrial*, *Mediterranean*. Double *r* can also be a consequence of the assimilation of

r	℞

certain Latin prefixes to roots beginning with *r*: *ad-* in *arrive*, *con-* in *correct*, *in-* in *irremediate* and *irrigate*, *sub-* in *surreptitious*. (4) When suffixes beginning with a vowel are attached to stressed syllables ending in *r*: *blurred*, *averred* (contrast *severed*), *deferring* (contrast *suffering*), *referral*, *referrable* (optionally also *referable*, often with stress on the initial syllable: compare *reference*). (5) The discrepancy of *rr* in *embar-rass*, but *r* in *harass* reflects French *embarrasser*, *harasser*. The *OED* attests variation in both words in English. (6) In some words, although doubling is obligatory in the source language, it is optional in English borrowings: English *garrotte/garotte*, *guerrilla/guerilla*, Spanish *garrote, guerrilla*.

**Syllabic R.** Difficulties in spelling arise from complex, unpredictable relationships between *r* and preceding unstressed vowel sounds and letters. Like the phonetically similar consonants *l*, *m*, *n*, the letter *r* functions in rhotic accents simultaneously as a spoken vowel and as a consonant (though less obviously in non-rhotic speech). The *r* is then syllabic, as in *acre*: see SYLLABIC CONSONANT. In non-rhotic accents, the *r*-sound has disappeared in these contexts, leaving schwa, with the result that pairs like *beater/beta*, *pucker/pukka*, *rotor/rota*, *peninsular/peninsula* are homophones in RP and similar accents. This syllabic *r* or the schwa which has replaced it may combine with a preceding long vowel or diphthong to form a single syllable, with the result that such words as *lair*, *layer* are homophones and rhyme with *mayor/mare* and *prayer*.

In *acre* (with 'magic' *e*), and BrE *centre*, AmE *center*, the schwa in non-rhotic pronunciation is represented by the *r* (the final *e* being silent). The effect is striking in inflected forms such as BrE *centred* (compare *entered*). Syllabic *r* creates uncertainty in spelling, because the schwa sound may be spelt with any vowel letter or several digraphs: *lumbar*, *cancer*, *nadir*, *rector*, *murmur*, *martyr*, *neighbour*. Pronunciation (especially in RP and related accents) is no guide; when in doubt, the less confident writer often settles on an *-er* form: \**burgler* for *burglar*, \**docter* for *doctor*.

The problem of spelling syllabic *r* (or final schwa) is compounded by numerous pairs of homophones: *altar/alter*, *auger/augur*, *calendar/calender*, *caster/castor*, *censer/censor*, *dollar/dolour*, *filter/philtre*, *fisher/fissure*, *frier/frier*, *hangar/hanger*, *lumbar/lumber*, *manner/manor*, *meddler/medlar*, *meter/metre*, *miner/minor*, *prier/prior*, *raiser/razor*, *rigger/rigour*, *roomer/rumour*, *sailer/sailor*, *sucker/succour*, *taper/tapir*, *tenner/tenor*. Homophone pairs in which the schwa + *r* sequence is medial pose

similar problems: *humerus/humorous*, *literal/littoral*, *savory/savoury*, *stationary/stationery*, *summary/summery*. Further problems for learners and weak spellers arise with words which have similar phonological but different orthographic patterns: *ministry/monastery*, *mystery/history*, *disparate/desperate*, *deliberate/elaborate*, *disastrous/boisterous*, *leprous/obstreperous*, *wintry/summery*.

**Simple vowels before R.** (1) The values of vowel letters before *r* are often modified. In monosyllables, if *a* and *o* precede *r*, they are lengthened: *star*, *hard*, *harm*, *barn*, *harsh*, *cart*, *carve*; *ford*, *turn*. However, *e*, *i*, *u*, *y* typically merge their values in RP to a lengthened schwa: *her*, *sir*, *cur*, *herd*, *turf*, *urge*, *irk*, *bird*, *curd*, *fern*, *turn*, *hurt*, *serve*, *myrrh*. The vowel digraphs *ea* and *ou* when followed by *r* may also have this value: *earn*, *journey*. These alternatives generate pairs of homophones: *berth/birth*, BrE *curb/kerb*, *earn/turn*, *fir/fur*, *heard/herd*, *pearl/purl*, *serf/surf*, *serge/surge*, *tern/turn*. Such long pronunciations also occur in the stressed final syllables of disyllables: *impart*, *suborn*, *concern*, *confer*, *concur*. However, when a *w*-sound precedes these vowel + *r* patterns, the values of *a* and *o* are commonly altered to those of *o* and *o* respectively, as in *dwarf* (compare *orphan*), *word* (compare *curd*), but not after silent *w* (*whore*, *sword*). (2) Especially in the accents of England, if an unstressed vowel between two *rs* is elided, single *r* may be heard as in *February* ('Febry', 'February'), *library* ('libry'), *literary* ('litry'), *temporary* ('tempry').

**Long vowels before R.** The greatest complexity arises after long vowels or diphthongs, as a result both of the rhotic/non-rhotic split and of the effect of *r* on preceding vowels. When final silent *e* follows *r*, preceding vowels are typically long, but often modified: compare *hare/hate*, *here/eve*, *hire/hive*, *more/mope*, *lure/lute*. Different spellings for these vowels produce inconsistency in many common words: (1) *Pare* compared with *pair*, *pear* and contrasted with *bar* and anomalous *are*. (2) *Here* compared with *hear* and contrasted with *were*, *there*, *where* and the two pronunciations of *tear*. (3) *Fire* contrasted with *fiery*, *wiry*. (4) *Pure* compared with the varying value of *-ure* in *sure*. (5) *Sore*, *morning* are homophones of *soar*, *mourning* only in some accents. (6) The *-our* sequence is confused. The forms *-our* and *-ower*, as in *flour/flower*, may represent the standard value, but *course*, *court*, *four* have the vowel of *or* in RP; there is uncertainty about rarer words such as *dour*, *gourd*; and the common word *your* may be a homophone of *yore* or of *ewer*. In many non-rhotic accents, *sore/soar/saw* (but not *sour*, *sower*) are homophones. Similar variety prevails with the vowels

in *moor/more/maw*. The oldest forms of RP, and many other accents, distinguish all three; others merge the first or last two; while recent RP and related accents merge all three.

**Intervocalic R.** In polysyllables, *r* between vowels may follow a short or long vowel: (1) Short *a*, *e*, *i*, *o*, *y* (not *u*) before *r* in stressed syllables: *arid*, *character*, *parachute*, *erudite*, *miracle*, *spirit*, *coracle*, *origin*, *courier*, *syrup*, *pyramid*. (2) Long vowels in stressed syllables: *area*, *parent*, *vary*, *hero*, *period*, *pirate*, *virus*, *story*, *floral*, *during*, *fury*, *spurious*. (3) The vowel before *rr* in the stressed syllables of polysyllables normally has the standard short value: *carry*, *barrier*, *error*, *ferry*, *mirror*, *stirrup*, *sorrow*, *hurry*. However, values differ between *warring/warrior*, the noun *furrier* and the comparative of the adjective *furry*, and between the verb *to tarry* and the adjective *tarry* from *tar*.

**Distinctive combinations.** (1) Initial *r* follows silent *w* in some words of Old English origin: *wrap*, *wraith*, *wreck*, *wriggle*, *write*, *wrong*, *wrought*, *wrung*. (2) The digraph *rh* occurs word-initially in Greek-derived words, representing classical Greek *r* with rough breathing ('hr'): *rhapsody*, *rhetoric*, *rhinoceros*, *rhododendron*, *rhubarb*, *rhythm*. In word-medial and word-final positions, the combination is *rrh*, following the classical Greek practice: *antirrhinum*, *catarrhine*, *diarrhoea/diarrhea*, *haemorrhage/hemorrhage*, *platyrrhine*, *catarrh*, *myrrh*. (3) *Rh* also occurs initially in Welsh names: *Rhodri* (man's first name), *Rhondda* (place-name). (4) The combination *shr* and *sr* occur in IndE in Sanskrit loanwords such as the titles *Sri/Shri/Shree* and *Srimati/Shrimati/Shreemati*, as in *Sri* and *Srimati Gupta* (Mr and Mrs Gupta). (5) Initial *vr* occurs in *vroom* (the noise of a powerful engine revving).

**Historical points.** (1) There has been occasional variation between *r* and other alveolar consonants: *glamour* derives from *grammar*; *colonel* was formerly *coronel* (see L); the *rr* in *porridge* and single *r* in *porage* were originally the *tt* in *pottage*: compare SCOUSE. (2) The *r*-sound has disappeared in *speak* (compare German *sprechen*), in *palsy* (ultimately from Greek-derived *paralysis*), and in the colloquial forms *burst* for *burst*, *cussed* for *cursed*. (3) Sometimes, an *r*-sound has switched position with a following vowel, as in *burn/brand* and *work/wrought* (dating from Old English), *brid* (in Middle English) now *bird*; *r* occurring before the vowel in *three* but after it in *third*, *thirty*: see METATHESIS.

**American and British differences.** Variation in the use of *r* occurs between most BrE forms ending in consonant + *re* and their AmE equivalents, which are written consonant + *er*: BrE *calibre/*

AmE *caliber*, *centre/center*, *fibre/fiber*, *goitre/goiter*, *litre/liter*, *manoeuvre/maneuver*, *meagre/meager*, *metre/meter*, *ochre/ocher*, *reconnoître/reconnoiter*, *sabre/saber*, *saltpetre/saltpetter*, *sceptre/scepter*, *sombre/somber*, *spectre/specter*, *theatre/theater*. However, no such difference arises after a long vowel + *c* or *g*: both varieties have the same spellings for *acre*, *lucre*, *mediocre*, and *ogre*. See ALPHABET, BURR, INTRUSIVE R, LETTER<sup>1</sup>, LINKING R, RHOTACISM, RHOTIC AND NON-RHOTIC, R-SOUNDS, SPELLING. [WRITING].

C. U., T.MCA., E.W.

**RACISM** [1930s: from French *racisme*, from *race*, from Italian *razza*: of uncertain origin. The more recent form *racism* (favoured in AmE) contrasts with the older form *racialism* (1900s: formerly favoured in BrE); it appears to have become the standard international term: compare *sexism*, *ageism*]. (1) The theory, belief, doctrine, or prejudice which asserts that distinctive human characteristics and abilities, including language, are determined by race (especially as established through such broad physiological categories as *Australoid*, *Caucasoid*, *Mongoloid*, *Negroid*). Although often presented as scientific, especially in the 19c in the wake of Darwinism, such a theory, etc., serves to buttress the visceral assumption that one's own race is superior to all others. It may follow from this that one's own race therefore has, among other things, the right to control (and, when deemed necessary, enslave and even exterminate) people of races that are taken to be inferior or undesirable. A racist viewpoint figured in the arguments used to justify European imperial expansion and what Kipling called 'the white man's burden'; it was taken to the extreme by the Nazis during the Second World War (especially against Gypsies, Jews, and Slavs), and continues to underpin the concept of *white supremacy* among such groups as the Ku Klux Klan in the US. (2) Hatred and intolerance of, and discrimination against, people of another racial group or groups: 'Racism is an *ism* to which everyone in the world today is exposed' (Ruth Benedict, *Race: Science and Politics*, 1940); 'In the British sailors' reactions to the slaves . . . , the very existence of racism is as well documented as the difference in language' (J. L. Dillard, *Black English*, 1972).

Attitudes to and assumptions about race and language have been significant elements in many parts of the world where English has been used and distinctive varieties have developed: for example, in the UK, the US, parts of Africa, parts of Asia, and the Caribbean. For further discussions of racism and language, and in particular the English language, see ABORIGINAL ENGLISH, ABORIGINES, ACHEBE, AFRICAN LITERATURE IN ENGLISH, ANGLO-INDIAN, ARYAN,

**RADIATION** [16c: from Latin *radiatio/radiationis* spreading out like rays of light]. In linguistics, a process of semantic change in which there is a multiplication in the senses of a word, phrase, or lexeme, whether within one language or across a number of languages. For example, in classical Greek, *pápyros* originally referred to a reed common in Egypt, used among other things for making into a writing surface. The word then came to refer to the writing material produced, and this is the dominant sense of the Latinate English word *papyrus*. In addition, *pápyros* has been adapted into other languages (into English as *paper*) without the original sense 'reed' and referring to writing material made from any source, whether reeds, cotton, linen, or wood pulp. In addition, the meaning of *paper* has radiated to include a written document or documents (from the 14c), a newspaper, a written or printed essay, a bill of exchange, and money (from the 17c), and a set of questions in an examination (from the 19c). See POLYSEMY, SEMANTIC CHANGE. As entries that themselves exemplify radiation, see READER, ROMANCE, THESIS. [HISTORY, LANGUAGE]. T.M.CA.

**RADIO.** See BROADCASTING.

**RANDOM HOUSE**, short form *RH*. A US publishing firm based in New York City, with overseas divisions in the UK (Chatto & Windus, Century Hutchinson, The Bodley Head, Jonathan Cape), Australia, and New Zealand. The company was founded in 1927 by Bennett Cerf (president, 1927-66) and Donald Klopfer, from the earnings of their profitable 'Modern Library', a series of republished classics from Homer forwards. The firm's name comes from the idea that they would publish 'at random' whatever books struck them as worthwhile. Initially, RH printed US editions of literary properties owned by such British presses as Nonesuch, Golden Cockerel, Spiral, Fountain, and Shakespeare Head; by 1929, it had become the leading distributor of British books in the US. Following the economic collapse of 1930, RH established a trade division and, in 1934,

successfully brought suit to gain the right to publish a US edition of the previously banned *Ulysses* by James Joyce. After World War II, the company established a reference and textbook section to undertake the publication of *The American College Dictionary*, with Clarence Barnhart as general editor and Jess Stein as managing editor. For its foundation, RH secured the rights to use *The Century Dictionary*, *The New Century Dictionary*, and *The Dictionary of American English*; the ACD drew on the expertise of such US linguists as Kemp Malone (etymology), W. Cabell Greet (pronunciation), Leonard Bloomfield, Charles C. Fries (usage levels and dialects), and Allen Walker Read (BrE and AmE usage). Since the popular and financial success of the ACD, RH has continued to produce increasingly comprehensive English dictionaries and other wordbooks; in 1986, it published in computer form its *Dictionary* and *Thesaurus* through Reference Software, Inc. After merging with Alfred A. Knopf in 1960, RH was purchased by RCA (1966) and later by S. I. Newhouse's Advance Publications (1980). In 1988, RH acquired the Crown Publishing Group and sold its college and school divisions to McGraw-Hill. See AMERICAN PUBLISHING, BRITISH PUBLISHING, CARTOON, POLITICALLY CORRECT, RANDOM HOUSE DICTIONARY. [AMERICAS, MEDIA].

R.W.B.

**RANDOM HOUSE DICTIONARY**, full form *Random House Dictionary of the English Language*. Short form *RHD*. An American unabridged dictionary. Recognizing an opportunity in the national outcry against *Webster's Third New International Dictionary* (Merriam, 1961), Random House commissioned an expansion of its *American College Dictionary* (1947), with Jess Stein as editor-in-chief and Laurence Urdang as managing editor. The 1st edition appeared in 1966 and achieved immediate popularity in the 'large' dictionary market previously dominated by Merriam. Many features of the ACD were kept, such as biographical and geographical names in the main alphabet, senses ordered by contemporary frequency rather than historical development, and etymologies at the ends of entries. About two-thirds the length of *Webster's Third*, the *RHD* was promoted as a home reference work for non-specialists who could have an up-to-date large dictionary at a price below that of *Webster's Third*. Indirectly alluding to the defining practices of its major competitor, Stein declared that 'communication with the user' was 'a central concern' and wrote that 'we have tried to avoid ingeniously concise wordings that are meaningful only to the writer'.

To increase its appeal, the *RHD* included a 64-page atlas in colour and concise bilingual

dictionaries of French, Spanish, Italian, and German. The first dictionary maker to employ computer-based editing and typesetting, RH produced a 'college edition' (1968) with Laurence Urdang as editor-in-chief and Stuart Berg Flexner as managing editor. Through access to computerized text archives, the *RHD* could claim to be 'the product of its editors' qualitative analysis and synthesis of more information on the words of English than has ever been collected for any dictionary of similar size'. In 1987, a 2nd edition of *RHD* appeared with Stuart Berg Flexner as editor-in-chief and Leonore Crary Hauck as managing editor. This edition claimed to add c.50,000 entries and 75,000 definitions; more encyclopedic material was included and most entries included dates indicating the time of first appearance of a word in English. In the usage note for *ain't*, the 2nd edition shows greater kinship with *Webster's Third* than with the *American Heritage Dictionary*: 'As a substitute for *am not*, *is not*, and *are not* in declarative sentences, *AIN'T* is more common in uneducated speech than in educated, but it occurs with some frequency in the informal speech of the educated, especially in the southern and south-central states.' See DICTIONARY, RANDOM HOUSE, REPELLING, UNABRIDGED, WEBSTER'S NEW INTERNATIONAL DICTIONARY. [AMERICAS, REFERENCE]. R.W.B.

**RAP** [1960s: US black slang, an extension of the turn-of-the-century US slang term *rap* to talk, chat freely]. An informal term associated with inner-city neighbourhoods and popular radio and television, especially in the US: (1) To talk rapidly, rhythmically, vividly, and boastfully, so as to compete for prestige among one's peers and impress one's listeners. The verse of the American boxer Muhammad Ali (formerly Cassius Clay) is an early form of rapping: 'Only last week / Ah murdered a rock / Injured a stone / Hospitalized a brick / Ah'm so mean / Ah made medicine sick'. (2) The ritualized repartee of (especially young male) blacks, associated with the *hip* or *cool* street talk also known as *sounding*, *capping*, and *playing the dozens*, which includes assertions, taunts, and insults. Currently, rapping is closely associated with *hip hop*, a flamboyant youth style originating in the streets of the South Bronx in New York City in the early 1970s and including graffiti art, break-dancing, and Afrocentric ways of dressing. (3) To perform a rhyming, usually improvised monologue against a background of music with a strong beat: in a street, the music is usually from a portable radio/cassette-player (a *ghetto-blaster* or *boom box*); in a broadcasting studio, it is from a background of recorded music or is reduced to a heavy bass beat produced by a drum machine

or synthesizer. (4) A song or poem performed in this way, the performer being a *rapper* and the overall effect being *rap music*. On television, the background may be a series of fragments of music or video scenes. Jon Pareles observes:

Ask most pundits about rap music, and they'll describe it as rude, jumbled noise. A few others may consider it million-selling post-modernism in audible form—songs as mix-and-match collages that treat the history of recorded music as a scrap heap of usable rubble and, often, trade narrative and logic for a patchwork of bragging, storytelling, speechifying and free-form rhymes. . . . It had to happen, sooner or later, that popular music would reflect the ubiquity of television—and it's true to American musical history that a black subculture picked up the new rhythms first. . . . To say that rap reflects television doesn't discount its deep roots in black culture; the networks didn't invent rap, ghetto disk jockeys did. Rap comes out of the storytelling and braggadocio of the blues, the cadences of gospel preachers and comedians, the percussive improvisations of jazz drummers and tap dancers. It also looks to Jamaican 'toasting' (improvising rhymes over records), to troubadour traditions of social comment and historical remembrance, and to a game called 'the dozens,' a ritual exchange of cleverly phrased insults. ('The Etymology of Rap Music', *The New York Times*, Jan. 1990).

Pareles considers that rap's chopped-up style reflects the impact of television, in which programmes are accompanied and interrupted by commercials, previews, snippets of news, and the like, as well as by using a remote control to 'zap' from channel to channel. He quotes as an example of this fragmentation the following lines from 'Bring the Noise', by Carlton 'Chuck D' Ridenhour of the group Public Enemy:

Bass! How low can you go?  
Death row. What a brother knows.  
Once again, back is the incredible the rhyme animal  
the incredible D, Public Enemy No. 1  
"Five-O," said, "Freeze!" and I got numb  
Can I tell 'em that I never really had a gun?  
But it's the wax that Terminator X spun  
Now they got me in a cell 'cause my records,  
they sell!  
[a *brother* a fellow black man, *Five-O* a reference to the TV cop show *Hawaii Five-O*, the wax an LP record, spun played, *Terminator X* a disc jockey].

Word-play is prevalent not only in rap verifying but also in the names that performers give themselves: for example, alliterative forms that often focus on the consonants of *dee-jay* (short for 'disc jockey'), as in *Chuck D*, *Jazzy Jeff*, *LL Cool J*, and *Jam Master Jay*; coolness and hipness, as in *Ice T*, *Ice Cube*, *Kid Frost*, *Easy E*, and *Mellow Man Ace*; hyped-up menace, as in *Red Alert* and *Terminator X*; and an African connection, as in *Afrika Bambaataa* and *Queen Latifah*. Compare BLARNEY, DUB, JIVE, PATTERN, REGGAE. See BLACK ENGLISH VERNACULAR. [AMERICAS, MEDIA, STYLE]. T.MCA.

**RASTA TALK** [1950s: a clipping of *Rastafari(an)*, from the Amharic title *Ras Tafari*, by which Prince Haile Selassie was known until 1930, when he became Emperor of Ethiopia; and *talk*. Used with or without initial capitals: see TALK]. Also **Rasta**, **Dread Talk**, **Iyarc**, **I-lect**, **the language/speech of Rasta(fari)**. The usage of the Rastafarian community in the Caribbean, UK, US, and elsewhere, derived from Jamaican Creole, with elements from the Old Testament of the Bible and the black consciousness movement. *Rastafarianism* (also *Rastafari*, *Rastafaria*; informal *Rasta*, *Ras*) originated among the poor in Jamaica in the 1930s. Haile Selassie is regarded as the incarnation of God (*Jah*), through whom, despite his death in 1975, the faithful of the black diaspora will be taken out of *Babylon* (the oppressive white power system) to the promised land of Ethiopia. Since the 1960s, young middle-class people have also been included among their number.

Rastas reject both standard English and Creole; their alternative usage emerged in the 1940s as an argot among alienated young men, became a part of Jamaican youth culture, and has been significant in the growth and spread of *dub* poetry and *reggae* music. A major syntactic difference from Creole is the use of the stressed English pronoun *I* (often repeated for emphasis and solidarity as *I and I*) to replace Creole *mi*, which is used for both subject and object. *Mi* is seen as a mark of black subservience that makes people objects rather than subjects. The form *I and I* may also stand for *we* and for the movement itself:

I and I have fi check hard . . . It change I . . . now I and I [eat] jus' patty, hardo bread, from Yard (*New York Magazine*, 4 Nov. 1973). [I was greatly affected . . . It changed me . . . Now I only eat patties, hard-dough bread, from Jamaica (a reference to Rasta vegetarianism).]

At the same time I fully know why leaders of societies have taken such a low view of I n I reality. They hold Rasta as dangerous to their societies (Jah Bones, 'Rastafari: A Cultural Awakening', appendix to E. E. Cashmore, *The Rastafarians*, Minority Rights Group Report 64, 1984).

Because of its significance as a mark of self-respect and solidarity, *I* often replaces syllables in mainstream words: *I-lect* Rasta dialect, *Iyarc* (by analogy with *Amharic*) Rasta language, *I-cient* ancient, *I-man* amen, *I-nointed* anointed, *I-quality* equality, *I-sanna* hosanna, *I-thiopia* Ethiopia. Other items of vocabulary are: *control* to keep, take, look after, *dreadlocks* hair worn long in rope-like coils (to signify membership of the group), *dub* a piece of reggae music, rhythmic beat, *queen* a girlfriend, *Rastaman* a male, adult Rastafarian, *reason hard* to argue, *sufferer* a ghetto-dweller, *trod* to walk away, leave, *weed*

*of wisdom* and *chalice* (by analogy with Holy Communion) marijuana, ganja (regarded as a sacred herb). Rasta word-play includes the etymology *Jah mek ya* (God made here) for *Jamaica*, and the adaptations *blindjaret* for *cigarette* (pronounced 'see-garet') and *higherstand* in preference to *understand*. See Velma Pollard, 'Dread Talk—the Speech of the Rastafari in Jamaica' (*Caribbean Quarterly* 26: 4, 1980) and 'Innovation in Jamaican Creole: The Speech of Rastafari' (in Görlach & Holm (eds.), *Focus on the Caribbean*, John Benjamins, 1986). See AFRICAN, BLACK, DIASPORA, DUB, JAMAICAN CREOLE, RACISM, REGGAE. [AFRICA, AMERICAS, VARIETY]. T.MCA.

**RATIONALIZATION** [19c]. (1) The action or result of making something rational, intelligible, more efficient, etc. The running of a factory can be rationalized by reducing waste and over-manning. (2) The action or result of ascribing behaviour to causes that seem sensible and respectable, but are not the real reasons for the behaviour. Such reasons may be less sensible than they seem and even disreputable, and in the process of rationalization awkward facts and views may be ignored, concealed, or glossed over. See ARGUMENT, LOGIC. [LANGUAGE].T.MCA.

**READ, Allen Walker** [b.1906]. American lexicographer, born in Winnebago, Minnesota, and educated at the U. of Northern Iowa and the U. of Iowa. While teaching at the U. of Missouri, awarded a Rhodes Scholarship (1928–31) to Oxford. He was recruited shortly afterwards by William A. Craigie to assist in compiling the *Dictionary of American English* at the U. of Chicago, and served as a researcher and assistant editor (1932–8). In England on a Guggenheim fellowship (1938), he began work on a *Dictionary of Briticisms*, a project which is still under way. During World War II, he compiled a dictionary of military terms and in 1943 joined other US linguists in preparing language descriptions and materials, including dictionaries, to assist Americans abroad. These scholars, previously isolated across the country, set the tone for post-war linguistic inquiry; Read recalls the atmosphere at the Language Section of the War Department as 'crackling with innovation and fresh approaches'. In 1945, he joined Columbia U., where he became Professor Emeritus on his retirement in 1974. His monograph *Lexical Evidence from Folk Epigraphy in Western North America* (Paris, 1935) was a collection and interpretation of mostly obscene inscriptions in public conveniences; it was republished in less prudish times as *Classic American Graffiti* (1977). Best known to the public for his definitive investigations of the origins of *Dixie*, *O.K.*,

*Podunk*, and *Rebel Yell*, Read has traced the origins of hundreds of words and phrases; his findings have appeared in most histories of AmE in the past half-century. He has also contributed to place-name studies. Active in many learned societies, he has been president of the Dictionary Society of North America and the Linguistic Association of Canada and the United States. See index. [AMERICAS, BIOGRAPHY, LANGUAGE, REFERENCE].

R.W.B.

**READER** [From Old English *rædere* one who reads or advises]. (1) Someone who reads regularly, who is reading at a particular time, or who reads aloud to an audience. (2) In library science, someone who uses a library, whether or not for reading. (3) In full *publisher's reader*. Someone employed to assess material submitted for publication. (4) More commonly *proof-reader*. Someone who reads the proofs of material about to be published. (5) Someone authorized to read Bible texts, lessons, etc., in church services. (6) Especially in Britain, the rank of a member of the teaching staff of a university between senior lecturer and full professor: *a Reader in English*. (7) A book intended to help someone learn to read: *an English reader*, *a first school reader*. Such readers may be written in restricted syntax and vocabulary (such as Ogden's Basic English or a set of graded structures and word lists as developed in the 1930s by Michael West), and are therefore referred to as *simplified readers*, *structural readers*, and *graded readers*. Some belong in series: for example, classic novels of English rewritten in a condensed and simplified form. (8) A book of writings on a particular theme (*a poetry reader*) or by a particular author (*a Kipling reader*). (9) A device that enlarges an image from a microform storage system so that it can be read on a screen. (10) In full *optical character reader*. Short form *OCR*. A device that reads data and programs, or information from an external medium, into the storage system of a computer. (11) The term *readership* can refer to the number of people regularly reading any publication, the status or profession of a professional reader, or the post of reader at a British university. See ABRIDG[E]MENT, BOOK, GEISEL, LITERACY, READING, WEST. [EDUCATION, WRITING].

**READER'S DIGEST**. A monthly magazine founded in the US in 1922 by De Witt Wallace and Lila Acheson; currently one of the most widely read periodicals in the world. At first a digest of previously published articles on current affairs and human interest, it is now a general-interest magazine that also commissions its own material. Although primarily an English-language publication (including editions in

Braille, large type, and cassette form), the *Digest* appears worldwide in 15 languages and 39 editions and has a circulation of some 30m. For many years, the English-language *Digest* has had two language-related features: a game at first called *It Pays to Increase Your Word Power*, now *It Pays to Enrich Your Word Power*, in which 20 words are listed with four definitions each, only one of which is correct; a section called *Towards More Picturesque Speech*, which gives examples of language play or colourful expressions submitted by readers who have made them up or culled them from other sources, such as *brain scanner* glossed as 'mind sweeper', and *snoring* as 'sheet music' (UK edition, Mar. 1989). The *Reader's Digest Association* also publishes books and recordings, sold mainly by mail order. These include home-study manuals and works of reference. The two-volume *Reader's Digest Great Illustrated Dictionary* (1984) is one of the ten largest 20c dictionaries of English; it is a British enlargement of the *American Heritage Dictionary*, and has served as the basis for two further US dictionaries: one by Reader's Digest, the other by Houghton-Mifflin (publishers of the *AHD*). There are two usage guides: the more descriptive *American Success with Words* (1983) and the more prescriptive British *The Right Word at the Right Time* (1985). Other works on language are *Write Better, Speak Better* (US 1972), the thesaurus-style *Family Word Finder* (US 1975, UK 1978), and the *Reverse Dictionary* (1989). See CONDENSED BOOK, DIGEST, MAGAZINE. [MEDIA, REFERENCE, USAGE].

**READING** [From Old English *rædinge* reading, advice]. The process of extracting meaning from written or printed language: one of the four language skills (listening, speaking, reading, writing) and one of the two key aspects of literacy (reading and writing). The activity is of two kinds: *reading aloud*, so that others can hear (and benefit from) what is being read, and *silent reading*.

**Reading aloud**. People who are learning to read often read aloud, in order to relate what they see to the spoken language. Depending on the skill and confidence of the novice reader, this may be accompanied by tracing the line of text word by word with the index finger. In scribal societies, reading aloud appears to have been the norm, even for private, personal purposes. The shift to mature silent reading may have been encouraged by the advent of print, the spread of literacy, an awareness that reading aloud disturbs others within earshot, a view among teachers that saying (or muttering) what is being read indicates a low level of skill, and perhaps also appreciation of a silence that makes the message more

personal. Reading aloud in public is an ancient practice that lies at the roots of publishing ('making public': see entry), and in many parts of the world continues to be an important means of disseminating information and educating the young. It includes *dictation* that is read out to be written down by students and *lecturing* from a prepared text at a pace that allows note-taking: compare French *lecture* (reading). Reading aloud well involves control of breath, voice, and body, a capacity to look up from a text and back without losing one's place, and, depending on subject and occasion, an element of drama and display. In public presentations, such reading has traditionally been from a document held in the hand or placed on a *lectern* (a special sloping surface that holds whatever is being read). On television, however, there is increasing use of an electronic prompting device (a *teleprompter* or trade name, an *Autocue*) placed between reader and audience. This enlarges the elements of a script line by line, so that someone may see it easily and use it without appearing (too obviously) to be reading.

**Silent reading.** Private reading is so basic a skill in present-day society that its nature is little discussed and its existence largely taken for granted. It differs from other forms of scanning one's surroundings by being focused, sustained, relatively disciplined, and accompanied by thinking about the meaning of what one sees. The concept of reading is often extended to other kinds of disciplined, reflective activity, such as 'reading' someone's face for a message, 'reading' a landscape for information, or asking *Do you read me?* (Have you understood me?) after sending a radio message. One can also 'read' semaphore signals at a distance, braille by touch, and Morse code by listening. The eye movements that occur in conventional reading consist of jerks and stops. Each jerk entails a change in focus, and is technically known as a *saccade* (from French: the jerk on the reins of a rider controlling a horse); each stop is a *fixation*, a moment of stability in which signals are transmitted from retina to brain. On average, readers make three or four fixations a second, and each may register several letters or several words, depending on such factors as distance from text, size and kind of lettering, and familiarity with language, orthography, and subject matter.

Readers use both visual and phonetic skills, combining a capacity to decipher writing and print letter by letter with an indirect awareness of the heard equivalents of what is graphically displayed. This cross-association of graphic and phonic symbols appears to be natural: readers may at any time audibly or inaudibly say a syl-

lable or word so as to help grasp its nature, function, and meaning: in doing this, they may be returning to the historically and individually 'early' stage of moving the lips while interpreting the signs of the text. In this process, they are not usually put off by homophones, such as *right* and *write* or *dun* and *done*, which suggests that visual interpretation can function independently of phonetic backup. They may, however, be put off by homographs and polysemous words, such as the various uses of *bank* and *crane*. The fact that some people read so fast (over 500 words per minute) that they exceed the capacity of their phonetic backup to check what they are seeing is evidence for an element in reading that is not in any way tied to physical sound or 'sounds' in the mind.

**Learning to read.** There has long been controversy among teachers of reading over the primary means by which children learn (or should learn) to read. Attitudes and policies tend to vary between a *whole-language*, *whole-word*, *global*, *holistic*, or *look-and-say* approach on the one hand (in which words are minimal units to be learned as *gestalts*) and a *symbol-to-sound*, *code-based*, *atomistic*, or *phonic* approach (in which reading is like cracking a code that consists of correspondences between speech sounds and graphic symbols, with letters or *graphemes* as the prime units). Some teachers favour one approach over the other, while many favour a compromise that allows a judicious use of elements from both approaches. Some also make a distinction between a 'whole language' approach in which children work from so-called 'real books' (as opposed to specially prepared readers) and the older 'look and say' method that is closely associated with readers, reading schemes, flash cards, and other aids. There is some evidence that concentrating on the atoms of reading in the early stages leads to a higher rate of word recognition later, followed by an expansion of global comprehension through the quality and interest of what is being read. It is also likely that strategies may differ depending on the writing system used: for example, learning to read the blend of logographic and syllabic signs used for Japanese may require a different approach from learning the set of signs used for such 'alphabetic' languages as Spanish, Italian, German and English.

**Six stages?** The American researcher Jeanne S. Chall (*Stages of Reading Development*, New York, 1983, and with Steven A. Stahl, 'Reading', *International Encyclopedia of Communications*, New York, 1989) has proposed that reading in

English proceeds through six (relatively idealized) stages, more or less as follows (with ages specific to educational experience in the US):

*Stage 0: Pre-reading and pseudo-reading.* Before they reach the age of 6, children are likely to 'pretend' to read, retelling a story when looking at the pages of a book that has already been read to them, increasingly naming letters, recognizing some signs, printing their own names, and playing with the general paraphernalia of literacy. This process develops naturally as a response to being read to by adults or older children who take a close and warm interest in that response. Most children at this stage can understand simple picture books and the stories read to them, but have a hazy perception of what reading really is.

*Stage 1: Initial reading and decoding.* Between 6 and 7, children may learn the relations between sounds and letters and between spoken and printed words, read simple texts containing short, high-frequency words that are spelt more or less regularly, and 'sound out' monosyllables. If they receive instruction in *phonics*, they are often read to from a level just above their own ability to read. Generally, their level of reading at this stage is well below their capacity to manage speech. Although it is not easy to quantify words known and used, Chall estimates that they can understand some 4,000 spoken words and some 600 written or printed words. A reading specimen of this stage is:

'May I go?' said Fay. 'May I please go with you?' (from *American Book Primer*).

*Stage 2: Confirmation and fluency.* Between 7 and 8, children may consolidate their skills, increasing their range of reading, their fluency, their general vocabulary, and their ability to decode the elements of words. Again, help may often include being read to at a level above their own ability. At the end of this stage, they can understand an estimated 9,000 spoken words and 3,000 written or printed words. A reading specimen of this stage is:

Spring was coming to Tait Primary School. On the new highway big trucks went by the school all day (from Ginn 720, Grade 2).

*Stage 3: Reading for learning.* Between 9 and 14, reading is no longer an end in itself but becomes a means by which further knowledge and experience can be gained. Use extends beyond the immediate subjects of school and includes textbooks, reference books, and periodicals (from comic books to newspapers and encyclopedias). Reading becomes part of a general experience of language that is likely to include explicit discussion of language skills, especially writing and spelling. At the beginning of this stage, listening

comprehension of the same material is more effective than reading comprehension, but by the end the two are roughly equal. For some young people, reading may have edged ahead. Two reading specimens of this stage are:

She smoothed her hair behind her ear as she lowered her hand. I could see she was eyeing *beauty* and trying to figure out a way to write about being beautiful without sounding even more conceited than she already was (from Ginn 720, Grade 5).

Early in the history of the world, men found that they could not communicate well by using only sign language. In some way that cannot be traced with any certainty, they devised spoken language (from Book F, *New Practice Reader*, Graves *et al.*, 1962).

*Stage 4: Multiplicity and complexity.* From 14 to 17, if all has gone well, students are reading fairly widely from a range of increasingly complex materials, both narrative and expository, and varied in viewpoint. Such materials are both technical and non-technical, literary and non-literary, and may involve a parallel study of words and their elements. For poorer performers, listening and reading comprehension are about the same, but for stronger performers reading comprehension is better than listening comprehension, especially in technical subjects. A specimen for this stage is:

No matter what phenomena he is interested in, the scientist employs two main tools—theory and empirical research. Theory employs reason, language, and logic to suggest possible, and predict probable, relationships among various data gathered from the concrete world of experience (from A. B. Kathryn, 'College Reading Skills', in John & Mavis Biesanz (eds.), *Modern Society*, 1971).

*Stage 5: Construction and reconstruction.* Beyond 18, young adults should have developed the capacity to read for their own purposes, using their skill to integrate their own knowledge with that of others and to assimilate their experience of the world more effectively. In stronger performers, it is rapid and efficient, and serves as a basis for a lifetime of reading for personal and occupational purposes. Interested readers go beyond their immediate needs and in the writing of essays, reports, summaries, and other materials continue to integrate the four skills. A reading specimen for this stage is:

One of the objections to the hypothesis that a satisfying after-effect of a mental connection works back upon it to strengthen it is that nobody has shown how this action does or could occur. It is the purpose of this article to show how a mechanism which is as possible psychologically as any of the mechanisms proposed to account for facilitation, inhibition, fatigue, strengthening by repetition, or other forms of modification could enable such an after-effect to cause such a strengthening (from Edward L. Thorndike, 'Con-nectionism', *Psychological Review* 40, 1933).

**Conclusion.** The above stages resemble the developmental phases of the child's mind as proposed by the Swiss researcher Jean Piaget. They are both a generalization from objective study and an idealized assumption about an average child who progresses fairly smoothly through such stages in an English-speaking society that has an adequate educational system, without any significant social or personal problems. The order may be universal, but the age ranges will vary between individuals, cultures, and countries. Unfortunately, not all climb smoothly from the bottom to the top of this ladder and not all societies provide an adequate educational service. In addition, many competent readers might have serious difficulty with the specimen that Chall provides for Stage 5, many adequate readers with the specimen at Stage 4, and so on down the line to the large percentage of people whom English-speaking societies now recognize as *functionally illiterate*: that is, those who, for whatever reason, never managed to get successfully through Stage 1 or 2. Recent definitions of literacy have classed as illiterate all those who read less efficiently than they would like, including many who have moved well beyond Stage 2.

**REAM** [14c: from Old French *raime*, Spanish *resma*, Arabic *rizmah* a bale]. A number of sheets of paper; 480 (a *short ream*) or 500 sheets (a *long ream*) or 516 (a *printer's ream* or *perfect ream*, allowing for waste). A short ream is equal to 20 quires of 24 sheets each, a long ream to 20 quires of 25 sheets each. The term has been extended to suggest large quantities of writing: *whole reams of argument*. [TECHNOLOGY]. T.M.CA.

**REBUS** [16c: from French *rébus*, Latin *rebus* (ablative plural of *res* thing) by or with things]. A device that uses letters, numbers, or pictures to represent words: for example, *MT* used to mean *empty*; *B4* to mean *before*. The rebus is usually a puzzle that demands some lateral thinking to decipher it, as in *MIN* (half a minute), *CCCCCC* (the Seven Seas), and *WORLAMEN* (World without end. Amen). The idea is as old as Egyptian hieroglyphics and came into English in the Middle Ages in heraldic devices and pictorial representations of names. In *The Spectator* (8 May 1711), Joseph Addison described a picture of a yew tree and berries surrounding a letter *N* to represent Mr Newberry. Rebuses are used mainly in children's puzzles (where an eye represents *I* and the number two stands for *to*), but can still be found in heraldry and on gravestones. See WORD GAME. [WORD, WRITING]. T.A.

**RECEIVED** [15c in this sense]. Accepted and approved: 'The appearance of Courtly Love has left an immense legacy of received ideas about sex and society' (J. Bayley, *Characters of Love*, 1960). When used of language, *received* usually refers to what is accepted and approved in educated, especially middle-class society: 'The tip of the tongue for received English is not so advanced towards the teeth or gums, as for the continental sound' (A. J. Ellis, *On Early English Pronunciation*, vol. 4, 1874). See RECEIVED PRONUNCIATION, RECEIVED STANDARD AND MODIFIED STANDARD, RECEIVED STANDARD ENGLISH, VERSION. [LANGUAGE]. T.M.CA.

**RECEIVED PRONUNCIATION.** (1) [1820s: no initial capitals]. Pronunciation regarded as correct or proper, especially by arbiters of usage: 'the theoretically received pronunciation of literary English' (A. J. Ellis, *On Early English Pronunciation*, vol. 1, 1869); 'Edinburgh and Dublin have their received pronunciations' (Simeon Potter, *Changing English*, 1969). (2) [1920s: with initial capitals]. Short form *RP*. A term in phonetics, applied linguistics, and language teaching for the accent generally associated with educated BrE and used as the pronunciation model for teaching it to foreign learners. This accent has been

referred to technically as *Received Standard English* (or *Received Standard*) and *Public School English* by Henry Cecil Wyld, *Public School Pronunciation (PSP)* by Daniel Jones, prior to using the term itself, *General British in the Oxford Advanced Learner's Dictionary* (3rd edition, 1974: in contrast to *General American*), *standard southern pronunciation*, and *standard (spoken) British English*. Since its initial description by Jones in the *English Pronouncing Dictionary (EPD)* in 1917, it has probably become the most described and discussed accent on earth.

**Attitudes to RP.** The terms *Received Pronunciation* and *RP* are not widely known outside the immediate circle of English-language professionals, but the form that they refer to is widely known as the spoken embodiment of a variety or varieties known as *the King's English*, *the Queen's English*, *BBC English*, *Oxford English*, and *Public School English*: see entries. It is often informally referred to by the British middle class as a *BBC accent* or a *public school accent* and by the working class as *talking proper* or *talking posh*. In England, it is also often referred to simply as *Standard English*. Its 'advanced' (that is, distinctive upper-class and royal) form is sometimes called *la-di-dah* (as in talking *la-di-dah*) or a *cut-glass accent*, especially if used by people judged as not really 'from the top drawer'. RP has been described by many of its users and admirers in the UK and elsewhere as the best pronunciation for BrE, for the countries influenced by BrE, or for all users of English everywhere. Americans do not normally subscribe to this view, but many of them admire RP as the representative accent of educated BrE while some associate it with the theatre and, in men, with effeminacy.

Many British people dislike Received Pronunciation, usually arguing that it is a mark of privilege and (especially among the Scots, Northern Irish, and Welsh) of social domination by the (especially southern) English. It has, however, a considerable gravitational pull throughout the UK, with the result that many middle- and lower middle-class people, especially in England, speak with accents more or less adapted towards it. These accents are therefore known among phoneticians as *modified regional accents* and *modified RP*. Comparable accents in Australia, Ireland, New Zealand, Scotland, South Africa, and elsewhere are often referred to as *near-RP*. It has always been a minority accent, unlikely ever to have been spoken by more than 3-4% of the British population. British phoneticians and linguists have often described it as a 'regionless' accent in the UK and especially in England, in that it is not possible to tell which part of the country an RP speaker comes from;

it is never, however, described as a 'classless' accent, because it identifies the speaker as a member of the middle or upper classes. Because it is class-related, it is socially and politically controversial and can lead to embarrassment when discussed.

**General background.** RP is often taken to have existed for a relatively long time, evolving from a prestigious accent well established in England by the 17c, when comparisons began to be made between the speech of the court and the nobility in London and that of their peers from the provinces. John Aubrey (*Brief Lives*, mid-17c) provides a hearsay report that Sir Walter Raleigh had a Devon accent till the day he died; Samuel Johnson in the 18c is on record as speaking with a Staffordshire accent. Although there was an increasingly homogeneous and fashionable style of speech in the capital in the 18-19c, little is known about it. It probably served in part at least as a model for the middle classes and may have been common at such ancient public schools as Eton, Harrow, Rugby, and Winchester, but there is no evidence that a uniform accent was used or promoted in these schools until the later 19c. However, by the beginning of the 20c, it was well established, and in 1917, at the height of the First World War, Jones defined his model for English as that 'most usually heard in everyday speech in the families of Southern English persons whose menfolk have been educated at the great public boarding-schools', and called it *Public School Pronunciation (PSP)*.

The heyday of Empire, approximately 1890-1940, was also the high point of RP, which has been described by such terms as 'patrician' and 'proconsular'. Its possession was a criterion for the selection of young men as potential officers during the First World War and it has been the accent favoured for recruits to the Foreign Office and other services representing the British nation (largely drawn from the public schools, with a slight enlargement of the catchment area in recent years). Newcomers to the British establishment have tended to ensure that their children acquire RP by sending them to the 'right' schools or, especially in the past in the case of girls, to elocution teachers. In these schools the accent has never been overtly taught, but appears to have been indirectly encouraged and often promoted through peer pressure that has included mockery of any other form of speech. It has been the voice of national announcers and presenters on the BBC since its founding in the 1920s, but in the 1970s-80s there has been a move towards modified regional accents among announcers and presenters, and towards distinct (but generally modified) regional accents among presenters on popular radio channels and met-

erologists and sports commentators on television.

**Generalities and characteristics.** (1) The description of RP in A. C. Gimson, *An Introduction to the Pronunciation of English* (Edward Arnold, 3rd edition, 1980) is widely regarded as standard. Its 4th edition (1990) has been revised by Susan Ramsaran. (2) RP is often used as a reference norm for the description of other varieties of English. An idealized representation has been available for this and other purposes for at least 20 years, with minor differences in the house styles of such publishers as Oxford University Press and Longman. A comparison between RP and 'GenAm' (General American) is a key element of John C. Wells's *Longman Pronunciation Dictionary* (1990). (3) RP differs little from other accents of English in the pronunciation of consonants, which are 24 in number. It is a non-rhotic accent that includes the linking/intrusive /r/ (widely noted in such phrases as *law/r and order*), which is not however taught as part of the EFL/ESL pronunciation model. (4) Wells (above) lists the following 22 basic values of RP vowels: /ɪ/ as in *kit, bid, hymn, intend, basic*; /e/ as in *dress, bed*; /æ/ as in *trap, bad*; /ɒ/ as in *lot, odd, wash*; /ʌ/ as in *strut, bud, love*; /ʊ/ as in *foot, good, put*; /i:/ as in *fleece, sea, machine*; /eɪ/ as in *face, day, steak*; /aɪ/ as in *price, high, try*; /ɔɪ/ as in *choice, boy*; /u:/ as in *goose, two, blue*; /əʊ/ as in *goat, show, no*; /aʊ/ as in *mouth, now*; /ɪə/ as in *near, here, serious*; /eə/ as in *square, fair, various*; /ɑ:/ as in *start, father*; /ɔ:/ as in *thought, law, north, war*; /ʊə/ as in *cure, poor, jury*; /ɜ:/ as in *nurse, stir*; /ɪ/ as in *happy, radiation, glorious*; /ə/ as in the first vowel of *about* and the last of *comma*; /u/ in *influence, situation, annual*.

**Current situation.** Although RP continues to be socially pre-eminent in Britain, and especially England, it has in recent years become less monolithic both phonetically and socially. Phoneticians recognize several varieties and also a generation gap. In the introduction to the 14th edition of the *EPD* (1977), Gimson noted of RP that its 'regional base remains valid and it continues to have wide intelligibility throughout Britain . . . [but there] has been a certain dilution of the original concept of RP, a number of local variants formerly excluded by the definition having now to be admitted as of common and acceptable usage. Such an extended scope of usage is difficult to define.' He retained the name, however, because of its 'currency in books on present-day English'. Even so, the observations of the phonetician David Abercrombie in 1951 still largely apply:

This R.P. stands in strong contrast to all the other ways of pronouncing Standard English put together. In fact,

English people are divided, by the way they talk, into three groups; first, R.P. speakers of Standard English—those [regarded as being] without an accent; second, non-R.P. speakers of Standard English—those with an accent; and third, dialect speakers. I believe this to be a situation which is not paralleled in any other country anywhere ('R.P. and Local Accent', in *Studies in Linguistics and Phonetics*, 1965).

**RP and EFL.** Because most British teachers of English have spoken with RP or modified-RP accents, overseas learners have until recently tended to assume that it is the majority accent of BrE. It retains its position as the preferred target for Commonwealth ESL learners, although in countries such as India and Singapore local pronunciations with a degree of prestige have emerged and may in due course replace it or operate alongside it. In EFL, it competes more and more with equivalent forms of AmE, but is strongly buttressed by the investment in RP made by British ELT publishers, especially in learners' dictionaries. It is generally selected as a matter of course as the reference norm for discussing spoken BrE (and often other varieties of English), as well as for such activities as automatic speech synthesis, but since most British people do not speak or even know RP as a coherent system, general statements about BrE keyed to Received Pronunciation can often be misleading and confusing.

[SPEECH, STYLE, VARIETY].

T.MCA., G.K.

**RECEIVED STANDARD AND MODIFIED STANDARD.** Contrastive terms proposed by Henry Cecil Wyld at the beginning of the 20c for two kinds of pronunciation in Great Britain:

It is proposed to use the term *Received Standard* for that form which all would probably agree in considering the best, that form which has the widest currency and is heard with practically no variation among speakers of the better class all over the country. This type might be called Public School English. It is proposed to call the vulgar English of the Towns, and the English of the Villager who has abandoned his native Regional Dialect *Modified Standard*. That is, it is

Standard English, modified, altered, differentiated, by various influences, regional and social. Modified Standard differs from class to class, and from locality to locality; it has no uniformity, and no single form of it is heard outside a particular class or a particular area.

(*A Short History of English*, 1914)

See ACCENT BAR, ORTON, PUBLIC SCHOOL ENGLISH, RECEIVED, RECEIVED PRONUNCIATION, RECEIVED STANDARD ENGLISH, STANDARD, WYLD. [SPEECH, STYLE, VARIETY]. T.MCA.

**RECEIVED STANDARD ENGLISH** [20c: introduced by Henry Cecil Wyld]. An occasional technical term for the accent of English generally referred to by phoneticians and EFL/ESL teachers as *Received Pronunciation*: 'Approximate pronunciations of OE vowels for those working without a teacher are given as far as possible in Received Standard English' (Bruce Mitchell & Fred C. Robinson, *A Guide to Old English*, 1964/1968/1989). Compare RECEIVED PRONUNCIATION, RECEIVED STANDARD AND MODIFIED STANDARD, STANDARD ENGLISH. [SPEECH, STYLE, VARIETY]. T.MCA.

**RECIPROCAL PRONOUN**. A term sometimes used for the compound pronouns *each other* and *one another*, which express a two-way interaction: *Romeo and Juliet loved each other/one another* (Romeo loved Juliet and Juliet loved Romeo). In meaning, reciprocal pronouns contrast with reflexive pronouns: *The Montagues and the Capulets loved themselves* (The Montagues loved the Montagues, and the Capulets loved the Capulets). Reciprocal pronouns are, however, like reflexives in not normally being used as subjects: no \**They wondered where each other/one another was*. See PRONOUN. [GRAMMAR]

S.C.

**RECTO**. See PAGE.

**RED ENGLISH** [1960s: on the analogy of *Black English*]. A term for the English language as used by Native Americans ('Red Indians'): 'Joey Dillard and other linguists introduced the American public to "Black English," "Red English" (of American Indians), and Southern Appalachian English, and many people interpret this diversity as evidence of the decline and splitting apart of American English' (Charles A. Ferguson & Shirley B. Heath, Introduction, *Language in the USA*, 1981). Compare BLACK ENGLISH, BLUE-EYED ENGLISH, WHITE ENGLISH. See AFRO-SEMINDLE, AMERINDIAN PIDGIN ENGLISH. [AMERICAS, VARIETY]. T.MCA.

**RED RIVER DIALECT**. See MÉTIS.

**REDUCTIONIST LITERACY**. See FUNCTIONAL LITERACY.

**REDUNDANCY** [16c: from Latin *redundantia* excess, from *redundare* to overflow, from *re-* again, epenthetic *d*, and *unda* wave]. (1) In general usage, more of anything than is (strictly) needed, usually resulting from repetition or duplication; pleonasm or tautology. In the sentence *They also visited us last week too*, either *also* or *too* is redundant, because both words express the same idea. (2) Technically, both the repetition of information (or the inclusion of extra information so as to reduce errors in understanding messages) and part of a message which can be eliminated without loss of essential information.

**Redundancy in language**. Languages differ in the degree and kinds of redundancy they make use of: Latin syntax has a much higher level of redundancy than English syntax. In the sentence *Milites novi hodie venerunt*, as compared with its translation *The new soldiers came today*, plurality is marked three times in Latin (*-es* in *milites*, *-i* in *novi*, *-erunt* in *venerunt*) but only once in English (*-s* in *soldiers*). French often has greater redundancy in writing than in speech: in *Les nouveaux soldats sont venu aujourd'hui*, the plural is carried in speech by *les*, *sont* and in writing by *les*, *-x*, *-s*, *sont*. It is a feature of pidgin languages that redundancy is greatly reduced: in the English *Six men come*, plurality is marked by *six*, *men*, but in Tok Pisin, *Sikspela man i kam* ('six-fellow man he come') only *sikspela* indicates plurality.

**Redundancy and style**. It is a convention of English style that words should be varied rather than repeated: *It was a great enormous house, the biggest I've seen* rather than *It was a large large house, the largest I've seen*. Different phrasing is intended to decrease monotony and perhaps increase the amount of information conveyed. Repetition is, however, a common activity and has traditionally been justified as a rhetorical device, used for emphasis and the expression of emotion: see ANADIPLOSIS, REPETITION. It was lexically and grammatically redundant, but not emotionally so, for Shakespeare to have Lear say:

And my poore Foole is hang'd: no, no, no life?  
Why should a Dog, a Horse, a Rat haue life,  
And thou no breathe at all? Thou'll come no more,  
Neuer, neuer, neuer, neuer, neuer.

(*King Lear*, 5. 3)

**Redundancy and information**. Redundancy can be described as the difference between the possible and actual information in a message. This difference may be repetition or other encodings beyond the minimal possible length. A message entirely without redundancy may contain the maximum amount of information, but cannot be corrected if it is corrupted in some way, because

there is no 'spare' material to check with. In the Latin sentence above, three items would have to be lost before the plural message is lost. In the English equivalent, the loss of one -s would change the message drastically. To avoid misunderstandings, people generally repeat themselves more when speaking than writing. This corresponds to the greater possibility of error in listening than reading. A speaker in a noisy room will usually provide even more redundancy to help listeners recognize what is said.

**Compression and abbreviation.** Redundancy makes possible (and can be removed by) the compression of messages. The vowels can be removed from words, as in the advertisements *f u cn rd ts u cn gt a gd jb* (If you can read this you can get a good job) and *w big gdn, s/v* (with a big garden and a sea-view): see CONTRACTION. Shorthand systems work on the same principle of eliminating the non-essential, and such mechanized systems as Stenotype (a machine with a keyboard for recording proceedings, speeches, etc.) rely on the redundancy of natural language to produce shorter versions that can be translated back to conventional English. Compression is often used to shorten computer files by using the equivalent of a frequent-word table. A computer can look through a document, find the most common words, and have each replaced by a short code. If the ten digits (0 to 9) are almost never used in a document, but the words *language* and *English* are very frequent, the symbol 1 need no longer mean the digit, but could be used to abbreviate *language*, saving seven characters each time. Similarly, 2 could replace *English*, and 31, 32, 33 could replace the numbers 1, 2, 3, and so on. If the text contained 1,000 instances of *language* and *English*, but only ten instances of 1, 2, and 3, it would be a total of 12,970 characters shorter as a result: 7,000 shorter from replacing *language*, 6,000 shorter from replacing *English*, and 30 longer from replacing the three digits. A more thorough version of this idea is the formal Lempel-Ziv algorithm, which usually shortens English to less than half its original length.

**Code-breaking.** Redundancy is of great value in code-breaking. By assessing the frequency of occurrence of letters in English (such as the commonness of *e*, the rarity of *z*), cryptographers can assign tentative values to certain symbols and so begin to break the code concerned. In a non-redundant system, all symbols would appear with equal frequency. English texts could be shortened by replacing all instances of *ee* with *z*, as in *I sz you have bzn to Grzce again*. No word would be misunderstood as a result. If this kind of substitution were continued until not only all letters but all letter patterns were equally

frequent, the cryptographer would not be able to look for the repetitions of elements like *ed* or *th* that help break ciphers. As a result, an effective way to discourage code-breaking is, wherever possible, to compress the message first, disrupting the more obvious patterns.

**Telecommunications and television.** Sounds and pictures also contain redundancy, such as silences in conversations and areas of one colour in a painting. Each side of a telephone conversation is silent about half the time. By removing the silences, long-distance telephone calls are packed into fewer than the expected number of circuits by removing the redundant silence. A detector on each channel listens to the conversation, and on hearing no noise from one end, stops transmitting that conversation, switches in a different conversation, and sends an electrical signal on a separate channel, telling the switch at the other end of the conversation what has happened. That switch sends the sound it is now receiving to another conversation, and connects the current listener to silence. When it receives a signal from the detector that the original speaker has started talking again and which channel is being used for the resumed conversation, it switches the listener back to that channel. See ABBREVIATION, CODE, INFORMATION, PLEONASM, REPETITION, TAUTOLOGY, TELECOMMUNICATIONS. [LANGUAGE, MEDIA, STYLE, TECHNOLOGY].

M.L., T.MCA.

**REDUPLICATION** 16c: from Latin *reduplicatio/reduplicationis* doubling, folding]. The act or result of doubling a sound, word, or word element, usually for grammatical or lexical purposes. In classical Greek, grammatical reduplication serves to form the perfect of the verb, by means of a prefixed syllable that repeats the initial consonant: *lúo* I loosen, *léluka* I have loosened. A mix of grammatical and lexical reduplication occurs in various languages: for example pluralizing in Malay *contoh* example, *contoh-contoh* examples, *raja* king, *raja-raja* kings. A word in which this process occurs is a *reduplication* or (more commonly) a *reduplicative*. In English, lexical reduplication is found: (1) In occasional borrowings, such as *beriberi*, a disease caused by deficiency of vitamin B<sub>1</sub> (from Sinhala, an emphatic doubling of *beri* weakness), and *ylang-ylang* or *ilang-ilang* the aromatic tree *Cananga odorata* (from Tagalog). (2) In echoic or otherwise phonetically suggestive words, such as *tut-tut/tsk-tsk*. In most cases, some elements contrast while others are repeated, as with *mish-mash* and *hanky-panky*. Such words are often informal and whimsical, with contrasts that affect vowels (*mishmash*, *pingpong*, *pitter-patter*,

*tick-tock, tittle-tattle*) or consonants (*mumbo-jumbo, niminy-piminy*), the latter often involving an opening *h*-sound (*hanky-panky, harum-scarum, helter-skelter, hocus-pocus, holus-bolus, hugger-mugger*). Less precisely reduplicative resemblances occur in such words as *hunky-dory* and associations can be made between actions in such words as *walkie-talkie*. (3) In such occasional emphatic repetitions as *no-no* in the slang expression *It's a no-no* (It's something definitely not to be done). (4) In pidgin and creole usages, such as Tok Pisin *lukluk* to stare (from *look*) and *singsing* a festival (from *sing*), Kamtok and Krio *benben* crooked (from *bend*), and Kamtok and Nigerian Pidgin *katakata* confused (from *scatter*). See ALLITERATION, ASSONANCE, ECHOISM, EPANALEPSIS, HAWAIIAN, MALAY, RHYMING COMPOUND, SCOTS, SINGSONG, VAGUE WORD. [GRAMMAR, WORD]. T.MCA.

**REDUPLICATIVE.** See REDUPLICATION.

**REFERENCE** [16c]. (1) Referring to or mentioning someone or something, either directly or indirectly, and often in the form of an allusion or a quotation. (2) Also *objective reference*. In logic and linguistics, the activity or condition through which one term or concept is related to another or to objects in the world. (3) In sociology and psychology, the process by which, or the extent to which, people relate to elements in society as norms and standards for comparing such things as status and values. (4) An indication or direction in a text or other source of information to all or part of one or more other text, etc., where further, related information may be found. (5) The text or other source to which one is directed or referred. The term is often attributive in senses 4 and 5, as in *reference book, reference library, reference materials*. It may also be part of an *of*-phrase, as in *frame of reference, point of reference, work of reference*. (6) To provide a book or other source of information with references (*books that are all thoroughly referenced*) or to arrange (data, notes, etc.) for easy reference (*all the background material is referenced in an appendix*).

Reference materials have in the past depended mainly on surfaces that serve as receptacles of pictures and language symbols, from paintings on cliff faces, in caves, and on walls, through clay tablets and manuscripts of various kinds, to printed books and other products. Especially in the 20c, however, they have been extended to include audio- and video-recordings and electronically stored information on tape and disk. Distinct genres of reference book, such as the *atlas* for maps, the *dictionary* for words, the *directory* for a variety of general or specific information (such as names, addresses, and telephone

numbers), the *encyclopedia* for facts and opinions, the *gazetteer* for geographical information, have emerged over many centuries, gaining their present-day forms especially in the expansion of book publishing in the 18-20c. See CROSS-REFERENCE, REFERENCE MARK, REFERENCE NORM, REFERENT, SEMANTICS. T.MCA.

**REFERENCE BOOK.** See REFERENCE.

**REFERENCE GUIDE FOR ENGLISH STUDIES.** A. A 790-page single-volume annotated bibliography compiled by Michael J. Marcuse (University of California Press, 1990). It covers titles to the mid-1980s, and is intended 'to introduce and describe unfamiliar reference sources that one may consult when dealing with any reference question arising from current teaching or research in any branch of English studies. For these purposes, English studies are defined as all those subjects and lines of critical and scholarly inquiry presently pursued by members of university departments of English language and literature. Put more boldly, this work aims to provide more help to more people than any single reference guide we in English studies have hitherto possessed.' The volume builds on and extends prior American works in the field of bibliography, relating in particular to literature. Its sections are: *A* General Works; *B* Libraries; *C* Retrospective and Current National Bibliography; *D* Serial Publications; *E* Miscellany; *F* History and Ancillae to Historical Study; *G* Biography and Biographical References; *H* Archives and Manuscripts; *I* Language, Linguistics, and Philology; *K* Literary Materials and Contexts; *L* Literature; *M* English Literature; *N* Medieval Literature; *O* Literature of the Renaissance and Earlier Seventeenth Century; *P* Literature of the Restoration and Eighteenth Century; *Q* Literature of the Nineteenth Century; *R* Literature of the Twentieth Century; *S* American Literature; *T* Poetry and Versification; *U* The Performing Arts—Theater, Drama, and Film; *W* Prose Fiction and Nonfictional Prose; *X* Theory, Rhetoric, and Composition; *Y* Bibliography; *Z* The Profession of English. Compare YEAR'S WORK IN ENGLISH STUDIES. See BIBLIOGRAPHY, ENGLISH STUDIES. [REFERENCE]. T.MCA.

**REFERENCE MARK** [1850s]. Any of various written or printed symbols, such as an asterisk (\*), an obelisk or dagger (†), or a superscript number used to indicate that further information is available in an end- or footnote, a bibliography, or another text. See ASTERISK, MARK, NOTES AND REFERENCES, OBELISK. [REFERENCE, WRITING]. T.MCA.

**REFERENCE NORM** [Late 20c]. A model for the use of language, such as a standard variety. In global terms, users of English tend to follow one of two reference norms: Filipinos, for example, have AmE as their reference norm, while Indians tend to follow BrE. See AMERICAN ENGLISH AND BRITISH ENGLISH, NORM, RECEIVED PRONUNCIATION, STANDARD. [LANGUAGE, REFERENCE]. R.F.I.

**REFERENT** [1830s]. (1) The object or event to which a term or a symbol refers. The term *table* has many referents, the majority of which have a flat top and four legs. (2) In logic, the first term in a proposition to which succeeding terms relate. See SEMANTICS, SEMIOTICS, SENSE. [REFERENCE]. T.MCA.

**REFINED** [16c: from *re-* and *fine*: compare French *raffiner*, Spanish *refinar*]. (1) Purified, freed from impurities: *refined iron*. (2) Characterized by fineness of feeling, taste, manners, thought, and/or action (*refinement*); cultured, civilized, well-bred; not vulgar or coarse: *refined courtiers*, *a refined education*. (3) (Of language) cultivated, polished, elegant: 'good Letters and refined speech' (preface, Authorized Version of the Bible, 1611); 'She spoke with a refined accent' (George Eliot, *Felix Holt*, 1868). See (A)ESTHETICS. Compare POLITE, PURE, STANDARD. [STYLE]. T.MCA.

**REFLEXIVE** [16c: from Latin *reflexivus* bending back]. A term for a verb, pronoun, or construction that works on identity of reference between two grammatical units, chiefly the subject and the object. In English, the relationship is expressed by the use of *reflexive pronouns*. See REFLEXIVE PRONOUN. [GRAMMAR]. S.G.

**REFLEXIVE PRONOUN.** A pronoun that ends in *-self* or *-selves*. Such pronouns are used when the direct and sometimes the indirect object of a verb 'reflects' or refers back to the subject: *I blame myself for what happened*; *They have allowed themselves another week*. Occasionally, some other part of the sentence may also reflect the subject: *She pulled the box towards herself*. In standard English, a reflexive pronoun cannot usually serve as the subject of a sentence (no \**Myself did it*), but especially in

Scotland and Ireland, under the influence of Gaelic, there is a mock-prestigious use of the third-person singular (*Is himself at home?*, *It was herself answered the phone*), deriving from usages that formerly referred to kings and chiefs: *Himself has eaten, the rest of the world may eat*. See PRONOUN, REFLEXIVE. [GRAMMAR]. S.C., T.MCA.

**REFORMATION.** The 16c religious movement that first sought to reform the Roman Catholic Church but ultimately resulted in the establishment of the Protestant churches. The ensuing theological polemic was voluminous (Edmund Spenser's *Faerie Queene*, 1. i. 20, represents the dragon Error spewing out 'vomit full of bookes and papers') and largely in the vernacular: John Wycliffe (c.1330-1384), a precursor of the Reformation, refused to use Latin, the traditional language of theological writing, and addressed the laity in English. His confidence in English led him to translate from Latin the first ever entire Bible to be published in a European vernacular. Later reformers often printed their works for wide distribution: in the five years before Martin Luther's 1522 translation of the New Testament, a third of all publications in German bore his name, and his High German became the literary standard throughout Germany. In England, reformers also renewed the study of Old English in an attempt to prove the continuity of the English church and its doctrines. In Scotland, there began an educational drive to make all citizens literate and able to read the Scriptures for themselves. Compare BIBLE, RENAISSANCE. See EARLY MODERN ENGLISH, MUMPSIMUS, WYCLIFFE. [EUROPE, HISTORY]. W.F.B.

**REFRAIN** [14c: from Old French *refraindre* to break sequence, from Latin *refringere* to break up]. A sequence of words repeated throughout a piece of verse, usually at the end of a stanza but sometimes between lines. Common in ballads, folk-songs, and nursery rhymes, it breaks into the main course of the verse at intervals and sometimes suggests a stylized dialogue between solo voice and chorus. In effect, it eases the reciter's memory and allows participation by listeners. In printed texts it is often typographically highlighted, perhaps in italics or by indenting. In some forms, the refrain is cumulative, providing a chant-like framework for the entire piece. Short refrains are often nonsensical, doing little more than bear the melody of the line: Shakespeare's 'With a hey, and a ho, and a hey nonino' (*As You Like It*, 5. 3). In Hardy's 'Voices from things growing in a churchyard', each stanza ends with the thematic refrain 'All day cheerily, / All night eerily!'; in Yeats's poem 'The O'Rahilly', on a death in the Dublin rising, 1916, the refrain is oblique, asking 'How goes the

weather?' An extended refrain is often sung as chorus to a song, as in Robert Burns's 'Auld Lang Syne'. Compare CHORUS. [LITERATURE].

R.C.

**REGGAE** [1960s: probably from Jamaican Creole *rege(-rege)* rags, ragged clothes (referring to slum origins), perhaps with echoes of AmE *rag-time*, a term used to describe jazz]. Music with a heavy four-beat rhythm, with accents on one and three rather than two and four as in rock music. Reggae began in Kingston, Jamaica, and has cultural, social, and political implications in the Caribbean, UK, US, and elsewhere. The lyrics propose solutions to black problems ranging from social revolution to redemptionist prophecy, and are often a vehicle for Rastafarianism, as in:

Babylon system is the vampire  
Sucking the children day by day.  
(Bob Marley, 'Babylon System', 1979).

I hear the words of the Rasta man say  
Babylon your throne gone down, gone down.  
(Bob Marley and the Wailers, 'Rasta Man Chant')

Lyrics are sung in Jamaican Creole, Jamaican English, or a mixture of both, 'often expressing rejection of established "white-man" culture' (F. G. Cassidy & Robert Le Page, *Dictionary of Jamaican English*, 1980) and are 'a major, if not sole, source of information (or focal point of information) about Jamaica for North Americans' (Lise Winer, 'Intelligibility of Reggae Lyrics in North America: Dread ina Babylon' (in *English World-Wide* 11: 1, 1990). They are also sung in French in Quebec and Senegal, and in Hausa, Lingala, Soninke, and Twi in West Africa. See BLACK, DUB, JAMAICA, RAP, RASTA TALK. [AFRICA, AMERICAS]. T.MCA.

## REGIONAL DICTIONARIES OF ENGLISH.

Dictionaries which list and define words as used in a particular country, such as the *Dictionary of Jamaican English*, or part of a country, such as the *Dictionary of Newfoundland English*. Such dictionaries of English date from the 17c: for example, John Ray's *A Collection of English Words* (1674), which provided two alphabetic lists of words, one for the North and one for the South of England. Thomas Ruddiman's *A Glossary of Alphabetical Explanation of the Hard and Difficult Words* (Edinburgh, 1710) was keyed to Gavin Douglas's translation of the *Aeneid* into Scots (1553), and was the first to combine a regional perspective with a historical treatment of words. Various works explaining vocabulary used in areas of Britain followed these; the first to present an overseas variety as an independent entity was Noah Webster's *An American Dictionary of the English Language* (1828). This was followed by Henry Yule and A. C. Burnell's

*Hobson-Jobson: A Glossary of Anglo-Indian Colloquial Words and Phrases* (1886), E. E. Morris's *Austral English* (1898), and Charles Pettman's *Africanderisms* (1913). These works have an idiosyncratic charm; they count as the first extended efforts to record and define the distinctive vocabulary of parts of the British Empire.

In his address to the Philological Society (1919), William A. Craigie reflected on future dictionaries, suggesting that it was time to plan English lexicography beyond the long-contemplated *Supplement to the OED* (1933), which was intended only to correct errors and add new information. Dictionaries to follow should include not only 'period dictionaries' such as for Middle English but also 'regional dictionaries' such as for Scotland and the US. His definition of a regional dictionary appeared in the first part of the *Dictionary of the Older Scottish Tongue* (1931), in which he defined the scope of the work: 'the whole range of the Older Scottish vocabulary . . . down to 1600' and 'the history of the language to 1700, so far as it does not coincide with the ordinary English usage of that century'. From 1603, when Scotland and England acquired a common monarchy, Craigie takes 'ordinary English usage' to be normative and the English of Scotland as exceptional, and subsequent 'regional' dictionaries have tended to follow that principle, most limiting themselves to usage not identical to the standard English of England.

In the preface to his *Dictionary of American English* (1940), Craigie rejected as impracticable a comprehensive, historical dictionary of English as used in the US, and defined the scope of this 'regional' work to include: 'words and phrases which are clearly or apparently of American origin, or have greater currency here than elsewhere, but also every word denoting something which has a real connection with the development of the country and the history of its people'. Hence, the term *regionalism* came to be used for a 'word, phrase, or peculiarity of pronunciation which is not part of the standard language of a country' (*OED*, 2nd edition, 1989). Without necessarily addressing the presumption that educated BrE, particularly the variety used in England, is 'standard' and other varieties therefore in some sense 'peculiar', subsequent regional dictionaries have approached the issue of inclusiveness in three ways:

(1) **The associationist approach.** This approach parallels the *Dictionary of American English* in admitting entries that have some particular association with the region, even though they also appear in the English of England. *A Dictionary of Canadianisms* (Toronto: W. J. Gage, 1967) includes 'words and expressions characteristic of

various spheres of Canadian life' without regard to their use elsewhere. The *Dictionary of Newfoundland English* (1982) includes coinages, survivals, and words and senses which have 'a distinctly high or general degree of use' there, and *The Australian National Dictionary* (1988) treats 'words and meanings of words which have originated in Australia, or which have a special significance in Australia because of their connection with an aspect of the history of the country'.

(2) **The etymological approach.** A more stringent definition of scope appears in *A Dictionary of Americanisms* (1951), which restricts inclusion to 'a word or expression that originated in the United States'. Similarly, the *Dictionary of Jamaican English* (1967, 1980) encompasses 'the English language in all the forms it has taken in Jamaica since 1655' which, in practice, means only borrowings, coinages, or sense developments entering English in Jamaica. Regional dictionaries of this type implicitly or explicitly acknowledge that the words and senses included are both distinctive and, from the Anglo-English perspective, alien. The *Dictionary of Bahamian English* (1982) focuses attention on 'words and expressions . . . which are not generally found in the current standard English of Britain or North America'; the *Dictionary of Prince Edward Island English* (1988) states forthrightly that it is 'a record of non-standard words as used, or once used, on Prince Edward Island'; *A Dictionary of South African English* (1987) defines its coverage as 'an unconventional part of the English vocabulary, namely that peculiar to or originating in South Africa'.

(3) **The loanword approach.** This approach describes words borrowed or adapted from a particular region of the world. Though there are many studies of the influence of various languages on English, only one dictionary has apparently been compiled so far on this basis: Gerard M. Dalgish's *A Dictionary of Africanisms* (1982), which lists words from African languages that appear in English.

Other regional dictionaries focus attention on subdivisions of the nation under scrutiny. Joseph Wright's six-volume *English Dialect Dictionary* (1898-1905) details usages according to the cultural geography of England. Frederic G. Cassidy's *Dictionary of American Regional English* (1985- ), however, presents a more complex definition of 'regional', by including: 'Any word or phrase whose form or meaning is not used generally throughout the United States but only in part (or parts) of it, or by a particular social group' and 'Any word or phrase whose form or meaning is distinctively a folk usage (regardless of region).' In *DARE*, regions are not fixed but

fluid and include social as well as geographical areas. Compare PERIOD DICTIONARIES OF ENGLISH. See DICTIONARY. [REFERENCE, VARIETY].  
R.W.B.

**REGIONAL ENGLISH LANGUAGE CENTRE.** See RELC.

**REGIONALISM** [19c: from *regional* and *-ism* as in *Scotticism*]. A term in linguistics for a word or other usage belonging to a region, either of the world or a country. An *Americanism* is a regionalism of English in world terms, while a *Kentuckyism* or *New Yorkism* is a regionalism in US terms. See *-ISM*. Compare LOCALISM. [STYLE, WORD].  
T.MCA.

**REGISTER** [1950s in this sense; 14c in origin, through French from Medieval Latin *registrum* a list or catalogue]. In sociolinguistics and stylistics, a variety of language defined according to social use, such as scientific, formal, religious, and journalistic. The term has, however, been used variously in different theoretical approaches, some giving it a broad definition (moving in the direction of *variety* in its most general sense), others narrowing it to certain aspects of language in social use (such as occupational varieties only). The term was first given broad currency by the British linguist Michael Halliday, who drew a contrast between varieties of language defined according to the characteristics of the user (*dialects*) and those defined according to the characteristics of the situation (*registers*). Registers were then subclassified into three domains: *field of discourse*, referring to the subject matter of the variety, such as science or advertising; *mode of discourse*, referring to the choice between speech and writing, and the choice of format; and *manner of discourse*, referring to the social relations between the participants, as shown by variations in formality. Compare DISCOURSE, CODE-MIXING AND CODE-SWITCHING, VARIETY. See CONTEXT, JARGON, RESTRICTED LANGUAGE, ROMANCE, USAGE. For details of some specific registers, see ACADEMIC USAGE, BIBLICAL ENGLISH, COMPUTER USAGE, JOURNALESE, LEGAL USAGE, TECHNOSPEAK. [LANGUAGE, STYLE, VARIETY].  
D.C.

**REGULAR** [15c: from Old French *reguler* (Modern *régulier*), from Latin *regularis* according to rule]. A term in general use and in linguistics for items and aspects of language that conform to general rules. A *regular verb* in English has four forms, and the construction of three of those forms is predictable from the first (uninflected) form: *play, plays, playing, played*. On the other hand *speak* is an *irregular verb*. It has five forms, the last two of which are unpredictable:

*speak, speaks, speaking, spoke, spoken*. See ANALOGY AND ANOMALY, IRREGULAR, RULE. [GRAMMAR].  
S.G.

**REGULAR VERB.** See REGULAR, VERB.

**RELATIVE CLAUSE.** In grammatical description, the term for a clause introduced by a relative word or a phrase containing a relative word. There are three types of relative clause: the *adnominal relative clause*; the *sentential relative clause*; the *nominal relative clause*.

**The adnominal relative clause** (also *relative clause, noun clause*). This clause modifies a noun, as in: (*the book*) *that I have just read*. It may be introduced by a relative pronoun such as *who, which, that*, or by a phrase containing a relative pronoun, such as *for which, to whom, in the presence of whom*, or by a relative adverb, such as *where, when*: (*the hotel*) *where he stayed*. Under certain circumstances, the relative pronoun may be omitted: (*the music*) *she composed*; (*the safe*) *I put the money in*. See RELATIVE PRONOUN. Adnominal relative clauses of the type (*She told me the reason*) *that they gave* are to be distinguished from the superficially similar appositive clause that also modifies a noun: (*She told me the reason*) *that they left*. The appositive clause is introduced by the conjunction *that*, which may sometimes be omitted: (*the reason*) *they left*. The difference between the two types of clause is that the appositive clause is complete in itself (*they left, not they left the reason*), whereas the relative clause requires the relative item to be present or to be understood, since it functions in the clause (*they gave that, meaning they gave the reason*). The relationship between a noun and its appositive clause differs from that between a noun and its relative clause in that it may be expressed by inserting the verb *be* between the two: *The reason is that they left*. Furthermore, the nouns that are modified by an appositive clause are restricted to a small set of general abstract nouns such as *fact, idea, news, report*.

**Restrictive and non-restrictive clauses.** The two major types of adnominal relative clauses are *restrictive relative clauses* and *non-restrictive relative clauses*. A *restrictive relative clause* (also *defining relative clause*) is a relative clause with the semantic function of defining more closely what the noun modified by the clause is referring to. In the sentence *My uncle who lives in Brazil is coming to see us*, the relative clause *who lives in Brazil* restricts the reference of *my uncle*. The restrictive modification would distinguish this uncle from any others who might have been included. A *non-restrictive relative clause* (also *non-defining relative clause*) adds information

not needed for identifying what a modified noun is referring to. The sentence *My uncle, who lives in Brazil, is coming to see us* contains the non-restrictive relative clause *who lives in Brazil*. This clause provides information about the uncle, but his identity is presumed to be known and not to need further specification. Non-restrictive relative clauses are usually separated from the noun phrases they modify by parenthetical punctuation (usually commas, but sometimes dashes or brackets). In speech, there may be a pause that serves the same function as the parenthesis.

**The sentential relative clause.** This clause does not modify a noun. It may refer back to part of a sentence (*She exercises for an hour a day, which would bore me*: that is, the exercising would bore the speaker), to a whole sentence (*He kept on bragging about his success, which annoyed all of us*: that is, the continual bragging about his success annoyed everybody), or occasionally to more than one sentence (*I didn't enjoy the work. The weather was atrocious. I felt thoroughly homesick. And the locals were unpleasant. Which is why I have never been back there again*). *Which* is the most common relative word to introduce a sentential relative clause, sometimes within a phrase (*in which case, as a result of which*), but other relative expressions with this type of clause include *whereon, whereupon, from when, by when*.

**Nominal relative clauses.** In the adnominal and sentential relative clauses, the relative word has as *antecedent*, a word or longer unit to which the relative word refers back: in *the game which they were playing*, the antecedent of *which* is *the game*, since in its clause *which* substitutes for *the game* (they were playing the game). The relative word in the nominal relative clause has no antecedent, since the antecedent is fused with the relative: *I found what* (that which; the thing that) *you were looking for*; *He says whatever* (anything that) *he likes*. Because they are free of antecedents, such clauses are sometimes called *independent* or *free* relative clauses. See ADJECTIVE CLAUSE, CLAUSE, COMMA. [GRAMMAR]. S.G.

**RELATIVE PRONOUN.** A pronoun that alone or as part of a phrase introduces a relative clause: *who* in *the man who came to dinner*; *on whom* in *the woman on whom I rely*. The relative pronoun refers to an antecedent (*the man/who, the woman/on whom*), and functions within the relative clause: as subject in *who came to dinner*; as complement of a preposition in *on whom*. There is a gender contrast between the personal set of *who* pronouns and the non-personal *which* pronoun, and there are case distinctions in the *who* set: subjective *who(ever)*, objective *whom(ever)*, genitive *whose*. However, except in a formal context, *who(ever)* replaces *whom(ever)*.

*That* can be used as a relative pronoun in place of *who, whom, or which*, except as complement of a preposition: *the woman who/that I rely on*, but only *the woman on whom I rely*. *That* can be omitted when functioning as object (*a man that I know; a man I know*), but not as subject (*a man that knows me*). The omitted pronoun is sometimes referred to as *zero relative*. See RELATIVE CLAUSE. [GRAMMAR]. S.G.

**RELIC**, full form *Regional Language Centre*. An educational institution (headquarters, Singapore) of the *Southeast Asian Ministers of Education Organization (SEAMEO)*, whose members are Brunei, Cambodia, Indonesia, Laos, Malaysia, the Philippines, Singapore, and Thailand, and associate members Australia, Canada, France, Germany, and New Zealand. RELC was founded in 1968 as the *Regional English Language Centre*, with the aim of improving the teaching of English as a second or foreign language in SEAMEO member countries. In 1977, its role was expanded to assist member countries in the development of all language education, and its full name was changed appropriately, while retaining the acronym. RELC assists member countries by providing training and study programmes that lead to postgraduate diplomas and degrees, and through research and development, regional seminars, publications, and information services. The annual *Regional Seminar* is well known and attracts scholars of international repute. RELC provides consultancy and advisory services and arranges exchange of personnel. Its publications include: two semi-annual periodicals, *RELIC Journal* (language teaching and research in South-East Asia) and *Guidelines* (a magazine for classroom teachers); the *RELIC Newsletter*; the *Annual Report*; a monograph series; an instructional series; occasional papers; and library and informational publications. The Library and Information Centre is a clearing-house of language-related information for the region. [ASIA, EDUCATION, LANGUAGE]. T.MCA.

**RELIEF PRINTING.** See LETTERPRESS.

**RENAISSANCE** [French: rebirth]. Also **Renasce** [From Latin *renascentia* rebirth]. The period of renewed influence of classical culture, beginning in 14c Italy and in England usually dated from about 1476 (the introduction of printing by William Caxton) or 1485 (the accession of the Tudors, culminating in the Elizabethan age). The close of the Renaissance in Britain is usually dated to the beginning or end of the Commonwealth (1649–60). Though the term (first used in English in 1840) inaccurately suggests an abrupt change from the culture of

the Middle Ages, several 16c features increasingly distinguished Renaissance English from its medieval precursor: an enormous influx of new vocabulary; a characteristic exuberance of literary style; the impact of the Reformation, especially the increase of printed works in English and the consequent rapid growth of literacy; the increase of national pride and of confidence in the vernacular for serious writing; the spread of English in Britain and Ireland and to the New World; and the arrival of some features of English structure such as the verb suffix *-s* in place of older *-th* (*has* for *hath*, *goes* for *goeth*), so that Shakespeare can use both in a line like 'The ripest fruit first falls, and so doth he'. Compare REFORMATION. See CAXTON, EARLY MODERN ENGLISH, ELIZABETHAN, JACOBAN, LATIN<sup>1</sup>. [EUROPE, HISTORY]. W.F.B.

**REPARTEE** [17c: from French *repartie* retort, the feminine past participle of *repartir*]. A swift, sharp, and amusing reply, and conversation that is full of such replies. Repartee is counter-punching wit, the skill of the pointed, face-saving retort to language or behaviour that may lead to one's losing face: 'If you were married to me,' said Lady Astor to Winston Churchill, 'I'd put poison in your tea.' 'If I were married to you,' Churchill retorted, 'I'd drink it.' Repartee can be scripted (as when Shakespeare invents repartee for the fools and gentlefolk of his comedies), but it is generally taken to be spontaneous. The purport of repartee is to stop verbal aggressors in their tracks. Occasionally, the contest is friendly, and the contestants will make room for one another in the to-and-fro moves of a slanging match enjoyed by all, but more often repartee consists of the hostile move and the annihilating response. The huffy complaint, 'I didn't come here to be insulted' prompts the retort 'Where *do* you go to be insulted, then?'

The aggressor may devise a formula (such as 'Have you stopped beating your wife?') which appears to preclude effective retort. In such cases the one option for repartee is to return the challenge in the same form (such as 'Have you stopped making mischief?'), but this is unsatisfactory, and can only produce a Mexican stand-off, in which neither side dares fire. True repartee always beats the gunman to the draw. The image of the gunman is by no means amiss, since repartee is a kind of duelling, an activity displacing physical violence, which may follow, but as a rule only when one or other of the verbal duellists is humiliatingly dumbfounded. The scuffles of the schoolyard are often prefaced by crude exercises in repartee (*You're illiterate, see?*—*Well, you're illegitimate, see?*), in which the contestants work themselves up into a combative rage. More sophisticated practitioners,

for example among Cockneys, Glaswegians, Liverpudlians in Britain and urban blacks in America (with their verbal rituals of *sound-ing*, *signifying*, *capping*, and *the dozens*), win prestige for their successful recourse to the word that serves as counter-punch or knockout blow. See BADINAGE, BANTER, HUMO(U)R, PATTERN. [STYLE]. W.N.

**REPertoire** [1840s: from French *répertoire* notebook, catalogue, list of works, from Latin *repertorium* inventory. Compare REPERTORY]. (1) In general terms, a list or stock of works that can be performed by a theatrical or other group or of skills, techniques, and devices available to a performer or in an occupation. (2) In linguistics and language teaching, the range of languages or varieties that an individual speaker can command, especially to perform particular social roles. The term also refers collectively to the whole set of varieties within a speech community. Increasing one's linguistic repertoire is an index of growing fluency in a language. Foreign language learners at an elementary level have a limited repertoire of a single style. Advanced speakers have an ability to use and respond to several varieties, such as formal/informal (in both speech and writing), regional, occupational, and other styles. In the case of bilingual or multilingual communities, speakers are able to choose between different languages in their repertoire (*code-switching*), which enables them to convey different kinds of social rapport and identity. See CODE, CODE-MIXING AND CODE-SWITCHING, DIGLOSSIA, REGISTER, VARIETY. [EDUCATION, LANGUAGE]. D.C.

**REPERTORY** [16c: from French *répertoire* a stock of plays, from Latin *repertorium* an inventory. Compare REPERTOIRE]. A theatre with a regular company and the resources to perform a variety of old and new plays, such as the Elizabethan theatres. Modern repertory developed in the late 19c, distinct from travelling companies and assembling a cast for a new production and disbanding it at the end of the run. In Britain, both the Royal Shakespeare Company and the National Theatre are repertories. See DRAMA, THEATRE. [LITERATURE]. R.C.

**REPETITION** [14c: through French from Latin *repetitio* a seeking again]. Doing, saying, or writing the same thing more than once. The recurrence of processes, structures, elements, and motifs is fundamental to communication in general and language in particular. Such repetition occurs at all levels, starting with rhythm. The distinctive rhythm of English derives from recurring syllabic stresses: *If whát/ you sáy/ is trúe/ I'd bét/ter gó*. Poetry intensifies such rhythms,

iambic pentameter in particular formalizing the stress-timed rhythm of English: 'While thús/ I stóod,/ intént/ to sée/ and héar,/ One cáme,/ methóught,/ and whís/per'd ín/ my éar' (Pope, 1715). In addition, the repetition of shared sounds creates rhyme. These lines of Pope's have the rhyme pattern *aabb*: *hear/ear, raise/praise*. The use of poetic and rhetorical devices such as alliteration and assonance produces repetition of sounds and letters and other effects, as in the jingle-like:

Nature, it seems, is the popular name  
for milliards and milliards and milliards  
of particles playing their infinite game  
of billiards and billiards and billiards  
(Piet Hein, *Grooks*, 1966)

Similarly, syntactic and rhetorical repetition can produce emphatic or climactic effects:

Lord Wilson's memoirs are not as dull as Lord Stockton's, nor as sad as Lord Avon's, nor as queer as Lord Bradwell's, but Lord! they are as worthless as any of them (*Independent*, 21 Oct. 1986).

In everyday conversation, people 'repeat themselves', often in slightly different ways, to ensure that the core of their message will not be missed. Such repetition spreads among several people in a conversation:

A: (Having just pulled a Christmas cracker, reads the riddle inside) Oh this one's awful. You won't want to hear this one. It's terrible.

B: Go on, let's hear it.

C: Yeah, let's hear it.

A: No, you won't want to hear it. I tell you, it'll make you ill.

C: Come on, let's all be ill together.

B: Yeah, let's hear it.

A: You really mean that. You want to hear it?

(cited by David Crystal, *English Today* 14, Apr. 1988)

Such repetition sustains conversation. It shows that the participants accept each other (whether they agree or not) and that they can create miniature dramas together. In formal writing, however, such repetition is generally avoided, both for the sake of economy and in favour of a tradition of 'elegant variation'. See ANADIPLOSIS, ANAPHORA, CONVERSATION, EPANALEPSIS, JINGLE, PARALLELISM, REDUPLICATION, TAUTOLOGY. [STYLE]. T.MCA.

**REPORTED SPEECH.** See DIRECT AND INDIRECT SPEECH.

**RESPELLING**, also **re-spelling**. (1) Spelling a word, etc., for a second time. (2) A lexicographical technique or system in which the pronunciation of English words is shown by means of a fixed set of letters and diacritics in which each letter unit has only one value: for example, *o* with the value in *hope* (usually

regardless of accent variations). Most present-day respelling systems include the schwa or weak vowel [ə]. A dictionary that uses such a system not only describes it in detail in the introduction but also usually displays a set of key word-values at the bottom of each page, for easy consultation. In Britain, the key words of the *Chambers English Dictionary* (1988) are: *fâte; fâr; hûr; mîne; môte; fôr; mûte; mōon; fōot; dhen* (then); *el'əmənt* (element). In the US, the key words (etc.) of *The Random House Dictionary* (1987), with the key letters in roman, are: 'act, cāpe, dāre, pārt; set, ēqual; if, ĩce; ox, ōver, ōrder, oil, bōōk, bōōt, out; up, ūrge; child, sĭng; shoe; thĭn, that; zh as in treasure. ə = a as in alone, e as in system, i as in easily, o as in gallop, u as in circus; ² as in fire (fĭr), hour (ou²r). l and n can serve as syllabic consonants, as in cradle (krād'l), and button (but'n). The only current alternative to respelling is phonetic symbols, such as those of the International Phonetic Alphabet. IPA symbols representing the RP accent are standard in British learners' dictionaries and have become more common in recent years in British mother-tongue dictionaries: compare recent editions of *The Concise Oxford Dictionary*: the 7th in 1982 has respelling; the 8th in 1990 uses IPA. Respelling remains standard in the US. [REFERENCE, WRITING]. T.MCA.

**RESTORATION, The.** The period in the social, cultural, and literary history of England, Scotland, and Ireland from the re-establishment of monarchy in 1660 through the reign of Charles II (until 1685), and sometimes extended to include the reign of James II and VII (1685-8). The period was marked by a reaction, especially among the upper classes, to the puritanical austerity of the preceding years. The comedy of manners popular during this period is referred to as *Restoration comedy*. Compare AUGUSTAN, COMMONWEALTH, JACOBAN. See COMEDY, DRAMA, EARLY MODERN ENGLISH, ENGLISH LITERATURE, PROSE. [EUROPE, HISTORY]. T.MCA.

**RESTRICTED CODE.** See ELABORATED AND RESTRICTED CODE.

**RESTRICTED LANGUAGE** [1960s]. A reduced form of a language: 'Some registers are extremely restricted in purpose. They thus employ only a limited number of formal items and patterns [and] are known as *restricted languages*' (M. A. K. Halliday *et al.*, *The Linguistic Sciences and Language Teaching*, 1964). Such a system is often artificial and highly specialized, created and used with a particular end in mind: for example, *Basic English*, limited in its syntax and lexis, but meant to be used as an international medium; *Seaspeak*, a form of English

limited to specific procedures and terms, serving to facilitate the safe movement of shipping; *headlines*, a register reduced in syntax and lexis, used to draw attention to news and other reports, and to indicate their content. See AIRSPEAK, ARTIFICIAL LANGUAGE, BASIC ENGLISH<sup>1</sup>, CONTACT LANGUAGE, ELABORATED AND RESTRICTED CODE, HEADLINE, INDEXING LANGUAGE, JARGON, MAKE-SHIFT LANGUAGE, NATURAL LANGUAGE, NUCLEUS, PIDGIN, REGISTER, SEASPEAK. [EDUCATION, LANGUAGE, STYLE]. T.MCA.

**RESTRICTIVE AND NON-RESTRICTIVE MODIFICATION.** See ADJECTIVE.

**RESTRICTIVE AND NON-RESTRICTIVE RELATIVE CLAUSE.** See RELATIVE CLAUSE.

**RETROFLEX** [Early 20c: from Latin *retroflexus* bent back]. Sometimes *retroflexed*. A term in phonetics for sounds, especially /r/, made with the tip of the tongue curled back and raised towards the palate. These r-sounds occur in such rhotic varieties of English as AmE (non-Southern), CanE, IndE, IrE, and the accents of south-west England, in which postvocalic /r/ coalesces with a following alveolar consonant in words like *worse* and *hard*. The process is known as *retroflexion*. In the languages of the Indian subcontinent, retroflex consonants such as /ʈ/ and /ɖ/ are common and occur in South Asian English. See R-SOUNDS. [SPEECH]. G.K.

**RETRONYM** [1970s: from Latin *retro* backward, and Greek *ónuma* name]. A semi-technical term for (1) A phrase coined because an expression once used alone needs contrastive qualification: *acoustic guitar* because of *electric guitar*, *analog watch* because of *digital watch*, *manual typewriter* because of *electric/electronic typewriter*, *mono sound equipment* because of *stereo sound equipment*. Retronyms emerge when contrast becomes necessary: 'The fast food market is bucking a worldwide neurosis about health . . . What's new then? Well, a lot of money is being invested in the most declining market of all—what you might call slow food, the traditional sit-down restaurant' ('Burger Boredom', *Independent*, 24 Feb. 1990). (2) A word that spells another word backward: *warts*. See REVERSAL, -ONYM. [WORD]. T.MCA.

**REVERSAL** [20c in this sense]. Also **retronym**. Semi-technical terms for a word that spells another word backwards: *warts*. Accidental reversals are established words in both directions: *doom*, *straw*. Deliberate reversals form a new word: the trade name *Trebor*; the BrE slang *yob* ('a backward boy': a lout). Such reversals are sometimes used for effect in utopian and

satirical writing, such as: (1) Samuel Butler's novel *Erewhon* (1872), which is set in a land where Victorian ideas and values are reversed. Crime is an illness, illness a crime. The local goddess *Ydgrun* reverses *Mrs Grundy*, a character in Thomas Morton's *Speed the Plough* (1798) and a symbol of rigid moral propriety. Erewhonians have such names as *Yram* and *Nos-nibor*. To make the name of his land easier to read and say, Butler amended the strict reversal *Erewhon*. (2) *The Study of Man* (1936), a pseudo-academic paper by the US anthropologist Ralph Linton, which described the culture of the *Nacirema*, a people living between the Cree and the Yaqui Indians. In a sequel, 'Body Ritual among the Nacirema' (1965), Horace M. Miner added information about their culture hero *Notgnihsaw* and their temple, the *latipso*. See ANAGRAM, BACK SLANG, BUTLER, HYPALLAGE, PALINDROME, RETRONYM, SATIRE, WILDE. [WORD]. T.MCA.

**REVIEW** [16c: from French *revue* seen again]. (1) A general survey of any kind: a *review of recent events*. (2) An article, especially in a newspaper, magazine, or other periodical, that offers a critical assessment of a book, monograph, article, play (whether performed live, on radio, or on television), motion picture, or electronic product: a *book review*. In such contexts, the terms *reviewer* and *critic* are virtual synonyms. (3) A journal or magazine that prints only or mainly reviews: a *literary review*; *The Edinburgh Review*; *The New York Review of Books*. See ELT DOCUMENTS, ENGLISH TODAY, JOURNAL, MAGAZINE, PERIODICAL, QUARTERLY REVIEW OF DOUBLESPEAK, SCOTTISH PUBLISHING. [MEDIA, WRITING]. T.MCA.

**REVIEW OF ENGLISH LANGUAGE TEACHING.** See ELT DOCUMENTS.

**REVISE.** See PAGE PROOF.

**R-FUL, R-FULL.** See R, RHOTIC AND NON-RHOTIC.

**RHEME.** See DISCOURSE ANALYSIS.

**RHETORIC** [14c: from Old French *rethorique* (Modern *rhétorique*), Latin *rhetorica*, from Greek *rhētorikḗ tekhnḗ* the craft of speaking, from *rhētōr* a speaker, orator]. (1) The study and practice of effective communication. (2) The art of persuasion. (3) An insincere eloquence intended to win points and get people what they want. All three senses have run side by side for more than 2,000 years. For many people who concentrate on the first sense, rhetoric is a deeply significant subject whose neglect impoverishes

education and makes a high standard of literacy harder to attain. For others, who pay more attention to the second and particularly the third sense, it is generally specious and hypocritical (*empty rhetoric, mere rhetoric*). In the late 20c, rhetoric has an explicit and an implicit aspect. Explicitly, many 20c language professionals refer to rhetoric as archaic and irrelevant, while for some philosophers of communication and for many teachers of writing it is a significant and lively issue. In the latter circles, there is discussion of a 'new rhetoric' that blends the best of the old with current insights into the nature of communication. It is, however, an ironic measure of the centuries-old strength of rhetoric that many of its principles, concepts, and devices are implicit in Western society, taken as given by educated users of languages like English, French, and German. Terms like *analogy*, *antithesis*, *dialectic*, and *metaphor* had their beginning among the rhetoricians of ancient Greece, as did many of the techniques of courtroom argument, public speaking, advertising, marketing, and publicity. In such areas, the principles, terms, and practices of rhetoric are alive, and widely discussed, though not necessarily under the name *rhetoric*.

**Origins.** In ancient societies with no awareness of writing, the ability to speak informatively, cohesively, and memorably was essential and admired. In such societies, chiefs, bards, and seers used a variety of techniques to gain attention and ensure retention of information (in their own as well as their listeners' minds). Linguistic techniques included: rhythm; repetition; formulaic lists and descriptions; kinds of emphasis; balance and antithesis; ellipsis; and words and devices to evoke mental images. Generic shapes (*genres*) designed for the accurate retention and effective delivery of messages included: genealogy; praising and blaming; supplication and lamentation; proverbial expressions of wisdom; statements of law; threats and warnings; and other manoeuvres intended to influence and persuade.

**Greek rhetoric.** In the course of time, such techniques were organized into bodies of received knowledge. In some societies, they were largely a part of religious ritual, as in India; in others, such as Greece, they were part of the craft of speaking which in the 5c BC became the foundation of education in city states like Athens and Sparta. The story is told of exiles who returned to Syracuse, a Greek colony in Sicily, after the overthrow of a tyrant. Because they needed to organize their claims to appropriate land, they hired teachers to help them argue their cases, and, as a result, the craft of rhetoric emerged through pleading in the Syracusan court. Itin-

erant teachers known as *sophists* (wise ones) then taught this forensic art alongside logic, a subject which was associated with the new craft of writing. Rhetoric's foremost exponents and analysts were Gorgias, Isocrates, Plato (all 5-4c BC), and Aristotle (4c BC). Of their rhetorical works, however, only Plato's *Phaedrus* and Aristotle's *Rhetoric* have survived. As writing became commoner, elements of the oral craft were transferred to prose composition and efforts were made to harmonize the rules of speech and writing with those of logic. The devices of rhetoric, however, did not lose their links with poetry or their practical ties with the law. As a result, rhetoric came to be viewed in two ways: as the high moral and philosophical art of speech and writing, and as a low art of winning arguments and impressing the gullible. Because of the varied nature of their audiences, student orators were encouraged to study their listeners and adopt a suitable *rhetorical character* while arguing a case, shedding it afterwards like an actor's mask.

**The five canons.** Many manuals were compiled on the subject, such as the Latin treatise *Rhetorica ad Herennium* ('Oratory for Herennius': anonymous, 1c BC). These works usually listed five *canons* or *offices* of rhetoric, concerned with gathering, arranging, and presenting one's material. The names and nature of the canons, though generally unfamiliar nowadays as aspects of rhetoric, are by and large familiar in education, linguistics, philosophy, and general informed discussion. The canons are:

(1) Greek *hêuresis*, Latin *inventio*. Finding or researching one's material. The speaker or writer assesses an issue, assembles the necessary material, and begins to work on the appropriate arguments.

(2) Greek *taxis*, Latin *dispositio*. Arranging or organizing one's material. Here, the orator puts the parts of the discourse in order, starting with the *exordium* or formal opening, then proceeding with the *narration*, including the division into various points of view, with proofs and refutations, and closing with the *conclusion*.

(3) Greek *lêxis*, Latin *elocutio* or *educatio*. The fitting of language to audience and context, through any of three styles: the high-and-grand, the medium, and the low-and-plain (with examples of the good and bad applications of all three). Included in this 'style' section are the traditional rhetorical devices and figures of speech.

(4) Greek *hupôkrisis*, Latin *pronuntiatio* or *actio*. Performance, including the arsenal of techniques to be used in proclaiming, narrating, or in effect acting. This aspect was concerned with

live audiences but also covered work on papyrus and parchment.

(5) Greek *mnēmē*, Latin *memoria*. Training of the mind, to ensure accurate recall and performance in public assembly or court of law.

In addition, rhetoric was related to time. *Epideictic* or *demonstrative* discourse catered for the present time (in debate, during ceremonies, at commemorative events, etc.), *deliberative* discourse looked to the future (in planning and theorizing), and *forensic* or *judicial* discourse judged the past, especially in courts of law (in assessing guilt or innocence). In all such discourse, the speaker could appeal to *páthos* (the emotions, the heart), to *lógos* (reason; the head), and/or to *êthos* (character; morality). The five canons, three kinds of discourse, and three kinds of appeal reflect an enthusiasm for taxonomy often expressed through contentious and legalistic hair-splitting, which came to characterize the subject in the late first millennium BC.

**Roman rhetoric.** Republican Rome shared the Greek interest in debate and legal argument, and therefore considered rhetoric essential to public life. Classics like Aristotle's *Rhetoric* were augmented by the lawyer Cicero (2-1c BC), who produced among other works the *De inventione* (On Making your Case) and the *De oratore* (On Being a Public Speaker), and by Quintilian (1c AD), author of the *Institutio oratoria* or *Institutiones oratoriae* (Foundations of Oratory). The systematization of rhetoric served the Empire well, helping to develop Latin as a language of literacy throughout the dominions. Imperial Rome, however, generally discouraged free and democratic debate, with the result that style and effect became more important than integrity. The American commentator James J. Murphy has noted (1982, below):

At the heart of the Roman approach is the conviction that linguistic ability (*facilitas* is Quintilian's term) is a single, unitary human capacity, regardless of whether it is employed in reading or speaking or hearing or writing. Like a muscle, linguistic ability can be strengthened by purposefully stretching it into new uses, and, like a muscle, it can be reinforced by the repetition of varied uses. Thus, rewriting Greek prose into Latin verse exercises half a dozen specific abilities of form recognition and creativity.

Some of the schools in which this approach to rhetoric was taught outlived the Empire and survived into a new age, in which St Augustine of Hippo (4-5c) put it to work in the service of Christian doctrine.

**Medieval and Renaissance rhetoric.** Aristotle and Cicero had a profound influence on education in medieval Christendom. Through the works of Martianus Capella (5c), Cassiodorus (5-6c), and St Isidore of Seville (6-7c), their principles

became part of Scholasticism, leading to the *trivium* (the three ways) of grammar, rhetoric, and logic-cum-dialectic, studied by aspirants to Latin learning and clerical orders. The trivium was the foundation for the *quadrivium* (the four ways) of arithmetic, geometry, astronomy, and music-cum-harmony. Together, these made up 'the seven liberal arts', the core programme of theocratic and general education. Cicero had been the first to use the phrase *artes liberales* (liberal arts), the model not only for medieval and Renaissance scholarly debate but for contemporary liberal arts colleges and degrees and the education they seek to provide. When the complete text of Quintilian was rediscovered in a Swiss monastery in 1416, it helped animate the revival of classical learning known as the Renaissance. Scholars like Peter Ramus (16c), however, saw rhetoric less as a way of developing speech than as a means of teaching writing, whose importance was much greater than in classical times, both to the Church and the new nation-states. The five ancient canons were reorganized, assigning *inventio* and *dispositio* to dialectic and largely ignoring *memory* (although learning by heart remained a prime element in education). Renaissance rhetoric served the growth of literacy in the vernaculars as well as Latin, focusing on composition, style, and the figures of speech.

**Rhetoric and English.** During and after the Renaissance, rhetoric dominated education in the humanities in England, Scotland, and France, remaining little changed until the later 19c. During this period, the ancient tension between 'good' and 'bad' rhetoric continued, as the following extracts indicate. The first, from *The Schoolmaster* (Roger Ascham, 1563), praises Cicero and everything Latinate; the second, from *Hudibras* (Samuel Butler, 1663) mocks the ornate and empty:

*Ascham.* There is a way, touched in the first book of Cicero *De oratore*, which, wisely brought into schools, truly taught, and constantly used, would not only take wholly away this butcherly fear in making of Latins but would also, with ease and pleasure and in short time, as I know by good experience, work a true choice and placing of words, a right ordering of sentences, an easy understanding of the tongue, a readiness to speak, a facility to write, a true judgment both of his own and other men's doings, what tongue soever he doth use.

*Butler.* For rhetoric, he could not ope  
His mouth but out there flew a trope;  
And when he happened to break off  
In the middle of his speech, or cough,  
He had hard words ready to show why,  
And tell what rules he did it by.  
Else, when with greatest art he spoke,  
You'd think he talked like other folk;  
For all a rhetorician's rules  
Teach nothing but to name his tools.

The fragmentation of rhetoric that began in the Renaissance created whole new subjects in succeeding centuries. The third and fourth canons (*elocution* and *pronunciation*) became in the 18c courses in 'proper' speech, taught by actors like Thomas Sheridan and John Walker, both of whom published pronouncing dictionaries of English. At the beginning of the 17c, Francis Bacon initiated an interest in gesture, which was developed by John Bulwer in *Chirologia* ('the speech of the hand', 1644), which in turn prompted studies of gesture and body language by Charles Darwin and Alexander Melville Bell in the 19c and Edward T. Hall and Desmond Morris in the 20c.

During the 17-19c, the methods of Cicero and Quintilian were standard in British and American universities. Yet, while students learned the classical languages and their rhetoric, their teachers were often in the forefront of change to English. The Scottish scholar Adam Smith chose English rather than Latin when giving his lectures; his friend Hugh Blair was appointed to the first chair of Rhetoric and Belles Lettres at the U. of Edinburgh in 1762, the precursor of all chairs of English language and literature around the world. In 1806, the first Boylston Professor of Rhetoric and Oratory at Harvard, Massachusetts, was John Quincy Adams (later sixth US president). He was charged to instruct students in accordance with the models and exercises of Quintilian, but when Francis J. Child occupied the same chair in 1851, it was as Professor of English. In 18c society at large, issues of judgement and taste became more important than aesthetics and rhetoric, and among Romantics in the 18c and 19c freedom and feeling were more intriguing than discipline and refinement. As the 19c progressed, the ancient theorists became of less and less interest, except to classical scholars, and rhetoric became for many either the (empty) forms of public speaking or the study of writing and composition in schools. Some of the ancient aims and practices were, however, sustained in the debating societies of British universities and the departments of speech and public address in US colleges.

**Conclusion.** The ancient rhetoricians assumed that truth was absolute and separable from a text. Many 20c critics and scholars, however, see truth as relative and texts as self-contained objects whose 'truth' is re-made by every reader. The ancients regarded discourse as dynamic, embodying an intention and a design fitted to an audience, much as politicians and lawyers still see it. Many present-day literary critics, however, see discourses and especially texts as complete in themselves and distinct from their creators, the intention and ideas of the creator

having reduced importance or no importance at all if they are not directly shown in the text. The dynamic therefore lies not with the writer but with the reader, in the re-creation of meaning. The emphasis has accordingly been on structure, coherence, and interpretation rather than on creation and the techniques of dissimulation that may accompany it, except insofar as these can be deconstructed to reveal a variety of possible interpretations. Even so, classical rhetoric survives. It has given shape to much of the Western world's inheritance of oracy and literacy. Everyone who speaks and writes a Western language or any language influenced by the forensic and literary traditions of the West is willy-nilly affected by it. Anyone who speaks in public or writes for professional purposes engages in the processes first listed in the five canons. In journalism and publishing, on radio and television, in the theatre and cinema, the old names may or may not be known, but the tools continue to be used.

**RHETORICAL QUESTION** [19c]. A question that expects no answer. The answer may be self-evident (*If she doesn't like me why should I care what she thinks?*) or immediately provided by the questioner (*What should be done? Well, first we should . . .*). The question is often asked for dramatic effect: 'GLENDDOWER. I can cal spirits from the vasty deepe. / HOTSPUR. Why so can I, or so can any man, / But wil they come when you do cal for them?' (Shakespeare, *1 Henry IV*, 3, 1). Rhetorical questions are sometimes announced with such a phrase as *I ask you* (when nothing is in fact being asked): 'Garn! *I ask you, what kind of a word is that? / It's Ow and Garn that keep her in her place, / Not her wretched clothes and dirty face*' (Alan Jay Lerner, *My Fair Lady*, 1956). [STYLE]. T.MCA.

**RHODESIA**. A territorial name during the British colonial period in Africa, based on the surname of Cecil John Rhodes, a British mining magnate and adventurer. The one-time colonies of *Northern Rhodesia* and *Southern Rhodesia* are now the republics of *Zambia* and *Zimbabwe*. See EAST AFRICAN ENGLISH, ZAMBIA, ZIMBABWE. [AFRICA, NAME]. T.MCA.

**RHOTACISM** [Early 19c: from Latin *rhōtacismus*, Greek *rhōtakismōs* making a *rhō* or *r*-sound]. A special, excessive, or idiosyncratic use of /r/, such as *rolling one's rs* in a stage Scottish accent: 'Rotacism . . . a vicious pronunciation common in the northern parts of England' (Robley Dunglison, *Medical Lexicon*, 1855, referring to the uvular Northumbrian burr); 'The privileged families, with pronounced rhotacism, are still there to help kill pheasants'

(*Times Literary Supplement*, 11 Feb. 1977, referring to an /r/ pronounced like /w/). Compare BURR, GUTTURAL, RHOTIC AND NON-RHOTIC. See R, R-SOUNDS. [SPEECH, STYLE]. T.MCA.

**RHOTACIZE, RHOTACISE**. See R.

**RHOTIC AND NON-RHOTIC**. [Later 20c: from Greek *rhō*, the letter symbol for /r/, and *-tic* as in *neurotic*]. Terms in phonetics for two kinds of spoken English, a fundamental contrastive feature in the language. In one set of accents of English, *r* is pronounced wherever it is orthographically present: *red, barrel, beer, beard, worker*. Such a variety is variously known as *rhotic, r-pronouncing, or r-ful(l)*. In another set of accents, *r* is pronounced in syllable-initial position (*red*) and intervocally (*barrel*), but not postvocally (*beer, beard, worker*). In such positions it is vocalized (turned into a vowel) and not pronounced unless another vowel follows. Such a variety is variously known as *non-rhotic, non-r-pronouncing, or r-less*. The mainly rhotic and non-rhotic communities in the English-speaking world are: (1) *Rhotic*. Canada; India; Ireland; south-western England; Scotland; the northern and western states of the US apart from the Boston area and New York City; Barbados. (2) *Non-rhotic*. Black Africa; Australia; the Caribbean, except for Barbados; England apart, in the main, from the south-west; New Zealand; South Africa; the southern states, the Boston area of New England, and New York City vernacular speech; and Black English Vernacular in the US; Wales. Foreign learners from such backgrounds as the Romance languages and Arabic and those who have Network American as their pronunciation model tend to be rhotic. Foreign learners in Black Africa, and from China and Japan, as well as those who have RP (BBC English) as their model tend to be non-rhotic. See R, RHOTACISM, R-SOUNDS. [SPEECH]. G.K., T.MCA.

**RHYME** [13c, rival etymologies: (1) From Old French *ritme*, Latin *rhythmus, ritmus*, Greek *rhythmōs* flowing, acquiring a classical respelling in the 17c. (2) From Old French *rimer* to rhyme, Gallo-Romance \**rimare* to put in a row, Old High German *rīm* series, from c.1600 influenced by *rhythmus*. (3) A complex mix of both]. Also **rime**. A general and literary term for the effect produced by using words that end with the same or similar sounds: in the last stressed vowel (*fire/lyre/desire/aspire*) and in following vowels and consonants (*inspiring/retiring; admiringly/conspiringly*). Rhyme has been a major feature of English verse since the early medieval period and is widely regarded as essential to it, although a great deal of verse is unrhymed. Rhyme is a

distinctive part of stanza form, but is also used in poems written in continuous couplets. The pattern of rhyme is commonly shown by using a letter to represent each terminal sound: a rhyming couplet is *aa* (*views/Muse*), a quatrain in which each alternate line rhymes is *abab* (*art/beat/heart/feet*). Rhyme can be a difficult constraint, but it provides form and can give prominence to words that express the theme or mood of the poem:

How can I, that girl standing there,  
My attention fix  
On Roman or on Russian  
Or on Spanish politics? . . .  
And maybe what they say is true  
Of war and war's alarms,  
But O that I were young again  
And held her in my arms!

(W. B. Yeats, 'Politics', 1939)

Such satisfaction of the expectation which the rhyme scheme arouses in the reader is a mark of the poet's skill. A predictable rhyme may disappoint expectation and trivialize a poem:

I plodded to Fairmile Hill-top, where  
A maiden one fain would guard  
From every hazard and every care  
Advanced on the roadside sward.

(Thomas Hardy, 'The Dear', 1901)

while an obviously forced rhyme damages the poet's artistic credibility:

When it came to be known a whale was seen in the  
Tay,  
Some men began to talk and say  
We must try and catch this monster of a whale  
So come on, brave boys, and never say fail.

(William McGonagall, 'The Famous Tay Whale', 1883)

The musical quality which resides in some combinations of sound is a matter of aesthetics and response to it can be subjective, but it is certainly part of the pleasure of rhymed verse. Rhyme has a strong mnemonic value and is used in educational mnemonics and advertising jingles as well as literary verse. English is poor in rhyme as compared with Romance languages like Italian and Portuguese and with Scots, enriched through its elided final consonants: *fa* and *a* (*fall* and *all*) rhyming with *blaw* and *snaw* (*blow* and *snow*). There is not, for example, a large range of rhymes for words as semantically important as *God*, *spirit*, and *life*; the frequent occurrences of such words in poetry eventually makes the chosen rhymes seem stale and predictable. This has made many poets favour simple rhyme schemes, or verse which is either unrhymed or includes unrhymed lines among rhymed ones. Changes in pronunciation can destroy rhyme: present-day readers may not respond well or at all to such earlier rhymes as *sounds/wounds*, *join/divine*. Conversely, the study of rhymes is a

valuable aid in attempts to determine the pronunciation of former times. At any time, the validity of certain rhymes may be disputed, since pronunciation is not uniform: rhyming *morn* and *dawn* can seem reasonable to speakers of dialects that do not sound the *r* in this position, while rhotic speakers find it curious, disturbing, even displeasing. Despite the comparative paucity of rhyme in English, it can appear inadvertently in speech or written prose, when the effect is generally comic or inept (sometimes prompting the wry remark, 'I'm a poet, and I don't know it').

See ALLITERATION, ASSONANCE, BLANK VERSE, EYE RHYME, FEMININE ENDING, FREE VERSE, HALF RHYME, INTERNAL RHYME, JINGLE, MASCULINE ENDING, OTTAVA RIMA, POETRY, PROVERB, RHYMING COMPOUND, RHYMING SLANG, VERSE. [LITERATURE, SPEECH]. R.C.

**RHYMING COMPOUND** A compound word whose elements rhyme, such as *jet set*, *hotshot*, *sky-high*, *zoot suit*. See COMPOUND WORD, JOURNAL-ELSE, RHYME. [WORD]. T.MCA.

**RHYMING SLANG.** A form of slang that may have originated in the 18c, probably among the London Cockneys, as part of creative word-play and thieves' cant. It is unlikely, however, that there was ever a systematic code of rhymes used to create a private language. Rhyming slang was part of the general patter of traders and others, used as much for amusement as for secret communication. It was never a major feature of Cockney usage, and became more widely known through its use on radio and television. There are two stages in its formation and use:

(1) *Creating two-term phrases.* The effect depends on the creation of a binary expression that rhymes with a single everyday word: *apples and pears* with *stairs*, *ball of chalk* with *walk*, *bowl of water* with *daughter*, *Bristol City* with *titty*, *butcher's hook* with *look*, *trouble and strife* with *wife*. The rhyme need not be perfect and is sometimes based on an existing slang usage: *Lakes of Killarney/barmy*, *cobbler's awls/balls*, where *barmy* means 'mad' and *balls* stands for 'testicles' and by extension 'nonsense'.

(2) *Dropping the second term.* The second element in the pair may then be dropped: *Bristol Cities* becomes *Bristols*, as in *Get a load of those Bristols* (Just look at those breasts), *butcher's hook* becomes *butcher's*, as in *Take a butcher's at him* (Take a look at him), and *cobbler's awls* becomes *cobbler's*, as in *What a load of old cobblers* (What crap).

Rhyming slang may never have been limited to London and is found in other parts of the British Isles, in Australia, and in the US. It is, however, most commonly associated with Lon-

don, at least as regards its origins, and much of its spread has been due to the broadcasting and other dissemination of Cockney and pseudo-Cockney usages. See COCKNEY, PRIVATE LANGUAGE, RHYME, SLANG. [STYLE]. T.MCA.

**RHYTHM** [16c: from Latin *rhythmus*, Greek *rhythmos* flow]. (1) The flow and beat of such things as sound, melody, speech, and art. (2) In music, the arrangement of beats and lengths of notes, shown in notation as *bars* or groups of beats, the first beat of each bar carrying the stress. (3) In poetics, the arrangement of words into a more or less regular sequence of long and short syllables (as in the quantitative metre of Latin) or stressed and unstressed syllables (as in the accentual metre of English), and any arrangement of this kind. (4) In phonetics, the sense of movement in speech, consisting of the *stress*, *quantity*, and *timing* of syllables. The rhythm of a language is one of its fundamental features, acquired early by a child and hard for an adult to change. Its basis is pulses of air in the lungs: technically, in the pulmonic air-stream mechanism. Such a pulse or beat is produced by the intercostal respiratory muscles and is known as the *breath pulse*, *syllable pulse*, or *chest pulse*. This pulse serves as the basis for the syllable and a flow of such pulses creates the series of beats in the flow of syllables. Occasionally, a pulse can occur but be silent, as when someone says 'kyou for thank you; this is technically referred to as *silent stress*. When a chest pulse has greater force, it produces a *stress pulse* whose outcome is usually a stressed syllable. Ordinary chest pulses occur at a rate of about five per second, stress pulses less frequently. David Abercrombie notes: 'These two processes—the syllable process and the stress process—together make up the pulmonic mechanism, and they are the basis on which the whole of the rest of speech is built' (*Elements of General Phonetics*, 1967, p. 36).

**Stress-timed and syllable-timed languages.** The two processes are coordinated in different ways in different languages, and the way in which they are combined produces a language's rhythm, which is fundamentally a matter of timing the pulses. In order to account for differences in timing among languages, a distinction is often drawn between *stress-timing* and *syllable-timing*, according to whether the foot or the syllable is taken as the unit of time. Broadly speaking, the languages of the world divide into *stress-timed languages* such as English, Modern Greek, and Russian, and *syllable-timed languages* such as French and Japanese; many languages, such as Arabic and Hindi, do not fit either category, and it is doubtful whether any language fits either category perfectly. In any language, timing is not

uniform throughout speech: it is affected by tone group boundaries, and slows down in final position. Nevertheless, the distinction is a useful pedagogical device: English learners of French can aim at syllable-timing, and French learners of English can aim at stress-timing. In some styles of delivery, including poetry reading and the recital of the liturgy, the rhythm appears more marked than usual. This is probably due to adjustments to the intonation (such as narrowed pitch range, and tones narrowed to the point where they become level) that background the intonation and leave the rhythm more prominent.

In a *stress-timed* rhythm, timing is based on stressed syllables that occur at approximately regular (*isochronous*) intervals: that is, the unit of rhythm known as the *foot* has about the same duration irrespective of the number of syllables it contains. According to this view, in the phrase *||dozens of| old| photographs||*, *dozens* of takes about the same time to say as *old*. In practice, such languages are not strictly isochronous, but rather tend towards it: the syllables of polysyllabic feet are compressed, and monosyllabic feet lengthened. A second feature of such languages is the reduction of unstressed syllables. This applies to the weak syllables of words and unstressed words. In a *syllable-timed* rhythm, timing is based on the syllable. This does not mean, however, that all syllables are equal in duration: they vary according to the vowels and consonants they contain. Syllable-timed languages lack the rhythmical properties of stress-timing: syllables are not compressed between stresses, and unstressed syllables are not reduced. Although syllable-timing is not used in native-speaker English (except occasionally for comic purposes), it is common in the kind of English spoken by people whose first language is syllable-timed, as is usual in Africa. The consequent lack of reduction might superficially appear to make speech clearer, but by obscuring the stress pattern it reduces the information normally carried by stress and reduces intelligibility. See LINGUISTIC TYPOLOGY, METRE/METER, S(C)HWA, SPELLING, SPRUNG RHYTHM, STRESS, SYLLABLE, TONE, WEAK VOWEL. [SPEECH]. G.K., T.MCA.

**RICHARDS, I(vor) A(rmstrong)** [1893-1979]. English critic and poet, born in Sandbach, Cheshire, educated at Clifton and at Magdalene College, Cambridge, and a teacher at Cambridge, Peking, and Harvard universities. His publications include three volumes of poetry, and three plays, the *Principles of Literary Criticism* (1924), and *Practical Criticism* (1929). In the last of these, he analysed the results of setting unscribed poems before students and seeking their opinions of them; cloaked in this

anonymity, poets generally considered great were often poorly received and minor works highly praised. Richards attacked traditional literary criticism as vague and lacking in clear principles; his regard for irony and ambiguity, and his insistence on close attention to the text, had a profound effect on F. R. Leavis and William Empson in Britain and the New Critics in the US. He was interested in linguistic philosophy and in the teaching of English as a foreign language, collaborating with C. K. Ogden first on *The Meaning of Meaning* (1923), a classic text of semantics, then on the formulation of Basic English. See index. [BIOGRAPHY, EDUCATION, EUROPE, LITERATURE]. R.C.

**RICHARDSON, Samuel** [1689–1761]. English novelist. Born in Derbyshire. He moved to London at the age of 17 and was apprenticed to a stationer, in whose trade he prospered, acquiring his own business. He was asked to produce a manual of model letters for those with little skill in writing, and this gave him the idea of a novel written as a series of letters: *Pamela, or Virtue Rewarded* (1740), a story of the troubles and ultimate marital reward of a young woman who defends her virtue. It was followed by *Clarissa, or the History of a Young Lady* (1747–8) and by the story of a virtuous man, *Sir Charles Grandison* (1753–7). Richardson's novels were translated into several languages and won wide approval, although Henry Fielding disagreed and conceived *Joseph Andrews* (1742) as a parody of *Pamela*. Fielding may also have written an earlier anonymous parody: *An Apology for the Life of Mrs Shamela Andrews* (1741). The novels are long, with a message of rewards for good conduct and an ethic of success. The style is often heavy, but can be lively and straightforward. The conversations have a dramatic quality. The minute analysis of mood and motive, noting significance in the apparently trivial, foreshadows later fiction. The epistolary method helps in this; though artificial, it provides immediacy and a shifting narrative view. Richardson satisfied the taste of the rising middle class and is a key figure in the history of the English novel. See index. [BIOGRAPHY, EUROPE, LITERATURE, STYLE]. R.C.

**RICKERT, Edith** [1871–1938]. American philologist and author, born in Dover, Ohio, and educated at Vassar College, New York, and the U. of Chicago (Ph.D., 1899). As Professor of English at the U. of Chicago, she achieved a reputation as a Chaucerian scholar through years of research for a revision of the Chaucer *Life Records* and for *The Text of the Canterbury Tales, Studied on the Basis of All Known Manuscripts* (eight volumes, 1940), a landmark of US

literary scholarship written with John Matthews Manly. *Chaucer's World* (1948), compiled from her research and edited after her death by her students, is a study of life in Chaucer's London. Rickert met Manly while working in the US War Department's ciphers and codes division during World War I. Their collaboration also resulted in a series of college textbooks including *Contemporary British Literature* (1921) and *Contemporary American Literature* (1922). These works helped to establish contemporary literature as an area of academic study at US universities. In *New Methods for the Study of Literature* (1927), she introduced linguistic methodology that entailed graphic and statistical methods for the representation of imagery, words, rhythm, and visual devices, as well as sentence and tonal patterns of literary language. Rickert also published works on research and writing, literary criticism, English romances and carols, and French literature. Her creative writing included the novel *Severn Woods* (1930), short stories, and children's literature. [AMERICAS, BIOGRAPHY, LITERATURE]. R.W.B.

**RIDDLE** [Probably related to Old English *ræd* a story, interpretation]. A statement or question that is intentionally worded in a puzzling or misleading way. The earliest English riddles were mystifying poems describing people or objects, as in the riddles of *The Exeter Book* (c.940). In translation, one such riddle runs: 'A moth ate words. That seemed to me, / when I heard of that strange happening, a curious event, / that the insect, a thief in darkness, devoured / what was written by some man, his excellent language / and its strong foundation. The thievish stranger was not / at all the wiser from swallowing those words' (as edited and translated by W. S. Mackie, 1934. The answer is a bookworm). Later versified riddles (often called *enigmas*) included poetry of quality, such as several poems by Sir Thomas Wyatt (16c) and Catherine Fanshawe's 'Twas whispered in heaven (c.1814). Nowadays, riddles are usually *conundrums*, questions which use a pun or double meaning: *When is a door not a door?—When it's ajar; What dog keeps the best time?—A watch-dog*. In the 16c, conundrums were amusements for adults (as in Shakespeare's *The Merry Wives of Windsor*, where Slender wishes to impress Anne Page with some riddles), but are now generally thought appropriate only for children or inclusion in Christmas crackers. See DOUBLE MEANING, PUN, WORD GAME. [WORD]. T.A.

**RIME**. See RHYME.

**R-LESS**. See R, RHOTIC AND NON-RHOTIC.

**ROCK, The.** See GIBRALTAR, NEWFOUNDLAND.

**ROGET, Peter Mark** [1779-1869]. English physician and taxonomist, born in London, the son of John Roget of Geneva, a Calvinist pastor, and Catherine, daughter of the legal reformer Sir Samuel Romilly, of Huguenot origin. He was educated in a private school and at the U. of Edinburgh, where he graduated in medicine at the age of 19. Roget helped found the Manchester Medical School and created the North London Dispensary, to which he gave his services without payment for 18 years. He was actively involved in the founding of the U. of London, was the first Fullerian Professor of Physiology at the Royal Institution, contributed to the *Encyclopaedia Britannica* (6th and 7th editions) and to various other works, and wrote treatises on electricity and magnetism for the Society for the Diffusion of Useful Knowledge (of which he was a co-founder). Roget was secretary of the Royal Society and for 22 years (1827-49) edited its *Proceedings*. Among other activities and hobbies he invented a slide rule that measured the powers of numbers, experimented with a calculating machine, set chess problems for the *Illustrated London News*, and brought out in 1845 what was probably the first pocket chessboard. He retired from professional practice in 1840, and in 1849, at the age of 70, began to develop a project he had first worked on in Manchester in 1805: a thematic arrangement of words published in 1852 as *Roget's Thesaurus*. See next and index. [BIOGRAPHY, EUROPE, REFERENCE]. T.MCA.

**ROGET'S THESAURUS**, full title *Roget's Thesaurus of English Words and Phrases*. A work of reference by Peter Mark Roget, published in 1852 by Longman. Its aim was 'to supply, with respect to the English language, a desideratum hitherto unsupplied in any language; namely, a collection of the words it contains and of the idiomatic combinations peculiar to it, arranged, not in alphabetical order as they are in a Dictionary, but according to the *ideas* which they express' (original introduction). The *Thesaurus* has been revised many times, has sold over 30m copies worldwide in different editions, and has become an institution of the language. The words in *Roget* are arranged in listed sets like the genera and species of biology. The intention has not been to define or discriminate them, but to arrange them in synonymous and antonymous groups; it serves as both a word-finder and a prompter of the memory regarding words one knows but could not recall to mind.

The *Thesaurus* was sustained by the Roget family for three generations: Roget himself, a

physician and librarian, brought out several revisions before his death in 1869, after which his son John Lewis Roget, a lawyer, continued the work (adding a word-index, which greatly aided use of the book, and a major revision in 1879) until his death in 1908, when his son Samuel Romilly Roget, an engineer, took over, providing a major revision in 1936. During Samuel's time as editor, the boom for crossword puzzles developed, creating a demand for the word-finder that neither his father nor grandfather could have predicted. He sold the rights to Longman in 1952, the year before he died. Since then there have been three revisions: by Robert A. Dutch (1962), Susan M. Lloyd (1982), and Betty Kirkpatrick (1987). There have been many changes between 1852 and 1987, but Roget's basic structure survives in the Longman work, whose latest edition is entitled *The Original Roget's Thesaurus* to distinguish it from various adaptations by other publishers, especially alphabetic versions in the US.

The classification of the *Thesaurus* is hierarchical, with six major headings: *Abstract Relations, Space, Matter, Intellect, Volition, Affections*. In the 1982 and 1987 editions, *Affections* has been replaced by *Emotion, religion, and morality*. Each of these headings is further divided, *Abstract Relations* for example into: *Existence, Relation, Quantity, Order, Number, Time, Change, Causation*. Each subheading is further subdivided, *Existence* for example into: *Existence, Inexistence, Substantiality, Unsubstantiality, Intrinsicity, Extrinsicity, State, Circumstance*. At this third level come the specific sets of words, among which are italicized keywords preceded by numbers. These keywords, which were introduced by Dutch, serve as cross-references to sets elsewhere in the book. The following is the content and layout of part of set no. 1 in the 1987 edition:

*existence*, being, entity; absolute being, the absolute 965 *divineness*; aseity, self-existence; monad, a being, an entity, ens, essence, quiddity; Platonic idea, universal; subsistence 360 *life*; survival, eternity 115 *perpetuity*; preexistence 119 *priority*; this life 121 *present time*; existence in space, prevalence 189 *presence*; entelechy, realization, becoming, evolution 147 *conversion*; creation 164 *production*; potentiality 469 *possibility*; ontology, metaphysics; realism, materialism, idealism, existentialism 449 *philosophy*.

In addition to such thematic sets, which make up the bulk of the present-day book, a detailed index shows where a listed word may be found: for example, *existence* is shown as appearing not only in *existence* 1, but also in *presence* 189, *materiality* 319, and *life* 360. Longman claim that over 1.25m words are covered in the 1987 Kirkpatrick edition. Also in 1987, Bloomsbury (London) brought out a facsimile edition of the

original *Thesaurus*, with an introduction by Laurence Urdang. See LEXICOGRAPHY, LONGMAN, MODEL, ROGET, THEMATIC ORDER, THESAURUS. [REFERENCE, WORD]. T.MCA.

**ROLL.** (1) See SCROLL, VOLUME. (2) See R-SOUNDS.

**ROMAJI.** See JAPAN, ROMAN.

**ROMAN** [Before 10c: from Latin *Romanus*]. (1) Relating to Rome, its people, customs, empire, religion, etc. (*the Roman alphabet, a Roman holiday, the Roman Catholic church*); an inhabitant or citizen of Rome (*the ancient Greeks and Romans*). (2) Both with and without an initial capital: relating to the upright style of typeface that dominates the printing of texts in English (of which this volume is an example) and many other languages, and that derives from the letter shapes used in ancient Rome; Roman type or lettering: *a text printed in Times Roman; a mixture of Roman and Gothic; substituting italic for roman*. (3) Used of handwriting: round and bold, in the Roman style. (4) The Roman alphabet: *Malay can be written in both Roman and Arabic*. When the characters of another writing system are transliterated into Roman, they are said to be *Romanized* or, more commonly, *romanized*. Systems of romanization include *Wade-Giles* and *Pinyin* ('classifying sound') for Chinese and *Hepburn* and *romaji* ('Roman letters') for Japanese. See ALPHABET, ARABIC, CHINA, GOTHIC, ITALIC, JAPAN, LATIN<sup>1</sup>, LETTER<sup>1</sup>, TRANSLITERATION, TYPE, TYPEFACE, TYPOGRAPHY. [TECHNOLOGY, WRITING]. T.MCA.

**ROMAN A CLEF.** See NOVEL.

**ROMAN ALPHABET.** See ALPHABET, ROMAN.

**ROMANCE** [13c: from the Middle English noun *romauce* Romanic language or a composition in such a language, from the Old French adjective *romanz/romans* Romanic, in turn from the adverb in the phrase *romanz escrire*, from Popular Latin *romanice scribere* to write in the Roman way (that is, in vernacular Latin). Compare Modern French *roman* a novel, and the *Romance languages*. The history of this word provides a striking example of semantic change from specific to general reference and from one to many senses].

Originally a book or narrative, usually in a Romance language, and especially one in which adventure, love, and chivalry are prominent, often with an accompaniment of magic and wonder. Medieval sources included garbled versions of classical myth and legend, Christian and Biblical story (including the so-called *Matter of*

*Jerusalem*), the legends of the Arthurian cycle (*the Matter of Britain*), and the deeds of Charlemagne and Roland (*the Matter of France*). An early example in English, where the form *romaunt* was commonly used, was the 13c verse poem *King Horn*. In the 14c, notable examples included *Sir Orfeo*, derived from the Orpheus story, and the Arthurian *Sir Gawain and the Green Knight*. The genre evolved into prose romances, such as Sir Thomas Malory's *Le Morte D'Arthur* (15c), Robert Greene's *Perimedes the Blacke-Smith* (1588), and Thomas Lodge's *Rosalynde* (1590), 'hatcht in the stormes of the Ocean, and feathered in the surges of many perillous seas'. Shakespeare based the plot of *The Winter's Tale* (c.1611) on Greene's *Pandosto: The Triumph of Time* (1588).

The classical and rationalist mood of the late 17c and 18c brought a more pejorative sense, in which a romance was remote from reality, gave false ideas about the world, and included personal fantasy verging on self-deception and the deception of others. John Evelyn writes of a knight who was 'indeed a valiant gentleman; but not a little given to romance, when he spoke of himself' (*Diary*, 6 Sept. 1651). This attitude later coexisted with the enthusiasm of the writers of the Romantic Movement for old stories as part of the medieval or Gothic revival: for example, Keats wrote:

When I behold upon the night's starr'd face  
Huge cloudy symbols of a high romance  
(Sonnet: 'When I have fears', 1818)

With the rise of realism in the novel, a romance tended to be a less serious and more frivolous story, in which the writer's imagination played freely, especially on historical subjects. In the 20c, although the earlier meanings continue, in popular terms a romance is a story of love between a woman and a man, in which a happy ending follows a variety of vicissitudes. Such a tale is part of *romantic fiction*. Major writers of this genre include Georgette Heyer, Barbara Cartland, and Judith Krantz; many others write for such companies as Mills and Boon, as well as supplying short stories to weekly and monthly women's magazines. In addition, romantic motifs and formulas figure to varying degrees in many other genres, in print, in motion pictures, and on television. In colloquial usage, a romance is also a love-affair, with emphasis on its idyllic nature. Both these love-affairs and the stories that describe them contribute to the widespread concept *romantic love*, which for at least a century has had a pervasive influence on relations between the sexes in the Western and Westernizing world. In the 20c, a 'romantic' approach to life ranges from passive escapism into novels

and films to an enthusiasm for 'real-life' adventures, quests, thrills, and passions for which the tradition of romance provides models that many find highly satisfying ('I'm a romantic at heart'). Because of the pervasiveness of romantic hopes or expectations, commercial advertising of consumer goods (from cosmetics and clothing to 'the holiday of a lifetime') commonly employ the images and language of romance:

New England quickly steals the heart. White clapboard houses clustering round a needle-spined church . . . forest-cloaked hills and mountainsides . . . cattle safe-grazing in green meadows . . . racing streams in whose waters trout grow sleek and fat . . . lakes of shining water . . . a rugged coastline of headlands, sheer sea cliffs and lonely, rocky coves that are home to lobster and clam. It's a land of endearing charm. Its people, independent, proud and warm of heart, love to share their rich heritage with visitors—and to feed them on waffles with local maple syrup, apple cider, blueberries, pumpkin pie and the finest, most succulent fresh lobster to be found anywhere (from 'See the Glory of New England in the Fall', *Woman and Home* for great-value holidays: a 10-night holiday for £799, *Woman and Home*, Mar. 1990).

To sell a particular vacation, this feature article seeks to cast a linguistic spell, romanticizing New England through such devices as metaphor, alliteration, emotive imagery, and colourful epithets, and suggesting that an experience of it is possible for surprisingly little outlay. Such 'applied romanticism' takes elements of a venerable and popular genre and puts them, often with considerable success, at the service not of kings but of commerce. Such writing is, however, no more contrived than the telling of the original romances; it serves an end, as they did. *Romanticism* as a concept, however, is one stage removed from *romance*: it consciously (sometimes cynically) chooses to invest life with the qualities of romance. Where romance is supposed to be spontaneous and free, the domain of the untrammelled spirit, romanticism is as deliberate as its opposite, *classicism*. In art and language, its forms are as well delineated as an Ionic column or an Augustan couplet. See CLASSICISM, GOTHIC, ROMANTICISM, SCIENCE FICTION. [LITERATURE, STYLE]. R.C., T.MCA.

**ROMANCE LANGUAGES** [From Medieval Latin *romanicum/romancia* a Latin vernacular language, from *Romanicus* of Roman origin]. Sometimes **Romanic languages**. Languages descended from the Latin of the Roman Empire, such as French and Spanish.

**Identifying the languages.** The number of Romance languages varies according to the criteria used to establish them, such as: (1) Status as a national language, in which case there are five (French, Italian, Portuguese, Romanian, and Spanish/Castilian) or six if Romansch or

Rhaeto-Romanic (a language of Switzerland) is included. (2) Possession of a literary tradition, in which case there are nine (the above, plus Catalan, Gallego (in Spain), and Occitan (including Provençal), in France). (3) Geographical or other distinctness, in which case there are 15 (the above, plus Andalusian (Spain), Friulian, Ladin (northern Italy), Sardinian and Sicilian (southern Italy), and Judeo-Spanish, also called Judezmo and Ladino (the Romance equivalent of Yiddish)). Extinct Romance varieties include Dalmatian (Yugoslavia) and Mozarabic (the language of Christians in Moorish Spain). There are also a number of Romance pidgins and creoles, including Haitian Creole French and Papiamentu, a mixed Portuguese-Spanish creole in the Netherlands Antilles. Romance languages are spoken by nearly 400m people and their creoles by nearly 6m more.

**Origins and development.** With the disintegration of the western Roman Empire (3–5c), forms of Vulgar or Popular Latin developed as the languages of many successor nations. In Italy, the transition was relatively straightforward, post-Latin varieties supplanting their closely related Italic predecessors, but elsewhere the success of the early Romance languages was largely at the expense of Celtic languages, especially in Spain and France. Germanic invaders of Italy, Spain, and France did not retain their own languages, and even as late as the 10c, Scandinavian invaders gave up Norse in favour of French when they settled what came to be known as Normandy. No Romance language developed in the Roman provinces of Britain, probably because Popular Latin was not so firmly established there, Celtic continued to be strong, and the language of the Anglo-Saxon settlers was little exposed to Latin influence before or after they left their homes on the north-western European coast. However, the many Latin loanwords in Welsh suggest that a Romance language might have developed in southern Britain if conditions had been more like those of Gaul and Spain.

**Romance in English.** The Germanic language of Britain developed largely free of Latin and of Romance influence until the 11c, when the Conquest of 1066 took Norman French across the Channel. For at least two centuries thereafter, a Romance language dominated social, political, and cultural life in much of the British Isles and had such an impact on the vocabulary and writing of English that, like Albanian and Maltese, English has been called a *semi-Romance language*; as Owen Barfield observed, 'the English language has been facetiously described as "French badly pronounced"' (*History in English*

*Words*, 1962, p. 59). Because of the French connection and the associated influence of Neo-Latin, English shares with the Romance languages a vast reservoir of lexis, concepts, allusions, and conventions. The accompanying table (which could be greatly expanded) lists 20 everyday English words and their equivalents in French, Spanish, Italian, and Portuguese.

English	French	Spanish	Italian	Portuguese
art	art	arte	arte	arte
bandage	bandage	venda	fasciatura	venda
bed	lit	cama	letto	cama
date (fruit)	date	dátil	dattero	tâmara
eagle	aigle	águila	aquila	águia
garden	jardin	jardin	giardino	jardim
January	janvier	enero	gennaio	janeiro
February	février	febrero	febbraio	fevereiro
legal	légal	legal	legale	legal
magic	magie	magia	magia	mágico
mountain	montagne	montaña	montagna	montanha
oak	chêne	roble	quercia	carvalho
parcel	paquet	paquete	pacco	pacote
poor	pauvre	pobre	povero	pobre
price	prix	precio	prezzo	preço
question	question	pregunta	domanda	pergunta
round	rond	redondo	rotondo	redondo
solution	solution	solución	soluzione	solução
value	valeur	valor	valore	valor
war	guerre	guerra	guerra	guerra

The table shows not only the similarity (even visual identity) of many items, but also, roughly in proportion to the various vocabularies, certain patterns of dissimilarity. Three English words of non-Romance origin (*bed*, *garden*, *oak*) are included, one of which (*garden*) is an example of how, on occasion, Germanic words have been adopted into Romance. See BORROWING, CREOLE, EUROPEAN LANGUAGES, FRENCH, IBERIAN LANGUAGES, ITALIAN, LATIN<sup>1</sup>, LATIN<sup>2</sup>, LINGUA FRANCA, PIDGIN, POLARI, PORTUGUESE, SABIR, SPANISH. [LANGUAGE]. T.MCA., J.M.G.

**ROMANI**, also **Romany**, **Romanes** [c.1800: from *Romani Romani*, the plural of *Romano*, the adjective from *rom* a man, husband, Gypsy (a word also used in English, collectively as *the Rom* and attributively as in *the Rom people*), and *Romanes* (adverb) in the *Romani* way: probably from a source related to Sanskrit *ṛoma* a low-caste minstrel and dancer. The name *Gypsy/Gipsy*, an adaptation of *Egyptian*, arises from the mistaken assumption (c.16c) that the *Rom* came from Egypt, whereas the original homeland of a major element in the community was northern India in the first millennium AD]. (1) A member of the *Romani* community, c.6–10m worldwide: ‘The most frequent explanation which I was given by Gypsies [for the name] was: “We’re Romanies ’cos we always roam”, (Judith

Okely, *The Traveller-Gypsies*, 1983). (2) The originally Indo-Aryan language of the Gypsies, whose c.60 dialects vary greatly because of the community’s wide dispersal and the impact of such languages as Persian, Greek, Hungarian, and English in places where Gypsies live or have lived. Most of the estimated 250,000 speakers of *Romani* are at least bilingual. In recent years, efforts have been made to create a standard written form for this largely non-literate language, in part so as to promote a stronger sense of ethnic identity among the *Rom* people. In Britain, there is a continuum of usage from a conservative inflected form called *Romnimos*, spoken by some 500 people mainly in Wales, to *Anglo-Romani*, *Angloromani*, *Anglo-Romany*, or *Romani English*, spoken by some 80,000 around the country, not all of them ethnic Gypsies. *Anglo-Romani* may contain more *Romnimos* or more English, depending on circumstances, and has often been regarded as a Travellers’ argot: ‘To patter romany, is to talk the gipsy flash’ (James H. Vaux, *A new and comprehensive vocabulary of the flash language*, 1812). An excerpt from the New Testament in *Anglo-Romani* runs:

There was a rich mush with kushti-dicking purple togs. Every divvus his hobben was kushti. By his jigger suttied a poor mush called Lazarus. Lazarus dicked wafedi, riffly as a juk. He was ready to scran anything he could get his vasters on or kur it from the rich mush’s table (The Gospel According to Luke, 16: 19–21, in *More Kushti Lavs*, the Bible Society, 1981) [*mush* man, *kushti* good, *dick* look, *divvus* day, *hobben* food, *jigger* door, *sutty* sleep, *wafedi* bad, *riffly* dirty, *juk* dog, *scran* eat, *vaster* hand, *kur* steal, *lavs* news].

Words from *Romani* borrowed into English tend to be slangy or informal; they include *mush* (‘moosh’: BrE slang) a friend, buddy, *nark* a (police) informer or spy (from *nāk* nose), and *pal* a friend. See Ian Hancock, ‘*Romani* and *Angloromani*’, in P. Trudgill (ed.), *Language in the British Isles* (1984). Compare SHELTA. See BORROWING, COCKNEY, EUROPEAN COMMUNITY, FLASH, INDIAN LANGUAGES, POLARI. [ASIA, EUROPE, LANGUAGE]. T.MCA.

**ROMAN NUMERAL** [18c]. A letter-like number used by the ancient Romans, part of a numeric system sustained, in both an upper- and lower-case form, to the present day as an alternative to arabic numerals, for such purposes as: showing numbers on buildings, etc. (upper case, as in *MDCVII*); representing the hours on clock faces (upper case); indicating the historical order of monarchs with the same name (upper case: *Henry VIII*, the eighth king of that name to rule England); enumerating items in lists and classifications (both upper and lower case, as in *III* and *iii*); and paginating the introductory pages in books (lower case, as in *xvi*). The basic symbols

derive from the fingers and the hand, *I* (= 1) originating as a raised index finger, *V* (= 5) as the fingers of the hand spread, and *X* (= 10) as a stylized version of two hands together. The numbers from 1 to 10 are *I, II, III, IIII* or *IV, V, VI, VII, VIII, IX, X*. Two or more letter symbols together are to be interpreted according to two rules: (1) If a letter is immediately followed by one of equal or lesser value, the two are added: *XV* makes 15. (2) If a letter is immediately followed by one of higher value, the first is subtracted from the second: *IV* makes 4. The higher numbers are *L* (= 50), representing half of *C* (= 100) the first letter of *centum* (hundred), *D* (= 500), and *M* (= 1,000) the first letter of *mille* (thousand). The number *MDCVII* ('1,000, 500, 100, 5, 1, 1') stands for either 1,607 or the year date 1607. A bar over a letter multiplies it by 1,000: a barred *M* is 1,000,000. The Roman system has no zero. See NUMBER<sup>1</sup>. [LANGUAGE, STYLE, WRITING]. T.M.C.A.

**ROMAN POLICIER.** See DETECTIVE STORY.

**ROMANTIC FICTION.** See ROMANCE.

**ROMANTICISM** [18c]. (1) Usually with an initial capital. A term referring to the ideas and attitudes of the *Romantic Movement* (late 18c, early 19c), a literary, artistic, musical, philosophical, and social movement which came as a reaction against 18c 'Augustan' neo-classicism and was linked with contemporary revolutionary and nationalist aspirations. In Britain, it covered two generations of writers, the first led by William Wordsworth and Samuel Taylor Coleridge, the second including Lord Byron, Percy Bysshe Shelley, and John Keats. The *American Romantic Period* occupied the mid-19c, with Henry Thoreau, Ralph Waldo Emerson, and Edgar Allan Poe. (2) Often without an initial capital. A general term suggesting romantic attitudes, ideas, ideals, and behaviour, especially when deliberately espoused as a way of life, style of writing, and the like.

**Nature.** In the 17c and early 18c, the term *romantic* was mainly pejorative, suggesting wild and disordered fancy. It came to be applied to landscapes and places appropriate to the old romances and passed from English, through French, into other European languages. Its first literary application was probably by Friedrich von Schlegel (1772-1829), an early German Romantic poet. Romanticism demands freedom in subject, form, and style: Coleridge saw poetry as shaped by the organic laws of imagination, not by external canons; Wordsworth believed that poetry should be 'the spontaneous overflow of powerful feelings'. Romantic literature is

strongly personal and subjective. In it, the individual is of supreme importance, and feeling is superior to reason. The artist, especially the poet, has a high function, but may be driven by the opposition of society into becoming an outcast rebel. The lyric was the most favoured poetic form, but long poems were also attempted in emulation of the epics: for example, Wordsworth's autobiographical *Prelude* (1805, revised 1850). The period also produced the novels of Walter Scott and the prose of Coleridge and Thomas De Quincey.

**Interests.** Romantic writers were interested in the Middle Ages, a time regarded by neo-classicists as barbaric. Keats in 'The Eve of St Agnes' gave an imaginative medieval setting to a narrative love poem. The supernatural was a source of fascination often linked with medievalism, as in Coleridge's 'Christabel' and, in language rather than setting, 'The Rime of the Ancient Mariner'. Nature became a major theme, described in detail and valued as a source of moral lessons, with a fresh sense of rapport between humanity and the natural world, as in Wordsworth's 'Lines Written above Tintern Abbey'. Romantic writing, although sometimes melancholy and haunted, was optimistic about the human capacity for goodness and the hopes of a new age. There was admiration for the presumed innocence of children, peasants, and other peoples in their supposed natural ('savage') state.

**Language.** A revolt against poetic diction led to a desire for more simple style in poetry. Wordsworth proposed 'fitting to metrical arrangement a selection of the real language of men in a state of vivid sensation' (Preface to the 2nd edition of *Lyrical Ballads*, 1800). Romantic poetry is generally characterized by the use of familiar words with few distortions of syntax. The poetry of nature in particular moved far from 18c artificiality. Contrast Crabbe and Wordsworth:

When winter stern his gloomy front uprears,  
A sable void the barren earth appears;  
The meads no more their former verdure boast,  
Fast bound their streams, and all their beauty lost.  
(George Crabbe, 'Inebriety', 1775)

My heart leaps up when I behold  
A rainbow in the sky:  
So was it when my life began,  
So is it now I am a man,  
So be it when I shall grow old  
Or let me die!

(William Wordsworth, 'My Heart Leaps Up', 1807)

However, Wordsworth did not always follow his own theory, nor were the Romantic poets uniform in style. Coleridge's revolt was towards more solemn and incantatory diction, as in: 'Five miles meandering with a mazy motion, /

Through wood and dale the sacred river ran'  
(*Kubla Khan*, 1816).

**Philology and folklore.** A development linked with the enthusiasm for medievalry was an increased interest in earlier forms of English. A few scholars had studied Old English texts since the 17c, particularly at Oxford, but in general it was supposed that English had emerged gradually from a cruder form to reach its highest quality towards the end of the 17c. Regard for the past coincided with the new comparative philology of the early 19c. By the middle of the century, Benjamin Thorpe, who had studied with Rasmus Rask in Denmark, and J. M. Kemble, a pupil of Jacob Grimm in Germany, produced new editions of nearly all the extant Old English poetry. The work of the Grimm brothers on early Germanic folklore was entirely in tune with Romantic interest in the 'primitive', and was part of an enthusiasm for folk traditions which also influenced the development of dialectology.

**Influence.** Although the dominance of Romanticism was over by the mid-19c, it influenced the early work of the Victorian poets. In poetry, the early work of W. B. Yeats and in fiction the novels of D. H. Lawrence are late manifestations of 'the Romantic spirit'. Such writers have had a great influence over many popular novelists (including writers of historical fiction and kinds of fantasy), as well as dramatic presentations on the cinema and television screen. The importance to some Romantic writers of 'romantic' love has also influenced the growth of a formulaic popular *romantic fiction* written and read throughout the English-speaking world. See AUGUSTAN, CELT, CLASSICISM, ENGLISH LITERATURE, GOTHIC, LITERARY CRITICISM, ROMANCE. [LITERATURE]. R.C.

## ROMANTIC MOVEMENT/PERIOD/ POETS/REVIVAL. See ROMANTICISM.

**ROMANY.** See ROMANI.

**ROOT** [16c in this sense]. (1) Also sometimes *radical*. In traditional grammar and philology, the element, often monosyllabic, left after all affixes have been removed from a complex word: *-ceive* in *receive*, *help* in *unhelpfully*, *act* in *reaction*. A root may or may not be a word, and may have several forms and meanings the further back it is traced in a language or languages. Compare BASE. (2) Also *root-word*. A word that is ancestral to a present-day word: the Latin verb *decidere*, the root of the English verb *decide* and the French verb *décider*. Compare ETYMON, ROOT-WORD. The classical elements in the vocabulary of English have often been listed and discussed, especially in textbooks and dictionaries,

as 'Latin and Greek roots', sometimes in the first sense given here, sometimes in the second sense, sometimes as a mix of the two. Both senses of *root* arise from a comparison between languages and plants, in which older forms of language are seen as hidden in the soil of history, nourishing the 'word-plants' that flourish above ground. Philologists and etymologists are the gardeners who sometimes dig them up for inspection.

In linguistics, a distinction is generally made not only between the two senses of *root* (above) but also between the terms *root* and *base*. The Latin *nescius* is the root or source of English *nice*, but is not a root in the philological sense. Rather, it consists of two elements, *ne* not, *scius* knowing. Its form cannot be detected anywhere 'inside' or 'under' present-day *nice*, which serves as a base for the formations *nicety* and *niceness*. *Ne* is a particle that also appears in *neuter*, and *scius* is made up of a linguistic root *sci* and an inflectional ending *-us*. *Sci* is present in the Latin *scientia* and its English derivative *science*; it is ancient, being the Latin 'descendant' of the Indo-European root *\*skei* to cut, split. This 'deep' primordial root also appears to underlie Old English *scinu* (Modern English *shin*), Old High German *scina* needle, Old Irish *scian* knife, Greek *schizein* to split, and Latin *scindere* to cut. See BASE, ETYMON, INDO-EUROPEAN ROOTS, ROOT-CREATION, ROOT-WORD, WORD-FORMATION. [HISTORY, WORD]. T.MCA.

**ROOT-CREATION.** A term in word-formation for the creation of a new root, base, or simple word. The process is rare compared with compounding and derivation, and is divided into *motivated root-creation* and *ex-nihilo root-creation*. By and large, motivated root-creation (in which a reason can be given for the formation of an item) is ad-hoc and echoic, the new form resembling one or more pre-existing forms. As with *cuckoo*, the new form may represent a real or imagined sound: *zap* the noise made by a ray-gun, *vroom* the sound of a powerful engine. By retaining the consonants and varying the vowel, a word like *splash* can be adapted to *splish*, *splosh*, *sploosh*, *splush*. In addition, a new form may be a reversal, an anagram, or some other adaptation of a pre-existing form. In *ex-nihilo* root-creation, however, there appears to be no lexicological way of accounting for the formation of a word: it has no known precursors, as with the trade name *Kodak* (invented in the US in 1888 by George Eastman) and the number *googol* (invented on request by a 9-year-old boy).

Although rare in general usage, *ex-nihilo* forms are common in fiction, and especially fantasy, in which writers often seek to escape the bonds of their language: Robert A. Heinlein's

Martian word *grok* suggests empathy and understanding: 'the ungrokkable vastness of ocean' (*Stranger in a Strange Land*, 1961). When sets of words are coined in a fantasy, however, escape from some degree of motivation is unlikely: for example, in Edgar Rice Burroughs's adventure novel *Tarzan at the Earth's Core* (1929), the inner world of Pellucidar is peopled by such creatures as the anagrammatic *tarag* and *jalok* (variants of *tiger* and *jackal*), the *thag* (a primeval ox, echoing *stag*), the *sagoth* (a gorilla-like hominid, echoing and perhaps blending *savage* and *Goth*), the clipped *horib* (a snake-like being overtly referred to as *horrid* and *horrible*), and the perhaps ex-nihilo *gyor*, a triceratops found on the *Gyor Cors* (the Gyor plains, whose name has a reduplicative quality). Such creations are usually nouns, but any part of speech is possible:

They first repeated the word 'sak' a number of times, and then Tars Tarkas made several jumps, repeating the same word before each leap; then, turning to me, he said, 'sak!' I saw what they were after, and gathering myself together I 'sakked' with such marvelous success that I cleared a good hundred and fifty feet (Burroughs, *A Princess of Mars*, 1912, ch. 4).

Although such ad-hoc creations seldom move into the wider world, some occasionally do. J. R. R. Tolkien's *hobbit* (1937) appears to echo and blend *hob* a rustic, and *rabbit*. John Wyndham's *triffid* (1951) echoes the botanical term *trifid* cleft three ways. The limits of actual or apparent root-creation are hard to establish, because it shades into such conventional processes of word-formation as turning names into words (*Hoover* becoming *to Hoover a rug*), blending (*smog* from *smoke* and *fog*), and abbreviation (*mob* from *mobile vulgus*). A classic clipping is *tawdry*, from *tawdrie lace* (16c), in turn from *Seynt Audries lace*, as sold at St Audrey's Fair at Ely in East Anglia (*Audrey* in turn being a Normanization of Anglo-Saxon *Etheldreda*). Such creations can reasonably be identified as 'roots' because they can and often do become the foundations of more complex forms, such as *hobbitomane*, *Hoovermatic*, *Kodachrome*, *mobster*, *smog-bound*, *tawdriness*, and *triffid-like*. See BASE, ECHOISM, FANTASY, NEOLOGISM, ONOMATOPOEIA, PHON(A)ESTHESIA, ROOT, WORD-FORMATION. [WORD]. T.MCA.

**ROOT-WORD**, also **root word**. A term in word-formation for a word, usually monosyllabic, that is prior or ancestral to one or more other words: *blood* the root-word of *bloody*, *bloodily*, *bloodhound*, *bloodthirsty*, *blood-thirstiness*, *cold-blooded*, *cold-bloodedly*, *bleed*, *bleeds*, *bleeding*, *nose bleed*. The term belongs in a group of related and sometimes overlapping terms with *root*, *base*, and *simple word*, and implies that every language has a certain number

or range of basic words and word elements, often presumed to be known by every user and listed somewhere. Although the common, high-frequency words of a language can more or less be so listed, the 'root' material of a language or group of languages is more than simply common words, and is distinct from what can be listed as everyday vocabulary. No one knows all the root forms of English or can easily decide whether certain freshly encountered items are new, old, meaningful, or meaningless. Any of the following might be ancient or have just been coined: *grise*, *quetch*, *smidge*, *tleen*. Checking in a dictionary does not guarantee a clear-cut answer about whether they are words or not: even the *OED* does not list all the monosyllables of English.

Some things can, however, be said of these and similar items: for example, that *tleen* is odd, because /tl/ as an initial cluster is phonologically un-English. If it occurs, it ought logically to be a borrowing from such a language as Tlingit in Alaska (which it is not, having been coined for the purposes of this article). The others, however, are possible; in the *Chambers English Dictionary* (1988), *grise* is listed as an obsolete verb (to shudder), *quetch* as a variant of *quich* (Spenser: to stir, cognate with *quake*). *Smidge*, though unlisted, could be authentic, a cousin of *smidge(o)n* and *smit*, which *Chambers* lists. Although used here as a novel root-word, its absolute novelty cannot be guaranteed: it may exist or have existed, somewhere, for some purpose, public or private, at some time. Used widely enough (for example, as a noun meaning a small amount, or as a verb meaning to smear in dabs), *smidge* could acquire an everyday use. Such items as *grise*, *quetch*, and *smidge* conform to a pattern of what English words are like, in terms of syllable, sound, and spelling. Items like *\*tleen*, *\*pwrg*, and *\*xacs* do not. However, as loans like *axolotl* from Nahuatl, *cwm* from Welsh, and *tsar* from Russian indicate, alien structure is no bar to entry into English. See BASE, ROOT, ROOT-CREATION, VOCABULARY CONTROL, WORD-FORMATION. [WORD]. T.MCA.

**ROPER RIVER CREOLE, ROPER PIDGIN.**  
See KRIOL.

**ROTTEN ENGLISH** [1980s]. A term used by the Nigerian writer Ken Saro-Wiwa to describe the mixed variety of English that he uses in the novel *Sozaboy* ['Soldier Boy'] (1985). In his preface, he says: 'Sozaboy's language is what I call "rotten English", a mixture of Nigerian pidgin English, broken English and occasional flashes of good, even idiomatic English. This language is disordered and disorderly. Born of a mediocre education and severely limited opportunities, it

borrowed words, patterns and images freely. . . . To its speakers, it has the advantage of having no rules and no syntax. It thrives on lawlessness.' An example in *Lomber Eighteen* (that is, 'Number' or Chapter 18):

To talk true, I was not thinking of all these things, I was just thinking of my mama and my young wife Agnes. If my mama die, what will I talk? If that sozaman have preganated my young darling or even sef killed her because she no gree 'am, what will I say? Ah, God no gree bad thing, God no gree bad thing. I must to find my mama and my wife. We must to all return to Dukana and build fine house to live inside.

Compare WEST AFRICAN PIDGIN ENGLISH. [AFRICA, VARIETY]. T.MCA.

**ROUGH** [From Old English *rūh*]. (1) Rude, unmannerly, impolite, uncouth: *rough words*. (2) (Of accents, voices, and sounds) discordant, jarring, grating, noisy, harsh: 'It requires very little skill to make our language rough' (Samuel Johnson, *Rambler* 92, 1751). See (A)ESTHETICS. [STYLE]. T.MCA.

**ROYAL.** See BOOK.

**ROYAL SOCIETY**, full name *Royal Society of London for the Promotion of Natural Knowledge*. The oldest continuously functioning scientific society in Britain and the world. It was founded in 1660 as the *Royal Society for the Advancement of Experimental Philosophy*, and granted royal charters in 1662 and 1663, when it acquired its present name. The Society arose out of small, informal groups that met from time to time to discuss scientific matters in the spirit of Francis Bacon; among its founding members were the architect Christopher Wren, the chemist Robert Boyle, and Bishop John Wilkins. Isaac Newton served as president from 1703 to 1727. In its origins, the Society was largely a Puritan venture; it therefore received little royal patronage or state support, and as a result enjoyed great freedom of expression and action (although members took care to exclude politics and religion from their discussions). In its early years, the Society showed a brief inclination to 'improve the English tongue, particularly for philosophic purposes', setting up in 1664 a committee with that end in view. Among its 22 members were the poets John Dryden and Edmund Waller, Bishop Thomas Sprat, and the diarist John Evelyn. However, the committee met only a few times and achieved nothing, despite considering a grammar of English and the omission of superfluous letters from the orthography. In his *History of the Royal Society* (1667), Sprat continued the discussion by arguing that the Society should require of its members 'a close, naked, natural way of speaking; positive expressions; clear senses; a native easiness; bringing all

things as near the mathematical plainness as they can; and preferring the language of artisans, countrymen, and merchants, before that of wits and scholars'. The Society took such matters no further, however, and this limited exercise was as close as England came to forming anything like the Académie française. The journal *Philosophical Transactions of the Royal Society*, begun in 1665, is one of the world's earliest periodicals; it was later complemented in the early 19c by *Proceedings of the Royal Society*, which was edited for many years by Peter Mark Roget, compiler of *Roget's Thesaurus*. Among its many projects, the Society sponsored the first scientific expedition to the Pacific, under James Cook, a venture that led directly to British settlement in Australasia and the spread of English among the Polynesians. See ACADEMY, ARTIFICIAL LANGUAGE, LONDON, ROGET. [HISTORY, MEDIA, OCEANIA].

T.MCA.

**ROYAL SOCIETY OF ARTS**, full form *Royal Society for the Encouragement of Arts, Manufactures and Commerce*. Short form *RSA*. A body founded in London in 1754 with a commitment to teach and test commercial skills, including proficiency in English. The Society conducted examinations for native and foreign users before 1800, and has been influential in the 20c in EFL and English for Adult Literacy and Immigrants. Since 1988, its EFL examinations have been administered internationally by the U. of Cambridge Local Examination Syndicate. These include examinations introduced in 1967 by the RSA examination board for teachers of English as a foreign language, leading to a certificate known as *Royal Society of Arts: Teaching English as a Foreign Language (RSA/TEFL)*. See EXAMINING IN ENGLISH, UCLES. [EDUCATION, MEDIA]. W.S.

**RP.** See RECEIVED PRONUNCIATION.

**R-PRONOUNCING AND NON-R-PRONOUNCING.** See RHOTIC AND NON-RHOTIC.

**RSA, RSA/TEFL.** See ROYAL SOCIETY OF ARTS.

**R-SOUNDS.** No other consonant of English is as variable as that represented by the letter *r*. Although /r/ is one phoneme in English, there are six ways in which it is pronounced: (1) *A post-alveolar approximant*. This is made by raising the tip of the tongue behind, but without touching, the alveolar ridge, the lips usually rounded, the lower lip brought close to the upper teeth. It is dominant in EngE and common in AusE and NZE. If the tongue movement is omitted, the result is a sound like /w/, suggested by (often facetious) spellings using *w* instead of *r*: *wound*

and wound the wugged woeks the wagged wascal wan. This usage has been noted in EngE variously: as an aristocratic shibboleth, an affectation, and a speech defect. (2) *A retroflex*. If the tip of the tongue is raised further and curled back towards the palate, the result is a retroflex *r*. It is dominant in the US, Canada, Ireland, and in the south-west of England, and gaining ground in Scotland. (3) *An alveolar flap*. If the tongue strikes the alveolar ridge as the tip is lowered, the result is a flapped *r*. This usage is characteristic of some varieties of IndE. (4) *An alveolar tap*. If the tongue strikes the ridge as the tip is raised, the result is a tapped *r*. This usage is dominant in ScoE, common among older speakers of RP in England, and typical of speakers of English in South Africa of Afrikaans background. When used by RP speakers in phrases like 'very American', Americans report hearing *Veddy Ameddican*. (5) *An alveolar trill or roll*. If the tongue is held in such a position that the air-stream causes it to vibrate against the alveolar ridge, the result is a trill or roll, a usage marked in Spanish by a double *r* (contrasting *pero*, 'but', with *perro*, 'dog'). It is widely regarded as a typically Scottish 'rolled *r*', and is so promoted in stage and jocular stereotypes. (6) *A uvular [r]*. If the tongue is pulled backwards towards the uvula, three kinds of *r* can be made: a uvular approximant, a uvular fricative, and a uvular trill (as in Parisian-French). Small numbers of speakers with a uvular *r* can be found in various parts of northern Britain, such as north-east England (the *Durham* or *North-umberland burr*) and south-east Scotland (the *Berwickshire burr*). See ALVEOLAR, BURR, CONSONANT, GEORDIE, INTRUSIVE R, LINKING R, LIQUID, L-SOUNDS, R, RETROFLEX, RHOTACISM, RHOTIC AND NON-RHOTIC. [SPEECH]. G.K., T.MCA.

**RUBRIC** [14c: from Latin *rubrica* red ochre, from *ruber* red]. (1) A heading of part of a document, written or printed in red or in special lettering, so as to stand out; a word, phrase, sentence, or passage marked in such a way. (2) A direction for the conduct of a Christian service, inserted especially in red in a liturgical book; a red-letter entry of a saint's name in a Church calendar (whence *red-letter day*). (3) A title or heading of a section in a legal code, also originally in red. (4) A title, category, procedure, protocol, explanatory comment, gloss, or instruction for an exercise in a textbook or workbook. Compare GLOSS, HEADING, TITLE. [WRITING]. T.MCA.

**RULE** [12c: Middle English *reule*, *riule*, from Old French *riule*, from Latin *regula* a straight stick, pattern]. (1) A principle that contributes to the organization and control of a group, activity, system, etc., and has the backing of some kind of authority. See AUTHORITY, CANON, CONVENTION,

NORM. (2) In language teaching and learning, a formal statement about the use of an aspect of a language, such as regular and irregular verbs in French. Traditionally, such rules have often been learned by heart. They are both prescriptive and proscriptive. See ANALOGY AND ANOMALY, DESCRIPTIVE AND PRESCRIPTIVE GRAMMAR, IRREGULAR, REGULAR. (3) In linguistics, a formal statement of the relationship between structures or units, such as the rules for forming plurals in English. Such rules are intended to be descriptive: explicit statements of how a language works (or may work), representing procedures applied by native speakers without conscious reflection when they talk to each other. It is not always easy to keep the first and second senses of the term distinct from the third sense. See DESCRIPTIVISM AND PRESCRIPTIVISM. (4) In printing, a thin strip of metal or its equivalent, used for printing a solid or decorative line or lines. Such a line the length of an em is an *em rule*, of an en, an *en rule*; such rules are used in punctuation as longer or shorter dashes. See DASH, EM, EN, REGULAR. [GRAMMAR].

S.G., T.MCA.

**RUNE** [17c: (through Danish writers on antiquities) from the Old Norse and Icelandic *rún*, but compare Old English *rûn* a dark saying, secret, mystery, letter, from which some commentators directly derive the term]. A character in an ancient script of 24 angular letters, usually cut on wood or carved in stone, and known as either *the runic alphabet* or *Futhark*/*Futhorc* (with or without an initial capital: from the names of its first six letters, regarded as equivalents of *f*, *u*, *th*, *a* or *o*, *r*, and *k* or *c*). The origin of the script is uncertain; most probably it was adapted by the Goths from the Etruscan alphabet and later influenced by Roman. It was used from the 3c to the 16/17c, especially in Scandinavia, Iceland, and Britain, to write Germanic languages. Runes, long regarded as magical, have been used on monuments, in charms, in fortune-telling (*casting the runes*), and as decorative motifs. Each has a mnemonic name beginning with the sound of the letter, such as *feoh* (property) and *ûr* (bison) for the *f* and *u* symbols. The letters *thorn* (thorn) and *wynn* (joy) were added to the Roman alphabet for writing Old English, and the runic name *æsc* (ash) was given to the digraph *æ*. The term *runestaff* refers to both a magic wand inscribed with runes and a runic calendar or almanac. *Rune* may also refer to something written in runes, to a saying or verse with a cryptic meaning or used in casting a spell, to a division of a Finnish poem, to a character in comparable scripts (especially in fictional writings), and to anything perceived as similar:

In some English shires, if the house were sufficiently eloquent, few would mind if its owner never spoke, equipped as the English are to lip-read every last cornice

and swag, to read the runes from herbs and vegetable gardens, . . . and pronounce these trappings socially acceptable: or, disastrously, not' (Angela Lambert, 'Money may talk but the house says it all', *Independent*, 22 Dec. 1990).

Runic writings survive in c.4,000 inscriptions and some manuscripts. There were at least three varieties: *Early or Common Germanic/Teutonic*, before c.800; *Anglo-Saxon or Anglian*, in Britain, c.6-12c; and *Scandinavian or Nordic*, c.8-13c. The Common Germanic script had 24 letters, divided into three groups called *ættir* (eights). Anglo-Saxon added letters to represent sounds of Old English not present in the languages for which Common Germanic was used, and by the 10c had 33 letters. See ALPHABET, ANGLIAN, ASH, BRADLEY, GOTHIC, THORN, WYN(N). [EUROPE, HISTORY, WRITING]. T.MCA.

**RUNNING HEAD**, also **running title**, **running headline**. A heading at the top of every page or every other page of text, especially in a book. Compare HEADERS AND FOOTERS. See CATCHWORD. [TECHNOLOGY]. T.MCA.

**RUSSIAN** [Known to its speakers as *russkiy*]. The major language of the Slavonic branch of the Indo-European language family, the language of the Russian people and the state language of the former Soviet Union, written in Cyrillic script. It has c.150m native speakers, and at least another 50m inhabitants of the ex-Soviet territories, and others, use it as a second language. Although the vast majority of its speakers live in the successor States of the USSR, Russian is used internationally in economic, scientific, and military contexts, and in the United Nations Organization, where it is one of the six official languages. A thousand years or more ago, a relatively undiversified East Slavonic dialect, generally known as *Old Russian*, was spoken in and around the approximate area of present-day Western European Russia, the Ukraine, and Byelorussia. Out of it emerged the Russian, Ukrainian, and Byelorussian languages. An early form of standard modern Russian developed in the 16c, centred on the educated speech of Moscow, and was influenced from the 17c onward by other European languages, especially Dutch and French. It gained international status in the 19c because of the power of Imperial Russia and the achievements of such writers as Alexander Sergeevich Pushkin (1799-1837) and Lev Nikolaevich Tolstoy (1828-1910). The Revolution of 1917, which led to the creation of the Soviet Union, associated the language closely with the maintenance and spread of Communism.

**Russian in English**. The impact of Russian on English has been slight in comparison with that of French or Spanish, but many of its loanwords stand out because of their exotic spellings and connotations. Borrowings fall into two broad categories: (1) Traditional cultural expressions: *bors(c)h* a soup based on beetroot, *borzoi* (swift) a kind of hound, *czar/tsar* (from Russian *tsar'*, Old Russian *tsīsarī*, Gothic and Greek *kaisar*, Latin *caesar*) emperor, king, *dros(h)ky* (from *droz(h)ki*, diminutive of *drogi* a dray-cart or hearse) an open, four-wheeled carriage, *r(ou)ble* (originally from *rubl'* a silver bar) the unit of Soviet currency, *steppe* (from *step'* lowland) a prairie, *troika* (threesome) a carriage drawn by three horses side by side, a group of three acting together, a triumvirate, *ukase/ukaz* an edict of the tsar, a decree or diktat, *vodka* (diminutive of *voda* water) an alcoholic drink. (2) Soviet and Communist usage: *gulag* (acronym of *Glávnoe upravlenie ispravitel'no-trudovykh lagereĭ* Main Directorate of Corrective Labour Camps) a labour camp, especially for political prisoners, *kolkhoz* (from *kollektivnoe khozyáistvo* collective household) a collective farm. This group contains many expressions, including acronyms, coined in Russian from Latin and Greek: *commissar* (from *komissár*) a political officer; *agitprop* political agitation and propaganda (from the organization title *Agitpropbyuro*, from *agitatsiya* and *propaganda*), *apparát* party organization, *Comintern/Komintern* (from *Kommunisticheskii Internationalnóal*) the Communist International organization (1919-43), *cosmonaut* (from *kosmonávt* 'universe sailor') a Soviet astronaut, *intelligentsia* intellectuals considered as a group or class.

**English in Russian**. The impact of English on Russian has been largely lexical, especially in the following areas, and has been increasing in recent years: (1) Sport and entertainment, etc.: *basketbol*, *chempion*, *futbol*, *kemping*, *khobbi* (hobby), *khokkey*, *kloun*, *klub*, *match*, *nokaut*, *ralli*, *rekord*, *sport*, *sportsmen*, *sprinter*, *striptiz*, *tent*, *umor*. (2) Politics, management, etc.: *boykot*, *interv'yu*, *lider*, *miting*, *pamflet*. (3) Food and drink: *bifsh-teks*, *dzhin*, *grog*, *keks*, *puding*. (4) Transport, commerce, and travel: *konteyner*, *motel'*, *tanker*, *tonnel'* or *tunnel'*, *trailer*, *trolleybus*. (5) Culture and technology: *bitnik* (beatnik), *detektiv* (meaning also *detective novel*), *komfort*, *komp'yuter*, *lift*, *poni*, *radar*, *servis*, *toster*. See AMERICAN LANGUAGES, ASIAN LANGUAGES, BORROWING, BURGESS, EUROPEAN LANGUAGES, -GLISH AND -LISH, INDO-EUROPEAN LANGUAGES, JONES (D.), PAMPHLET, PROPAGANDA, SLAV(ON)IC LANGUAGES, SPELLING REFORM. [ASIA, EUROPE, LANGUAGE]. F.E.K., T.MCA.

# S

**S, s** [Called 'ess']. The 19th letter of the Roman alphabet as used for English. It originated as the Phoenician symbol for a voiceless sibilant. The Greeks adopted it as the letter *sigma* ( $\Sigma$ ), with lower-case variants according to its position in a word: medial ( $\sigma$ ) and final ( $\varsigma$ ). The Etruscans and then the Romans further adapted the form to create *S*. A straightened lower-case variant (*f*), known as *long s* was used in script and (except in final position) in printing until the 18c.

**Sound values: voiceless and voiced.** (1) In English, the letter *s* represents a sibilant alveolar fricative, both voiceless /s/ and voiced /z/, that is sometimes palatalized. (2) Initial *s* is normally voiceless, and precedes vowels (*sat, sail, set, seat, sit, site, soon, soul, south*) and consonants (*scare, skill, slip, smith, snip, sphere, spit, squeal, still, svelte, swing*). (3) Final *s* in monosyllables is voiced in *as, has, his, is, was*, but not in *gas, yes, this*, nor in most accents after *u*: *us, bus, pus, thus*. Final double *s* is always voiceless: contrast *his/hiss*. (4) Certain common *s*-endings of Romance or Greek origin are voiceless (-*as* as in *atlas, -is* as in *cannabis, -os* as in *rhinoceros, -ous* as in *famous, -us* as in *terminus*), but final -*es* is typically voiced (*species, theses, Hercules*). (5) The Romance prefix *dis-* varies, with voicing in *disaster, disease* but not in *disagreeable, disgrace*. (6) The Germanic prefix *mis-* never has voiced *s*: *misadventure, mischance, misgovern, mishap, misspell*. (7) Between vowels, *s* is normally voiced: *bosom, busy, cousin, easy, feasible, hesitate, misery, peasant, poison, position, present, prison, reason, rosy, visit, weasel* (contrast *admissible, blossom, gossip, lesson, admissible, possible*). (8) Intervocalic *s* is voiceless in *basin, mason, sausage* (derived from earlier French *c*: compare Modern French *bassin, maçon, saucisse*), and usually also in -*osity* (*curiosity, luminosity*). (9) Greek-derived words commonly have voiceless medial *s*: *analysis, asylum, basalt,*

*crisis, dose, episode, thesis* (but not *music, physics*). (10) After medial consonants *s* is usually voiceless: *balsam, arsenal, gipsy* but note *clumsy, crimson, damsel*. There is variation after *n*: *answer, ransom*, but *Kansas, pansy*. It is usually voiceless before voiceless medial consonants (*asphalt, basket, hospital, sister, whistle*), but otherwise voiced (*husband, wisdom, muslin, spasm, dismal*).

**-CE, -SE, -ZE.** (1) A final *e* sometimes distinguishes voiced and voiceless *s* (*tens/tense*), but the distinction is rarely reliable (contrast *chase/phase*) compared with voiceless -*ce* (*hens/hence, advise/advice*) and voiced -*ze* (*dose/doze*). *Lens* is unusual: a voiced singular without final *e*. The cluster -*nse* usually has voiceless *s* as in *tense/dense*, but note *cleanse*. The ambiguity of -*se* is not removed by contrasting forms with -*ce, -ze*: *since/rinse* both have voiceless /s/, while *fleece/freeze* are distinct. The dominant pattern of voiced or voiceless -*se* varies according to preceding vowel, but uncertainty is high after the long *e*-sound, as in *lease/please, geese/cheese*. (2) The pronunciation of *grease* (noun and verb) varies from accent to accent: /s/ in RP, /z/ commonly in ScoE, and regionally varied in AmE. (3) In *lose/loose* it is the consonant sounds that differ but the vowel spellings that vary. (4) Some words vary /s, z/ according to grammatical category, as in *close* (adjective and verb) and *house, use* (noun and verb) (*closest/closed, house/houses/housed* and *useful/useable*), sometimes using *c* for the voiceless alternative or *z* for the voiced, as in *advise/advice, glass/glaze*. (5) AmE sometimes prefers -*se* for BrE -*ce*: AmE *defense, offense, pretense, practise, license, vise* (the tool), BrE *defence, offence, pretence, practice, licence, vice*. (6) *Erase, eraser, erasure* are normally voiced in BrE but voiceless in AmE.

ſ	S	S	s	s

**Palatalized S.** (1) Before *i* or *u*, there are some common patterns of palatalization, with *s* pronounced *sh*, or, if voiced, *zh*. This arises by assimilation of a following *y*-sound, represented either by *i* or by *u* pronounced with an initial *y*-sound, as in *puce*, *pure*. Sometimes assimilation is incomplete, with *s* kept unpalatalized in careful speech: for example, /s/ in *issue* and /z/ in *casual*. Conversely, palatalization is sometimes extended to words like *assume* ('ashoom'). (2) Initial palatalized *s* is confined to *sugar*, *sure* (and the derivatives *assurance*, *insurance*), but palatalization is common before final unstressed vowels: geographical terms such as *Asia*, *Persia* are heard with both voiced and voiceless palatalized *s*. (3) Before final *-ion*, *s* is palatalized and voiceless after *l* or *n* (*impulsion*, *tension*), but has optional voicing after *r* (*version*, *immersion*, but not *torsion*), and regular voicing after vowels (*invasion*, *lesion*, *vision*, *erosion*, *fusion*). (4) Voiceless palatalized *s* after vowels is doubled: *passion*, *session*, *mission*, *concussion*: compare *Russian*, but unpalatalized *ss* in *hessian*. (5) Other endings preceded by palatalized *s* are *-ual*, *-ure*, voiced as in *casual*, *visual*, *usual*, *measure*, *leisure*, but voiceless in *fissure*, *censure*, *tonsure*, *sensual*. The list does not include *-ial*, before which the sibilant is written as *c* (facial) or *t* (spatial), for historical reasons.

**Silent S.** (1) Postvocalic *s* is often silent in French-derived words (*isle*, *apropos*, *chamois*, *chassis*, *corps*, *debris*, *fracas*, *precis*, *viscount*, *Grosvenor*, *Illinois*), or where inserted by false analogy with French: *island*, unrelated to *isle* (Middle English *yland*, etc.); *aisle* (compare French *aile*), which probably acquired its *s* by confusion with *isle*; *demesne*, cognate with *domain*. (2) Silent final *s* in French-derived words (*corps*, *fracas*) is often pronounced in the plural (*two army corps*, *frequent fracas*).

**Double S.** (1) *Ss* is normally voiceless (*pass*, *assess*, *dismiss*; *message*, *passage*, *possible*), but it is sometimes voiced in medial position (*brassiere*, *dessert*, *dissolve*, *hussar*, *scissors*, *possess*), and optionally in *hussy*. (2) In final position, *ss* typically occurs in monosyllables (*press*, *miss*, *loss*, *fuss*, *pass*), less often in polysyllables (*compass*, *embarrass*, *morass*), but commonly in the suffixes *-less* (*hopeless*) and *-ness* (*kindness*), derived from Germanic sources, and the suffix *-ess* (*hostess*, *princess*), derived from Romance sources. (3) The Latin prefix *ad-* becomes *as-* when assimilated to roots beginning with *s*: *assault*, *assemble*, *assimilate*, *assume*. (4) The prefixes *dis-*, *mis-* similarly produce *ss* when the following syllable begins with *s* (*misspell*, *dissatisfy*), but the *s* of *dis-* is assimilated into the digraph *sh* in *dishevelled* (formerly *discheveled*, etc.). (5) Some

words optionally have double final *s* in their inflected forms: *biased/biassed*, *buses/busses*, *focusing/focussing*, *gased/gassed*. (6) *Ss* after a long vowel, as in *bass*, *gross* is rare, forms such as *face*, *dose* being more usual.

**SC and SCH.** The letter *s* occurs frequently with various values in conjunction with *c* and *ch*: *effervesce*, *schedule*, *scheme*, *scent*, *schism*, *schist*. See *c*.

**SH.** (1) The digraph *sh* represents a distinct English phoneme, a voiceless alveolar fricative /ʃ/, which mostly arose from palatalization of early *s*, whether in Old English or Old French. (2) Old English used *sc* rather than *sh*, *ship* being written *scip*, and *sh* only became general after c.1450, probably by analogy with other *-h* digraphs such as *ch*, *th*, *wh*. The evolution is demonstrated by such Old English and Middle English forms as *Englisc*, *Englisch*, *Englissche*, *Englisse*. Nevertheless *sh* is most typically found in words of Old English origin: *shadow*, *shall*, *shape*, *shed*, *ship*, *shoot*, *shot*, *shut*, *fish*. (3) A French-derived palatalized *s* was frequently changed to *sh* as in *abash*, *anguish*, *asheet*, *brush*, *bushel*, *cash*, *cushion*, *fashion*, *leash*, *parish*, and verbs ending in *-ish* (*abolish*, *famish*, *finish*, *punish*).

**ST.** (1) The sequence *st* is sometimes pronounced as /s/, *ss/st* having the same value in *hassle/castle*, and *st* having different values in *whistle*, *pistol*. (2) The /s/ value of *st* occurs mainly before *-en* (*fasten*, *listen*, *moisten*) and *-le* (*castle*, *wrestle*, *thistle*, *jostle*, *rustle*), although elision of /t/ before *m* in *Christmas*, *postman* has the same effect.

**Inflectional S.** (1) Final *s* is commonly an inflection, as in the plural of most nouns (*year/years*), the third-person singular of the present tense of most verbs (*eat/eats*, *need/needs*), and in possessive forms with apostrophe (*my uncle's house*). (2) Inflectional *s* is normally voiced, as after all vowels and voiced consonants (*rays*, *skis*, *skies*, *rows*, *rues*, *bananas*, *purrs*, *paws*, *ploys*, *ploughs*, *ribs*, *rods*, *rugs*, *ridges*, *rolls*, *rims*, *runs*, *roars*, *races*, *roses*, *rushes*, *wreathes*, *arrives*, *boxes*, *razes*), but not after voiceless non-sibilant consonants (*tics*, *tiffs*, *treks*, *tips*, *cliques*, *sits*, *myths*). (3) Possessive *s* is similarly voiced, as in the pronouns *his*, *hers*, *ours*, *yours*, *theirs*, *whose*, but not *its* after *t*, and *is* is similarly devoiced in the contraction *it's*. (4) The use of the possessive apostrophe raises uncertainties when a noun ends in *s*. Personal names ending in *s* may add only an apostrophe (*Achilles'*), but 's is also common (*Achilles's*), while in set phrases the apostrophe may be dropped (*Achilles tendon*). The *OED* gives various conventions in plant names, such as *Venus's flytrap*, *Venus' hair*, *Venus looking-glass*. Fowler has suggested using only

an apostrophe before *sake*, producing for *goodness' sake*, and even for *conscience' sake*, but the practice is rare.

**Singulars and plurals.** (1) Noun plurals and verbs ending in a sibilant generally add *-es*: *lenses*, *buzzes*, *masses*, *foxes*, *wishes*, *touches*, *witches*. *Riches*, though a plural form, derives from singular French *richesse*. (2) Some names of diseases (*mumps*, *measles*) may be treated as plural, but *pox* (*smallpox*, *chickenpox*, etc.) functions as singular rather than as the plural of *pock* (its ultimate origin). (3) *Forceps*, *gallows*, and BrE *innings* may be singular or plural, although *gallows* was formerly plural. Fowler's *Modern English Usage* (1983) has recommended the plural *gallowses* if needed, and gives *inningses* as a BrE alternative to *innings* (compare AmE singular *inning*; plural *innings*, in baseball). (4) Tools with two arms (*pincers*, *pliers*, *scissors*, *shears*, *tweezers*) and garments with two legs (BrE *pyjamas*, AmE *pajamas*, *shorts*, *tights*, *trousers*) are grammatically plural, but semantically singular; plurality is expressed by preceding *pairs of*, and *-es* is never added: no \**scissorses*. (5) Family names of Welsh provenance, such as *Jones* and *Williams*, add *-es* for their plural, but are sometimes written with an apostrophe even when not possessive: *the Williams'*. (6) Plurals are widely misspelt as possessives: for example, the so-called greengrocer's apostrophe: \*6 *apple's*: see APOSTROPHE<sup>1</sup>, PLURAL. (7) For the pattern *half/halves*, see F. (8) For plurals of words ending in *o*, as in *potatoes*, *pianos*, see O. (9) For changing *y* to *ies*, as in *pony/ponies*, see I.

**S/T variation.** (1) Some variations of *s* and *t* have arisen in such related forms as *pre-tension/pretentious*, *torsion/distortion*. (2) *S/t* variation with corresponding changed pronunciation occurs in the endings *-sis/-tic* in sets of related words from Greek: *analysis/analytic(al)*, *neurosis/neurotic*, *psychosis/psychotic*, *synthesis/synthetic*. (3) The *-gloss/-glot* variation in *diglossia/glossary/glottal/polyglot* derives from dialect differences in ancient Greek. (4) Different derivational paths have been followed from Latin and/or French to English in the doublets *poison/potion*, *reason/ration*.

**-IZE, -ISE.** (1) Variation occurs between *s* and *z* in such words as *organise/organize*, *systematise/systematize*. Here the *-ize* ending reflects Greek origin, while *-ise* reflects the adaptation of some of these words during their passage through French, as in the verbs *organiser*, *systématiser*. (2) The *-ise* form is widespread in BrE and virtually universal in AusE, whereas the *-ize* form is universal in AmE, favoured in CanE, and is employed by some British publishers, such as Oxford University Press. (3) In BrE *-ize* is not used in some two dozen verbs based

on Latin roots, such as *advise*, *advertise*, *commitment*, *surprise*. In verbs with base nouns in *-lysis* (*analysis*, *paralysis*), BrE has *-lyse* (*analyse*, *paralyse*) and AmE *-lyze* (*analyze*, *paralyze*).

**Lost letters.** (1) An initial *s* in the Latin roots of some words has been assimilated by the prefix *ex-*, but appears after other prefixes, as in *exert/insert*, *exist/consist*, *expect/respect*, *expire/perspire*, *extinguish/distinguish*, *exult/result*. *S* has been similarly assimilated in *expatriate*, *exude*. (2) *X* has assimilated *s* from the now archaic forms *buxsome*, *cockscomb*, *pocks* in present day *buxom*, *coxccomb*, *pox*. (3) Some words that now begin with *s* have lost a preceding vowel by aphesis, although it may survive in cognates: *sample* from *example*, *squire* from *esquire*, *state* from *estate*, *story* from *history*. See ALPHABET, APHESIS, ESH, LETTER<sup>1</sup>, LONG S, PALATE, SPELLING, VOICE. [WRITING]. C.U.

**SABIR** [1860s: from Portuguese *sabir* to know]. A name for the original *lingua franca*, the earliest known pidgin based on a European language. Its vocabulary is drawn mainly from the southern Romance languages, and it was used from the time of the Crusades (11–13c) until the beginning of the 20c for communication among Europeans, Turks, Arabs, and others in the Levant, and is believed by some scholars to have served as a base for the development of Atlantic and other pidgin languages first used by Portuguese sailors and traders and later by the British, Dutch, French, and Spanish. See LINGUA FRANCA, PIDGIN. [LANGUAGE]. S.R.

**SAGA** [Early 18c: from Norse *saga* what is said. Cognate with English *say*]. (1) A medieval Icelandic prose narrative such as *Njáls Saga*, the story of a blood feud. Some sagas deal with history, others with legend, but all have a heroic outlook and emphasize family loyalty and personal honour. There is some saga-like material in the old English epic poem *Beowulf*. Snorri Sturlusson's saga *Heimskringla* (Circle of the World, c.1230) includes the reign of Canute and mentions Viking raids on England. In the anonymous *Gunnlaugs Saga* (late 13c), the hero visits the court of Ethelred the Unready and recites a poem in the king's honour. In this connection, the narrator explains that 'the language was then the same in England as in Norway and Denmark. But languages changed in England when William the Bastard won England.' This remark suggests that the passage of time had blurred the memory of the Danelaw. The English poet William Morris, who visited Iceland, collaborated in translating sagas and derived from them such poems as 'Sigurd the Volsung' (1876). (2) A generic term in the 20c for a long novel or series of novels, especially about a family. When

John Galsworthy named his series *The Forsythe Saga* (1922), he called the title ironic, but the usage caught on and is now widespread. Many family sagas have been written, such as Susan Howatch's *Penmarric* (1971), set in Cornwall (blurb: 'the saga of a family divided against itself'). Many such sagas are performed as television miniseries. (3) An informal term for a long and tedious personal story: *He told us the saga of how his marriage broke up.* [HISTORY, LITERATURE]. R.C., P.C.

**SAINT CHRISTOPHER AND NEVIS**, also **St Christopher-Nevis, St Kitts and Nevis, St Kitts-Nevis**. Official title: *Federation of St Christopher and Nevis*. A Caribbean country and member of the Commonwealth, consisting of St Christopher/Kitts, Nevis, and Sombbrero. Capital: Basseterre. Currency: the East Caribbean dollar. Economy: sugar, vegetable oil. Head of state: the British monarch, represented by a governor-general. Population: 47,000 (1988), 55,000 (projection for 2000). Ethnicity: 94% African, 6% mixed. Languages: English, Creole. Education: primary 88%, secondary 60%, tertiary 5%, literacy 92%. In 1623, St Kitts became the first English colony in the Caribbean. Britain and France disputed control of the islands until in 1783 they became British under the Treaty of Versailles. They were united by the Federal Act of 1882 along with Anguilla. In 1980, Anguilla chose to remain a British dependency and in 1983 the other islands became independent. See ANGUILLA, CARIBBEAN, ENGLISH. [AMERICAS, NAME, VARIETY]. T.MCA.

**SAINT HELENA**, commonly written **St Helena**. A British dependency in the South Atlantic. Capital and port: Jamestown. Currency: the pound sterling. Administration: a governor and legislative council. Economy: fishing, agriculture, handicrafts, postage stamps; passenger and cargo services sail to the UK and South Africa; there is no airfield. Population: 5,500 (1984), a mix of European (mostly British), Asian, and African origin, known as *Yamstalks*. Religion: an Anglican majority. Sole language: English. When the Portuguese navigator João da Nova Castella discovered the island on 21 May 1502, he named it after the mother of the Roman emperor Constantine, the saint of the Eastern Church whose feast day it was. St Helena was a port of call for ships travelling to the East Indies, may have been occupied by the Dutch in the mid-17c, and was annexed and occupied by the East India Company in 1659. In 1873, nearly half the population was imported slaves. Its remoteness made it the choice for Napoleon's exile, 1815-21. By the later 1830s, the island was under direct British rule. In 1922,

Ascension Island was made a dependency, and in 1966 St Helena received a measure of autonomy. Local pronunciation includes: (1) Substitution of /w/ for /v/, so that *very* is pronounced 'werry'. (2) Replacement of /θ/ and /ð/ by /f/ and /d/, so that for example *bath* is pronounced 'baf', and *the* is 'de'. (3) Use of /ɔɪ/ for /aɪ/, so that *the island* is 'de oiland'. Special vocabulary includes: (1) Names for indigenous plants and animals, such as *gum wood, hog fish, old-father-live-forever, wire bird* (a small plover, the only native land bird). (2) Such usages as *jug up* to arrange flowers in a vase; *mug* a jug or pitcher for pouring; *make free with yourself* to take risks. Place-names on the island provide the contrast between the classical references in *Mount Actaeon* and *Diana Peak* and the more typically colonial *James Bay* and *Sandy Bay*. See ASCENSION (ISLAND), ENGLISH, TRISTAN DA CUNHA. [NAME, VARIETY]. J.B., T.MCA.

**SAINT KITTS**. See SAINT CHRISTOPHER AND NEVIS.

**SAINT LUCIA**, commonly written **St Lucia**. A Caribbean country and member of the Commonwealth. Capital: Castries. Currency: the East Caribbean dollar. Economy: agriculture, tourism. Head of state: the British monarch, represented by a governor-general. Population: 146,000 (1988), 200,000 (projection for 2000). Ethnicity: 90% African, 5% mixed, 3% East Indian. Languages: English (official), French Creole. Education: primary 79%, secondary 25%, tertiary 5%, literacy 78%. Columbus may have landed in 1502, and in 1605 and 1638 the English made attempts to colonize the island. In 1650, St Lucia, Grenada, and Martinique were purchased by two Frenchmen, after which ownership of St Lucia was disputed by England and France until in 1814 it became British by the Treaty of Paris. The island became independent in 1979. See CARIBBEAN, ENGLISH, FRENCH, WALCOTT. [AMERICAS, NAME, VARIETY]. T.MCA.

**SAINT VINCENT AND THE GRENADINES**, commonly written **St Vincent and the Grenadines**. A Caribbean country and member of the Commonwealth, including the islands of St Vincent, Balliceau, Bequia, Canouan, Isle D'Quatre, and Mustique. Capital: Kingstown. Head of state: the British monarch, represented by a governor-general. Currency: the East Caribbean dollar. Economy: agriculture. Population: 113,000 (1988), 135,000 (projection for 2000). Ethnicity: 65% African, 25% mixed, 4% East Indian. Languages: English (official), French Creole. Education: primary 90%, secondary 40%, tertiary 5%, literacy 85%. Columbus visited the area in 1498. Europeans could

only settle in St Vincent after making treaties with the local Caribs. The British and French competed for the island until 1763, when it became British by the Treaty of Paris. In 1773, the Caribs agreed to divide the island with the British, but grew resentful and with French help rebelled in 1795. Most were deported in 1796 to islands in the Gulf of Honduras. St Vincent became part of the Windward Island colony in 1871 and the group became independent in 1979. See CARIBBEAN, ENGLISH. [AMERICAS, NAME, VARIETY]. T.MCA.

**SAMANA**, also **Samaná English**, **Samaná Creole English**. An offshoot of the English-based creole used on plantations in the southern US that was transplanted to the Samaná Peninsula of the Dominican Republic when blacks settled there in the 1820s. Currently spoken by some 8,000 people, Samaná English is much more de-creolized than the variety spoken in the Bahamas, despite the relative linguistic isolation of both groups. The Samaná-speakers were surrounded by a French colony (Haiti) and a Spanish colony (San Domingo), but remained isolated from such influences and from English-speakers until the 1930s. The type of English taken to Samaná and the extent to which it was de-creolized are issues debated by scholars; de-creolization may already have been far advanced in certain areas of the US before the breakup of the plantation system. This may be one reason why Samaná appears to be close to standard English. The present older generation were schooled mainly in English and some remain monolingual; most of their children, however, are bilingual in Spanish and English and have become more integrated into the Dominican Republic through intermarriage with Spanish-speakers. Spanish terms have been borrowed or calqued into Samaná: for example, *gain money* from *gañar dinero*. Compare GULLAH. See BLACK ENGLISH VERNACULAR, CARIBBEAN ENGLISH CREOLE. [AMERICAS, VARIETY]. S.R.

**SAMIZDAT**. See PAMPHLET.

**SAMOA**. See NEW ZEALAND ENGLISH, WESTERN SAMOA.

**SANDALWOOD ENGLISH**. See BEACH LA MAR.

**SANSKRIT**, also, especially formerly, **Sanscrit** [17c: from Sanskrit *saṃskṛta* put together, well-formed, perfected]. The dominant classical and scholarly language of the Indian subcontinent, the sacred language of Hinduism (with Pali) a scriptural language of Buddhism, and the oldest known member of the Indo-European language

family. It is usually written in the Devanagari script, which runs from left to right. The major forms are *Vedic Sanskrit*, the medium of the Vedas and Upanishads (known as *daivī vāk* divine speech), and *Classical Sanskrit*, whose texts include the two epic poems, the *Mahabharata* (of which the *Bhagavad-Gita* is a section), reputedly by the poet sage Vyasa, and the *Ramayana*, reputedly by the poet sage Valmiki. The classical language was systematized by the grammarian Panini in the late first millennium BC. Much as Latin influenced European languages, Sanskrit has influenced many languages in South and South-East Asia. Since the 19c, it has also provided loans to European languages including English and French. The most apparent of these loans relate to religion, philosophy, and culture, such as *ahimsa*, *chakra*, *guru*, *karma*, *kundalini*, *mahatma*, *pundit*, *swami*, and *yoga/yogi*, but less direct loanwords in English (borrowed through other languages) include *carmine*, *cheetah*, *chintz*, *chutney*, *jugger-naut*, *jungle*, and *jute*.

All major modern Indian languages (both Indo-Aryan and Dravidian) have a Sanskritized register, used in religious and secular contexts. Indian English, especially when concerned with Hindu religion and philosophy, also freely uses Sanskrit terms, and Indian literature in English makes use of such conventions from Sanskrit as repetition of main themes in paragraphs and an abundance of compounds and embedded clauses. Sanskrit words appear in English texts in two forms: fully Anglicized, as with the variants *pundit* and *panḍit* (through Hindi *paṇḍit*); or, in scholarly writings, with various diacritics, following the conventions for transliterating Sanskrit into the Roman alphabet, as with *paṇḍita*. A representative scholarly text using full transliterations is:

In the *Bṛhad-āraṇyaka Upaniṣad* (3.9.1) we are told that, when Śākalya asked the sage Yājñavalkya what was the number of the gods, the sage gave a cryptic answer (Alain Daniélou, *Hindu Polytheism*, 1964).

Differences in meaning and use often match the different styles: for example, *paṇḍita* means a learned *brahmin* (or *brahman*, or *brāhmaṇa*); *panḍit* may have the same meaning and is used as a title for such a person, as in *Pandit Nehru*; *pundit* may have the same meaning and use, but is more fully integrated into English, in which it commonly refers to an expert: 'Nobody dared to predict how long the financial upheaval would last, but every dealer and pundit agreed that it reflected international anxiety and not the economy' (*International Herald Tribune*, 22 Dec. 1990). Comparably, the term *guru* may refer to a Hindu teacher, a venerable spiritual leader, and any venerated sage or expert, as in the

phrases *management guru* and *usage guru*. The extended non-Hindu senses of *pundit* and *guru* are often used in a tongue-in-cheek way, to suggest that there is something spurious or amusing about the persons so described. Most direct 20c borrowings do not, however, have such connotations, and some, such as Gandhi's *ahimsa* and *satyagraha*, currently have positive implications.

See ARYAN, BORROWING, BOSTON, CLASSICAL LANGUAGE, DOT, INDIA, INDIAN ENGLISH<sup>1</sup>, INDIAN LANGUAGES, INDO-EUROPEAN LANGUAGES, JONES (W.), LINGUISTIC TYPOLOGY, PALI, PRAKRIT, ROMANI/ROMANY, TRANSLATION, TRANSLITERATION, WHITNEY. Compare ARABIC. [ASIA, LANGUAGE]. T.MCA., R.P.

**SANSERIF, SANS SERIF.** See SERIF.

**SAPIR, Edward** [1881-1939]. German-American linguist and anthropologist. Born in Lauenberg, Schleswig-Holstein. Emigrated with his parents to the US in 1886. Educated at Columbia U., graduating in 1904. His early work was on Germanic languages, but he soon came under the influence of the anthropologist Franz Boas, and turned to American Indian languages. Based in Ottawa, Canada, for 15 years, he produced works on Nootka and other Canadian Indian languages. In 1925, he moved back to the US, first to the U. of Chicago, then in 1931 to Yale as Professor of Anthropology and Linguistics. He wrote on a wide range of topics, but produced only one book, *Language: An Introduction to the Study of Speech* (1921). A selection of his best-known papers was published after his death as *Selected Writings of Edward Sapir in Language, Culture and Personality* (ed. D. G. Mandelbaum, 1949). Sapir and Leonard Bloomfield are often regarded as the fathers of American linguistics, even though their approaches differed considerably. Both can be regarded as proponents of structural linguistics, but, unlike Bloomfield, Sapir saw language as primarily a social phenomenon which must be considered within its cultural context. This led him to a view of *linguistic relativity*, the notion that 'human beings . . . are very much at the mercy of the particular language that has become the medium of expression for their society' (1929). See SAPIR-WHORF HYPOTHESIS. [AMERICAS, BIOGRAPHY, LANGUAGE]. J.M.A.

**SAPIR-WHORF HYPOTHESIS**, also **Whorfian hypothesis**. A term in linguistics for the proposition that thought and behaviour are influenced by the language spoken, promoted by the American linguists Edward Sapir and Benjamin Lee Whorf. In Sapir's words: 'The real world is to a large extent unconsciously built up

on the language habits of the group. No two languages are ever sufficiently similar to be considered as representing the same social reality. The worlds in which different societies live are distinct worlds, not merely the same world with different labels attached' (1929, in *Selected Writings of Edward Sapir in Language, Culture and Personality*, ed. D. G. Mandelbaum, 1949). This assumption had considerable popularity in the 1930s and 1940s, when languages were believed to differ without limit, in unpredictable ways. Its influence decreased in the 1960s, primarily under the influence of Noam Chomsky, who directed attention to the possibility of language universals and the likelihood that language was genetically programmed. The views of Sapir and Whorf, however, were not as extreme as has sometimes been maintained. Neither of them argued for linguistic determinism (the belief that people are trapped in their languages), but both stressed linguistic relativity (the notion that different languages lead their speakers to different interpretations of the same physical evidence). These differences persist 'unless their linguistic backgrounds are similar, or can in some way be calibrated' (Whorf, 1940, in *Language, Thought and Reality*, ed. John B. Carroll, 1956).

Recent reassessments of the hypothesis suggest that Whorf misanalysed some of the data, particularly on the American Indian language Hopi. The supposed huge gap between the Hopi and Western conceptions of time has turned out to be largely a mirage: compare Ekkehart Malotki, *Hopi Time* (1983). However, psycholinguistic experiments show that linguistic boundaries have some influence on the behaviour of subjects when they are asked to make decisions about, for example, the closeness of colours to one another. The Mexican language Tarahumara has a single basic colour term *siyóname* covering both blue and green. An experiment was devised in which subjects were shown examples of three colours within the blue-green range, and asked to pick the two which were closest together. English-speakers were better at the task than Tarahumara-speakers, suggesting that separate names for *blue* and *green* had aided their performance, especially as Tarahumara-speakers scored similarly to English-speakers in other colour tasks (Paul Kay & Willett Kempton, 'What is the Sapir-Whorf hypothesis?', *American Anthropologist* 86, 1984). In general, it seems likely that habitual thought follows along the lines laid down by language, but that people are adaptable and can transcend their linguistic boundaries if they pause to reflect. [LANGUAGE]. J.M.A.

**SARAMACCAN**. A creole of Surinam whose vocabulary derives partly from Portuguese,

partly from English; generally considered the oldest creole of Surinam and currently spoken by the *Central Bush Negroes* (the Saramaccans and the Matuari). It is important to both the study of Caribbean Creoles and theories of the origins and development of creoles with European lexicons. It developed among 17c runaway slaves who may have spoken a Portuguese pidgin in addition to their West African languages, and who came into brief contact with English in the plantations. They would, however, have escaped before contact with English affected their language to the same degree as those who developed *Sranan*. See CREOLE, NDJUKA, SRANAN, SURINAM(E). [AMERICAS, VARIETY]. L.D.C.

**SARCASM** [16c: from Latin *sarcasmus*, Greek *sarkasmós* tearing flesh, speaking bitterly]. A term in rhetoric and general use for sneeringly ironical remarks: 'Oh *yes*, we *know* how clever you are'; 'Well, Mr Know-it-all, what's the answer this time?' Sarcasm serves to taunt and deflate. It often stems from resentful and embittered insecurity, but is also used by people in authority (such as teachers and army instructors) as a means of marking and maintaining that authority. See BIERCE. Compare CYNIC, IRONY. [STYLE]. T.M.C.A.

**SATIRE** [16c: from Latin *satira* medley, from (*lanx*) *satura* a full dish (of fruits offered to the gods). Associated from classical times with the Greek *sáturos* satyr, and with the chorus of satyrs in Greek *satyric drama*]. A literary attack through ridicule, irony, and parody, in verse or prose, and intended to arouse amused contempt for its target. Satire differs from denunciation or diatribe in its artistry and its desire to reform as well as discredit. It contrasts the actual with an existing or desired ideal and has an underlying moral stance in its exposure of weakness, vice, and folly. It may be directed against an individual, as in Dryden's 'MacFlecknoe, or A Satyr upon the True-Blew-Protestant Poet, T. S.' (attacking Thomas Shadwell, 1682), a group, such as the authors and critics ridiculed in Pope's *Dunciad* (1728), and humanity in general, as in Swift's *Gulliver's Travels* (1726). Satire can occur in any genre and has been practised in English in all periods, with such early exponents as Chaucer, Dunbar, and Skelton. There is a satirical element in Elizabethan drama, notably in Jonson. However, some 16c satirists regarded themselves as innovators, or as Joseph Hall put it:

I first adventure, follow me who list  
And be the second English satirist.

(Prologue to *Virgidedimae*, 1597)

The Augustan heroic couplet proved suitable for satire, especially as used by Pope:

The Wit of Cheats, the Courage of the Whore,  
Are what ten thousand envy and adore!  
All, all look up with reverential Awe,  
At Crimes that 'scape, or triumph o'er the Law.  
(‘Epilogue to the Satires’, 1738)

Writers were influenced by such classical models as the amused and urbane *Horatian satire* (of the Roman poet Horace: as in Pope's 'Epistle to Augustus'), the more severe and harsh *Juvenalian satire* (of the Roman poet Juvenal: as in Johnson's 'London'), and *Menippean* or *Varronian satire* (of the Greek philosopher Menippus and his Roman imitator Varro), which used dialogue in a narrative framework (as in Thomas Peacock's *Headlong Hall*, 1816, and *Nightmare Abbey*, 1818). The poet Byron also used satire, as in 'English Bards and Scotch Reviewers' (1809). The Victorian novel contains satirical elements in its social criticism, particularly in Dickens, Thackeray, and Butler. In the 20c, satire has been used in drama by Shaw in *The Devil's Disciple* (1897) and *The Doctor's Dilemma* (1906), in verse by Roy Campbell, in 'The Georgiad' (1931) against the writers known as the Bloomsbury Group, and in novels by, among others, Aldous Huxley (*Antic Hay*, 1923), Evelyn Waugh (*Decline and Fall*, 1928), George Orwell (*Animal Farm*, 1945), and Joseph Heller, whose *Catch 22* (1961) is set in the US Air Force in the Second World War. From it has come the phrase *a Catch-22 situation*, one in which any move one makes will cause further problems. See BATHOS, BUTLER, CARICATURE, CHAUCER, DICKENS, DRYDEN, IRONY, JOHN BULL, LAMPOON, ORWELL, PARODY, REVERSAL, SCRIBBLER, SHAW, SWIFT. [LITERATURE, STYLE]. R.C.

**SAXON** [13c: through French from Latin *Saxo/Saxonis*, and parallel to the Old English form *Seaxan* (plural *Seaxe*), probably derived from *s(e)ax*, the name of a knife used by the Saxons]. (1) A member of a Germanic people that once lived near the mouth of the Elbe, and in Roman times spread across Germany from Schleswig to the Rhine. Some (*the Anglo-Saxons*: that is those who joined the Angles) migrated in the 5–6c to Britain; others (*the Ealdseaxe, Old Saxons*) became the founding people of *Saxony*, the name of a German territory that has changed its location and political standing several times over the centuries. (2) The dialects spoken by the Saxons in southern England, in *Essex* (home of the East Saxons), *Middlesex* (the Middle Saxons), *Sussex* (the South Saxons), and *Wessex* (the West Saxons). The term has sometimes been used instead of *Old English* and *Anglo-Saxon*, as the name of the language carried to Britain by

the Angles and Saxons. (3) A native of Saxony. (4) The Low German dialect of Saxony. (5) An English man or woman, especially in medieval times, in contrast to *Norman*, and sometimes in more recent times in contrast to *Latin* and *Celt*. The term has also been used to contrast a Lowland Scot with a Highland Scot or *Gael*: see ETHNIC NAME [SASSENACH]. (6) Also *Saxon English*, *Saxon language*. Formerly, a name for native or vernacular English in contrast to French and Latinate usage: 'Our vulgar Saxon English standing most vpon wordes monosillable' (George Puttenham, *The Arte of English Poesie*, 1589). (7) Relating to any of the above: *Saxon traditions*. See ANGLES, ANGLO-SAXON, LOW GERMAN, SAXON GENITIVE, SAXONISM, WESSEX. [HISTORY, LANGUAGE, NAME]. T.MCA.

**SAXON ENGLISH.** See SAXON (6).

**SAXON GENITIVE.** A term for the forms of the possessive associated with the apostrophe (*boy's*, *boys'*), so called because, along with the plural ending, they are the only noun inflections surviving from Old English or Anglo-Saxon. This genitive is often described as a case form, but as it can be attached to phrases (*The King of Thailand's visit*; *somebody else's seat*), some grammarians argue against this view: see GROUP POSSESSIVE. The same meaning when expressed by an *of*-phrase is sometimes called the *of*-genitive: *the top of the hill*. The Saxon genitive can be used alone with a place reference: *See you at Tom's*; *I got it at the grocer's this morning*. Other usages include the *subjective genitive* (*the man's statement*, where the man made the statement); the *objective genitive* (*the group's leader*, where someone leads the group); and the *descriptive genitive* (*a moment's thought*, *a ladies' hairdresser*, *ship's biscuits*, *Parkinson's disease*), which shares some features with attribution and compound words. See APOSTROPHE<sup>1</sup>, GENITIVE CASE, POSSESSION. [GRAMMAR]. S.C.

**SAXONISM** [18c: from *Saxon* and *-ism* as in *Scotticism*]. Also **Anglo-Saxonism**. A semi-technical term for: (1) The use of, and preference for, expressions of Anglo-Saxon origin. (2) A word or other expression of Anglo-Saxon origin or formed on an Anglo-Saxon or Germanic model, often contrasted with *classicism*, as in *foreword* with *preface*, *folkwain* with *omnibus*. Saxonisms are generally the outcome of a purist and nativist approach to the language. The aim behind many deliberately created forms has been to create compounds and derivatives to replace foreign borrowings; the device is rooted in the Old English practice of loan-translating Latin

words: *benevolentia* as *welwilledness* *well-willingness*; *trinitas* as *thrines* *threeness*. Loan-translation was standard before the Norman Conquest, but was limited from the mid-11c by the predominance of French. Since the decline of French influence in the 14c, Saxonism has resurfaced only occasionally. In the 16c, it was a reaction to inkhorn terms; in his translation of the Bible, John Cheke used *hundreder* and *gain-rising* instead of *centurion* and *resurrection*. In the 19c, it was prompted by comparative philology, when *folklore* and *foreword* (modelled on German *Vorwort*) were coined, *handbook* was revived to compete with *manual*, and *leechcraft* was preferred by Walter Scott to *medicine*. Dickens eulogized Anglo-Saxon times, when 'a pure Teutonic was spoken' (*Household Words* 18, 1858). The most enthusiastic 19c Saxonizer was William Barnes, who wished to turn English back into a properly Germanic language. Some of his coinages were structurally acceptable (*bendsome* for *flexible*, *folkwain* for *omnibus*), but others were awkward (*markword* of *suchness* for *adjective*). His work is now largely forgotten and where remembered is usually seen as quaint and unrealistic.

Currently, Saxonism occurs directly as a literary conceit and indirectly in campaigns for simpler English. In humorous writing, vernacular alternatives to established Romance words are coined and used for effect. In the magazine *Punch* in 1966, to celebrate the 900th anniversary of the Battle of Hastings, the humorist Paul Jennings wrote 'anent the ninehundredth yearaday of the Clash of Hastings', and rendered Hamlet's most famous soliloquy into 'English', beginning with:

To be, or not to be: that is the ask-thing:  
Is't higher-thinking in the brain to bear  
The slings and arrows of outrageous dooming  
Or take up weapons 'gainst a sea of bothers  
And by againstwork end them?

In the word list of Basic English, C. K. Ogden showed a marked preference for vernacular over Romance and classical words. Campaigners for Plain English often urge people to avoid polysyllables and keep to everyday language, implicitly proposing a kind of Saxonism. In such movements, however, the main criterion is not linguistic pedigree but ease of communication. See AMERICAN LITERATURE, ANGLO-SAXON, CARLYLE, BARNES, BASIC ENGLISH, BLUE-EYED ENGLISH, BRIDGES, -ISM, PLAIN ENGLISH, PURISM. [STYLE, WORD]. J.M.G., T.MCA.

**SAYING** [13c]. An informal, general term for anything said, especially if it is brief and to the point; a pithy or concise observation that expresses folk wisdom that has been handed

down orally, or represents a basic principle, fundamental teaching, or the like: *Time flies; It never rains but it pours; Honesty is the best policy*. In scribal times, when oral tradition was strong and printing had not yet developed, the imparting of education was often done through series of sayings that could be easily memorized. This has resulted in English in several more or less synonymous terms, mostly of classical origin, for kinds of short, instructional statement, such as *saying* (from Old English), *adage* (from Latin), and *aphorism* (from Greek). See ADAGE, APHORISM, APO(PH)THEGM, AXIOM, EPIGRAM, FOLK, MAXIM, METAPHOR, ORAL TRADITION, PROVERB, QUOTATION. [STYLE, WORD].

T. MCA.

**SCANDINAVIAN LANGUAGES.** A group of languages in northern Europe. Strictly speaking, *Scandinavian* relates only to the peninsula of Scandinavia (Norway and Sweden), but the term usually includes Denmark and sometimes Finland. The languages spoken in this area are the Germanic languages Danish, Norwegian, and Swedish and the Finno-Ugric languages Lappish and Finnish. In linguistics, the terms *Scandinavian* and *North Germanic* both refer to a subgroup of the Germanic language family. The languages of this subgroup are Danish (in Denmark, the Faroe Islands, and Greenland), Faroese (in the Faroe Islands), Icelandic (in Iceland), Norwegian (in Norway), and Swedish (in Sweden and Finland). The Scandinavian language Norn was spoken in Scotland until the 17-18c. Originally, there was little variation in Scandinavian, the common language of the Viking raiders and settlers of the 9-11c. At the present time, in Norway, Sweden, and Denmark, educated people seldom have difficulty in communicating across frontiers, speakers using their own languages. Icelandic and Faroese, however, are no longer immediately intelligible to other Scandinavians, even though they retain many features of original Scandinavian. The justification for regarding Danish and Swedish as distinct languages lies largely in their separate literary traditions, dating from the 16c. The distance between them is like that between standard English and Lowland Scots. The situation in Norway is more complex, but can also be compared to the linguistic situation in Scotland.

**Scandinavian and English.** During the early Middle Ages, the Viking invasions led to settlements in Britain and Ireland: in the Northern and Western Isles, the northern and western coasts of Scotland, parts of Ireland (including Dublin), the Isle of Man, and large parts of England, resulting in the Danelaw. As a consequence, Scandinavian was for several centuries

a major language of Britain and Ireland, competing with Gaelic and English, on both of which it had a powerful impact. By 1200, however, Scandinavian (also referred to as Danish, Old Danish, Norse, Old Norse) had ceased to be spoken in England, but survived elsewhere: for example, as Norn in Orkney and Shetland. In England, the long period of contact and ultimate fusion between the Anglo-Saxon and Danish populations, especially north of a line between London and Chester, had a profound effect on English. More recently, Scandinavian influence has been slight and sporadic, in such loans as *ombudsman*, *ski*, *smorgasbord*, *tungsten*.

**English and Scandinavian.** English influence, for centuries slight, began to increase from c.1750, and in the 20c, especially since the Second World War, has become extensive in such fields as journalism, computer technology, and aviation, as well as in areas of life where American influence has been predominant: youth culture, leisure activities, sport, business, advertising. The influence is particularly noticeable in journalism. The impact of English includes: (1) Loanwords: nouns are the largest group, followed by verbs and adjectives. Before c.1900, borrowings usually conformed to local conventions (English *strike* became Danish *strejke*, Norwegian *streike*, Swedish *strejk*), but recent loans generally undergo little or no modification. (2) Loan translations: *blood bank* has become *blodbank*; *self-service* has become Danish and Norwegian *selvbetjening*, Swedish *självbetjäning*. Phrasal verbs are a feature of Scandinavian as well as English and loan translations have been increasing: Danish *tone ned* (tone down); Danish *ende op med*, Norwegian *ende opp med* (end up with). In addition, idioms like *drag one's feet* and *conspiracy of silence* have entered Scandinavian usage in translation. (3) Loan constructions: usages of the type *wall-to-wall carpets* and *lovely 20-year-old So-and-So* are no longer foreign to Scandinavian usage, although older people may object. (4) Semantic borrowing: the word for 'to sell' used in the sense 'to convince people of the worth of (a product, idea, etc.)'. (5) Vogue words from English competing with adequate existing terms: while *personlighed* or *personlighet* is usual, an advert for a new car might claim instead that it has *personality*. (6) Many existing borrowings from Latin have gained in frequency under the influence of their use in English: *status*; Danish and Swedish *kommunikation*, Norwegian *kommunikasjon*.

The above remarks apply to Denmark, Norway, and Sweden. In Iceland, English influence is felt on the colloquial level, but a purist tradition has kept the written language

unaffected, neologisms being Icelandicized: *hamborgan* a hamburger. Recently, however, some authors have broken with the more extreme form of purism and English is making inroads in television. The Faroese situation is comparable. In Scandinavia proper, emphasis is placed on the teaching of modern languages and English is compulsory in all schools. Scholarly and scientific publications are often in English. University regulations usually allow doctoral theses to be submitted in English, German, or French as an alternative to a Scandinavian language, and English is a frequent choice. See ANGLO-DANISH, BORROWING, DANISH, FA(E)ROESE, GERMANIC LANGUAGES, ICELANDIC, INDO-EUROPEAN LANGUAGES, NORN, NORSE, NORWEGIAN, ORKNEY AND SHETLAND DIALECT, SAGA, SWEDISH. [EUROPE, LANGUAGE]. P.C.

**SCANSION** [17c: from Latin *scansio/scansionis* climbing, scanning a poem foot by foot, from *scandere* to climb]. The descriptive analysis of the metrical pattern of a poem. In English, this has traditionally been done by marking the stressed syllables in each line, dividing the line into feet by considering how these stresses are arranged, and from this identifying the poem's prevailing metre: for example, if the stress pattern of the syllables in a line is recently one weak one strong, one weak one strong, each foot is an *iamb* (◡-). If there are five such feet in a line, the line's overall metre is *iambic pentameter*. By showing each syllable as stressed (strong) or unstressed (weak) within its metrical foot, the structure of the whole poem can be indicated. The traditional notation in scansion marks stressed and unstressed syllables above the line. The examples below show three sets of conventions for analysing a line of iambic pentameter verse:

Using macron (¯) and breve (◡):

◡ - ◡ - ◡ - ◡ - ◡ -  
O thought/less mor/tals! e/ver blind / to fate

Using *solidus* or slash (/) and the symbol (×):

× / × / × / × / × /  
O thought/less mor/tals! e/ver blind / to fate

Using *acute accent* (´) and *breve* (without marking the feet):

Ö thougthlëss mórtáls! évër blind tō fâte

In order to identify its metrical rhythm, verse may be rendered in a stricter fashion than usual (often to the accompaniment of hand and head movements); for poet and audience, however, the overall effect of a poem is what matters, and its delivery requires more than the steady, stylized reproduction of perfect feet. Irregularities and changes are noted as each line of a poem is

scanned. Thoughtful scansion, however, is pragmatic rather than rigid; very few poems show complete regularity of metre, and strict scansion can distort the stress demanded by normal pronunciation and syntax. If the metrical beat (*ictus*) does not coincide with the stress pattern of speech, it is better to show the difference than to make the verse seem dissociated from living language.

To catch the nuances of natural rhythm, some prosodists have devised more elaborate systems and attempted to show the degrees of emphasis on stressed syllables, a difficult task that results in mainly subjective judgements. Experiments in a pitch-based method of scansion, using a kind of musical notation, have not been successful. *Free verse* challenges the traditional method of scanning recurring metrical feet, and must be analysed through rhythm instead of regular metre. Scansion is an abstract process that is valuable as long as it remains descriptive and does not force an unnatural interpretation on a poem. Even a detailed and liberal scansion cannot indicate all the factors of pitch, loudness, timing, and rhetorical emphasis found in spoken recital or supplied by the silent reader; the poem is continually created in the tension between performance and scansion. See METRE/METER, PROSODY. [LITERATURE]. R.C.

**SCARE QUOTES.** See QUOTATION MARKS.

**SCATOLOGY** [1870s: from *skato-*, combining form of Greek *skōr* dung, shit, and *-logy* study]. (1) The scientific study of faeces for such purposes as medical diagnosis, the determination of diet, and the study of fossils. (2) A preoccupation with excrement and associated obscenity, often in writing or humour: *scatological jokes*. See COPROLALIA, OBSCENITY, SWEARING. [STYLE]. T.MCA.

**SCHEME** [16c: from Medieval Latin *schema*, Greek *skhēma* a form]. Also **figure**. An obsolete term in rhetoric for both an expression that deviates from the usual or natural through a change in sound, syntax, or through general arrangement (often with a pleasing effect), and the device or technique that makes such a change possible (turning the literal into the *schematic(al)* or *figurative*). Schemes include such devices as alliteration and assonance (that purposefully arrange sounds, as in *The Leith police dismisseth us*) and antithesis, chiasmus, climax, and anticlimax (that arrange words for effect, as in the cross-over phrasing *One for all and all for one*). See FIGURATIVE LANGUAGE/USAGE, FIGURE OF SPEECH, TROPE. [STYLE]. T.MCA.

**SCHOLARLY APPARATUS.** See **ACADEMIC USAGE, NOTES AND REFERENCES.**

**SCHWA** [Late 19c: from German *schwa*, from Hebrew *shwā*, from *shāw'*, emptiness. Hebrew grammarians traditionally mark consonants with signs referred to in Roman lettering as *sheva* or *shewa*. These signs indicate either no following vowel sound (*quiescent sheva*) or a following central vowel (*vocal or movable sheva*). There was nothing comparable in alphabets derived from Roman until the development of the International Phonetic Alphabet in the late 19c, when an inverted e was introduced to serve the same purpose as vocal sheva]. Also **shwa**, **neutral vowel**, **obscure vowel**. A term in phonetics for a central vowel sound represented by the symbol /ə/. To make a schwa in isolation, the tongue is neither pushed forward nor pulled back, neither raised nor lowered, and the lips are neither spread nor rounded: hence the term 'neutral'. Although not represented in the conventional alphabet, schwa is the commonest vowel sound in English. It typically occurs in unstressed syllables, and in the following list is shown for illustrative purposes as if it were an everyday letter: *above*, *again*, *sappose*, *photograph*, *scenary*, *sofə*. It is often an ill-defined voice gap between consonants: for example, in *today* it is formed as the tongue moves away from the alveolar ridge on the release of /t/ and returns to form /d/ (*t'day*). Many languages do not have a neutral vowel, and this causes problems for foreign speakers of English from such backgrounds. However, another vowel may replace it: for example, the short /a/ of North Indian languages (as in the first vowel of *Punjab*) is used as a schwa in IndE, or the /a/ in many kinds of AfrE: *speaker* /spika/. Learners who have not had access to native-speaker English tend not to attempt a schwa at all, but to pronounce words more or less according to the vowel letters of the spelling. Their speech is therefore likely to be syllable-timed rather than stress-timed. See **RHYTHM, SYLLABLE, WEAK VOWEL, VOWEL, VOWEL QUANTITY**, and, in particular, the letter entries **A, E, I, O, R, U.** [**SPEECH**].

G.K.

**SCIENCE FICTION** [1850s: popularized in the 1920s by the US magazine editor Hugo Gernsback, regarded by many fans as 'the father of science fiction']. Short forms *sci-fi*, *SF*. Fiction inspired by the achievements and speculations of science. Gernsback's definition of an SF story was: 'a charming romance intermingled with scientific fact and prophetic vision' (editorial, *Amazing Stories*, 1926). Until recently, the genre was largely ignored or disdained by literary critics, but has begun to gain attention. It is

increasingly studied as a genre in universities and schools and student anthologies are beginning to be published.

An early British term for the genre was H. G. Wells's *scientific romance*, applied especially to troubled works on the future of humankind, such as his *The Shape of Things to Come* (1933) and Aldous Huxley's *Brave New World* (1932). A term used in recent years, *speculative fiction*, seeks to improve the down-market image of the genre and distance it from the 'pulp magazines' edited by Gernsback and John W. Campbell, and from comic books and motion pictures replete with superheroes, little green men from Mars, and 'bug-eyed monsters'. Some writers have sought to stay close to the wellsprings of science, notably Isaac Asimov (US) and Arthur C. Clarke (UK).

However viewed, science fiction does not operate in a literary or linguistic vacuum: probably encouraged by such social forces as the Industrial Revolution, Darwinism, technological advance, and two world wars, as well as by 'hard' or 'soft' science, it demonstrates links with traditional philosophical and utopian writing as well as with allegory, satire, romance, and the Gothic novel. Related writing that does not attempt to follow science closely, but appears to be more concerned with aspects of myth, is known as *science fantasy*, while tales of adventure among the stars are often referred to, dismissively or affectionately, as *space opera*.

**Themes, plots, and settings.** Although SF themes, plots, and settings vary greatly, they tend to fall into three broad types: (1) Especially in British writing, accounts of a present time that slowly loses normality, as in H. G. Wells's *The War of the Worlds* (1898) and John Wyndham's *The Day of the Triffids* (1951). (2) Especially in American writing, accounts of future times and places often far from Earth, as in Ray Bradbury's *The Martian Chronicles* (1950) and the TV series, films, and books known collectively as *Star Trek* (1960s onwards), created by Gene Roddenberry. (3) Generally, accounts of alien worlds in some way reachable from this world, as in Conan Doyle's *The Lost World* (1912), located on a plateau in South America, and Edgar Rice Burroughs's *Pellucidar* (1915), the hollow interior of the Earth. Both of these worlds abound in prehistoric creatures.

**Recent developments.** Before the 1960s, science fiction readers were mostly young men, but women have in recent decades become more involved as both readers and writers. Leading women writers include Doris Lessing, Ursula Le Guin, and C. J. Cherryh. It can also be argued that science fiction as a genre was virtually created by Mary Shelley in *Frankenstein, Or The*

*Modern Prometheus* (1817). In recent years, not only have the boundaries of SF and other kinds of fantasy writing become increasingly indeterminate, but those between SF and 'straight' fiction have also grown less distinct. The genre has transferred spectacularly to motion pictures and television, particularly with special effects as exploited by the movie-makers Steven Spielberg and George Lucas. Such developments have also prompted multimedia sci-fi 'packages': for example, the humorous, satirical, and space-operatic 'trilogy in four parts', *A Hitch Hiker's Guide to the Galaxy* by Douglas Adams (1979 onwards), which has appeared in radio, television and print forms.

**SF and English.** Science fiction has been written in many languages, and from its inception in the 19c, French, with the seminal works of Jules Verne, has been a significant medium. In the late 20c, however, English appears to be the international voice of the genre: "The lack of broad vision in the novel tradition," declares Wolfgang Jeschke, the Munich writer and publisher, "makes science fiction possible and necessary." Although the venue is The Netherlands Congressgebouw in the Hague, and Jeschke is a German born in Czechoslovakia, he reads his speech in effortful but eloquent English. English may be the second language of Europe, but it is the first language, sometimes it seems the only language, of science fiction. Of nearly 3,000 SF fans, writers, editors and publishers attending the 48th World SF Convention a week ago, more than half were from Britain or America' (Colin Greenland, 'Millennial Visions', *Sunday Times*, 9 Sept. 1990).

See ANACHRONISM, FANTASY, FICTION, GOTHIC, MYTH, NOVEL, POPULAR FICTION, ROMANCE, ROOT-CREATION, WELLS. [LITERATURE]. T.MCA.

**SCIENTIFIC USAGE/ENGLISH.** See ACADEMIC USAGE/ENGLISH.

**SCOPE** [The acronym for *Standing Committee on Spoken English*]. See AUSTRALIAN BROADCASTING.

**SCOT** [From the Latin *Scotti*, *Scōti*, plural]. A native of Scotland. The name first appeared in late 4c Latin texts in reference to the Gaelic-speaking people of *Hibernia* (Ireland), but appears not to have been a native Irish tribal name. It was used by such Irish and English writers as Adomnán and Bede (7-8c) for the Irish, and its derivative *Scotia* or *Scottia* as an alternative to *Hibernia*. By then, however, as well as the people of Ireland, *Scot(t)i* included that part of the northern Irish tribe Dál Riata which had settled in Argyll by the end of the 5c. After

these *Scoti Britanniae* (Irish of Britain, as Adomnán and Bede sometimes called them) had come to rule their Pictish neighbours to the east (mid-9c), the names *Scot(t)i* and *Scot(t)ia* and their Anglo-Saxon renderings *Scot(t)as* and *Scotland* came by the 10c to apply to the entire kingdom north of the Forth. Until the 13c, these names did not apply to Strathclyde, Lothian, and Galloway to the south, and sometimes excluded Moray and Argyll to the north and west. By the mid-13c, however, they had begun to acquire their present-day wider sense. The plural has tended to be commoner than the singular, to which *Scotsman/Scotchman* and *Scotswoman/Scotchwoman* have been preferred. Currently, the singular is increasingly favoured because it is concise and avoids gender distinctions. See MAN/WOMAN, MÉTIS, SCOTCH, SCOTLAND, SCOTS. [EUROPE, NAME]. A.J.A.

**SCOTCH.** A late 16c contraction of *Scottish*, first in Early Modern English then in Older Scots. It ousted *Scottish* as the prevailing form in England. In Scotland, the native form *Scots* predominated until in the 18c Anglicizing vogue *Scotch* became fashionable in both countries. In the early 19c, however, some Scottish writers were expressing doubts about it as a supposed innovation and returning to the more traditional *Scottish* and *Scots*, while others, such as J. A. H. Murray, editor of the *OED*, continued to use it. By the early 20c, disapproval of *Scotch* by educated Scots was so great that its use was regularly disencouraged by teachers, except for such entrenched phrases as *Scotch broth*, *Scotch mist*, *Scotch terrier*, *Scotch tweed*, *Scotch whisky*. In England and North America, *Scotch* has remained the dominant form into the late 20c, although awareness of middle-class Scottish distaste for it has been spreading. The *OED Supplement* (1982) reported that in deference to Scottish sensibilities the English have been abandoning *Scotch* for *Scottish* and less frequently *Scots*, and prefer *the Scots to the Scotch* as the name of the people. Paradoxically, for working-class Scots the common form has long been *Scotch* (sometimes written *Scoatch*) and the native form *Scots* is sometimes regarded as an Anglicized affectation. Compare SCOTS, SCOTTISH. See SCOTCH-IRISH. [EUROPE, NAME]. A.J.A.

**SCOTCH-IRISH.** The name of that part of the population of northern Ireland descended from the Scottish Presbyterian settlers of the 17c and later. From the 18c, it has been applied to the people of this background who migrated in large numbers to Pennsylvania and neighbouring regions of the US and later to Ontario and other parts of Canada. Since around 1950, it has also been applied by linguists to the variety of Scots

spoken in northern and north-eastern Ireland, especially in Donegal, Derry, Antrim, and Down. The recent form *Scots-Irish* runs parallel with the increasing preference for *Scots* over *Scotch*: 'The ingrained hostility between the Catholic community and the Scots-Irish in Northern Ireland' (*The Listener*, 21 Dec. 1972). See APPALACHIAN ENGLISH, DIALECT IN AMERICA, SCOTCH, ULSTER SCOTS. [AMERICAS, EUROPE, NAME, VARIETY]. A.J.A.

**SCOTCHMAN/WOMAN.** See -MAN/WOMAN.

**SCOTIA** [Latin: Land of the Scots. See SCOT]. In present-day use, a formal and somewhat grand literary name for Scotland ('The halesome parritch, chief of Scotia's food': Robert Burns, *The Cotter's Saturday Night*, 1786), also sometimes used for fun ('Auld Scotia ma hame, hoo ye dirl in ma wame': Ebenezer McIlwham, pen name of Clifford Hanley, 'Caledonia', c.1975) [*halesome* wholesome, *parritch* porridge, *auld* old, *ma hame* my home, *hoo ye dirl in ma wame*, ambiguous: 'how you thrill in my heart' or 'how you upset my stomach']. Compare ALBA, CALEDONIA, SCOTLAND. [EUROPE, NAME]. A.J.A.

**SCOTLAND** [From Old English, Land of the Scots: see SCOT]. A kingdom in the island of Britain. The name, like its older Latin equivalent *Scotia*, first referred to Ireland, the home of the original Scots. By the 10c, the name was used of the realm of the Celtic kings of Scots, north of the Forth and Clyde, after which the original Irish association died out. From the 14c, *Scotland* has been the common name for the kingdom, its southern boundary virtually stable at the present border with England, between the mouth of the Tweed and the Solway Firth. Other names for Scotland are *Alba*, *Caledonia*, *Scotia*: see entries. Since 1707, Scotland has been part of the United Kingdom. The mainland is divided into three regions: the *Highlands*, the *Lowlands*, and the *Southern Uplands*. The islands to the north-west are known as both the *Western Isles* and the *Hebrides*, and divide into the *Inner* and *Outer Hebrides*. The islands to the north are known as the *Northern Isles* and divide into two groups: *Orkney* and *Shetland*. Traditionally sources of tension in the lives of Scots include ancient rivalry and warfare with England (including a resentment of its wealth, influence, and political dominance), a long-standing mutual suspicion between Gaels (Highlanders and Hebrideans) and Lowlanders (on account of language and culture, and because the centres of power have been located in the Lowlands), and since the Reformation, antagonism between

Protestants (mainly Presbyterians) and Catholics (both among the Gaels and as immigrants from Ireland, especially in the 19c).

In 1503, James IV King of Scots married Princess Margaret of England, in the *Marriage of the Thistle and the Rose*. In 1603, James VI King of Scots became James I of England in the *Union of the Crowns*. In 1707, an incorporating (non-federal) union took place, the *Union of the Parliaments*, in which the Scots Parliament was dissolved and the English Parliament expanded as the British Parliament. In the Act of Union, both countries retained their separate legal and educational systems and national Protestant churches. There was massive unease in Scotland at the time of Union, in which there were elements of coercion and bribery; although an uncertain majority of Scots has generally supported the idea of Great Britain, waves of nationalist feeling recur, with demands ranging from home rule through federalism to independence. The Scottish National Party currently favours independence within the European Community.

T.MCA., A.J.A.

**SCOTS** [Late 16c: a contraction of earlier Northern Middle English and especially Older Scots *Scottis* or *Scottis*, in contrast with the later English form *Scottish*]. (1) Relating to or characteristic of Scotland, its people, languages, culture, institutions, etc.: *Scots traditions*, *the Scots*

*language*. Since the 15c, *Scots* (originally in Midland and Southern Middle English as *Scottes*, *Scotes*) has also occasionally been used in England. Although in certain uses (*Scots law*, *Scots Greys*, *Scots thistle*, *a Scots mile*, *a pound Scots*) the adjective has never gone out of favour, in other uses its popularity declined after the mid-18c in competition with *Scottish* and *Scotch*, reviving when *Scotch* fell into disfavour in the 19–20c. (2) A name for both Gaelic and the form of Northern English used in Scotland. The forms *Scottis*, *Scottis* and the Latin adjectives *Scotticus*, *Scotticus* down to the 15c applied only to Gaelic and its speakers and have occasionally been so used since. From 1494, the term was increasingly applied to the Lowland speech, previously known as *Inglis*, so as to distinguish it from the language of England. From then on, this was the regular application of the term, and until the early 18c *Scots* and *Inglis* or *English* were more or less interchangeable: 'They decided not to disjoin but to continue the Scots or English classe in the gramer school as formerly' (Stirling Burgh Records, 23 Aug. 1718).

**The status of Scots.** Scholars and other interested persons have difficulty agreeing on the linguistic, historical, and social status of Scots. Generally, it is seen as one of the ancient dialects of English, yet it has distinct and ancient dialects of its own. Sometimes it has been little more than an over-spill noted in the discussion of English as part of the story of England. Sometimes it has been called the English of Scotland, part of general English yet often in contrast with it, and different from the standard English taught in Scottish schools. Sometimes, it has been called a Germanic language in its own right, considered as distinct from its sister in England in the same way that Swedish is distinct from Danish. In addition, in its subordinate relationship with the English of England, its position has been compared to Frisian in the Netherlands (dominated by Dutch) and Norwegian (once dominated by Danish). In *The Languages of Britain* (1984), Glanville Price notes:

In planning and writing this book, I have changed my mind four times, and, in the end, I devote a separate chapter to Scots not because I necessarily accept that it is a 'language' rather than a 'dialect' but because it has proved to be more convenient to handle it thus than include some treatment of it in the chapter on English.

Whatever it is, Scots is distinct enough to stand alone in this way. Despite the controversy, it has since the beginning of the 18c been the object of scholarly investigation and those scholars who have specialized in its study divide its history into three periods: *Old English* (to 1100); *Older Scots* (1100–1700), divided into *Early Scots*

(1100–1450) and *Middle Scots* (1450–1700); *Modern Scots* (1700 onwards).

**The King's Scots.** The first source of Scots dates from the 7c. It was the Old English of the kingdom of Bernicia, part of which lay in what is now southern Scotland: see NORTHUMBRIA. The second source was the Scandinavian-influenced English of immigrants from Northern and Midland England in the 12–13c, who travelled north at the invitation of the Anglo-Normanized kings of Scots. By the 14c, the variety of Northern English which had crystallized out of these sources (known to its speakers as *Inglis*) had supplanted Gaelic and Cumbric, languages formerly spoken in much of what is now Lowland Scotland, except in Galloway in the south-west, where Gaelic did not die out till the 17c. Throughout the rest of Lowland Scotland, all ranks, including the court and barons, who had formerly spoken Norman French, now spoke *Inglis* (known today as Older Scots). In Caithness, Orkney, and Shetland, however, the form of Norse known as *Norn* continued in use for some time. From the late 14c also, Latin began to be overtaken by Scots as the language of record and literature, a process well advanced by the early 16c, by which time the term *Scots* had joined *Inglis* as an alternative name for what had become the national language of Stewart Scotland.

**Anglicization.** By the mid-16c, Scots had begun to undergo the process of *Anglicization*, in which southern English word forms and spellings progressively invaded written and later spoken Scots. Among the conditions favouring this trend were the Scots' failure to produce a translation of the Bible in their own language and Protestant reliance (before and after the Reformation of 1560) on Bibles in English, so that the Biblical language of Scotland was English. By the late 16c, all Scots writing was in a mixed dialect, in which native Scots spellings and spelling symbols co-occurred with English borrowings: *aith/oath*, *ony/any*, *gude/good*, *quh/-wh-*, *sch/-sh-*, Scots *ei*, English *ee*, *ea*, with the English forms gradually gaining in popularity. Scots elements virtually disappeared from published writings in Scotland before the end of the 17c, except for some vernacular literature, mostly verse. The elimination of Scots from unpublished writings like local records took some decades longer. Scottish speakers were now coming into contact with spoken English of various sorts, notably Biblical English read or preached from Scottish pulpits and the English learned by the Scottish gentry on their visits to the English court and the Home Counties, following the Union of the Crowns (1603). Early in the 18c, Sir Robert Sibbald distinguished three

sorts of Scottish speech: 'that Language we call Broad Scots, which is yet used by the Vulgar . . . in distinction to the *Highlanders* Language, and the refined Language of the Gentry, which the more Polite People among us do use'. That 'refined language', however, was no longer Scots but the ancestor of *Scottish English*.

**Scotticisms.** According to the Augustan ideals of good taste and propriety, shared by cultivated people in the 18c in both England and Scotland, the residue of Scots in the English of Scottish people was deplored as 'provincial' and 'unrefined'. This led many of the gentry and intelligentsia to try to rid themselves of all traces of their former national tongue by attending lectures on English elocution held in Edinburgh from 1748. In addition, from the late 17c they made great efforts to eradicate Scotticisms from their writing and speech. At the same time, the tongue 'yet used by the Vulgar' was regarded by the establishment as 'barbarous' and 'corrupt' and by the end of the 18c was thought by some to deserve 'total extinction' (John Pinkerton, 1786). Not all educated 18c Scots, however, accepted these propositions. From early in the century, a new literary Scots, which unlike most literary Middle Scots was based on up-to-date colloquial speech, burgeoned in the writings of Allan Ramsay (1686–1758) and some of his contemporaries, and such successors as Robert Burns. This led on to a stream of vernacular literature in Scots and was accompanied early in the 19c by a revival of interest in and approval of Modern Scots among the middle and upper classes, inspired to some extent by John Jamieson's *Etymological Dictionary of the Scottish Language* (1808). Scots was now generally accepted as a rich and expressive tongue and recognized as the 'national language', albeit (as had been repeatedly stated since 1763 or earlier) 'going out as a spoken tongue every year'.

**Revival and survival.** The need was now felt to record the old language before it was too late, as in Jamieson's dictionary, or to undertake the preservation or even restoration of Scots. In the 20c, this has manifested itself *inter alia* in the creation of Lallans or Synthetic Scots by the Scottish Renaissance writers from c. 1920, and in a sustained output in recent decades of narrative, expository, and even some transactional prose in Scots, notably in the Scots Language Society's journal *Lallans* (1973–). From the early 18c to the present day, appeals in English prose or Scots verse have been made to Scots to speak their own language rather than Southron. Although these appeals have often been unheeded even by some of those who make them, all such activity has helped maintain the Scottish people's linguistic loyalty to their 'own

dying language' (Robert Louis Stevenson, 1887) and has helped to slow the drift away from native Scots elements at all levels of speech. But it could not reverse the trend which favours English as the language of power and prestige or restore the full Scots of a dwindling minority of rural speakers to its former central position. In its written form, even after its 20c renaissance, Scots remains restricted to a narrow sphere of literary uses and it makes only a marginal appearance in the written media, in comic strips, cartoons, and jokes (for example, in the enormously popular *Sunday Post*) and in couthy columns in the popular and local press. Full Scots is almost never heard on the broadcast media, though diluted varieties occur in a few popular television series. None the less, although English is dominant, the efforts of the elocutionists and the castigators of Scotticisms have not been especially effective: Scottish English remains permeated with features from Scots.

**Scots and Northern English.** Scots has many features of Northern English phonology, grammar, and vocabulary, which it shares with the contemporary dialects of northern England. However, because of the separation of the two kingdoms since early times, many of the characteristics of Scots extend only to the Border. What appears to be the most numerous bundle of dialect isoglosses in the English-speaking world runs along this border, effectively turning Scotland into a 'dialect island'.

**Pronunciation.** (1) Like other Northern dialects, Scots displays the results of many early divergences from the Midland and Southern dialects of Middle English: *hame, stane, sair, gae* as against *home, stone, sore, go; hoose, oot, doon, coo* as against *house, out, down, cow; baw, sawt* against *ball, salt; gowd, gowf* as against *gold, golf; mouter* as against *multure; fou* as against *full; and buit, guid, muin, puir, dui* (or with some other front vowel, depending on dialect) as against *boot, good, moon, poor, do*: see DIALECT IN SCOTLAND. (2) Of the features largely exclusive to Scots (in Scotland and Ulster), the most pervasive is the *Scottish Vowel-Length Rule* (see entry), the most striking result of which is the split of Early Scots /i:/ into two phonemes in Scots and ScoE: /aɪ/ in *ay* (yes), *buy, alive, rise, tied*, and /əɪ/ in *aye* (always), *life, rice, bite, tide*. (3) The consonant system retains the Old English voiceless velar fricative /x/ in *teuch, heich* (equivalents of *tough, high*) and many other words (including such Gaelic loans as *clarsach, loch, pibroch*), and the cluster /xt/ in *dochter, nicht* (*daughter, night*). Such forms were once universal in English and have only become obsolete in Northern England in recent decades.

**Spelling.** By the late 14c, Older Scots was developing its own distinctive orthography, marked by such features as *quh-* (English *wh-*), *-ch* (English *-gh*), *sch-* (English *sh-*), and the use of *i/y* as in *ai/ay*, *ei/ey* to identify certain vowels: compare Scots *quheyll*, *heych*, *scheip*, *heid*, *heyd* with English *wheel*, *high*, *sheep*, *heed*, *head*. Following the Anglicization of the 16–17c, the literary Scots of Allan Ramsay and his contemporaries and successors in the 18c had discarded some of these forms but retained others, including *ei* as in *heid* (head), *ui* or *-e* as in *guid/gude* (good), and *ch* as in *loch*, *thocht* (loch, thought). This orthography, however, was in the main an adaptation of English orthography to represent Scots, as is shown by the free use of apostrophes to mark ‘missing’ letters. Unlike English, but like Older Scots, it is tolerant of spelling variation, and attempts to regulate this, notably through the *Scots Style Sheet* of the Makars’ Club (1947), have had only limited success. The *Concise Scots Dictionary* records many spelling variants, such as *breid*, *brede*, *bread*, *braid* (bread), and *heuk*, *huke*, *hook* (hook), and the larger Scots dictionaries record very many more.

**Morphology.** (1) The regular past form of the verb is *-it* or *-t/(e)d*, according to the preceding consonant or vowel: *hurtit*, *skelpit* smacked, *mendit*, *kent/kenned* knew/known, *cleant/cleaned*, *tellit/tauld* told, *deed* died. (2) Some verbs have distinctive principal parts: *greet/grat/grutten* weep/wept, *fesh/fuish/fuishen* fetch/fetched, *lauch/leuch/lauchen* laugh/laughed, *gae/gaed/gane* go/went, *gie/gied/gien* give/gave/given. (3) A set of irregular noun plurals: *eye/een* eye/eyes, *cauf/caur* calf/calves, *horse/horse* horse/horses, *coo/kye* cow/cows (compare archaic English *kine*), *shoe*, *shae*, *shee/shuin*, *sheen* shoe/shoes (compare archaic English *shoon*). (4) Nouns of measure and quantity unchanged in the plural: *four fuit* foot, *twa mile*, *five pund* pound, *three hunderwecht* hundredweight. (5) A third deictic adjective/adverb *yon/yonder*, *thon/thonder* (that and those there, at some distance): *D’ye see yon/thon hoose ower yonder/thonder?* (6) Ordinal numbers ending in *-t*: *fourt*, *fift*, *saxt/sixt*, etc. (7) Adverbs in *-s*, *-lies*, *-lin(g)s*, *gate(s)*, and *way(s)*, *-wey*, *-wey(s)*: *whiles* at times, *maybes* perhaps, *brawlies* splendidly, *geylies* pretty well, *aiblins* perhaps, *arselins* backwards, *halfins* partly, *hidlins* secretly, *maistlins* almost, *a’gates* always, everywhere, *ilka gate* everywhere, *onygate* anyhow, *ilkawye* everywhere, *onyway(s)* anyhow, anywhere, *endweys* straight ahead, *whit wey* how, why. (8) Diminutives and associated forms: in *-ie/y* (*burnie* small *burn* brook, *feardie/feartie* frightened person, coward, *gamie* gamekeeper,

*kiltie* kilted soldier, *postie* postman, *wifie* wife, *rhodie* rhododendron), in *-ock* (*bittock* little bit, *playock* toy, plaything, *sourock* sorrel) and chiefly Northern *-ag* (*bairnag* little *bairn* child, *Cheordag* Geordie), *-ockie*, *-ickie* (*hoosickie* small house, *wifeockie* little wife). Note the five times diminished a little *wee bit lassockie*.

**Syntax and idiom.** (1) Verbs in the present tense are as in English when a single personal pronoun is next to the verb; otherwise, they end in *-s* in all persons and numbers: *They say he’s owre auld*, *Thaim that says he’s owre auld*, *Thir laddies says he’s owre auld* They say he’s too old, etc.; *They’re comin as weel but Five o them’s comin; The laddies?—They’ve went but Ma brakes has went*. (2) *Was* or *wis* may replace *were*, but not conversely as in some Northern English dialects: *You were/wis there*. (3) The modal verbs *may*, *ocht* to ought to, and (except in Orkney and Shetland) *shall*, are rare or absent in informal speech, but occur in literary Scots. They are replaced respectively by *can*, *should*, and *will*. *May* and *shall* are similarly missing from most ScoE. (4) Scots, like Northern English, employs double modal constructions: *He’ll no can come the day* He won’t be able to come today, *Ah nicht could come the morn* I might be able to come tomorrow, *Ah used tae could dae it, but no noo* I could do it once, but not now. (5) There are progressive uses of certain verbs: *He wis thinkin he wid tell her*; *He wis wantin tae tell her*. (6) Verbless subordinate clauses that express surprise or indignation are introduced by *and*: *She had tae walk the hale lenth o the road and her seven month pregnant*; *He tellt me tae run and me wi ma sair leg* (and me with my sore leg). (7) Negation is mostly as in English, either by the adverb *no* (North-East *nae*), as in *Ah’m no comin* I’m not coming, or by the enclitic *-na/nae* (depending on dialect, and equivalent to *-n’t*), as in *Ah dinna ken* I don’t know, *They canna come* They can’t come, *We couldna hae tellt him* We couldn’t have told him, and *Ah huvna seen her* I haven’t seen her. With auxiliary verbs which can be contracted, however, such as *-ve* for *have* and *-ll* for *will*, or in *yes-no* questions with any auxiliary, Scots strongly prefers the usage with the adverb to that with the enclitic: *He’ll no come* rather than *He winna come*, and *Did he no come?* to the virtual exclusion of *Didna he come?* (8) The relative pronoun is *that* for all persons and numbers, and may be elided: *There’s no mony folk (that) lives in that glen* There aren’t many people who live in that glen. The forms *wha*, *wham*, *whase*, *whilk* (who, whom, whose, which) are literary, the last of these used only after a statement: *He said he’d lost it, whilk wis no whit we wantit tae hear*. That is made possessive by *’s* or appending an appropriate pronoun: *The man that’s hoose got burnt*;

*the wumman that her dochter got mairrit; the crew that thair boat wis lost.* (9) Verbs of motion may be dropped before an adverb or adverbial phrase of motion: *Ah'm awa tae ma bed; That's me awa hame; Ah'll intae the hoose and see him.* (10) Like Northern English, Scots prefers the order *He turned oot the licht to He turned the licht out and Gie me it to Give it me.*

**Vocabulary.** The vocabularies of Scots and English overlap, but Scots also contains words that are absent from the standard language, either shared with the dialects of Northern England, or unique to Scotland. Many words have wide currency and have strong emotive overtones for many Scots. The sources of the distinctive elements of Scots vocabulary include Old English, Old Norse, French, Dutch, and Gaelic.

*Old English.* (1) Not now shared with any dialect of England are such forms as: *but an ben* a two-room cottage, *but* the outer room, *ben* the inner room, *cleuch* a gorge, *haffet* the cheek, *skeich* (of a horse) apt to shy, *swick* to cheat. (2) Shared with (especially Northern) dialects of England: *bairn* a child, *bide* to stay or live (in a place), *dicht* to clean, *dwam* a stupor, *hauch* a riverside meadow, *heuch* a steep hill, *rax* to stretch, *snell* (of weather) bitter, severe, *speir* to ask, *thole* to endure. (3) Now in general or literary English: *bannock*, *eldritch*, *fey*, *gloaming*, *raid*, *wee*, *weird*, *wizened*. *Weird* and *fey* also have the original senses 'destiny' and 'fated to die'. *To dree yir ain weird* means 'to endure what is destined for you'.

*Norse.* The Scandinavian element, introduced by 12–13c immigrants from Northern England, is generally shared with the Northern dialects, but some words that are obsolete there survive in Scots and ScOE: *ain own* (*ma ain* my own), *aye* always, *big* to build, *blae* blue (whence *blaeberry*), *blether* to chatter, *brae* slope of a hill, *cleg* a gadfly, *eident* diligent, *ferlie* a wonder, *gate* a road (also in street names: *Gallowgate*, in Glasgow), *gowk* a cuckoo, *graiith* equip, equipment, *kirk* church, *lass* a girl, *lowp* to jump, *lug* ear. This element includes the auxiliary verbs *gar* to make or cause to do (*It wad gar ye greet* It would make you weep) and *maun* must (*Ah maun find her* I must find her, and the proverb *He that will tae Cupar maun tae Cupar* Scots equivalent of 'A wilful man must have his way'). Most of this is also shared by the dialects of Shetland, Orkney, and Caithness, which have in addition their own distinct vocabulary descended from Norn.

*French.* Influence from French was first through the Anglo-Norman baronage of 12–13c Scotland and the Frenchified literary and fashionable culture of medieval Britain, then partly as a result of the *Auld Alliance* (Franco-Scottish Alliance, 1296–1560), and partly from Scots travelling and

living in France and Switzerland in medieval and later times: (1) Shared with early English but surviving only in Scots: *causey* the paved part of a street (cognate with *causeway*), *cowp* to capsize or upset (from *couper* to cut, strike) *cummer* a godmother (from *commère*), *douce* (originally of a woman or manners) sweet (from *doux/douce*), *houlet* owl (from *hulotte*), *leal* (a doublet of *loyal* and *legal*), *tass/tassie* cup (from *tasse*). (2) Virtually exclusively Scots: *ashed* a serving dish (from *assiette*), *disjune* breakfast (from *desjun*, now *déjeuner*), *fash* to bother (from *fâcher*), *Hogmanay* (from Old French *aguillanneuf* a New Year's gift), *sybow/sybie* the spring onion (from Old French *ciboule*), *vennel* an alley (from Old French *venelle*). (3) Shared from the 17c with English: *caddie*, *croup* (the disease), *pony*.

*Dutch.* The population of medieval Scotland included Flemish landowners in the countryside, wool merchants, weavers, and other craftsmen in the burghs, and trade with The Netherlands dates from the same period. Borrowings from medieval Dutch or Flemish include: *callan* a lad, *coft* bought, *cowk* to retch, *cuit* an ankle, *groff* coarse in grain or quality, *howf* a favourite haunt, public house (from *hof* a courtyard), *loun* ('loon') a lad, *mutch* a kind of woman's cap, *mutchkin* a quarter of a Scots pint, *pinkie* the little finger (passed on to AmE), *trauchle* to overburden, harass. The words *croon*, *golf*, *scone* have been passed on to English at large.

*Gaelic.* (1) Early borrowings, from around the 12c to the 17c, many of which have passed on into English: *bog*, *cairn* a pile of stones as a landmark, *capercaillie* the wood grouse, *clachan* a hamlet, *clan*, *clarsach* the Highland harp, *cran-reuch* hoar frost, *glen*, *ingle* a hearth-fire, *loch*, *partan* the common crab, *ptarmigan* an Arctic grouse, *slogan* originally a war cry, *sonse* plenty, prosperity (whence *sonsy* hearty, comely, buxom), *strath* a wide valley, *tocher* a dowry. (2) From the 17c onward, also often passing into English: *ben* a mountain, *brogue* a Highlander's shoe, *claymore* a Highland sword, *corrie* a cirque or circular hollow on a mountainside, *gillie* a hunting attendant, *golach* an earwig, *piibroch* solo bagpipe music, *sporrán* a purse worn in front of a kilt, *whisky*. (3) From the late 19c onward: *ceilidh* ('cayly') an informal musical party, *Gaidhealtachd* the area where Gaelic is spoken, *slàinte* ('slanch') health and *slàinte-mhath* ('slanche-va') good health (said as a toast).

*Latin.* The distinctive vocabularies of education, the Church, and especially law in Scotland are largely Latin: see SCOTTISH ENGLISH. From the classroom a little schoolboy Latin has trickled into Scots since the 15c or earlier: *dominie* schoolmaster, *dux* best pupil in a school or a

class, *fugie* a runaway, truant, *janitor* a school caretaker, *pandie* a stroke on the palm with a cane, etc. (from Latin *pande manum* stretch out your hand: also *palmie*), *vacance* vacation, holiday, *vaig* and *stravaig* wander aimlessly.

*Echoisms, reduplicatives, and others.* (1) Words of uncertain origin but with a distinct onomatopoeic element include: *birl* to whirl, *daud* a thump or lump, *dunt* a thump, *sclaff* to slap, *skrauch* and *skreich* to shriek, *weech* to move in a rush, *yatter* to chatter. (2) Scots has many widely used reduplicative words, such as *argybargy* a dispute, *clishclash* and *clishmaclaver* idle talk, gossip, *easy-osy* easy-going, *eeksie-peeksie* six and half a dozen, *the hale jingbang* the whole caboodle, *joukerie-pawkerie* trickery, *mixer-maxter* all mixed up. (3) Combinations and fanciful formations: *bletherskate* an incessant talker, *camshauchle* distorted, *carnaptious* quarrelsome, *carfuffle* a commotion (passed into English), *collieshangie* a noisy squabble, *sculduddery* fornication (whence AmE *skullduggery*), *tap-salteerie* topsy-turvy, and *whigmaleerie* a trifle, whim.

*Iteratives, intensives, and others.* (1) Iteratives and intensives: *donner* to daze (whence *donnert* stupid), *scunner* to disgust, and someone or something disgusting (from the root of *shun*: also Northern English), *scowder* to scorch (cognate with *scald*), *shauchle* to shuffle, *shoogle* to joggle or shake. (2) Common words of various derivations, some obscure: *bogle* a ghost (perhaps of Celtic origin: note *tattie-bogle* 'a potato bogle', a scarecrow), *bonny* or *bonnie* handsome, beautiful (perhaps from French *bon* good), *braw* fine, excellent (perhaps a variant of *brave*), *collie* a sheepdog (now in general use in English), *couthy* homely/homey, congenial (from *couth* known: compare *uncouth*), *eerie* fearful, ghostly (now general), *glaiokit* foolish (from *glaiik* trick, deceit, flash), *glamour* a spell (now general, for a special kind of magic: a doublet of *grammar*), *gowkit* or *gukkit* foolish (perhaps from the *guk-guk* call of the *gowk* or cuckoo), *glaur* mud, *glower* to stare (now general), *gomerel* a fool, *gumtion* get-up-and-go, *guts* (now general). (3) Recent creations: *bangshout* caboodle (compare *jingbang*, above), *bletheration* foolish talk (see *blether*, above), *duffie/yuffie* a water closet, *fantoosh* flashy (probably a play on *fancy* and *fantastic*), *gallus* mischievous, *heidbanger* a madman, *high-heid-yin* ('high-head-one') boss, manager, *laldie* a thrashing, *multy* a multi-storey tenement, *sapsy* sappy, effeminate, *scheme* (clipping 'housing scheme') a local-authority housing estate, *schoosh* to gush, fizzy drink, *squeegee* askew.

**Literary Scots.** Already in Middle Scots, literary and official prose had grown archaic in comparison with contemporary speech, and spoken

innovations therefore largely fail to appear in writing, apart from comic verse and passages of quoted dialogue in law-court records. These last show novel forms such as *fow* for *full*, *mow* for *mouth*, *ha* and *gie* (later *hae* and *gie*) for *have* and *give*, and such new coinages as *glower* (to stare) and *glaiokit* (foolish). The following passage illustrates polished 16c literary prose:

The samyn tyme happynnit an wonderfull thing. Quhen Makbeth and Banquho war passand to Fores, quhair King Duncan wes for the tyme, thai mett be the gaitt thre weird sisteris or wiches, quihik come to thame with elrege clething (from John Bellenden's translation, c.1531 of Hector Boece's Latin *Chronicles of Scotland*, 1527).

[Translation: At that time a wonderful thing happened. When Macbeth and Banquo were on their way to Forres, where King Duncan was at the time, they met by the roadside three 'sisters of fate' or witches, who approached them in unearthly (eldritch) garments.]

In the 20c, literary Scots of the variety that includes Lallans and the language of W. L. Lorimer's *The New Testament in Scots* similarly differs from colloquial varieties. It draws its typical word forms, vocabulary, and grammar from an archaic, more or less non-local, variety of Central Scots, retaining for example obsolete or obsolescent uses of modal verbs and negatives and such archaisms as *aiblins* perhaps, *descryve* describe, *leed/leid* a language, *lift* sky, *swith* quickly, and *virr* strength. It also sometimes employs a stilted, non-colloquial, English-like syntax. Occasionally, false analogies produce forms and usages that have no Scots pedigree: *ainer* an owner, *aipen* open, *raim* to roam, *delicht* delight, *tae* too (whose Scots equivalent is *owre*).

The following passages exemplify Modern Scots since the 18c, in works of wide currency within 'English literature':

O! 'tis a pleasant thing to be a bride;  
Syne whinding gets about your ingle-side,  
Yelping for this or that with fashuous din,  
To mak them brats then ye maun toil and spin.  
(Allan Ramsay, from the *The Gentle Shepherd*, 1725)

'Weel, weel,' said Mr. Jarvie, 'bluid's thicker than water; and it liesna in kith, kin and ally, to see motes in ilk other's een if other een see them no. It wad be sair news to the auld wife below the Ben of Stuck-avrallachan, that you, ye Hieland limmer, had knockit out my harns, or that I had kilted you up in a tow'

(Walter Scott, from *Rob Roy*, 1817).

Faith, when it came there was more to remember in Segget that year than Armistice only. There was better kittle in the story of what happened to Jim the Sourock on Armistice Eve. He was aye sore troubled with his stomach, Jim, he'd twist his face as he'd hand you a dram, and a man would nearly lose nerve as he looked—had you given the creature a bad shilling or what? But syne he would rub his hand slow on his wame, *It's the pains in my breast that I've gotten again;*

and he said that they were fair awful sometimes, like a meikle worm moving and wriggling in there (Lewis Grassie Gibbon, from *Cloud Howe*, second in the trilogy *A Scots Quair*, 1932-4).

**Conclusion.** With its own history, dialects, and literature, Scots is something more than a dialect yet something less than a fully-fledged language. A wide linguistic distance lies between it and standard English, the poles of speech in most of Scotland. By and large, spoken and written Scots are difficult for non-speakers, and require an investment of effort. As a result, use of Scots in mixed company can make 'monolingual' English speakers feel excluded. In the larger European context, the situation of Scots resembles that of Frisian in the Netherlands, Nynorsk in Norwegian, Occitan in relation to French in France, and Catalan in relation to Spanish in Spain: see **FRISIAN, NORWEGIAN**. Scots is the substratum of general English in Scotland; most Scots use mixed varieties, and 'full' traditional Scots is now spoken by only a few rural people: see **SCOTTISH LANGUAGES**. None the less, despite stigmatization in school, neglect by officialdom, and marginalization in the media, people of all backgrounds have since the 16c insisted in regarding *the guid Scots tongue* as their national language, and it continues to play an important part in their awareness of their national identity.

**SCOTS LANGUAGE ORGANIZATIONS.** In addition to such university departments as

Edinburgh's *School of Scottish Studies* (which includes the *Linguistic Survey of Scotland*) and Glasgow's *Department of Scottish Literature*, several voluntary bodies promote Scots. The *Scottish Text Society* (founded 1882) provides scholarly editions of (especially earlier) literature. Though with different aims, the publications of the *Scottish History Society* (from 1887) ensure the appearance of many works in Scots. The *Scottish National Dictionary Association* (founded in 1929) produces dictionaries of Modern Scots, based on original research on the language. From 1953 to 1976, the *Scottish Dictionaries Joint Council* oversaw the work of the *Scottish National Dictionary* and the *Dictionary of the Older Scottish Tongue* on behalf of the universities and other bodies; currently, as the *Joint Council for the Dictionary of the Older Scottish Tongue*, it continues to manage *DOST*. The *Saltire Society* was founded in 1936 to promote Scottish culture and has benefited Scots and Gaelic through its publications and public performances. The *Burns Federation* (founded 1885), with its annual journal *The Burns Chronicle*, carries out similar work. Since 1970, the *Association of Scottish Literary Studies (ASLS)* has published works of Scots literature and language. It publishes the *Scottish Literary Journal*, which includes an annual issue *Scottish Language*. The ASLS has a Language Committee and a Schools Committee. The *Scots Language Society* (founded in 1972 as the *Lallans Society*) supports the language and its literature, and publishes the magazine *Lallans*. See **LALLANS, LINGUISTIC SURVEY OF SCOTLAND, SCOTS, SCOTTISH DICTIONARIES.** [**EUROPE, MEDIA**].

I.C.M.

**SCOTS LITERATURE.** Literature written in Scots, whose history falls into two periods: before the Union of the Crowns in 1603, when Scots was the accepted literary medium of non-Gaelic Scotland; after 1603, when literature in Scots as a literary language coexists and in some sense competes with standard English.

**Before 1603.** The period from 1376 to 1560 is considered the finest in the history of Scots literature. The language, with its large and varied vocabulary, allowed for a wide range of styles, exploited by such poets or *makars* as John Barbour (the epic poem *The Brus*, 14c), King James I (*The Kingis Quair*, 15c), Robert Henryson (*The Morall Fabillis, The Testament of Cresseid*, 15c), 'Blind Harry' (the epic poem *The Wallace*, 15c), William Dunbar (a varied output including religious, courtly, humorous, and satirical poems, 15-16c), Gavin Douglas (a translation of the *Aeneid*, 15-16c), and Sir David Lyndsay (poems including *Squyer Meldrum* and the play *Ane*

*Satyre of the Thrie Estaitis*, 16c). Scots prose never reached the same level of literary development, but the late 15c and the 16c produced some historical, theological, and polemical works. A short-lived poetic revival directed by James VI included experiments with French and Italian models.

**After 1603.** The 17c was a relatively barren period in Scottish letters. In the 18c, however, Allan Ramsay revived Scots poetry with a corpus of mainly comic and satiric verse and the pastoral drama *The Gentle Shepherd*. Robert Fergusson, Robert Burns, and Alexander Ross, among others, built on Ramsay's foundation to produce a varied and colourful poetry drawing on folklore as well as on the earlier literary tradition. The use of Scots for fictional purposes was developed in the late 18c and 19c by Walter Scott, John Galt, James Hogg, George MacDonald, Robert Louis Stevenson, and others. Stevenson, perhaps the foremost Scots poet since Burns, used an eclectic language that contrasted with a school of local dialect writing then emerging in the north-east, with William Alexander and (in the late 19c and early 20c) Charles Murray and Mary Symon among its practitioners. A revolution was effected in the 1920s by Hugh MacDiarmid, who used an eclectic literary dialect known as *Synthetic Scots* for a challenging, metaphysical poetry. His achievement launched a school of experimental poetry, among whose leading members were William Soutar, Sydney Goodsir Smith, Robert Garioch, and Alexander Scott. The distinctive North-Eastern dialect continued to produce poetry closely linked to the traditional life of the region. Other parts of the country, including Orkney and Shetland, have more recently developed traditions of local dialect writing. Stories and dramas in Scots, a vigorous school of writing in Glasgow working-class dialect, and a number of major literary translations, such as W. L. Lorimer's translation of the New Testament into Scots, are among recent developments.

**SCOTSMAN/WOMAN.** See -MAN/WOMAN.

**SCOTT, Sir Walter** [1771-1832]. Scottish poet, novelist, collector of ballads, and historian. Born in Edinburgh, he was partly brought up in the Borders, whose history and traditions were a fundamental influence. He was educated at the High School and U. in Edinburgh, and after

training as a lawyer was appointed Sheriff-Depute of Selkirkshire in 1799. His first important published work was *Minstrelsy of the Scottish Border* (1802-3), an edited collection in three volumes of over 70 ballads. The tone and quality of ballad poetry influenced his series of narrative poems on Scottish historical themes, including *Marmion* (1808) and *The Lady of the Lake* (1810). However, his reputation rests mainly on his novels, of which many are set in 17-18c Scotland (including *Waverley*, 1814; *Old Mortality*, 1816; *Rob Roy*, 1817), but others have settings from various periods in the history of England (including *Ivanhoe*, 1819; *Kenilworth*, 1821) and France (*Quentin Durward*, 1823). His success as a novelist enabled him to purchase the estate of Abbotsford, in the Borders, on which he lavished much imagination and expense. In 1826, the collapse of the publishing company with which he was associated left him financially ruined; and the remainder of his life was spent, despite bereavements and deteriorating health, in heroic and ultimately successful efforts to redeem the company's debts by his writing.

By virtually inventing the historical and regional novel as genres, Scott exerted a profound influence on the subsequent course of literature throughout the world. His successors include not only English regional novelists such as the Brontë sisters and Thomas Hardy, but James Fenimore Cooper and Mark Twain, for example, in the US, and others in Australia, Canada, India, and elsewhere. His use of Scots for dialogue encouraged others to experiment with non-standard forms of English and to provide them with more or less consistent orthographies. His presentation of scenes and characters from Scottish history also made an enduring contribution to perceptions of Scotland both at home and abroad. His English vocabulary is ornamented not only with words taken from Scots but with a large number of archaisms from Spenser and Shakespeare, particularly in such fields as warfare, weaponry, horsemanship, and medieval architecture. His Scots dialogue is realistic and expressive, but the declining status of Scots in his time is suggested by the fact that most of his Scots-speaking characters belong to the lower orders or are associated with an age that was gone or passing when he wrote. See index. [BIOGRAPHY, EUROPE, LITERATURE].

J.D.M.

**SCOTTICISM** [17c: from Latin *Scotticus*, Scottish, and *-ism* as in *Anglicism*]. A feature of English peculiar to Scotland; a word or usage from Scots or related to Scotland that occurs in English at large or in any other language. The term has often been pejorative, especially in Scotland itself, where since the late 17c it has served to

indicate a usage to be avoided for reasons of refinement at home and ease of communication abroad. As the Anglicization of Scots proceeded after the Union of the Crowns in 1603, Scottish writers began apologizing for, vindicating, or seeking English help in eradicating the Scots expressions which occurred in their writings. Published collections such as James Beattie's *Scotticisms arranged in Alphabetical Order, designed to correct Improprieties of Speech and Writing* (Edinburgh, 1787, 115 pp., c.500 entries) began appearing in 1752, continuing to the 20c. The general response to these collections has been mixed: (1) Some of the expressions warned against were eliminated from ScoE: *to come/sit into the fire*; the French-derived verb *evite* (to avoid). (2) Some have become (and may always have been) part of general English: *burial* for *funeral*; *come here* (18c refined usage in England preferred *come hither*); *close the door* (*shut* was preferred); *curt/curtly*; *greed*; *liberate* (*set at liberty* was preferred). (3) Many continue in present-day ScoE. With the return of Scots to respectability in the 19c, Scotticisms have lost much of their former odium, except for the shibboleths of *Gutter Scots*.

A distinction can now be drawn between *covert* and *overt Scotticisms*. Covert Scotticisms are characteristically Scottish expressions (though some are shared by other varieties, such as AmE) which speakers of ScoE use unselfconsciously, only slightly or not at all aware that they are not universal in English: *cast out* to quarrel, *cast up* to reproach, *handless clumsy*, *miss oneself* to miss a treat, *pinkie* the little finger, *give/get a row* to inflict/receive a severe reprimand, *sort* to mend, *stay* to live, reside, *swither* to hesitate between options. Overt Scotticisms make up a repertoire of hundreds of words, sayings, and idioms universally recognizable as Scots, which middle-class ScoE speakers sprinkle through their speech and to a less extent their writing, to claim membership of the in-group of Scots: *ay(e)* yes, *hame* home, *hoose* house, *ben* the hoose in(to) the inner part of the house, *bonnie* and *braw* good-looking, *fine*, *the craitur* ('the creature') whisky, *dreich* dreary (said of the weather, a sermon, etc.: Scots *gey dreich* pretty dreary), *kirk* church, *the auld kirk* ('the old church') whisky, *peelie-wallie* sickly, *wabbit* exhausted, *come into the body o' the kirk* to come forward and join the company, *it's back tae the auld claes* and *parritch tomorrow* back to old clothes and porridge (said on return from holiday), *keep a calm sough* to stay calm, *work for sweeties* to work for sweets or candy (that is, for a pittance). See GUTTER SCOTS, -ISM, SCOTS, SCOTTISH ENGLISH. [EUROPE, STYLE, VARIETY, WORD].

A.J.A.

**SCOTTISH** [From Middle English *Scottisc*, Old English *Scyttisc*]. Relating or belonging to Scotland, its people, institutions, etc., the most neutral and inclusive of the adjectives *Scottish*, *Scots*, *Scotch*. In the late 16c, as part of the Anglicizing fashion of the time, *Scottish* began to be used in Scotland as well as England as an alternative to *Scots*, which from the mid-18c it surpassed in popularity in most uses: *the Scottish Episcopal Church*, *the Scottish Language*, *the Scottish Office*, and in the title *The Scottish Monthly Magazine* (1836-7) as compared with *The Scots Magazine* (1739- ). When, by the early 20c, *Scotch* had fallen out of favour in educated usage in Scotland, *Scottish* along with *Scots* superseded it in nearly all adjectival uses: for example, when the *Scotch Educational Department* had its name changed by Act of Parliament (1918) to the *Scottish Education Department*. Formerly used (since the 17c) in England and Scotland as a mass or collective noun, *Scottish* is virtually confined in Scotland to use as an adjective, unlike *Scots* or *Scotch*, as in 'Speak Scots/Scotch or whistle', 'the clannishness of the Scots/Scotch'. In expressions like these, *Scottish* is not now used. Compare SCOTCH, SCOTS. [EUROPE, NAME].

A.J.A.

**SCOTTISH DICTIONARIES**. Since the 16c, Lowland Scotland has had a tradition of glossaries and dictionaries interpreting Scots to users of standard English, and since the mid-19c Scottish lexicographers have contributed significantly to a range of dictionaries of English.

**The lexicography of Scots**. The first substantial piece of Scottish lexicography was Sir John Skene's glossary of Scots law, *De Verborum Significatione: The Exposition of the . . . difficult wordes, contained in the . . . Actes of Parliament* (1597), but the foundation of the lexicography of the vernacular was Thomas Ruddiman's *A Glossary . . . of The hard and difficult Words in Gavin Douglas's Translation of Virgil's Aenis*, appended to his edition (1710) of Douglas (1513). This alphabetic glossary of c.3,000 entries, supported by Ruddiman's familiarity with local dialect and lore, was copiously supplied with references to the text, enabling words to be examined in their context. Following Ruddiman, it became usual to append a more or less alphabetical glossary, but mostly without text references, to any collection of Scots vernacular writing: for example, Burns's glossaries to the 1786 and 1787 additions of his *Poems*; until the late 19c, few or none of these have compared with Ruddiman for thoroughness. Another branch of Scottish lexicography (18-20c) was collections of Scotticisms: see entry. Following

several abortive schemes to 'complete a Dictionary of words peculiar to Scotland' (Samuel Johnson to James Boswell, 1769), a full dictionary of Scots was realized in John Jamieson's *An Etymological Dictionary of the Scottish Language*, in two quarto volumes (1808), with a *Supplement* in two further volumes (1825). This was the first completed British dictionary to substantiate its definitions with accurately referenced quotations, usually in chronological order, and therefore the first dictionary on historical principles of any variety of English. In its original form or in re-editions or abridgements (the first his own abridgement of 1818), Jamieson's *Dictionary* was consulted as the authority on Scots vocabulary long after it had been superseded by the *Oxford English Dictionary* in 1928.

The 19-20c produced several one-volume dictionaries of Scots, mostly without quotations or references and with fairly brief definitions. The most important have been: *A Dictionary of the Scottish Language* (1818), by Ebenezer Picken; *Chambers Scots Dialect Dictionary* (1911), by Alexander Warrack; *The Scots Word-Book* (1977), by William Graham, containing an English/Scots section of c.5,000 entries, and a Scots/English section of c.4,500 entries; and the *Concise Scots Dictionary* (1985; see below). The appearance of numerous new and more reliable editions of early texts, the continued production (since Jamieson's time) of new dialect literature, and the copious body of new information on current oral dialect usage amassed by Joseph Wright for his *English Dialect Dictionary*, made possible the great advance over Jamieson achieved by the *EDD* and especially the *OED* in the coverage and description of Scots in every period. The *OED*'s etymologies are also incomparably more trustworthy than Jamieson's. One of its editors, W. A. Craigie, was the moving spirit behind the further progress of the lexicography of Scots.

*Dictionary of the Older Scottish Tongue* (short form *DOST*). This work is one of the Period Dictionaries of English and an exhaustive record of the vocabulary and usage of Older Scots, from its beginnings in the 12c to the end of the 17c. In his 1919 paper on the Period Dictionaries, W. A. Craigie proposed that he himself would undertake the dictionary of Older Scots, and in 1921 he began to collect the quotations for it. Editing began in 1925 and the first fascicle was published in 1931. By 1990, over two-thirds of *S* had been edited and 41 fascicles (comprising seven volumes, of nearly 5,000 pages) had been published to *ro*. *DOST* is an encyclopedic work, notable for quotations (the 21,000 or so main entries to *Ro* are illustrated by around 350,000

quotations) and for its editorial analysis by sense, spelling, and habitual collocation, manifesting at a glance the distributions of all these in time, region, and genre. Its editors have been W. A. Craigie (1921-55), A. J. Aitken (1955-86), J. A. C. Stevenson (1973-85), H. D. Watson (1983- ), and Margaret G. Dareau (1984- ).

*Scottish National Dictionary* (short form *SND*). This work, also one of the Period Dictionaries of English, provides a record of Scots from 1700 to the second half of the 20c. Unlike *DOST*, it records only those Scots words and uses, including those of Ulster and of Orkney and Shetland, which are not shared with general English or are not judged to be slang. Of Scots, however, it provides an exhaustive account, illustrated by quotations from over 6,000 source texts, supplemented by records of local oral use, partly from dialect studies, partly from local correspondents. The completed work, in ten volumes totalling 4,676 pages, contains around 20,000 main entries, illustrated by over 300,000 examples and references, more than half of which are quotations. Indications are given of the past and present regional and chronological distributions of each aspect of every word, and etymological notes cover much of the philological history of Scots. The accounts given of each alphabetical letter are unique and William Grant's *Historical Introduction* remains the clearest and most comprehensive survey of the main characteristics of the Scots dialects. The enterprise in effect began in 1907, with a suggestion from W. A. Craigie in a lecture he gave in Dundee. Dr William Grant, Lecturer in Phonetics, Aberdeen Teachers Training Centre, undertook to prepare a new dictionary of modern Scots. In 1929, the *Scottish National Dictionary Association* (*SNDA*) was formed to oversee the production of the dictionary. Grant brought out the first part in 1931, and by 1946, when he died at 83, he had carried the editing to near the end of *C*. His successor, David D. Murison, enlarged the collection of quotations, introduced new methods of collection and presentation, and completed the editing in 1976.

*Concise Scots Dictionary* (short form *CSD*). A one-volume dictionary with c.25,000 entries in 815 pages, edited by Mairi Robinson and published in 1985 by Aberdeen University Press. It resulted from a decision by the Council of the Scottish National Dictionary Association to produce a dictionary abridged from the *DOST* and *SND*. For the part of the alphabet not reached by the *DOST* at the time of editing the *CSD*, the main source for Older Scots was the *OED*. The *CSD* is unusual among concise dictionaries in showing the time span and dialect distribution of almost every meaning and form

it records. It has etymologies and gives the pronunciation of every variant of every word, including obsolete words. In 1988, an abridged version appeared, *The Pocket Scots Dictionary*, and in 1990 a thematic consort to the *CSD*, *The Scots Thesaurus*, ed. Iseabail MacLeod, which defines 20,000 words in semantic fields from '1 Birds, Wild Animals, Invertebrates' to '15 Character, Emotions, Social Behaviour', and includes an English-into-Scots index.

**The lexicography of English.** Before the mid-19c, the contribution by Scots to general English lexicography was slight. The *Encyclopaedia Britannica* (1768–71) of three Edinburgh businessmen is in part a selective dictionary. Samuel Johnson, in the compilation of his *Dictionary* (1755), employed several Scots amanuenses, one of whom, Francis Stewart, collected specimens of cant and slang and explained words of gambling and card-playing. In his *Linguae Britannicae Vera Pronunciatio; or, a New English Dictionary* (1757), James Buchanan, a Scot who spent most of his life in London, made a modest improvement in the handling of indications of pronunciation; the schoolmaster William Perry, who made further improvements in the same direction in his *The royal standard English dictionary* (Edinburgh, 1775), though he lived in Scotland from 1774 or earlier and is often cited as an important 18c Scottish lexicographer, was apparently an Englishman.

John Ogilvie's *Imperial Dictionary, English, Technological and Scientific* (2 volumes, 1850) is notable as the completest dictionary of English to that date, as the first for over a century to use pictorial engravings to illustrate scientific and other terms, and as providing in many entries additional 'encyclopedic' description. This aspect was enhanced in the four-volume revised and much enlarged edition (1881–3) of another Scot, Charles Annandale. This formed the basis of the six-volume *American Century Dictionary* (1889–91), which was in turn the fountainhead of a succession of one-volume American and subsequently British dictionaries. Especially in the 20c, some of the most successful one-volume popular dictionaries of English have come from the Scottish publishing houses of W. & R. Chambers in Edinburgh and William Collins in Glasgow. Like most other British dictionaries, these differ from most American dictionaries and from Ogilvie in being without pictures. Collins too has earned a high reputation for its bi-directional dictionaries of English and various foreign languages. The Chambers flagship, its *Twentieth Century Dictionary* (1901), now renamed *Chambers English Dictionary* (1988), is noted for exhaustiveness of coverage and compactness of treatment and also for its unusually thorough

coverage of Scots usages and of English archaisms. However, the outstanding contribution by Scots to the general lexicography of the English language is that of the Scottish editors of and assistants to *The Oxford English Dictionary*, its *Supplements*, and *The Shorter OED*, most of all that of James Murray, who completed nearly half of the *OED*, and William Craigie, who edited a further fifth and also founded and co-edited the *Dictionary of American English*.

[EUROPE, REFERENCE].

A.J.A.

**SCOTTISH ENGLISH**, short forms *ScoE*, *ScE*. The English language as used in Scotland, taken by some to include and by others to exclude Scots, or to include or exclude Scots as appropriate to particular discussions. When included, Scots is taken to be a northern dialect of English and part of the range of English found in Scotland. When excluded, Scots is taken to be a distinct language, still intact in literature and in the speech of some rural people, but otherwise now mixed with English from England. However the relationship is defined, Scots may be extolled or deplored, be a matter of indifference, or be an area of relatively dispassionate scholarly comment, and stands at the end of a social and cultural continuum from the language of official life and of education: standard English. Although for many the relationship between English and Scots is not clear-cut, most people are fully aware of the great differences at the poles of the continuum. Whatever the case, the traditional Scots usage of the Lowlands is distinct from *Highland English*, the English typically acquired by Gaelic-speakers in the Highlands and Islands. If Scots is excluded, *ScoE* can be defined as the mother tongue of a large minority of native-educated Scots (mainly the middle classes and those who have received a higher education) and the public language of most of the remainder (mainly the working class of the Lowlands). While most of its vocabulary and grammar belong to general English, *ScoE* has many features of Scots, which is the first language of its original speakers in the 17–18c and also of many people who today have English as their principal adult language, but occasionally revert to the Scots of their childhood.

**Pronunciation.** In many ways, the conservative *ScoE* accent is phonologically close to Scots, while in others it has departed from it.

*Scots-based phonology.* (1) The ScoE accent is rhotic, and all the vowels and diphthongs appear unchanged before /r/: *beard* /bɪrd/, *laird* /lɛrd/, *lard* /lɑrd/, *moored* /murd/, *bird* /bɪrd/, *word* /wɔrd/, *heard* /hɛrd/, *herd* /hɛrd/, *cord* /kɔrd/, *hoard* /hɔrd/. A distinction is made between the vowels in such words as *sword* /sɔrd/ and *soared* /sɔrd/. Scots are widely supposed to trill the /r/, and many do, but majority usage is the alveolar tap in some phonetic environments and a fricative or frictionless continuant in others. There is a minority uvular *r* (see BURR) and retroflex *r* appears to be gaining ground in the middle class. (2) There are distinct phonemes in such words as *rise* and *rice*. The /aɪ/ diphthong occurs in *rise*, *tie/tied*, *sly*, *why* while the /ɔɪ/ diphthong occurs in *rice*, *tide*, *slide*, *while*, as well as in such borrowings from Scots as *ay(e)* always, *gey* very, *gyte* mad. (3) ScoE operates the Scottish Vowel-Length Rule: see entry. (4) There is no distinction between *cam* and *calm*, both having /a/, between *cot* and *caught*, both having /ɔ/, and between *full* and *fool*, both having /u/. (5) There is a monophthong in most regions for /i, e, o, u/ as in *steel*, *stale*, *stole*, *stool*. (6) The monophthongs and diphthongs total 14 vowel sounds, perhaps the smallest vowel system of any long-established variety of English. (7) ScoE retains from Scots the voiceless velar fricative /x/: for example, in such names as *Brechin* and *MacLachlan*, such Gaelicisms as *loch* and *piibroch*, such Scotticisms as *dreich* and *sough*, and for some speakers such words of Greek provenance as *patriarch* and *technical*. (8) The *wh-* in such words as *whale*, *what*, *why* is pronounced /hw/ and such pairs as *which/witch* are sharply distinguished. (9) In some speakers, initial /p, t, k/ are unaspirated.

*Phonological options.* (1) Vowels: *lodge* and *lodger* with /a/ and not /ɔ/; *there* and *where* with /e/ and not /ɛ/. (2) Consonants: *length* and *strength* with /n/ and not /ŋ/; *fifth* and *sixth* with final /t/ and not /θ/; *raspberry* with /s/ and not /z/, *December* with /z/ and not /s/, *luxury* with /gʒ/ and not /kʃ/; *Wednesday* retains medial /d/. (3) Stress patterns: *tortoise* and *porpoise* with spelling pronunciation and equal syllabic stress; many words with distinctive stressing, such as *advertise*, *baptize*, *realize*, *recognize* and *adjudicate*, *harass*, *reconcile*, *soiree*, *survey* with the main stress on the final syllable, and *lamentable* and *preferably* on the second.

*Non-Scots phonology.* (1) Where many Scots speakers pronounce *coat* and *cot* with the same /o/ vowel, ScoE has /o/ in *coat* and /ɔ/ in *cot*. (2) Where some Scots speakers pronounce the vowel in *daughter* and *law* as /a:/ or /ɑ:/, most educated ScoE speakers use /ɔ:/, as in Central

Scots and Southern English. (3) Where in most Scots dialects the vowel in *bit*, *give* is open and more or less central, ScoE has a closer RP-like /ɪ/. A relic of the more open Scots vowel survives in the uniquely ScoE vowel /ɛ/ in the first syllable of *never* ('nivver', contrasted with *sever* and *river*): see AITKEN'S VOWEL.

**Hybrid accents.** The conservative accent just described is not the only accent of ScoE: (1) Especially in Edinburgh, in the group which includes lawyers, accountants, and architects, there exists a range of accents that to varying degrees incline towards RP. They date from the early 20c or earlier and their Scottishness is reduced by these main features: the addition of an RP-like /ɑ:/ in such words as *calm*, *gather*, *value* contrasting with /a/ in *cam*, *bad*, *pal*, and /ɔ:/ in *caught* beside /ɔ/ in *cot*; the merging of some or all of /ɪ, ʌ, e, ɛ/ before /r/, in such words as *bird*, *word*, *heard*, and *herd* or *birth*, *worth*, *Perth*, and *earth*, usually with *r-colouring*; the sporadic or consistent merging of /ɔɪ/ and /aɪ/ under /aɪ/ in *tied/tide*; diphthongal realizations of /e/ as [eɪ] in *came*, and /o/ as [ou] as in *home*; and sporadic or consistent loss of pre-consonantal /r/ in such words as *farm*, *form*, *hard*. (2) Another hybrid, strongly stigmatized in the population at large, is a middle-class variety associated with both Edinburgh and Glasgow: see MORNINGSIDE AND KELVINSIDE. (3) Speakers of Highland English form a distinct community whose accents are influenced by Gaelic, including a tendency to lengthen vowels and devoice voiced consonants and aspirate voiceless ones, *just* sounding like 'chust', *big* like 'pick': see HIGHLAND ENGLISH.

**Grammar.** Features of present-day Scots grammar are carried over into ScoE: (1) *Modal verbs.* Many speakers do not use *shall* and *may* in informal speech, using *will* as in *Will I see you again?* and *can* for permission as in *Can I come as well?* and *might* or *will maybe* for possibility, as in *He might come later/He'll maybe come later*. *Must* expresses logical necessity as in *He must have forgotten*, *He mustn't have seen us*, but not compulsion, for which *have (got)* to are used, as in *You've (got) to pay*. Both *should* and *ought* to express moral obligation or advice, as in *You should/ought to try and see it*, but otherwise *would* is used where other BrE has *should*, as in *I would, if I was you* (not *I should, if I were you*). *Need to*, *use to*, and *dare to* operate as main verbs rather than auxiliaries: *He didn't need to do that*; *I didn't use to do that*; *She doesn't dare to talk back*. (2) *Passives.* The passive may be expressed by *get*: *I got told off*. (3) Certain verbs are used progressively, contrary to other BrE practice: *He was thinking he'd get paid twice*; *I was hoping to*

see her; They were meaning to come. (4) *Negatives*. As with Scots *no* and *-nae*, ScoE *not* is favoured over *-n't*: *He'll not come* in preference to *He won't come*, *You're not wanted* to *You aren't wanted*, and similarly *Is he not coming?* *Can you not come?* *Do you not want it?* *Did he not come?* *Not* may negate a main verb as well as an auxiliary: *He isn't still not working?*; *Nobody would dream of not obeying*. (5) Verbs of motion elide before adverbs of motion in some contexts: *I'll away home then*; *The cat wants out*. (6) *The* is used as in Scots in, for example, *to take the cold*, *to get sent to the hospital*, *to go to the church*. (7) Pronouns in *-self* may be used non-reflexively: *How's yourself today?* *Is himself in?* (Is the man of the house at home?). (8) *Anybody*, *everybody*, *nobody*, *somebody* are preferred to *anyone*, *everyone*, *no one*, *someone*. (9) *Amn't I?* is used virtually to the exclusion of *aren't I?*: *I'm expected too, amn't I?*

**Vocabulary and idiom.** There is a continuum of ScoE lexical usage, from the most to the least international: (1) Words of original Scottish provenance used in the language at large for so long that few people think of them as ScoE: *caddie*, *collie*, *cosy*, *croon*, *erie*, *forebear*, *glamour*, *golf*, *gumption*, *lilt*, (*golf*) *links*, *pony*, *raid*, *rampage*, *scone*, *uncanny*, *weird*, *wizened*, *wraith*. (2) Words widely used or known and generally perceived to be Scottish: *bannock*, *cairn*, *ceilidh*, *clan*, *clarsach*, *corrie*, *first-foot*, *glengarry*, *gloaming*, *haggis*, *kilt*, *pibroch*, *sporrán*, *Tam o' Shanter*, *wee*, *whisky*. (3) Words that have some external currency but are used more in Scotland than elsewhere, many as covert Scotticisms: *bairn*, *bonnie*, *brae*, *burn*, *canny*, *douce*, *hogmanay*, *kirk*, *peewit* (the lapwing), *pinkie*, *skirl*. (4) General words that have uses special to ScoE and Scots: *astragal* a glazing bar on a window, *close* an entry passage in a tenement building, *stair* a flight of stairs, or a group of flats served by a single close in a tenement, *stay* to reside, *tablet* a variety of sweet, *uplift* to collect (rent, a parcel, etc.). (5) Scottish technical usages, many of Latin origin, especially in law, religion, education, and official terminology: *advocate* a courtroom lawyer (in England *bar-rister*), *convener* a chairman of a committee, *induction* of an ordained minister to a ministerial charge, *janitor* caretaker of a school, *jus relictii/relictæ* the relict's share of a deceased's movable property, *leet* a list of selected candidates for a post, *procurator-fiscal* an official combining the offices of coroner and public prosecutor, *provost* a mayor, *timeous* timely. (6) Colloquial words used and understood by all manner of Scots and by the middle class as overt Scotticisms: *ach* a dismissive interjection, *braw* fine, good-looking, *chuckiestane* a pebble, *footer* to mess about, *gillie*

a hunting attendant, *girn* to whine, *glaukit* stupid, *haar* a cold sea-fog, *howf* a public house, *och* an interjection, *pernickety* fussy, *scunnered* sickened, *wabbit* tired out, *wannert* ('wandered': mad). (7) Traditional, sometimes recondite and literary, Scots words occasionally introduced into standard English contexts in the media, and known to minorities: *bogle* a phantom, *dominie* a schoolmaster, *eident* diligent, *forfochen* exhausted, *furth of* and *outwith* outside of, *gardyloo* the cry formerly used in Edinburgh before throwing slops from a high window, *hochmagandie* fornication, *leid* a language, *makar* a poet, *owerset* to translate, *Sassenach* an Englishman, a Lowlander, *southron* English, *yestreen* yesterday evening.

**Conclusion.** A feature of ScoE in its wider sense is the capacity and willingness to move, more or less consciously, and often for fun, from a more Scots to a more English way of speaking, employing differences in pronunciation, grammar, vocabulary, and idiom which add to the nuances of communication. Besides their use of overt Scotticisms as a token of national solidarity, the middle classes may also parade Scots (especially Gutter Scots and shibboleths) proudly, humorously, snobbishly, or patronizingly, according to inclination and circumstance. The working classes, for their part, sometimes send up people whom they consider snobbish, affected, or overly English in their ways by putting on 'anglified' speech.

**SCOTTISH GAELIC.** The Celtic language of the West Highlands and Western Isles of Scotland. Gaelic-speaking Scots arrived from Ireland on the west coast of what is now Scotland in 3-5c AD. As they gradually gained power, their language spread throughout the country, though

not the whole population; in the south-east, for example, it was probably used mainly among the ruling classes. With the increased influence of Northern English, the use and prestige of Gaelic began to decline and since the 12c there has been a gradual retraction. Political factors, social pressures, and educational policies have combined to threaten the language with extinction. In the later 20c, more positive attitudes have developed and efforts are being made to sustain Gaelic, encourage bilingual policies, and give it a valued place in school and pre-school education. Many, however, fear that these measures are too little too late. Gaelic is now used as a community language virtually only in the Western Isles. At the 1981 census, there were little over 80,000 speakers, with only a few hundred under the age of five and there are few monoglot speakers above this age.

Scottish Gaelic has an ancient literary tradition and paradoxically its literature flourishes in the 20c, with such poets as Sorley MacLean, Derick Thomson, and Iain Crichton Smith (also a novelist in English). The formal literature of the medieval period was shared with Irish Gaelic, the two cultures remaining in close contact until at least the 17c. Much poetry came from a bardic tradition of poets composing songs in strict metre in the service of their chiefs, a system which ended in the 17c. However, the 18c saw a golden age of less rule-bound poetry with a wide variety of subject matter: the songs of Donnchadh Bàn Mac-an-t-Saoir (Duncan Bàn Macintyre), Alasdair Mac Mhaighstir Alasdair (Alexander MacDonald), and Rob Donn continue to be sung, and the 20c flowering continues with a younger generation of poets. Public performance and composition are encouraged by the *National Mod*, an annual competitive festival of music and poetry organized by *An Comunn Gaidhealach/The Highland Association*, founded in 1891 to support the Gaelic language and culture and the Highland way of life. *Comunn na Gàidhlig* (the Gaelic Association) was set up in 1984 with the more specific aim of promoting the language.

There has been a considerable two-way traffic of words between Scottish Gaelic and Scots throughout the centuries, with some words making more than one journey across the linguistic boundary: for example, Gaelic *clann* (the children of a family) became older Scots and then English *clan* (a local or family group under a chief and having a common name), recently taken back into Gaelic in the latter sense. Gaelic has also influenced the pronunciation and syntax of English in Gaelic-speaking and recently Gaelic-speaking areas. Gaelic borrowings from English and Scots are numerous and increasing, especially in technical and administrative fields:

for example, *teilebhisean* television, *rèidio* radio, and *briogais* trousers (from Scots *breeks*). The influence of English on Gaelic syntax is considerable and rapidly extending, now that virtually all adult speakers are bilingual. Pronunciation has been less affected, but phonemic changes based on English or Scots are noticeable in the speech of children of Gaelic-speaking immigrants to the cities. More of these children now speak Gaelic, because of a recent increase in Gaelic playgroups and schools. The language is taught in three of the Scottish universities, two of which (Edinburgh and Glasgow) have a chair of Celtic.

**SCOTTISH JOKE.** An ethnic joke that presents Scots as unredeemably mean: 'Whilst in London's West End tonight, a Scotsman died of starvation on the back seat of a Pay-as-You-Leave bus' (*The Two Ronnies*, 1978). See ABERDEEN JOKE, ETHNIC JOKE, JOKE. [EUROPE, STYLE]. T.M.CA.

**SCOTTISH LANGUAGES.** Scotland's linguistic heritage is complex. In the Middle Ages, six languages were in regular use: *British* or *Brythonic* in Strathclyde, a Celtic language akin to Welsh and known among scholars as *Cumbric*; *Gaelic*, the majority language, a Celtic language originating in Ireland; *Inglis*, a variety of Northern English spoken in the Lowlands and later known as *Scots*; *Norn*, a form of Norse in the Northern Isles, the Western Isles, and the adjacent mainland; *Norman French* among the Normanized nobility; and *Latin* as an ecclesiastical, academic, and legal language. From the 16c, the English of England has been increasingly influential and of the early profusion only Gaelic and Scots survive. Gaelic is a distinct though dwindling language with its own literature, and there is controversy and even confusion over the nature of Scots: whether it is best described as a distinct language, a dialect of English, or in a half-way condition between the two. For some three centuries, a Scotticized standard English has been the language of official life, publishing, and in recent times the mass media. In private and informal speech, virtually all native-educated Scots (c.4.5m) operate within a variable range from the full Scots of some members of some farming, fishing, and former mining communities, through various mixtures of Scots and English, to a variety of ScoE, with such exceptions as bilingual speakers of Gaelic and

English. The remainder falls into two groups: an RP-speaking upper class and upper middle class (traditionally educated in England or in a number of private schools in Scotland, and generally using few Scotticisms), and immigrants from England, Ireland, or elsewhere (speaking with non-Scottish accents and a varying degree of assimilation to ScoE grammar and vocabulary). See BRITISH, BRITISH LANGUAGES, CELTIC LANGUAGES, CUMBRIC, GAELIC, INGLIS, LATIN<sup>1</sup>, NORMAN FRENCH, NORN, PICTISH, SCOTS, SCOTTISH GAELIC. [EUROPE, NAME]. A.J.A., T.MCA.

**SCOTTISH LITERATURE.** Literature written in Scotland in any language, including Scots, English, Gaelic, Latin, and Cumbric (Brythonic), the only extant example of which is the late 6c poem *Y Gododdin*: the first surviving poem within what is now Scotland and also considered part of Welsh literature. The following article deals with writing by Scots in English; for other aspects of the literature of Scotland, see the list of entries at the end of the article. From the mid-16c, the combined influence of English-trained printers and widely disseminated works of theology in English (most importantly the Geneva Bible), led to a rapid assimilation of literary Scots to the orthographic, grammatical, and lexical canons of English. John Knox's *History of the Reformatioun within the realme of Scotland* (1587) shows a random mixture of Scots and English forms. The first major writer to adopt a virtually unmixed English for his work was the 17c poet and historian William Drummond of Hawthornden.

During the revival of Scottish artistic and intellectual activity in the 18c, English was the medium for all prose works on whatever subjects (for example, David Hume's philosophy, Adam Smith's economics, and James Hutton's geology), and for much of the poetry produced: such pseudo-Augustan works as William Wilkie's *Epigoniad* (1757), modelled on Homer, were preferred by critics to the more natural vernacular verse of Robert Fergusson. One of the most influential literary works of the century was James MacPherson's *Fingal, an Ancient Epic Poem, in Six Books* (1762), based loosely on early Gaelic tales and written in a highly poetic English prose. Purportedly based on the work of the Gaelic poet Ossian, it is now usually referred to as MacPherson's *Ossian*, and was a focus of controversy at the time. It was highly regarded by Hume, Smith, and the rhetorician Hugh Blair, by leading European writers, including Goethe and Schiller, and was one of Napoleon's favourite works. However, Johnson and other critics were doubtful about its authenticity and when asked to show the originals from which he had with considerable poetic licence claimed it

came, MacPherson produced fabrications. Whatever the morality of the episode, the bilingual author had succeeded in adapting and translating Gaelic tales and greatly influenced the Romantic Movement.

In this period, the question of how Scottish writers should express their national identities after the loss of independence in 1707, and the rival claims of Scots as the mother tongue and English as the language of formal education and social prestige, gave rise to a conflict which has never been resolved and which has informed much that is characteristic of Scottish literature to the present day. Many writers have used English for poetic or prose works on Scottish subjects: John Hume's *The Douglas Tragedy* (1756), Walter Scott's *Marmion* (1808) and other poems, James Thomson's *The City of Dreadful Night* (1874), and the novels of Neil Gunn. Others have sought a linguistic solution, employing an English coloured with the idiom, cadences, and to some extent vocabulary of one of the other languages of Scotland: South-West Scots in John Galt's *Annals of the Parish* (1821) and *The Provost* (1822), North-East Scots in Lewis Grassie Gibbon's *A Scots Quair* (1932-4), Gaelic and Highland English in Fionn Mac Colla's *The Albannach* (1932). Others again have produced work that is Scottish neither in subject matter nor language, and their Scottishness has to be identified on more subtle levels: much of the work of J. M. Barrie (drama), Edwin Muir (poetry), John Buchan and Eric Linklater (novels). The enduring sense of a Scottish identity, resisting submergence in the British state and transcending the strongly individual cultures of the regions of Scotland, has ensured the continuation and growth of a national literature. See ENGLISH LITERATURE, SCOTS (LITERARY SCOTS), SCOTS LITERATURE, SCOTTISH GAELIC. [EUROPE, LITERATURE]. J.D.M.

**SCOTTISH NATIONAL DICTIONARY.** See SCOTTISH DICTIONARIES.

**SCOTTISH PLACE-NAMES.** The sources of the place-names of Scotland are diverse: the Celtic languages (British or Cumbric, Pictish, and Gaelic), the Germanic languages (Anglian, Norse, Scots, and English), and some others (pre-Celtic, French, etc.). Both hybridization and the Anglicization of non-English names occur.

**Cumbric and Pictish.** Many of the most ancient names are names of rivers: unexplained (*Spey, Ettrick, Tweed*), pre-Celtic (*Ayr, Nairn*), and Celtic (*Avon, Clyde, Dee, Don*). Both the Britons and the Picts spoke P-Celtic languages akin to Welsh. The Britons of Strathclyde and Lothian have bequeathed such Cumbric names as *Glasgow* green hollow, *Linlithgow* lake in the moist hollow, *Melrose* bare moor, and others containing such elements as *cair* fort (*Cramond* fort on the Almond River), *pen* head, end (*Penicuik* headland of the cuckoo), and *irev* homestead, village (*Tranent* village of the streams). Pictish has provided relatively few name elements; among them are *carden* thicket, as in *Kincardine* and *Pluscarden*, and *pett* a parcel of land, in some 300 names such as *Pittenweem* and *Pitlochry*. Some elements, such as *lanerc* glade (*Lanark, Lendrick*), are shared by both Cumbric and Pictish. Also Pictish is *aber* confluence, river mouth (*Aberdeen* Don mouth, *Aberfoyle* confluence of the sluggish stream), the P-Celtic equivalent of Gaelic *inver* (*Inverness* mouth of the Ness, *Inveraray* mouth of the Aray).

**Gaelic.** The most pervasive of the place-naming languages is Gaelic, the language of the original Scots from Ireland, who by c.500 had settled *Argyll* (coastland of the Gaels). Among the commonest Gaelic elements are *achadh* field (Scotticized as *ach-*, *auch-*, or, with the definite article in the genitive case, *Auchen, Achna*, as in *Auchmithie, Auchendinny, Achnasheen*), *baile* farm, village, town (Scotticized as *bal-*, as in *Balerno, Balfour*), and *cill* church, cell (Scotticized as *kil-*, as in *Kilbride, Kilmartin*). After the Gaelicization of Pictland and the annexation of Strathclyde and Lothian, Gaelic names spread throughout the country, from *Garvald* (rough brook) and *Glencorse* (glen of the river crossings) in the south-east to *Altnaharra* (brook of the wall) and *Downreay* (fort by the broch) in the far north. They include the relatively Scotticized *Ardrossan* (headland of the little cape), *Arnprior* (prior's portion of land), *Achnasheen* (field of the storm), *Auchinleck* (field of the flagstone), *Auchtermuchty* (summit of the piggery), *Cambslang* (river-bend of ships), *Cumbernauld* (confluence of brooks). In the Highlands, Gaelic names tend to have more exotic spellings that often breach both Gaelic and Scots spelling rules, such as: *Achiltibuie* (? field of the yellow-haired lad), *Ardrishaig* (height of briars), *Drumadrochit* (ridge of the bridge), *Tighnabruaich* (house on the bank). The names of mountains and other natural features often conform to Gaelic orthography: *Sgurr Domhnull* (Donald's hill), *Rubha Mòr* (big headland), *Loch an Eilean* (loch of the island).

**Anglian.** From the Northumbrian Angles, who settled in southern Scotland (Lothian) from the 7c, come such names as, in the south-east, *Whittinghame* (homestead of Hwīta's people), *Tynninghame* (homestead of the people by the River Tyne), *Haddington* (farm of Hadda's people), *Yetholm* (village near the gate or pass), *Polwarth* (Paul's enclosed farm), *Newbattle* (new house), *Hawick* (hedge farm), and in the south-west, *Whithorn* (white house), *Buittle* (house), *Prestwick* (priest's or priests' abode). Where Angle and Briton met, we have the hybrids *Edinburgh* (see EDINBURGH) and *Jedburgh* (fort on the Jed, formerly *Jed-worth*, with Old English *worth*, enclosed village, and a Cumbric river-name *Jed* (?)twisting river). Gaelic prefixes to Anglian names, as in *Bonjedward, Dalswinton, Tarbolton* signal the arrival, several centuries later, of Gaelic-speaking incomers.

**Norse.** From the 8c, the form of Norse known as Norn has covered the Northern Isles, and parts of Caithness, Sutherland, and Ross with such Scandinavian names as *Dingwall, Isbister, Kirkwall, Lerwick, Lybster, Papa Westray, Scalloway, Scapa Flow, Stromness, Sullom Voe, Thurso, Tingwall, Tongue, Wick*. Norse settlers of the same period in the Hebrides and the north-west mainland have left other names that were subsequently Gaelicized, as with *Uig, Mal-laig*, originally with the same *vik* ending, for 'inlet, small bay', as in *Wick, Lerwick; Stornoway* in Lewis has the same element *vágr* (inlet, small bay) as in *Scalloway* and *Kirkwall*; similarly, *Shawbost*, with the element *bólstaðr* (homestead, farm), parallels *Isbister* and *Lybster*, and *Duirinish* and *Fishnish*, with the element *nes* (headland), echo *Durness* and *Stromness*. In the south-west, *Galloway* is named after the *Gall-Ghàidhìl* (foreign Gaels), settlers of mixed Gaelic and Scandinavian stock from Ireland and the Hebrides, who appear to have been responsible for such 'inversion compounds' as *Kirkbride* and *Kirkoswald*, as compared with *Bridekirk* in Dumfriesshire and *Oswaldkirk* in Yorkshire; others are *Kirkcowan* and *Kirkcudbright* (pronounced 'Kircoobry'). In the same area, Cumbric, Gaelic, and Norse names co-occur: Cumbric *Penpont* and *Leswalt*, Gaelic *Ballantrae, Kilbride*, and *Stranraer*, Norse *Applegarth, Bogue, Gategill, Murraythwaite*, and *Tinwald*.

**Norman, Scots, and English.** There are some Norman French names, such as *Melville* (bad township), from the surname of Geoffrey de Melville, the 12c Norman owner, originally the name of a village in Normandy, and *Beaully* (pronounced 'Bew-lay'), once *Beau Lieu* (beautiful place). From the 12c, names in Early Scots spread beyond Lothian and include *Canonbie*,

*Lamington, Neilston, Stewarton*, and innumerable minor Lowland names: *Blackbogs, Broomielaw, Dyke, Fiddler's Flat, Newbigging, Skateraw, Skinfasthaven, Staneycroft, Threpe-land, Windygates*. Some more recent names recall Hanoverian military outposts in the Highlands: *Fort William, Fort Augustus, Fort George*. Others commemorate a founder or a founder's wife or daughter (*Barbaraville, Bettyhill, Campbeltown, Fraserburgh, Grantown, Helensburgh*) or an event (several *Waterloos*) or memories of a residence abroad (*Lamancha*). Some have Biblical inspiration (*Canaan Lane, Joppa, Jordan Burn*) or are romantic or fanciful (*Beeswing, Comely Bank, Golden Acre*).

**A mixed toponymy.** Scottish toponymy is generally mixed, both linguistically and orthographically. The toponyms of the island of Skye, for example, include *Rubha Hunish, Kilmaluag, The Storr, Bernisdale, Portree, Kyleakin, Kyle of Lochalsh, the Cuillin Hills, the Crowlin Islands, Broadford, Teangue, the Sound of Sleat, the Point of Sleat, Loch Scaavaig, Sgurr Alasdair, Idrigill Point, Macleod's Tables, Dunvegan, Dunvegan Head, Dunvegan Castle, Loch Bracadale, the Minch, the Little Minch*. North of Forth and Clyde, Gaelic predominates in the generic names for natural features: *ben/beinn* a mountain (*Ben Nevis, Beinn Dearg*), *glen/gleann* a narrow valley (*Glen Nevis, Glengarry*), *loch* a lake or arm of the sea (*Loch Ness, Loch Eriboll*), *strath/srath* a broad valley (*Strathearn, Strathmore*). In naming towns and villages at the head of a loch, Gaelic competes with a Gaelic/English hybrid: fully Gaelic *Kinlochleven, Kinlocheil*, and mixed Gaelic/English *Locheearnhead, Lochgoilhead*. Although *ben* dominates in the centre and north, in the south-east the Anglian *law* is common: *Broad Law, North Berwick Law, Traprain Law*. In the south and east, an arm of the sea may be a *firth*, of Norse origin, cognate with *fjord* (*the Solway Firth, the Firth of Clyde*). In one instance, in the far north, it is a strait: *the Pentland Firth*, between the mainland and Orkney. See CUMBRIC, EDINBURGH, GLASGOW, PICTISH, PLACE-NAME, SCOTLAND. [EUROPE, NAME]. A.J.A., T.MCA.

**SCOTTISH PUBLISHING.** Scotland has played a significant part in English-language publishing since the late 18c. Such companies as Constable and Oliver & Boyd were prominent in the early years of the 19c, based in Edinburgh, the most important centre of British publishing after London. Several publishers of the time produced magazines, the most prestigious of which were the Whig *Edinburgh Review* (1802-1929, originally published by Constable) and its Tory rival *Blackwood's Magazine* (1817, started by

William Blackwood), which continued publication in one form or another until 1988. The brothers W. & R. Chambers played a significant role in the self-education movement of the early 19c, an important element in which was *Chambers's Journal* (founded 1832). In the 20c, publishing based in Scotland has been greatly diminished by increasing British centralization in London; as a result, many companies of Scottish origin, such as A. & C. Black and Nelson, have become prominent London publishers. Of the few firms that retained their Scottish base and gained in strength in 20c, William Collins was taken over by Rupert Murdoch's News International in 1988, and integrated with the US Harper & Row as Harper Collins; Blackie is the only long-established company of any size to remain independent. Both are based near Glasgow. W. & R. Chambers has since the mid-19c built up a worldwide reputation for its dictionaries of English and other reference books; it was taken over in 1989 by the French company Groupe de la Cité.

While the general picture has been one of retraction and withdrawal, there has been in recent decades an upsurge of smaller companies, some of which have supported Scottish language and literature: notably, in mid-century, William Maclellan and Macdonald & Co. Currently, contributions to Scottish culture in general and to literature in particular are being made by such newer firms as Aberdeen University Press, Canongate, John Donald, and Mainstream. Efforts are being made to reprint important works from the past, notably in Canongate's *Scottish Classics* series and Richard Drew's *Scottish Collection*. Apart from contributions by larger firms such as Oliver & Boyd (now owned by the Longman Group), publishing in Gaelic has generally been carried out by small companies, such as the Celtic Press in the 19c and Maclaren's in the 20c. At the present time, the publishers Acair (in Stornoway, Isle of Lewis) are supported by public funds in an effort to provide learning materials for Gaelic. Gairm in Glasgow publishes a wide variety of Gaelic books, including dictionaries, as well as a quarterly magazine of the same name. *The Gaelic Books Council/An Comunn Leabhraichean*, based in the U. of Glasgow, acts as a funding and encouraging body. Scottish publishing in general is supported by the *Scottish Arts Council*, which spends a higher proportion of its annual budget on literature than does the Arts Council of Great Britain. Since the 1970s, the *Scottish Publishers Association* has fostered cooperation among a growing number of Scottish companies. See BRITISH PUBLISHING, CHAMBERS, COLLINS, PUBLISHING. [EUROPE, MEDIA]. I.C.M.

**SCOTTISH VOWEL-LENGTH RULE**, short form *SVLR*. The name given by A. J. Aitken to the outcome of a 15–16c sound change, through which certain vowels of Scots and ScoE in Scotland and Ulster have no inherent length but are long or short according to following environment: long in stressed syllables before /r/, /v/, /ð/, /z/, and /ʒ/, before another vowel, before a morpheme boundary, and in certain other conditions; but short elsewhere. Thus, /i/ is long in *here, leave, see, sees, in idea, in agreed, and in feline*, but short in *beat, bead, feel, leaf, cease, greed, and feeling*. The vowels most regularly subject to the rule are: /i/, as shown above; /u/, which displays for example a contrast between *brewed* (with the vowel long before the morpheme boundary) and *brood* (with the vowel short), and, in many dialects, /e/, and /o/. Certain conservative Scots dialects have a vowel /ø/ that, in accordance with SVLR, is long in, for example, *do, poor, and use* (verb), and short in *boot, fool, and use* (noun). In the dialects of Central Scotland and Ulster Scots, this vowel has undergone an SVLR-conditioned phonemic split, so that *do, poor, and use* sound like ‘day’, ‘pair’, and ‘yaize’, whereas *boot, fool, and use* sound like ‘bit’, ‘fill’, and ‘yis’. A similar split is responsible for the contrast between, for example, *alive, tie, and tied* (with the long diphthong /aɪ/), and *life, tide* (with the short diphthong /ɛɪ/). Other vowels in Scots and ScoE are not subject to the rule but have the same length in all environments: /ɪ/ as in *bit* and *fir*, and /ʌ/ as in *but* and *fur*, are short in all environments; certain other vowels, such as /ɑː/ or /ɔː/ in *saut* (salt), *law*, are in many dialects long in all environments. See AITKEN’S LAW, DIALECT IN SCOTLAND, SCOTS. [EUROPE, SPEECH].

A.J.A.

**SCOUSE** [From 18c *lobscouse*, a sailor’s dish of stewed meat, vegetables, and ship’s biscuit, not unlike Irish stew. *Lobscouser* was a slang name for a sailor. The terms *Scouse* and *Scouser* for someone from Liverpool seem to be recent, and probably arose because the city is a port and stew was a feature of the diet. The *OED* cites the *Southern Daily Echo* (1945), in which ‘a scouse’ is explained as ‘a native of Liverpool where they eat “scouse”’]. (1) Also *Scouser*. A person born in the city of Liverpool, on the River Mersey, especially if from the working class. (2) The often stigmatized working-class speech of Merseyside. The accent combines features of Lancashire with varieties of English from Ireland and to a lesser extent from Wales, brought in by 19–20c immigration. Accents range from broad Scouse through modifications towards RP and RP itself in the middle and upper classes. Among the distinctive expressions in Scouse are *the Pool*, a nickname for Liverpool, and *Liverpudlian* (the

correct name for someone born in Liverpool, substituting *puddle* for *pool*). Non-Scousers, especially from north of the city, are sometimes called *woollybacks* (sheep), a nickname suggesting rusticity and lack of wits.

**Pronunciation.** Of the following features, 1–5 are widely regarded as shibboleths, especially when several occur together: (1) A merger of the vowels in such pairs as *fair/fur* and *spare/spur*, realized as an /e:/ or /ɜː/. (2) As in other parts of the north-west of England, syllable-final *-ng* is pronounced /ŋg/, as in ‘long-g’ for *long* and ‘sing-ging-g’ for *singing*. (3) The vowel in such words as *pin* and *sing* is pronounced /i/, so that they sound close to ‘peen’ and ‘seengg’. (4) The sound /r/ may be either an alveolar continuant or an alveolar tap that is particularly distinct initially (*rabbit, run*), after stops and fricatives (*breathe, grass, three*), and between vowels (*carry, ferry*). (5) A /t/ between vowels is often replaced by /r/, sometimes shown in print as *rr*, as in ‘marra’ for *matter*: *What’s the marra with you then?* In a publicity drive for the Liverpool clean streets campaign, litter was described as ‘norra lorra fun’. (6) Some speakers, especially working-class Catholics of Irish background, replace /t, d/ with /θ, ð/, as in ‘dese tree’ for *these three*. *Month* may be pronounced ‘munth’. (7) In syllable-initial and syllable-final positions, a fricative can follow a stop, as in ‘k/x/ing’ for *king* (where /x/ represents the fricative in ScoE *loch*), ‘me d/z/ad’ for *my dad*, ‘back/x/’ for *back*, and ‘bad/z/’ for *bad*. (8) Scouse is often described as having a flat intonation, in effect a rise with a level tail where RP has a fall: in the statement *I don’t like it*, it goes up on *like* then runs level, whereas RP starts going down on *like* and keeps going down. There is also a kind of fall in *yes-no* questions where RP would have a rise, so that in the question *Are you from Birkenhead?*, Scouse falls on *Birk* where RP rises. (9) Until recently it was possible to distinguish the speech of Irish Catholics from Protestant English through the pronunciation of some words; a double advertisement on local buses in the 1960s read on one side of the bus ‘Treat us furly, travel early’, on the other ‘Treat us fairly, travel airly’ (the latter denoting Irish-derived usage).

**Adenoidal speech.** The voice quality of speakers of Scouse has often been described as adenoidal, and phoneticians have speculated about the origins of such a feature. David Abercrombie, noting that children may acquire a quality of voice from others who have a problem, observes: ‘A striking example . . . is afforded by some urban slum communities where adenoids, due doubtless to malnutrition and lack of sunlight, are prevalent, with their consequent effect on voice

quality, but where people can be found with adenoidal voice quality who do not have adenoids—they have learnt the quality from the large number who do have them, so that they conform to what, for that community, has become the norm. . . . The accent of Liverpool seems to have had its origin in such circumstances' (*Elements of General Phonetics*, 1967). Gerald O. Knowles adds: 'In Scouse, the centre of gravity of the tongue is brought backwards and upwards, the pillars of the fauces are narrowed, the pharynx is tightened, and the larynx is displaced upwards. . . . The main auditory effect of this setting is the "adenoidal" quality of Scouse, which is produced even if the speaker's nasal passages are unobstructed' (in P. Trudgill (ed.), *Sociolinguistic Patterns in British English*, 1978). The effect is primarily achieved by the sustained closure of the velum or soft palate. See ACCENT, DIALECT IN ENGLAND, HIBERNO-, LANCASHIRE. [EUROPE, VARIETY]. T.MCA.

**SCRABBLE** [1930s: trademark of J. W. Spear & Sons plc]. A popular modern word game, invented by the American architect Alfred Butts and inspired by the crossword. His original game used letters printed on cardboard squares; later versions added a board of 225 squares and letters printed on plastic *tiles*. There are now versions for different languages. The English version is played by two, three, or four players, each using up to seven tiles at a time to make interlocking words on the board. Each tile bears a number indicating the score which can be made by that particular letter. Rare letters like J, Q, and Z have high values; common letters like E and S have low values. Some squares are *premium squares*, allowing double or triple scores for individual letters or for whole words. English Scrabble has 100 tiles, but sets in other languages have different numbers of tiles with different values, reflecting the distribution of the letters in those languages: German Scrabble uses 119 tiles, and players have eight tiles at a time. The British National Scrabble Championships started in 1970. See CHAMBERS, WORD GAME. [WORD]. T.A.

**SCRIBBLER** [15c: from *scribble* (apparently from Medieval Latin *scribillare*, a diminutive of *scribere* to write), and *-er*]. A dismissive term for someone whose handwriting is hurried and hard to read, or for a writer whose work is considered poor; sometimes also a tongue-in-cheek term for a journalist. In 1713, the name *the Scriblerus Club* (in which *scribbler* is turned into pseudo-Latin) was adopted by a group of conservative London writers, including John Arbuthnot and Alexander Pope, who wished to ridicule 'false tastes in learning'. To do this, they created *Martinus Scriblerus*, a pretentious 'modern' writer

whose memoirs they decided to write. Arbuthnot wrote most of the memoirs, and many of the pseudo-footnotes in Pope's later satire *The Dunciad* (1728–43) were signed *Scriblerus*: 'The Dunciad was . . . a declaration of war against the whole tribe of scribblers' (L. Stephen, *Pope*, 1880). Commentators have used the term *Scriblerian* to describe the Club members, their influence, and satire of a similar kind. Compare HACK, SCRIBE. [LITERATURE, MEDIA, WRITING].

T.MCA.

**SCRIBE** [14c: from Latin *scriba* a clerk]. (1) A copyist, especially of manuscripts before the invention of printing; a clerk or public writer, usually with official status, as in ancient Egypt, or with the right to copy, edit, and interpret scripture, as in ancient Israel. The term was used in English into the 18c for a secretary or note-taker. In recent years, scholars have come to refer to societies in which scribes were prominent as *scribal cultures*. (2) A tongue-in-cheek term often used by journalists to describe themselves. Compare HACK, SCRIBBLER, WRITER. See COMMUNICATIVE SHIFT. [MEDIA, WRITING]. T.MCA.

**SCRIBLERIAN, SCRIBLERUS**. See SCRIBBLER.

**SCRIPT** [14c: from Latin *scriptum* written]. (1) A collective term for the characters used in a writing system: *cuneiform script*, *Arabic script*. (2) Handwriting, especially if cursive or flowing: *Italic script*. (3) The text of a manuscript or other document. (4) The written or typed text of a play or motion picture, or radio or television broadcast. (5) In printing, a typeface that imitates handwriting. (6) To write a script for (a play, etc.) or to make arrangements for something: *They scripted the whole thing*. See COMMUNICATIVE SHIFT, CORRUPT, DRAMA, MANUSCRIPT, PARAGRAPH, PRINTING, SCRIBE, SCRIPTURE, TRANSCRIPTION. [LITERATURE, MEDIA, TECHNOLOGY, WRITING]. T.MCA.

**SCRIPTURE** [13c: from Latin *scriptura* writing]. A sacred text or texts (such as the Christian and Hebrew Bibles, the Qur'ān of the Muslims, and the Vedas of the Hindus), usually considered by adherents to originate in a form of divine inspiration or revelation. All scriptures compiled and edited in the first millennium BC or earlier appear to rest on an oral foundation which may have existed for centuries before being committed to writing. In the case of later scriptures, such as the New Testament and the Qur'ān, the length of time between the founding events and the creation of a canonical record has been shorter, but by and large the historical details are unclear. In linguistic terms, there are two traditions: those resistant to translation,

insisting on the sacredness of the language in which the scriptures were first committed to writing (such as Islam and Hinduism), and those that encourage translation for missionary and other purposes, and do not consider the source language sacred as such (for example, Christianity and Buddhism). However, the Latin of the Vulgate Bible (based on St Jerome's translation of Hebrew and Greek) and the English of the Authorized Version (1611) have been to some degree elevated, but not to the exclusion of other languages. Similarly, the 'Biblical' style of the Authorized Version has been preferred by many over other (later) renderings in English.

Translating the Bible has often entailed the creation of writing systems for languages which did not possess them. The outcome has been the promotion of literacy in the languages concerned and, in such cases as Welsh and Icelandic, the creation of a vernacular Bible has served to strengthen the language in the face of pressure from other speech communities. The absence of a vernacular Bible has also been a factor in the decline of languages, because of their inability to form a stable and prestigious written or print standard, as with both Gaelic and Scots. Scripture, like other texts, has been affected by current media developments: for example, the UK audio-publisher Signal in 1986 made the Authorized Version of the Bible available in 15 volumes (each of four cassettes), totalling 87 hours of listening. The texts presented in this way were 'enacted' by 147 speakers; excerpts from them could be heard by telephoning a special number.

See ARABIC, ARAMAIC, BIBLE, BIBLICAL ENGLISH, CLASSICAL LANGUAGE, COMMUNICATIVE SHIFT, GOTHIC, GREEK, HEBREW, LATIN<sup>1</sup>, LORIMER, PALI, PUN, SANSKRIT, SCRIPT, SERMON. [HISTORY, LANGUAGE, MEDIA, STYLE, WRITING]. T.M.CA.

**SCROLL** [14c: from earlier *scrow*, from Anglo-French *escrowe*, perhaps from Medieval Latin \**scroda*: compare Old High German *scrôt* a scrap]. (1) A roll of parchment, paper, or other material, especially with writing on it. Long scrolls or *rolls* are traditionally attached at one or both ends to spindles, from which they can be unrolled and on to which they can be re-rolled, more or less continuously, as they are read. The same principle is currently used for spools and reels of film and for audio/videotapes. (2) Verb: by analogy, in computing and word processing, to move (text, etc.) up or down on a screen by means of a cursor or function keys marked *page up* and *page down*, as if the screen were a scroll. See COMMUNICATIVE SHIFT, PAPER, PARCHMENT. Compare VOLUME. [TECHNOLOGY, WRITING]. T.M.CA.

**SEA ISLAND CREOLE.** See GULLAH.

**SEASPEAK** [1980s]. Also **English for maritime communications**. The English of merchant shipping, a restricted language adopted in 1988 by the *International Maritime Organization (IMO)* of the United Nations for use in ship-to-ship and ship-to-shore communications as a necessary consequence of vastly increased shipping during the 1960s-70s. Two factors facilitated and encouraged the development of Seaspeak: the availability of Very High Frequency (VHF) radio-telephone began to make radio operators obsolete and ships' captains were able to send their own messages within a radius of 30 miles; following changes by many owners to flags of convenience, the distribution of nationalities of ships' officers gradually changed from 80% English-speaking and 20% other to 80% other and 20% English-speaking. The need for regularization of practices in one language and the training of officers in its use was therefore agreed, and English, already the language of civil aviation, was chosen by the IMO.

In 1982-3, Seaspeak was created by specialists in maritime communications and applied linguistics, working in Plymouth and Cambridge and funded by the UK government and Pergamon Press. It was made as concise and unambiguous as possible, was restricted to no more than two propositions in any message, allowed for constant checkback and confirmation, and made as few changes as possible to existing practice. The *SEASPEAK Reference Manual* by Weeks, Glover, Strevens, and Johnson (Oxford: Pergamon, 1984) was published after worldwide sea trials. In it, the *conventions* section regulates ways of speaking, such as the use of different frequencies, a required sequence of elements in identifying oneself, a list of commonly used seafaring abbreviations, and ways of speaking numbers, quantities, position, course, bearings, and expressions of time. The *procedures* section covers ways of establishing a conversation on VHF radio and different categories of communication, such as 'exchanges' and 'broadcasts'. The section *Major communication subjects* defines technical vocabulary and includes emergency, search and rescue, navigational dangers and instructions, meteorological reports, non-urgent medical information, ice conditions, anchor operations, tugs and towage, and cargo operations. The *messages* section contains the main linguistic innovation. Apart from special-format messages (as in stereotyped weather forecasts), all messages begin with a *message marker* that indicates the nature of what follows, such as advice, information, instruction, intention, question, request, warning, or a response to one of these. Below is a typical exchange, in which a ship called *Sun Dragon* calls up Land's End

Coastguard in England, to inform them of a change of plan:

*Ship.* Land's End Coastguard, Land's End Coastguard.

This is Sun Dragon, Sun Dragon. Over.

*Coastguard.* Sun Dragon. This is Land's End Coastguard. Switch to VHF channel one-one. Over.

*Ship.* Land's End Coastguard. This is Sun Dragon. Agree VHF channel one-one. Over.

*Coastguard.* Sun Dragon. This is Land's End Coastguard on channel one-one. Over.

*Ship.* Land's End Coastguard. This is Sun Dragon. Information: I am returning to Mount's Bay.

Reason: north-west gale and very heavy seas. Over.

*Coastguard.* Sun Dragon. This is Land's End Coastguard. Information received: you are returning to Mount's Bay. Reason: north-west gale and very heavy seas. Question: do you require assistance? Over.

*Ship.* Land's End Coastguard. This is Sun Dragon. Answer: no assistance required, thank you. Nothing more. Over.

*Coastguard.* Sun Dragon. This is Land's End Coastguard. Nothing more. Out.

**SECONDARY LANGUAGE.** See PRIMARY LANGUAGE AND SECONDARY LANGUAGE.

**SECOND LANGUAGE.** See FIRST LANGUAGE.

**SEMANTIC CHANGE** [Early 20c]. Also

**semantic shift.** Change in the meanings of words, especially with the passage of time, the study of which is *historical semantics*. Investigators of changes in meaning have established a set of semantic categories, such as *generalization*, in which the meaning and reference of a word widen over the years (*pigeon* once meant a young dove and now means all members of the family Columbidae), and *specialization*, in which the meaning of a word narrows over the years (*deer* once meant any four-legged beast and now means only members of the family Cervidae). Such categories are not always sharply distinguishable; one may shade into another or develop from another. For example, before it meant a young dove, *pigeon* meant a young bird; it therefore specialized from young bird to young dove, then generalized from young dove to all dove-like birds. For scholarly convenience, the processes of semantic change are often described as if each operates alone, the 'story' of a word being told without bringing in too many other words. Such stories, however, are often complex and disseminate across whole networks of words. When a part of such a network is considered (such as the set of all barnyard fowls), many processes can be seen working together: the reference of one word widens while narrowing another (*chicken* generalizing to include

the meaning of *hen*), the reference widens in one period and narrows in another, sometimes establishing regional preferences (*cock* in BrE, *rooster* in AmE), and the reference extends figuratively (*chick* coming to mean a young woman) or idiomatically (*no spring chicken*), permitting a special use in one place but not another (in ScoE, *hen* as a term of endearment for women in and around Glasgow, comparable to *duck(s)* in parts of England). It has proved useful, therefore, to discuss semantic change in terms of webs of shifting forms and relationships rather than words on their own.

See BACK-FORMATION, CATACHRESIS, COMPUTER USAGE, CONVERSION/FUNCTIONAL SHIFT, DERIVATION, DETERIORATION, EPONYM, ETYMOLOGY, EUPHEMISM, EXTENSION, FIGURATIVE EXTENSION, FIGURATIVE LANGUAGE/USAGE, GENERALIZATION, HOMOGRAPH, HOMONYM, HOMOPHONY, JANUS WORD, LOCALISM, MELIORATION, METAPHOR, METONYMY, PEJORATION, PHILOLOGY, POLYSEMY, RADIATION, SEMANTIC FIELD, SEMANTICS, SPECIALIZATION, SUBREPTION, TOPONYMY. [HISTORY, LANGUAGE, WORD]. T.MCA.

**SEMANTIC FIELD.** A group, pattern, or framework of related words and word elements that covers or refers to an aspect of the world, such as colour words, culinary terms, military ranks, and the usage of sport. Many works of reference have been organized according to fields, from at least the time of Pliny the Elder's *Historia Naturalis* in AD 23-79. Recent works in English so organized are: *The English Duden: A Pictorial Dictionary* (1960), in 15 fields, the first of which, *Atom, Universe, and Earth*, is divided into such sub-fields as *Atom, Atmosphere, Astronomy, Meteorology*, each section consisting of a numbered list linked to a picture with numbered elements; *The Longman Lexicon of Contemporary English* (1981), organized in 14 semantic fields, the first of which, *Life and Living Things*, is divided into *Living creatures, Animals/mammals, Birds, and Kinds and parts of plants*, each group made up in turn of labelled lexical sets, usually of synonyms, antonyms, and associated words, defined together. There is no absolute list of such fields in any language, nor any fixed pattern or order in which a field or a set of fields may be presented. However, broad areas of experience can be isolated and structured in certain ways with certain ends in mind. They usually relate to such things as the world and its contents, human beings, and what human beings do. It is not known whether comparable structures exist in the brain. If they do, they are presumably multi-relational and far more fluid than anything so far attempted in printed or electronic form. Whether or not fields like *Kinds*

of *Plants and Feelings and Sensations* have electrochemical correlates, they have a psychological reality in large part conditioned by culture. The presentation of such fields differs from age to age and place to place: a 9c Muslim list began with power and war and concluded with food and women; most European lists from the 7c to the 17c began with God and the angels. See LEXICAL FIELD, LEXICON, SEMANTIC CHANGE, SEMANTICS, SLANG, THEMATIC ORDER. [LANGUAGE, REFERENCE, WORD]. T.MCA.

**SEMANTICS** [1890s: from French *sémantique*, Greek *sēmantikós* significant, from *sēma* a sign]. The study of meaning. The term has at least five linked senses: (1) Sometimes *semasiology*. In linguistics, the study of the meaning of words and sentences, their denotations, connotations, implications, and ambiguities. The three levels or components of a common model of language are phonology, syntax, and semantics. (2) In philosophy, the study of logical expression and of the principles that determine the truth or falsehood of sentences. (3) In semiotics, the study of signs and what they refer to, and of responses to those signs. (4) In general usage, interest in the meanings of words, including their denotations, connotations, implications, and ambiguities. (5) Informally and often pejoratively, the making of (pedantic and impractical) distinctions about the meaning and use of words.

**Background.** The attempt to formulate a science of signs dates from the late 19c, when the French linguist Michel Bréal published *Essai de sémantique* (1897). He was interested in the influence of usage on the evolution of words and wished to extend the philological study of language (largely based on text and form) to include meaning. The historical study of meaning, however, is not currently central to the work of semanticists: see SEMANTIC CHANGE. Present-day semantic theory has developed largely from the later theories of the Swiss linguist Ferdinand de Saussure, who emphasized synchronic system and not diachronic evolution. Post-Saussurean semantics is the study of meaning as a branch of linguistics, like grammar and phonology. In its widest sense, it is concerned both with relations within language (*sense*) and relations between language and the world (*reference*). Generally, sense relations are associated with the word or *lexical item/lexeme* and with a lexical structure; their study is known as *structural* or *lexical semantics*. Reference is concerned with the meaning of words, sentences, etc., in terms of the world of experience: the situations to which they refer or in which they occur.

**Semantic fields.** One approach has been the theory of *semantic fields*, developed by J. Trier and

W. Porzig in 1934. It attempts to deal with words as related and contrasting members of a set: for example, the meaning of English colour words like *red* and *blue*, which can be stated in terms of their relations in the colour spectrum, which in turn can be compared with the colour words of other languages. Thus, there is no precise equivalent of *blue* in Russian, which has two terms, *goluboy* and *siniy*, usually translated as 'light blue' and 'dark blue'. In Russian, these are treated as distinct colours and not shades of one colour, as users of English might suppose from their translation. See SEMANTIC FIELD.

**Sense relations.** In addition to semantic fields and lexical sets, a number of different types of *sense relation* have been identified, some traditional, some recent: (1) *Hyponymy*. Inclusion or class membership: *tulip* and *rose* are hyponyms of *flower*, which is their *hyperonym* or *superordinate term*. In its turn, *flower* is a hyponym of *plant*. In ordinary language, however, words can seldom be arranged within the kinds of strict classification found in zoology or botany: see BINOMIAL NOMENCLATURE. For example, there are arguments about whether rhubarb is a vegetable or a fruit, and whether the tomato is a fruit or a vegetable. (2) *Synonymy*. Sameness of meaning: *large* is a synonym of *big*. It is often maintained that there are no true synonyms in a language, but always some difference, of variety (AmE *fall*, BrE *autumn*), style (polite *gentleman*, colloquial BrE *chap*), emotive meaning (general *politician*, appreciative *statesman*), collocation (*rancid* modifying only *bacon* or *butter*). Partial or near synonymy is common, as with *adult*, *ripe*, and *mature*. (3) *Antonymy*. Oppositeness of meaning. There are, however, several types of opposite: *wide/narrow* and *old/young* are gradable both explicitly (X is wider than Y, A is older than B) and implicitly (a wide band is narrower than a narrow road). Such pairs allow for intermediate stages (neither wide nor narrow) and are antonyms proper. *Male/female* and *alive/dead* are not usually gradable and allow for no intermediate stage, except in expressions such as *more dead than alive*. Such pairs are *complementaries*. *Buy/sell* and *husband/wife* are relational opposites (X sells to Y and Y buys from X; only a husband can have a wife, and vice versa). Such pairs are *converses*. (4) *Polysemy* or *multiple meaning*. The existence of two or more meanings or senses to one word: for example, *flight* defined in at least six different ways: the power of flying; the act of flying; an air journey; a series (of steps); fleeing; a unit in an air force. (5) *Homonymy*. Words different in meaning but identical in form: *mail* armour, *mail* post. It is not always easy to distinguish homonymy and polysemy, and dictionaries rely

partly on etymology to help maintain the distinction. *Ear* (of corn) and *ear* (the organ) are examples of homonymy, because etymologically the former derives from Old English *éar* (husk) while the latter derives from Old English *éare* (ear). See ANTONYM, HOMONYM, HYPONYM, -ONYM, POLYSEMY, SENSE, SYNONYM, SYNONYMY.

**Componential analysis.** An approach which makes use of semantic components was first used by anthropologists in the analysis of kinship terms. Componential analysis seeks to deal with sense relations by means of a single set of constructs. Lexical items are analysed in terms of *semantic features* or *sense components*: for example, such sets as *man/woman*, *bull/cow*, *ram/ewe* have the proportional relationships *man : woman :: bull : cow :: ram : ewe*. Here, the components [male]/[female], and [human]/[bovine]/[ovine] may account for all the differences of meaning. Generally, components are treated as binary opposites distinguished by pluses and minuses: for example, [+male]/[-male] or [+female]/[-female] rather than simply [male]/[female]. It has been argued that *projection rules* can combine the semantic features of individual words to generate the meaning of an entire sentence, and to account for ambiguity (as in *The bill is large*) and anomaly (as in *\*He painted the walls with silent paint*). There are complexities where the features are not simply additive but arranged in hierarchical structure: for example, in the proposal to analyse *kill* as [cause] [to become] [not alive]. It is controversial whether there is a finite set of such universal semantic components accounting for all languages and whether the components have conceptual reality.

**Semantics and grammar.** The meaning of a sentence is generally assumed to be derived from the meaning of its words, but it can be argued that we usually interpret whole sentences and that the sentence, not the word, is the basic unit of meaning, the meaning of words being derived from the meaning of sentences. This view is implicit in the referential theories of meaning discussed below. A distinction has been made by the British linguist John Lyons between *sentence meaning* and *utterance meaning*: sentence meaning is concerned with 'literal' meaning determined by the grammatical and lexical elements, unaffected by the context or what the speaker 'meant' to say.

Utterance meaning includes: (1) *Presupposition*. The statement *The king of France is bald* presupposes that there is a king of France, and the statement *I regret that Mary came* presupposes that Mary did come, but *I believe that Mary came* does not. What is presupposed in this sense is not asserted by the speaker but is

nevertheless understood by the hearer. (2) *Implicature*. A term associated with H. P. Grice. The statement *It's hot in here* may imply the need to open a window, *I tried to telephone John yesterday* would normally suggest that I failed, and *I've finished my homework* (as a reply to *Have you finished your homework and put your books away?*) would suggest that the books have not been put away. Implicature is concerned with the various inferences we can make without actually being told, and includes presupposition. (3) *Prosodic features*. The use of stress and tone, as when *He SAW Mary this morning* means that he did not avoid her or telephone her, in contrast with *He saw MARY this morning*, rather than or in addition to anyone else. (4) *Speech acts*. Associated with J. L. Austin (*How to do Things with Words*, 1962). When a ship is launched with the words *I name this ship . . .*, the usage is not a statement of fact but an action. Similarly, *I declare this meeting closed* is the act of closing that meeting. Such speech acts, called *performatives*, cannot be said to be true or false. The notion of speech act can be extended to more common types of speech function: questions, orders, requests, statements, etc., and it is instructive to note that what appears to be a question may actually be a request: for example, *Can you pass the salt?*, where it would be inappropriate, though true, to reply *Yes, of course I can* without taking any action.

**Reference.** The place of reference in semantics is controversial. A problem with word meaning in terms of reference is that though words for objects may seem to denote, or refer to, objects (as with *stone* and *house*), other words (abstract nouns, verbs, and prepositions, etc.) do not seem to refer to anything. Many words are quite vague in their reference, with no clear dividing line between them (*hill/mountain*, *river/stream/brook*), and may be used for sets of objects that are very different in appearance (*dog* and *table* covering a wide range of animals and pieces of furniture). Referential meaning (usually of words but also of sentences) is sometimes known as *cognitive meaning*, as opposed to *emotive* or *evaluative meaning*. In traditional terms, this is the difference between *denotation* and *connotation*. Since there are theoretical problems with the concept of referential meaning (which seems inapplicable to abstract nouns, verbs, etc.), some scholars prefer the terms *cognitive* and *affective*. Thus, the pairs *horse/steed*, *statesman/politician*, and *hide/conceal* may be said to have the same cognitive meanings, but different affective meanings.

**Approaches to meaning.** The American linguist Leonard Bloomfield regarded meaning as a weak point in language study and believed that it

could be wholly stated in behaviourist terms. Following the Polish anthropologist Bronisław Malinowski, the British linguist J. R. Firth argued that *context of situation* was an important level of linguistic analysis alongside syntax, collocation, morphology, phonology, and phonetics, all making a contribution to linguistic meaning in a very wide sense. However, there have been few attempts to make practical use of that concept. Many scholars have, therefore, excluded reference from semantics. Thus, in transformational-generative grammar, the semantic component is entirely stated in terms of sense or semantic components, as described above in terms of componential analysis. Others have argued for a *truth-conditional* approach to semantics, in which the meaning of *bachelor* as 'unmarried man' is shown by the fact that if *X is an unmarried man* is true, then *X is a bachelor* is also true.

**Pragmatics.** Every aspect of meaning which cannot be stated in truth-conditional terms is *pragmatics*; the distinction is close to that of sentence and utterance meaning. But there are problems with this distinction and with the exclusion of reference. Thus, such deictic relationships as *here/there* and *this/that*, and words such as *today* and the personal pronouns, appear to contribute to sentence meaning, yet depend for their interpretation on reference, which varies according to the identity of speaker and hearer and the time and place of the utterance. See PRAGMATICS.

**Conclusion.** There can be no single, simple approach to the study of semantics, because there are many aspects of meaning both within language and in the relation between language and the world. The complexity of semantics reflects the complexity of the use of human language.

**SEMICOLON**, also **semi-colon** [17c: from Latin *semi-* half, *colon:* see COLON]. The punctuation mark (;). Its main roles are: (1) To link statements that are closely associated or that complement or parallel each other in some way: *We will stay here; you may go*. In this role, it can link clauses (*they were poor; they had few clothes; they were often in despair*) or phrases or a mixture of phrases and clauses (*they had no money; nor any clothes; nor could they find work*). It marks antithesis, often with a word such as *and, but, or yet* to emphasize this: *They were poor; and yet they were happy*. Words such as *however, nonetheless/none the less, and moreover* are usually preceded by a semicolon when they begin a new statement: *books are cheap; moreover, they last a lifetime*. (2) To mark a stronger division in a sentence that is already punctuated with commas (*several people were still waiting, impatiently shuffling their feet, looking bored; but none of them, in spite of this, seemed willing to speak*). The semicolon is often avoided in ordinary writing, or replaced with a dash, because many users lack confidence in it. It is most often found in print. See COLON, PUNCTUATION. [WRITING].

**SEMIOTICS** [1870s: from Greek *sēmeiōtikós* observant of signs, from *sēmeion* a sign. The adjective *semiotic* was coined by the English philosopher John Locke in the early 17c]. The study and analysis of signs and symbols as part of communication, as for example in language, gesture, clothing, and behaviour. Present-day semiotics arises from the independent work of two linguistic researchers, one in the US, the other in Switzerland. Charles S. Peirce (1834–1914) used the term to describe the study of signs and symbolic systems from a philosophical perspective, while Ferdinand de Saussure (1857–1913) coined *semiology* as part of his interest in language as a system of signs. The terms have

generally been regarded as synonymous, and *semiotics* is better known, especially in the English-speaking world.

Semiotics is a comprehensive discipline, in that almost anything can be a sign: clothes, hairstyles, type of house or car owned, accent, and body language. All send messages about such things as age, class, and politics. Sign systems, however, are not peculiar to human beings: the study of animal communication by gesture, noise, smell, dancing, etc., is termed *zoosemiotics*, while the study of technical systems of signals such as Morse code and traffic lights is *communication theory*. In semiotics, the term *code* refers loosely to any set of signs and their conventions of meaning. Language represents a rich set of such codes, both *verbal* (in language proper) and *non-verbal* (in the paralanguage of facial expressions, body movements, and such vocal activities as snorts and giggles). The media provide visual and aural signals in photographs, radio and television programmes, advertisements, and theatrical performances. Literature is seen as a particularly rich semiotic field with such sub-disciplines as *literary* and *narrative semiotics*. Critical attention has come to focus not only on the codes themselves, but on the process of *encoding* and *decoding*. Readers, it is argued, do not simply decode messages, but actively create meanings: that is, they *re-code* as they read.

Peirce and Saussure were interested in the relationship between sign and *referent* (what a sign refers to). Although they both stressed that this relationship was essentially arbitrary, Peirce argued that different types of sign had different degrees of both *arbitrariness* and *motivation*. What he terms an *icon* is a highly motivated sign, since it visually resembles what it represents: for example, a photograph or hologram. His *index* is partly motivated to the extent that there is a connection, usually of causality, between sign and referent: spots indexical of a disease like measles; smoke indexical of fire; a stutter of nervousness. Peirce's *symbol* is the most arbitrary kind of sign: the word in language, the formula in mathematics, or the rose representing love in literary tradition. See CODE, ICON, LINGUISTIC SIGN, MIME, PARALANGUAGE, SEMANTICS, SIGN, SYMBOL. [LANGUAGE]. K.W.

**SENSE** [14c: from Latin *sensus* feeling, understanding]. A term whose meanings range from physical faculties (such as *the sense of sight*) through analogous faculties of mind or spirit (*a sense of humour*), intelligence (*Show some sense!*), and what is logical and proper (the opposite of *nonsense*) to meaning (*the sense of a text*) and the idea that many words have sub-meanings (*X used in the sense of Y; the various senses of the word 'make'*). Although people agree that words may have different 'senses', there is no agreed means of establishing just how many senses many *polysemous* (many-sensed) words have. The boundaries between senses are not always clear: a sense may be precise and restricted or vague and diffuse, and may be susceptible to analysis into more or less easily delineated *sub-senses*. Identifying a sense may depend on knowledge and experience, social and situational context, the reason for analysing a word, the policy used by compilers of a particular dictionary, the method of displaying words in that dictionary, the amount of detail to be provided, and different theories about what words are and of how they should be discussed and defined. As the accompanying table shows, dictionaries can differ considerably as to the main sense divisions

Dictionary	Number of senses of:			
	<i>walk</i>		<i>crane</i>	
	noun	verb	noun	verb
<i>CoED</i> (1986)	15	11	4	3
<i>LDEL</i> (1984)	5	12	3	2
<i>AHD</i> (1985)	7	4	4	2
<i>ChED</i> (1988)	25	20	4	4

*Key:* *CoED* Collins English Dictionary, *LDEL* Longman Dictionary of the English Language, *AHD* American Heritage Dictionary, *ChED* Chambers English Dictionary.

of such words as *walk* and *crane*. See DICTIONARY, HOMONYM, MEANING, METAPHOR, NONSENSE, POLYSEMY, SEMANTIC CHANGE, SEMANTICS. [LANGUAGE, REFERENCE]. T.MCA.

**SENSE RELATION.** See SEMANTICS, SENSE.

**SENTENCE** [12c: through Old French from Latin *sententia* a way of thinking, opinion, judgement, used to translate the Greek terms *dóxa* and *gnómē*]. The largest structural unit normally treated in grammar. The sentence is notoriously difficult to define; numerous definitions have been offered and found wanting. The classical definition, that a sentence expresses a complete thought, dates from the first Western treatise on grammar, by Dionysius Thrax (c.100 BC), whose interest lay primarily in analysing, using, and teaching written Greek. This traditional notional definition, however, only solves the problem by transferring it: how does one define a complete thought? Linguists and anthropologists in the 19-20c, trained in the Greco-Latin grammatical tradition and faced with the analysis of previously unwritten Amerindian languages, have often noted how difficult it is to establish the boundaries between what might be words and what might be sentences in some of those languages. Because of this, the sentence as understood in the Western linguistic tradition has not yet been unequivocally established as a universal of language.

**The syntactic sentence.** Formal definitions usually refer to the structural independence of the sentence: that it is not included in a larger structural unit by such devices as coordination and subordination. However, dependence is relative: what are generally recognized as sentences may be dependent to some extent on other sentences through such devices as pronoun substitution and connective adverbials: *therefore*, *however*, *yet*. Elliptical sentences such as *Tomorrow* (in answer to *When is your birthday?*) are clearly dependent in some sense on linguistic context. There are also problems in deciding the status of formulaic utterances such as *Yes* or *Good morning*, which in dialogue are complete in themselves. Formal definitions may also refer to the internal structures of sentences. Indeed, it is possible to recognize as canonical sentences those that conform in their structure to the normal clause patterns, such as subject-verb-direct object. Other constructions would then be considered irregular or minor, and some (such as *Yes*) perhaps not sentences at all.

**The orthographic sentence.** In written language, sentence status is signalled by punctuation, primarily through the *period* (especially AmE) or *full*

*stop* (especially BrE), but the orthographic sentence is not necessarily identical with the syntactic sentence: clauses separated by *semicolons* or *colons* might well be analysed as independent sentences, the punctuation reflecting the writer's feeling that the sentences so linked are closer semantically than the surrounding sentences. In addition, in the prose of publicists and advertisers, traditional conventions for the organization of written sentences are routinely abandoned, in order to highlight certain points:

Have a little pick-me-up before you get back to work. Iberia's Business Class always welcomes you with a glass of sherry. A taste of Spanish sunshine to whet your appetite for the delicious meal ahead. And afterwards relax and take advantage of our unique, multilingual, on-board library. Efficient and professional but warm and hospitable. That's how we think business should be (advertisement, 1990).

**The phonological sentence.** Contemporary linguists tend not to worry over the definition of a sentence. They assume that they can recognize sentences, implicitly relying on their familiarity with their orthographic forms. The spoken language, however, does not signal sentence boundaries. The syntax of speech, particularly in spontaneous conversation, differs considerably from the regularities of the written (particularly printed) language in ways that have yet to be fully investigated. Everyday conversation exhibits abundant hesitations, shifts in sentence construction, apparently incomplete structures, and interconnections that are odd by the norms of the written language. Most grammarians focus on structures in the written language (and their analogues in more or less formal speech) for the data they use in constructing their grammars, and if they turn their attention at all to samples of speech tend to derive spoken structures from what they consider to be fuller forms normal in written texts. What constitutes a sentence in the language should be (but does not appear to be) of particular concern to generative grammarians who view the goal of their grammar as accounting for all and only the sentences of the language.

**Sentence structure.** If the sentence is to constitute a grammatical unit for the language as a whole, then the orthographic sentence cannot serve as that unit: speech signals do not correspond to sentence punctuation, and punctuation only crudely signals some elements of speech, such as possible points for pausing or changing one's tone. Instead, reference can be made to the relative independence of the unit and its internal structure. A sentence may be viewed as a clause complex, in which the parts are clauses linked to each other by coordination and subordination. From this viewpoint, the traditional *simple sentence* is indeed simple, because it consists of only

one clause, as in: *The governor of the prison negotiated with the prisoners throughout the day.* A *compound sentence* involves the coordination of two or more *main clauses* (each of which could constitute a simple sentence), linked by the coordinators *and, or, but*, as in: *The governor of the prison negotiated with the prisoners throughout the day and talks were continued into the night.* A *complex sentence* consists of one main clause within which there are one or more subordinate clauses: *The governor of the prison negotiated with the prisoners after police had seized control of the kitchen and food-store area.* The subordinate clause, here introduced by the subordinator *after*, can be moved to the front of the sentence, a typical property of subordinate clauses.

Further complexities are quite usual. A *compound-complex sentence* resembles the simple sentence in having more than one main clause, but in addition one or more of the main clauses contains one or more subordinate clauses: *A police officer said that the prison authorities could not confirm that there were bodies inside the prison, but he believed that there had been some deaths.* Here, the two main clauses are coordinated by *but*, the first main clause has a *that*-clause within which is embedded another *that*-clause, and the second main clause also contains a *that*-clause. It is further possible to recognize a *complex-compound sentence* (though the term is not often used), in which the one main clause contains two or more subordinate clauses that are coordinated: *The Home Secretary said that nine prisoners had been forcibly injected with drugs and that eight others had taken drugs voluntarily.* In this example, the two subordinate *that*-clauses are coordinated by *and*. The subordinate clause may be embedded in a phrase rather than directly in another clause, as in this example of a relative clause (introduced by *who*) that is embedded in a noun phrase: *Twelve prison officers who received minor injuries during the riot have all been discharged from hospital.*

All the examples of subordinate clauses given above have been *finite clauses*, but subordination may be effected through *non-finite clauses* and *verbless clauses*. In the next example, two coordinated participle clauses (which follow the comma) are subordinate to the main clause in this complex sentence: *The rioters have destroyed most of the ten wings of the prison, systematically smashing cells and setting fire to buildings.* In the example that follows, the *if*-clause is verbless: *If possible, prisoners will be moved to other prisons.*

**Constituents of clauses.** This structured account of sentences assumes the recognition of clauses. A clause consists of central and peripheral constituents, the first usually obligatory, the second

optional. The central constituents are the *subject* (though generally omitted in imperative sentences) and the *verb*, as in *Nobody moved*. Other central constituents are *complements* of the verb: that is, elements that complete its meaning, such as the direct object *my typewriter* in *Somebody has taken my typewriter*, the indirect object *me* in *Derek gave me some books*, the subject complement *hungry* in *Jane is hungry*, the object complement *strong* in *I like my tea strong*, the adverbial complement in the garage in *The car is in the garage* and in *I put the car in the garage*. The peripheral or marginal constituents are mainly adverbials such as *incidentally, also, and last week* in *Incidentally, Derek also gave me some books last week*, and vocatives such as *Natalie* in *I like my tea strong, Natalie*.

**Irregular structures.** Some constructions are irregular in some respect, but are generally considered sentences or (if attached to a sentence) parts of sentences: (1) Certain types of subordinate clauses constitute independent exclamations: *That we should come to this! To think that I once helped him! If it isn't my old friend Jeremy! If only you had listened to me!* (2) Questions in which the phrases or subordinate clauses are introduced by interrogative words: *How about a kiss? Why all the fuss? What if they don't come? How come you're not ready yet?* (3) Such headings as *How to get help in an emergency; Where you should eat in Paris.* (4) Elliptical constructions such as *Serves you right* and *Never fails, does it?*, and elements of dialogue such as *A: Where are you? B: In the kitchen.* (5) Problematic sequences that cannot easily be analysed into clausal constituents appear in such contexts as labels, titles, warnings, and greetings: *Baked beans; The Department of English; Good morning; The police!; Thanks; Yes.* Conversations often contain such sequences as *That one. The big one. No, the one over there. Higher up. Yes. Beside the green jug*, which might as easily be written *That one—the big one—no—the one over there—higher up—yes—beside the green jug*, orthographically sidestepping the problem of deciding the status of the phrases in question. Such uncertain sequences are often referred to as *sentence fragments*.

**Functional and syntactic categories.** Sentences were categorized above by degree of internal complexity: *simple, compound, complex, compound-complex, complex-compound*. They are also commonly classified according to dominant function in discourse, as *declarative, interrogative, imperative, and exclamatory*. These functions are reflected in the four corresponding sentence types *statement, question, directive* (or *command*), and *exclamation*. In addition, sentences can be classified according to syntactic

features that affect the sentence as a whole: *mood* (indicative, imperative, subjunctive), *voice* (active, passive), and *polarity* (positive, negative). Finally, they can be classified by the patterns of the central or kernel constituents that they exhibit: for example, *Subject-Verb-Direct Object (SVDO)*; *Subject-Verb-Subject Complement (SVSC)*.

See ADVERBIAL, CLAUSE, COLON, COMMA, COMPARATIVE SENTENCE, COMPLEMENT, COMPLEX SENTENCE, COMPOUND-COMPLEX SENTENCE, COMPOUND SENTENCE, COMPUTING, DISCOURSE, EXISTENTIAL SENTENCE, OBJECT, PARTICIPLE, PART OF SPEECH, PERIOD, PERIODIC SENTENCE, PHRASE, POLARITY, PREDICATE, PUNCTUATION, SEMICOLON, SENTENCE WORD, SIMPLE SENTENCE, STRESS, SUBJECT, TAG, VERB, VERBLESS SENTENCE, VOICE. [GRAMMAR, STYLE, WRITING]. S.G.

**SENTENCE ADVERB, SENTENCE ADVERBIAL.** See ADVERBIAL.

**SENTENCE FRAGMENT.** See SENTENCE.

**SENTENCE STRESS.** See STRESS.

**SENTENCE TAG.** See TAG.

**SENTENCE WORD.** An occasional term in word-formation for a sentence which serves as a word or part of a word, such as *never say die*, attributively in 'a *never-say-die* attitude', suffixed in *never-say-die-ism*, or as an often allegorical name: *Captain Never-Say-Die*, *Mrs Do-As-You-Would-Be-Done-By*, *She-Who-Must-Be-Obeyed*. The attributive use is the commonest. In writing and print, the constituents are often linked by hyphens (examples as collected in the 1980s): *an aren't-I-just-the-cutest-thing smile*; *a from-this-day-forward-I-have-no-daughter scene*; *her I-don't-understand-you look*. However, they may also come between quotation marks (*a 'print or shut down' ultimatum*; *a Toyota 'Drop Everything' Sales Event*), be capitalized (*the I Did It My Way approach*), or mix hyphens and capitals (*the great Support-Your-Local-Hostage binge*). Sentence words often begin with verbs in the imperative mood: *a Dial-a-Prayer service*; *a Rent-a-Car contract*; *a get-up-and-go Britain in place of a sit-back-and-wait-for-it culture*. Compare PHRASE WORD. [GRAMMAR, WORD]. T.M.C.A.

**SERIAL** [1830s: from Neo-Latin *serialis*: see SERIES]. (1) Occurring in a series (*serial polygamy*) or presented one part at a time (*a serial story in a magazine*). (2) A work that is published or broadcast in parts: *a weekly TV serial*. Included in the law of copyright are the *serial rights* to a book, film, etc. When a company obtains these

rights it can proceed to *serialize* the work in question. (3) In library science, a periodical such as a scientific journal, each part numbered and chronologically labelled: *International Journal of Lexicography*, Volume 3, Number 3, Autumn 1990. A *serial catalog(ue)* lists such publications, each of which usually has an *International Standard Serial Number (ISSN)*. (4) In computing, relating to the performance of data-processing operations in sequence: that is, *serial processing* as opposed to *parallel processing*. *Serial storage* is the recording of information in the order in which it is entered. Compare EPISODE, JOURNAL, PERIODICAL. [LITERATURE, MEDIA, TECHNOLOGY].

T.M.C.A.

**SERIAL COMMA.** See COMMA, OXFORD UNIVERSITY PRESS.

**SERIES** [17c: Latin *series* a row, chain, succession]. (1) A group, number, or set of usually similar things that occur or are arranged in sequence: *a series of events*; *the third book in the 'Patterns of English' Series*. (2) A number of related broadcast programmes (*a wild-life series*), or one programme in serial form, usually daily or weekly, with a specific format and theme or story-line, and a core group of performers, such as a TV *game show* or *situation comedy*. (3) In printing, all sizes of one typeface. See EPISODE, SERIAL, SOAP OPERA. [LITERATURE, MEDIA, TECHNOLOGY].

T.M.C.A.

**SERIF** [Early 19c: perhaps from Dutch *schreef* a written line, from *schrijven* to write]. Sometimes *ceriph*. A printer's and calligrapher's term for a small line used to finish off or ornament a main stroke of a letter. Some typefaces have serifs, others do not and are said to be *sans serif* (without serifs); there are therefore serif and sanserif typefaces. Compare MINIM. See TYPOGRAPHY. [TECHNOLOGY, WRITING].

T.M.C.A.

**SERMON** [12c: from Latin *sermo/sermonis* talk, discourse]. A discourse on a religious subject, usually delivered within corporate worship. Expositions of scripture took place in early Christian services; when Greek and Latin became archaic as liturgical languages, sermons were delivered in the vernaculars. Some Old English sermons are extant, notably by Aelfric (late 10c). Medieval sermons are among the earliest examples of original English prose. The Reformation in the 16c emphasized sermons that were often polemical. Leading English preachers of the 17c included Lancelot Andrews and John Donne. The growth of 18c nonconformity bred a line of famous preachers from John Wesley to Charles Spurgeon. John Henry Newman was an

outstanding preacher of the 19c Oxford Movement. Many 19c preachers collected and published their sermons, usually edited to make them more conformable to the expectations of written English. Sermons in the 20c are less often published. They are usually shorter and less prominent in worship, though revivalists like Billy Graham have preached to vast crowds and US evangelists have adapted the sermon to television. It has also influenced the rhetorical style of Black American preachers and civil rights campaigners, such as Martin Luther King:

The battle is in our hands. I know some of you are asking today, 'How long will it take?' I come to say to you this afternoon, however difficult the moment, however frustrating the hour, it will not be long, because truth pressed to earth will rise again. How long? Not long, because no lie can live forever. How long? Not long, because you will reap what you sow. How long? Not long, because the arm of the moral universe is long, but it bends towards justice (in Montgomery, Alabama, 1965).

The sermon usually has dramatic qualities, and has been a means through which Biblical phrases have become part of the everyday idiomatic language of the English-speaking world. See BIBLICAL ENGLISH. Compare SCRIPTURE. [LITERATURE, SPEECH, STYLE]. R.C.

SESTET. See SONNET.

SETTLER ENGLISH. See LIBERIA.

**SEXISM** [1960s: on the analogy of *racism*]. A term used in feminist critiques of society and in general usage for: (1) Attitudes and behaviour based on traditional assumptions about, and stereotypes of, sexual roles in society and some gender usages in language. (2) Discrimination or disparagement based on a person's sex, especially when directed by men or society at large against women. In terms of language, sexism refers to a bias through which patterns and references of male usage are taken to be normative, superordinate, and positive and those of women are taken to be deviant, subordinate, and negative. Usage typically challenged as sexist includes: (1) *Man* used to refer to the human race in general (book title: *The Ascent of Man*) and to individuals (*What does the average man in the street think?*). Such neutral forms as *humankind* and *person* have been recommended in its place. (2) *Girl* used to refer to adult women (considered to be as demeaning as the use of *boy* for adult non-white males) and used attributively in such expressions as *girl athlete*, *girl reporter*. The use of such phrases appears to have declined in recent years. (3) *Lady* used to indicate a woman professional, as in *lady doctor* and *lady lawyer*, a genteelism that dates from a time when women

were rare in such professions and the few who did exist came from the upper and middle classes. (4) Naming that does not equally represent men and women, such as: *Professors Eliot, Goldstein, and Barbara Smith*. Many manuals of style now recommend strict parallelism: *Professors Eliot, Goldstein, and Smith* or *Professors Edgar Eliot, Sol Goldstein, and Barbara Smith*.

**Non-sexist usage.** Since the 1960s there has been strong social pressure from feminist and other groups, especially in North America, to make the use of English and other languages less biased against women. Some of these attempts have met with fairly widespread acceptance, while others have been resisted and appear to be regarded as too radical, or awkward, or unnecessary. An early change in the US (c.1970) was the coining of the abbreviated title *Ms* parallel to *Mr* in that it identifies gender but not marital status. This term is often used in public (such as in newspapers and the mail) in the way intended by feminists, but it has also often been used as a replacement of *Miss*, to designate an unmarried woman, while *Mrs* continues to designate a married woman (often because women and men wish to retain some such distinction). A more limited but definitive change occurred in 1979, when major tropical storms were no longer designated with female names alone, *Hurricane Harry* becoming as likely as *Hurricane Hazel*. This change has largely eliminated descriptions of 'temperamental' storms that 'flirt with the coast'. During the 1980s, increasing pressure against sexual discrimination in areas such as job advertisements and academic journals led to the development of guidelines for non-sexist usage, intended to help people avoid both explicit and implicit sexism in language. One such set of guidelines is *The Handbook of Nonsexist Writing* by Casey Miller and Kate Swift (Harper & Row, 1988). They cover such issues as not assuming that a doctor or other professional is always *he*, dropping such derivatives as *authoress*, *executrix*, and *usherette*, using neutral terms such as *draughter* for *draughtsman*, *chair* for *chairman*, *flight attendant* for *steward* and *stewardess*, and using *women* rather than *girls* for adults.

**Radical coinages and adaptations.** Many feminists consider that radical changes in the form of certain everyday words have psychological value, as with the conversion of *history* to *herstory*, which, they argue, presents a new perspective on and analysis of life and the processes with which the original words have generally been associated. *Herstory* focuses attention on the situation and accomplishments of women, seen as largely excluded from or marginalized in the 'his story' of male historians. The forms *womyn* and *wimmin* are seen as more detached

from *man*, the origin of *woman* being *wifman*, meaning 'female human being' but easily interpretable as 'wife of a man'. Such usages are not currently widespread. Equally radical is the *reclamation* or *positive reinterpretation* of negative words for kinds of women, such as *crone*, *hag*, *witch*. Mary Daly and Jane Caputi's *Wickedary* (Boston: Beacon Press, 1987), for example, defines *revolting hag* as 'survivor of the perpetual witchcraze of patriarchy . . . [who has] Discovered depths of Courage, Strength and Wisdom in her Self'.

**Generic male usages.** Despite traditional assertions that such generics as *man* and *he* include *woman* and *she*, in practice the gender for many words is often specifically male, as in *refugees* and *their wives* (who are also refugees) and *When a bird isn't foraging, it's singing its heart out to advertise its territory, keep intruding males at bay and attract a female*. Both the *man in the street* and the *man of letters* are supposedly general, but the unacceptability of \**She was a leading man of letters* and the non-use (or rarity) of *She was a leading woman of letters* demonstrate a primary and abiding male reference. A widely approved alternative to generic *he* (*Ask anyone and he'll tell you*) has not yet developed. The most common appears to be singular *they*, which has a long history of usage: *Ask anyone and they'll tell you. He or she* and to a less extent in writing *s/he* or *(s)he* occur, and sometimes *she* and *he*, but commentators generally recommend avoidance strategies, such as a shift to plural constructions.

**Use of *person*.** The neutral use of *person* in its own right and in compounds has made some progress: *anchorperson*, *chairperson*, *layperson*, *salesperson*, *spokesperson*, with the occasional successful plural *-people*: *business people*, *lay people*, *sales people*, *working people*. However, the usage is often mocked (*clergyperson*, *fisherperson*, *weatherperson*), and remains an uneasy term for many people. In two cases, especially in North America, the first element alone has had some success: *anchor*, *chair*. *Fisher* has not had much success, but *firefighter* has been used with some success instead of *fireman*. The term *layman* is widely used, especially in such phrases as *in layman's language*, but neutral *layperson*/*lay person* appear to have caught on for both religious and professional reference: plural *lay people*, religious collective *the laity*. The terms *non-specialist*, *non-professional* have been proposed for non-religious contexts. For many people, however, *person* remains an awkwardly formal and unwelcome intrusion in their lives, and of all the words associated with discussions of inclusive language has provoked the most jokes, as with *personhole covers*, *to person an*

*assembly line*, *to personage a company*, and *huperson beings*.

**The feminine inanimate.** Although standard English does not have gender for inanimate objects, female reference, such as the pronoun *she*, is often associated with things and qualities perceived as having 'female' characteristics. *Mother Nature* is associated with female fertility; *justice* and *liberty* are perceived as 'soft' and 'compassionate', as are women; boats and cars are seen as irrational, cranky, and dominated by men. Such associations may at times seem flattering, as in *She's got a beautiful stern*, but not when someone who is trying to start a motor is told to *give her a kick and she'll turn over*.

**Lexical asymmetry.** Male/female pairs of words are often asymmetrical: *governor* refers to a man with great power and position, *governess* to a woman employee with limited authority over children; *master* generally refers to a man who controls things (but may sometimes be a woman: *She's a master of the subject*), while *mistress* may refer to a powerful woman in charge of a house or college, but more often means a married man's kept lover (negative echoes from this sense often affecting the other). In some areas, however, female terms have not emerged, symmetrical or otherwise: the degrees of *Bachelor of Arts* and *Master of Arts*, once conferred only on men, are now conferred on both men and women without any such contrasts as \**Spinster of Arts* or \**Mistress of Arts*. In addition, although terms like *lady lawyer/doctor* are widely used, there has been no general move towards such forms as *doctorette*, *lawyeress*, instances of which are jocular and/or pejorative. The relative position of male and female in binomial phrases (such as *he or she*, *host and hostess*, *male or female*, *man and wife*, *men and women*, *men and girls*, *men and ladies*, *boys and girls*) gives primary status to males, the only exceptions being the chivalric *ladies and gentlemen* and the informal *mum/mom and dad*. Asymmetrical pairs are also common, with female terms as lower in status, as in *men and girls*, *men and ladies*. It is often also the case that pejorative terms are stronger when applied to women: *bitch* is seldom a compliment, whereas *bastard* (especially *old bastard*) can under some circumstances be intended as a term of respect or affection. Of similar positive status when masculine is *dog* (as in *you old dog!*, admiring a *roué*); when feminine in reference in AmE it means an ugly woman. *Witch* is almost always pejorative, whereas *wizard* is often a compliment.

**Marked suffixes.** In common with other European languages, English has traditionally indicated femaleness by the use of certain suffixes, indicating that the nouns to which they attach

have traditionally been taken to refer only to men. The suffixes are: (1) *-ess*, as used in *actress*, *authoress*, *sculptress*, *waitress*. It is sometimes said to highlight women's accomplishments, but is often linked to roles presented as less significant than those of men, such as *manageress*, *poetess*. *Actress*, however, is widely used at the same time as the inclusive use of *actor* has gained ground, especially in the theatre. *Hostess* continues to be widely used, but because of its occurrence in such phrases as *bar hostess* it may decline, making way for inclusive *host*. *Jewess*, *Negress*, *Quakeress* are dismissive additions to often disparaging usages of *Jew*, *Negro*, *Quaker* and are not balanced by such creations as *\*Christianess*, *\*Nordess*, *\*Mormoness*. (2) *-ette* has three deprecatory senses: small size (as in *cigarette*, *kitchenette*), artificiality (*leatherette*), femaleness and auxiliary status (*majorette*, *usherette*, *Jaycee-ette*). *Copette* is not as tough or reassuring an image as *cop*. The term *suffragette* is widely used to refer to activists at the turn of the 19-20c who sought votes for women. These women, however, called themselves *suffragists*. The better-known term was popularized by a largely hostile public and media, using a demeaning and dismissive suffix to disparage their goals. (3) *-trix*, as in the now rare *aviatrix*, has a limited use in legal language (for example, *executrix*, *testatrix*), and in the sado-masochistic term *dominatrix*. Such usages, however, mark females in these roles as unusual. (4) *-ine* is obsolete except for *heroine*.

**Inclusive usage.** The possibility of eliminating sexism from language involves the Whorfian hypothesis: not just that language is a reflection of the society which uses it, but that society is in part shaped by its language. If this is so, language change may bring about social change: children hearing constant references to *the doctor . . . he* may well assume that all physicians are or should be male. A consistent use of inclusive and non-sexist language might help change this perception. Male-based words appear to be increasingly challenged by both women and men. In many cases, they have been formally replaced by neutral terms: *chairman* by *chair*, *forefather* by *ancestor*, *headmaster* and *headmistress* by *head teacher*, *waiter* and *waitress* by *server*, *coed* by *student*. Asymmetrical words such as *mistress* in the sexual sense are being replaced by neutral terms such as *lover*. The replacement of *mother/father* by *parent*, unless gender-specific roles are involved, reflects some breakdown in socially stereotyping according to gender. *Steward* and *stewardess* have generally been replaced by *flight attendant*, although call buttons on aircraft continue in the main to show a female figure. In the case of *housewife*, on the

other hand, the male-oriented *househusband* seems to be integrated (sometimes mockingly) into both AmE and BrE, while *homemaker* appears to remain feminine in reference, and *home manager* has not gained acceptance. Common work terms can generally be neutralized without much difficulty: *manpower* can be changed to *personnel*, *work force*, or *workers*, and *man hours* to *operator hours*. Suffixes like *-er* in job titles such as *steelworker* and *bookkeeper* can be used to modify *longshoreman* to *longshoreworker* and *fisherman* to *fisher*, but often meet with ridicule. Many suggested changes raise further difficulties and have produced varied responses. Of the alternatives proposed for *chairman*, *chair* is comparable to *head* (of a department) and echoes the phrase *in the chair*. It is widely used in AmE. *Chairperson* is sometimes used more by, or referring to, women. The contrastive *Chairman/woman*, unlike *businessman/woman*, does not appear to work well. BrE tends to use *chairman* neutrally, with the contrasting forms of address *Mr Chairman* and *Madam Chairman*: not *\*Mr Chair*, *\*Madam Chair*.

**Feminist objections to inclusive usage.** Some feminists have objected to the use of such terms as *faculty spouse*, *chair*, *lion* to neutralize the male-oriented *faculty wife*, *chairman*, *lioness*, on the grounds that they can hide information that is important to the cause of women's rights, such as the under-representation of women on university faculties and as controllers of committees, and the fact that female lions do most of the hunting. They argue that even if generic *man* ('When ancient man developed agriculture') is changed to *ancient people*, the new usage masks evidence that women were the earliest cultivators of plants. To say in the US that 'The fifteenth amendment ensured the voting rights of former slaves' hides the historical reality that this referred only to *men* who were former slaves.

**SEXUALITY AND LANGUAGE.** The degree of ease with which people have spoken and written about sexuality in English has varied considerably by historical era, with such descriptive extremes as 'prudish Victorians' and 'modern permissiveness'. English has a well-documented history of delight in sexual topics, including dirty jokes, bawdy songs and limericks, and earthy elements in such works of literature as Chaucer's *Canterbury Tales*. A Shakespearean phrase for sexual intercourse, *the beast with two backs* (*Othello*, 1. 1. 107) is not used today but is probably recognizable in its context. However, Hamlet's command to Ophelia *Get thee to a nunnery* plays on a secondary slang meaning of *nunnery* as *brothel*, and the usage to *die* (slang for *to have an orgasm*) in *Much Ado About Nothing*, 5. 2. 99 ('I will live in thy heart, die in thy lap, and be buried in thine eyes') were obvious to contemporary audiences, but now need scholarly footnotes.

Literature containing sexual language or reference to aspects of sexuality has not always been readily available: for example, the explicit erotic poetry of the Scottish national poet Robert Burns was long published only in private editions. Censorship has often focused on particular sexual words, such as *fuck*, even when not used in a strictly sexual sense. Most controversy over sexuality in literature, such as in D. H. Lawrence's *Lady Chatterley's Lover*, is not over language but content: by and large, the detailed descriptions of sexual intercourse were more offensive than the use of *four-letter words*. Terms identifying or describing aspects of sexuality include names for body parts, sexual desire and activities, menstruation, pregnancy and birth, illness ('female complaints' and venereal disease), and prostitution. Such words can be placed along an overlapping continuum of acceptability: scientific-clinical, formal-neutral, child language, euphemism, slang, and taboo. Terms for parts of the body, for example, include as a group, more or less from the least to the most offensive, *vagina*, *privates*, *pussy*, *gash*, *cunt*. Words used to describe women sexually are often more negative and used more in abuse, than words that describe men in this way, both of women and men: for example, calling a woman a *cunt* is bad, calling a man a *cunt* is very bad, and both are stronger than calling someone a *prick*. Similarly, words for sexual activity often show a lack of parallel evolution. A woman can be called a *cock-teaser*, but there is no common

equivalent for a man. A sexually active man with many partners is at worst a *womanizer*, but often publicly admired as a *stud*; a sexually active woman with many partners, although no longer generally considered *fallen*, is likely to be called *promiscuous*, a *tart* or a *whore*, and a *slut* or in BrE slang a *slag*.

Reluctance to talk about sexuality, because it is 'not nice' or at least 'private', is still strong. In certain groups, more open use began in the 'permissive' 1960s, in response to the women's liberation movement, the 'sexual revolution', increased attention to women's health issues, greater accessibility of birth control and abortion, and greater attention to sexually transmitted diseases. There has consequently been increased use in the media of formal terms, such as *sexually transmitted diseases* (instead of *venereal diseases*), *anal intercourse*, and *oral intercourse*. Many of the objections, particularly in the US, to sex education and awareness of the disease AIDS are linked to disapproval of their supposed encouragement of homosexual or non-marital sexual relations and the 'threat to family authority' that they may be thought to constitute. Thus, in many places, use of all informal, slang, or taboo terms (even for educational purposes) is forbidden. On television, some terms are not used at all and others only when children are presumed not to be watching. Advertisements for menstrual products can now mention *periodic flow*, for example, but advertising condoms, where permitted, uses indirect, non-specific, and euphemistic language such as references to 'protection'. See **SEXISM**, **SWEARING**, **TABOO**, **VICTORIAN**. [LANGUAGE, STYLE]. L.S.W., M.E.W.

**SEYCHELLES.** Official title: *Republic of the Seychelles*. A country of the western Indian Ocean and member of the Commonwealth, made up of over 100 islands. Capital: Victoria. Currency: the rupee. Population: 66,000 (1988), 75,000 (projection for 2000). Ethnicity: mixed African, European, Indian. Languages: Creole or Seychellois (French-based and spoken by around 95% of the population), English, and French (all official). Education: primary 92%, secondary 50%, tertiary 21%, literacy 75%. The islands were a French colony from 1768, a British colony from 1814, and became independent in 1976. The Seychellois are largely descended from French colonists and their freed African slaves, with smaller numbers of British, Chinese, and Indians. See **ENGLISH**. [AFRICA, NAME, VARIETY]. T.MCA.

**SHAGGY DOG STORY** [1940s: said to have begun as a species of joke about a talking dog]. A long, involved anecdote whose humour lies in

its digressions and embroideries, the way it is told, and its long-delayed punch line. It is almost nihilistic in its pointlessness and the way in which it flouts the conventions of folk narrative. There is no easy sequence of 'once upon a time . . . then . . . next . . . in the end . . . and the moral is . . .'. The signal that the story has at last come to a point is usually a gleefully forced pun or play on words, as in the tale of the baron to whose castle gate one storm-lashed evening there comes a knight errant and his faithful hound. There is room within for only one stranger, and the baron, after giving the matter some thought, offers his hospitality to the dog. 'Would you turn a knight out on a dog like this?' cries the rejected traveller (playing on the idiom, 'I wouldn't turn a dog out on a night like this', with a cheerful disregard for the resultant collapse of logic and sense). This is the framework of the tale: its charm and torment lie in the detail, the development of inessentials, the loving exploration of narratological blind alleys, the excruciating relish of synonyms and stylistic curlicues, making the dog a *hound*, a *four-footed friend*, a *companion in many a time of trial*. Shaggy dog stories became popular after the Second World War and seem to be related to such other, more serious cultural developments as existentialism, *cinéma vérité*, and modernist fiction that does not put a construction on the events it describes but presents an undifferentiated report. However, the intricate, pointless tale is not exclusive to the 20c: a foremost example in English literature is Laurence Sterne's *Tristram Shandy* (1759-67), a 600-page rigmarole described at its conclusion as a story about a cock and a bull. Yesterday's cock and bull have become today's shaggy dog. See ANECDOTE, JOKE, PUNCH LINE, STORY. [STYLE].

W.N.

**SHAKESPEARE, William** [1564-1616]. English poet and playwright, the foremost figure in English literature and a primary influence on the development of especially the literary language. Knowledge of his life comes chiefly from documents unrelated to his career: records of his property transactions, his taxes, his occasional involvement in lawsuits. Other 'knowledge' derives from anecdotes, many set down long after his death, and biographical inferences from his writing.

**Family and birth.** Shakespeare's family goes back to the Warwickshire robber William Sakspere, whose hanging is recorded in the mid-13c. In the early 16c, Richard Shakespeare farmed as a tenant some three miles outside Stratford; his son John, a dresser of skins in Stratford, married his landlord's daughter Mary. John's growing prosperity is recorded not only in his real estate

purchases and in the expansion of his business into wool, timber, and barley, but also in a few brushes with the mercantile laws of his day. He rose nonetheless in the community, from Constable to Chamberlain and eventually to Mayor, though he apparently never learned to read and write: in surviving documents he signed with his mark. William, one of John and Mary Shakespeare's eight children, was baptized on 26 April 1564: it is only a guess that he was born on 23 April, St George's Day. The inscription on his tomb records his death on 23 April 1616, exactly 52 years later. No record of young William's education survives. The tradition, first set down in the early 18c, that says that he attended the Stratford 'free school', appears to be borne out by the thorough knowledge of Latin language and literature evident in his plays and poems. The same tradition says that his father's declining fortunes forced Shakespeare to quit school before he finished. He received special permission to marry Anne Hathaway in November 1582, when he was 18 and she was 26. Their daughter Susanna was born in May 1583; twins Hamnet and Judith were born in 1585.

**Career.** In 1592, the playwright Robert Greene alluded to another writer who 'with his *Tygers hart wrapt in a Players hide* . . . is in his owne conceit the onely Shake-scene in a country'. The allusion to 3 *Henry VI* (1. 4. 137) and the pun on his name make it clear that Shakespeare was already in 1592 a prominent, if controversial, figure on the London theatrical scene. Within a few years, his pre-eminence was beyond controversy: in 1598, Francis Meres gave Shakespeare pride of place among the English dramatists he listed in *Palladis Tamia*, praising the 'sugred' sonnets and naming twelve plays composed in 'Shakespeares fine filed phrase'.

The plague forced the closing of London theatres from 1592 to 1594, years in which Shakespeare's non-dramatic *Venus and Adonis* and *The Rape of Lucrece* appeared. When the theatres reopened, Shakespeare wrote new plays, acted in some of Ben Jonson's, and, according to some traditions, in several of his own. He also became a part-owner of his theatrical troupe, the Lord Chamberlain's company. In the five years or so following, according to the conventional chronology, the phenomenally busy Shakespeare wrote eleven plays, the early sonnets, and *The Lover's Complaint*. His increasing success enabled Shakespeare to buy Stratford's second-largest house in 1597, when he was 33, and he continued to buy property in the town and in London as well until at least 1613. The list of property in his will makes impressive reading.

Shakespeare's company opened the Globe theatre in 1599. Queen Elizabeth died in 1603,

and her successor James I pronounced Shakespeare's troupe his servants under the name the King's Men. The company often performed at court and, in 1608, took over the Blackfriars, a private indoor theatre. Shakespeare had written fewer plays since 1601, and seems to have stopped acting after 1607, perhaps because he was spending more time in Stratford. In 1613, he wrote his last play, probably in collaboration with Fletcher; in the same year, the Globe theatre burned down.

**Works.** Shakespeare's works do not survive in manuscript, and the copy that printers used was apparently not always his: some came from actors' reconstructions, some from the theatre company's prompt-books. Both scribes and printing-house compositors made occasional further alterations in the course of transmitting Shakespeare's text, including linguistic details such as punctuation, spelling, and grammatical inflections. Many of his works appeared in small separate editions known as 'quartos' during his lifetime; dates on the title page, or in the Stationers' Register, along with lists like Meres's, outline the chronology of Shakespeare's career. Some at least of the sonnets were already in circulation when Meres mentioned them over a decade before their 1609 publication, and some of the plays may likewise have been written and presented earlier than their publication. Several of the plays did not appear until the posthumous collected Folio edition of 1623, so the following chronology, though it reflects the preponderance of modern opinion, remains uncertain:

- (1) Early works written before Shakespeare joined the Lord Chamberlain's company in 1594: *1 Henry VI*, *2 Henry VI*, *3 Henry VI*, *Richard III*, *Titus Andronicus*, *The Taming of the Shrew*, *Venus and Adonis*, *The Rape of Lucrece*.
- (2) Works written between 1594 and the opening of the Globe in 1599: *Two Gentlemen of Verona*, *Love's Labour's Lost*, *Romeo and Juliet*, *Richard II*, *Midsummer Night's Dream*, *King John*, *Merchant of Venice*, *1 Henry IV*, *2 Henry IV*, *Much Ado About Nothing*, *Henry V*, the early sonnets, and *The Lover's Complaint*.
- (3) Works written between 1599 and the acquisition of Blackfriars in 1608: *As You Like It*, *Twelfth Night*, *Hamlet*, *The Merry Wives of Windsor*, *Troilus and Cressida*, *All's Well That Ends Well*, *Measure for Measure*, *Othello*, *King Lear*, *Macbeth*, *Antony and Cleopatra*, *Coriolanus*, *Timon of Athens*, the later sonnets, and *The Phoenix and the Turtle*.
- (4) The last plays, written between 1608 and the burning of the Globe in 1613: *Pericles*, *Cymbeline*, *A Winter's Tale*, *The Tempest*, *Henry VIII*.

**Language.** The phrase 'Shakespeare's language' has come to mean both the state of English

around 1600 and Shakespeare's use of it. Both are topics in the following discussion of orthography, pronunciation and rhyme, syntactic structure, vocabulary and word-formation, linguistic variety, rhetoric, and pragmatics. In it, all the citations are from *Richard II* in the Quarto first edition (Q) of 1597, and comparisons with the Folio (F) of 1623. This concentration of examples from one play makes it easier to follow the passages cited, and gives an idea of the frequency of the features. Though no play embodies the full range of Shakespeare's linguistic ideas and practices, *Richard II* is notably concerned with the powers, limits, and dangers of language.

**Orthography.** The original editions of Shakespeare's works look very different from present-day orthography. They used no apostrophe for possessives; the occasional capitals on common nouns were more frequent in F than Q (for example, *violl* Q, *Vyall* F); and the letters *v* and *u* varied according to position rather than sound: *v* stood for both the *v*- and *u*-sounds when initial, and *u* stood for both when medial. Similarly, *i* stood for both *i* and *j* initially (*John*). Other non-substantive variants included silent final *-e* (*robbes* 1. 3. 173 Q, *robs* F); this *-e* remains in conservative spellings like the surname *Clarke*.

**Pronunciation and rhyme.** The printed page best preserves features of vocabulary and structure; it preserves features of sound worst. Early editions of Shakespeare spelled the vowel in *band* and *bond* (5. 2. 65, 67) indifferently, and made no distinction between the consonants in words like *Murders* (1. 2. 21) and *Murthers* (3. 2. 40). Presumably, the spellings represented indistinguishable pronunciations. Q has *my owne* (1. 1. 133) but *thine owne* (1. 2. 35); where Q has *my honour* (1. 1. 191) and *thy oth* (1. 3. 14), F has *mine honour* and *thine oth*. The changes show that the matter of this historical *-n* before a vowel received editorial attention, but variations within Q indicate that the attention was not uniform. However, *sit* (1. 2. 47) in F differs from *set* in Q because the two words were commonly confused in the late 16c.

A rhyme such as John of Gaunt's *when/againe* (1. 1. 162-3) contrasts with the Duchess of York's *againne/twaine* (5. 3. 131-2), perhaps opportunistically making use of two current pronunciations, both still heard today. But the rhymes *teare* (verb)/*feare* (1. 1. 192-3) and *beare/heere* (5. 5. 117-18) reflect consistent pronunciation in both cases, as does *pierce/rehearse* (5. 3. 125-6) in Q, where F has the spelling *pearce* (from Old French *percer*) and the *-ea-* in *rehearse* looks back to a time when it was pronounced like the *-ea-* in *bear*. So too *happie hauens* (1. 3. 276) is a pun depending on a pronunciation of *heavens* implied by the *-ea-* spelling as in *bear*.

Much of the variation in spelling concerns the long vowels, which the Great Vowel Shift had left uncertain: for *yeeres* (1. 3. 159) in Q, F has *yeares*; but both have *yeeres* in line 171.

The rhyme *compassionate/late* (1. 3. 174-5) shows that the stress in the first word was fuller than at present, as with *loyaltie/lie* (1. 1. 67-8). But lack of stress and vowel reduction are implied in *a Gods name* (2. 1. 251), *Iohn a Gaunt* (1. 3. 76), *a dying* (2. 1. 90), where *a* means respectively 'in', 'of', and 'on'.

**Syntactic structure.** The structure of Shakespeare's Early Modern English is unlike present-day English. It seems familiar, however, because it is often studied, so its older features are overlooked, at least until they begin to cause difficulty. These features are, notably: word order; the polarity of adjectives and verbs; transitivity; subject-verb concord; negation and the use of *do*; relative pronouns and conjunctions; verb inflection; personal pronouns; and strong and weak verbs.

**Word order.** The sentence *My nativie English now I must forgo* (1. 3. 159-60) inverts typical English subject-verb-object word order from SVO to OSV, but is not ambiguous, because *I* is clearly the subject. However, there is structural ambiguity in *The last leaue of thee takes my weeping eie* (1. 2. 74): is *leaue* or *eie* the subject of *takes*? Shakespeare sometimes used the VS(O) order with the subjunctive verb for conditional clauses: *Holde out my horse* (2. 1. 300) means *If my horse holds out*, and *Put we our quarrell* (1. 2. 6) is a hortative order equivalent to *Let us put our quarrel to the will of heauen . . .*

**Polarity.** *It bootes thee not to be compassionate* (1. 3. 174) seems odd in part because *compassionate* now means *showing compassion*; for Shakespeare, it meant *seeking compassion*, and so the sentence translates as 'It won't help you to seek pity'. Similar instances of change in syntactic polarity are *pittifull* = *showing pity* (5. 2. 103), *fall* = *let fall* (3. 4. 104), *remember* (1. 3. 269) = *remind*, and *learne* (4. 1. 120) = *teach*.

**Transitivity.** A related feature is change in transitivity: *inhabit* (4. 1. 143) and *frequent* (5. 3. 6) are intransitive, while *Staies* for 'awaits' (1. 3. 3) and *part* for 'part from' (3. 1. 3) are transitive. The construction *Me thinkes* is impersonal, but Shakespeare could also write *I bethinke me* and *I had thought*.

**Concord.** His management of subject-verb agreement sometimes varied because the subject might be construed as either singular or plural: *this newes, these newes* (3. 4. 82, 100). Hence, *Reproch and dissolution hangeth ouer him* (2. 1. 258) is a singular verb following a double subject conceived of as a single entity.

**Negation and the use of 'do'.** Negatives like *I slewe him not* (1. 1. 133) avoid *do*, while *we do not vnderstand* (5. 3. 122) employs it; both are common in Shakespeare. The same is true of negative imperatives: *Call it not patience* (1. 2. 29), but *doe not so quickly go* (1. 2. 64). Multiple negations that retain negative sense are also common, though the Folio 'corrects' some of these: *Nor neuer looke vpon each others face, / Nor neuer write, regreete, nor reconcile* (1. 3. 185-6) Q becomes *Nor euer looke . . . Nor euer write . . . or reconcile* in F. Like negatives, questions can be formed with or without *do*: *Why dost thou say* (3. 4. 77), *what saist thou* (1. 1. 110).

*Do* also has an abundance of other uses: man- age (*How shal we do for money*: 2. 2. 104); verb substitute (*let vs share thy thoughts as thou dost ours*: 2. 1. 273); idiomatically with *right* or *wrong* (*to do him right*: 2. 3. 137); idiomatically with *have* (*I haue to do with death*: 1. 3. 65); finish (*my life is done*: 1. 1. 183); with emphatic stress (*Yes . . . It doth containe a King*: 3. 3. 24-5).

**Relative pronouns.** Shakespeare will omit a relative pronoun for the subject of the clause where modern English omits it only for the object: *neare the hate of those loue not the King* (2. 2. 127), or use intricate subordination: *Hath causd his death, the which if wrongfully, / Let heauen reuenge* (1. 2. 39-40). He was no stickler for the use of *that* and *which* in restrictive and non-restrictive clauses, respectively: *the hollow crowne / That roundes but this flesh which wals about* (3. 2. 160-1, 167). He also used a variety of subordinating conjunctions: *for* (1. 1. 132) meaning 'as for', *for that* meaning 'because' (1. 1. 129) and 'in order that' (1. 3. 125), *forbecause* (5. 5. 3) and *for why* (5. 1. 46), both meaning 'because'.

**The endings -s and -th.** The third-person singular indicative ending in Shakespeare's verbs could be either -s, as now, or the older -th. No meaning attached to the choice, so one line might include both: *Greefe boundeth where it falls* (1. 2. 58) F. But the forms of *do* and *have* were almost invariably *doth* and *hath*. The subjunctive mood, marked in the third-person singular present by the absence of a -s or -th ending, is often used in place of an auxiliary like *may* or *let*, and sometimes in combination with them: *O set my husbands wronges on Herefords speare, / That it may enter butcher Mowbraies breast: / Or if misfortune misse the first carier, / Be Mowbraies sinnes so heauy in his bosome / That they may breake his foming coursers backe* (1. 2. 47-51).

**Pronouns.** Shakespeare's English included the second-person pronouns *you* or *ye* and *thou*. Historically, they were plural and singular respectively, but *you* had come to be used as a

formal or honorific alternative for the singular. In *Richard II*, some usages conform to this pattern: the Queen calls the gardener *thou* in 3. 4 and he calls her *you* in her presence; after she leaves he changes to a compassionately familiar *thou*. Likewise, the King regularly calls the dispartants, his subjects, *thou* in the singular and *you* in the plural. Generally, they call him the respectful *you*, as Mowbray does at the beginning of his 'protest' speech (1. 3. 154-73); but by the end of the speech he has switched to *thou*. The change could arise from Mowbray's growing anguish, but other alternations between the two forms occur: in 1. 2, John of Gaunt usually calls the Duchess of Gloucester *you* (but *thee*: 1. 2. 57), while she consistently calls him *thou*; in 5. 5, the Groom calls the King *thou*, but the Keeper uses *you*.

Shakespeare's English lacked the possessive *its*; he sometimes used the uninflected *it*, sometimes the historical neuter possessive *his*: *what a Face I haue, | Since it is Bankrupt of his Maiestie* (4. 1. 266-7) F.

*Strong and weak verbs.* Among Shakespeare's weak verbs, the spelling often shows that the suffix *-ed* is not syllabic: *learnt* 1. 3. 159, *casde* 1. 3. 163. The suffix after *t* or *d* is, however, regularly syllabic: *blotted*. Both pronunciations accord with modern practice; unlike it, however, are words like *fostered*, which had three syllables. His strong verbs occasionally take unfamiliar forms in the past: for example, *spake* (5. 2. 12). Some forms of strong past participles are identical with the simple past: *broke* (5. 5. 43-8) F (*broken* 2. 2. 59 Q is extra-metrical, and F has *broke*), *shooke* (4. 1. 163) F, *spoke* (1. 1. 77) Q (*spoken* F). Others are archaic: *holp* (5. 5. 62), *eate* (5. 5. 85), *writ* (4. 1. 275) F.

**Vocabulary and word-formation.** Shakespeare's vocabulary is sometimes estimated at c.20,000 words. For it, he drew on Renaissance technical terms, derivations, compounds, archaisms, polysemy, etymological meanings, and idioms. *Richard II* abounds in technical terms, often words with specialized meanings distinct from their everyday use: in *That knowes no touch to tune the harmonie* (1. 3. 165), *touch* means 'fingering' and *to tune* means 'to play'. Suitably to the subject of the play, many technical terms are from the law or chivalry.

*Conversion.* Shakespeare is noted for verbal conversion such as *grace me no grace, nor vnckle me no vnckle* (2. 3. 86). Other examples include the verbs converted from nouns *refuge* (5. 5. 26), *twaine* (5. 3. 132), *priuiledge* (1. 1. 120), and *dog them at the heeles* (5. 3. 137).

*Derivation.* Shakespeare was also fecund with derivations, words created by the addition of a suffix, often in a new part of speech: the verb

'partialize' (1. 1. 120), from the adjective 'partial', a Shakespeare original as a transitive verb. In addition, every Shakespeare play makes concentrated use of some lexical field. Whereas in *Coriolanus* it is a lexical set centring on 'breath', 'voice', and 'vote', in *Richard II* it is a morphological set centring on privatives beginning with *un-*, like *vnfurnisht wals, | Vnpeopled offices, vntrodden stones* (1. 2. 68-9). Some of these appear nowhere else in Shakespeare, like *vndeafe, vnhappied, and vnkingd*.

*Compounding.* Lines like *My oile-dried lampe, and time bewasted light* (1. 3. 221) show Shakespeare's fondness for compounds: here, compounds formed on past participles. They are most often nouns, like *beggar-feare* (1. 1. 189), or adjectives, like the cluster *Egle-winged pride | Of skie-aspiring and ambitious thoughts, | With riuall-hating enuy* (1. 3. 129-31).

*Polysemy.* Shakespeare often used words in more than one meaning: *defend* (1. 3. 19) means 'protect', but in the previous line it means 'forbid'. His *recreant* (1. 1. 144) meant 'false to religion', but *caitiue recreant* (1. 2. 53) means 'captive coward', since *recreant* there is a figure of speech and means 'false to the religion of chivalry'.

**Linguistic variety.** The Welsh Captain in *Richard II* (2. 4) uses none of the regionalisms of Fluellen in *Henry V*, and lower-class characters like the Groom (5. 5) use none of the vulgarisms of the Carriers in *1 Henry IV*. At the level of dramatic idiolect, the play has no comic overreachers like Dogberry in *Much Ado About Nothing*, Mistress Quickly in *1 Henry IV*, the Gravedigger in *Hamlet*, or Holofernes in *Love's Labour's Lost*. Though the Queen refers to the Gardener's *harsh roudge tong* (3. 4. 74), she seems to mean only the bad news he recounts: his speech is apparently quite standard. At least in this respect, *Richard II* is unlike other Shakespeare history plays such as 1-2 *Henry IV*.

**Rhetoric.** Shakespeare was familiar with paradox and other figures of traditional rhetoric, for example *chiasmus* in *Banisht this fraile sepulchre of our flesh, | As now our flesh is banisht* (1. 3. 196-7); *the last taste of sweetes is sweetest last* (2. 1. 13); *Deposing thee before thou wert possesst, | Which art possesst now to depose thy self* (2. 1. 107-8). The last example also contains *paronomasia*; here, the pun is on *possessed* meaning both *having come into possession* and *unreasonably determined*. Richard comments on Gaunt's onomastic word-play, *Can sicke men play so nicely with their names?* (2. 1. 84), but Gaunt has already juggled *inspire* and *expire* (2. 1. 31-2), and urged his son to *Call it a trauaile that thou takst for pleasure* (1. 3. 262), playing on *travel* and *travail*. Even in prison, Richard

replies to the salutation *Haile roiall Prince with Thankes noble peare: / The cheapest of vs is ten grotes too deare* (5. 5. 67-8), the royal being a coin worth ten groats more than a noble.

*Imagery.* Shakespeare's reputation has always rested more securely on another rhetorical figure: his images. Some of the images are submersed in a passing line: in *How high a pitch his resolution soares* (1. 1. 109), *pitch* is a technical term for the peak of a falcon's ascent before it plunges on its prey, so it forms an image with *soares* (and anticipates *Egle-winged pride* in 1. 3. 129). The three images of Mowbray's protest speech are more extended and more explicit: language is like a stringed musical instrument (1. 3. 162-5); the tongue is like a prisoner within the mouth (1. 3. 166-9); the breath of language is like the breath of life (1. 3. 172-3). The images form an increasingly ominous sequence from courtly entertainment to liberty to life. The most extended images are symbolic action like that of the literal gardeners, whose dialogue compares the commonwealth to a garden grown wild. When the Queen demands *Thou old Adams likeness set to dresse this garden, / . . . / What Eue? what serpent hath suggested thee / To make a second fall of cursed man?* (3. 4. 73-6), her epithets revive John of Gaunt's proleptic comparison of England to *This other Eden* (2. 1. 42).

*Allusion.* Traditional rhetoric encouraged the invocation of authorities, in *Richard II* not the historical sources but other traditions that gave the historical action its meaning. Shakespeare made frequent use of proverbs: *Forget, forgiue* (1. 1. 156); *truth hath a quiet brest* (1. 3. 96); *There is no vertue like necessity* (1. 3. 278). But the greatest authority was the Bible: in 5. 5. 14-17, Richard deftly concords Matthew 19: 14 and 19: 24:

set the word it selfe  
Against the word, as thus: Come little ones, & then  
again  
It is as hard to come, as for a Cammell  
To threed the posterne of a small needles eie . . .

as he has already more daringly merged Matthew 26: 20-1 with Ecclesiastes 7: 28 in 4. 1. 169-71 F, in:

Did they not sometime cry, All hayle to me?  
So *Iudas* did to Christ: but he in twelue,  
Found truth in all, but one, I, in twelue thousand,  
none.

*Eloquence.* Richard's fondness for such 'fine' language is often noted. He is also inclined to set his thoughts out in paratactic lists such as the seven parallel objects of 'Ile give', all beginning 'My':

Ile giue my Iewels for a sett of Beades,  
My gorgeous Pallace, for a Hermitage,  
My gay Apparrell, for an Almes-mans Gowne,

My figur'd Goblets, for a Dish of Wood,  
My Scepter, for a Palmers walking Staffe,  
My Subjectts, for a payre of carued Saints,  
And my large Kingdome, for a little Graue

(3. 3. 147-53)

Richard also composes poised hypotaxis, such as his verdict:

For that our kingdomes earth should not be soild  
With that deare blood which it hath fostered:  
And for we eies do hate the dire aspect  
Of ciuill wounds plowd vp with neighbours swords,  
And for we thinke the Egle-winged pride  
Of skie-aspiring and ambitious thoughts,  
With riual-hating enuy set on you  
To wake our peace, which in our Countries cradle  
Draw the sweet infant breath of gentle sleepe,  
Which so rouzde vp with boistrous vtunde drummes,  
With harsh resounding trumpets dreadfull bray,  
And grating shocke of harsh resounding armes,  
Might from our quiet confines fright faire Peace,  
And make vs wade euen in our kinreds bloud;  
Therefore we banish you our territories . . .

(1. 3. 125-139)

If his eloquence often replaces action, it is nonetheless magisterial. But the play also undercuts the power of eloquence: following the Cardinal's eloquent speech, Northumberland comments *Well haue you argued sir, and for your paines, / Of Capitall treason, we arrest you heere* (4. 1. 150-1).

*Pragmatics.* Richard's language enforces his kingship: *How long a time lies in one little word. / Foure lagging winters and foure wanton springes / End in a word, such is the breath of Kinges* (1. 3. 213-15). Hence, his speeches are full of performatives: *The hoplesse word of neuer to returne, / Breathe I against thee* (1. 3. 152-3). But Bolingbroke too (*With a foule traitors name stuffe I thy throte*: 1. 1. 44) and Mowbray (*I do defie him, and I spit at him*: 1. 1. 60) employ performatives, already signalling their traverse of the royal prerogative in the play's first scene. Richard interrupts Bolingbroke's procession to instruct his Queen *Tell thou the lamentable tale of me* (5. 1. 44) in future times, again transmuting physical action into speech. Richard's optimism about language, even in this moment of downfall, conflicts with the belief of others that language is at odds with both action and intention: rather than let his tongue recant, Bolingbroke would spit it in Mowbray's face, disabling his language and committing himself to incontrovertible action (1. 1. 190-3); the Duchess of York contradicts her garrulous husband because *His words come from his mouth, ours from our brest* (5. 3. 100). Shakespeare records lapses of language in the characters most involved in it: the Duchess of Gloucester, she of the great speech on the sons of Edward, falters a few lines later: *I shall remember more: Bid him, ah what? / With all good speede at Plashie visite*

me (1. 2. 65-6); and York, whose mastery of language is his refuge from his inability to act, stumbles: *Come sister, cousin I would say, pray pardon me* (2. 2. 105).

**Language and nation.** The exchange of chivalric formulas and the reliance on legal terms in Act I witness the role of language as a civilized bond in *Richard II*. In this sense, language is like coin, the customary and authorized medium of exchange within a nation, as Richard acknowledges: *if my word be Sterling yet in England* (4. 1. 264) F, and as do lines like to what purpose *doest thou hoard thy words and the tongue's office should be prodigall* (1. 3. 253, 256). John of Gaunt's use of the comparison, however, delimits the currency of coin and language: *Thy word is currant with him for my death, / But dead, thy kingdome cannot buy my breath* (1. 3. 231-2). As Mowbray's protest speech shows, language equates not only with nationality but with life, for both take form in breath: abroad he will be without his native language, hence as good as dead. The report of Gaunt's death recalls Mowbray's imagery of language: *His tongue is now a stringlesse instrument, / Words, life, and al, old Lancaster hath spent* (2. 1. 149-50), as well as Gaunt's own: *Where words are scarce they are seldome spent in vaine* (2. 1. 7). The alterity of foreign languages reverses stable meanings. The Duchess of York begs Bolingbroke to *Say Pardon* for her son. But her husband, arguing against her, urges him to *Speake it in French, King say, Pardonne moy* (5. 3. 117), since the foreign phrase is a refusal. In the dangerous space that Shakespeare marks between the English *pardon* and the French lies the difference between their son's life and death, the empire of language. See index. **SHAW, George Bernard** [1856-1950]. Irish dramatist and critic. Born in Dublin. Educated at Wesley Connexional School. He moved to London in 1876, where he wrote five novels that had little success, was a music, art, and drama critic, and an early member of the Fabian Society. He found the contemporary English theatre trivial and remote from serious issues, and admired the Norwegian dramatist Henrik Ibsen's treatment of social problems; his first play, *Widowers' Houses* (1893), was an indictment of the profits made by slum landlords. Shaw began a long career as a playwright, controversial about specific issues and challenging the basic assumptions of his contemporaries, which sometimes brought conflict with theatrical censorship. Although polemical, his plays established him as the leading dramatist of his time by their humour, lively dialogue, and strong characterization. Shaw believed that, in order to survive, the human race must become more rational and better organized. He developed a philosophy of Creative Evolution, requiring cooperation with the Life Force, and against the mechanistic theory of Darwin he urged the power of human choice. His ideas on this subject appear in *Man and Superman* (1903), which emphasizes his belief in the creative strength of women, and *Back to Methuselah* (1921). Other plays are *Caesar and Cleopatra* (1898, the film 1945), *The Devil's Disciple* (1905), *Major Barbara* (1905, the film 1941), *Pygmalion* (1913, the film 1938), *Heartbreak House* (1919), *Saint Joan* (1923, the film 1956), and *The Apple Cart* (1929).

**Shaw and language.** In *Pygmalion*, the phonetician Henry Higgins teaches a Cockney girl to speak with an upper-class accent and adopt some social graces, then introduces her to smart society. Despite dramatic exaggeration, the play makes the point that in the stratified society of England powerful judgements of worth and suitability attached to accent and usage. Shaw's knowledge of phonetics and views on literacy led him to demand a rational system of spelling which would follow the sounds of English and reduce time wasted by traditional orthography. Having campaigned for spelling reform, he left a bequest for the establishment of a suitable new

alphabet reflecting 'pronunciation to resemble that recorded of His Majesty our late King George V and sometimes described as Northern English'. A system was devised into which the play *Androcles and the Lion* (1912) was transcribed (published in 1962), but the project has had no further success.

**Innovations.** In his own work, Shaw adopted three innovations: (1) Some simplified spellings of the North American type, such as *cigaret*, *program*, *vigor*. (2) Omission of the apostrophe in contractions, as in *didnt*. (3) Spacing between letters for emphasis (*mu s t*). He complained that dialect speech could not be shown in writing without a phonetic system, but nonetheless used non-standard spelling for the purpose, as in: 'Aw know. Me an maw few shillins is not good enaff for you. Youre an earl's grandorter, you are. Nathink less than a anderd pahnd for you' (from *Major Barbara*) [*maw* my, *grandorter* granddaughter, *nathink* nothing, *anderd pahnd* hundred pounds]. Shaw was impatient of insistence on formal grammar and believed that a form of Pidgin English could become a world medium of communication. See index. [BIOGRAPHY, EUROPE, LITERATURE, STYLE]. R.C.

**SHELTA**, also **Shelter**, **Shelteroch**, **Sheldru** [c.1880s: origin uncertain]. An argot, derived from Irish Gaelic, used by Travelling People (*tinkers*) in Ireland and Britain. Many of its words are disguised through such techniques as back slang (such as *gop* kiss, from Irish *póg*) and altering the initial sounds of words (as in *gather* father, from Irish *athair*). The linguist Ian Hancock has described it ('Shelta and Polari', in P. Trudgill (ed.), *Language in the British Isles*, 1984) as having 'all the characteristics of an ethnic language'. The name appears not now to be used by its speakers, who call it *Gammon*, *Tarri*, or simply *the Cant* (perhaps from Irish *caint* speech: but compare CANT). It has also been referred to as *Bog Latin*, *Tinkers' Cant*, and *the Ould Thing*. There are two divisions, *Gaelic Shelta* (in Ireland and Scotland) and *English Shelta* (in England and Wales); although the influence of English in the latter is increasing, the varieties share a common core of some 2,000–3,000 Irish-derived words. *American Travellers' Cant* was originally also Shelta but is now largely Anglicized. BrE slang may have absorbed from Shelta such words as *gammy* lame (from *gyamyath*, Irish *cam*) and *monicker* name (from *munnik*, Irish *ainm*). English Shelta uses Irish-derived words in English syntax (as in *I korbed him so hard I broke his pi* I hit him so hard I broke his head) with Irish syntactic influence shown in some constructions (such as *Have you the feen's dorah*

*nyocked?* Did you take the man's bread?). See CANT, IRISH. [EUROPE, NAME, VARIETY]. T.MCA.

**SHERIDAN, Richard Brinsley** [1751–1816]. Anglo-Irish dramatist. Born in Dublin, son of Thomas Sheridan the actor and Frances Sheridan the novelist. Educated at Harrow in England. His first play *The Rivals* (1775) was a success at Covent Garden in London, and was followed in the same year by *St Patrick's Day* and an operetta *The Duenna*. In 1776, he became manager of Drury Lane theatre, and in 1777 wrote *A Trip to Scarborough* and his most popular play *The School for Scandal*. His dialogue avoided the stilted language, sentiment, and artificiality of much 18c drama. He satirized contemporary pretensions and intrigues; like Fielding, he extolled the worth of honesty and generosity above an outward piety that concealed hypocrisy. His observation was acute rather than wide-ranging and he recorded mainly the tones and usage of fashionable society. The term *malapropism* derives from his character Mrs Malaprop in *The Rivals*, who confused *pine-apple* with *pinnacle* and *allegory* with *alligator*. Sheridan became sole proprietor of Drury Lane in 1779 and wrote *The Critic*, but was becoming tired of the theatre and sought a career in politics. He was elected MP for Stafford in 1780, gained a reputation as a parliamentary orator, became a minister of the Crown, and gained the friendship of the Prince Regent and leading politicians. Drury Lane was found unsafe and demolished in 1792; the rebuilt theatre was destroyed by fire in 1809. Sheridan lost his parliamentary seat, was arrested for debt in 1813, and died in poverty. See index. [BIOGRAPHY, EUROPE, LITERATURE]. R.C.

**SHERIDAN, Thomas** [1719–88]. Anglo-Irish actor and elocutionist. Probably born in Dublin. Educated at Westminster School in London and Trinity College, Dublin. He acted in Dublin and at Drury Lane in London before becoming manager of the Dublin Theatre Royal. After a period of moving between the Dublin and London stages he settled in England as teacher of elocution. He travelled the country lecturing and became a respected member of London literary society. Sheridan's publications include *A Course of Lectures in Elocution* (1763) and *A Plan of Education for the Young Nobility and Gentry of Great Britain* (1769). In the latter, he describes his aim 'to establish a uniformity of pronunciation . . . in all quarters of the globe, where English shall be taught by this method, and to remain immutably so, whilst that language shall be spoken in any part of the earth'. His most ambitious work was his *General Dictionary of the English Language* in two volumes

(1780), in which he mainly followed Johnson's orthography while adding what he considered the correct pronunciation of each word. In the preface, he wrote of Queen Anne's reign as the golden age of spoken English, before the Hanoverian succession brought excessive French influence. He feared the decline of English into 'a mere jargon, which every one may pronounce as he pleases'. Sheridan was a leading exponent of 18c prescriptivism in pronunciation, believing in an ideal and correct state of usage to be defended vigorously. His writings preserve information about the fashionable speech of the period. In *Lectures on Elocution* he wrote: 'Spoken language is the gift of God, written the invention of men.' See index. [BIOGRAPHY, EUROPE, REFERENCE, SPEECH]. R.C.

**SHETLAND**, also, especially locally but now less commonly, **Zetland**. Sometimes the **Shetlands** (short for *the Shetland Islands*); *Shetland* is preferred by Shetlanders. A group of islands off the northern coast of Scotland, constituting with Orkney *the Northern Isles*. Of the two, Shetland is further from the mainland. Capital: Lerwick. Population: 27,277 (1981). See NORN, NORTHERN ISLES, ORCADIAN, ORKNEY, ORKNEY AND SHETLAND DIALECTS, SCOTLAND, SHETLANDIC. [EUROPE, NAME]. T.MCA.

**SHETLANDIC**, also **Zetlandic** [By analogy with *Icelandic*]. Of or characteristic of Shetland. The term, in general use in Shetland since at least the mid-19c, has since c.1950 been used to mean *Shetland dialect*: 'the present participle in Shetlandic' (John J. Graham, *The Shetland Dictionary*, Stornoway: Thule, 1979). See ORKNEY AND SHETLAND DIALECTS. [EUROPE, NAME]. A.J.A.

**SHETLAND NORN**. See NORN.

**SHIBBOLETH** [14c: from Hebrew *shibbōleth*, meaning uncertain, perhaps either 'stream in flood' or 'ear of corn']. The English use originates in the Bible, in the Book of Judges 12: 5-6, where Jephthah and the Gileadites defeat the Ephraimites at the River Jordan: 'And the Gileadites took the passages of Jordan before the Ephraimites: and it was so that when those Ephraimites which were escaped said, Let me go over, that the men of Gilead said vnto him, Art thou an Ephraimite? If he said, Nay: Then said they vnto him, Say now, Shibboleth: and he said, Sibboleth: for hee could not frame to pronounce it right. Then they tooke him, and slewe him at the passages of Iordan: and they fell at that time of the Ephraimites, fourtie & two thousand' (Authorized Version, 1611)]. (1) A peculiarity of pronunciation that indicates someone's regional and/or social origins, such

as: *toity-toid* thirty-third, serving to identify someone from Brooklyn; *firty fahsn* thirty thousand, identifying a Cockney. (2) A style, expression, custom, or mannerism that identifies an enemy or someone disliked because of background, community, occupation, etc.: for example, extreme political slogans referred to as *Fascist/Commie shibboleths*. Usually, the disapproval runs one way, higher social Gileadites detecting and rejecting lower social Ephraimites, but the reverse is also possible, as when in Britain, in assessing the vowel sounds in *can't dance*, speakers who say 'cahn't dahnce' are often dismissed as toffs and snobs. Occasionally, the term is neutral (when referring to a favourite expression, piece of advice, or slogan, such as *Er, good, good!* or *The early bird catches the worm, y'know*) or positive (when it is a device through which members of a group can identify each other). See MARKED AND UNMARKED TERMS. Compare STEREOTYPE. [SPEECH, STYLE]. T.MCA.

**SHORT**. See LONG AND SHORT.

**SHORTHAND** [17c]. Also **stenography** [17c: from Greek *stenós* narrow, *-graphy* writing]. A method of writing rapidly by substituting special characters, symbols, and abbreviations for letters, words, or phrases, and used for recording the proceedings of legislatures and testimony in courts of law, dictation for business correspondence, and note-taking by journalists and others. Cicero's orations, Luther's sermons, and Shakespeare's plays were all preserved by means of shorthand; Samuel Pepys used it to keep his diary, Charles Dickens used it as a reporter in the London law courts and Parliament, and Bernard Shaw wrote his plays in it. There are two basic systems of shorthand: *orthographic*, based on standard letters, and *phonetic*, seeking to represent speech sounds directly. Also involved are the use of arbitrary symbols and abbreviations to facilitate speed, comparable to the use of & for *and* and *etc.* for *etcetera* in longhand.

The earliest attested shorthand appears to date from 63 BC. It was the system of *notae Tironianae* (Tironian notes) devised by Marcus Tullius Tiro, a learned freedman and friend of the lawyer and orator Cicero, and was used to record speeches in the Roman Senate. Tiro's system, which was cursive and orthographic, was used by Julius Caesar, taught in Roman schools, and continued in use for c.1,000 years. It influenced the first modern system, developed in England by Timothy Bright in his *Characterie: an Arte of Shorte, Swifte, and Secrete Writing by Character* (1588). Over the next 50 years some 13 orthographic systems were published, the best-known being Thomas Shelton's *Short Writing* (1626), which Pepys used. The Revd Phillip

Gibbs (1736) was the first to favour a phonetic system. The Industrial Revolution gave a strong boost to the quest for ever more efficient systems that were easy to learn, both in Britain and on the Continent.

In 1837, in England, Isaac Pitman launched his phonetic system, *Stenographic Sound-Hand*, which classified sounds in a scientific manner and introduced abbreviations for the sake of speed. Made up of 25 single consonants, 24 double consonants, and 16 vowel sounds, its principles include the use of the shortest signs for the shortest sounds, single strokes for single consonants, simple geometrical forms, and pairing consonants (one written more lightly, as for *f*, the other more heavily, as for *v*). Revised versions of this system are widely used throughout the English-speaking world and are predominant in Australia, New Zealand, and India. In 1888, in Scotland, the Irish-born John Robert Gregg published his *Light-Line Phonography*, a system that he took to the US where it became the dominant medium, although Pitman's Shorthand is widely used there and is predominant in Canada. Gregg Shorthand is also phonetic, but the characters are based on elements of ordinary longhand, vowels are shown by circles and hooks, and curving motions are used throughout to ease movement. It also employs abbreviations, blended consonants, and affix forms to enable the writer to gain speed. Systems developed in the 20c use longhand symbols for most or all letters, and include: *Bain's Typed Shorthand* (1917), *Speedwriting* (1923, 1951), *HySpeed Longhand* (1932), *Abbreviatix* (1945), *Quickhand* (1953), *Stenoscript* (1955), and *Carter Briefhand* (1957). The advantages of orthographic systems are relative ease of learning and transcription, the disadvantage loss of speed; the advantages of phonetic systems are speed and ease of transcription, the disadvantage difficulty of learning. See ACRONYM, DICTATION, HAND, HANDWRITING, LONGHAND, PITMAN (I.), VOCABULARY CONTROL. [WRITING]. T.MCA.

**SHORT STORY.** A fictional narrative brief enough to be transmitted at a single hearing or reading. The form is ancient and examples of its popularity and success include *Aesop's Fables*, *The Arabian Nights*, and the medieval *fabliaux*, the stories in Boccaccio's *Decameron*, and Chaucer's *Canterbury Tales*. The literary short story dates from the 19c and was fostered by the rise of the novel and the growth of periodicals for leisure reading. It is found in all modern literary cultures and may range from some 500 words in a magazine to around 10,000 words; a longer story of less than novel length is a *novella*. Edgar Allan Poe defined it as 'a short prose narrative requiring from a half-hour to one or two hours

in its perusal' (review of *Twice-Told Tales* by Nathaniel Hawthorne, 1842). Despite its brevity, it shares with the novel such features as plot, characterization, and narrative point of view. It must, however, be succinct in presenting its basic intention: the plot cannot be elaborate, it is likely to begin near its climax, and is unlikely to continue long after the climax has been reached. The few characters are presented through dialogue and action rather than description and comment. Within these constraints, the interest may be primarily in the incidents (as with Poe's stories), in a surprise ending (as with Ambrose Bierce and 'O. Henry', the pen name of W. S. Porter), in the presentation of character (as by Anton Chekhov), or in the symbiosis of character and setting (as in James Joyce's *Dubliners*). Broadcasting has revived oral narration and television has encouraged dramatization (as with the short stories of Roald Dahl). The attraction of the form for readers is partly practical, as filling vacant time in waiting or travelling; there is also the satisfaction of encountering language carefully shaped to a purpose and giving a brief experience of an often unfamiliar aspect of life. See DETECTIVE STORY, NARRATIVE, NOVEL, STORY. [LITERATURE]. R.C.

**SHWA.** See SCHWA.

**SIBILANT** [17c: from Latin *sibilans/sibilantis* hissing]. In phonetics: (1) A consonant characterized by a hissing sound, such as the /s/ in *hiss* and the /z/ in *his*. (2) Relating to such a consonant: *sibilant sounds*. See CONSONANT. [SPEECH]. T.MCA.

**SIC.** See NOTES AND REFERENCES.

**SIDEBAR.** See LAYOUT.

**SIDNEY, (Sir) Philip** [1544–86]. English courtier, scholar, and author. In his *Apologie for Poetry* (1583?), Sidney held English the better for having a mixed vocabulary and simple grammar, and hence 'for the vttering sweetly and properly the conceits of the minde, which is the end of speech, that hath it equally with any other tongue in the world; and is particularly happy in compositions of two or three words together, neere the Greeke, far beyond the Latine; which is one of the greatest beauties can be in a language'. He opposed literary affectations like Spenser's archaisms and far-fetched vocabulary in the guise of eloquence. Among his many other accomplishments, his contemporaries praised the contributions of his style to literary English: Thomas Nashe said that Sidney was 'the first (in our language) . . . that repurified Poetrie from Arts pedantisme, and that instructed it to speake

courtly'; Michael Drayton believed that his prose proved 'That plenteous *English* hand in hand might goe / With Greeke and Latine'; and Francis Meres claimed that English was 'gorgeouslie inuested in rare ornaments and resplendent abilitiments by sir Philip Sidney'. See index. [BIOGRAPHY, EUROPE, HISTORY]. W.F.B.

**SIERRA LEONE.** Officially *Republic of Sierra Leone*. A country of West Africa and member of the Commonwealth. Capital: Freetown. Currency: the leone (100 cents). Population: 3.95m (1988), 5.4m (projection for 2000). Ethnicity: 34% Mende; the remainder including Temne, Kono, Fulani, Bullom, Koranko, Limba, Loko, Kissi, and Krios. Religions: 70% traditional, 25% Muslim, 5% Christian. Languages: English (official); Krio (an English-based creole), Mende, and Temne widely spoken. Education: primary 58%, secondary 17%, tertiary 1%, literacy 30%. The first Europeans to visit the area were Portuguese navigators and British slavers. In the 1780s, British philanthropists bought land from local chiefs to establish settlements for freed slaves, whence the name *Freetown*. In 1808, the coastal settlements became a British colony, and in 1896 the hinterland became a protectorate. Sierra Leone became independent in 1961 and a republic in 1971. The English of Sierra Leone is a variety of West African English; it is distinct from Krio, but the two shade into each other and into vernacular usage. English is the language of all education, all newspapers and magazines, 95% of television and cinema, and the medium for documenting local history and culture. It has such a high status that 'using an African language at a wedding reception or even a private party is unheard of, because it is considered a debasement of the value of the occasion' (Joe Pemagbi, 'Still a Deficient Language?—The New English of Sierra Leone', *English Today* 17, Jan. 1989). Its distinctive vocabulary includes: (1) Words derived from local languages: *agidi* a paste made from fermented cornflour, *bondo* a secret society for women, *fufu* grated and fermented cassava cooked into a paste and eaten with soup or sauce, *woreh* a cattle ranch. (2) Extensions of sense: *apprentice* a young man who loads and unloads vehicles, *bluff* to be elegantly dressed, to have a neat appearance ('She's bluffing today'), *cookery* cheap food eaten outside the home, *foolish* to make (someone) appear stupid ('The teacher was foolished'), *woman damage* money paid to a husband by another man as compensation for having a sexual relationship with his wife. See AFRICAN ENGLISH, ENGLISH, KRIO, LIBERIA, WEST AFRICAN ENGLISH. [AFRICA, NAME, VARIETY]. T.MCA.

**SIGN** [12c: noun use from Old French *signe*, Latin *signum* mark, sign, signal, image; verb use from *signare/signatum* to mark with a sign]. (1) Something that conveys meaning, such as an object, token, mark, image, movement, gesture, sound, event, pattern, and the like. Signs may be directly representational (as when a drawing of a hand points in the direction to be taken) or symbolic (as when a cross denotes Christianity and not the Crucifixion alone), but are often entirely arbitrary (such as letters standing for speech sounds, or in mathematics a *plus sign* and a *minus sign*). (2) A notice or other object that carries a name, etc. (as with a *shop sign* BrE, *store sign* AmE), names and directions (as with a *road sign*), a warning (as with a board marked *Danger*), etc. (3) Various, by extension, a trace, symptom, omen, etc. (4) Verb senses include: to add one's signature to a document; to communicate by means of a sign or signs (*He signed that he wanted to leave*); to convey a message in sign language (*to sign the word 'friend'*). If one thing *signifies* another, it serves as a sign for it: for example, the symbol + signifying 'plus' in arithmetic. The act of signifying is *signification*; a term that is often used synonymously with 'meaning' and 'sense', and occurs in the discussions of students of semantics and semiotics. Compare SIGNAL, SIGNATURE, SYMBOL. See LINGUISTIC SIGN, SEMANTICS, SEMIOTICS, SIGN LANGUAGE. [LANGUAGE]. T.MCA.

**SIGNAL** [14c: from Medieval Latin *signale*, from Latin *signalis* of a sign]. (1) An object or action (often one of a set or series) intended to show, direct, warn, etc., such as a *distress signal*, indicating that people are in danger, a *hand signal*, such as raising one arm or waving both arms, a *traffic signal*, indicating when road-users must stop or go. (2) An electrical quantity or effect, such as a current, that can be varied to convey information: for example, in telephoning and when computers store data. (3) To communicate by means of signals, as with the flags used in sending *semaphore* messages (messages by means of handheld flags). See MESSAGE, SIGN, SYMBOL. [LANGUAGE]. T.MCA.

**SIGNATURE** [16c: from Latin *signatura* something marked]. (1) A name or mark placed on a surface, to show approval, agreement, authorization, source, etc.: *putting one's signature to a contract*; *an illegible signature on a letter*. (2) A feature or features, such as a musical motif, especially the *signature tune* of a group or a series on radio or television, or in biology and medicine a pattern of characteristics marking a formation or disorder. (3) Also *quire signature*. A mark (usually letters and numbers), with which a quire of pages has been signed, usually at the foot of

the opening recto, to guide a binder in folding sheets and putting them in the right order. The signing is now often along the outer fold, which is hidden in the binding of the book. (4) Also *section*. A leaf or a quire so marked and folded for binding to form a book or periodical. (5) A booklet made from the first section of a large book, such as a dictionary or encyclopedia, as a specimen for promotional purposes. See BOOK, MARK. [TECHNOLOGY]. W.W.B.

**SIGN ENGLISH, SIGNED ENGLISH.** See SIGN LANGUAGE.

**SIGN LANGUAGE** [1840s]. (1) A means of communication using gestures, usually between speakers of different languages: *Plains Indian sign language*. (2) Also *sign*. A system of manual communication used by the deaf. It is widely believed that such sign languages consist of instinctive gestures that picture the world and are understood no matter which part of the world a signer comes from. This is not so: the signs are conventional movements that represent a range of meanings similar to those expressed by speech (including abstract notions), and differing widely between communities. There are two main types: *concept-based systems* used as natural languages; *language-based systems* often used when teaching deaf children to communicate. There are rules governing the way signs are formed and how they are sequenced, and people have to learn them, either as children (such as from deaf parents) or as adults (such as when working with the deaf). There are many thousands of signs in the leading sign languages.

When a sign language becomes widely used, it develops varieties similar to those in spoken language. Several 'mixed' varieties exist, where people use signs that show the influence of the speech of the community to which the signer belongs. Not only is it impossible for French and English signers to understand each other (without one person learning the other's sign), but there is little mutual comprehension between signers of *American Sign Language* (short forms *Ameslan*, *ASL*) and *British Sign Language* (short form *BSL*), because the sign vocabulary is different. However, both sign languages can be traced to the early 19c work of two educators of the deaf, Thomas Gallaudet in the US and Laurent Clerc in France. The signs express a range of meanings and nuances comparable to those expressed by spoken or written language. For example, time relationships can be expressed by dividing the space in front of the body into zones, such as further forward for future time and further back for past time. Personal pronouns can be distinguished using different spatial areas: *you* is front-centre and various

third-person forms are signed to the right and left. Use is made of repeated signs to convey such notions as plurality, degree, or emphasis. These signs are used simultaneously with other movements, such as facial expressions, eye movements, and shifts of the body: for example, questions can be signalled by a facial expression, such as raised eyebrows and a backwards head tilt. Fluent signing (between one and two signs per second) produces a conversational rate comparable to that of speech.

Sign languages within the community of English have been devised at various times to bring the signer into a close relationship with spoken or written English. These include: (1) *Finger spelling* (dating at least from the 19c), in which each letter of the alphabet has its own sign, using two hands in the British version and one hand in the American version. (2) *Cued Speech* (1966), a system of hand cues used alongside lip movements to draw attention to the phonemic contrasts in speech. (3) More complex systems that aim to reflect features of English grammar, including *Signed English* or *Sign English* (1966), *Seeing Essential English* (1969), *Manual English* (1972). See DUMMY, MEDIUM, MIME, MUMMY. [LANGUAGE]. D.C.

**SILENT FILM/MOVIE.** See MIME, MOTION PICTURE.

**SILENT LETTER.** A letter that is not pronounced, such as the *p* and *l* in *psalm*. With the exception of *f*, *j*, *q*, *r*, *v*, all consonant letters in English have no sound value in certain environments: *b* in *numb*, *c* in *scythe*, *d* in *handsome*, *g* in *foreign*, *h* in *honest*, *k* in *knee*, *l* in *talk*, *m* in *mnemonic*, *n* in *damn*, *p* in *psychology*, *s* in *island*, *t* in *hutch*, *w* in *wrong*, *x* in *prix*, *y* in *key*, and *z* in *laissez-faire*. See ALPHABET, B, D, E, G, H, K, L, M, N, P, R, S, SPELLING, SPELLING REFORM, T, W, X. [WRITING]. C.U.

**SILENT READING.** See READING.

**SILENT STRESS.** See RHYTHM.

**SILENT WAY, The.** See ELT, LANGUAGE TEACHING.

**SIMILE** [14c: from Latin *simile*, neuter of *similis* like]. A figure of speech, in which a more or less fanciful or unrealistic comparison is made, using

like or as. *Some dogs are like wolves* is a prosaic or realistic comparison and therefore not a simile, but *The Assyrian came down like the wolf on the fold* (Byron) is a simile because the savagery is wolf-like, not the Assyrian, and neither savagery nor the Assyrian is physically like a wolf. Everyday usage is rich in similes, many of them idiomatic: (1) *With like: spread like wildfire, sell like hot cakes, run like the wind; like a bull in a china shop* (said of a clumsy, violent person), *like a fish out of water* (said of a person uneasy in an unfamiliar situation). (2) *With as . . . as: as thick as thieves* (of people cooperating closely), *as like as two peas* (of people or things virtually identical in looks), *as mad as a hatter* (of someone considered crazy), *as strong as an ox* (of someone very strong).

Most similes are brief, but *extended similes* take up many lines or sentences. The relationship between simile and *metaphor* is close, metaphor often being defined as condensed simile, that is, someone who *runs like lightning* can be called a *lightning runner*. Sometimes, simile and metaphor blend so well that the join is hard to find, as in: 'And hence one master-passion in the breast, / Like Aaron's serpent, swallows up the rest' (Pope, *Essay on Man*, 1732-4). A passage beginning with similes can turn into an extended metaphor, as in these verses of John Donne ('A Valediction: Forbidding Mourning', 1633; italics added):

Our two souls, therefore, which are one,  
Though I must go, endure not yet  
A breach, but an expansion,  
*Like gold to airy thinness beat.*

If they be two, they are two so  
*As stiff twin compasses are two;*  
Thy soul, the fixed foot, makes no show  
To move, but doth, if th'other do.

And though it in the centre sit,  
Yet when the other far doth roam,  
It leans and hearkens after it,  
And grows erect as that comes home.

Such wilt thou be to me, who must  
Like th'other foot obliquely run;  
Thy firmness makes my circle just,  
And makes me end where I begun.

Similes can draw in complex ways on immediate circumstance: 'Like light from a collapsing star, exhausted by the struggle against gravity, the thoughts of Stephen Hawking reach us as if from a vast distance, a quantum at a time. Unable to speak, paralysed by a progressive, incurable disease, the 46-year-old British physicist communicates with the world by a barely perceptible twitch of his fingers, generating one computer-synthesized word approximately every six seconds' (Jerry Adler, 'Reading God's Mind', *Newsweek*, 13 June 1988). See FIGURATIVE

LANGUAGE/USAGE, HOMERIC SIMILE, IMAGE, METAPHOR, PARABLE. [STYLE]. T.MCA.

**SIMPLE FUTURE.** See FUTURE.

**SIMPLE PAST.** See PAST.

**SIMPLE PRESENT.** See PRESENT.

**SIMPLE SENTENCE.** A sentence that consists of one main clause and does not contain a coordinate clause or a subordinate clause: *The storm blew down several of my trees.* See SENTENCE. [GRAMMAR]. S.G.

**SIMPLE WORD.** See WORD-FORMATION.

**SIMPLEX.** See WORD-FORMATION.

**SIMPLIFIED READER.** See READER.

**SIMPLIFIED SPELLING SOCIETY,** short form SSS. An association founded in Britain in 1908 with the aim of bringing about 'a reform of the spelling of English in the interests of ease of learning and economy of writing'. Its presidents have been predominantly philologists and linguists: W. W. Skeat (1908-11), Gilbert Murray (1911-46), Daniel Jones (1946-68), and Donald Scragg (from 1988). Others were the publisher and Member of Parliament Sir James Pitman (1968-72) and the psychologist John Downing (1972-87). Its officers have included the House of Commons Speaker Horace King, Archbishop William Temple, H. G. Wells, the industrialist Sir George Hunter, and the phoneticians David Abercrombie and A. C. Gimson.

**A phonetic orthography.** Between about 1915 and 1924, the SSS issued reading books in a phonetic orthography for learners in schools, such as *Nerseri Rymz and Simpel Poënz: A Ferst Reeder in Simplifyd Speling*. Considerable success was claimed for them as a means of teaching literacy quickly and effectively. In 1923, the SSS sought to persuade the Board of Education to set up a committee to examine the possibilities of reform, but without success. A second approach was made in 1933, supported by over 900 university figures from vice-chancellors to lecturers, 250 MPs, 20 bishops, and ten teachers' organizations, but it also met with a refusal to entertain the question.

**New Spelling.** This failure led the SSS to concentrate on preparing a fully researched and revised version of the system it had previously advocated, a task undertaken by William Archer and Walter Ripman. The result was issued as *New Spelling*, a final edition (further revised by Daniel Jones and Harold Orton) appearing in

1948. Subsequent work was financed partly by a 1937 legacy from Sir George Hunter. Campaigning was renewed in Parliament by Mont Follick, an MP who twice promoted a Private Member's Bill (1949, 1953), the latter receiving a second reading and passing the committee stage. Official opposition, however, led to a compromise in which the government undertook no more than to facilitate research into the use of simplified spelling in schools. By way of research, the U. of London Institute of Education, the National Foundation for Educational Research, and the Association of Education Committees were, at first tentatively, concerned with school experiments in the early 1950s.

**The initial teaching alphabet.** By the end of the 1950s Sir James Pitman had evolved the *Initial Teaching Alphabet* (i.t.a.), based on the Society's *New Spelling* system, but with new characters in place of digraphs. On his initiative and at his expense, i.t.a. was introduced in many hundreds of schools in the UK, US, Australia, and elsewhere. Its effects were researched by John Downing, who published his findings in *Evaluating the Initial Teaching Alphabet* (1967). Reformers argue that these findings confirmed previous experience: literacy skills were more successfully acquired in a phonographically regular system than in traditional orthography (t.o.). Organizational problems, however, led to rapid decline in the use of i.t.a. in the 1980s. The i.t.a. was controversial within the SSS, partly because of its unpopular new characters, and partly because it was a teaching medium and not the system for general use that the Society advocated.

**Recent developments.** In the 1970s-80s, the SSS broadened its interests and its worldwide links, initiating a series of international conferences and launching the *Journal of the Simplified Spelling Society*. In view of the non-acceptance of earlier reform proposals, the Society began to take up the ideas of Harry Lindgren in Australia and consider partial or staged reforms of t.o. as more practical and likely to overcome entrenched resistance. Three kinds of staged reform have so far been proposed: (1) The spelling of a single phoneme could be regularized, as with *e* in *eny*, *breth*, *frend*. (2) Problem graphemes such as *gh* could be regularized, producing forms such as *weit*, *dauter*, *tho*, *thru*, *cof*. (3) Redundant letters could be removed, as in *dout*, *princl*, *acomodate*, achieving far-reaching regularization with little disruption. In the late 1980s, the Society sought to influence British education policy by submitting statements on spelling problems to government committees inquiring into the future of English teaching. See

**SINGAPORE** [From Sanskrit *simha pura* city of the lion]. Official titles: English *Republic of Singapore*, Chinese *Hsin-chia-p'o Kung-ho-kuo*, Malay *Republik Singapura*, Tamil *Singapore Kudiyarasas*. A country in South-East Asia, and member of the Commonwealth. Capital: Singapore City. Currency: the dollar. Economy: mixed. Population: 2.6m (1988), 2.9m (projection for 2000). Ethnicity: 76% Chinese, 15% Malay, 7% South Asian, 2% others. Religions: 56% Buddhist and Taoist, 16% Muslim, 10% Christian, 4% Hindu, 14% other. Languages: English, Mandarin Chinese, Malay, Tamil (all official), with English the language of the law courts, government administration, and education. Singapore was originally part of the Sri Vijaya kingdom of Sumatra. Sir Stamford Raffles leased the island from the Sultan of Johore in 1819, and with Malacca and Penang it became in 1826 (under the East India Company) the *Straits Settlements*, which became a British colony in 1867. The island was taken by the Japanese in 1942 during the Second World War, became British again in 1945, obtained self-government in 1959, and was part of the *Federation of Malaya* from 1963 to 1965, when it became an independent state. In the early 1990s, it is a city state that, like Hong Kong, has raised its standard of living dramatically by becoming one of the most important financial, travel, and communications centres in South-East Asia. See MALAYSIA, SINGAPORE ENGLISH. [ASIA, NAME].  
T.MCA.

**SINGAPORE ENGLISH**, informally **Singlish**. The English language as used in Singapore, a lingua franca influenced by Chinese and Malay that is fast acquiring a large community of native speakers. The English of Singapore serves as both a means of uniting the country and an international medium. In 1947, 31.6% of students in the colony were in English-medium schools; from 1987, English has been the sole medium of primary, secondary, and tertiary education in the republic. It is the main language of business and commerce, internally and externally, and has an influence extending well beyond the boundaries of the state. Educated Straits-born Chinese (locally known as the *Baba Chinese*) have traditionally used *Baba Malay* rather than a Chinese dialect, and currently tend to favour English over both Chinese and other languages. There are at least two forms of Singapore English: the standard variety, based on educated BrE spoken with an RP accent (used in textbooks and by the *Singapore Broadcasting Corporation*),

and a colloquial variety whose forms range from a 'low' basilect strongly influenced by Chinese and Malay to a 'high' acrolect that blends with the standard.

**Pronunciation.** (1) English in Singapore is non-rhotic and generally syllable-timed. It places more or less equal stress on all syllables, usually with the final syllable of a tone unit somewhat lengthened. (2) Its intonation, often described as 'singsong', has many short tone groups; there is no contrastive stress. (3) Final consonants are often unreleased, resulting in glottal stops, as in /hɪŋ/ for *hit* and /stɛŋ/ for *step*. (4) Final consonant clusters are generally reduced to one spoken consonant, such as 'juss' for *just* and 'toll' for *told*. Often a Singaporean will say, for example, 'slep' or 'sleŋ', but write *slept*. Compare grammar point 1, below, on omission of *-s* and *-ed*. (5) The vowels in such words as *take*, *so*, and *dare* are often monophthongs: /tɛ/, /so/, /de/.

**Grammar.** (1) There is a tendency to omit articles (*You have pen or not?*; *He went to office yesterday*), the plural inflection *-s* (*I got three sister and two brother*), the present-tense inflection *-s* (*This radio sound good*; *My mum, she come from China many year ago*), the past-tense inflection *-ed/-t* ('ask' for *asked*, 'slep' for *slept*; *He live there* for 'He lived there'), and the *be* before adjectives used predicatively (*This coffee house cheap*). (2) *Already* is used as a marker of completive aspect: *Eight years she work here already* She's been working here for eight years. (3) *Use to* occurs as a marker of habitual aspect: *My mother, she use to go to the market* My mother goes to the market. (4) *Would* is used for future events rather than *will/shall* or the present tense: *We hope this would meet your requirements* We hope this meets/will meet your requirements. (5) Direct and indirect objects are highlighted by being preposed: *This book we don't have*; *Me you don't give it to*. (6) The invariant tags *is it?* and *isn't it?* are common: *You check out today, is it?*; *They come here often, isn't it?* (7) There is a preference for *also over too*: *But we are supposed to learn Chinese also*. (8) There are various informal ways of checking that someone agrees or disagrees, or can or cannot do something: *Yes or not?* *Like it or not?* *Can or not?* *Enough or not?* *Got or not?* (9) Chinese particles, such as *lah* and *aa*, are a common means of conveying emphasis and emotion, in effect replacing the intonational features of mainstream English: for example, *lah* as a token of informal intimacy (*Can you come tonight?*—*Can lah/Cannot lah*); *aa* in yes-no questions (*You wait me, aa?* Will you wait for me?; *I come tonight, aa?* Should I come tonight?; *You think I scared of you, aa?*): compare MALAYSIA.

**Vocabulary.** (1) Words borrowed from regional languages: (Malay) *makan* food, as in *Let's have some makan*; (Hokkien Chinese) *ang pow* a gift of money, traditionally in a red packet (the meaning of the Hokkien words). (2) Non-English interjections include: *ay yaah!* suggesting exasperation; *ay yör!* suggesting pain, wonder, or both; *ay yēr!* indicating a reaction to something unpleasant and perhaps unexpected; *che!* expressing irritation or regret. (3) Words of English with adapted meanings: *send* in the sense of 'take' (*I will send you home*); *open* meaning 'put on' (*Open the light*); *take* suggesting 'eat, drink, like' (*Do you take hot food?* Do you like spicy food?); *off* and *on* as verbs (*to off/on the light*); *off* as a noun, for time off (*We had our offs changed to Thursdays*). (4) Reduplicating of a word so as to intensify or emphasize a point: *I like hot-hot curries*; *Do you speak English?*—*Broken-broken*. (5) Formal and informal registers are less marked off from one another than in BrE, with the result that the highly colloquial and highly formal may co-occur: *her deceased hubby* rather than *her dead husband*. See CHINA/MALAY, MALAYSIA, PHILIPPINE ENGLISH. [ASIA, VARIETY].

**SINGING SUFFOLK.** See EAST ANGLIA.

**SINGLISH.** See -GLISH AND -LISH, SINGAPORE.

**SINGSONG**, also **sing-song** [17c]. (1) Formerly: a ballad or jingle; verse with (often monotonous) musical rather than poetic qualities: 'a beautiful legend; a nice sing-song to send men to sleep' (D. Jerrold, *St. Giles*, 1851); 'the despised melodrame, the sing-song of opera' (*Westminster Review*, 1833). (2) Informal BrE: the unrehearsed singing of popular songs; community singing: 'Wednesday was welfare. Ping pong night. Sing song night' (John le Carré, *Small Town in Germany*, 1968). The term *singsong girl*, used of

especially Chinese women who sing, dance, and double as prostitutes, echoes China Coast Pidgin English. Compare *singsing*, a Papua New Guinea (Tok Pisin) term for an occasion of singing, dancing, and feasting. (3) A usually disparaging or condescending term for a rhythm or tone regarded as musical but monotonous and considered typical of certain accents, such as those of speakers of English in Wales and parts of Asia: 'A trace of Holyhead Welsh to his sing-song accent' (Ian Thomson, *Independent*, 29 Dec. 1990). In linguistics, the name *singsong theory* (originally used disparagingly by his critics) refers to the theory of the Danish linguist Otto Jespersen that language began as singing. See ACCENT, CANT, PHILIPPINE ENGLISH, REDUPLICATION, SINGAPORE ENGLISH, WELSH ENGLISH. [LITERATURE, SPEECH, STYLE]. T.MCA.

**SINGULAR** [14c: from Latin *singularis* one at a time, alone, single]. A term contrasting with *plural* and *dual* in the number system of a language and referring to one person or thing. In English, the term is often used to include uncountable noun usages like *love* and *wine* because they take singular verb concord, even though in other ways such nouns are different from singular countable nouns like *horse* and *stone*. Compare DUAL, PLURAL. [GRAMMAR]. S.C.

**SINHALA**, also **Sinhalese** and formerly **Singhalese**, **Cingalese**. An Indo-Aryan language spoken by over 10m people in Sri Lanka (formerly Ceylon) and on the Laccadive islands of India; in the Maldives, the variety known as Divehi has official-language status. Carried south with Buddhism by settlers from northern India c.5c BC, Sinhala was subsequently influenced by the Dravidian languages, especially Tamil, which is also spoken in Sri Lanka, by Pali, the sacred language of the local form of Buddhism, and to some extent by Sanskrit. Its earliest inscriptions date from c.200 BC, its present-day literary form from c.1250. The early literature is almost exclusively Buddhist, and, unlike in other parts of South Asia, mostly in prose. Sinhala is written in a distinctive syllabic script related to the scripts of the Indian languages. The arrival of Western powers in Sri Lanka led to the decline of the Sinhala literary tradition, which did not revive till the late 18c. The norms established for prose in the 13c, however, persist to this day. Modern Sinhala literature shows the influence of European literary traditions in addition to those of Sanskrit, Pali, and Tamil. There is currently a three-language policy in Sri Lanka for the use of Sinhala, Tamil, and English. See INDIAN LANGUAGES, MALDIVES, PALI, SANSKRIT, SRI LANKA. [ASIA, LANGUAGE].

**SINICIZED ENGLISH**. See CHINA.

**SINO-TIBETAN LANGUAGES**. A family of tone languages in Central and East Asia. It includes most of the languages of China, the most prominent of which are Mandarin Chinese and Cantonese, and the Tibeto-Burman languages, among them Tibetan, Burmese, and various languages of Nepal. See ASIAN LANGUAGES, CHINA, INDIAN LANGUAGES, LANGUAGE FAMILY, LINGUISTIC TYPOLOGY (TONE LANGUAGES), NEPAL. [ASIA, LANGUAGE]. T.MCA.

**SITUATIONAL APPROACH**. See LANGUAGE TEACHING.

**SIXMO** [Probably 19c: from *six* and the suffix *-mo*, indirectly derived from *sexto*, from the Latin ablative phrase *in sexto* (folded) in six. See *-MO*]. Also *sexto*. Abbreviated *6mo*, *6°*. A book size obtained by folding a sheet of paper into six leaves or 12 pages; a book of this size. [TECHNOLOGY]. T.MCA.

**SIXTEENMO** [1840s: from *sixteen* and *-mo*, indirectly from *sextodecimo*, from the Latin ablative phrase *in sextodecimo* (folded) in sixteen]. Also *sextodecimo*. Abbreviated *16mo*, *16°*. A book size obtained by folding a sheet of paper into 16 leaves or 32 pages; a book of this size. See *-MO*. [TECHNOLOGY]. T.MCA.

**SKEAT, W(alter) W(illiam)** [1835-1912]. English clergyman and philologist, born in London and educated at King's College School, then Highgate, and at Christ's College, Cambridge, where he graduated in mathematics. He became a Fellow of the college in 1860, took holy orders in 1861, and became a curate at Godalming in the same year, but a serious throat illness cut short his career in the Church. In 1864, he took up an appointment at Christ's and began his study of Early English. In 1878, he became Professor of Anglo-Saxon at Cambridge. Skeat was typical of the generation of scholars that included F. J. Furnivall, J. A. H. Murray, and Henry Sweet (all members of the Philological Society), who promoted the collection and publication of texts (through the Early English Text Society and the Chaucer Society). They were concerned with the history of the language, its dialects, its cataloguing in works of reference, and such educational issues as spelling reform. He was founder and first director of the English Dialect Society in 1873, and edited a bibliography in preparation for the Society's *English Dialect Dictionary*, with the title 'A bibliographical list of works that have been published or are known to exist in MS, illustrative of the various dialects of English' (1873). His

major publication was *An Etymological Dictionary of the English Language* (Oxford University Press, 1882, 1883, 1897, 1909), the fullest work of its kind at that time, with appendices of notes on the languages cited in the dictionary, canons for etymology, and suffixes, followed by prefixes, homonyms, doublets, Indogermanic (Indo-European) roots, and distribution of words borrowed into English according to language of origin. Other publications included: *Principles of English Etymology* (1891), *The Chaucer Canon* (Oxford, 1900), and *English Dialects from the Eighth Century to the Present Day* (Cambridge, 1911). See index. [BIOGRAPHY, EUROPE, HISTORY, REFERENCE]. S.E.

**SLANDER** [13c: from Middle English *s(c)laundre*, from Anglo-Norman *esclaundre* and Old French *esclandre*, from Latin *scandalum* a snare, cause of offence. A doublet of *scandal*]. A general and legal term for the uttering of a false and defamatory statement that injures someone's reputation. As distinct from *libel*, which is written or printed, slander is oral. Though actionable, it is not a criminal offence, perhaps because strongly critical views may be uttered unguardedly on the spur of the moment, and are unlikely to reach a wide audience unless further broadcast. See *LIBEL*, *MALEDICTA*. [MEDIA]. G.H.

**SLANG** [18c: origin uncertain, perhaps from *sling* or a clipping that combines elements in such phrases as *beggars' language* and *rogues' language*]. An ever-changing set of colloquial words and phrases generally considered distinct from and socially lower than the standard language. Slang is used to establish or reinforce social identity and cohesiveness, especially within a group or with a trend or fashion in society at large. It occurs in all languages, and the existence of a short-lived vocabulary of this sort within a language is probably as old as language itself. In its earliest occurrences in the 18c, the word *slang* referred to the specialized vocabulary of underworld groups and was used fairly interchangeably with *cant*, *flash*, and *argot*.

**Defining slang.** The word is widely used without precision, especially to include informal usage and technical jargon, and the social and psychological complexities captured in slang vocabulary make the term difficult to define. For linguistic purposes, slang must be distinguished from such other subsets of the lexicon as *regionalisms* or *dialect words*, *jargon*, *profanity* or *vulgarity*, *colloquialism*, *cant*, and *argot*, although slang shares some characteristics with each of these. It is not geographically restricted (like BrE *lift*, AmE *elevator*), but is often regional (BrE *bloke*, AmE *guy*). It is not jargon

(vocabulary used in carrying out a trade or profession), but it frequently arises inside groups united by their work: for example, such non-technical vocabulary as the US Army phrases *chicken colonel* (full colonel) and *John Wayne* (used to describe exemplary military behaviour).

Although slang synonyms abound in the taboo subjects of a culture, not all slang terms violate social propriety; *Mickey Mouse* meaning 'easy' and *dough* for 'money' may be inappropriate in some contexts, but they are not usually offensive, although *Mickey Mouse money* may be used pejoratively of an unfamiliar or a disdained currency. Slang belongs to the spoken part of language, but not all colloquial expressions are slang: *shut up* for 'be quiet' would rarely be written except in dialogue, but it is not slang. *Cant* and *argot*, the specialized and sometimes secret languages of thieves and other groups which operate on the fringes of the law, have contributed many items to the general slang vocabulary of English: for example, *heist* for 'robbery' and *OD* for 'take an overdose (of drugs)'. Yet many slang words arise from the language of groups that have no association with the underworld, such as college students, sports fans, or enlisted personnel in the military. It is often the usage of the young, the alienated, and those who see themselves as distinct from the rest of society. People who at a formative stage belonged to a certain institution or milieu may continue to use the slang expressions of their group and generation for the rest of their lives.

Despite the difficulty of defining the term, slang does have some consistent characteristics. Foremost, taken as a whole, the slang vocabulary of a language is ephemeral, bursting into existence and falling out of use at a much more rapid rate than items of the general vocabulary. The slang of students can illustrate this. American college students who studied very hard in 1900 were known as *grinds* or *grubs*; in the 1980s, *grinds* were called *geeks*, and *grub* meant to kiss passionately. A tally of slang terms in use at the U. of North Carolina at Chapel Hill over a 15-year period (1972-87) showed a retention rate of less than 10%: the exclamation of approval *far out* was replaced by *awesome*, the all-purpose affirmative adjective *cool* yielded to *sweet*, and students stopped *cutting* classes and instead started *blowing them off*.

**Transience.** The rapid change characteristic of slang requires a constant supply of new words, sometimes replacing or adding to already established slang words, like a *waste case* for a 'drunk', and sometimes extending to new areas of meaning, like *jambox*, *ghetto blaster*, or *Brixton suitcase* for a portable stereo tape player. This makes novelty, or innovation, an often cited

characteristic of slang and freshness a large part of its appeal. Yet some slang items have long lives. Thus, *bones* as slang for dice was used by Chaucer in the 14c and is still slang. But when slang items remain in the language for years, they often lose their slang status. Middle English *bouse* (now *booze*) persists in informal contexts, as does *pooped* (exhausted), first attested in the 16c. Still other slang items pass into the general vocabulary and bear little or no association with their earlier lives as slang: for example, *jeopardy* from gambling and *crestfallen* from cock-fighting have even acquired a learned tinge.

**Sounds.** Although, for the most part, slang items conform to the general constraints on sound combinations that govern English, the venture-some spirit behind much slang includes playing with sounds. Onomatopoeia accounts for many slang terms, including these for 'vomit': *barf*, *buick*, *earl*, *ralph*. Mock dialect and foreign pronunciations are sometimes the source for slang, as in *shoot the peel* (play basketball), an approximation of the Southern US pronunciation of 'pill', a reference to the round shape of the ball. Or *my feet are staying* (good-bye), a mock pronunciation of German *auf wiedersehen*. The American linguist Roger Wescott has noticed that some sounds appear to give words a slangier flavour, most noticeably: *z*, in words like *zazzy* from 'jazzy', *scuz* from 'scum', and *zap* from 'slap' or 'whap'; the replacement or addition of a vowel with *oo*, in words like *cigaroot* from 'cigarette', *bazooms* from 'bosom', and *smasheroo* from 'smasher'. Rhyming, however, is the favourite sound effect of slang, as in *brain drain* the loss of intellectual and educated people from a community because of a lack of opportunity, *boob tube* television, *frat rat* member of a US college fraternity, *groomed to zoom* dressed fashionably. The rhymers *par excellence* have been the Cockneys of London, who have developed an elaborate and colourful collection of slang terms based on rhyme. Straightforward examples are *trouble and strife* for 'wife' and *mince pies* for 'eyes', but most Cockney rhyming slang involves a shortening process in which the rhyme word is not expressed: *elephant* means 'drunk', from *elephant's trunk*; *plates* means 'feet', from *plates of meat*; and *Godfer* means 'child', from *God forbid*, which rhymes with 'kid'.

**Word-formation.** Slang items usually arise by the same means in which new words enter the general vocabulary: by recycling words and parts of words which are already in the language. Affixation allows limitless opportunities for open-ended sets like *megabucks*, *megabeers*, and *megawork* (for vast quantities of the item in question), or *bookage*, *fundage*, and *sleepage* (as

collective terms, as in *I'm about to ask my folks for some major fundage*). Compounding makes one word from two: *airhead* AmE someone out of touch with reality, *homeboy* AmE a person from the same hometown, BrE a young man happy to stay with his parents. A currently productive process especially in AmE is the addition of a particle like *out*, *off*, or *on* to a noun, adjective, or verb, to form a phrasal verb: for example, *blimp out* to overeat, *blow off* (US college slang) to ignore, (British schoolboy slang) to fart, or *hit on* to make sexual overtures to. In slang, frequently used phrases and words are likely to be abbreviated, like *OTL* from *out to lunch* out of touch with reality, *VJ/veejay* from *video jock* an announcer for televised music videos, *obno* from *obnoxious*, and *Sup?* from *What's up?* Unlike the general vocabulary of the language, English slang has not borrowed heavily from foreign languages, although it does borrow from dialects, especially from such ethnic or special-interest groups which make an impact on the dominant culture as American Blacks or from a second language that is part of the culture, like Yiddish.

**Semantics.** The intricate interplay of exclusivity, faddishness, and flippancy which breeds and supports slang guarantees semantic and etymological complexity. Nevertheless, slang items often diverge from standard usage in predictable ways, especially by generalization and melioration. In generalization, a term acquires a wider range of referents: for example, in the 19c *dude* was 'a dapper man, a dandy' but in current US slang, via Black usage, it can be applied to any male. *Schiz out* is to have any kind of mental or emotional breakdown; it is not restricted to *schizophrenia*. Evaluative words in slang sometimes become so generalized in application that they lose specific meaning and retain only a value: for example, AmE *awesome*, *heavy*, *key*, and *solid*, BrE *ace*, *brill*, and *triff*, and *def* in both varieties, all mean 'worthy of approval'. Generalization often operates in conjunction with melioration, a process in which the connotations of a word become more favourable. Many words enter general slang from the taboo words of subcultures. Through increased use and broad application, they can lose their shock value and become more positive; the verb *jam* a century ago had specific sexual referents, but now means 'to dance, play music, have a good time, succeed'. Yet many words in slang remain negative, especially the large and constantly replenished set of epithets available at all time in slang: for example, the pejorative *boob*, *dork*, *dweeb*, *jerk*, *nerd*, *scuzbag*, *slimeball*, *imp*.

Another characteristic of the semantics of slang is the tendency to name things indirectly

and figuratively, especially through metaphor, metonymy, and irony. *Rack monster* exhaustion, *couch potato* one who lies around doing little except watch television, *coffin nail* a cigarette, are metaphors. *Brew* and *chill* (beer) take their meaning by association and are metonyms. Irony, in its simplest form, categorizes the tendency in slang for words to evoke opposite meanings: *bad*, *wicked*, *killer* can all mean 'good' when signalled with appropriate ironic intonation. The influence of semantic fields on productivity in slang is also important, as they provide an established framework to shape the form and meaning of new words. In English, the semantic field 'destruction' sets the pattern for the proliferation of terms for being drunk, such as *blitzed*, *bombed*, *fried*, *hammered*, *polluted*, *ripped*, *slammed*, *smashed*, *toasted*, *wasted*. Slang also often evokes meaning by drawing on the shared cultural knowledge of its users. Thus, calling a Ford automobile in the 1920s a *Henry* or a *Henrietta* alluded to automotive tycoon Henry Ford. The current verb *bogart* (to take an unfair share, originally of a marijuana cigarette) alludes to the American actor Humphrey Bogart's tough-guy image in films. *Midnight requisition* and *midnight supply company* (stealing) allude to military life.

**Functions.** The aim of using slang is seldom the exchange of information. More often, slang serves social purposes: to identify members of a group, to change the level of discourse in the direction of informality, to oppose established authority. Sharing and maintaining a constantly changing slang vocabulary aids group solidarity and serves to include and exclude members. Slang is the linguistic equivalent of fashion and serves much the same purpose. Like stylish clothing and modes of popular entertainment, effective slang must be new, appealing, and able to gain acceptance in a group quickly. Nothing is more damaging to status in the group than using old slang. Counter-culture or counter-establishment groups often find a common vocabulary unknown outside the group a useful way to keep information secret or mysterious. Slang is typically cultivated among people in society who have little real political power (like adolescents, college students, and enlisted personnel in the military) or who have reason to hide from people in authority what they know or do (like gamblers, drug addicts, and prisoners). With the possibility of instant and widespread communication, the group-identifying functions of slang for the population at large may be diminishing in favour of identification with a style or an attitude rather than with a group. If items like *low-life* and *sleaze* can be considered slang in the US, they are a kind of national slang and say little about group identification.

**Slang lexicography.** Because slang is usually considered a deviation from ordinary language, it has been little more than a curiosity in the scientific study of language. Nevertheless, a strong tradition in slang lexicography provides valuable data for analysing the workings of this often neglected portion of the language. Foremost among 20c slang lexicographers was the New Zealand-born writer Eric Partridge, an indefatigable collector of slang and of the unconventional kinds of vocabulary that demonstrate the ongoing vigour of the language. Recent lexicographical works include *The Thesaurus of Slang: 150,000 Uncensored Contemporary Slang Terms, Common Idioms, and Colloquialisms Arranged for Quick and Easy Reference* (Esther and Albert E. Lewin, Facts on File, 1988), which lists standard headwords in alphabetic order, each followed by an undiscriminated set of slang synonyms among which the reader may browse. For example, after the verb *converse* are listed *gab*, *rap*, *yack*, *chew the fat*, *rag around*, *modjitate*, *shoot the shit*, *schmoose*, *fold one's ear*, *bat the chat*.

**Conclusion.** People use slang consciously and unconsciously in the course of ordinary, everyday interaction. No arbitrary rules in grammar books make items of slang right or wrong, and, for the most part, current slang cannot be found in dictionaries, which are always engaged in catching up, and may never include certain terms, because they have proved to be highly ephemeral or are used in groups to which lexicographers have little or no access. Essentially, slang allows speakers the freedom to play with and enjoy the language, make words up, adopt new expressions indiscriminately, and use language for humour, irony, sarcasm, and irreverence. **SLANGUAGE** [Early 20c: a blend of *slang* and *language*]. A non-technical term for slang usage or a variety of language dominated by slang. In *The Slanguage of Sex: A Dictionary of Modern Sexual Terms* (1984), Brigid McConville and John Shearlaw define a slanguage as 'an underground language' of simile, metaphor, euphemism, and innuendo. Compare ARGOT. See GREAT AUSTRALIAN SLANGUAGE, NEW ZEALAND DICTIONARIES, SLANG. [STYLE]. T.M.C.A.

**SLANT** [15c: by aphesis from *aslant* sloping]. A term in especially journalism and advertising, through which the idea of obliqueness is extended to predisposition, bias, or distortion especially in a piece of writing: *There's always a political slant, even if he's writing about pet food*. Compare ANGLE, NEOLOGISM (SPIN). [MEDIA, STYLE, WRITING]. T.M.C.A.

**SLANT RHYME**. See HALF RHYME.

**SLASH**. See OBLIQUE.

**SLAVONIC LANGUAGES** BrE, **Slavic languages** AmE. A branch of the Indo-European language family spoken primarily by the Slav peoples of Central, Southern, and Eastern Europe. It is usually divided into *East Slavonic* (Russian, Ukrainian, Byelorussian), *West Slavonic* (Polish, Czech, Slovak, and Sorbian or Lusatian), and *South Slavonic* (Old Church Slavonic, Macedonian, Bulgarian, Serbo-Croat, and Slovene). Native speakers total some 300m. The approximate numbers of speakers of the larger languages are: Russian 150m; Polish 37m (with some 13m diaspora Poles in Western Europe, North America, and Australasia); Ukrainian 35m (with 600,000 in North America, two-thirds in Canada, and 100,000 in Poland); Serbo-Croat 12.5m; Bulgarian 8m; Byelorussian 7m. Slavonic languages also divide into those using the Roman alphabet (western and southern, including Polish, Czech, Slovak, and Slovene) and those using the Cyrillic alphabet (eastern and southern, including Russian, Ukrainian, and Bulgarian). Serbo-Croat uses both scripts, Serbs mainly Cyrillic, Croats mainly Roman. The classical language Old Church Slavonic, originally used by evangelists among the South Slavs, has

had considerable influence on both the South and East Slavonic languages. The impact of the group on English has been relatively slight. Loanwords include: *mammoth* (from 17c Russian *mamot*), *mazurka* (from Polish, after a regional name), *robot* (from Czech, from the base of *robota* compulsory labour, and *robotnik* a peasant owing such labour), *samovar* (from Russian: 'self-boiling'), and *vampire* (through French from German from Serbo-Croat *vampir*). The especially AmE diminutive suffix *-nik* (mid-20c) is Slavonic in origin, and has entered English along two paths: from Russian, as in *sputnik* a space satellite, and through Yiddish, which adopted it from its Slavonic neighbours in Eastern Europe, as in *kibbutznik* one who lives on a kibbutz. The suffix as used in English refers to a person who exemplifies or endorses a way of life or an idea, as in *beatnik*, *no-goodnik*, *peacenik*, *refusenik*. It is often humorous or dismissive. Loans from English into the Slavonic languages have increased greatly in the late 20c, especially in such areas as sport (for example, Polish *faul* foul, *faulowac* to cause a foul, *play-off*, *sprint*, *sprinter*, *tenis*) and high technology (Polish *bit*, *bajt*, *hardware* and *software*, and their adjectives *hardwarowy* and *softwarowy*, *interface*, *joystick*, *monitor*). See BORROWING, CANADIAN, CANADIAN ENGLISH, EUROPEAN LANGUAGES, INDO-EUROPEAN LANGUAGES, JEWISH ENGLISH (-NIK), RUSSIAN, YIDDISH. [EUROPE, LANGUAGE]. F.E.K., T.M.C.A.

**SLIP OF THE TONGUE** [Earliest *OED* citation N. Bailey, 1725: a loan translation of Latin *lapsus linguae*, earliest citation J. Dryden, 1667. Parallel usages are the now rare *slip of the pen* and *lapsus calami*]. An unintended mistake made in speaking, sometimes trivial, sometimes amusing: *This hasn't solved any answers (rather than problems, questions), a great floating lump (blending lump and hunk), I want a thin chin . . . I mean, a thin cheese pizza*. Normal speech contains a fairly large number of such slips, though these mostly pass unnoticed. The errors fall into patterns, and it is possible to draw conclusions from them about the underlying mechanisms involved. They can be divided into: (1) *Selection errors*, where a wrong item has been chosen, usually a lexical item, as with *tomorrow* instead of *today* in *That's all for tomorrow*. (2) *Assemblage errors*, where the correct items have been selected, but they have been assembled in the wrong order, as in *holed and sealed* for 'soled and healed'. The former shed light on the organization of the mental lexicon, the latter on the preparation of chunks of speech for production.

Selection errors may involve: (1) Meaning: *crossword* instead of 'jigsaw'. (2) Sound: *cylinders* for 'syllables'. (3) Both of these: *badger* for 'beaver'. (4) Blends of two similar words:

terrible for 'terrible' and 'horrible'. Of these, errors in sound, usually called *malapropisms*, are probably the best known. Such errors suggest that meaning and sound are only partially linked in the mind, and also that the linking up involves the activation of a number of words which are similar to the target (the word sought). Among assemblage errors, common patterns are: (1) Anticipations, with a word or sound coming in too soon: *crouny cricket* for 'county cricket'. (2) Perseverations, with a word or sound repeated: *beef needle soup* for 'beef noodle soup'. (3) Transpositions, with words or sounds transposed: *to gap the bridge* for 'to bridge the gap'; *hole of rostess* for 'role of hostess'. The best-known of these are the sound transpositions called *spoonerisms*. These errors indicate that chunks of speech are pre-prepared for utterance, possibly in a tone group (a group of words spoken within the same intonation pattern), and that the activated words are organized in accordance with a rhythmic principle. Research is in progress in order to assess to what extent these findings are universal, or specific to the English language. See FREUDIAN SLIP, MALAPROPISM, MISTAKE, NEUROLINGUISTICS, SPOONERISM. [LANGUAGE, STYLE]. J.M.A.

**SLIPSHOD** [16c: originally meaning wearing ('shod with') slippers or loose shoes, and therefore down at heel]. A casual term often applied to speech and writing considered substandard and careless: 'The fashionable jargon of the day . . . seems to have been a sort of slipshod English, continually helped out with the newest French phrases' (Arthur H. Clough, *Poems*, 1861). See (A)ESTHETICS. Compare SLOPPY, SLOVENLY. [STYLE]. T.MCA.

**SLOANE RANGER** [1970s: a facetious blend of *Sloane Square* in London and *Lone Ranger*, the name of an American hero in Western films and cartoons]. An equivocal nickname for a young Englishwoman with an upper-class background and fashionable tastes, but otherwise conventional in outlook and ambitions. It is often extended, especially in the clipped form *Sloane* and the informal adjective *Sloan(e)y*, to anyone of the same class and type: 'The Sloane Rangers always *add tone*. They never put on prole accents, like self-conscious Oxford boys in the sixties' (P. York, in *Harpers & Queen*, Oct. 1975);

'In the circle of debutantes who used to be presented at court in the year of their "coming out" marked RP was commonplace, and since the ending of this social ritual in recent years, we have only to look at the Sloane Rangers for sounds which assure us that this special form of RP is alive and well and being passed on to a new generation of the socially privileged and those who try to identify with them' (John Honey, *Does Accent Matter?*, 1989); 'Also the voice had a hint of near-deb or off-Sloane Square: "The pollution of the ayah next ye-ah"' (Edward Pearce, *Sunday Times*, 24 Sept. 1989). See MARKED AND UNMARKED TERMS, RECEIVED PRONUNCIATION (RP). Compare KENSINGTON, U AND NON-U. [EUROPE, VARIETY]. T.MCA.

**SLOGAN** [16c: from Scottish Gaelic *sluagh-ghairm* a war cry, from *sluagh* host, army, *gairm* a cry, shout. Formerly *slogurn*, *slughorn*, etc.]. (1) Obsolete: a battle or rallying cry of the Scots and Irish, usually the name of a leader or a place, or the motto of a clan. (2) A catchphrase shouted or exhibited by someone campaigning for a cause, or used in advertising and promotion, such as 'No more war' or 'Beer is best'. The regular use of such slogans is *sloganeering*, a common feature of politics. See ACRONYM, MOTTO. [STYLE, WORD]. T.MCA.

**SLOPPY** [18c: from *slop* mud, slush]. A casual term often applied to speech and writing considered substandard and careless: 'Too prone to indulge in sloppy English' (*The Academy*, 1881); 'Sloppy language makes for muddled thinking' (*The Right Word at the Right Time*, Reader's Digest, 1985). See (A)ESTHETICS. Compare SLIPSHOD, SLOVENLY. [STYLE]. T.MCA.

**SLOVENLY** [16c: from obsolete *sloven* a lazy, idle rascal, a term applied until the late 19c to careless writers]. A casual term often applied to speech and writing considered substandard and careless: 'When he gets into a sentence of five or six lines long, nothing can exceed the slovenliness of the English' (S. T. Coleridge, *Table Talk*, 1834). See (A)ESTHETICS, GLOTTAL STOP. Compare SLIPSHOD, SLOPPY. [STYLE]. T.MCA.

**SLUR** [15c: from Low German, to drag, trail]. (1) A semi-technical term for an indistinct sound or utterance that usually arises from two or more sounds being run together: *gonna* going to, *gotta* got to, *wannabe* want to be. Compare ELISION. (2) A non-technical term for a slighting and dismissive remark or reference. Linguistic slurs can, among other things, be racist and ethnic: an English-speaking person calling a German a *squarehead*, a French Canadian calling an English Canadian *une tête carrée* (a squarehead).

See ETHNIC NAME, FOUR-LETTER WORD. [SPEECH, STYLE]. T.MCA.

**SMOLLETT, Tobias** [1721-71]. Scottish surgeon and novelist, born near Dumbarton, and educated at the U. of Glasgow. After training as a surgeon in Scotland, he went to London in the vain hope of success in the theatre. He served in the navy as a surgeon's mate and later practised in London. His first novel *The Adventures of Roderick Random* (1747) drew partly on his experiences. A journey to Paris in 1750 gave him material for *The Adventures of Peregrine Pickle* (1751). His writing included a translation of *Don Quixote* (1755). In 1760, he was fined and imprisoned for publishing a libel on Admiral Knowles. He undertook a trip to Italy for the sake of his health and there wrote his last novel *The Expedition of Humphry Clinker* (1771). Smollett took a harsh view of the world and his picture of 18c life emphasizes sordid and cruel aspects that others refused to face. His love of controversy brought him into conflict with such contemporaries as Fielding. His influence on the course of the novel was considerable; he took many of his characters from disreputable society and presented them with a zest that verges on caricature yet remains credible. His narrative style is straightforward, sustaining the interest of picaresque stories that could easily have become diffuse. *Humphry Clinker* is a major example of the epistolary novel in English. He created vivid names for his characters, such as Commodore Trunnion and the schoolmaster Concordance, and portrayed dialect, registers, and the affectations of the newly fashionable, using deviant spellings for the usage of the uneducated, particularly in letters in *Humphry Clinker*. Dickens greatly admired his style. See NOVEL. [BIOGRAPHY, EUROPE, LITERATURE, STYLE]. R.C.

**SMUT.** An informal term for obscene language, on the analogy of something which smudges or stains, as in *There's too much smut on television nowadays*. See OBSCENITY, SWEARING. [STYLE, USAGE]. T.MCA.

**SOAP OPERA** [1930s: from a whimsical extension of *opera* to cover entertainments on US radio commercially sponsored by soap companies and aimed at housewives]. Informal short form *soap*. A usually long-running serial on radio or television that dramatizes the lives, problems, successes, and failures of a set of stock characters in stock situations, sometimes domestic, sometimes glamorous. Although the genre is usually dismissed by critics as trivial and escapist, it is a means by which information can be widely disseminated: for example, about family planning in developing countries. Major TV

soap operas, such as the US series *Dallas* and *Dynasty* (mainly 1980s), the British *EastEnders*, and the Australian *Neighbours*, have been watched by millions around the world, the nature and doings of both characters and actors being widely discussed in the media and elsewhere. Some characters, such as J. R. Ewing in *Dallas* (played by Larry Hagman) and Alexis Colby in *Dynasty* (played by Joan Collins), have achieved virtually mythic proportions, comparable to the major characters of Disney and Hollywood. Compare MOTION PICTURE, MYTH, SAGA. See SERIES. [MEDIA]. T.MCA.

**SOBRIQUET**, also **soubriquet** [17c: from French *sobriquet*, earlier *soubriquet* a tap under the chin, a surname (often with a mocking quality)]. A nickname, originally a descriptive epithet used as a surname, such as *Plantagenet*, the name of a medieval dynasty of English kings, which may have come from the French *plante genêt* (the broom plant), because Geoffrey, Earl of Anjou, the founder of the line, used to wear a sprig of broom in his cap, or planted broom to improve his hunting covers. See EPITHET, NICK-NAME. [NAME]. J.A., T.MCA.

**SOCIAL DISTANCE.** See PROXEMICS.

**SOCIAL REALISM.** An imprecise term for drama or fiction that tries to reflect life accurately. It excludes fantasy and romance, refuses to avoid the unpleasant, and is often inspired by a wish to expose injustice and encourage political action. Social realist novels were written in the late 19c and early 20c, by George Gissing, George Moore, Arnold Bennett, and Somerset Maugham. A similar approach was taken in the mid-20c by dramatists like John Osborne and Arnold Wesker. In novels and plays of this type, the dialogue reproduces everyday speech, warts and all. Social realism is distinct from *Socialist Realism*, a theory adopted by the Congress of Soviet Writers in 1934, which used drama to help audiences of workers understand Marxism. See DRAMA, FICTION. [LITERATURE]. R.C.

**SOCIETY FOR PURE ENGLISH, The.** A reforming society founded in England in 1913 by a number of writers and academics on the initiative of the poet Robert Bridges. The outbreak of the First World War impeded its development, but between 1919 and 1946 it carried on a campaign against what it regarded as degenerate tendencies within the language, mainly through a series of 66 *Tracts*, for many years printed and distributed by Oxford University Press. The terms *pure* and *tract* indicate the quasi-missionary approach adopted by Bridges and his associates. In *Tract 21* (1925), which sets

out the aims of the Society, Bridges indicated that by *pure* he did not intend *Teutonic* (that is, Germanic), an interpretation associated with the 19c reformer William Barnes, who had advocated a return to undiluted Saxonism. *Pure* was deliberately adopted 'as an assertive protest against that misappropriation of the term which would condemn our historic practice'. Bridges considered that the spread of English throughout the world was 'a condition over which we have no control', but one that 'entails a vast responsibility and imposes on our humanity the duty to do what we can to make our current speech as good a means as possible for the inter-communication of ideas':

That we did not of our own will or intention put ourselves in this predicament cannot excuse our neglect; nor in the exposure and trial that our language has to face can we honestly sustain our native pride in it, if, shutting our eyes to its defects, we refuse to accommodate it to the obvious needs of perspicuity and logical precision which are the essential virtues of any cultured speech. In certain respects the English language is in its present condition inferior to some of its rivals as a convenient carrier of thought; and it would be a disgrace to us if we made no effort to bring it up to the mark.

In addition to benefits gained from its intricate history, English 'carries many scars', some beyond remedy, others still capable of treatment. Bridges argued that 'we are the inheritors of what may claim to be the finest living literature in the world', and that steps should therefore be taken to ensure that the everyday language does not 'grow out of touch with that literature . . . so that to an average Briton our Elizabethan heritage would come to be as much an obsolete language as Middle English is to us now'. He saw as a special peril the scattering of speakers of English among 'communities of other-speaking races, who . . . learn yet enough of ours to mutilate it, and establishing among themselves all kinds of blundering corruptions, through habitual intercourse infect therewith the neighbouring English':

We can see this menace without any guess as to what may come of it, and in the United States, where it is most evident, it is natural that despair should encourage a blind optimism, expressed—as I redd<sup>1</sup> it in the *New York Times*—in some such jaunty phrase as this, that the *old Lady may be trusted to take care of herself*. But, whatever sort of speech might naturally arise, it is extremely unlikely that the unknown accidental linguistic profits would outbalance the calculable loss. [I venture this spelling, long advocated by Henry Bradley and others, for the perfect of *read* and *spread*, like the use of *lead led*, *speed sped*, &c., the added *d* being the common sign of the perfect tense.]

Although the Society had only a slender influence on users of English beyond literary and philological circles, many of the views expressed

by Bridges and his fellow members continue to be widely endorsed, especially by older members of the middle classes throughout the English-speaking world. They are from time to time restated by pressure groups with similar interests, such as the *Queen's English Society* in England in the 1980s, under the presidency of the writer and retired BBC broadcaster Godfrey Talbot, who echoes Bridges in writing:

Accost me as The Old-Fashioned Anglo if you like, but it appears to me that the Mother Tongue which half the world now uses is a cause for concern because while in demand overseas it is in decay at home, where increasingly it is both taken for granted and tainted. Restoration and repair are needed. Rarely has a rich inheritance been so undervalued as English today ('Protecting the Queen's English', *English Today* 11, July 1987).

Garland Publishing (New York & London, 1979) has produced a facsimile collection of the Society's *Tracts* (1-66) in seven volumes, with an introduction by Steele Commager of Columbia U., who calls them 'perhaps the most important, and certainly the most engaging, collection of essays devoted to the English language'. Contributors to the series included the English poet Lascelles Abercrombie, the Scottish lexicographer William Craigie, the English writer on language Bernard Groom, the Danish philologist Otto Jespersen, the US dialectologist Hans Kurath, and the Anglo-American essayist Logan Pearsall Smith.

See BRIDGES, PURE, PURISM, TRACT. Compare BAD ENGLISH, BARNES, CORRUPT, DISEASED ENGLISH, GOOD ENGLISH, PLAIN, PROGRESS AND DECAY IN LANGUAGE, QUEEN'S ENGLISH SOCIETY, SAXONISM. [MEDIA, USAGE, VARIETY]. T.MCA.

**SOCIETY OF PAKISTANI ENGLISH LANGUAGE TEACHERS.** See SPELT.

**SOCIOLECT** [1970s: a blend of *socio-* and *dialect*]. A social dialect or variety of speech used by a particular group, such as working-class or upper-class speech in the UK. See DIALECT, LECT. [LANGUAGE]. S.R.

**SOCIOLINGUISTICS** [1930s: from the combining form *socio-*, referring to society and sociology, and *linguistics*]. The scientific study of the social aspects of language. The relationship between language and society is complex and sociolinguistics reflects this complexity, encompassing many different activities which are social and linguistic to varying degrees: for example, the analysis of conversation focuses on language as used in social interaction.

**Norms of speech.** Conversation analysts deal with norms for the practice of conversation, including turn-taking, interruption, and silence.

They may also investigate relatively contentless but highly important conversational markers such as *well* and *anyway* which help to indicate the structure of conversations. A related area, the *ethnography of speaking*, notes that norms for how language is used vary from one society to another, and that, for instance, while English conversations do not normally contain silences of more than a few seconds, other cultures may permit much longer silences. Work in the ethnography of speaking is important for cross-cultural communication, where different attitudes towards language use can lead to misunderstanding and hostile ethnic stereotyping. This may be true even where both parties are native speakers of the same language: for example, Greek Australians are less likely to react favourably to humorous irony than are Australians of Irish origin.

**Attitudes and expectations.** Language attitudes of a different sort are the subject of the *social psychology of language*. This area of sociolinguistics investigates attitudes that people have to different varieties (accents, dialects, languages) and the way in which these attitudes influence perceptions of the characteristics and abilities of speakers. These attitudes are clearly social in origin: for example, speakers of the prestigious BrE accent known as Received Pronunciation are often perceived to be more competent and intelligent than speakers with regional accents, this view arising simply from the high social status of RP. Similarly, some accents of English are regarded as being more or less aesthetically pleasing than others. This, too, can be shown to be the result of the social connotations that different accents have for listeners. Americans, for example, do not find the accent of the West Midlands of England ugly, as many British people do, which has much to do with the fact that they do not recognize these accents as being from the West Midlands.

**Accent, dialect, region, and class.** The relationship between accent and dialect, on the one hand, and social class background on the other, is an issue of considerable sociolinguistic importance. For example, dialects and accents of BrE vary both geographically and socially. The high status of RP is traditionally associated with the British upper class and the public schools (a group of private boarding-schools), and, although often associated with southern England, it shows no regional variation. The further one goes down the social scale, however, the more regional differences come into play, with lower-class or 'broad' accents having many regional features. One of the major advances of modern sociolinguistics has been the introduction of quantitative techniques, following the

lead of the American sociolinguist William Labov, which enables investigators to measure exactly and gain detailed insight into the nature of the relationship between language and social class.

In a sociolinguistic study in Bradford, Yorkshire, Malcolm Petyt showed that the percentage of *hs* 'dropped' by speakers correlated closely with social class as measured by factors such as occupation and income. While lower working-class speakers on average dropped 93% of all *hs* in words like *house*, upper working-class speakers dropped 67%, lower middle-class speakers 28%, and upper middle-class speakers only 12%. This study provides information about the source of some of the language attitudes mentioned above. *H-dropping* is widely regarded in Britain as 'wrong'. Teachers and parents have often tried to remove this feature from children's speech, sometimes claiming that since the *h* appears in the spelling it must be wrong to omit it in speech. This is obviously a rationalization: no one makes this claim about the *h* of *hour*, or the *k* of *knee*. The real reason for this condemnation of *h-dropping* is its correlation with social class and its low social status.

**Language change.** Such quantitative techniques enable linguists to investigate some of the processes involved in language change. Large amounts of tape-recorded data (obtained in such a way as to ensure as far as possible that speakers are speaking naturally) can be used to plot the spread of changes through the community and through the language. For example, Labov was able in the 1960s to show that in New York City the consonant *r* was being reintroduced in the pronunciation of words like *form* and *farm* by comparing the number of *rs* used by older speakers to the number used by younger speakers. He was also able to show that this change was being spearheaded by speakers from the lower middle class, probably because saying 'form' rather than 'fawm' is considered prestigious (and therefore 'correct') in US society, and because speakers from this class are more likely to be both socially ambitious and insecure about the worth of their dialects.

**Language planning.** Sociolinguistics can be concerned with observing the details of individual behaviour in, for example, face-to-face conversation. It can also be involved in the larger-scale investigation of linguistic behaviour in communities the size of New York City. It can furthermore be concerned with the relationship between language and society in even larger-scale units such as entire nations. Sociolinguists working in areas such as the sociology of language and language planning are concerned with issues like the treatment of language minorities,

and the selection and codification of languages in countries which have hitherto had no standard language. In nations such as Britain, Ireland, the US, Canada, Australia, and New Zealand, English is the majority language, in a relationship of dominance with numerically much smaller and officially much less well-supported languages, such as Gaelic and Welsh in Britain and Maori in New Zealand. Sociolinguists study such relationships and their implications for education. In the case of Britain, they also attempt to obtain information on more recently arrived languages such as Gujarati, Panjabi, Maltese, and Turkish. Elsewhere, they note that there are countries in which native speakers of English are in a minority, as in Nicaragua, Honduras, South Africa, and Zimbabwe.

**Switching languages and styles.** In multilingual situations, developments occur which are important for linguists, including the growth of pidgin and creole languages. Sociolinguists study the behaviour of bilinguals, investigating the way in which they switch from one language to another depending on social context. Speakers in all human societies possess large verbal repertoires, which may include different languages, different dialects, and different (less or more formal) styles. Varieties of language will be selected from this repertoire depending on features of the social context, such as the formality of the situation and the topic of conversation. Stylistic variation occurs in all English-speaking communities, signalled for the most part by vocabulary: for example, one might say *somewhat foolish* or *rather silly* or *a bit daft* depending on who one is talking to, what one is talking about, the situation one is in, and the impression one wants to create. Some English-speaking communities, like many Scots and members of overseas Caribbean communities, are *bidialectal*, having access to more than one dialect as well as different styles.

**Conclusion.** Sociolinguistics of all types is concerned with language as a social phenomenon. Some aspects of this subject may be more sociological in emphasis, others may be more linguistic. It is characteristic of all work in sociolinguistics, however, that it focuses on English and other languages as they are used by ordinary human beings to communicate with one another and to develop and maintain social relationships.

**SOCIOLOGESE** [20c: from *sociology* and *-ese* as in *journalese*]. An informal, usually pejorative term for the style and register of sociologists, especially when addressed to or used by non-sociologists. Fowler's *Modern English Usage* (1965, edited by Ernest Gowers) refers in the entry *sociologese* to 'the harm that is being done to the language' and adds:

Sociology is a new science concerning itself not with esoteric matters outside the comprehension of the layman, as the older sciences do, but with the ordinary affairs of ordinary people. This seems to engender in those who write about it a feeling that the lack of any abstruseness in their subject demands a compensatory abstruseness in their language. Thus, in the field of industrial relations, what the ordinary man would call an informal talk may be described as a *relatively unstructured conversational interaction*, and its purpose may be said to be *to build, so to speak, within the mass of demand and need, a framework of limitation recognized by both worker and client*. This seems to mean that the client must be persuaded that, beyond a certain point, he can only rely on what used to be called self-help; but that would not sound a bit scientific.

Critics who condemn sociologese usually make a simultaneous plea for plain language, especially in speeches and texts addressed to the general public. The issue appears to be the need to fit register to audience and be clear in what one says and writes rather than the invasion of the language at large by the jargon of sociology. See ACADEMIC USAGE, -ESE, JARGON, PLAIN LANGUAGE, REGISTER, TECHNOSPEAK. [STYLE, VARIETY].

**SOLECISM**, formerly **soloeism** [16c: from Latin *solæcismus*, Greek *soloikismós* what they

do in Soloi, solecism]. A traditional term for the violation of good grammar and manners, and any instance of this, such as saying *I didn't do nothin'* instead of *I didn't do anything* (especially if done by someone who 'ought to know better'). In classical times, Athenian or Attic Greek was generally considered the best, but the usage of the Athenian colony of Soloi in Cilicia was considered such a disgrace that it came to represent bad grammar at large. In the 2c, Lucian of Samosata composed a manual of usage entitled *The Solecist*, to help people improve their style and usage. The term has often been used in tandem with *barbarism*, the perceived malcoinage and abuse of words. See ATTIC AND DORIC, ATTICISM, BARBARISM, BARDOLATRY, KING'S ENGLISH. [STYLE, USAGE]. T.MCA.

**SOLIDUS.** See OBLIQUE.

**SOLILOQUY** [16c: from Late Latin *soliloquium* an act of talking to oneself, from *solus* alone, *loqui* to speak]. A speech in which a dramatic character utters his or her thoughts aloud; it was particularly common and important in Elizabethan and Jacobean drama. It may inform the audience, offer self-revelation of motive, or put inner conflict into words. The convention of 'overhearing' a character's thoughts was accepted by 16c theatre audiences and continued until late in the 18c, when the development of realist drama put it out of fashion. The soliloquy has been revived by some 20c dramatists, notably Eugene O'Neill in *Strange Interlude* (1928). A soliloquy ends the first part of T. S. Eliot's *Murder in the Cathedral* (1935). Samuel Beckett's characters frequently soliloquize: *Happy Days* (1961) is a sustained soliloquy. Early soliloquies are in the same language as the dialogue, but modern dramatists have tried to reproduce the inconsequence of thought. The soliloquy is different from the *aside*, a short speech addressed to the audience in the presence of other characters, and from the *monologue*, which is a distinct genre. In film and television, the soliloquy has evolved into a technique managed through a *voice-over*, in which a character's thoughts are expressed by his or her voice while doing something in silence. See ASIDE, MONOLOGUE. [LITERATURE, SPEECH]. R.C.

**SOLOMON ISLANDS.** A country of Oceania due north of Vanuatu, a constitutional monarchy and member of the Commonwealth. Capital. Honiara. Population: 303,000 (1988), 417,000 (projection for 2000). Languages: English and Solomon Islands Pidgin (both official), and indigenous languages. The islands were a

British colony from the late 19c, partly a German colony from 1885-1900, and became independent in 1978. See ENGLISH, MELANESIA, SOLOMON ISLANDS PIDGIN ENGLISH. [NAME, OCEANIA, VARIETY]. T.MCA.

**SOLOMON ISLANDS PIDGIN ENGLISH**, also commonly **Pijin** and technically **Neo-Solomonic**. A variety of Melanesian Pidgin English spoken in the Solomon Islands, in the south-western Pacific Ocean. It is closely related to Bislama in Vanuatu and Tok Pisin in Papua New Guinea. English is the official language of the Solomons, but Pijin is spoken by about half the population. In the early 1900s, copra plantations were established. The labourers employed there had also worked in Queensland and Fiji, where they had used pidgin English. The local variety stabilized early and several religious missions adopted it for use, though it never gained the status of Tok Pisin or Bislama. Throughout their post-colonial history, Solomon Islanders, unlike Papua New Guineans and Ni-Vanuatu, have never been in contact with any other European language but English. For this reason Pijin is closer than Tok Pisin to English and has less non-English vocabulary.

It is syntactically more elaborate than Tok Pisin, for example in having many more prepositions and a greater range of connectives, such as *so*, *bat*, *bikos* (so, but, because), as in: 'Mitufala jes marit nomoa ia so mitufala no garem eni pikinini iet. Mi traehad fo fosim haosben blong mi fo mitufala go long sip bat taem ia hemi had tumas fo faendem rum long sip bikos plande pipol wandem go-go hom fo Krismas tu' (from J. Holm, *Pidgin and Creole Languages*, volume 2, 1988, p. 536) [Translation: We've just got married only we haven't got any children yet. I tried hard to force my husband to go on the ship, but times were hard and we couldn't find room on board because plenty of people wanted to go home for Christmas too]. In this text, in addition to *so*, *bat*, *bikos*, *fo* (for) is used to introduce clauses. In cases like these, Tok Pisin would use *long* or *bilong*. See AUSTRALIAN PIDGIN, MELANESIAN PIDGIN ENGLISH. [OCEANIA, VARIETY]. S.R.

**SOMERSET.** The name of a south-western county of England and of its local speech, sometimes called *Somersetian* and occasionally referred to informally as *Zummerzet*. Many of its features are common to the entire West Country, but the diphthongs in such words as *cow*, *house* and *tail*, *came* are closer to RP than elsewhere in the region. The use of the voiced initial fricative in words such as 'zum' for *some* and 'varm' for *farm* is becoming rare in the towns. The influence of Bristol, the main city of the region

(though since 1974 it has been in the new county of Avon), has helped mark off local speech from that of Devon and Dorset: a well-established feature in and around the city is a final or 'intrusive' -l in words that end in a weak vowel: 'areal' for *area*, 'cinemal' for *cinema*, 'Victorial Centre' for the *Victoria Centre*, a well-known shopping mall. The name *Bristol* institutionalizes the usage, having originally been *Bristow* (earlier *Brigstow*, the holy place by the bridge). See DORSET, MUMMERSET, WEST COUNTRY. [EUROPE, NAME, VARIETY]. S.E.

**SONNET** [16c: from Italian *sonnetto* a little sound, a name at first applied to various short poems]. A lyric poem in 14 lines, usually of iambic pentameter. The Italian or Petrarchan sonnet, imitating the style of Francis Petrarch, was introduced into English in the 16c by Sir Thomas Wyatt. It consists of two parts: the *octave* or *octet*, rhyming *abbaabba*, and the *sestet*, rhyming variously but usually *cdecde*. The octave may pose a question that the sestet answers, or the octave may state one point of view and the sestet another. The Italian sonnet is difficult in English because it calls for repeated rhymes. Some poets have broken the Petrarchan rule by ending the sestet with a rhymed couplet; others have used *abbaacca* in the octave. Wyatt's contemporary Henry Howard, Earl of Surrey, devised the form known as the *Shakespearean sonnet*, rhyming *ababcdcd efefgg*. Shakespeare's 154 sonnets, generally considered the finest Elizabethan sonnets, were often devoted to love and have been arranged in a series, of which the following is no. 116:

Let me not to the marriage of true mindes  
Admit impediments. Loue is not loue  
Which alters when it alteration findes,  
Or bends with the remouer to remoue:  
O no, it is an ever fixed marke  
That lookes on tempests and is neuer shaken;  
It is the star to euery wandring barke,  
Whose worths vnknowne, although his high be taken.  
Loue's not Times foole, though rosie lips and cheeks  
Within his bending sickles compasse come,  
Loue alters not with his breefe houres and weekes,  
But beares it out euen to the edge of doome:  
If this be error and vpon me proued,  
I neuer writ, nor no man euer loued.

The sonnet fell largely into disuse after the Restoration of 1660, but was revived by the Romantics (especially Wordsworth) at the end of the 18c. Poets of the 20c who have written sonnets include W. H. Auden and Dylan Thomas. [LITERATURE]. R.C.

**SOPHISTRY** [14c: from Old French *sophistrie* (Modern *sophisterie*), Latin *sophistria* specious reasoning, from Greek *sophistēs* a wise person, and pejorative *-ry* as in *palmistry*]. Reasoning

that seems sound but is misleading. The *sophists*, itinerant teachers in ancient Greece, were originally celebrated for their wisdom and rhetorical skills, but latterly widely regarded as intellectually suspect, in contrast with the *philosophoi* (lovers of wisdom), who seemed to be humbler about their knowledge. Anything *sophistical* is therefore plausible but dubious. Nowadays, *sophistication* means worldly wisdom, complexity, and refinement, but from the 14c to the 18c it meant hoodwinking people with sophistry: 'Hers were the acts of cunning practised upon fear, not those of sophistication upon reason' (Ann Radcliffe, *The Romance of the Forest*, 1791, ch. 3). Compare LOGIC. [LANGUAGE, STYLE]. T.MCA.

**SORT**. See FONT.

**SOUND** [13c: from Old French *son*, Latin *sonus*]. (1) In technical terms, vibrations that travel through the air at some 1,087 feet (331 metres) per second at sea level and are heard through their stimulation of organs in the ear. (2) A particular effect of such vibrations: *the sound of bells*; *a speech sound*. (3) In phonetics, the audible result of an utterance: *the b-sound in 'big'*. (4) To make or produce a sound: *The bells sounded across the valley*. (5) To indicate (something) through sound: *The bugle sounded 'lights out'*. (6) To say or utter: *Sound each letter clearly*. (7) To have an effect as sound: *Her voice sounded loud*. (8) To seem or appear, through what is said or written or how it is said or written: *You sounded unhappy last night*; *The report doesn't sound right*. (9) Although the nouns *sound* and *noise* can often be used interchangeably (*What was that sound/noise?*), *sound* usually relates to regular and harmonious vibrations, *noise* to irregular and discordant vibrations. See PHONETICS, SPEECH SOUND, TONE, VOICE. [SPEECH]. T.MCA.

**SOUND SYMBOLISM**. See PHON(A)ESTHESIA.

**SOUTH, The.** (1) The southern part of a country: *Northern Italy is very different from the South*. The adjective is used contrastively with *North* in such national and regional names as *South Korea*, *South Vietnam*, *South Carolina (the United States)*, *South Island (New Zealand)*, (*the state of*) *South Australia*. (2) The South of England, especially London and the Home Counties. (3) The South of Ireland, particularly the Irish Republic contrasted with Northern Ireland: *You're from the South, are you not?* It is a rather 'Irish' feature of the South that one of its counties, Donegal, is in the extreme north-west of the island. (4) The eleven states that formed the Confederacy during the American Civil War

(1861-5), consisting of the seven states of the *Deep South* (Alabama, Florida, Georgia, Louisiana, Mississippi, South Carolina, and Texas) and the four states of the *upper South* (Arkansas, North Carolina, Tennessee, and Virginia). In addition, border states that share some of Southern culture and history, including the holding of slaves, are often thought of as at least partly Southern: Delaware, Kentucky, Maryland, Missouri, and West Virginia. Despite internal differences, the people of the South are conscious of a cultural cohesion strongest in the Deep South. Most white Southerners trace their ancestry in the US to before 1800 and to English-speaking forebears from the British Isles. Their culture includes a romantic attachment to the past, allegiance to Protestant Christianity (accounting for the nickname *The Bible Belt*) and a belief in a class system based in part on ancestry. Black Southerners (many in fact of mixed descent) have their roots in West Africa, from which their ancestors were taken as slaves. Their culture also includes Protestant Christianity, and has shaped such pre-eminently American forms of music as jazz and the blues. About one-fifth of the population of the South is black, and the long and difficult relationship between the races has shaped the social, economic, educational, religious, and political institutions of the region. Historically more agrarian, poorer, and less educated than the North, the South has recently experienced a prosperity that has brought many outsiders to the region. Compare ASIA (EAST), NORTH, WEST. See AMERICAN LITERATURE, DIALECT IN AMERICA, DIXIE, SOUTHERN ENGLISH. [AMERICAS, NAME].

T.MCA., C.C.E., J.A.

**SOUTH AFRICA.** Official title: English *Republic of South Africa*, Akrikaans *Republiek van Suid Afrika*. Short form *RSA*. Black African activist name *Azania*. A state of southern Africa. Administrative capital: Pretoria. Judicial capital: Bloemfontein. Legislative capital: Cape Town. Population: variously estimated between 27m and 36m (late 1980s; average 31.5m); 44.6m (projection for 2000). Ethnicity: 70% black, 18% white, 9% Coloured (mixed), 3% Asian. Religion: 73% Protestant, 17% Roman Catholic, 2% Hindu, 1% Muslim; most blacks, whites, and Coloureds are Christian. Education: primary 75%, secondary 30%, tertiary 10%, literacy 65%. Languages: Afrikaans, English (both official); others include (black African) Zulu, Xhosa, South Ndebele, Sotho, Tswana, Siswati/Swazi, Tsonga, Venda, Shangaan (South African) Hindi, Tamil, Telugu, Urdu. The earliest inhabitants of the region appear to have been the San (better known as Bushmen) and the Khoi Khoi (traditionally but inaccurately referred to as

Hottentots). They are speakers of the so-called *Khoisan* languages, the term combining their names. The first Europeans to reach coastal southern Africa were the Portuguese in the late 15c. Dutch settlement began in 1652, followed by Huguenots in 1688, both of whom were well established when the British took the Cape in 1795. The Bantu peoples appear to have been moving from the north into the territories of the San and Khoi Khoi at about the same time as the Dutch began colonizing the same areas from the south. British settlers landed at Port Elizabeth in 1820 and settled in the Eastern Cape. To escape British control and keep their slaves after the abolition of slavery in the British Empire in 1833, many Dutch-speaking farmers (Boers) made the Great Trek beyond the Orange River. Their republic of Natal was established in 1839 and annexed by the British in 1846, but the republics of Transvaal (1852) and Orange Free State (1854) were left alone.

The rivalry of British and Boer was sharpened by the discovery of diamonds and gold, resulting in two wars (1880-1, 1899-1902), both won by the British without however settling any social and linguistic problems. In 1910, Cape Colony, Natal, Orange Free State, and Transvaal became provinces of the Union of South Africa, a dominion of the British Empire. In 1931, South Africa became independent within the Commonwealth and in 1961 became the Republic of South Africa, outside the Commonwealth. The National Party, dominated by the Afrikaner community, has governed since 1948, adopting a policy of *separate development* or *apartheid* (Afrikaans: separateness) among the various races: African, Asian, 'Coloured', and European. Voting rights were restricted to European South Africans until 1983, when some were extended to Coloureds and Asians. In the 1960s, the government created ten 'homelands' for the major African peoples, and blacks were classed as citizens of these 'homelands' rather than as citizens of the RSA: see BANTU. Bophuthatswana, Ciskei, Transkei, and Venda were declared independent between 1976 and 1981, but none has been recognized internationally. There has been both passive and guerrilla resistance by blacks to white rule, culminating in the declaration of a state of emergency in 1986. In the early 1990s, there were signs of possible reconciliation between the races and of social and political reform, including especially the dismantling of apartheid. The nature and use of the languages of South Africa are affected by the history and current social and political situation in the RSA.

At present black South African school pupils learn through the medium of their mother tongue for the first four years of school, with

English being introduced as one of their subjects. In the fifth year of school, English becomes the medium of instruction. The change happens abruptly in most cases, and there is a high failure and drop-out rate at this level. There is considerable debate about whether English should be introduced earlier or later; some advocate offering a choice of medium: mother tongue or English throughout school. The reasons against introducing English early are that there is a shortage of adequately trained primary teachers, and that many new concepts and skills are difficult in themselves, and having to grasp them through a foreign language makes them even more difficult. One reason given for introducing English early is that it has to be mastered at some time, and one might as well get on with it. Another is that local African languages do not always have terms for the concepts that have to be learned (such as multiplication and division in mathematics). In practice, teachers often teach in the mother tongue, simply borrowing English terms when necessary.

See AFRICA, AFRICAN ENGLISH, AFRICANISM, AFRICAN LANGUAGES, AFRIKAANS, AFRIKAANS ENGLISH, ANGLIKAANS, BANTU, BOTSWANA, DIALECT IN SOUTH AFRICA, DUTCH, ENGLISH, ETHNIC NAMES, FANAKALO, FLYTAAL, GERMANIC LANGUAGES, GORDIMER, LESOTHO, NAMIBIA, SOUTH AFRICAN BROADCASTING, SOUTH AFRICAN ENGLISH, SOUTH AFRICAN ENGLISH DICTIONARIES, SOUTH AFRICAN INDIAN ENGLISH, SOUTH AFRICAN LANGUAGE ORGANIZATIONS, SOUTH AFRICAN LANGUAGES, SOUTH AFRICAN LITERATURE IN ENGLISH, SOUTH AFRICAN PLACE-NAMES, SOUTH AFRICAN PRESS, SOUTH AFRICAN PUBLISHING, SWAZILAND, TSOTSI-TAAL. [AFRICA, NAME]. T.M.CA.

**SOUTH AFRICAN BROADCASTING.** Broadcasting in the Republic of South Africa makes use of English, Afrikaans, and several African languages, and is almost entirely nationally controlled. Public radio transmissions were introduced in 1924, and the *South African Broadcasting Corporation* or *Suid-Afrikaanse Uitsaaikorporasie* was formed by Act of Parliament in 1936. *Radio South Africa* (English) and *Radio Suid Afrika* (Afrikaans) broadcast nationally, and *Radio RSA* broadcasts to other countries in English. There are also such regional and special-interest stations as *Radio Algoa* in the Eastern Cape, *Radio Metro* mainly for blacks, *Radio Lotus* mainly for Indians, *Radio 5* for all-day pop music, and *Radio Allegro* for classical music. There are also independently owned and operated stations such as *Radio 702* in Transvaal and *Capital Radio*, both broadcasting music, news, and interviews. Television was introduced in 1974 and operates from the SABC/TV Centre in Johannesburg, with the

exception of 'Bop TV', the network based in Bophuthatswana (a black homeland), which can be picked up in some northern areas of the RSA. TV channels are nationally controlled with the exception of *M-Net*, a commercial network whose transmissions are scrambled and require a decoder and an independent subscription. The main SABC channel, *TV1*, is in English and Afrikaans, which are alternated at earlier and later times and days of the week. There are mixed-language early morning sessions and afternoon sessions for children. *TV2* and *TV3* serve the black community, generally using African languages and English. Certain times and frequencies are used for the transmission of the entertainment channel *TV4*. See BROADCASTING. [AFRICA, MEDIA]. J.B.

**SOUTH AFRICAN ENGLISH**, short forms *SAE*, *SAfrE*. The English language as used in the Republic of South Africa, the first language of c.10% (about 2.7m) of the total population of the RSA and its present black 'homelands'. About two-thirds of this 10% are white, and most of the rest Indian or 'Coloured' (mixed African and European descent). To a small but important African élite, English is a 'second first language', and it is spoken fluently by many Afrikaners. As a lingua franca, it is used with varying degrees of proficiency by millions whose mother tongue is not English. In 1990, with Afrikaans, it was one of the two principal official languages; a new 'language dispensation' appears likely in the near future. In the following discussion, South African English is distinguished from both *Afrikaans English* and black second-language varieties.

**History.** The Dutch settlement at the Cape dates from 1652. When the British seized the colony in 1795, they moved into a long-established Dutch-speaking community with its own culture, administration, and patterns of relationship with the black and Khoisan peoples of the subcontinent. The Dutch community was already diglossic, for example using standard Dutch for religious and governmental purposes and local varieties known variously as *Cape Dutch*, *colonial Dutch*, *South African Dutch*, or simply *the taal* ('the language') as dialects of 'hearth and home'. These were later, between 1875 and 1925, standardized as *Afrikaans*. Since the end of the 18c, many speakers of English in southern Africa have been in close contact with Dutch/Afrikaans people (with many intermarriages), and less closely with speakers of Bantu and Khoisan languages. Competent bilinguals (for example, in English and Dutch, or Xhosa and English) have been numerous and

influential, and conditions have favoured complex code-mixing and code-switching. There is also a large body of published English writings by non-English authors ranging from the Tswana Sol Plaatje to the Afrikaner Andre Brink.

**Pronunciation.** (1) SAE is typically non-rhotic, but may become rhotic or partially so in speakers strongly influenced by Afrikaans English. These may have final postvocalic /r/ and a medial /r/ as trill or tap. Lanham has observed an initial obstruent (fricative) /r/, in such phrases as *red, red rose*, in older speakers in the Eastern Cape. (2) Variations in accent depend usually on education, social class, domicile (rural or urban), and accommodation to speakers of varieties different from one's own. (3) Conservative middle-class accents remain close to RP, though typically with the lowering and retraction (in certain phonetic contexts) of the vowel in RP *bit*, *pin* to a position approaching that of schwa /ə/, in varying degrees. The vowel of RP *goose* is often central rather than back. (4) Salient features of 'broader' accents include the following renderings: the vowel of RP *trap* as 'trep' (Afrikaans/Dutch and the southern Bantu languages lacking a vowel of the *trap* quality); the long back vowel of RP *car* in a higher and more rounded version as in the stereotype 'pork the car'; diphthong reductions as in *fair hair* as /fe: he:/, and the vowel of RP *price* in a glideless or nearly glideless version, so that *kite* may resemble *cart*. (5) In a class of loanwords from Afrikaans, such as the interjection *ga* (/xa/) expressing disgust, and *gedoente* (fuss, bustle), most speakers use a borrowed velar or palatal fricative like the sound in ScoE *loch*. In another loan class, of words such as *bakkie* (light delivery van) and *pap* (porridge), there is a vowel between those of RP *but* and *hot*. The precise extent of Afrikaans influence on the sound system and other aspects of SAE is a matter of controversy. In many cases, such as the vowel of the *trap* class, there seem to have been convergent influences from English settler dialects, Dutch/Afrikaans, and in some cases African languages.

**Grammar.** The syntax of formal SAE is close to that of the international standard. Colloquial SAE, however, has many features, such as: (1) Sentence initiators such as affirmative *no*, as in *How are you?—No, I'm fine*, probably from Dutch/Afrikaans, and the emphatic *aikona* as in *Aikona fish* ('No fish today'), of Nguni (Bantu) origin. The common informal phrase *ja well no fine* (yes well no fine) has been adopted in solid written form as an affectionate expression of ridicule (*jawellnofine*) for broad SAE usage, and has served to name a South African television programme. (2) The suffixed phrase *and them*, as

in *We saw Billy and them in town* ('Billy and the others'), a form found also in Caribbean varieties. (3) *Busy* as a progressive marker with stative verbs, as in *We were busy waiting for him*, and often with a non-animate subject, as in *The rinderpest was busy decimating their herds*. (4) The all-purpose response *is it?*, as in *She had a baby last week.—Is it?*, heard also in Singapore and Malaysia, but closely parallel in use to Afrikaans *Is dit?* (5) Extensive use of Afrikaans 'modal adverbs', such as *sommer* ('just') in *We were sommer standing around*.

**Vocabulary.** SAE has borrowed freely. A rough estimate of source languages for distinctively South African words is: Dutch/Afrikaans 50%, English 30%, African languages 10%, other languages 10%. The most recent years show an increasing proportion of items of English or African-language origin. Most of the SAE items best known internationally, such as *Afrikaner*, *boer*, *trek*, and *veld*, are of Dutch/Afrikaans origin. An exception is *concentration camp*, coined by the British during the second Anglo-Boer War. In most domains, such as landscape and topography, there is likely to be: (1) A high proportion of 'common words' borrowed directly from Dutch/Afrikaans, such as *drift ford* (1795), *kloof* deep valley or ravine (1731), *land* a cultivated stretch, usually fenced (from Cape Dutch), and *veld* open country (1835). (2) A number of 'English' items translated or partially translated from Dutch or Afrikaans, such as *backveld* back country, outback, from Dutch *achterveld*. (3) Some words of English origin that have acquired new senses, such as *location*, originally, as in Australia, an area allocated to white settlers, later 'a district set aside for Blacks', and still later 'a segregated urban area for Blacks', typically with strongly unfavourable connotations (as in 'the usual mess, the location, of sacking and paraffin tins': Dan Jacobson). In this sense, *location* has largely given way to the equally euphemistic *township*. (4) A sprinkling of items of African-language origin: for example, *karroo* semi-desert (Khoi, 1776), *donga* an eroded watercourse, usually dry (Nguni). (5) A few words reflecting South Africa's cosmopolitanism, past and present, such as *kraal* an African or Khoikhoi village, an enclosure for cattle (probably from Portuguese *curral*: compare Spanish *corral*).

Most topic areas reflect the wide range of peoples and cultures of past and present-day South Africa. Thus, among trees are the flowering *keurboom* (South African Dutch, 1731), the hardwoods *stinkwood* and *yellowwood* (translating Dutch *stinkhout* and *geelhout*) and *silver tree*, an English coinage dating from early travellers' accounts of the Cape (Dutch: *wittebome*

white trees). Among living creatures are the antelopes *eland* (Dutch: elk), *kudu* (probably Khoisan), *impala* (Zulu), and *tssebe* (Tswana). Human types range from the *predikant* or *dominee* (Dutch/Afrikaans: minister of the Dutch Reformed Church) through the *sangoma* (Nguni: diviner) to the *ducktails* (Teddy boys) of the streets of the 1960s. Artefacts range from the traditional *kaross* (Khoisan via Afrikaans: skin blanket) through the *Cape cart* (mistranslating Afrikaans *kapkar* hooded cart) to the ubiquitous *bakkie* (from Afrikaans: basin or other container), a light truck, now a symbol of virile open-air life. Liquor ranges from traditional Nguni *tshwala* brewed with malted grain or maize (formerly *Kaffir beer*, now often *sorghum beer*) to the formidable *mampoer*, a brandy distilled from peaches and other soft fruits, prominent in the fiction of H. C. Bosman and now the focus of a cult of its own, possibly named after the Sotho chief Mampuru. *Mahog(a)* is brandy as served in township shebeens (many now legalized as *taverns*) and possibly from English *mahogany*. Foods include *boerewors* (Afrikaans: boer sausage), a centrepiece of a *braaivleis* (Afrikaans: barbecue), and *sosaties* (curried kebabs, probably from Malay). At outdoor parties, the focal dish may be *potjiekos* (Afrikaans), a stew with ingredients to taste, made in a three-legged pot over an open fire. African township culture has generated an enormous vocabulary that includes *matchbox* a small standardized dwelling, *spot* a shebeen or tavern, *boere* ('boers') the police, and *tsotsi* an African street thug (of uncertain origin). Much of the vast government vocabulary of apartheid remains in use, such as *group area* an area set apart for a particular racial group, and *resettlement*, sometimes forcible, of people into such areas. 'Resistance vocabulary' includes the rallying cry *Amandla (ngawethu)* 'Power (is ours)', from Nguni, and the more recent *Viva!*, perhaps from Portuguese-speaking Mozambique, *comrade* in the specialized sense of 'political activist, usually young' (but also as in *Comrade Slovo* or *Comrade Mbeki*), and *necklace* (execution by igniting a petrol-filled tyre hung round the victim's neck). Two items of special interest are *muti* and *larney*. The first, from Zulu, originally designated traditional African medicines and other remedies, but has passed into general white colloquial use as in *The pharmacist gave me a special muti for this*. *Lahnee*, of unknown origin, appeared first in IndE in general colloquial use, usually as *larney*, meaning 'smart, pretentious', as in *a hell of a larney wedding*.

**SOUTH AFRICAN ENGLISH DICTIONARIES.** The first dictionary of South African English was *Africanderisms* (1913), compiled by the Methodist minister Charles Pettman, updated in 1934 by C. P. Swart in an unpublished thesis for the U. of South Africa ('Africanderisms: A Supplement') and in 1965, 1967, and 1970 by M. D. W. Jeffreys in *African Notes and News*. In 1968, the *Institute for the Study of English in Africa* began work towards a *Dictionary of South African English on Historical Principles*. In 1971, it published privately a sample of 50 historical entries called *Towards a Dictionary of South African English*, and in 1976, in a limited edition, *Voorloper* ('Forerunner': the term for a leader of a span of oxen), by J. D. Walker, P. M. Silva, and an editorial committee, a work of 921 pages. This was followed in 1984 by *Agterryer* ('After-rider': a mounted groom), a three-volume 1,638-page work by W. and J. Branford, M. Britz, and J. Pargiter, containing further entries. These, with further items still, constitute the basis for the *DSAE on Historical Principles*, to be published by Oxford University Press (UK) in the 1990s. The offices of the project are at Rhodes U., Grahamstown, Cape Province. A smaller work by J. Branford, *A Dictionary of South African English* (OUP SA), appeared in 1978, with revised editions in 1980, 1987, and 1991. It contains illustrative quotations and has become a generally used reference book, but is not intended as a substitute for the historical dictionary. OUP SA published in 1977 *A Dictionary of South African English Usage* by D. R. Beeton and H. Dorner, a prescriptive usage text combined with a largely biological vocabulary, and in 1987 a South African edition of *The Pocket Oxford Dictionary*, adapted with about 2,000 South African entries by W. Branford. See DICTIONARY. [AFRICA, REFERENCE].

J.B., W.B.

**SOUTH AFRICAN INDIAN ENGLISH**, short form *SAIE*. English as used by South Africans of Indian background. In the province of Natal, where the majority of Indian South Africans live, SAIE is the first language of most under 40. The ancestral languages, chiefly Gujarati, Hindi, Tamil, Telugu, and Urdu, are in various stages

of obsolescence 130 years after the first immigrants under indentureship in 1860. SAIE is not generally recognized as a variety in its own right, and in educational circles is stigmatized as poor English. It is a continuum from the low-prestige basilect of older people with little education to an acrolect used by some younger educated speakers that differs little from general South African English. Between these extremes is the mesolect, the usage of the majority. Indian influence is apparent in the syllable-timing of informal speech, retroflexion of /t, d/, especially at the ends of syllables (as in *but* and *bud*), and the replacement of /θ, ð/ by /t, d/. Parataxis is often favoured over hypotaxis (*I went to Derek—Derek filled that form in—he sent it*), topicalization is used for emphasis (*Only asthma I had*), and the word order of the Indian languages is sometimes used, as when kinship titles follow proper names (*Johnny Uncle, Meena Auntie*) and relative clauses precede the head noun of the main clause (*You can't beat Vijay's-planted tomatoes: You can't beat the tomatoes which Vijay plants*). Some lexical similarities with IndE suggest the 19c influence of teachers from India: *cousin-brother* a male first cousin, *further-studies* higher education, and the compounds *butter-bread* bread and butter, *curry-rice* curry and rice. Such similarities are not enough to suggest a simple process in which the English of the sub-continent was transplanted to Natal. Although the number of acrolectal speakers is increasing, there are few signs of merging with general South African English, partly because of past policies of segregation in housing and education. See AFRICAN LANGUAGES, INDIAN ENGLISH, SOUTH AFRICAN ENGLISH. [AFRICA, ASIA, VARIETY]. R.M.

**SOUTH AFRICANISM** [1970s]. A word or other expression that occurs in or is typical of the English of South Africa, such as the internationally known *laager* and *trek*, the local informal term *lekker* pleasant, excellent, delicious (as in *lekker sunshine* nice warm sunshine, and *the lekkerest ladies in London*), and the contrastive acronyms *ESSA* (English-speaking South African) and *ASSA* (Afrikaans-speaking South African). See -ISM, SOUTH AFRICAN ENGLISH. [AFRICA, STYLE, WORD]. T.MCA.

**SOUTH AFRICAN LANGUAGE ORGANIZATIONS.** The foremost language organizations in South Africa are the *Afrikaanse Akademie*, with an authoritative role for Afrikaans similar to that of the *Académie française*, and the *Afrikaanse Taalkommissie* (Afrikaans Language Commission). There are no comparable organizations for English. *The English Academy of Southern Africa* (founded 1961), with members from all language groups,

is largely concerned with literary studies, but makes recommendations on style and punctuation for the guidance of teachers and others. It publishes the periodical *EAR* (an acronym for *English Academy Review*) and has a telephone service, *Grammar-Phone*, that answers questions on usage. *The South African Council for English Education (SACEE)* holds symposia and sponsors lectures on subjects relating to English language and teaching. The bilingual *Linguistic Association of Southern Africa/Linguistiese Vereniging van Suider Afrika* (founded in the 1970s) provides the broadest forum for linguists, but is not strongly supported by English-speaking academics, since many of them are not sufficiently bilingual. The Association publishes *Taalfasette* ('language facets'), in which some of its proceedings appear, and *The South African Journal of Linguistics*. The *South African Applied Linguistics Association (SAALA)* draws on a wider field and produces a quarterly newsletter. The *Names Society/Naamkundige Vereniging* (founded in the 1970s) is bilingual, has regular annual conferences, and publishes the journal *Nomina Africana* and the proceedings of major conferences. The *Institute for the Study of English in South Africa (ISEA: founded 1965)* is a research institute of Rhodes U., Grahamstown. Its interests have been: (1) The encouragement of South African literature, to which end it publishes *New Coin* (poetry by new writers) and *English in Africa* (a literary quarterly). (2) Running literary programmes for black children. This activity has become so large and complex that it is now separated off into what is known as the *Molteno Project*, named after the sponsors of the scheme. See SOUTH AFRICAN ENGLISH DICTIONARIES. [AFRICA, LANGUAGE]. J.B.

**SOUTH AFRICAN LANGUAGES.** The languages of South Africa consist of African languages and languages from Europe and Asia. In 1990, about four in every five South Africans were speakers of Bantu languages, though Afrikaans and English have substantial blocks of mother-tongue speakers. There are currently no reliable figures for language groupings in the total population (c. 35.2m in 1987). Estimates are complicated by the problems of what, in a multidialectal society, constitutes a 'language', by governmental manipulations during the 'apartheid era', and by the lack of census language data since 1980. There are two major groups of Bantu-speaking peoples: *Nguni* and *Sotho-Tswana*. Nguni (perhaps 15m) includes over 6.5m speakers of *Zulu*, well over 6m of *Xhosa*, and (in the Republic) about 1m of *Siswati* (*Swazi*). Sotho-Tswana includes about 2m speakers of 'Southern Sotho', about 3m of *Tswana* (formerly called *Sechuana* or *Bechuana*),

and about 3m of 'Northern Sotho'. The Nguni languages are largely mutually intelligible, as to a lesser extent are the Sotho-Tswana languages. A 'standardized Nguni' and a 'standardized Sotho', initially as written languages, are possible options for a post-apartheid society. Zulu is said to be used in some areas as a *lingua franca*, and there are many 'township colloquials', hybrid varieties in black urban areas such as *flytaal* and the 'Pretoria Koine'. The *Tsonga* group has about 1m speakers in the Republic, *Venda* about 0.5m. *Afrikaans*, Africa's only home-grown language of Germanic origin, has about 6m speakers, over half of them white and most of the rest Coloured; *English* has perhaps 3.5m, two-thirds white. Both are official, and widely used as second languages. The original languages of the Indian population (for example, the Dravidian languages Tamil and Telugu, and the Indo-Aryan languages Gujarati and Urdu) are rapidly giving way to English. The most important minority 'white' language is Portuguese. Khoisan languages (formerly called *Hottentot* and *Bushman*) are spoken by small groups in South Africa and by larger populations in Namibia, the largest being the *Namas* (c.45,000). See AFRICAN LANGUAGES, AFRIKAANS, ANGLIKAANS, BANTU, FANAKALO, FLYTAAL, NAMIBIA, SOUTH AFRICAN ENGLISH, TSOTSI-TAAL. [AFRICA, LANGUAGE]. W.B.

**SOUTH AFRICAN LITERATURE IN ENGLISH.** Literature in English in South Africa originated during immigration from Britain in the 1820s to a former colony of The Netherlands, where Dutch, some Portuguese, and many indigenous languages were spoken. The cross-fertilization of the various languages characterizes the literature at large. Early prose writing was largely non-fictional: journalism, travellers' tales, and hunting romances that evolved into a tradition of fictional realism. First were the imperialist romances of Henry Rider Haggard, such as *Allen Quatermain* (1887), followed by a pastoral tradition whose leading writers were Olive Schreiner (*Story of an African Farm*, 1881) and Pauline Smith (*The Little Karoo*, 1925). Smith's work transfers into English the structures of Afrikaans, the language of her characters, a pattern followed by Herman Charles Bosman in *Mafeking Road* (1947) and others.

**Race and politics.** In the 20c, social realism has dominated in an increasingly politicized literature that, since the poetry of the 1820 settlers Thomas Pringle and Andrew Geddes Bain, has fostered a socially and racially liberal attitude. William Plomer's *Turbott Wolfe* (1929) was the first novel to use social realism as a mode of

protest against repressive political practice. In the work of Alan Paton (*Cry, the Beloved Country*, 1948) the resonances of the Bible are consonant with the author's liberal humanist standpoint. Since the advent of apartheid in 1948, an awareness of the indignities suffered by non-whites under repressive Nationalist legislation has fuelled a committed literature among both white and black users of English, in which writers have sought to construct new forms to deal with a complex situation. From the 1960s, literature has tended to approach an African rather than a European consciousness, although such novelists as Nadine Gordimer (*The Conservationist*, 1974) and Dan Jacobson continue to use European models. White South African poetry, dominated at first by Roy Campbell (*Adamastor*, 1930) and more recently by Douglas Livingstone (*The Devil's Undertone*, 1978), has also tended to look stylistically to Europe though material is invariably local.

**Black writing.** Writing by blacks had been sparse, nurtured by church and mission schools and drawing heavily on British models, but in the 1950s writers associated with the black magazine *Drum*, centred in Johannesburg, were publishing material for readers in the townships. A new style developed: impressionistic, energetic, racy, though still complying with Anglo-American codes. In the late 1950s and 1960s, however, political protest and black writing were suppressed; many writers went into exile, where they continued to produce a largely poetical or autobiographical literature, such as Ezekiel Mphahlele's *Down Second Avenue* (1959). Oswald Mtshali's collection of poetry, *Sounds of a Cowhide Drum*, signalled the flowering of black poetry in the 1970s under the ideology of Black Consciousness. It became a matter of principle to reject Western culture, associated with the oppressor, to represent black standards, and to assist in consciousness-raising. Fostered by *Staffrider* magazine in Johannesburg, a new form of English emerged, especially among those whose facility in standard English had been destroyed by the policies of Bantu education, that uses *tsotsi-taal* (the *lingua franca* of the townships), the vernaculars, Afrikaans, Americanisms, and jazz rhythms. It also mingles epic and oral techniques in a rhetoric of resistance. In ideology and practice, it is similar to the radical poetry of West Indian immigrants in England, where much of the writing is conceived as performance. Some whites, such as the one-time political prisoner Jeremy Cronin, are involved in similar linguistic experimentation.

**A vague middle ground.** A parallel development has taken place in black theatre, especially since the non-racial Market Theatre opened in 1976,

the year of the Soweto riots. Here is staged an indigenous dramatic form, with its roots in community theatre, giving the voiceless a voice. Athol Fugard, a leading white dramatist, has pioneered a new type of non-racial and politicized theatre based on US models but relying heavily on improvisation. It has been difficult for white, English-speaking writers to find an idiom to express their abiding sense of alienation and marginalization, trapped in a vague middle ground between the opposing nationalisms of blacks and Afrikaners and fearing a cataclysm. Recently, in what has been dubbed a *literature of disaster*, poets have turned for models to Italian, Russian, and South American poetry. In fiction and poetry, a movement led by J. M. Coetzee (*Waiting for the Barbarians*, 1980; *Foe*, 1986) looks outside the Anglo-African nexus, basing its work on the theories of post-structuralism and such non-British models as Albert Camus and Roland Barthes. See GORDIMER. [AFRICA, LITERATURE].

**SOUTH AFRICAN PLACE-NAMES.** The place-names of South Africa reflect its complex multiracial and multilingual history. Their main sources are African languages, Afrikaans, and English.

**African languages.** Many place-names, especially in the west, are from the Khoisan (Bushman, Hottentot) languages, such as *Namib*, *O'Kiep*, *Garies*, *Nabapiet*. A major study of these names, known in Neo-Latin as *Toponymica Hottentotica*, has been made by G. S. Nienaber and P. Raper. There are many names from African languages, particularly Zulu names in Natal, such as the river *Amanzimtoti* (sweet water) and the hill *Majuba* (doves), the site of the battle of 1882, and the Cape Town township *Khayelitsha* (new home). The majority of new and relatively new place-names are of African-language origin. Several prefixes regularly appear in names, such as *Kwa-* (place of), as in *KwaZulu* (place of the people of heaven) and *KwaMashu* (Marshall's place), *e-* (on) as in both *Empangeni* and *Entabeni* (on the mountain), and *um-*, usually in the names of rivers, such as *Umfolozo*, *Umhlanga*, *Umkomazi*, *Umdhloti*.

**Afrikaans.** Various city names are associated with leaders of the Afrikaner community, such as *Pretoria*, after Andries Pretorius, and *Pietermaritzburg*, after the Voortrekker leaders Piet Retief and Gerrit Maritz. Several Afrikaans topographical elements appear regularly, such as *berg* mountain, *rand* ridge, *kloof* ravine, *krans* cliff, *hoek* angle, corner, *drift* ford, *baai* bay, *kop*(*pie*) hill(ock), *dorp* town, village, *stad* town, *burg* city. The English elements *-town*, *-ton*, and the French *-ville* are also found. The colours *groen*, *wit*, *swart*, *blou* (green, white, black, blue) and the names of animals and plants (such as *leeu* lion, *olifant* elephant, *baviaan* baboon, *eike* oak, *denne* pine) are also common. These combine with personal names and constitute an open system used to form new names, as in *Verwoerdburg*, *Groenkloof*, *Randburg*, *Denneoord*. Typical of older names are *Johannesburg*, *Krugersdorp*, *Venterstad*, *Spioen Kop* (Spy's Hill), *Witwatersrand*, *Buffelsbaai*, and *Waterkloof*, all of which show these same formatives and structure types.

**English.** Some well-known names are of English origin, such as the ports *Durban* (formerly D'Urban, commemorating a governor of that name), *East London*, and *Port Elizabeth*. *Cape Town* is a translation of *Kaapstad*; both names are used, the Afrikaans representing the earlier form. English place-names, such as *Grahamstown*, *George* (named after King George III), and *King William's Town*, are far outnumbered by those of the African languages and Afrikaans. See PLACE-NAME. [AFRICA, NAME]. J.B., W.B.

**SOUTH AFRICAN PRESS.** The first newspaper in South Africa was the bilingual English/Dutch *Cape Times Gazette and African Advertiser*, first published in 1800 by Messrs Walker & Robertson, a firm describing themselves as 'wholesale merchants, slave dealers and privateers'. The *Gazette* was taken over almost immediately by the government and became its official organ, ancestor of the present *Government Gazette*. In 1824 appeared the *South African Commercial Advertiser*, edited by John Fairbairn and Thomas Pringle, and the *South African Journal*, edited by Pringle. They were suppressed on the instructions of the Governor, Lord Charles Somerset, but a vigorous agitation won virtual freedom of the press in 1828. Many newspapers followed: *The Colonist* (1827-8), *The South African Quarterly Journal* (1829-31, 1833-4), *The Colonial Times* (1840), *The Cape Times* (1840, revived 1876), and *Sam Sly's African Journal* (1843). They included the *Grahamstown Journal* (1831), still published biweekly as *Grocott's Mail*, and the *Eastern Province Herald*

(1841). *The Friend of the Sovereignty* (1850), originally bilingual, is now *The Friend. The Star*, now Johannesburg's largest-circulation daily, began in Grahamstown as *The Eastern Star*, moving to the Rand in 1877. Most of these newspapers reflected, well into the 20c, the language and general stance of the British press of their day. Even the small-town *George and Knysna Herald* reads in its earlier issues much like *The Times* of London. Such newspapers indicate a high level of literacy and general culture, and many brought a close approximation to the British standard language into South African homes. A century later, in 1948, came the rise of the black and Indian press, mostly in English-language newspapers and magazines: *Drum*, *Golden City Post* (now *City Press*), *New Nation*, *Pace*, and the Indian *Graphic* and *Leader*. Their circulations and influence grew steadily in the 1970s and 1980s: They are important sources for many black items in the South African English vocabulary. See NEWSPAPER, PRESS. [AFRICA, MEDIA].

W.B., J.B.

**SOUTH AFRICAN PUBLISHING.** Long-established local houses include Juta's and Maskew Miller's, the latter now amalgamated with Longman. There are numerous private houses which have been in operation for many years: Howard Timmins; A. A. Balkema (also Utrecht); C. A. Struik, well known for a series of facsimile reprints of important works of Africana; David Philip, long-time specialist in South African material, literary and political; also more recently founded houses such as Ad Donker, Don Nelson, and the new Chameleon Press. Ravan Press is a house specializing in Black literature, or books of particular African interest, including literary collections from their journal *Staffrider*. Tafelberg Uitgewers/Publishers, one of the major Afrikaans houses, also publishes in English. Several overseas publishing houses have branches in SA, notably Oxford University Press, Harper Collins, and Longman. Others such as The Bodley Head, Heinemann, and McGraw-Hill have their sales distribution done for them through the agency of Oxford or some other house. See PUBLISHING. [AFRICA, MEDIA].

J.B.

**SOUTH AMERICA.** See AMERICA, AMERICAN LANGUAGES, ARGENTINA, CARIBBEAN ENGLISH, CARIBBEAN ENGLISH CREOLE, CONTINENT, CREOLE, CULTURA, FALKLAND ISLANDS, GUYANA, LATIN<sup>2</sup>, PIDGIN, SURINAM(E).

**SOUTH ASIAN BROADCASTING.** All South Asian broadcasting, in Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan, and Sri Lanka, is currently government-controlled, with

the exception of a private TV channel, *PTN*, in Pakistan, for news and entertainment. In India, however, there are proposals for an autonomous broadcasting corporation. English has a significant role as a link language, both internationally and across the regions of the larger countries. The first regional public radio service was set up in 1921 by the Bombay office of the *Times of India* newspaper, in collaboration with the government Posts and Telegraphs Department. This was followed by the radio clubs of Bombay, Calcutta, and Lahore (now in Pakistan). In 1926, the private *Indian Broadcasting Company* was authorized to set up medium-wave radio stations in Bombay and Calcutta, and provided a regular service until 1929. The government then set up the *Indian State Broadcasting Service* in 1930, and in 1935 Lionel Fielder from the BBC became the first controller of the renamed *All-India Radio (AIR)*, 1936. Broadcasting became part of the *Department of Information and Broadcasting* in 1941. After independence in 1947, India and Pakistan divided the service between them, the Indian successor organization retaining the original name (since 1957 also known as *Akashvani*, Sanskrit for 'voice from space'). Indian television or *Doordarshan* (Sanskrit: 'distant vision') began as a UNESCO pilot project in 1959, with regular broadcasts in 1965 and colour in 1982. Pakistan by 1988 had 22 radio and TV stations. Television now covers 87% of the population and 47% of the total area of the country. The *Pakistan Broadcasting Corporation* (Islamabad) has daily broadcasts in over 20 languages (home service) and 15 languages (external service). The first TV station in Nepal began in March 1986, under the auspices of the *Nepalese Television Corporation*. *Radio Nepal* (Kathmandu) broadcasts on short and medium wave in Nepali and English. In Sri Lanka, an experimental TV station was started in 1979 by the *Independent Television Network* and was taken over by the government in the same year, as the *Sri Lanka Rupavahini Corporation (SLRC)*. All the regional countries and therefore broadcasting services are multilingual and multicultural: for example, AIR broadcasts in 60 languages and dialects, its Kohima (Nagaland) station alone providing services in 12 dialects. Pakistan uses over 24 languages. In all the countries, English-language announcers generally use the educated form of the local variety. A relevant publication is P. C. Chatterji's *Broadcasting in India* (New Delhi, 1987). See BROADCASTING. [ASIA, MEDIA]. B.B.K.

**SOUTH ASIAN ENGLISH**, short form *SAE*. The English language as used in Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan, and Sri Lanka. The combined populations of

these countries, projected as 1,400m in the year 2000, constitute almost a quarter of the human race. English is their main link language, largely as a result of British commercial, colonial, and educational influence since the 17c. Only Nepal, Bhutan, and the Maldives remained outside the British Raj. All South Asian countries are linguistically and culturally diverse, with two major language families, Dravidian and Indo-Aryan, a shared cultural and political history, common literary and folk traditions, and pervasive strata of Sanskrit, Persian, and English in language and literature. In 1600, Elizabeth I granted a charter to London merchants, giving them a monopoly of trade with 'East India'. The *East India Company* slowly expanded its influence in the Indian subcontinent, gaining control over the greater part of it by 1859, when it was replaced by direct British rule. Three factors operated in favour of the spread of English: the work of Christian missionaries; demand from local leaders for education in English, to benefit from Western knowledge; and a decision by the government of India to make English the official medium of education. Although the missionaries did not achieve the hoped-for mass conversions of Hindus and Muslims, their network of English-medium schools had a great impact and remains intact and successful (though largely secularized).

In 1835, Lord Macaulay wrote the Minute that led to the use of English as the language of education: see INDIAN ENGLISH<sup>1</sup>. The Minute divided the Administration, and that division and controversy has continued into the post-independent period of South Asian education and language policies. Macaulay's main opponent, H. T. Prinsep, considered the Minute 'hasty and indiscreet', and many South Asians believe that he was right. The political map of the subcontinent has changed drastically, but not the language policy. Before the Minute, each Indian state had its own policy for language in education: Hindi-Urdu, Sanskrit, and Persian were the languages of wider communication, and Hindus, Muslims, and Buddhists generally sent their children to their respective scriptural schools; afterwards, education in English was, even in Christian schools, increasingly secular and general, though with a bias towards English literature and European culture. In 1857, the three English-medium universities of Bombay, Calcutta, and Madras were set up. The new policy emphasized the use of vernacular languages instead of Sanskrit and Arabic, and indicated that English should be taught only where there was a demand for it. English continued as an important component of education, administration, and law, as well as among the educated élite across linguistic and political boundaries

until 1947, when the British left India. The diffusion and impact of the language has not abated since then; if anything, in its localized forms, the spread of English has increased both in its functional range and societal depth. There is a general educated South Asian variety of English used for pan-regional and international purposes. Its main characteristics in all the countries are those of educated IndE, with some national variations. Its use is influenced by three factors: level of education and proficiency; the user's first or dominant language (and the characteristics of the language family to which it belongs); and ethnic, religious, or other background. There is in effect a continuum from educated SAE (the *acrolect*) through such mesolectal varieties as *Anglo-Indian English*, *Babu English*, *Burgher English*, etc., to the *basilects*, such as the broken English of street vendors and beggars (*Bearer English*, *Boxwallah English*, *Butler English*, etc.).

**SOUTH-EAST ASIAN ENGLISH.** English as used in South-East Asia falls into two broad types: second-language varieties in countries that were formerly colonies or protectorates of an English-speaking power (Britain in the case of Brunei, Malaysia, and Singapore; the US in the case of the Philippines); and foreign-language varieties in Cambodia/Kampuchea, Indonesia, Laos, Thailand, and Vietnam. In the first group, students in English-medium schools were not only taught English but learned other subjects through it; they were expected to use English in the playground, and there were often penalties for using anything else. Such education began with the establishment of the Penang Free School in 1816 and the Singapore Free School in 1823. English-medium education was the path to better-paid employment and in some cases to higher education leading to the professions. As a consequence, English became a prestige language among the élite. The greater the spread of

English and the more functions for which it could be used, the more it became indigenized. This is most apparent in Singapore where, since 1987, English has been the sole medium of education, and there are now native speakers of Singaporean English.

In formal situations, the English of educated Singaporeans is distinguishable mainly by accent, but in more informal situations an innovative use of words is noticeable, such as loans from Chinese and Malay and modifications in the meaning of English words. Grammatical structure shows the influence of local languages, especially Chinese dialects. In Malaysia, a similar type of English developed. In colonial times, most of the students at English-medium schools were Chinese, but since independence in the 1950s Malay-medium education has increased and Malay has become by far the main medium in primary schools and the only medium in secondary schools. English remains an important compulsory subject but its functions have greatly diminished. Brunei has a bilingual Malay and English education policy, earlier primary-school classes beginning with Malay alone, then an increasing use of English until in the senior secondary school English is the medium for 80% of class time.

English-medium education began in the Philippines in 1901 after the arrival of some 540 American teachers, not long after the defeat by the US of the former colonial power, Spain. English was made the language of education and with wider use became indigenized by the inclusion of vocabulary from local languages, the adaptation of English words to suit local needs, and the modification of pronunciation and grammar to produce a distinctively Philippine English. English was adopted for newspapers and magazines, the media, and literary purposes. After independence in 1946, the national language Tagalog (later called Pilipino) was made an official language along with English and Spanish. With increasing nationalism, the role of English diminished and in 1974 a bilingual education policy was implemented, with English as a school subject at primary level but as the medium for science and mathematics at secondary level. At tertiary institutions it remains the main medium of instruction. In the foreign-language countries, English has great importance as an Asian and international lingua franca, in tourism, a reading language for technical subjects, and a token of modernity. See BRUNEI, INDONESIA, MALAY, MALAYSIA, PHILIPPINES, RELC, SINGAPORE. [ASIA, VARIETY]. J.P., H.W.

**SOUTHERN AFRICA.** See AFRICA, SOUTH AFRICA.

**SOUTHERN ENGLISH,** also **Southern American English.** A collective term for the geographic and social varieties of English spoken in that part of the US roughly coextensive with the former slave-holding states: see SOUTH (THE). These varieties share the inclusive plural personal pronoun *y'all* (*Are y'all comin' tonight?*), the pronunciation of *greasy* with /z/, and the use of double modals like *might could* (*He might could come Friday*). Two of the major US regional dialect types, (*Coastal Southern* and *South Midland*, cut across the vast territory in patterns following natural boundaries and settlement routes: (1) (*Coastal Southern* (also *Lowland Southern*, *Plantation Southern*). Spoken along the Atlantic seaboard and westward across the lands of lower elevation with a predominantly agrarian economy once relying on slave labour. In this area, white and black speakers have traditionally shared many of its characteristics: a non-rhotic accent, a glide before /u/ in words like *news* and *Tuesday*, and the usages *tote carry*, *carry escort*, and *snapbeans* string beans. (2) *South Midland* (also *Appalachian*, *Hill Southern*, *Inland Southern*). Spoken in a region settled by the Scotch-Irish and Germans coming from Pennsylvania. It is rhotic, has a monophthongal /a/ in *nice time* ('nahs tahm'), and the usages *skillet* frying-pan, *poke* paper sack, and *green beans* string beans. Not all varieties of English spoken in the South fit easily into types: for example, the relic area of Tangier Island in the Chesapeake Bay; the English influenced by the creole Gullah around Charleston, South Carolina; and Cajun English in Southern Louisiana. In addition, non-rhotic appears to be losing out to rhotic pronunciation among the younger generation. For further details, see DIALECT IN AMERICA.

**SOUTHERNIZE** AmE & BrE, **southernise** BrE & AusE [19c]. (1) To make southern in respect of language, culture, character, etc. (2) To apply linguistic and other norms, usages, and perspectives from the South of England to the North of England: 'Some of the poems bear traces of having been southernized from a Northern original' (preface, *Hymns to the Virgin and Christ*, c.1430, Old English Texts Society, 1867). (3) To apply the linguistic and other norms, usages, and perspectives of England to Scotland: 'When we Scots gather in groups now and again to succour Lallans and Gaelic, we do the succouring in a patently southernised style' (Tom McArthur, 'A Future for Scotland's Languages', *Scotsman*, 22 Feb. 1977). See **NORTHERNIZE**, **SOUTH (THE)**, **SOUTHRON**. [VARIETY].

T.MCA.

**SOUTHERN ONTARIO**. Part of the Canadian province of Ontario considered as a dialect area that runs along the northern shore of the lower Great Lakes from Windsor on the Detroit River to Kingston at the eastern end of Lake Ontario. Because it is the most populous and wealthiest part of Canada, its usage preferences have generally been taken as normative for CanE and treated not as a 'dialect' but as the 'language'. Originally known as the colony of *Upper Canada* (contrasted with *Lower Canada* below the rapids at Montreal), southern Ontario came to dominate British North America after 1815 when its border with the US was ascertained. Neighbouring border cities, connected by road bridges across the waterway, are linguistically distinct despite shared broadcast media and regular travel from one country to the other: Sarnia (Ontario) and Port Huron (Michigan), Windsor and Detroit (Michigan), Port Erie and Buffalo (New York), Kingston and Watertown (New York). Though few in number, studies of these city pairs show that the linguistic boundary is as sharp as the political one: for example, CanE merger of the vowels of *Don* and *dawn* is restricted to the northern shore. Certain lexical usages of historical interest, relating to land surveys and political organization, are acknowledged as distinctive, and include: *concession* (from Canadian French) surveyed land subdivided into *ranges*; *continuation school* a secondary school; *crown land* publicly owned tracts of land available for purchase by settlers; *reeve* the principal officer of a township, municipality, or village; *riding* a parliamentary district (a term later applied to

electoral units elsewhere in Canada). However, contemporary differences between the usage of southern Ontario and the rest of Canada are less frequently acknowledged: for example, the *Survey of Canadian English* shows *eavestrough* ('channel along the eaves of a roof to catch rain-water and carry it away') as the term of choice for more than 95% of adults in Ontario, and is consequently given as normative in the illustration at *eaves* in the *Gage Canadian Dictionary* (published in Toronto). The synonymous *gutters*, however, is in increasing use among the young and is used by a majority in the Atlantic Provinces; in the *Dictionary*, it is treated as a subordinate entry glossed as 'eavestrough'. Similarly, *Gage* provides no usage label for *serviette* 'paper table-napkin', the word preferred to *napkin* by two-thirds of adults in the Atlantic Provinces and a plurality of younger Canadians in the Prairies and the West. All the quotations for *dew worm* 'earthworm' in the scholarly *Dictionary of Canadianisms* are from Ontario, but *Gage* identifies it not as *Ont.* but as *Cdn.* Were it not for the presumption that the dialect of southern Ontario is definitive for Canada as a whole, these expressions would be assigned a locality label. See **CANADIAN DICTIONARIES IN ENGLISH**, **CANADIAN ENGLISH**, **DIALECT IN CANADA**. [AMERICAS, VARIETY]. R.W.B.

**SOUTH KOREA**. See **EAST ASIAN ENGLISH**, **KOREA**.

**SOUTHLAND BURR**. See **BURR**, **NEW ZEALAND ENGLISH**.

**SOUTHRON** [Also *sutheroun*, *suddron*, etc.: Older Scots forms of *southern*]. (1) A Scots adjective and noun for the English and their language: 'Kepand na sudroun bot our awin langage' (Using no southern, but our own language: Gavin Douglas, Prologue to his *Aeneid*, 1513); the Catholic gibe of Ninian Winzet at the Anglicizing Protestant John Knox: 'Gif 3e, throw curiositie of nouationis, hes forzet our auld plane Scottis quhilk 3our mother lerit 3ou, in tymes cuming I sall wryte to 3ou my mind in Latin, for I am nocht acqyntit with 3our Southeroun' (If you through eager seeking after new-fangled changes have forgotten our old, plain Scots that your mother taught you, in future I'll give you my opinions in Latin, for I'm not acquainted with your Southron: 1563). The expression *knap suddrone* (speak in an affected English fashion) was attributed to James V King of Scots by John Hamilton (1581). The term continues to the present day in Modern Scots, mostly in the *th*-spellings, as with Robert Burns's *Suthron*. (2) A person from the Southern states of the US: 'The

Southron was a better fighter than the Northerner' (*The North American Review* 126, 1878). (3) Anything southern; any southerner. See SOUTH. [AMERICAS, EUROPE, HISTORY, VARIETY].

**SOUTH SEAS ENGLISH, SOUTH SEAS JARGON.** See PACIFIC JARGON ENGLISH.

**SOYINKA, (Akinwande Oluwole) Wole** [b.1934: pronounced 'Shoy-']. Nigerian and Yoruba playwright, poet, novelist, literary critic, translator, and commentator on African culture, born in Abeokuta, Western Region, and educated at the U. of Ibadan, Nigeria, and the U. of Leeds, England. He worked in London (1958-60), gaining experience in the theatre, and returned home to write and direct in 1960, the year of Nigeria's independence. He has taught in Nigerian universities and at Yale in the US, has worked on radio, television, and film, and has edited *Transition*, a leading African intellectual magazine. His work includes: plays, such as *The Lion and the Jewel* (1959), *The Bacchae of Euripides* (1973), and *Requiem for a Futurologist* (1984); novels, such as *The Interpreters* (1965) and *Season of Anomy* (1973); poetry, ranging from lyrics and epics, such as *Idanre and Other Poems* (1967) and *Ogun Abibiman* (1976), to political comment in *Mandela's Earth* (1988); literary criticism, illustrating his views on Yoruba culture, and African and European aesthetics and their cross-fertilization, in *Myth, Literature and the African World* (1976) and *The Critic and Society* (1980); autobiography, in *The Man Died: Prison Notes of Wole Soyinka* (1972), *Aké: The Years of Childhood* (1981), and *Ísarà: A Voyage Around the Essay* (1990). Soyinka won the Nobel Prize for Literature in 1986. See index. [AFRICA, BIOGRAPHY, LITERATURE].

G.D.K., L.T.

**SPACE** [13c: from Old French *espace*, Latin *spatium* room, distance, interval, extent]. (1) A general term for an area of paper or other material that has been left blank, usually between letters or lines in a text. In a line of justified print the spaces between letters are the same but the spaces between words may vary. (2) A printer's term for any of the blank pieces of metal traditionally used to separate words and sentences. (3) A term in telegraphy for any interval in the transmission of a message when the key is not in contact. (4) A media term for the amount of page surface in a periodical or time in a schedule allowed for a story, article, programme, etc. See LAYOUT, TYPOGRAPHY, WHITE SPACE, WORD. [TECHNOLOGY, WRITING].

T.M.CA.

**SPANGLISH** [1960s: a blend of *Spanish* and *English*, on the analogy of *franglais*]. An

informal and often pejorative term, particularly common in North America, for: (1) Any of several mixtures of Spanish and English, ranging from extensive uses of loanwords and loan translations to code-switching among bilinguals. Occasionally, the term appears in Spanish as *el espanglish* and Spanish which is heavily influenced by English is sometimes known as *el englañol*. English-influenced Spanish is often referred to negatively in the US Southwest as *español mocho* (from *mochar* to cut limbs off trees) and *español pocho* (from Uto-Aztec *potzi* short, tailless). (2) Less commonly, the slightly pidginized Spanish of some English-speakers, including *learner Spanish*. The term often refers broadly to non-standard Spanish which contains: (1) Loanwords from English, such as: *wachar* to watch, *pushar* to push. (2) Loan senses attached to traditional Spanish words, such as: *asistir* to assist, help, *atender* to attend (school). (3) Calques, such as: *llamar pa(ra) (a)trás* to call back (on the telephone). (4) Code-switching, such as *Sácame los files for the new applicants de alla!* (Get out the files for the new applicants from over there). A more precise terminology developed by Chilean linguist Lucía Eliás-Olivares (1976) identifies standard Spanish, popular Spanish, mixed Spanish, *Caló*, and code-switching, to cover a continuum of varieties between Spanish proper and English proper. In this scheme, mixed Spanish contains extensive borrowings and calques, *Caló* is a mixed cryptolect descended in part from the traditional *germania* (the argot of the Hispanic underworld) and associated in the main with adolescent boys in gangs, and code-switching is the rapid alternation of Spanish and English. Despite the apparent freedom with which they are used, lexical borrowing and code-switching are not random, but are closely related to syntactic structure. See CHICANO ENGLISH, -GLISH AND -LISH, PUERTO RICO, SPANISH, TEX-MEX. [AMERICAS, VARIETY].

J.A.M.

**SPANISH** [Called by its speakers *español*]. A Romance language of Western Europe, spoken by c.250m people worldwide: the official language of Spain (including the Balearic and Canary Islands), and most of the nations of Central and South America: Argentina, Bolivia, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, Uruguay, Venezuela. In Paraguay, official status is shared with Guaraní, and in Peru, with Quechua, both Amerindian languages. Spanish is spoken in the US, especially in the Southwest (Arizona, California, New Mexico, Texas), Florida, parts of Louisiana, and such cosmopolitan cities as New York

City and Chicago, as well as in the Commonwealth of Puerto Rico. It has also been spoken on the Caribbean island of Trinidad and by Sephardic Jews in North Africa, Turkey, and the Balkans. In Africa, it is the official language of Equatorial Guinea and is spoken in parts of Morocco and in the Spanish coastal enclaves of Ceuta and Melilla. In Asia, it is spoken by a small minority in the Philippines. There have been Spanish creoles in Colombia, the Caribbean, and the Philippines.

**Origins.** Historically, Spanish evolved out of Late Vulgar Latin, with minor Germanic and major Arabic influence. Its history is divided into three periods: Old Spanish (c. 750–1500), Renaissance Spanish (1500 to 1808, the beginning of the Napoleonic Wars in Spain), and Modern Spanish (since 1808). At the close of the Roman period (early 5c), the Iberian Peninsula was overrun by the Vandals and Visigoths, Germanic invaders who contributed such war-related vocabulary as *brida* (bridle), *dardo* (dart), *guerra* (war), and *hacha* (axe). During the Muslim period (711–1492), when much of the peninsula was held by Moorish rulers, Arabic loanwords were absorbed into the local post-Latin dialects, such as *aceituna* an olive, *ahorrar* to save, *albóndiga* a meatball, *alfalfa*, *álgebra*, *alquilar* rent, *cifra* a cipher, zero, *naranja* an orange, *ojala* may Allah grant, may it happen, if only, some hope. This influx appears to have been made easy by the Christians who lived in Moorish territories: they were known as *mozárabes*, from Arabic *musta'rib*, Arabicized. Many of them were probably bilingual, speaking Arabic and the now-extinct variety of Spanish known as Mozarabic. The national epic, *El poema/cantar de mio Cid* (the Poem/Song of My Lord), in which the word *cid* is of Arabic origin (*as-sid* lord), is from the period of the Reconquest.

Works of literature first appeared in Spanish c. 1150 and a literary language was firmly established by the 15c. Three pivotal events all occurred in 1492: (1) 'The Catholic kings', Ferdinand and Isabella of Castile and Aragon, completed the reconquest of Spain by taking Granada, the last Moorish kingdom. (2) Christopher Columbus, acting on their behalf, sailed west to find China and India and instead discovered the Americas. (3) The first grammar of a modern European language was published, Antonio de Nebrija's *Gramática de la lengua castellana* (Grammar of the Castilian Language), duly followed by his dictionary and orthography. Spain became a world power and the centre of a vast empire. The standard language of Spain and its empire was based on Castilian (the dialect of Castile), and for this reason continues to be referred to in Spanish as both *castellano* and *español*. Other dialects, however, are

also important, especially that of Andalusia ('land of the Vandals', long under Muslim control). Despite efforts made during the period in power of Generalissimo Francisco Franco (1939–75) to establish Castilian Spanish throughout the land, it is not the language of choice in all the regions of present-day Spain.

**Spanish in the United States.** Spanish has been spoken longer than English in what is now the US. Spanish settlement in San Agustín, Florida, dates from 1565, various areas in New Mexico were settled in 1598, and settlements in California were established from 1769 on. As the English-speaking US expanded, it incorporated territory originally held by Spain (Florida), France (the Louisiana Purchase), and Mexico (the Southwest, from Texas to California). Spanish was also incorporated into the US, by the addition of Texas in 1845 and the rest of the Southwest by the Mexican Cession in 1848. Although statehood for the Territory of New Mexico was delayed until 1912 at least partly because of a lack of English-speaking citizens, Spanish was later granted legal status there along with English. Puerto Rico became associated with the US in 1898 and currently has Commonwealth status, with Puerto Ricans holding US citizenship.

In recent years, immigration from Latin America has made Spanish the second most widely spoken language in the US. The influx of Cubans into Florida beginning in 1960 turned the Miami-Dade County area into a centre of Hispanic language and culture. In the Southwest, immigration from Mexico increased during and shortly after the Mexican Revolution (1912–15), after World War II, and in the 1980s. Immigration from Central America also increased rapidly in the 1980s. The increasing Hispanic population has given some areas outside the Southwest and Florida a decidedly Hispanic flavour, including the cities of New York and Chicago. In all areas, bilingual education has been implemented as a method for bringing new immigrants to fluency in English in the shortest time. In reaction, however, many (including some Hispanics and members of other immigrant groups) have supported the appeals of the organization US English, which advocates a constitutional amendment to declare English the official language of the country and seeks the elimination of bilingual education.

**Spanish in English.** Because of the reintroduction of Greek learning to Europe by the Arabs in Spain and then the great wealth and power of the new empire, 16c Spain was a major centre of learning. Spanish was a language of high prestige throughout Europe, and in late 16c England was the subject of a number of linguistic treatises,

including Richard Percivall's *Bibliotheca Hispanica, Containing a Grammar, with a Dictionarie in Spanish, English, and Latine* (1591). The *Real Academia* (Royal Academy) was founded in 1713, on the model of the French Academy (1637), in order to *limpia, fija, y da esplendor* ('purify, fix, and lend splendour') to the language, the motto on the great seal of the Academy that appears on the spine and title page of all volumes of the Academy's dictionary.

The influence of Spanish on English at large has extended over centuries and been primarily lexical. Phonological and grammatical influences have occurred relatively rarely and recently in the Americas, and have been limited to particular regions and varieties. English shares with Spanish a large vocabulary derived from Latin, due especially to the impact of Norman French after the 11c Norman Conquest of England. During the 16-17c, a time of rapid colonial expansion among the seafaring nations of Europe, Spain and England were competing to amass empires and influence, and Spanish had its first direct impact. Loanwords of the 16c include the orthographically unadapted words *armada, cargo, desesperado, flotilla, mosquito, mulatto, negro, pec(c)adillo, sombrero* and the adapted *ambush, cannibal, cask, cigar, comrade, jennet, parade, renegade, sherry*. Other loans have entered the language since then, such as unadapted *albino, flotilla, hacienda, mesa, plaza, siesta*, adapted *barbecue, caramel, cockroach, corvette, doubloon, escapade, guitar, jade, lime, maroon, picaresque, quadroon*. Some Spanish loans have Arabic origins, such as *alfalfa* (Arabic *al-fasfah*), *alcázar* (Arabic *al-qasr* the castle), *alcove* (through French *alcôve*, from Spanish *alcoba*, from Arabic *al-qubbah* the vault). See ARABIC.

A wave of New World borrowings occurred in the 19c, mainly in the Southwest of the US, such as the unadapted *arroyo, bronco, cantina, corral, gringo, mesa, patio, rodeo, tequila*, and the adapted *alligator, buckaroo, chaps, lariat, mustang, ranch*. Many items borrowed from Spanish were through Spanish from indigenous Amerindian languages, such as *avocado, chocolate, coyote, peyote*, from the Aztec language Nahuatl. In the 20c, there has been a second wave throughout the US, related to the increase in Latin American immigration; loans include *contras, guerrilla, jefe, macho/machismo*, as well as such culinary terms as *burrito, chiles rellenos, flautas, frijoles, frijoles refritos, nacho, pan dulce, salsa, taco, tortilla*. See BORROWING.

**English in Spanish.** In recent decades, English has had a greater influence on Spanish than vice versa. This has happened wherever Spanish is spoken, but is particularly noticeable where

Spanish- and English-speaking communities live as neighbours (such as along the US-Mexican border) and where communities of speakers of one language have migrated to the territory of another (such as Puerto Ricans in New York City; British expatriate communities and facilities for holiday-makers along the Mediterranean littoral of Spain). Close contact between the two languages has produced hybrid forms, for which casual names have arisen: *Spanglish*, a term covering all forms of English influenced by Spanish and Spanish influenced by English, and the more particular *Tex-Mex* or *Border Lingo* along the Texas-Mexican border.

In general, the influence is lexical, especially in the borrowing and adaptation of technical and sporting terms. Many of these borrowings are accepted only grudgingly or until more Hispanicized equivalents are coined. Not all are current in all dialects, but are clearly favoured in contact dialects. Some expressions are borrowings, either unadapted or adapted, while others are Anglicisms in a more general sense: loan shifts resulting from English influence in the usage of traditional Spanish words, often cognates of English Romance-derived words. Examples of borrowings are: (in sport) *boxeo* boxing, *boxear* to box, *nocaut* a knockout, *noquear* to knock out, *jonrón* a home run, *jonronear* to make a home run, *fútbol, criquet, basquetbol*; (culinary) *cake/queque* a cake, *panqueques* pancakes, (*miel*)maple maple syrup, *bistec* a beefsteak, *cóctel* a cocktail, *hamburguesa*, a hamburger; (in politics) *agenda, boicot* a boycott, *boicotear* to boycott, *cartel, detective*; (in general usage) *bus, camuflaje, esmoking* a dinner jacket, tuxedo, *esnob*, *esnobismo* snobbery, *jazz, jet, microchip, parquear* to park, *troca* a truck.

Loan shifts and translations may compete with established usages: the verbs *rentar* with *alquilar* (to rent) and *clarificar* with *aclarar* (to clarify); the nouns *elevador* with *acensor* a lift, elevator; *profesional* with *profesionista* a professional. They may also provide a new sense for a traditional word: *carácter*, in the theatre as opposed to *personaje*; *conductor*, of music as opposed to *director*; *década* for ten years as opposed to ten of anything; *educación* for schooling as opposed to manners. Sometimes they are entirely new: *perro caliente* a hot dog, *escuela alta* high school. Others, such as *filmoteca* a library of films, are loan blends.

**-SPEAK, SPEAK** [1949: from *Newspeak*, as coined by George Orwell]. Both a combining form and a word used informally (and often pejoratively or facetiously) for the style of a group or occupation, often regardless of whether it is spoken or written. In a compound that contains *-speak*, the first element indicates either the situation in which the style occurs (*adspeak*: advertising) or what the user thinks of it (*doublespeak*: a jargon intended to mislead). There are three orthographic forms: (1) Solid: *Aussiespeak, computerspeak, Femspeak, healthspeak, lewdspeak, modernspeak, moneyspeak, nukespeak, pensionspeak, tycoonspeak, unionspeak*. (2) Hyphenated: *gay-speak, golf-speak, management-speak, oblique-speak, Pentagon-speak*. (3) Open: *art speak, estate-agent speak, mandarin speak, political speak*. In terms of structure, there are two extremes: (1) The first element is monosyllabic like *new*, often a clipping of a longer word: *bizspeak, Russpeak*. (2) The first element is phrasal: *Hitch-Hiker's-Guide-to-the-Galaxy-speak; medical and social work 'speak'; Twentieth century era speak; Womenslibspeak*. Occasionally, blending occurs, as in *bureaucraspeak, litercritspeak, politspeak, Shakespeak*. Such usages generally occur in social and literary criticism: 'The aim of this jargon-sodden Femspeak is to set up a myth of women artists as a hated underclass' (*Time*, 15 Dec. 1980); 'It is customary to conclude any piece about oblique-speak, jargon or euphemisms by exhorting everyone to stop it and return to the stern, plain language of our fathers' (Katharine Whitehorn, *Observer*, 26 Oct. 1986). See **DOUBLESPEAK, NEWSPEAK, TECHNOBABBLE, TECHNOSPEAK**. Compare **-ESE, -ISM, LINGO, TALK**. [SPEECH, STYLE]. T.M.C.A.

**SPEAKING IN TONGUES**. See **GLOSSOLALIA**.

**SPEAQ**. See **CANADIAN LANGUAGE ORGANIZATIONS**.

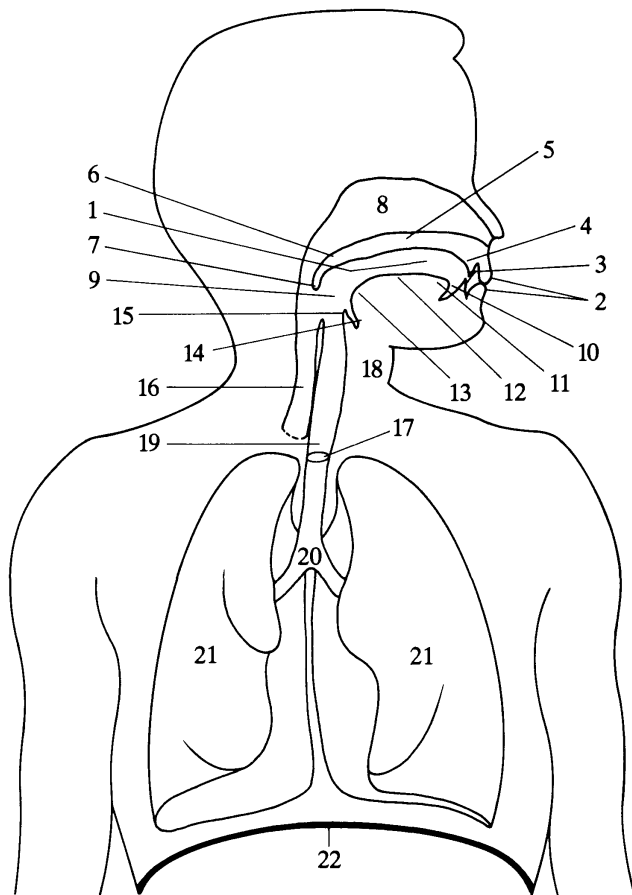

**SPECIALIZATION** [1840s in this sense]. A process of semantic change in which narrowing occurs in the meaning of a word. In Middle English, *deer* meant a four-legged beast (compare Dutch *dier* and German *Tier*), but the early restriction to one kind of animal (the family Cervidae) has long since eclipsed the earlier

meaning. Such specialization is slow and need not be complete; *fowl* is now usually restricted to the farmyard hen, but it retains its old meaning of 'bird' in expressions like *the fowls of the air* and *wild fowl* (compare Chaucer's 'Parlement of Fowles' and German *Vogel*). See **COMPUTER USAGE, SEMANTIC CHANGE**. [HISTORY, LANGUAGE, WORD]. T.M.C.A.

**SPEECH** [From Middle English *speche*, Old English *spæc*, a variant of *spræc*, from *sprecan* to speak, cognate with German *Sprache*, from *sprechen*]. (1) The primary form of language; oral communication in general and on any particular occasion: *Most people are more fluent in speech than in writing*. (2) A usually formal occasion when a person addresses an audience, often with the help of notes or a prepared text. (3) A way of speaking, often involving a judgement of some kind: *local speech, slovenly speech, standard speech*. (4) The field of study associated with speaking and listening: *the science of speech*.

**Anatomy and physiology**. Speech is possible because of the development over millennia of an appropriate physical system: the diaphragm, lungs, throat, mouth, and nose, working together. All such organs pre-existed the evolution of language and have such prior purposes as breathing, eating, and drinking. With the advent of speech, they continued to perform these functions while becoming available for additional uses, so that two systems (maintenance of the body and systematic communication) exist side by side. The diagram overleaf displays the *organs of speech*. Vocal sound becomes possible when a stream of air is breathed out from the lungs and passes through the larynx, then into and through the pharynx, mouth, and nose. This sound may be *voiced* or *voiceless*: that is, the larynx may vibrate or not. Different sounds are made in the mouth by moving the lips, tongue, and lower jaw to change the size and shape of the channel through which the air passes. A *consonant* is made with a narrowing of the channel, and the point of maximum narrowing is the *place* (or *point*) of *articulation* for that consonant. The way in which this is done is the *manner of articulation*. A *vowel* typically has a wider channel than a consonant. Since it is difficult to be precise about the articulation of vowels, they are normally described by their auditory quality. In discussing articulation, phoneticians refer to an *articulator*, which may be *active* (as with the lips and tongue) or *passive* (as with the front teeth).

**Place of articulation**. For *bilabial* consonants, the narrowing is achieved by bringing the lips together. For *labio-dental* consonants, the active articulator is the lower lip. In other cases, the

active articulator is part of the tongue, which is raised towards the passive articulator on the roof of the mouth: see table.

Sounds can be classified according to the active articulator, for example the tongue: *apical* sounds made with the tip (Latin *apex*); *laminal* sounds with the blade (Latin *lamina*); *dorsal* sounds with the back (Latin *dorsum*). *Retroflex* sounds are made with the tip of the tongue curled back behind the alveolar ridge towards the palate. However, the commonest classification is according to the passive articulator. This terminology assumes that the active articulator is

Articulator		Description	Examples
Active	Passive		
lower and upper lips	—	bilabial	/p, b, m/
lower lip	front teeth	labio-dental	/f, v/
tongue:			
tip	front teeth	dental	/θ, ð/
tip	alveolar ridge	alveolar	/t, d, s, z, n, l, r/
tip/blade	ridge/palate	palato-alveolar	/ʃ, ʒ, tʃ, dʒ/
front	palate	palatal	/j/
back	velum	velar	/k, g, ŋ/

the organ that lies opposite the passive articulator in the state of rest: for example, the passive articulator of a *dental* sound is the upper front teeth, and the active articulator is the tip of the tongue. If some other active articulator is used, it is specified explicitly: for example for /f, v/, the lower lip moves up to the upper teeth, and these sounds are *labio-dental*: see table. The *aspirate* /h/ is usually described as *glottal*. In English, /h/ is like a *voiceless vowel* in that there is no fricative-like narrowing in the mouth, so that the greatest point of narrowing is in the glottis. Most sounds have one place of articulation, but /w/ has a *double articulation*, being made by simultaneously rounding the lips and raising the back of the tongue towards the velum. It is thus both bilabial and velar.

**Manner of articulation.** This refers mainly to the degree of narrowing at the place of articulation of a sound. If the air-stream is blocked completely, the result is a *stop*, such as /b/, but if it is narrowed to the point where noise or *turbulence* is generated as air passes through the gap, the resulting sound is a *fricative* /v/. In the case of an *approximant* or *continuant*, the manner of articulation is more open, as with the /r/ of *rink* as compared to the /z/ of *zinc* (a voiced fricative). When a stop is released, the articulators move apart and necessarily pass through the degree of narrowing which produces fricative noise. A *plosive* is released quickly, whereas an *affricate* is released slowly:

<i>plosives</i>	/p, b; t, d; k, g/
<i>affricates</i>	/tʃ, dʒ/
<i>fricatives</i>	/f, v; θ, ð; s, z; ʃ, ʒ; h/

There are several types of approximant. The velum is normally raised to prevent air from entering the nose: a *nasal* is produced with the velum lowered. The air-stream normally passes centrally through the mouth: in the case of a *lateral*, the air escapes at the sides. The tongue normally offers a convex surface to the roof of the mouth: for an *r-sound*, the tongue surface is often hollowed out and the tip raised. A *glide* or *semi-vowel* is vowel-like and moves rapidly into the following vowel, and cannot be prolonged:

<i>nasals</i>	/m, n, ŋ/
<i>lateral</i>	/l/
<i>r-sound</i>	/r/
<i>glides</i>	/j, w/

Phoneticians conventionally describe consonants according to their articulation. See AIR-STREAM MECHANISM, CONSONANT, TONE, VOICE, VOWEL. [LANGUAGE, SPEECH]. G.K., T.MCA.

**SPEECH ACT.** A term used by philosophers of language such as J. L. Austin, in *How to Do Things with Words* (1962), to refer to acts performed by utterances: for example, giving orders, making promises. In saying 'I name this ship the *Queen Mary*', one performs an act of naming; in saying 'I am sorry I offended you', one performs an apology. Such usages are *performatives*, as opposed to *constatives*, which are statements that convey information. *Speech act theory* distinguishes itself from conventional semantic theory by studying the effects of *locutionary acts* (utterances) on speakers and hearers rather than concerning itself with truth value; *performatives* in particular have no truth value. Speech acts are also known as *illocutionary acts* (that is, acts that occur in speech) and responses by hearers are *perlocutionary acts* (that is, acts that occur through or as a result of speech). There are many different kinds of speech act; John R. Searle (*Speech Acts*, 1979) recognizes five: (1) *Representatives*, where speakers are committed in varying degrees to the truth of the propositions they have uttered: swearing, believing, reporting. (2) *Directives*, where speakers try to get hearers to do something: commanding, requesting, urging. (3) *Commissives*, which commit speakers in varying degrees to courses of action: promising, vowing, undertaking. (4) *Declarations*, whereby speakers alter states of affairs by performing such speech acts as *I now pronounce you man and wife*. (5) *Expressives*, where speakers express attitudes: congratulating, apologizing. In order to be successful, speech acts have to meet certain *felicity conditions*: for example, a marriage ceremony can only be performed by someone with the authority to do so, and with the consent of the parties agreeing to the marriage. Speech acts may be direct or indirect: compare *Shut the door, please* and *Hey, it's cold in here*, both of which

are directives. See LOCUTION, SEMANTICS, UTTERANCE. [LANGUAGE, SPEECH, STYLE]. S.R.

**SPEECH DEFECT/DISORDER.** See SPEECH PATHOLOGY.

**SPEECH ORGANS.** See SPEECH.

**SPEECH PATHOLOGY**, also **speech and language pathology**. The study of disorders of speech. *Speech pathology* (practised by a *speech pathologist*) is the traditional name for the subject in many parts of the world (notably, the US) and reflects the early focus on handicaps of pronunciation in the development of the field. There is currently a trend to emphasize other aspects of linguistic disorder apart from pronunciation (such as grammar and vocabulary), other modalities of language (such as listening, reading, writing, and signing), and other professional activities than the diagnosis of pathology (such as teaching and therapy). For these reasons, there have been moves to replace the term by others thought to reflect more accurately the domain of the subject and the activities of its professionals, such as *language pathology and therapy*. The traditional name, however, retains considerable support. For further discussion, see LANGUAGE PATHOLOGY, SPEECH THERAPY. [LANGUAGE, SPEECH]. D.C.

**SPEECH-READING** [1890s]. (1) Interpreting speech by means of visual clues that accompany it, such as facial expressions, lip movements, and physical gestures. It may be attempted, more or less systematically, because people's speech is hard to hear or understand, listeners are hearing-impaired, or as part of the everyday processes of conversation, in which non-vocal signals assist comprehension. (2) Another name for *lip-reading*. See PARALANGUAGE. [EDUCATION, SPEECH]. T.MCA.

**SPEECH RECOGNITION AND COMPREHENSION.** See COMPUTING.

**SPEECH SOUND** [Perhaps mid-20c]. In phonetics, a general term for a (usually minimal) constituent sound in any flow of speech or in the vocal repertoire of a language; it may or may not be a member of the set of distinctive sounds of that language (a *phoneme*). See PHONE, PHONEME, SOUND. [SPEECH]. T.MCA.

**SPEECH SYNTHESIS.** See COMPUTING.

**SPEECH THERAPY.** The British term for the paramedical profession that diagnoses and treats disorders of speech; also known as *speech pathology*, especially in the US. The profession has

hotly debated the appropriateness of the term in recent years, because of the implied limitation of their domain to speech (therapists deal also with problems of listening and to some extent of reading, writing, and signing) and also because the term *therapy* seems to exclude other aspects of their role (screening, assessment, and diagnosis). Although widespread dissatisfaction exists, the difficulty of finding a widely acceptable alternative has not been overcome, and the name continues to be the usual way of identifying this group in Britain and several other countries. See ELOCUTION, LANGUAGE PATHOLOGY, PHONETICS, SPEECH PATHOLOGY. [LANGUAGE, SPEECH]. D.C.

**SPEECHWAY** [Probably early 20c]. A term, especially in US dialectology, for a way of speaking shared by all or most of the people in a place and/or group: *the study of traditional American speechways*. [SPEECH]. T.MCA.

**SPEEDHAND**. See SHORTHAND.

**SPEED-READING**. Reading faster than the norm, especially by means of: disciplined skimming and controlled eye movements that take in whole phrases, clauses, and sentences; searching for main ideas and key words rather than giving equal attention to supporting detail; varying one's reading rate and attention to detail according to purpose; sensing the broad pattern of the developing text; and looking for, then concentrating on, the less predictable elements in the text. It is usually easier to speed-read a text that relates to a subject with which one is familiar than one that contains unusual grammatical constructions and specialized terms. See READING. [EDUCATION]. T.MCA.

**SPELLER**. (1) Someone who spells: *a good/poor speller*. (2) Especially in the US, a book that helps children learn to spell, usually through the provision of lists and exercises. The British equivalent is *spelling book*. (3) An informal name for a computer spelling checker. See SPELLING, SPELLING CHECKER, WEBSTER. [WRITING]. T.MCA.

**SPELLING** [14c: from Old French *espeller* (Modern *épeler*), probably from Germanic \**spellōn*, ancestor of Old English *spel*, *spell* a magical incantation: compare *gospel* ('good spell', good news) and *spiel* extravagant talk (from German *Spiel*). In Middle English, *spelling* was a term for reading books and casting spells, and reading was formerly often called *spelling a book*]. The act, process, or system of relating speech sounds to letters and to the written form of words. The spelling system of an alphabetic language consists of the conventions by which its letters represent sounds and words

(*E-G-G spells egg*) and the way(s) in which words are spelt/spelled (*How d'you spell 'accommodation'—one m or two?*). Phoneticians describe the ideal relationship between sound and alphabetic writing as *phonographic*: letters indicate sounds and sounds indicate letters. As alphabets have evolved, however, they have been adapted in different ways to different languages, and the relationship is sometimes indirect and far from ideal. In French and English, whose orthographic traditions are ancient and intricate, the current situation is complex and often confused.

**English spelling**. The spelling of English has traditionally been discussed (and often taught) in terms of rules and exceptions. For example, the rule that the *ee* combination in *meet*, *sleep*, etc., stands for a single long /i/ sound, but the fact that the long /i/ sound can be represented in other ways, as in *be*, *sea*, *key*, *quay*, *ski*, *esprit*, *deceit*, *field*, *people*, *amoeba/jameba*, *aeon/leon*, *leave*, *these*. Similarly, there is a rule that *c* before *a/o/u* is hard (*cat*, *cot*, *cut*) but before *e/i* is soft (*cent*, *cite*), with such exceptions as *façade* on the one hand and a common pronunciation of *Celtic* on the other. Word forms that conflict with the phonographic principle are common: (1) Those with aberrant letter values, such as the *a* in *any*, the *e* in *sew*, the *g* in BrE *gaol*, the *gh* in *laugh*, the *l* in *colonel*, the *o* in *woman* and *women*, the *s* in *sugar*, the *x* in *xenophobia*, and the *z* in *schizophrenia*. (2) Those with silent letters, such as the *a* in *head*, the *b* in *thumb*, the *c* in *indict*, the *e* in *height*, the *g* in *foreign*, the *h* in *honest*, the *k* in *knee*, the *n* in *column*, the *p* in *ptarmigan*, the *t* in *castle*, and the *w* in *write*. (3) Those that carry over all or something of their non-English spelling from other languages, such as the *aa* in *bazaar* (from Persian), the *c* in *cello* (from Italian), the *dd* in *eisteddfod* (from Welsh), the *ch* and *y* in *chrysanthemum* (from Latinized Greek), the *chs* in *fuchsia* (from Latinized German), and the *j* in *marijuana* (from Spanish). A Dutch observer of English, Dr Gerard Nolst Trenité (1870–1946), wrote a wry poem on English spelling, entitled 'The Chaos'. It begins:

Dearest creature in creation,  
Studying English pronunciation,  
I will teach you in my verse  
Sounds like corpse, corps, horse and worse,  
It will keep you, Susy, busy,  
Make your head with heat grow dizzy,  
Tear in eye your dress you'll tear.  
Queer, fair seer, hear my prayer,  
Pray, console your loving poet,  
Make my coat look new, dear, sew it!  
Just compare heart, hear and heard,  
Dies and diet, lord and word,  
Sword and sward, retain and Britain,  
(Mind the latter, how it's written).  
Made has not the sound of bade;

Say, said, pay, paid, laid but paid.  
 Now I surely will not plague you  
 With such words as vague and ague.

Although most of the letters of the alphabet have in isolation an unambiguous sound value, as represented in children's alphabet lists (*A is for Apple*, etc.), in the spelling of many words this correspondence does not apply (*A* is also for *above*, *all*, and *any*). Uncertainties run both ways: in interpreting the sound value of an unfamiliar written form and in determining the spelling of a word from its pronunciation. Learners sometimes mispronounce *gaol* as *gale* or *goal*, *mised* as 'myzled' or 'mizzled', and *archipelago* as 'ar-chip-elago' (compare *lumbago*), and adult native speakers are often unsure how to pronounce such words as *algae*, *fungi*, *hegemony*, and *lichen*. Common misspellings include confusion over silent letters (for example, 'fight' for *fight*), doubled consonants ('supprise' for *surprise*, 'accomodate' for *accommodate*, 'comitee' for *committee*, 'dissapear' for *disappear*), and the representation of the weak vowel schwa ('assistent' for *assistant*, 'consistant' for *consistent*, 'burgler' for *burglar*, 'docter' for *doctor*).

**A hybrid system.** The major elements in the creation of the present-day spelling of English have been the adaptation of the Roman alphabet to serve English, outside influences on that language, and the Great Vowel Shift. When the Roman alphabet was adopted as a medium for writing Old English, it was supplemented to cover sounds not present in Latin. The letters *ash*, *eth*, *thorn*, and *wynn* (along with *yogh*, a variant of Roman *g*) have not survived into Modern English, while the consonants *j*, *v*, *w* have been recent additions. Old English spelling appears to have represented pronunciation relatively consistently, but the Norman Conquest in 1066 introduced many Norman-French usages that conflicted with Old English tradition, such as the *qu-* in *queen* (Old English *cwēn*). Massive borrowing of Latin and Greek words (often through French or French spelling conventions) as well as the adoption of words from many other languages created a great variety of often conflicting spelling patterns. Many small sets of words with their own inherited patterns of letters emerged, such as the *kn-* group representing Old English *cn-* (such as *knave*, *knife*, *know*), the *gu-* group from Norman French (such as *guard*, *guide*, *guise*), the *-ence* group from Latin through French (such as *sequence*, *diligence*, *residence*), and the group of silent *p-* words from Greek (*pneumonia*, *pterodactyl*, *psychology*). The spelling of early loans conforms to what are now traditional 'native' patterns (*beef* from Norman French *boef* is like *keep* from Old English *cēpan*), but later loans have tended to keep their foreign

forms (*rendezvous* French, *spaghetti* Italian, *yacht* Dutch). In the 15c the Great Vowel Shift changed the basic sound values of the language (compare Chaucerian with Modern pronunciations) and such ancient Germanic consonant sounds as the *k* and *gh* of *knight* were lost. Spellings often did not change to reflect these phonological developments. At the same time, writers inserted letters in a number of words on erroneous grounds of etymology, such as the *s* in *island* and the *gh* in *delight* by analogy with *isle* and *light*.

**Fixed spellings.** Before the spread of printing, publishing, and education, spelling reflected differences in individual and regional usage. The *OED* records, from the 9c onward, the following spellings of one word, only the last of which is now accepted: *myr3e*, *mur3e*, *myri3e*, *miri3e*, *mer3e*, *meri3e*, *murye*, *muri*, *murie*, *mury*, *miri*, *mirie*, *myry*, *miry*, *myrie*, *myri*, *mirrie*, *mirry*, *myrrie*, *myrry*, *mirre*, *meri*, *merey*, *merie*, *mery*, *merye*, *merrye*, *mere*, *meary*, *merrie*, *merry*. In 1586, Elizabeth of England wrote in a letter to James of Scotland *desiar* and *wold* and James in his reply wrote *desyre*, *desire* and *wolde*, *woulde*. As a consequence of the spread of printing and publishing (15c onward) and wider education in the vernacular, most common words had acquired their present-day fixed spellings by the 19c, with minor variations between BrE and AmE. Samuel Johnson's *Dictionary of the English Language* (1755) served as an authoritative work of reference. Until the late 18c, when AmE and BrE usage began to diverge, both members of such pairs as *center/centre*, *color/colour*, *magic/magick*, *plow/plough* were in general use. AmE usage followed Noah Webster's dictionary in 1829 in settling on the first in each of these cases. BrE usage, however, having favoured the second in each pair (as in Johnson's dictionary of 1755), continued with all but the *-ick* form as its standard practice, turning them into tokens of national distinctiveness. As a result, the most obtrusive differences between present-day American and British documents are their spellings.

**A system of systems.** Spellings became fixed in the 18c by a social consensus and not through the recommendation of an Academy or other institution. The result has been at the same time a lessening of variability and a fossilization of forms that came into existence in different times and places. These fossils occur, as it were, in orthographic strata: a vernacular substratum of Anglo-Saxon, Danish, and other Germanic material (and exotic material borrowed so early that it has come to look Germanic), a mid-stratum of Norman-French material, and a superstratum of nativized Neo-Latin (Latin and

Latinized Greek). The intricacies of this system of systems are so great that it is close to impossible to sort out its sets and subsets neatly, but literate users of English appear, by and large, to be aware (in functional, not etymological, terms) of the main patterns. These are amenable to several descriptions: a two-part contrast of Germanic and Romance (including Latinized Greek and ignoring the exotica); a five-part system of Germanic, French, Latin, Greek, and exotica; or a three-part system in line with the three major traditions of word-formation in English, Germanic, Latin, and Greek (Norman-French patterns variously affecting all three), representing a cline from the everyday to the highly technical. In addition to the core words that belong etymologically to each group there are many words that have crossed over from group to group or been drawn into a group from elsewhere, but what marks a group (among other things) is the distinctive pattern of its spellings, a limited selection of which are:

*A vernacular-style spelling.* (1) Syllable-initial sets of consonants: *kn-* with silent *k* in *knave, knee, knife, know, knuckle*; *sk-* in *skate, skill, skunk, sky*. (2) Syllable-final sets of consonants: *-sh* in *bash, mesh, dish, slosh, gush*; *-tch* in *batch, ketch, ditch, splotch, hutch*; *-ck* in *back, deck, tick, mock, suck*; *-le* in *cattle, kettle, sizzle, bottle, nuzzle*; *-ckle* in *crackle, heckle, sickle, grockle, knuckle*; *-dge* in *badge, hedge, midge, dodge, nudge*. (3) Prefixes: *a-* in *ablaze, aglow, alive, asleep*; *be-* in *become, believe, belong*. (4) Suffixes: *-ly* in *brotherly, kindly, lordly, northerly*; *-ness* in *darkness, lordliness, slowness, wetness*; *-y* in *sandy, slimy, wishy-washy*.

*A Romance-style spelling.* (1) Soft *c* and *g* before *e* and *i*: *cell, gelatin, decision, ginger*. (2) Prefixes (unaltered or assimilated): *ad-* in *admit, adopt, advise, allege, apparent*; *con-* in *conclude, commensurate, collection*; locative *in-* in *inherent, innate, instinct, investigate*; negative *in-* in *indecisive, inconclusive, ignoble, illiterate, impossible, irreversible*; *post-* in *post-date, postpone*; *pre-* in *prescribe, prevent*; *pro-* in *progress, provide*. (3) Suffixes: *-ity* in *adversity, centrality*; *-ion* in *addition, admission, condition, eruption, propulsion, segregation*.

*A transliterated Greek-style spelling.* (1) *Ch* with the sound value /k/: *chaos, archetype, orchid, cholesterol, monarch*. (2) Word-initial silent *m* and *p*: *mnemonic, psychology, pterodactyl*. (3) Use of *y* rather than *i*: *analysis, psychology, synthetic, syzygy*. (4) Use of *ph* rather than *f*: *amphibious, pharmacy, philosophical*. (5) Initial *rh* and medial and final *rrh* as in *rhetoric, rhythm, diarrh(o)ea, h(a)emorrhage, catarrh*.

**Spelling and stress.** English is a stress-timed language, but its written form does not show where

the stress falls in polysyllabic words. The noun and adjective *present*, which are stressed on the first syllable (*présent*), have the same spelling as the verb, which is stressed on the second syllable (*présént*). English can, however, indicate stress when an unstressed vowel is spelt with a syllabic consonant and not a vowel letter: *apple, acre, hadn't*, and *spasm* show that the first syllable, with the vowel *a*, carries the stress, and not the second syllable, in which no vowel letter figures. In the weak syllables of the language (initial in *about, conspire, decide, persuade, remove*, final in *anthem, beggar, metal, phantom, worker*), the vowel is reduced in speech to a central weak quality (schwa) or is represented by a syllabic consonant. Unless one already knows the spelling of such unstressed or weak syllables, it is not easy to guess what it might be: compare *anthem/fathom, medal/model, principal/principle*. In addition, patterns of stress associated with suffixes change the pronunciation of words without affecting spelling and without any indication of stress shift shown in writing, as in *atom/atómic, eléctric/electricity, nátion/nationálicity, phótograph/photógrapher/photográphic*. Elsewhere, the stress shift is reflected in the spelling: *maintáin/máintenance, revéál/revelátion*.

**Homographs and heterographs.** Ambiguity of word form in English has three aspects: (1) *Homonyms*, words that have distinct meanings and are in origin unconnected, but have the same sound and spelling: *tender* as in *tender feelings, a locomotive tender, and to tender one's resignation*. In context, however, they seldom trouble the reader. (2) *Homophones* or *heteronyms/heterographs*, words that have the same pronunciations but are differently spelt, of which there are over 600 sets in English. Phonologically they are *homophones*, orthographically *heterographs*: *pair/pare/pear, right/rite/write/wright, cent/scent/sent*. Such forms are made possible by the many alternative sound-symbol correspondences in English. In reading, the different spellings prevent visual ambiguity, but for writing they require an effort of memorization and can lead to confusion, as when *flair* is written as *flare*. (3) *Homographs* or *heterophones*, words that have the same spelling but different pronunciations: *bow* for a violin, *bow* of a ship. These are ambiguous for readers but cause writers little trouble and are of two kinds: related and unrelated pairs. Related pairs include those that shift stress (*an insert/to insert*), introduce voicing (*a house/to house*), give an otherwise mute vowel full value (*aged, agéd*), and involve inflected forms (*bathing*, either from *bath* or *bathe*) and part-of-speech differences (*a live wire/to live nearby*). Unrelated pairs have

usually resulted from accidental convergence: *axes* (plural of *ax(e)* or *axis*). Encounters with a member of such a pair can pose problems comparable to an optical illusion that can be interpreted in two ways: *bass*, *buffet*, *does*, *furrier*, *gill*, *lower*, *multiply*, *routed*, *sewer*, *skier*, *supply*, *tarry*. Such heterophones are not generally felt to constitute a problem, but some of the commoner pairs are easily misread: *lead*, *read*, *tear*, *wind*, *wound*, *bow*, *row*, *sow*.

**The psychology of literacy.** Because of the complexity of English spelling, psychologists, educationists, and linguists have long puzzled over the best way to teach it. It has become a widely held view that rather than seek sound-symbol correspondences, the spelling of words should be seen as forming a constellation of letters whose image is (or can be) more or less imprinted on the mind. Considered from this point of view, English spelling has been called *logographic*: not simply alphabetic, but with some of the qualities of Chinese writing; spellings such as *one* and *who* are read as wholes (*gestalts*), regardless of the implications of a letter-by-letter reading. Even a simple spelling such as *bad* triggers sound and meaning in a skilled reader's mind not by virtue of the letters alone but by global image, just like *one* and *who*. Proponents of such a 'look and say' approach to reading and writing consider that once these word-*gestalts* are imprinted on the mind, they can be read and written as easily as the spelling of a more directly phonographic language such as Spanish or Hungarian. Proponents of a 'phonic' approach (relating individual letters to sounds) as well as spelling reformers argue that it is precisely the difficulty of acquiring a separate mental image of so many English spellings that prevents a large number of people from reaching a functional level of literacy. The 'look and say' approach teaches quick recognition of familiar words, but can leave users helpless in the face of unfamiliar words if they do not know how to relate sounds and letters. While it is relatively easy to learn to read and write by a system of regular sound-symbol correspondences, the irregularities of English spelling make it difficult for many to master the unpredictable conventions of the written language.

**SPELLING BEE**, also **spelling competition**. A contest or game in which players compete in the spelling of words whose difficulty increases as the game progresses, until one person is left as the winner. See SPELLING, WORD GAME. [WORD, WRITING].

T.MCA.

**SPELLING CHECKER**. Also **speller**, **spell-check(er)**. A computer program that verifies the spelling in a text. It is often an adjunct to a word processor or to desktop publishing, and is usually based on the headword list of a published dictionary. Major word-processing programs such as *WordPerfect*, *WordStar 2000*, *Microsoft Word*, and *Multimate* contain a spelling checker, or one may be bought separately, such as *Turbo Lightning* or *Random House Proofreader*. Typically, such programs identify every word not in their source list. They detect finger slips and misspellings, but not the mind slips that confuse homonyms or violate grammatical agreement: that is, they detect non-words such as 'ther' for *there*, but not wrong words such as *their* for *there*. A more ambitious program may also make corrections, changing typed words which are not in its list to the closest match it has. When dealing with the text of dictation, phonetic representations are useful for guessing the word intended, and are incorporated into programs for people typing from phone lines (such as airline reservations clerks). Compare GRAMMAR CHECKER, STYLE CHECKER. See PROOF-READING, SPELLING. [TECHNOLOGY, WRITING].

M.L.

**SPELLING PRONUNCIATION.** Pronunciation based on the spelling of a word rather than on conventional speech, such as *often* pronounced with /t/. In a language such as Spanish, the patterns of whose speech and spelling correlate closely, the concept is unnecessary, but in English, in which correlations between spoken and written forms are often weak, the term labels a common, though often unevenly developed, phenomenon: for example, a number of English words that begin with *h*, such as *honour*, *honest*, *humble*, *human*, were borrowed from French with no /h/ in their pronunciation. While some, such as *honour* and *honest*, continue to be pronounced without /h/, others, such as *humble* and *human*, are now pronounced with /h/ to fit their spelling (except in such entirely aitchless varieties as Cockney); in standard BrE pronunciation, the /h/ is pronounced in *herb*; in AmE, it is not. In some cases, spelling pronunciation triumphs over erstwhile common pronunciations: in general usage, *waistcoat* is no longer pronounced 'weskit'. In others, when a word has been learnt only through reading, a spelling pronunciation may be used until the error is discovered: for example, that the *ch* of *archipelago* is pronounced /k/, not /tʃ/, and its closing syllables do not rhyme with *sago*. Spelling pronunciations can be invoked on an ad-hoc basis, to contrast words that are otherwise homophones: for example, by saying 'stay-shun-AH-ry' for *stationary* and 'stay-shun-ER-y' for *stationery*. Many place-names, especially in England, have both traditional and spelling pronunciations, such as *Cirencester*, whose pronunciations range from 'Sissiter' to 'Siren-sester'; *Gloucester*, however, perhaps because it is better known, has no spelling pronunciation; it is only 'Gloster'. See PRONUNCIATION, SPELLING. [SPEECH, WRITING].

T.MCA., C.U.

**SPELLING REFORM.** The planned alteration of the established alphabetic writing system of a language so as to remove or reduce elements taken to be sources of confusion and difficulty in learning and using that system. Spelling reform does not usually include such changes as the substitution of one writing system for another (as, for example, in 1928, when Arabic script was replaced by Roman for the writing of Turkish), changes in systems of non-alphabetic signs (as with the reform of Chinese characters begun in the People's Republic of China in 1955), or the readoption of earlier individual spellings (such as, in English, the spelling *fantasy* after some three centuries of *phantasy*, there being no general substitution of *f* for *ph* throughout the language).

**Regulation and reform.** Before the advent of printing in the 15c, European spelling conventions were not usually rigid and often reflected writers' accents and preferences. The concept of 'correct writing' (*orthography*) emerged partly because printers sought uniformity and partly from a Renaissance interest in word forms, but it was only gradually, over centuries, that the availability and example of dictionaries and the pressures of formal systems of education led individuals to strive to observe the conventions of print. Systematic changes in spelling have generally been the responsibility of language academies or government departments. Academies have been founded for Italian (1582), French (1634), Spanish (1713), and various other languages (but excluding English), to act among other things as authorities on orthography, and have strongly influenced the orthographic development of the languages over which they have presided. For example, the 1740 edition of the dictionary of the Académie française altered the spelling of 36% of French words, chiefly replacing mute *s* by acute and circumflex accents: for example, *estoit* by *étoit*, *boiste* by *boîte*. Similarly, in 1959, the Real Academia de la Lengua Española issued its *Neuvas Normas de Ortografía* (*New Norms of Orthography*), recommending that silent initial letters should be dropped: *psicología* could, for example, thenceforth be written *sicología*.

The German-speaking countries held a conference in 1901 to harmonize their spelling and eliminate redundant *h* in such words as *Thier*, *Thor*, *Thür*. In the Soviet Union after the 1917 Revolution, the new authorities removed four redundant letters of the Russian alphabet and curtailed the use of a fifth. In Malaysia and Indonesia in 1972, the two governments acted jointly to harmonize their previously British- and Dutch-derived writing systems. In the Low Countries in 1883, Dutch and Flemish spelling were harmonized, and in 1947 some double vowels were simplified and *sch* was replaced by *s*, *nederlandsch* for example becoming *nederlands*. In the 20c, spelling reform has most often been implemented by edict and through the schools. Government publications use the new forms and children grow up using them as the only forms they have been taught, while many adults continue with those they learned in childhood; as a result, in such situations, people's spelling may indicate their age group. Depending on the culture of the language and the political circumstances of such a change, reform may be smoothly adopted or encounter resistance; sometimes even a modest proposal for reform may be vigorously opposed. Successful reform

usually presupposes either a very powerful central government with a strong ideological programme or agreement that existing spelling conventions are unsatisfactory.

**Reforming English spelling.** The orthography of English has never been subject to systematic official reform, and has seen few changes in 300 years. There appear to be two reasons for this:

(1) *A hybrid orthography.* Written English emerged from the Middle Ages as a combined adaptation of two very distinct spelling systems, those of Old English and Norman French. Added to these disparate elements were important elements from other languages: first Scandinavian, then Latin and, with the Renaissance, Greek, to be followed in later centuries by further elements from other languages around the world. This mix made the phonographic basis of writing in English (the link between its sounds and its written symbols) less immediately apparent, and militated against the possibility of assimilating all the ingredients of the language into a phonographically consistent whole. The resulting diversity (and often confusion) were increased by the effects of changes in pronunciation, especially the Great Vowel Shift in the 15c, in response to which there were few changes in spelling.

(2) *The absence of an Academy.* No authority created or approved by the state took an interest in the writing systems, despite calls in the 17c and 18c for the establishment of an English Academy. The alternative institutions that established themselves were dictionaries, for BrE primarily Samuel Johnson's (from 1755) and for AmE primarily Noah Webster's (from 1828). Johnson's aim, however, was not to regularize but to 'adjust' what he saw as 'unsettled and fortuitous'; he was guided by etymology and usage, not by the phonographic principle of 'one letter, one sound', and considered that many irregularities were simply 'inherent in our tongue'. His intent was not to reform the writing system but, through the authority of his dictionary, to promote the notion of 'correct' spellings. Noah Webster was in part guided by the phonographic principle in making his reforms, and at one time advocated a radical break with BrE orthography; the conservative pressures of publishing, however, ensured that only a few of his proposed spellings were propagated (and increasingly widely accepted), and these constitute most of the characteristic present-day AmE forms: see AMERICAN ENGLISH AND BRITISH ENGLISH. Webster has been the only reformer whose ideas have had a lasting effect, and even that was limited and slow to spread.

**Amenders and reformers.** Many linguists and educationists have been concerned with ways of

systematizing written English. Although there could be no reform before spelling became more or less fixed, many of the ideas that have dominated the spelling-reform debate were already under discussion in the 16c. For example, in 1568, Sir Thomas Smith called for consistency within an extended alphabet, including letters and diacritical marks from Old English and Greek; in 1569, John Hart called for the spelling of words strictly by their sound; in 1582, Richard Mulcaster appealed for stability based on consistency, analogy, and custom, and the recollection that 'letters were invented to expresse sounds'. However, the schoolmaster Edmond Coote probably contributed most to the settling of English spelling in its present form through the 54 editions of his handbook *The English Schoole-maister* (from 1595 to 1737), which tended to avoid some of the redundant letters that were previously common.

Alexander Gil in 1619 and Charles Butler in 1633 advocated phonographic systems with the retention of Old English letters or the introduction of new letters (with some variation to mark etymology and distinguish homophones), but there was little serious advocacy of reform until 1768, when Benjamin Franklin assessed the needs of learners and poor spellers and devised an alphabet that did not use the letters *c, j, q, w, x, y* (which he considered superfluous) and introduced new characters for the vowels in *hot, up* and the consonants in *the, thin, -ing, she*. The scheme did not, however, receive much attention. A major 19c innovator was Isaac Pitman, who moved from the invention of his phonetic shorthand to the development of an extended alphabet called *phonotype* (see entry) or *phonotypy*. His emphasis on the need to encourage the education of the poor was echoed in Britain in the 1870 Education Act and led to a call by the National Union of Elementary Teachers in 1876 for a Royal Commission to consider spelling reform. The late 1870s saw the founding of spelling-reform associations on both sides of the Atlantic, whose members included Tennyson and Darwin. Such eminent philologists as Henry Sweet and Alexander Ellis in the UK and Francis March in the US experimented with reformed alphabets. In the 1880s, many students of the new science of phonetics were interested in the development of a phonetic alphabet not only for academic purposes but also as a possible precursor of a reformed spelling system for English.

**New Spelling.** At the beginning of the 20c, the cause of spelling reform was taken up for a time by the US President Theodore Roosevelt and sponsored by the industrialist and philanthropist Andrew Carnegie. In 1908, the British *Simplified Spelling Society* (SSS) was founded, chiefly with

the aim of devising a reformed writing system based on the Roman alphabet, in the belief that such a development would stand a better chance of acceptance than a new alphabet. In 1948, the phonetician Daniel Jones and dialectologist Harold Orton published a system called *New Spelling*, the recommended orthography of the SSS, of which the following is a specimen:

We rekwier dhe langgwej as an instroument; we mausloe study its history. Dhe presens ov unpronounst leterz, three or for diferent waez ov representing dhe saem sound, three or for uezes ov dhe same leter: aul dhis detrakts from dhe value ov a langgwej az an instroument.

*New Spelling* was accepted in 1956, with small amendments, by the *American Simplified Spelling Association*, was further developed and computerized by Edward Rondthaler in New York (1986), and was revised in the 1980s, its most recent form being published in the Society's Pamphlet No. 12, *New Spelling 90* (1991). It also provided the phonographic analysis on which Sir James Pitman based his *initial teaching alphabet* (*i.t.a.*) (1959). To date, however, the system has had little impact on the English-using world, and there appears currently to be little general interest in reform, and considerably less interest among language scholars than a century or even half a century ago.

**A new alphabet.** There have from time to time been attempts at radical change that go well beyond spelling reform proper into the creation and promotion of entirely new alphabets. Most prominently, a bequest from the dramatist and social reformer George Bernard Shaw financed a public competition in 1957-8 for the design of a new alphabet that would have at least 40 letters and no digraphs or diacritics. The winner of this competition, Kingsley Read (from Warwickshire in England), produced an alphabet that is utterly unlike Roman and has letters of four types: *tall* (those with ascenders), *deep* (those with descenders), *short* (those with neither ascenders nor descenders), and *compound* (combining basic symbols). In visual effect, the *Shaw Alphabet*, *Shaw's Alphabet*, or the *Shavian Alphabet*, as it is variously known, looks rather like the scripts used for the Dravidian languages of South India, with many gently curving characters. A bi-alphabetic edition of Shaw's play *Androcles and the Lion* was published by Penguin Books in 1962 to demonstrate the old and new orthographies side by side, the texts running parallel on facing pages. In it the *Shaw Alphabet*, though alien in its effect, proves markedly more compact and economical than the traditional system. To date, however, it has had no significant impact on the English-using world.

**The contemporary situation.** Recent thinking among spelling reformers stresses gradual rather than radical change, so as to ensure continuity of literacy, enable old and new to coexist, and limit the impact and scope of any one stage in reform: that is, evolution rather than revolution. Harry Lindgren in Australia, for example, proposes a multi-stage reform programme, each stage regularizing the spelling of a single phoneme. As a first stage, he suggests that the traditional short-*e* sound be written as *e*, as in *eny* 'any', *sed* 'said', *agenst* 'against', *bery* 'bury', *frend* 'friend', *hed* 'head'. Alternatively, rather than taking a rigid schema of sound-symbol correspondences as a starting-point, some reformers adopt a functional approach, asking what spellings would best suit the needs and abilities of users. One proposal suggests a first stage confined to removing the digraph *gh* in *though*, *caught*, etc. In addition, some reformers argue that by studying kinds of misspelling it is possible to identify the greatest difficulties among current spellings, and concentrate on regularizing them alone. The *Cut Spelling* proposal, for example, is based on the observation that many troublesome spellings involve letters that are superfluous in terms of pronunciation, and suggests that these be omitted, achieving greater ease of use and at the same time considerable economy of space (see *CUT SPELLING*).

**Arguments about spelling reform.** The idea of reforming the spelling of English has long been controversial, with arguments about the relative value of tradition and literacy, the practicalities of introducing change, and the specific changes that might be made. Opponents of reform often describe the rich variety of present spellings as a heritage not to be lightly discarded, while reformers attach priority to the actual or perceived needs of contemporary users. Orthographic conservationists point out that present spellings often reflect the history of words and their links across groups of words and with words in other languages, while reformers present a counter-list of historically inconsistent spellings and cite arbitrary variations both within English and from the spellings of other European languages. Conservationists object that radically changed spellings would seem alien to the older generation, while texts in the old spelling would seem alien to the young; the change-over would also, they say, create uncertainty and cost a great deal. Reformers reply that the present system has already alienated many, the spelling of earlier writers has in in any case been updated in various ways, and reform could potentially save money. Anti-reformers fear that interfering with an ancient, delicately balanced system might make learning not easier but more

difficult, while many who have taught regularized spelling (such as teachers of the *initial teaching alphabet*) have argued that a more regular system is easier to learn. Resistance to the idea of change is often provoked by the disturbingly unfamiliar appearance of radically reformed spellings, such as *kof* and *skool* for *cough* and *school*, which for many people are both aesthetically displeasing and suggest semi-literacy.

Among the practical objections to spelling reform is the problem of coordinating reform worldwide in so widely used a language as English, as well as the fact that there is no consensus among reformers on the system to be introduced. Anti-reformers argue in particular that, if English spelling is directly to represent pronunciation, there is no serious answer to the question: if reform is to be phonographic, on which accent of English should it be based? To these points reformers reply that the traditional orthography of English is quite simply out of date and is demonstrably difficult both to learn and to use. Literacy, they maintain, is a precondition for individual, national, and international prosperity, and the present spelling system of the world's foremost language hinders the wider and fuller achievement of literacy in that language. As regards consensus and accent, they insist on the necessity of the major English-speaking communities getting together and discussing the problem, to find out what bases of agreement exist and to seek workable compromises, especially with regard to the phonemic analysis on which any international system might be built. Currently, there does not appear to be anything close to a meeting of minds in such matters.

**SPELT**, full form *Society of Pakistani English Language Teachers*. A non-governmental organization set up in 1984 to improve the standard of English teaching and learning in Pakistan. It is a registered voluntary body with a national network in major centres. It provides a forum for teachers of English, disseminates current ideas and developments in ELT, provides in-service courses, seminars, and workshops, and develops national and regional resource centres. SPELT has monthly academic sessions and an annual seminar with international participation. A one-year Practical Teacher Training course (now recognized by the Royal Society of Arts) and a newsletter were introduced in 1985. See PAKISTAN. [ASIA, EDUCATION, MEDIA]. T.MCA.

**SPENSER, Edmund** [1552?-1599]. English poet, probably born in London, son of a clothmaker from Lancashire. He was educated as a 'poor boy' at Merchant Taylors' School in London and as a 'sizar' (a poorer student who did menial duties) at Cambridge, where he gained a wide knowledge of languages. In 1580, he was appointed secretary to Lord Grey of Wilton, Lord Deputy for Ireland. He grew attached to Ireland, but disliked its wildness and lack of law, and was involved in the plantation of English settlers in the province of Munster. His tract *A View of the Present State of Ireland* (1595-6) argued for firm measures in controlling the island, with gentleness only for those who submitted to English rule. He was granted considerable land and property, including Kilcolman Castle, County Cork (c. 1588), and it was there that he completed his major literary work. His neighbour in Ireland, Sir Walter Raleigh, appears to have taken him to London to present the first sections of the epic *The Faerie Queene* to Elizabeth. In 1598, he was made Sheriff of Cork, but in the same year a rebellion broke out and his castle was burned. He returned to London with his family and with official letters about the state of Ireland, and died early the following year, perhaps as a result of his experiences.

Spenser was criticized in his own day for adopting an archaic style ('Spenser, in affecting the Ancients, writ no language': Ben Jonson, *Timber or Discoveries*, 1641), but has been recognized since then as a major influence on the language of English poetry. In imitating Chaucer, he extended the literary life of many Middle English archaisms, such as *dight* to adorn, *eke* also, *stour* conflict, *unneath* hardly, *whilom* formerly,

and retained obsolete inflectional affixes for metrical purposes as in *eyen* eyes, *muchell* great, *to worken* to work, and especially in past participles with the *y-* prefix (*yclad*, *ywrought*). The liberal use of inverted word order ('Yet I am glad that here I now in safety am') helped with his elaborate rhyming patterns: see SPENSERIAN STANZA. Spenser's deliberately 'old' language served the purposes of pastoral in *The Shepheardes Calender* (1579), where it is often indistinguishable from ongoing dialect, and was used to evoke an idealized chivalric past in *The Faerie Queene* (1590-6), a work which served to vindicate Protestantism and glorify England. His poetry is full of etymological quibbles, puns, and verbal allusions which contribute to the patterning of this long allegorical poem in praise of Gloriana (Queen Elizabeth). Through later imitators and the Romantic poets, his language became a main source of English poetic diction. William Butler Yeats talked of his 'powerful and subtle language' and admiration of Spenser's verbal artistry has led to his being called 'the poet's poet'. See index. [BIOGRAPHY, EUROPE, HISTORY, LITERATURE]. N.E.O., T.M.C.A.

**SPENSERIAN STANZA** [1800s]. The form of stanza devised by Edmund Spenser for *The Faerie Queene* (1590-6), probably influenced by the *rhyme royal* used by Chaucer in *Troilus and Criseyde*, a seven-line stanza that rhymes *ababbcc*. The Spenserian stanza consists of eight lines in iambic pentameter followed by an alexandrine (a six-foot iambic line), rhyming *ababbabcc*, as:

She also dofte her heavy habergeon,  
Which the faire feature of her limbs did hyde,  
And her well plighted frock, which she did wone  
To tucke about her short, when she did ryde,  
She low let fall, that flowd from her lanck syde  
Downe to her foot, with carelesse modestie.  
Then to them all she plainly was espyde,  
To be a woman wight, unwist to bee,  
The fairest woman wight, that ever eye did see.

Other poets have written in Spenserian stanza, notably Keats in 'The Eve of Saint Agnes' and Shelley in 'Adonais'. See SPENSER, STANZA. [LITERATURE]. R.C.

**SPLIT INFINITIVE**. [Late 19c, as in: 'Are our critics aware that Byron is the father of their *split infinitive*? "To slowly trace", says the noble poet, "the forest's shady scene"' (*Academy*, 3 April, 1897)]. Also formerly **cleft infinitive**. A prescriptive term for an infinitive phrase such as *to cut* or *to enjoy* that has been opened up ('split', 'cleft') by the insertion of a word or phrase (especially an adverb), as in: '*to sharply cut* the federal deficit'; 'How *to actually enjoy* February'; 'encouraging more people *to, for example, park* their cars'; '*to one day do* my own elephant

study'. Long a major bone of contention among teachers, grammarians, and commentators on style and usage, the split infinitive in the last two decades has become a matter of minor concern. Many younger speakers and writers split or leave intact their infinitives without being aware that the matter was ever controversial. Probably the most famous split infinitive in the language is *to boldly go* (*where no man has gone before*), occurring in the opening voice-over of the US television series *Star Trek* (1960s), and subsequently often parodied. For further discussion of the controversy, see USAGE GUIDANCE AND CRITICISM. In addition, see DESCRIPTION AND PRESCRIPTION, INFINITIVE, USAGE. [GRAMMAR, STYLE, USAGE].

T.M.C.A.

**SPOKEN PROSE** [1959: coined by David Abercrombie]. A semi-technical term for prose presented as speech. Such prose is the spoken outcome of the lines of actors, the texts of public speakers, and the scripts of presenters on stage, screen, radio, and television. The term distinguishes all such speech from spontaneous, unscripted conversation. In 1957, T. S. Eliot argued (*On Poetry and Poets*) that the division of language into verse and prose was not enough; the need was for verse, prose, and 'ordinary speech'. Abercrombie proposed a fourfold division: verse, prose to be read silently, prose to be spoken aloud, and conversation:

Prose is essentially language organized for *visual* presentation. Eliot's point was that it is just as artificial to make characters on the stage speak prose as to make them speak verse, and the latter needs no more defending than the former. But there is another point to be made from what he said. Most people believe that *spoken prose* . . . is at least not far removed, when well done, from the conversation of real life. . . . But the truth is that nobody speaks at all like the characters in any novel, play or film. Life would be intolerable if they did; and novels, plays or films would be intolerable if the characters spoke as people do in life. Spoken prose is far more different from conversation than is usually realized (*Studies in Phonetics and Linguistics*, 1965).

Spoken prose is descended from drama, lecturing, and disputation, the recitation of more or less memorized public addresses, and the arguments of lawyers and orators whose craft originated in ancient Greece. Conversation is distinct from it, but the use of spoken prose has influenced educated and formal spoken usage. Speakers often use the same devices whether they are speaking spontaneously, using a script, or working from notes. See PROSE. [SPEECH, STYLE].

T.M.C.A.

**SPONDEE** [14c: from French *spondée*, Latin *spondeus*, from Greek *spondēios* *pous* the foot of

libation, referring to its use in melodies accompanying libations in classical times]. A metrical foot of two syllables, both long in quantitative metre, as in Latin, both stressed in accentual metre (– –), as in English. The normal stress of monosyllabic adjective and noun in English is spondaic: *good news, fine day*. In verse, the heavy effect of the spondee can be used to suggest weariness or depression, as in the following line from Tennyson, with its alternation of iambs and spondees:

U – – – – U – – –  
The long / day wanes; / the slow / moon climbs.

The associated adjective is *spondaic*. See FOOT, METRE/METER, SCANSION. [LITERATURE]. R.C.

**SPOONERISM** [1890s: from the name of the Reverend W. A. Spooner (1844–1930), Dean and Warden of New College, Oxford, and *-ism* as in *euphemism*]. The transposition of the initial sounds of words, as in *ket of seas* (set of keys), *mit wunday* (Whit Monday). The eponymous Spooner was reputed to make errors of this type, and a number of utterances are quoted as ‘original spoonerisms’: *a well-boiled icicle* (a well-oiled bicycle), *a scoop of Boy Trouts* (a troop of Boy Scouts), and *You have hissed all my mystery lectures and tasted a whole worm*. It seems likely that these transpositions were exaggerated inventions by his students. In real life, transposed sounds often have some phonetic resemblance to one another, as in *slow and sneet* (snow and sleet). In addition, they can affect vowels, as in *cuss and kiddle* (kiss and cuddle) and the final sounds of words and syllables: *hass or grass* (hash or grass). They can also affect larger items, such as syllables and words: *mouth in her food* (food in her mouth), *to gap the bridge* (to bridge the gap). Such errors provide evidence of how speech is planned and produced. See SLIP OF THE TONGUE. [LANGUAGE, STYLE]. J.M.A.

**SPREAD**. See LAYOUT.

**SPRUNG RHYTHM** [1877]. A term used by the British poet Gerard Manley Hopkins to describe his innovative verse, which he derived from the strong-stressed metres of Old English poetry. His metre is different from the regular ‘running rhythm’ of alternating stresses and goes in ‘jumps’ of various occurrence. Each metrical foot begins with a stressed syllable that may be followed by one or more unstressed syllables, or may itself occupy the whole foot:

No worst, there is none. Pitched past pitch of grief,  
More pangs will, schooled at forepangs, wilder wring.  
Verse in sprung rhythm can be compelling and emphatic, especially when strong stresses appear in sequence. Hopkins used alliteration, assonance, and compound words to increase the effect.

Ezra Pound, T. S. Eliot, and other 20c poets have used it to vary the structure of free verse. See RHYTHM, VERSE. [LITERATURE]. R.C.

**SRANAN**, also *Sranan Tongo, Taki-Taki*. The major English-based creole of Surinam in South America, used as a lingua franca by the coastal population and influential among speakers of Ndjuka and Saramaccan. See BAJAN, SURINAM(E). [AMERICAS, VARIETY]. L.D.C.

**SRI LANKA** [1970s: from the Sanskrit and Sinhala name for the island, *Lanka*, preceded by the honorific *sri*. The Tamil equivalent is *Ilam/ Eelam* or *Ilankai*. Arab traders used the name *Serendip/Serendib*. From the title of the Persian fairy tale ‘The Three Princes of Serendip’, the writer Horace Walpole in 1754 formed the noun *serendipity*, the faculty of happily discovering one thing while diligently looking for another, something that came naturally to the heroes of the tale. Both *Serendip* and *Ceylon* (the name used throughout the British colonial period) derive from Sanskrit *Simhala-dvipa* island of the Sinhala, a people known variously in English as *Sinhalese, Singhalese, Cingalese, and Ceylonese*. Official title: *Sinhala Sri Lanka Janarajaya, English Democratic Socialist Republic of Sri Lanka*. A country of South Asia, and member of the Commonwealth. Capital: Colombo (or, more accurately since 1983, its suburb Sri-Jayawardenapura). Currency: the rupee (100 cents). Economy: mixed. Population: 16.6m (1988), 19.8m (projection for 2000). Ethnicity: 74% Sinhalese, 18% Tamils, 7% Moors/Muslims, 1% Burghers (Eurasians), Veddhas (aboriginals), and Malays. Religions: 69% Buddhist, 15% Hindu, 8% Christian, 8% Muslim. Languages: Sinhala, Tamil (both official, national languages), and English (often used in government and spoken by some 10% of the nation, including especially the Burghers). Education: primary 75%, secondary 30%, tertiary c.10%, literacy c.65%.

**The mission schools**. The first Europeans to visit the island were the Portuguese in 1505, who built a fort at Colombo. The Dutch forced them out in 1658, but failed to gain control of the whole island. The British defeated them in 1796 and established the colony of Ceylon in 1802, to which Tamil labourers were brought from south India to work on tea and coffee plantations. Ceylon became a Dominion of the British Empire in 1948 and the independent republic of Sri Lanka in 1972. Long-standing tensions between the majority Sinhalese and the minority Tamil community (concentrated in the north-east) led to civil strife in the late 1980s; many Tamils have sought to set up their own state. The history of English in Sri Lanka is closely linked with its

communal problems. In 1799, the Revd James Cordiner went as chaplain to the British garrison in Colombo, becoming in due course principal of all the schools in the settlement. In 1827, the Christian Institution was set up by Sir Edward Barnes, the aim of which was 'to give a superior education to a number of young persons who from their ability, piety and good conduct were likely to prove fit persons in communicating a knowledge of Christianity to their countrymen'. Until about 1831, the teaching of English was in the hands of missionaries; when the government took control, there were 235 Protestant schools in the island, and until 1886 Christian schools and colleges predominated.

**English in Sri Lanka.** One result of the long-established tradition of such institutions was the emergence of two broad and at times hostile educated classes: an English-using and largely Christian minority and a Sinhala-educated majority, most of whom were Buddhists. Until 1948, three languages were used side by side, English, Sinhala, and Tamil. English served as the language of administration, the generally desired language of higher education, and a link language between the communities. In 1956, however, a socialist government replaced English with Sinhala, unleashing in the process a succession of riots that has not yet come to an end. The Sinhala-only policy resulted in 'the sharp cleavage between Sinhalese and Tamils, most of whom are monolingual in their own tongues and therefore have no means of communication with members of the other community' (Rajiva Wijesinha, *An Anthology of Contemporary Sri Lankan Poetry in English*, Colombo, The British Council, 1988). In recent years, a three-language policy has been proposed that provides for equality among Sinhala, Tamil, and English, and to some extent seeks to restore the position of English, whose role in the community was greatly reduced from the 1960s to the 1980s. English in Sri Lanka, sometimes referred to as *Lankan English*, has a range of subvarieties based on proficiency in its use and the language background of its users. In general terms, it is a subvariety of South Asian English, sharing many features with IndE. Sri Lanka has a number of daily and weekly English-language newspapers, including *Ceylon Daily News*, *Ceylon Observer*, *The Island*, *Sun*, and *Sunday Weekend*. There is a small body of creative writing, Sri Lankan prose writers including J. Vijayatunga, Punyakante Wijenaike, James Goonewardene, Raja Proctor, Rajiva Wijesinha, and Savimalee Karunaratne. Poets include George Keyt, Patrick Fernando, Lakdasa Wikkramasinha, Yasmine Goonaratne, Ashley Halpe, and Anne Ranasinghe. See ENGLISH, INDIAN ENGLISH<sup>1</sup>,

**STAGE** [13c in general terms: from Old French *estage* (Modern *étage*), from Popular Latin \**staticum* a standing-place, from *stare*/*statum* to stand]. The theatrical profession, metonymically named from the platform on which they usually stand to perform a play. The stage became an organized calling in England in the late 16c, with the establishment of permanent theatres. The *sharers* who divided the profits of the company often became prosperous, Shakespeare buying property in London and Stratford. Actors, however, were disliked by the authorities and classed as 'rogues and vagabonds' if they did not have royal or noble protection. For centuries, actors (and after 1660 actresses) were adulated by theatre-goers and despised by 'respectable' society. By the mid-19c, however, leading figures were accepted in literary and fashionable circles and Henry Irving's knighthood in 1895 confirmed the improved status of the profession. Stage usage that has extended into the language at large includes such stock phrases as *behind the scenes*, *the limelight*, *the show must go on*, *a stage whisper*, *taking one's cue*. There is also a popular sense of a register peculiar among actors: rhetorical, egocentric, and sprinkled with vocatives like *darling* and *laddie*. While such a style may have been affected in the 19c and earlier 20c, it is rare today. A significant aspect of theatrical usage has been accents and usages adopted on stage by actors unable to handle them well or constrained to exaggerate them. As a result, such comments are often made as '*Bejabsers*' is *stage Irish*—no real Irish person says things like that. See DRAMA, IRISH ENGLISH, MUMMERSSET, PLAY, THEATRE/THEATER. [LITERATURE, SPEECH, STYLE].

**STAMMERING.** See STUTTERING.

**STANDARD** [12c: from Old French *estandard* (Modern *étendard*), Medieval Latin *standard(i)um*, *standardus*, from *extendere* to stretch out, and -*ard* as in *placard*: often associated with such ideas as *taking a stand*, *standing fast* (compare the Middle High German *stanhart*, suggesting 'stand hard'). A prestigious and uniform variety of a language: *the literary standard*, *standard English*. The application of the term to language dates from the early 19c, when the idea of standard shapes, sizes, and measures and of commercial and manufacturing standards had become commonplace because of the Industrial Revolution. Since then, the concepts of a *standard language* (one with agreed norms and conventions) and a *language standard* (a level below which a 'cultivated' language should not fall)

have been closely associated. For some, the expressions are two sides of the same linguistic coin: the standard is and should be the highest and best form of a language. For others, there is no necessary tie between the two: a standard language is an averaging-out of differences, neither higher nor better than any other variety of a language, and used with particular ends in mind. For others still, uncertainty may lead to ambivalence and confusion about the relative merit of standards and dialects. Dialect, colloquial usage, and slang are often lumped together, with greater or less discrimination, as *non-standard*, *substandard*, or *deviant* forms when judged against a dominant form that is taught in all schools and used by all major public and private institutions.

**The king's standard.** The earliest recorded use of the word was in the phrase *Battle of the Standard*, the name given to a defeat inflicted by the English on the Scots at Cowton Moor in Yorkshire in 1138. The English 'standard' in that battle was a ship's mast mounted on a mobile base, on which various flags were flown. When Richard of Hexham reported on the contest, he quoted a Latin couplet written for the occasion, which said in translation that this device was a standard because 'it was there that valour took its stand to conquer or die'. For many centuries afterwards, the primary meaning of *standard* was a flag or other object raised as a rallying point for armies and fleets: 'Then in the name of God and all these rights, Advance your Standards, draw your willing Swords' (Shakespeare, *Richard III*, 5, 3).

A second meaning emerged in the 15c, referring (perhaps by extension from the flag) to a royal norm of weights and measures that would guarantee fair trading. Once officially approved, such a weight or measure was lodged where it could be consulted to verify other standard weights and measures: 'The sayd Burgese schall haffe y<sup>e</sup> standard . . . the qwhyche measures schuld agre with the kynges standard' (ordinance, c.1450). Such a sense lies behind phrases like *original standard* one from which others are copied and to which ultimate appeal must be made, *gold standard* gold used as a reservoir of value against which paper currencies can be measured, *standard atmosphere* a unit of atmospheric pressure, and *standard error* a measure of the statistical accuracy of an estimate. Ideas of firmness, uprightness, and centrality are found in other extensions of sense, such as an upright pole used as a support, a tall candlestick, a fruit tree trained to have an upright stem, a principle of honesty and decorum, and a level of excellence or quality, all of which have contributed to the

semantic complex in which the linguistic sense is embedded.

**Standards and languages.** In medieval times, the vernaculars of Europe were overshadowed by Latin, the language of scriptural truth, learning, and debate: the gold standard, as it were, against which base vernacular metal was judged. During the 12-16c, however, an accumulation of events and processes demoted Latin and promoted some vernaculars (such as Northern French over Occitan, the Romance language of southern France) and some varieties of some vernaculars (such as the East Midland dialect of English over other dialects). These events and processes were:

(1) *Ethnic and cultural unification.* Many groups using the same languages began to develop a firmer sense of unity. If the unity lacked political cohesion, as in Italy and Germany, linguistic refinement was fostered in certain cities and courts and through certain literary styles. If the unity was accompanied by political centralization, as in France, Spain, and England, linguistic refinement was fostered by a capital where the court resided. Such forms as Parisian French, Castilian Spanish, and the English of south-east England became the 'good' forms of those languages: that is, those drawn from or influenced by Latin. The presence of a strong, literate business class further enhanced the prestige and utility of metropolitan forms of speech and writing. See DIALECT.

(2) *The growth of vernacular literatures.* New literatures developed as counterpoints to Latin in such languages as Italian, Spanish, French, German, and English. They owed much to Latin and Greek in terms of the genres, formulas, and allusions available to them, but differed from them in being widely understood. They were able to exploit, among other things, popular epic cycles such as the *Matter of Britain* (Arthur, the Round Table, the Holy Grail) and the *Matter of France* (Charlemagne and Roland).

(3) *The invention of movable type.* The use of printing presses in the Rhineland from the mid-15c promoted standard letters, uniform formats and sizes of paper, and over time more regularized orthographies. The presses developed a greater influence over religious, literary, public, official, and educational language than scribes had ever had over the medieval and classical languages. In the case of English, Caxton and later printers, though at times anxious about their usages, built on a relatively stable written standard that had already been used for some decades by the clerks of Chancery when writing official documents.

(4) *The legacy of Latin.* During the Renaissance, the flow of elements of Neo-Latin (Latin with

admixtures of Greek) into the new 'high' forms of the vernaculars made them more effective as vehicles of learning and shed on them some of the lustre of the classics. This was particularly true of English, already receptive to the vocabulary of the Romance languages because of the impact of Norman French since the 11c.

(5) *Translating the Bible*. The questioning of the authority of the Pope and the Roman Catholic Church before, during, and after the Reformation also served to weaken the hold of Latin, the language of the Mass and of St Jerome's Vulgate Bible. In northern Europe in particular, the Bible in an élite ecclesiastical language ceased to be acceptable. When it was translated directly from the original Hebrew and Greek into such vernaculars as English, the variety used for the translation became privileged by that use, much as Latin had been privileged before.

**Conclusion.** The development of vernaculars such as French and English and of high forms of those vernaculars such as educated Parisian French and educated south-eastern English depended therefore on the existence of a royal court, a literature associated with that court, laws and ordinances promulgated by court and parliament, the aspirations of a growing middle class, increasing literacy in writing and print, and schools inspired by Latin and the grammatical descriptions of Latin. Such forms benefited from the sense of an educated and refined minority set by Providence over an uneducated and unrefined majority in town and country, a sense that continued uninterrupted from the Middle Ages to at least the American and French Revolutions in the late 18c.

**STANDARD ACCENT** [20c]. An accent that is (taken to be) standard for a language or variety of a language: 'The standard accent—the one that is regionless rather than regional—is the accent of a minority . . . and those who speak it are associated with high status, socially, politically and economically' (J. K. Chambers, in *In Search of the Standard in Canadian English*, 1986); 'It is crucial to realize that the direct ancestor of British English's present-day standard accent (RP) was not simply a particular regional one; it was also the property of a limited social group within that region' (John Honey, *Does Accent Matter?*, 1989). See ACCENT, STANDARD, STANDARD ENGLISH. [SPEECH]. T.MCA.

**STANDARD AMERICAN** [1947: proposed by Eric Partridge]. The standard English of the US: 'Standard English and Standard American are the speech of the educated classes in the British Empire and the United States' (*Usage and Abuse*, 1947, p. 304). Compare AMERICAN<sup>2</sup>, STANDARD, STANDARD AMERICAN ENGLISH. [AMERICAS, VARIETY]. T.MCA.

**STANDARD AMERICAN ENGLISH**, also **American Standard English** [20c]. The standard English of the US: 'In many little ways standard American English is reminiscent of an older period of the language' (A. C. Baugh & T. Cable, *A History of the English Language*, 1978). See AMERICAN ENGLISH, STANDARD, STANDARD AMERICAN. [AMERICAS, VARIETY]. T.MCA.

**STANDARD AUSTRALIAN ENGLISH**, also **Australian Standard English** [20c]. The standard English of Australia: 'As the national variety of English in Australia, Standard Australian English ought to be used with confidence in Australia and overseas' (Joseph Lo Bianco, *National Policy on Languages*, Australian Government Publishing Service, Canberra, 1987). See AUSTRALIAN ENGLISH, STANDARD. [OCEANIA, VARIETY]. T.MCA.

**STANDARD BLACK ENGLISH** [1980s: coined by Orlando Taylor]. The standard English of black Americans: 'Taylor pointed to the fact that many educated African Americans speak "standard black English". They adopt the grammar of standard English, with all the necessary inflections, but do so with distinctive black English phonology' (John Baugh, personal communication, 1990). See BLACK ENGLISH, STANDARD. [AMERICAS, VARIETY]. T.MCA.

**STANDARD BRITISH ENGLISH**, also **British Standard English** [Late 20c]. (1) The standard English of the UK: 'The American pronunciation of *advertisement* . . . may have been current in standard British English . . . in the eighteenth century' (John Honey, *Does Accent Matter?*, 1989). (2) Received pronunciation: 'Far more marked is the social variation of speech patterns [in New Zealand] . . . New Zealand English may reasonably be divided into "broad", "general", and "conservative"—the last of which sets out to model itself on standard British English' (*New Zealand English* entry, *The Right Word at the Right Time*, The Reader's Digest Association, 1983); 'The onslaught against Standard British English as the most appropriate variety of spoken English for a foreign learner to study receives a new impetus with the publication of *Accent on Australia*' (Alan Thompson, *EFL Gazette*, Apr. 1986). See BRITISH ENGLISH, STANDARD. [EUROPE, VARIETY].

T.MCA.

**STANDARD CANADIAN ENGLISH**, also **Canadian Standard English**, short form **CSE** [Late 20c]. The standard English of Canada: 'Grammatical variants occur in Canada. Some of them are undoubtedly too regional or too colloquial (or both) to warrant a place in standard Canadian English, but such judgements cannot be made glibly' (J. K. Chambers, in *In Search of the Standard in Canadian English*, 1986). See CANADIAN ENGLISH, STANDARD. [AMERICAS, VARIETY].

T.MCA.

**STANDARD CARIBBEAN ENGLISH**, also **Caribbean Standard English** [Late 20c]. The standard English of the Caribbean/West Indies: '[The Caribbean Lexicography Project] is concerned with codifying the lexicon of those varieties of English spoken by educated West Indians. Its aim is to define a standard Caribbean English as a prestigious standard in its own right' (Donald Winford, 'The Caribbean', in *English around the World: Sociolinguistic perspectives*, ed. Jenny Cheshire, 1991). Subvarieties include *Standard Barbadian English*, *Standard Jamaican English*, and *Standard Guyana/Guyanese English*. See CARIBBEAN ENGLISH, STANDARD. [AMERICAS, VARIETY].

T.MCA.

**STANDARD DIALECT** [20c]. A term in linguistics for a part of a language traditionally equated with the language itself, and seen as the product of such 'refining' forces as use at a royal court, by the middle classes, and in literature, printing, publishing, and education. Because the standard has generally been set apart from and above *dialect*, the phrase *standard dialect* is sometimes used to indicate that, in linguistic

terms, it too can be regarded as a dialect, despite its special status: 'A grammar of present-day English is a grammar of a standard dialect of English, which is implicitly identified with the language as a whole' (Sidney Greenbaum, *Good English and the Grammarian*, 1988). See DIALECT, STANDARD, STANDARD LANGUAGE, STANDARD VARIETY. [LANGUAGE, VARIETY].

T.MCA.

**STANDARD ENGLISH** [19c: used with and without an initial capital S]. A widely used term that resists easy definition but is used as if most educated people nonetheless know precisely what it refers to. Some consider its meaning self-evident: it is both the usage and the ideal of 'good' or 'educated' users of English. A geographical limitation has, however, often been imposed on this definition, such as the usage of educated people in Britain alone, England alone, or southern England alone, or the usage of educated people in North America and Britain generally. Others still find standard English at work throughout the English-speaking world. For some it is a monolith, with more or less strict rules and conventions; for others it is a range of overlapping varieties, so that standard AmE is distinct from but similar to standard BrE. Although for some the term is negative, for most it appears to be either neutral or positive, referring to something important: 'Standard English (by whatever name it is known) is the variety of English that is manifestly recognised in our society as the prestigious variety' (Sidney Greenbaum, in *English Today* 18, Apr. 1989).

**A minority form.** Some commentators regard standard English as a convenient fiction, like the law; others see it as a thoroughly inconvenient fiction built on social élitism and educational privilege. Even the distinction in writing between *Standard English* with two capital letters and *standard English* with only one implies that the form may be viewed as more or less institutional. It is generally agreed that standard English contrasts (often strongly) with other kinds of English, but there is no consensus about the best way of describing and discussing this contrast: for example, as between 'standard' and 'dialect', 'standard' and 'non-standard', or 'standard' and 'substandard', or some mix of these. It is also usually agreed that standard English is a minority form. Some consider that this has always been so and probably always will be so; others see standard English as a social and political good to which all citizens of English-speaking countries have a birthright and/or should aspire; others again are less certain, or are hostile to the concept. The precise proportion of users of standard English to users of other kinds is not

known, and may not be knowable; it is also seldom discussed. Even so, however, there appears to be a consensus that such a form exists, and serves (or should serve) as the basis for public and private education in English-speaking countries and in English-medium schools elsewhere.

**A general definition.** In everyday usage, *standard English* is taken to be the variety most widely accepted and understood within an English-speaking country or throughout the English-speaking world. It is more or less free of regional, class, and other shibboleths, although the issue of a 'standard accent' often causes trouble and tension. It is sometimes presented as the 'common core' (what is left when all regional and other distinctions are stripped away), a view that remains controversial because of the difficulty of deciding where core ends and peripheries begin. Linguists generally agree on three things: (1) The standard is most easily identified in print, whose conventions are more or less uniform throughout the world, and some use the term *print standard* for that medium. (2) Standard forms are used by most presenters of news on most English-language radio and television networks, but with regional and other variations, particularly in accent. (3) Use of standard English relates to social class and level of education, often considered (explicitly or implicitly) to match the average level of attainment of students who have finished secondary-level schooling.

**A negative definition.** In 'What is Standard English?' (*RELC Journal*, Singapore, 1981), the British applied linguist and language teacher Peter Strevens sought to establish the nature of standard English by saying what it was not:

(i) It is not an arbitrary, *a priori* description of English, or of a form of English, devised by reference to standards of moral value, or literary merit, or supposed linguistic purity, or any other metaphysical yardstick—in short, 'Standard English' cannot be defined or described in terms such as 'the best English,' or 'literary English,' or 'Oxford English,' or 'BBC English.'

(ii) It is not defined by reference to the usage of any particular group of English-users, and especially not by reference to a social class—'Standard English' is *not* 'upper class English' and it is encountered across the whole social spectrum, though not necessarily in equivalent use by all members of all classes.

(iii) It is not statistically the most frequently occurring form of English, so that 'standard' here does not mean 'most often heard.'

(iv) It is not imposed upon those who use it. True, its use by an individual may be largely the result of a long process of education; but Standard English is neither the product of linguistic planning or philosophy (for example as exists for French in the deliberations of the Academie Francaise, or policies devised in similar terms for Hebrew, Irish, Welsh, Bahasa Malaysia, etc); nor is it a closely-defined norm whose use and maintenance is monitored by some quasi-official body, with

penalties imposed for non-use or mis-use. Standard English evolved: it was not produced by conscious design.

**A standard accent?** In Strevens's view, the term *standard English* is valuable because it helps account for a range of distinctions and attitudes, offers a label for the grammatical and lexical components of the core taught to all students of the language, and constitutes the unifying element within the enormous diversity of the language. He argued strongly, however, that the standard applies to grammar, vocabulary, writing, and print, but not to accent (except as a pronunciation target in the teaching of English as a foreign language). However, although it is widespread among contemporary 'liberal' linguists, this view is relatively recent and is not universal. Use of the term to include, and specifically identify, an accent (and most commonly the accent known as *Received Pronunciation*) has long been common and continues in use: *US* 'The British version of standard English, RP, is the same for all speakers regardless of their place of origin' (W. Nelson Francis, *The English Language: An Introduction*, 1967); *UK* 'Both Chaucer and Shakespeare rhymed *cut* with our present-day (southern) standard English *put*' (John Honey, *Does Accent Matter?*, 1989). See RECEIVED PRONUNCIATION, RECEIVED STANDARD ENGLISH. The question of whether *standard English* does, can, or ought to include norms of speech remains the most controversial of the many difficult issues associated with the term.

**An institutional definition.** The Kingman Report on the teaching of English in England and Wales, submitted to the British government in 1988, began with a statement defining standard English that presented the variety as virtually limitless in its reach yet closely bound to one medium:

All of us can have only partial access to Standard English: the language itself exists like a great social bank on which we all draw and to which we all contribute. As we grow older, and encounter a wider range of experience, we encounter more of the language, but none of us is ever going to know and use all the words in the Oxford English Dictionary, which is itself being constantly up-dated, nor are we going to produce or to encounter all possible combinations of the structures which are permissible in English. . . . It is important to be clear about the nature of Standard English. It developed from one of the Middle English dialects (East Midlands—the dialect first printed by Caxton) to become the written form used by all writers of English, no matter which dialect area they come from. It is the fact of being the written form which establishes it as the standard. And it is the fact of being the written form which means that it is used not only in Britain but by all writers of English throughout the world, with remarkably little variation.

**Standards and the standard.** The figurative strength of the term *standard English* has been considerable. Just as there was at one time only one standard yard, kept in the capital as a measure against which all yards everywhere might be checked, so (by extension in the 19c) there was only one standard language, 'kept' in or near London for the 'same' purpose. Even after a war established the US as a separate centre of English, years passed before the British (and indeed many Americans) began to accept that government, writers, and publishers had set up a second centre and with it a second yardstick for the language. Even after 200 years, old ways of talking about the language die hard: 'The British are quick to point out how different American English is from Standard English' (Mandy Loader, *EFL Gazette*, Apr. 1990). Despite the time lag and the confusion of terms, however, there appears to be little doubt that since at least the early 19c two yardsticks have existed for English, and that in principle more are possible, if not already actual.

**A standard of standards.** Among the objective indicators that a language or a variety of a language has a standard form are such artefacts as grammars and dictionaries and such cultural achievements as a literary canon. It was taken to be proof positive of the success of French as a national and international language that by the end of the 17c it had all three. English had only achieved this status by the time the American colonies declared their independence. By the middle of the 19c, the US also had its grammars, its dictionaries, and its literary canon, although it took until the early 20c for many Americans to feel sure that 'American English' and 'American literature' were firmly established. In more recent times, Australia and Canada have produced national dictionaries and style guides, and have begun to acknowledge the extent and vitality of their literatures in English. In this, they appear to be experiencing afresh what happened in Britain and America. Some commentators favour the development and acceptance of various national standards: an indefinite number of distinct centres of gravity for a vastly complex world language. Others see such a plurality of 'Standard Englishes' as disruptive and disturbing. The paradox of the 1990s is the possibility that there can be, at one and the same time, a range of national standards and a single broadly recognizable international standard that subsumes them: a standard of standards. Even more than in the past, it is a creature born of consensus. See ENGLISH, STANDARD. [USAGE, VARIETY]. T.MCA.

**STANDARD ENGLISH BRAILLE.** See BRAILLE, STANDARD.

**STANDARD ENGLISH ENGLISH,** also **English Standard English.** The standard English of England: 'Standard English English is described, lexically, in the great dictionaries' (Peter Trudgill, 'Standard English in England', in *Language in the British Isles*, 1984). See BRITISH ENGLISH, ENGLISH ENGLISH, ENGLISH IN ENGLAND, RECEIVED PRONUNCIATION, STANDARD, STANDARD ENGLISH. [EUROPE, VARIETY]. T.MCA.

**STANDARD GENERAL ENGLISH** [1980s]. The standard form of English conceived as a non- or supra-regional language: 'Chapter 6 includes a discussion of the Scottish variety of Standard General English' (Peter Trudgill, Introduction, *Language in the British Isles*, 1984). See GENERAL ENGLISH, STANDARD, STANDARD ENGLISH. [VARIETY]. T.MCA.

**STANDARD INTERNATIONAL ENGLISH** [1980s]. Also **international standard English.** The standard form of English conceived as an international language; international English in its standard form: 'The relationship . . . is very complex, owing to the perception that Jamaican and standard international English are not really that different' (Lise Winer, 'Intelligibility of Reggae Lyrics in North America', in *English World-Wide* 11: 1, 1990). See INTERNATIONAL ENGLISH, STANDARD, STANDARD ENGLISH. [VARIETY]. T.MCA.

**STANDARD LANGUAGE.** A term for the form of a language used, for example, in general publishing, the news media, education, government, such professions as law and medicine, and by especially the middle classes: 'The existence of a standard language discourages further divergence, because many people try to make their usage more like the standard, especially if they wish to make their way in administration and government or are social climbers' (Charles Barber, *The Flux of Language*, 1965). See STANDARD, STANDARD DIALECT, STANDARD VARIETY. [LANGUAGE]. T.MCA.

**STANDARD VARIETY** [1980s]. A term in linguistics for the standard form of a language: '[T]he current national guidelines for examination in the English language do not require pupils to use the "standard" variety exclusively' (Tony Fairman, in *English Today* 17, Jan. 1989); 'The standard variety of British or American English would perhaps not have served this purpose. The language of Indian writing in English is the natural product of an alien medium in interaction and interference with native languages and native cultures' (R. R. Mehrotra, 'Indian Literature in English', in *English Across Cultures, Cultures Across English*, eds. Ofelia

García & Ricardo Otheguy, 1989). See STAND-ARD, STANDARD DIALECT, STANDARD LANGUAGE, VARIETY. [LANGUAGE]. T.MCA.

**STANZA** [16c: from Italian, standing, a stopping-place]. A group of lines in verse, forming a division of a poem. A poem usually keeps the same stanzaic form throughout, continuity being established by using the same metre, rhyme scheme, and number of lines. See BALLAD, OTTAVA RIMA, SPENSERIAN STANZA, TERCET. [LITERATURE]. R.C.

**STATIVE VERB.** A category of verb that contrasts with *dynamic verb* in the aspect system of a language, and relates to state and not action: in English, such verbs as *belong, love*. Syntactically, these verbs are used in simple rather than progressive tenses and generally not in the imperative (no *\*Belong!*, but occasionally *Love me!*). Semantically, stative verbs refer to states of affairs (*belong, know, own*) in contrast to dynamic verbs that refer to actions (*buy, learn, jump*). In practice, the boundary between stative and dynamic verbs is sometimes fuzzy, and it is generally more useful to talk of stative and dynamic meaning and usage. In most varieties of English, some verbs are normally stative (therefore no *\*I am owning this car, \*Know how to give first aid!*), but others are partly stative and partly dynamic (no *\*She is liking to help people, but How are you liking your new job?*; no *\*I am forgetting their address, but Forget it!*). Some verbs belong to both categories but with distinct meanings, as with *have* in *She has red hair* and *She is having dinner*. In IndE, the stative/dynamic distinction described above is considered standard, but it is widely ignored, so that expressions like *I am owning this car* and *She is liking to help people* are commonplace. See VERB. [GRAMMAR]. S.C., T.MCA.

**STEELE, (Sir) Richard** [1672–1729]. Anglo-Irish essayist, dramatist, and journalist, born in Dublin and educated at Charterhouse and Merton College, Oxford. He joined the army and later obtained a court appointment, but his Whig principles led to loss of favour when the Tories came into power. Steele became MP for Stockbridge in 1713, but was expelled from Parliament for his pamphlet *The Crisis*, which favoured the Hanoverian succession. The accession of George I restored his fortunes and he was knighted in 1715. He showed a zeal to reform contemporary morals with the early treatise *The Christian Hero* (1701). He wrote several comedies, such as *The Conscious Lovers* (1722), often described as 'sentimental' because of their emotive appeals and rejection of Restoration bawdiness. In 1709, using the pseudonym *Isaac Bickerstaff*, he

started the periodical *The Tatler* with Addison, a contemporary at Charterhouse, followed by further collaboration in *The Spectator* (1711–12) and *The Guardian* (1713). Steele is generally thought inferior to Addison as an essayist, but he contributed greatly to the rise of journalism (particularly as a vehicle of political opinion) and his contemporary influence was considerable. He recognized the individual status and needs of women in society and created an imaginary woman editor 'Jenny Distaff' to introduce family interest. See index. [BIOGRAPHY, EUROPE, LITERATURE, MEDIA]. R.C.

**STEM** [Before 10c: from Old English *stemn, stefn*, probably cognate with *stand*. 17c in this sense]. Also *theme*. A term in grammar and word-formation for a root plus the element that fits it into the flow of language. Stems are basic to such inflected languages as Latin and rare in analytic languages like English. In Latin, the root *am* (love) and a thematic vowel *-a-* make up the stem *ama-*, to which appropriate inflections are added: *-s* in *amas* thou lovest, *-t* in *amat* he/she/it loves. The only stems in present-day English are acquisitions from Latin and Greek. Such stems have no syntactic role, but often decide the spelling and sometimes the pronunciation of derivatives: because *negative* and *auditory* derive from Latin *negare* to deny, *audire* to listen, their stems are *negat-* and *audit-*. Spellings like *\*negitive* and *\*audatory* are therefore not possible. Whereas the rhythm of Latin makes the quality and quantity of all stem vowels clear, the rhythm of English often does not do so, reducing the vowels to a schwa and therefore limiting sound/spelling correspondences. See STEM FORMATIVE, THEMATIC VOWEL. [GRAMMAR, WORD]. T.MCA.

**STEM FORMATIVE.** A term in linguistics for a word element that attaches to a root or base so that a suffix can be then added: the *-t-* added to *dogma* to produce the stem *dogmat-* in *dogmatic, dogmatism*. See STEM, THEMATIC VOWEL. [GRAMMAR, WORD]. T.MCA.

**STENOGRAPHY.** See SHORTHAND.

**STEREOTYPE** [18c: from Greek-derived *stereo-* solid, and *type*: compare CLICHÉ]. (1) A process for making metal printing plates in which a block of type is composed in, and cast from, a mould of papier mâché or other material; a plate made by such a process. (2) By extension, a stock concept, image, or type: *racial, ethnic, and sexual stereotypes; a stereotypical mean Scotsman*. Compare BOILERPLATE, QUOTATION, SHIBBOLETH, STOCK. [LANGUAGE, STYLE, TECHNOLOGY]. T.MCA.

**STERNE, Laurence** [1713–68]. Anglo-Irish novelist, born in Ireland and educated in Halifax, Yorkshire, and Jesus College, Cambridge. He was ordained into the Church of England, held several livings, and became a prebendary of York Minster. The first two volumes of *The Life and Opinions of Tristram Shandy* were published in 1759; further volumes appeared in 1761, 1765, and 1767. The book was not admired by Johnson and some other leaders of critical taste, but proved popular and made Sterne famous. His family life was not happy and his health became poor. He travelled abroad and lived for two years in France. A further visit to France in 1765 led to *A Sentimental Journey Through France and Italy* (1767), in which a first-person narrator 'Parson Yorick' (a character from *Tristram Shandy*) relates a series of humorous and bawdy episodes. The fashionable sentimentality of the time is mingled with admiration for French life and a mischievous sense of human absurdities. *Tristram Shandy* diverged from the course that the novel was taking with Fielding and Smollett. Purporting to tell the story of the narrator's life, it was an account of the eccentric Shandy family that did not follow a steady chronological course but was broken by digressions and reflections on numerous topics. By using rows of asterisks, typographical variations, and blank pages, Sterne draws attention to the artificiality of the novel and the lack of true relationship between life and book. He was influenced by Rabelais and by the philosopher Locke's views on the association of ideas. Sterne can be seen as the distant ancestor of the *stream of consciousness* in fiction. He wrote that 'writing, when properly managed, is but a different name for conversation'. Despite the deliberate disorder of his narrative, he created such memorable characters as Tristram's Uncle Toby, Corporal Trim, and Dr Slop. See index. [BIOGRAPHY, EUROPE, LITERATURE]. R.C.

**STET** [16c: the Latin phrase *stet* let it stand, from *stare/statum* to stand: Compare CARET]. In proof-reading, when something has been incorrectly marked to be changed, the original form can be kept by putting dots under the wrongly altered matter and writing *stet* in the margin. See PROOF-READING. [WRITING]. W.W.B.

**STEVENSON, Robert Louis (Balfour)** [1850–94]. Scottish writer, born in Edinburgh and educated at the U. of Edinburgh. He travelled frequently, attempting to improve his chronic ill health; he described early journeys in *An Inland Voyage* (1878) and *Travels with a Donkey in the Cevennes* (1879). He became famous with his first work of fiction *Treasure Island* (1883) and his popularity was upheld by novels with romantic

themes and Scottish settings: *Kidnapped* (1886), *Catriona* (1893), and *The Master of Ballantrae* (1889). In a last search for health he settled in Samoa, where he was writing *Weir of Hermiston* at the time of death. Despite physical weakness, Stevenson was a prolific and versatile writer, from the simple diction of *A Child's Garden of Verses* (1885) to the strong prose that narrates the grim events of his last, unfinished novel. He took a detached attitude to the art of fiction, which he described as being 'to grown men what is play to the child', and critics in turn have not taken his work very seriously. He has, however, remained one of the most popular of late Victorian writers; *Treasure Island* in particular has delighted generations of children. For the speech of some of his characters, Stevenson used Scots:

'Aweel, Wully was unco' praying kind o' man; a dreigh body, nane o' my kind, I never could abide the sight o' him; onyway he was a great hand by his way of it, and he up and rebukit the Master for some of his on-goings. It was a grand thing for the Master o' Ballantrae to tak up a feud wi' a wabster, wasnae'?' (from *The Master of Ballantrae*, 1889).

Stevenson worked hard to achieve a style by imitation; he wrote, 'I have thus played the sedulous ape to Hazlitt, to Lamb, to Wordsworth, to Sir Thomas Browne, to Defoe, to Hawthorne, to Montaigne, to Baudelaire and to Obermann.' His chief contribution to current English comes from his novella *The Strange Case of Dr Jekyll and Mr Hyde* (1886), which tells how a man separates the good and evil sides of his nature: a disreputable or criminal life behind a façade of respectability is now called a *Jekyll and Hyde existence*. [BIOGRAPHY, EUROPE, LITERATURE, STYLE]. R.C.

**STILTED** [17c: 'on stilts']. A common term for artificial, pompous speech or writing that does not flow smoothly: 'There is a stiffness and stiltedness in the dialogue' (Edward Bulwer-Lytton, *Pelham*, 1828). Compare AFFECTATION, HYPERCORRECTION, LITERARY. [STYLE]. T.M.CA.

**STOCK** [17c in this sense: always attributive]. Available for exploitation in acting, speaking, and writing, especially as part of a stock-in-trade of topics, arguments, plots, jokes, expressions, etc. (*a stock production, stock characters, stock responses*): 'If Agatha Christie works almost entirely with what the critics call "stock responses", she knows how to take advantage of our responding in a stock way to stock situations' (*The Times*, 20 Sept. 1975). A *stock expression* is a word or phrase that is often used and has therefore become commonplace and banal. Compare CLICHÉ, HACKNEYED, TRITE. See MELODRAMA. [STYLE]. T.M.CA.

**STOP.** (1) [16c]. Also (*full*) *point*, *full stop*, *period*. The mark (.) at the end of a sentence: 'It is a sound principle that as few stops should be used as will do the work' (H. W. & F. G. Fowler, *The King's English*, 1906). See PERIOD, POINT, PUNCTUATION. (2) [Early 20c]. The word used in a cablegram/telegram to stand for a (full) stop or period: *ARRIVING LONDON AIRPORT FRIDAY 2200 HRS STOP WILL PROCEED STRAIGHT TO HOTEL STOP*. (3) [Early 20c]. In cryptography, a character representing a punctuation mark. (4) [17c]. Also *stop consonant*. In phonetics, a consonant sound made by momentarily blocking the air-stream. The two kinds of stop in English speech are the *plosive* (as in the *b*-sound of *bad*) and the *affricate* (as in the *ch*-sound of *choose*). See AFFRICATE, CONSONANT, GLOTTAL STOP, PLOSIVE. [SPEECH, WRITING]. T.MCA., G.K.

**STORY** [12c: from Anglo-French *estorie*, Latin *historia*, Greek *historia* learning by inquiry, history, from *histōr* a person who knows or sees. Where English generally keeps *story* and *history* separate, with distinct meanings, French retains the original Greek unity in *histoire*]. (1) A narrative, spoken or written, in prose or in verse, true or fictitious, related so as to inform, entertain, or instruct the listener or reader. A story has a structure that may be more or less formal, unfolds as a sequence of events and descriptions (even when devices like flashbacks alter the flow of time), and concerns one or more characters in one or more settings. (2) All such narratives: *long remembered in song and story*. (3) Also *story line*. The plot of a novel, narrative poem, drama, motion picture, etc.: *I liked the characters and the setting, but the story was unconvincing*. (4) An informal history: *the story of medicine*. (5) Informal: an account: *That's her story and she's sticking to it*. (6) Also *news story*. An account of events in a newspaper, etc. (7) A lie: *I'm afraid he's started telling stories again*. (8) Also *fabula*. In narratology (the literary study of narrative), the content rather than the form of a narrative. See ANECDOTE, DETECTIVE STORY, JOKE, LITERARY CRITICISM, NARRATIVE, PLOT (NARRATOLOGY), SHAGGY DOG STORY, SHORT STORY, STORY LINE. [LITERATURE, MEDIA, STYLE, WRITING]. T.MCA.

**STORY LINE.** The sequence or flow of events in a story: the unelaborated routine of the *plot*, as opposed to the *theme* that the plot treats. A common story line is *Boy meets girl—boy loses girl—boy finds girl*, and a twist in such a story line might be *girl meets boy—girl loses boy—girl finds another boy*. In some books, especially in the 18c and 19c, each chapter is preceded by a contents list that is in effect a story line: for example, in Chapter 10 of Jerome K. Jerome's

*Three Men in a Boat* (1889), *Our first night—Under canvas—An appeal for help—Contrariness of tea-kettles, how to overcome—Supper—How to feel virtuous—Wanted, a comfortably-appointed, well-drained desert island, neighbourhood of South Pacific Ocean preferred—Funny thing that happened to George's father—A restless night*. See LINE, STORY. [MEDIA, STYLE, WRITING]. W.N.

**STORY OF ENGLISH, The.** The name of a nine-part television series about the English language first broadcast in 1986 and of its companion book, published in the same year by Faber and BBC Publications. The dual project was created by the British novelist and publisher Robert McCrum, the British broadcaster William Cran, and the Canadian writer and broadcaster Robert MacNeil, anchorman of the US MacNeil-Lehrer Newshour. Their aim was to tell in a popular way 'the extraordinary tale of a language that came from nowhere to conquer the world'. Commenting on the democratic philosophy behind the project, McCrum observed in *English Today* (No. 6, Apr. 1986): 'Walt Whitman once wrote that English is "not an abstract construction of dictionary-makers but a language that has its basis broad and low, close to the ground"—and that, I suppose, would be a good epigraph for what we have done.' The title was used again for a radio series of 18 15-minute programmes, first broadcast on the BBC World Service in 1987. Created by the British linguists David Crystal and Tom McArthur, working with BBC English by Radio and Television, it took up and extended many of the points covered in the TV series and book. *The Story of English* is the first international multimedia project devoted to the language. See FABER. [HISTORY, MEDIA]. T.MCA.

**STRANG, Barbara M(ary) H(ope)** [1925–82]. English linguist. Born Barbara Mary Hope Carr in Shirley, Surrey, she was educated at Coloma Convent in Croydon and King's College, London, where she researched the Kentish dialects for an MA thesis under Professor C. L. Wrenn. In 1950, she became a lecturer in English at King's College, Newcastle, then part of the U. of Durham and later reconstituted as the U. of Newcastle upon Tyne, in which she was Professor of English Language and General Linguistics (1964–82). Her major publications were *Modern English Structure* (1962/8) and *A History of English* (1970), one of the first such surveys to take account of the international spread of the language. It was also unique in working back from the present day and not forward from a relatively remote point in the past. *An Historic Tongue: Studies in Linguistics in*

*Memory of Barbara Strang* (ed. Graham Nixon and John Honey, Routledge, 1988) contains a biography and bibliography. See index. [BIOGRAPHY, EUROPE, LANGUAGE]. T.M.CA.

**STRATHY LANGUAGE UNIT.** A centre for research into English usage in Canada, established in 1981 by a bequest from the businessman J. R. Strathy to the Department of English of Queen's University, Kingston, Ontario. Its purpose is to 'stimulate interest in correct English' and produce 'an authoritative guide to correct written and oral communication in English within Canada'. The Unit has a corpus and bibliography of CanE, and publishes occasional papers, such as *In Search of the Standard in Canadian English*, ed. W. C. Loughheed (1985) and *The English Language as Used in Quebec*, by Tom McArthur (1989). The first director was W. C. Loughheed; the second and current director is Margery Fee. [AMERICAS, LANGUAGE]. M.F.

**STREAM OF CONSCIOUSNESS** [1890: used by William James in *Principles of Psychology*, to describe the waking process of continuous thought]. A literary term for a style that attempts to reproduce directly the often random thoughts, emotions, and impressions of a character. Examination of the inner worlds of characters is found in earlier writers, but the inception of the stream-of-consciousness technique is generally attributed to Édouard Dujardin in *Les Lauriers sont coupés* (1888). It appealed to Modernist novelists of the early 20c who were trying to remove direct authorial interference from the text; among its principal exponents were James Joyce and Virginia Woolf:

*Joyce.* Opening her handbag, chipped leather, hatpin: ought to have a guard on those things. Stick it in a chap's eye in the tram. Rummaging. Open. Money. Please take one. Devils if they lose sixpence. Raise Cain. Husband barging. Where's the ten shillings I gave you on Monday? Are you feeding your little brother's family? Soiled handkerchief; medicine bottle. Pastille that was fell. What is she? (*Ulysses*, 1922).

*Woolf.* But why should she invite all the dull women in London to her parties? Why should Mrs Marsham interfere? And there was Elizabeth closeted all this time with Doris Kilman. Anything more nauseating she could not conceive. Prayer at this hour with that woman. And the sound of the bell flooded the room with its melancholy wave; which receded, and gathered itself together to fall once more, when she heard, distractingly, something fumbling, something scratching at the door. Who at this hour? Three, good Heavens! Three already! (*Mrs Dalloway*, 1925).

Attention to the viewpoint of the character rather than the author, with attention to psychology and motivation, has been a feature of much 20c fiction. The realization of the stream of consciousness takes various forms: thoughts

may be organized into the language of normal communication, or (as above) the free flow of associations and half-formed impressions may be presented in defiance of the regular syntax of prose. Concentration on unspoken inner experience is known as the *interior monologue*, a special form of the broader stream of consciousness that is projected into the outer world of the plot. See DIRECT AND INDIRECT SPEECH, ENGLISH LITERATURE, JOYCE, MONOLOG(UE), WOOLF. [LITERATURE, STYLE]. R.C.

**STRESS** [13c: a reduction of Middle English *destresse* (Modern *distress*), probably coalescing with a similar reduction of Old French *estrece/estresse* narrowness. Both terms are ultimately from Latin *stringere/strictum* to draw tight, and cognate with *stringent, strict*]. (1) In general usage, a word associated with emphasis, significance, tension, and strain. (2) Also *accent*. In poetics and phonetics, a term for the property by means of which syllables and words become *prominent*: that is, they are made to stand out from their background.

**Phonetic prominence.** Stress is not a single phonetic feature, stressed syllables having different kinds of phonetic prominence: (1) *Prominence of pitch.* A syllable is made prominent by a pitch movement on the syllable or by a pitch discontinuity involving a jump from the immediately preceding pitch. (2) *Prominence of duration.* Stressed syllables have full duration and may be prolonged, whereas unstressed syllables are likely to be shortened. (3) *Prominence of vowel quality.* Stressed syllables retain full vowel quality, whereas unstressed syllables may have weak vowels. (4) *Prominence of loudness.* Stressed syllables are generally said to be loud (although this is probably the least important kind of prominence for the recognition of stress in English). Stressed syllables with pitch prominence are said to be *accented* and a pitch contour or tone is associated with each accent.

**Word stress.** A property which makes some syllables in a word stand out. In writing and print, a stressed syllable is conventionally marked with the stress mark (ˈ) placed immediately before the syllable in phonetics and most contemporary dictionaries (but placed after it in many older works). The word *'foreign* is stressed on the first syllable, and *de'scribe* on the second. Longer words may have two or more stresses, in which case the main stress is referred to as *primary stress* and others as *secondary stress*. Secondary stress is marked with the stress mark (ˌ). The word *pho'tography* has just one stress on the second syllable, but *photo'graphic* has primary stress on the third syllable and secondary stress on the first, while *'photo,graph* has primary stress

on the first syllable and secondary stress on the third.

It is rare for unrelated English words to be distinguished solely by stress, as in *be'low*, *'billow*. More commonly, related disyllabic words are stressed on different syllables, and the unstressed syllables may be reduced, for example, the verb *construct* is /kən'strakt/ and the noun *construct* is /'kɒnstrakt/. When a word is pronounced in isolation, it is treated as a tone group. The primary stress is the nucleus, and in isolation it is given a falling tone: ↓*foreign*, *de|scribe*. A secondary stress before the primary stress is the onset, which normally takes a level tone: *photo|graphic*. A secondary stress after the primary stress is an unreduced syllable in the tail of the tone group. See TONE.

**Sentence stress.** The process whereby some words in an utterance are made prominent while others remain in the background, as in: *THAT is the END of the NEWS*. In strict phonetic terms, *sentence stress* is a misnomer, as the domain of these patterns is not the sentence but the tone group. In general, lexical words (nouns, verbs, adjectives, adverbs in *-ly*) have sentence stress, unless they refer to information already provided, in which case the resulting pattern is *contrastive stress*. Grammatical words are more likely to be unstressed, and may be reduced to weak forms.

**Contrastive stress.** The process by which stress is used to imply a contrast, as in *MARY can go* (not Susan) and *Mary CAN go* (she is free to do so). A fall-rise tone with a wide pitch range is often associated with contrast: *I can't go on* ↘ *MONday* leads to the implication 'but I can go some other day'. Whole words can be contrasted in a similar way in many languages, but English is unusual in that parts of words can be contrasted: *I wouldn't say she's an employ* ↘ *YEE she is actually an employER*. In such cases, the normal pattern of word stress is overridden. The term is also used to refer to a stress pattern relating a sentence to its context: without preceding information, the sentence *Ram's got a motorbike* is likely to be stressed on the first and last words, *RAM'S got a MOTorbike*. On the other hand, *RAM'S got a motorbike* belongs to a context where possessing a motorbike is already under discussion and *motorbike* is not given sentence stress because it is not in contrast with anything else (*bicycle, car*).

**Stress and weak forms.** The rhythm of English leads to special reduced forms in some monosyllabic grammatical words in unstressed contexts: in isolation, the words *an, from, his* are pronounced /æn, frəm, hɪz/, but in context are usually reduced to /ən, frəm, əz/. The process of reduction includes replacing the vowel with a

weak vowel, usually schwa, and dropping an initial /h/. If the vowel is lost altogether, the result is a contraction, represented in informal writing by an apostrophe replacing the missing vowel: *she's here*. Although a consonant may also have been dropped (for example, the *h* of *has* in *She's arrived*), this is not normally indicated. Weak forms are natural in all native varieties of English, even in slow, careful speech. This also applies to the dropping of /h/ from weak forms, which is different from the dropping of *h* from accented syllables, which is not normal in some varieties, such as RP, and is widely stigmatized in BrE.

**Stress shift.** It is a common feature of English that when derivative words are formed by means of certain suffixes, the (primary) stress shifts from a particular syllable in the base word to a new syllable in the derived word: *atom/atòmic, còplex/complèxity, dévelòpment/developmèntal* (with appropriate adaptations in the fullness or weakness of the vowels). Such *stress shift* or *accent shift* occurs only in words of French, Latin, and Greek background, in terms of particular suffixes, such as *-ic, -ity, -al*, and not in words of vernacular Germanic background. See ACCENT, FOOT, ICTUS, MILTON, PHRASAL VERB, RHYTHM, SPELLING, SUFFIX, TONE. [SPEECH]. G.K.

**STRESS MARK.** See DIACRITIC, MARK.

**STRESS SHIFT.** See STRESS, SUFFIX.

**STREVENS, Peter (Derek)** [1922–89]. English phonetician, applied linguist, and language scholar, born in Norwich, and educated at Ackworth School, the U. of London, and U. of Cambridge. He lectured in phonetics at the U. College of the Gold Coast (1949–56), where he was a founding member of the faculty, and in phonetics and applied linguistics at the U. of Edinburgh (1957–61). He was Professor of Contemporary English, U. of Leeds (1961–4), and of Applied Linguistics, U. of Essex (1964–74); Secretary of AILA (1966–70), Chairman of BAAL (1972–5), Chairman of IATEFL (1983–6); a Fellow of Wolfson College, Cambridge (from 1976); and Director-General of the Bell Educational Trust (1976–88), a group of private language schools in southern England. His research interests included speech communication, language teaching technology, ESP, and TEIL. His publications include: *The Linguistic Sciences and Language Teaching* (with Michael Halliday & Angus McIntosh, 1964), *British and American English* (1972), *New Orientations in the Teaching of English* (1977),

*Teaching English as an International Language* (1980), *International English for Maritime Communication: Seaspeak* (jointly, 1984). Strevens saw his role as building language teaching in general and English-language teaching in particular into a confident profession that crossed international boundaries and linked scholarly work from diverse disciplines: 'He believed passionately in the beneficent influence of English as an international language. He was concerned that the pre-eminence of English should not be at the expense of quality nor lead to linguistic imperialism. It is significant that he was a founder member of the Association des Etats Generaux des Langues. In fact, he died while advising on the teaching of Japanese as a foreign language' (Alan Maley, *EFL Gazette*, Jan. 1990). See index. [BIOGRAPHY, EDUCATION, EUROPE].

T.MCA., C.J.B.

**STRINE** [1964: a syncope of *Australian*]. A non-technical word coined by Alistair Morrison, to represent an alleged Australian pronunciation of *Australian*. Writing under the pseudonym Afferbeck Lauder ('alphabetical order') and as Professor of Strine Studies at the University of Sinny (Sydney), Morrison published a series of humorous articles in the *Sydney Morning Herald*, some of which were later collected under the title *Let Stalk Strine* (Sydney, 1965). The series made much of such features as elision, assimilation, and metanalysis, as characteristic of Broad Australian: *Emma Chisit* How much is it?; *money Monday*; *ass prad* house proud; *tan cancel* town council. The term has had some local and international acceptance as a name for a stereotype of pronunciation and syntax (the 'style' of AusE). Examples like *Gloria Soame* (glorious home) and the title of a subsequent collection, *Nose Stone Unturned* (1966), indicate the importance of eye dialect in achieving the desired effect. See AUSTRALIAN ENGLISH, EYE DIALECT. [OCEANIA, VARIETY].

W.S.R.

**STRONG LANGUAGE.** A non-technical term for words and phrases often used to express strong feelings and opinions and capable of provoking a strong reaction, typically of shock or anger. Strong language that provokes shock includes bad language, blasphemy, foul language, four-letter words, obscene language, and taboo language. Typically, the usages in question are considered smuttily dirty or religious sensibilities are offended. Strong language that provokes anger includes cursing, expletives, and swearing. It is debatable whether strong language includes slurs such as *dyke*, *queer*, *wog*, and *Yid*. Nevertheless, the negative injunction 'Mind your language!' or simply 'Language!' (found especially in BrE rather than AmE and

meant to discourage strong, or at least bad, language) might be employed in response to slurs as well as to smut or abuse. See SWEARING. [STYLE].

R.F.I.

**STRONG VERB.** A term in the description of Germanic languages for a verb that indicates such differences as tense by modifying its vowels: English *ring*, *rang*, *rung*. In contrast, *weak verbs* add inflections: *play*, *play*, *played*. These terms are usually replaced in grammars of Modern English by *regular verb* (in place of *weak verb*) and *irregular verb* (in place of *strong verb*). In Old English, strong verbs could have as many as four different vowels, since the first- and third-person singular in the past differed from all the other past forms: compare *was* and *were* in the Modern English past of the verb *be*. An example from Old English is the verb *helpan*, with *e* in the present tense, but past *healp* (first- and third-person singular) and *hulpon*, and the past participle *holpen* (with the *-en* inflection found in some Modern English irregular verbs: *shaken*, *taken*). In Modern English, this verb has become weak (*help*, *helped*), a change that has affected many other strong verbs over the centuries, such as *climb*, *step*, *walk*. The strong verbs that have survived into Modern English seldom retain the original distinctions, and all (except the highly irregular *be*, with *was* and *were*) have lost the two forms for the past. In some Modern English verbs, the vowels of the past and the past participle have become identical (*sting*, *stung*), and in others all three forms are the same (*put*). Some originally strong verbs have regular variants (*swell*, *swelled*, or *swollen*). A few originally weak verbs have become strong, such as *wear*, *dig*, *fling*. Differences may occur between varieties: (1) *dive*, *dived* in BrE, but often *dive*, *dove* in AmE; (2) *sell*, *sold* and *tell*, *told* in standard English worldwide, but *sell*, *selt* and *tell*, *telt* in Scots. Occasionally, for facetious purposes, people play with strong forms: *I think very hard about it* and *Where were you brung up?* In general, new verbs in Modern English are regular; that is, formed on the pattern of weak verbs, the pronunciation of the *-ed* inflection as /əd/ or /t/ varying systematically according to the immediately preceding sound. Verbs formed by prefixation or compounding usually take the same forms as the verbs on which they are based: *offset*, *babysit*, and (both regular and irregular) *deep-freeze*. Some phrasal verbs prefer a weak form (contrast *The car sped up the hill* and *The car speeded up*). See VERB, WEAK VERB. [GRAMMAR].

S.G.

**STRUCTURAL APPROACH.** See LANGUAGE TEACHING.

**STRUCTURALISM** [Early 20c]. A theory or method which assumes that the elements of a field of study make up a structure in which their interrelationship is more important than any element considered in isolation. Structuralist principles have been applied since the beginning of the 20c, primarily by francophone theorists, to various fields of interest: in linguistics, it is associated with the work of Ferdinand de Saussure in Switzerland and Leonard Bloomfield in the US; in anthropology, with Claude Lévi-Strauss in France; in literature and semiotics, with Roland Barthes in France; and in studies of history with Michel Foucault in France. Generally, structuralists follow de Saussure in emphasizing the arbitrary nature of the relationship between a sign (*le signifiant* the signifier) and what it signifies (*le signifié* the signified), and in treating objects of study (whether phoneme inventories, kinship groups, or texts) as closed systems abstracted from their social and historical contexts. See LANGUAGE TEACHING, LINGUISTIC SIGN, LITERARY CRITICISM, POETICS, SEMANTICS, SEMIOTICS, SIGN, STRUCTURAL LINGUISTICS, STRUCTURE. [LANGUAGE]. T.MCA.

**STRUCTURAL LINGUISTICS.** An approach to linguistics which treats language as an interwoven structure, in which every item acquires identity and validity only in relation to the other items in the system. All linguistics in the 20c is structural in this sense, as opposed to much work in the 19c, when it was common to trace the history of individual words. Insight into the structural nature of language is due to the Swiss linguist Ferdinand de Saussure, who compared language to a game of chess, noting that a chess piece in isolation has no value and that a move by any one piece has repercussions on all the others. An item's role in a structure can be discovered by examining those items which occur alongside it and those which can be substituted for it. The structural approach developed in a strong form in the US in the second quarter of the century, when the prime concern of American linguists was to produce a catalogue of the linguistic elements of a language, and a statement of the positions in which they could occur, ideally without reference to meaning. Leonard Bloomfield was the pioneer among these structuralists, attempting to lay down a rigorous methodology for the analysis of any language. Various Bloomfieldians continued to refine and experiment with this approach until the 1960s, but from the late 1950s onwards, *structural linguistics* has sometimes been used pejoratively, because supporters of *generative linguistics* (initiated by Noam Chomsky) have regarded the work of the American structuralists as too narrow in conception. They have argued that it is

necessary to go beyond a description of the location of items to produce a grammar which mirrors a native speaker's intuitive knowledge of language. See BEHAVIO(U)RISM, BLOOMFIELD, COMPETENCE AND PERFORMANCE, LINGUISTICS, PARADIGMATIC AND SYNTAGMATIC, PHILOLOGY, POETICS. [LANGUAGE]. J.M.A.

**STRUCTURAL READER.** See READER.

**STRUCTURAL SEMANTICS.** See SEMANTICS.

**STRUCTURE** [15c: from Latin *structura* something put together, from *struere/structum* to arrange, make, compose]. (1) A complex form seen as an arrangement of parts; a construction, organization, or system. (2) In linguistics, the pattern of organization of the elements and levels of a language, with such sub-patterns as *phonological structure*, *syntactic structure*, and *semantic structure*. See CHOMSKY (DEEP AND SURFACE STRUCTURE), LEVEL OF LANGUAGE, STRUCTURALISM, STRUCTURAL LINGUISTICS, STRUCTURE DEPENDENCE, SYSTEM. [LANGUAGE]. T.MCA.

**STRUCTURE DEPENDENCE.** In linguistics, the reliance of language on an intrinsic structure rather than on simple counting or recognition procedures. In the sentence *Alice saw the white rabbit*, speakers of English immediately know that the sequence *white rabbit* forms a chunk of structure for which there are no audible cues, and which can be manipulated in various ways: *A white rabbit was seen by Alice; Was it a white rabbit which Alice saw?* The US linguist Noam Chomsky has argued that this property of language is likely to be innate. See STRUCTURE. [GRAMMAR, LANGUAGE]. J.M.A.

**STUNT WORD** [Later 20c]. An informal term for a word created and used to produce a special effect or attract attention, as if it were part of the performance of a stunt man or a conjuror. All three such words in the following citation combine ordinary base words with Latinate suffixes to suggest pretentious immaturity: 'As they smoked and stuffed fat palatable bites of sandwich into their mouths, [the boys] would regard each other with pleased sniggers, carrying on thus an insane symphony of laughter: "Chuckle, chuckle!—laugh of *gloatation*." / "Tee-hee, tee-hee, tee-hee! . . . laugh of *titterosity*." / "Snuh-huh, snuh-huh, snuh-huh! . . .

laugh of *gluttonotiousness*”’ (Thomas Wolfe, *Look Homeward Angel*, 1929: italics added). Stunt words used to exhibit and practise spelling patterns are a feature of the children’s books of Theodor Seuss Geisel (Dr Seuss): ‘Did you ever have the feeling, / there’s a WASKET in your BASKET? / . . . Or a NUREAU in your BUR-EAU? / . . . Or a WOSET in your CLOSET? / Sometimes I feel quite CERTAIN / there’s a JERTAIN in the CURTAIN. / Sometimes I have the feeling / there’s a ZLOCK behind the CLOCK. / And that ZELF up on that SHELF! / I have talked to him myself’ (from *There’s a Wocket in my Pocket!*, 1974). The preceding examples derive from the work of individuals. Many stunt formations can, however, be the outcome of group effort relating to a shared theme, as for example acronyms and related forms based on the letters *y-p* (standing for ‘young professional’), particularly fashionable in marketing and media circles in the 1980s, such as: *yuppie* (young urban professional), *yumpie* (young upwardly mobile professional), *yap* (young aspiring professional), *mumpie* (Malaysian yumpie), *McYuppie* (Scottish yuppie), *yucca* (young up-and-coming Cuban American), and *yuckie* (a yuppie who makes you sick). Compare BUZZ WORD, -ITIS, NEOLOGISM, NONCE WORD, NONSENSE VERSE. [STYLE, WORD]. T.M.CA.

**STUTTERING** [16c: *stutter* from earlier *stut*. Compare Dutch *stotteren*]. A disorder of fluency in the use of language; also called (especially in the UK) *stammering* [before 10c, from Old English *stamerian*. Compare German *stammern*]. The primary symptoms are difficulty in controlling the rhythm and timing of speech, and a failure to communicate easily, rapidly, and continuously. Individual sounds may be abnormally repeated or lengthened, or fail to be released. Symptoms range from mild through moderate to severe. The cause is not known, but several genetic, physiological, and psychological factors have been implicated; in particular, stammerers are affected adversely by any increase in stress or anxiety: ‘My own name is my hardest word. Too many big people have asked me, “What is your name, sonny?” I’ve had to say it too many times when I got into trouble. I’ve said it so often and stuttered on it so often that I almost think it should be spelled with more than one *t*, like T-T-Tommy’ (in Charles Van Riper, *Speech Correction*, 1978). A number of treatments are available, which can help to alleviate the symptoms by bringing the stammer more under the speaker’s control. Approaches used in speech therapy include the teaching of new techniques of speech production, such as slowed speech, in which the stammerers learn to slow their speech down to a rate of a syllable a second or less,

then gradually speed up to achieve a rate which approximates to normal everyday speech. Another approach involves the wearing of acoustic devices that interfere with the normal process of feedback as stutterers listen to their own speech: for example, by playing high-frequency noise into their ears while they are talking. Of particular importance is the need to train stammerers to develop new attitudes to the task of becoming part of the everyday speech community. Many stammerers, because of their handicap, learn to live apart from normal social interaction, and develop a poor image of themselves as conversationalists. Using the telephone may be greatly inhibited or entirely avoided. A more positive self-image needs to be acquired, and opportunities to practise new-found skills in a supportive environment. Much contemporary therapy is based on such an approach. See LANGUAGE PATHOLOGY. [SPEECH]. D.C.

**STYLE** [14c: from Old French *stile*, *style*, from Latin *stilus* (variant *stylus*) a stake, pointed instrument for writing, way of speaking or writing. The spelling with a *y* derives from the mistaken belief that Latin *stilus* derived from Greek *stúlos* a pillar]. A general term that primarily means a way of doing things, with additional senses such as doing them appropriately, doing them well or badly, doing them in a distinctive way, or doing them in one of a number of ways. The term first referred in English to a writing implement, then to ways of using it, then to ways of doing virtually anything.

**Linguistic style.** It can be convenient, in synchronic terms, to think of linguistic style as an aspect of style in general: someone may write in an *ornate style*, speak in a *laconic style*, live in a *Tudor-style mansion*, dress in a *youthful style*, and have an *aggressive style* when playing squash. In all such cases, the way in which people do things can be seen to vary: from one medium to another (speech to writing), from one situation to another (formal to informal, legal to journalistic), and from one period or genre to another (Elizabethan to Romantic, prose to poetry, sonnet to ode). *Yours faithfully* is recognizably a formula of writing, *He’s kicked the bucket* is a slangy equivalent of the euphemism *He’s passed away*, and the following lines might at first possibly be prose, but soon resolve into verse: ‘A thing of beauty is a joy for ever: / Its loveliness increases; it will never / Pass into nothingness’ (Keats, *Endymion*, 1818). Although stylistic variation can be discussed in terms of groups, generations, movements, and the like, it is most apparent in terms of individuals. No two people have the same style in writing or playing a game; as Sir Thomas Browne put it in the 16c,

*stylus arguit hominem* (style maketh the man). In the same way, for such 20c structural linguists as Ferdinand de Saussure, style in language was a matter of *parole* (individual performance) rather than *langue* (the collective system). Readers recognize distinctive authorial styles (the loose sentence structures and grotesque metaphors of Charles Dickens, the periodic sentences and abstract diction of Henry James) and also differences between the styles of writers at different points in their careers (the play of sound in Shakespeare's 'early style' in his comedies as distinct from the richly figurative style in his last plays).

**Appropriateness.** The definition of linguistic *style* as a 'way' or 'manner' implies distinctiveness, that there are phonetic, grammatical, and lexical features which mark out a text, register, genre, or situation: for example, legalisms like the BrE *m'lud* (my lord: said to a judge); the often ambiguous ellipses of headlines (*Defence cuts off agenda*); and the ways in which a secretary on the telephone handles different callers. In the study of literature, style is a matter principally of design and theme, but in the works of writers of usage manuals and style guides, it is a matter principally of layout and the physical appearance of a manuscript, typescript, or printed text. In both areas, however, a sense of *appropriateness* or *appropriacy* is crucial: that choices have been made or must be made that take into account situation, occasion, subject matter, and audience (readers, listeners, viewers). The notion of appropriateness appears in many definitions: in the 16c, Roger Ascham used the term *decorum*; in the 18c, Jonathan Swift used the phrase 'proper words in proper places'.

The idea of appropriateness has its origins in the canon of classical rhetoric known as *elocutio*. The three ways of speaking or writing were the *high* or *grand style*, the *middle style*, and *plain* or *low style*, all three of which were carried over into the European vernaculars. The grand declamatory style was associated with epic poetry and had Homer and Virgil as its models; it is well illustrated in English by Milton's *Paradise Lost* (1667). The restrained middle style was used in the main for education and edification; it was the basis of the English tradition of sermons from Aelfric in the 10c to Sir Thomas More in the 16c. The plain or low style was close to colloquial speech, used relatively simple vocabulary and syntax, and was the medium of popular entertainment in ballads and folk-tales. By and large, in both classical and English literature and oratory, the three styles have been points of reference rather than dogmatic categories, allowing for what 20c linguists call *style-switching*. Stylistic variability within broad generic frames

can be seen in, among many others, Chaucer's tales, Shakespeare's plays, and Dickens's novels.

**Good style, bad style.** Swift's definition of style as 'proper words in proper places' suggests approval, that styles can be evaluated, prescribed, and proscribed. In the 18c, the leaders of literate opinion were interested in elevating the literary language and promoting elegant and refined everyday usage among the upper and middle classes. They were by and large prescriptive, laying the foundation of attitudes to grammar, style, and usage which were not significantly questioned, particularly in educational institutions, until after the Second World War. Style in the evaluative sense tends to fall into two broad groups: 'good', 'rich', 'elegant', 'refined', 'careful', and 'precise' style and usage on the one hand, and 'bad', 'poor', 'crude', 'vulgar', 'sloppy', and 'slovenly' style and usage on the other. The latter has tended to be associated with colloquial, especially dialect, speech.

To be said to have 'style' is a high compliment similar to having 'class'; to be said to have 'no style (at all)' is a serious adverse judgement. The precise social, cultural, and psychological bases for such assessments of speech and writing (especially if part of a consensus) are by no means clear. They appear, however, to involve a mixture of criteria associated with *status* (usually educational, often social, sometimes economic), *ability* (in such matters as selection, structure, clarity, delivery, and wit), and *aesthetics* (in such matters as balance, elegance, and euphony). Literary and other critics of the use of language generally agree that 'good style' is difficult to describe and by no means a matter of general agreement, yet there is often something on which wide agreement is possible, with regard to the style and success of a writer or speaker, just as there is often a consensus about the style and success of an athlete or musician.

In more immediate matters, the 18c prescriptivists made specific decisions about what was and was not acceptable style in writing. For example, to repeat oneself was a mark of poor style, whatever the ancients and Shakespeare may have done. Writers were encouraged to seek 'elegant variation', especially in the use of synonyms and epithets: a *poet* in one line was a *bard* in the next, and *Shakespeare* in one line became the *Swan of Avon* in another. Similarly, variety of sentence types was encouraged, with a view to avoiding a succession of clauses linked by *and*. Such a paratactic style was associated with the childish and immature, despite the fact that it was typical of the grand style of Homer (though not of Milton). There are fashions in style as in clothes.

**Style as deviation.** Despite the frequency of the expression, it is difficult to imagine a text or discourse as having 'no style', whether the claim was typically dismissive or even a compliment. For the French critic Roland Barthes, the style of Albert Camus is 'degree zero writing', because it seems unmarked by idiosyncrasies of grammar and vocabulary. Yet even such an apparently 'unmarked' style is stylistically significant, by virtue of its apparent plainness: if there is a norm, and if such a style adheres strictly to that norm, then it is the normative style. In the 1960s, linguists tended to treat style as deviation, matching a text against the assumed norms of its genre or a perceived common core of language. They concentrated in particular on highly marked poetic idiolects like those of Gerard Manley Hopkins and e. e. cummings, because it was relatively easy to see where they departed from established convention: 'Our heart's charity's hearth's fire, / Our thought's chivalry's throng's Lord' (Hopkins, *Wreck of the Deutschland*, 1876). Some stylisticians have tended to regard style as decorative, to define it (as the Greeks and Romans defined figurative language) as something 'added' to an utterance. In this, they resemble Lord Chesterfield when, in a letter to his son in 1749, he wrote: 'Style is the dress of thought.'

**Style as variation.** Not only style, but language itself, can be regarded as the dress of thought. In the *elocutio* of classical rhetoric, style had to do with *verbum* (the word, in the sense of form and manner of presentation) and not with *res* (the thing, in the sense of content or matter). It has often been argued that style consists of saying the same thing in different words and ways: *Smokers are requested to occupy rear seats; Smokers please sit at the back; If you smoke, sit at the back; Smokers must sit at the back; Smokers at the back.* However, what is frequently debated in stylistics and literary criticism is the extent to which choice of synonym or syntactic structure involves an actual change of meaning. Notions of synonymy and paraphrase depend on what has been called the *dualist* view that the 'same' content can be expressed in different forms, against which *monists* argue that form and content are inseparable and that to change a form will produce a different meaning. In poetic language, with an aesthetic focusing on form, the monist argument is plausible: poetry is notoriously difficult to translate.

**Conclusion.** One way of reconciling the dualists and the monists would be to define *style* as 'different ways of saying not dissimilar things', or proposing that at times a monist view is useful, at times a dualist view. The term seems generally to depend on the concept of variation,

but within a set of more or less established conventions and genres that have been adopted for purposes which their target publics more or less appreciate. Depart too far from such common ground, as James Joyce did in *Finnegans Wake* (1939), and the public shrinks to a dedicated few who may or may not, with the author, prove to be in the vanguard of language and literature. Style is a matter of linguistic contrasts in contexts: one word set against another, one utterance against another, one text against another, one genre, *œuvre*, or period against another. **STYLE CHECKER.** A computer program that tries to check the suitability of the style of a document in a word-processing system. The average style checker has two parts: one that looks for instances of listed items regarded as mistakes in style (such as overuse of *very* or of the passive voice); one that can compute certain properties of the document, such as reading level measured in terms of syllables per word and words per sentence. The program then warns the user about possible defects. Some checkers suggest ways of changing the document to eliminate the apparent problems. Programs referred to as 'style checkers' may incorporate spelling checkers and grammar checkers. A style checker commended by the Plain English Campaign in the UK is *Stylerwriter: the Plain English Editor*, launched in Australia in 1988 and in Britain in 1989. A major style checker in the US is the

Modern Language Association's *Editor* ('a system for checking usage, mechanics, vocabulary, and structure'), launched in 1991. Compare GRAMMAR CHECKER, SPELLING CHECKER. See BRITISH NATIONAL CORPUS, FLESCH READABILITY FORMULA, FOG INDEX, PASSIVE (VOICE). [STYLE, TECHNOLOGY]. M.L., T.MCA.

**STYLE COUNCIL.** See DICTIONARY RESEARCH CENTRE.

**STYLE-DRIFTING** [1970s: coined by A. J. Aitken]. A term in linguistics for a phenomenon common in the Scottish and other similar speech situations, in which speakers modify their styles along a continuum from standard to non-standard or formal to informal, or both, in either direction, as in the following dialogue overheard in an Edinburgh restaurant: *A* 'Yaize yer ain spuin.' *B* 'What did ye say?' *A* 'I said, use yer ain spuin.' *B* 'Oh, use ma own spoon.' The modification is usually convergent (towards the style of another speaker, especially if this is more prestigious or formal than the drifting speaker's norm), but may be divergent (to express solidarity with the speaker's group and reject that of the interlocutor). Compare CODE-MIXING AND CODE-SWITCHING. [LANGUAGE, STYLE]. A.J.A.

**STYLE GUIDE, MANUAL, SHEET.** See HOUSE STYLE, USAGE GUIDANCE AND CRITICISM.

**STYLE-SWITCHING.** See STYLE (APPROPRIATENESS).

**STYLISTICS** [1840s: on the analogy of German *Stylistik* and French *stylistique*]. The branch of linguistics that studies style, especially in works of literature. Developing in Continental Europe in the late 19c out of comparative philology, it was greatly influenced by the work of both Charles Bally, a student of Ferdinand de Saussure, and Leo Spitzer, whose approach, known as *expressive stylistics*, was concerned with the expression or revelation of the 'soul' or personality of a writer. Currently, however, it is less orientated towards writer or speaker and more towards text and reader, reflecting changes in literary criticism, with which it has long been associated. The advent of the computer has given rise to both *computational stylistics* and *stylo-metry*, approaches in which (among other things) attempts are made to decide the authorship of disputed texts on the basis of key features in the writings of authors who may have been responsible for them. Stylistics became established in the UK and the US in the 1960s. It has drawn eclectically on the models and terminology of linguistics at large: on generative

grammar in the late 1960s, with a focus on 'deviant' usage, and more recently on discourse analysis and pragmatics. Stylistics used as a tool in EFL and ESL is known as *pedagogical stylistics*. See CRITICISM, DEVIANT, DISCOURSE ANALYSIS, LINGUISTICS, LITERARY CRITICISM, PHILOLOGY, POETICS, RHETORIC, SEMIOTICS. [LANGUAGE, STYLE]. K.W.

**SUB-EDITING.** See EDITING.

**SUBHEADING, SUBHEAD.** See HEADING.

**SUBJECT** [13c: from Latin *subiectum* grammatical subject, from *subiectus* placed close, ranged under]. A traditional term for a major constituent of the sentence. In a binary analysis derived from logic, the sentence is divided into *subject* and *predicate*, as in *Alan* (subject) *has married Nita* (predicate). In declarative sentences, the subject typically precedes the verb: *Alan* (subject) *has married* (verb) *Nita* (direct object). In interrogative sentences, it typically follows the first or only part of the verb: *Did* (verb) *Alan* (subject) *marry* (verb) *Nita* (direct object)? The subject can generally be elicited in response to a question that puts *who* or *what* before the verb: *Who has married Nita?*—*Alan*. Where concord is relevant, the subject determines the number and person of the verb: *The student is complaining/The students are complaining; I am tired/He is tired*. Many languages have special case forms for words in the subject, such as the *nominative* in Latin; and in English the subject requires a particular form (the *subjunctive*) in certain pronouns: *I* (subject) *like her*, and *she* (subject) *likes me*.

**Kinds of subject.** A distinction is sometimes made between the grammatical subject (as characterized above), the psychological subject, and the logical subject: (1) The *psychological subject* is the theme or topic of the sentence, what the sentence is about, and the predicate is what is said about the topic. The grammatical and psychological subjects typically coincide, though the identification of the sentence topic is not always clear: *Labour and Conservative MPs clashed angrily yesterday over the poll tax*. Is the topic of the sentence the MPs or the poll tax? (2) The *logical subject* refers to the agent of the action; *our children* is the logical subject in both these sentences, although it is the grammatical subject in only the first: *Our children planted the oak sapling; The oak sapling was planted by our children*. Many sentences, however, have no agent: *Stanley has back trouble; Sheila is a conscientious student; Jenny likes jazz; There's no alternative; It's raining*.

**Pseudo-subjects.** The last sentence also illustrates the absence of a psychological subject, since *it*

is obviously not the topic of the sentence. This so-called 'prop *it*' is a dummy subject, serving merely to fill a structural need in English for a subject in a sentence. In this respect, English contrasts with languages such as Latin, which can omit the subject, as in *Veni, vidi, vici* (I came, I saw, I conquered: with no need for the Latin pronoun *ego*, I). Like prop *it*, 'existential *there*' in *There's no alternative* is the grammatical subject of the sentence, but introduces neither the topic nor (since there is no action) the agent.

**Non-typical subjects.** Subjects are typically noun phrases, but they may also be finite and non-finite clauses: '*That nobody understands me* is obvious'; '*To accuse them of negligence* was a serious mistake'; '*Looking after the garden* takes me several hours a week in the summer.' In such instances, finite and infinitive clauses are commonly postposed and anticipatory *it* takes their place in subject position: '*It is obvious that nobody understands me*'; '*It was a serious mistake to accuse them of negligence*.' Occasionally, prepositional phrases and adverbs function as subjects: '*After lunch* is best for me'; '*Gently* does it.'

**Subjectless sentences.** Subjects are usually omitted in imperatives, as in *Come here* rather than *You come here*. They are often absent from non-finite clauses ('*Identifying the rioters* may take us some time') and from verbless clauses ('New filters will be sent to you *when available*'), and may be omitted in certain contexts, especially in informal notes (*Hope to see you soon*) and in coordination (*The telescope is 43 ft long, weighs almost 11 tonnes, and is more than six years late*). See ANTICIPATORY IT, CASE, OBJECT, SENTENCE, WORD ORDER. [GRAMMAR]. S.G., S.C.

**SUBJUNCTIVE** [16c: from Latin *modus subiunctivus* subjunctive mood, from *subiungere/subiunctum* to bind together]. A grammatical category that contrasts particularly with *indicative* in the mood system of verbs in various languages, and expresses uncertainty or non-factuality. Some languages have a range of subjunctive tenses: Latin (*Caveat emptor*: Let the buyer beware); French (*Je veux que tu travailles*, literally 'I want that you should work', I would like you to work). There was such a system in Old English (*Ne hē ealu ne drince opp wīn*: Nor shall he drink ale or wine), but in Modern English there are few distinctive subjunctive forms and the use of the term is controversial. Grammarians have traditionally described English as if it had a subjunctive system comparable to Latin and French, with present and past subjunctive tenses. This approach poses problems, because the 'present' subjunctive is used in subordinate clauses referring to both present and

past time: *They are demanding that we pay now* and *They demanded that we pay there and then*. In form, this subjunctive is identical with the base of the verb (the bare infinitive), which means that, when the reference is to present time, it only differs from the indicative (except with the verb *be*) in the third-person singular: *We suggest that he leave soon* as against *They say he leaves at dawn tomorrow*. With past reference, the difference from the indicative is noticeable for all persons, as in *We suggested he leave*.

This subjunctive has three uses: (1) *Mandative*. Mainly in subordinate clauses, following a verb, adjective, or noun expressing a past or present command, suggestion, or other theoretical possibility: *I insist that she disband the team*; *It is essential that it be disbanded*; *She ignored his request that she disband the team*. When a negative is used with this subjunctive, it precedes the verb: *He requested that she not embarrass him*, except with *be* when *not be* and *be not* are both possible: *He was anxious that his name be not/not be brought into disrepute*. The mandative subjunctive is commoner in AmE than BrE, but appears to be on the increase in BrE. In both, but especially in BrE, it can be replaced by a *should*-construction or an indicative: *He requested that she should not embarrass him*; *He was anxious that his name was not brought into disrepute*. (2) *Conditional and concessive*. Sometimes formally in subordinate clauses of condition or concession: *If music be the food of love, play on . . .*; *Whether that be the case or not . . .*; *Though he ask a thousand times, the answer is still NO*. The alternatives are an indicative or a *should*-phrase: *If music is . . .*; *Though he should ask . . .* This usage does not extend to past time. (3) *Formulaic*. In independent clauses mainly in set expressions. Some follow normal subject-verb word order (*God save the Queen! Heaven forbid!*), while others have inversion of main verb and subject (*Long live the Queen!*; *Far be it from me to interfere*). *Come* plus a subject introduces a subordinate clause: *Come the end of the month, (and) there'll be more bills to pay*.

The 'past' subjunctive is now often called the *were*-subjunctive, because this is the only form in which there is a distinction from the indicative, and then only in the first- and third-person singular: *If I were you . . .* as opposed to *If I was you*. It is used with present and future (not past) reference in various hypothetical clauses, including condition: *If only I were young again*; *If he were asked, he might help*; *This feels as if it were wool*; *I wish she were here now*; *Suppose this were discovered*; *I'd rather it were concealed*. In popular and non-formal speech and writing, the *were*-subjunctive is often replaced by the indicative *was*, which brings this verb into line with other verbs, where the past tense is similarly used

for hypotheses about the present and future: *If only I knew how; I'd rather you said nothing.* *Were* is, however, widely preferred in *If I were you . . .* In the fixed phrase *as it were* (*He's captain of the ship, as it were*), *were* cannot be replaced by *was*. The use of *were* instead of *was* to refer to a real past possibility is generally considered an over-correction: \**If I were present on that occasion, I remember nothing of it.* This contrasts with the purely hypothetical past, *If I had been present . . .*, which strongly implies *but I was not*. See MOOD. [GRAMMAR]. S.C.

**SUBORDINATE CLAUSE.** A clause that cannot normally function independently as a sentence. Also *dependent clause*. See CLAUSE, SENTENCE, SUBORDINATION. [GRAMMAR]. T.MCA.

**SUBORDINATION** [17c: from Latin *subordinatio/subordinatio* under-arrangement, translating Greek *hupóstasis*]. In grammatical theory, a relationship between two units in which one is a constituent of the other or dependent on it. The subordinate unit is commonly a subordinate clause organized 'under' a superordinate clause. Such organization can be described in two ways: the subordinate unit as a constituent of the superordinate unit, and the subordinate unit as dependent on but distinct from the superordinate unit. In the sentence, *They did it when they got home*, the subordinate *when*-clause may be either a constituent of its superordinate main clause, which begins with *They* and is coextensive with the entire sentence, or dependent on a more limited main clause *They did it*. There is in principle no limit (apart from comprehensibility and practicality) to the subordination of clauses one under another. In the sentence, *They saw that I was wondering who had won the competition*, the subordinate *who*-clause is a constituent of or dependent on its superordinate *that*-clause (which ends with *the competition*), while the *that*-clause is also a subordinate clause, in turn a constituent of or dependent on its superordinate clause beginning with *They*. Subordinate clauses may also be constituents of or dependent on phrases: in *What's the name of the woman who's winning the competition?*, the *who*-clause modifies the noun *woman*.

**Form.** Traditionally, part of a sentence can only be classed as a subordinate clause if it contains either an identifiable or an 'understood' finite verb. In contemporary grammatical analysis, however, subordinate clauses may be classed as: finite ('I think *that nobody is in*'); non-finite ('He used to be shy, *staying on the fringes at parties*'); verbless ('She will help you, *if at all possible*'). Traditionally, the second category would be classed as a participial phrase and the third as a

clause with the verb 'understood' (*it is*). Finite subordinate clauses are usually marked as subordinate either by an initial subordinating conjunction (*after* in *He got angry after I started to beat him at table-tennis*) or by an initial *wh*-word that also functions within the clause (*who* in *Most Iranians are Indo-Europeans who speak Persian*, where *who* is the subject of the subordinate clause). These subordination markers sometimes introduce non-finite clauses (*while* in *I listened to the music while revising my report*), and verbless clauses (*if* in *If necessary, I'll phone you*).

**Function.** Subordinate clauses fall into four functional classes: *nominal*, *relative*, *adverbial*, *comparative*. Nominal or noun clauses function to a large extent like noun phrases: they can be subject of the sentence ('*That he was losing his hearing* did not worry him unduly') or direct object ('He knew *that he was losing his hearing*'). Relative or adjective/adjectival clauses modify nouns: the *that*-clause modifies *star* in 'She saw a star *that she had not seen before*.' Adverbial or adverb clauses function to a large extent like adverbs: the adverb *there* could replace the *where*-clause in 'You should put it back *where you found it*.' Comparative clauses are used in comparison and are commonly introduced by *than* or *as*: 'The weather is better *than it was yesterday*'; 'The weather is just as nice *as it was yesterday*.'

All such clauses occur in complex sentences. Subordination contrasts with *coordination*, in which the units, commonly the clauses of a compound sentence, have equal status: the clauses joined by *but* in *We wanted to visit the cathedral first, but the children wanted to see the castle straight away*. Sentences in which both subordinate and coordinate clauses occur are compound-complex sentences: with *before* and *but* in *We wanted to visit the cathedral before we did anything else, but the children wanted to see the castle straight away*. See CLAUSE, COORDINATION, SENTENCE. [GRAMMAR]. S.C.

**SUBORDINATOR.** See CONJUNCTION.

**SUBREPTION** [16c: from Latin *subreptio/subreptionis* a snatching away]. A process of semantic change in which a shift in a word's reference takes it away from its strict etymological and structural meaning: for example, the use of *September* and *October* (in Latin, the seventh and eighth months of the year: *septem* seven, *octo* eight) for the ninth and tenth months of the year. See SEMANTIC CHANGE. [HISTORY, LANGUAGE]. T.MCA.

**SUBSCRIPT** [18c: from Latin *subscriptus* written beneath]. (1) Also *inferior*. Written below:

*subscript numbers*. (2) Also *inferior*, *subfix*. A character, letter, or symbol written or printed next to and partly or wholly below another, usually in a smaller size. In the chemical formula  $H_2O$ , the number 2 is a subscript. Compare SUPERSCRIPIT. [TECHNOLOGY, WRITING]. R.E.A.

**SUBSTANDARD**, also **sub-standard** [20c: *standard* and *sub-* as in *subnormal*]. A semi-technical term for usage that is not standard or correct: *He ain't done nothin'; I don't got no money*. A variety of speech may also be so labelled: 'St. Mary's Lane, Lewes, is called "Simmery Lane" in local sub-standard speech' (*English Studies* 45, 1964). The term has often been used academically, without necessarily intending a negative judgement: 'In such communities the non-standard language can be divided, roughly, to be sure, and without a sharp demarcation, into *sub-standard speech*, intelligible at least, though not uniform, throughout the country, and *local dialect*' (Leonard Bloomfield, *Language*, 1933). Many linguists and teachers object to this use, arguing that in such phrases as *substandard housing* the term means 'of poor or low quality' and that usage referred to in the same way is perceived in the same way. They consequently prefer the term *nonstandard*. See DEVIANT, NON-STANDARD, STANDARD. [STYLE]. T.MCA.

**SUBSTANTIVE** [14c: from Latin *nomen substantivum* a name of a thing, a substantive noun]. A grammatical term that in the Middle Ages included both noun and adjective, but later meant noun exclusively. It is not usually found in later 20c English grammars. In such languages as Latin and French, the equivalent terms serve to distinguish the use of Latin *nomen*, French *nom* (etc.) as 'name' from the grammatical use as 'noun', a distinction which is unnecessary in English. However, the term has been used to refer to nouns and any other parts of speech serving as nouns ('the substantive in English'). The adjective *local* is used substantively in the sentence *He had a drink at the local before going home* (that is, the local public house). See NOUN. [GRAMMAR]. S.C., T.MCA.

**SUBSTRATE** [16c: from Latin *substratus* spread or laid under]. Also **substratum** [16c]. A language or aspect of a language which affects another usually more dominant language, often where the speech of a colonized people influences the superimposed language of the conquering group: for example, the syntax of Gaelic providing the model for the IrE construction *I am after eating my dinner* (I have eaten my dinner) in the English of bilingual English/Gaelic-speakers and of some unilingual English-speakers. Compare SUPERSTRATE. [LANGUAGE]. S.R.

**SUBTEXT**, also **sub-text**. (1) [18c]. A text that is placed in a subordinate position below another, especially on the same page. (2) [1940s: a translation of Russian *podtekst*]. In literary theory, a theme or viewpoint that underlies a text or activity, is often at odds with the apparent meaning of what is going on, and reflects a significant though not immediately obvious truth: 'We are not against a translation being given [on television by means of voice-overs], but the original language should be clearly audible rather than faded out. Not only would language students gain, but the implied sub-text—that foreign languages are of secondary interest and importance—would receive a long overdue challenge' (letter, *Independent*, 19 Jan. 1991). Compare CONTEXT, TEXT. [WRITING]. T.MCA.

**SUBTRACTIVE BILINGUALISM**. See BILINGUALISM.

**SUBWORD**. See HEADWORD.

**SUDAN**, also **the Sudan**. Official title: *English The Republic of Sudan*, Arabic *Al Jumhuriyat as-Sūdān*. A country of north-eastern Africa. Capital: Khartoum. Currency: the pound. Population: 23.9m (1988), 33.7m (projection for 2000). Ethnicity: 55% Arab, 35% African (Dinka, Lokuta, Nuer, Shilluk), 10% Nubian. Religions: 70% Muslim, 25% traditional, 5% Christian. Languages: Arabic (official), Nubian, and other indigenous languages. Education: primary 50%, secondary 19%, tertiary 2%, literacy 31%. In the early 19c, the northern Sudan was controlled by Egypt. In 1899, the entire region became a condominium of Britain and Egypt (the *Anglo-Egyptian Sudan*), and in 1956, it became independent. The division between Arab and Nubian Muslims in the north and pagan and Christian societies in the south has been an ongoing source of unrest. English was widely used in the 19c and earlier 20c, but currently has no official status. Of all the African nations colonially associated with Britain and English, Sudan has had least interest in maintaining the language, although English is more attractive to the non-Muslim south than to the Arabic-using north. See AFRICAN ENGLISH, ENGLISH. [AFRICA, NAME, VARIETY]. T.MCA.

**SUDRON, SUTHRON**. See SOUTHRON.

**SUFFIX** [16c: from Latin *suffixum* (something) fixed after or under, from *sub-* under, *figere/fixum* to attach]. An affix added at the end of a word, base, or root to form a new word: *-ness* added to *dark* to form *darkness*; *-al* added to *leg-* to form *legal*. Two distinctions are usually made: (1) Between a derivational suffix proper, such as

-ness and -al, which creates derivative words, and an inflectional *ending*, such as -s added to form the plurals of nouns, which changes the inflection of a word. (2) Between a *productive suffix*, which actively forms words (-ness: *darkness, newness, quaintness, wordiness*) and a *non-productive suffix*, which does not (-ledge: *knowledge*). There is a continuum from the highly through the mildly and rarely productive to the dormant and dead, and usage can vary according to time and place: the suffix -y has generally been added to vernacular nouns to form adjectives (*ease/easy, oil/oily, rain/rainy*) with some disyllabic bases (*paper/papery, powder/powdery*). In the 20c, however, -y has increasingly been added casually and often for nonce purposes to longer bases (sometimes with idiosyncratic or debatable spellings), including compounds and classical words: *air-hostessy, chocolat(e)y, dry-biscuity, garden-y, idiomaticky, crusty, pizzazzy, statusy, teenagely, upper-linty, warm-bready*.

**Origins.** In 1882, the philologist Walter W. Skeat noted: 'The number of suffixes in Modern English is so great, and the forms of several, especially in words derived through the French from Latin, are so variable that an attempt to exhibit them all would tend to confusion' (*Etymological Dictionary of the English Language*). The diversity of the backgrounds from which the suffixes of English have been drawn, the different periods in which they have entered the language, and the different processes involved all contribute to the complexity of the subject. Most suffixes, however, fall into one of three groups:

(1) *Vernacular*. Suffixes in the main from Old English and other Germanic tongues: -ish as in *childish* is from Old English and is cognate with German -isch as in *kindisch*.

(2) *Romance*. Suffixes that have come especially from Old French and Latin: -al as in *legal* and *natural* derives either directly or through Old French from Latin -alis as in *legalis* and *naturalis*, and is cognate with the Modern French forms -al in *légal* and -el in *naturel*.

(3) *Greek*. Suffixes that have come mainly through Neo-Latin and French: -oid as in *anthropoid* and *steroid* is from the combining form -(o)eidēs as in *anthrōpōeidēs* (human-like), and is cognate with French -oïde as in *anthropoïde* and Spanish -oide(o) as in both *antropoïde* (adjective) and *antropoïdeo* (noun).

Some suffixes fall into more or less parallel sets according to use and background; for example, three suffixes for causative and inceptive verbs: vernacular -en (*harden* to make or become hard), Latinate -ify (*purify* to make or become pure), and Greek -ize (*systematize* to make or become systematic). The conditions for using such

suffixes are strictly circumscribed: no \**hardize*, \**puren*, \**systemify* (although the third is conceivable, on the model of *humidify*). Great variation is possible in a single form or group of related forms, as with the Latin form whose masculine is -arius, feminine -aria, neuter -arium. This has entered English in at least four ways: original forms unchanged, as in *denarius, urticaria, aquarium*; as the genderless -ary in *aviary, honorary, primary, salary*; as French -aire (contrast *legionnaire/legionary, commissionaire/commissioner*); in the complex forms -arian in *disciplinarian, -arious* in *hilarious*. In Latin, -arius was close to -aris (as in *similaris*, English *similar*); many words, especially from French, that contain the element -ar- derive from either -arius or -aris. In addition, a part of a word may look as though it contains a member of the -ar- group but does not, as with *barbarian*, whose division is *barbar|ian*, not \**barb|arian*.

**Functions.** The functions of a suffix are: to form a noun, adjective, or verb from another noun, adjective, or verb, in such patterns as noun from verb and verb from adjective; to provide a more or less clear-cut element of meaning in the complex word so formed: when -y is added to *rock*, an adjective is formed from a noun and the meaning of the phrase *a rocky coastline* can be paraphrased as 'a coastline made up of rocks/covered with rocks/with a rock-like aspect'. Some suffixes function in isolation (for example, -ard in such words as *communard, drunkard*); no other element attaches to these words except the plural -s (but note *bastardy*). Others belong in sets, both associatively (-ist, -ism, -ize) and cumulatively (-ist, -istic, -istical, -istically). Such a cumulative set forms a *derivational paradigm*, a pattern whose potential can be exploited as needed. There are some 14 patterns of cumulative suffixation in English. Of these, four are vernacular and ten Neo-Latin, sometimes blending Latin and Greek: (pp. 1003-5). The vernacular paradigms belong to the language at large, while the Neo-Latin paradigms tend to be limited to educational, technical, and scientific registers. Such paradigms indicate a higher level of regularity in English suffixation than is often supposed to exist, but for every more or less regular system there are many incomplete or idiosyncratic arrangements in all areas and levels in which suffixes are involved. For example:

(1) *Vernacular*. The nouns *sand, milk* provide the usually literal *sandy* and *milky*, but the nouns *brain, hand* provide *brainy* and *handy*, which are figurative and do not refer directly to brain or hand.

(2) *Latinate*. The noun *nation* is the base of the adjective *national*. The noun *nationality* is formed from it, but not usually the noun

*nationalness*. Compare the noun *use*, the etymological base of the adjective *usual*, which has little to do with using things. From it, *usualness* is formed, but not *\*usuality*.

(3) *Greek*. The adjective *syllogistic* derives from the noun *syllogism*, not from *\*syllogy*, but *eulogistic* currently derives from the noun *eulogy*, not *eulogism*. Where *biology* begets *biological* and not *\*biologistic*, *eulogy* begets *eulogistic* and not in present-day English *\*eulogical*.

**Gradations of meaning and use.** Suffixes display all kinds of relationships between form, meaning, and function. Some are rare and have only vague meanings, as with the *-een* in *velvet-*een**. Some have just enough uses to suggest a meaning, as with *-iff* in *bailiff*, *plaintiff*, suggesting someone involved with the law, and *-ain* in *captain*, *suzerain*, suggesting someone with power. Some may be rare and apparently inert, yet come to life when needed: the Greek suffix *-ad* marks a nymph (*dryad*, *oread*), a number group (*monad*, *triad*), an epic (*Iliad*, *Dunciad*), and an activity occurring on an epic scale (*Olympiad*). Few nymphs and number groups are now created, but the recent *Asiad* as the name for pan-Asian games indicates that *-ad* is still available for epic events, at least in the context of athletics.

**Thematic groups.** The major semantic groups of suffixes and suffix-like elements are listed, with examples of their use, in the groups below. The same element or a variant of an element may appear in more than one group, because many elements have more than one meaning and use. No attempt is made to signal the degree of productivity of any suffix listed.

*Forming agents, people, instruments* (feminine forms marked with an asterisk). *-ad\** naiad, *-aire* legionnaire, *-al* general, *-an* human, Cuban, saccristan, *-ant* claimant, *-ar* beggar, *-ard* sluggard, *-ary* fritillary, legionary, *-ast* enthusiast, *-aster* usageaster, *-ate* affiliate, magistrate, *-ator* aviator, *-atrix\** aviatrix, *-ean* epicurean, *-ee* employee, *-eer* engineer, *-ener* sharpener, *-ent* resident, *-er* mixer, runner, *-ess\** hostess, *-ete* athlete, *-ette\** usherette, *-i* Pakistani, *-ian* Australian, electrician, historian, simian, *-ic* cleric, stigmatic, herpetic, syphilitic, *-id* aphid, druid, *-ier* soldier, fusilier, *-iff* plaintiff, *-ifier* humidifier, *-ile* hostile, *-ine\** actorine, *-ion* hellion, *-ist* cyclist, mentalist, semanticist, *-ister* chorister, *-ite* ammonite, Hittite, Thatcherite, *-ive* captive, *-izer/iser* atomizer, *-oid* anthropoid, *-oon* octroon, *-or* actor, *-ot* pilot, *-ote* zygote, *-ster* youngster, *-yst* analyst.

*Forming objects, items, concepts, substances* (scientific usages marked with an asterisk). *-a\** lava, ammonia, *-ad\** monad, *-ade* fusillade, lemonade, *-al\** methylal, *-alia\** mammalia, *-ane\** methane,

*-ar\** pulsar, *-ary* capillary, *-ase\** oxidase, *-asm* orgasm, *-ate\** nitrate, *-eme\** phoneme, *-ene\** benzene, *-ese* manganese, *-iac* ammoniac, *-ian* obsidian, *-id* plasmid, *-ide* cyanide, *-il* fossil, *-in* insulin, protein, *-ine* caffeine, cocaine, plasticine, *-ino* neutrino, *-ism* organism, *-ite* dynamite, phosphite, *-ma* magma, *-mo* sixteenmo, *-ode\** electrode, nematode, *-oid* alkaloid, *-ol\** glycerol, *-oma\** carcinoma, *-ome\** genome, *-on\** photon, *-one* silicone, *-ose\** glucose, *-tron* cyclotron, *-um* platinum, *-us* phosphorus, *-yl\** methyl, *-yne\** alkylne, *-ysm* aneurysm.

*Forming states, conditions, situations, and instances.* *-acy* accuracy, *-age* baggage, blockage, wharfage, *-al* renewal, *-ale* morale, *-ance* clearance, *-ancy* occupancy, *-asm* enthusiasm, *-ation* communication, *-dom* kingdom, serfdom, *-efaction* liquefaction, *-ence* munificence, *-ency* consistency, *-erie* lingerie, *-ese* journalesse, *-hood* adulthood, *-iasis* elephantiasis, *-ics* statistics, *-ie* bonhomie, *-ification* purification, *-ing* running, bridge-building, swimming pool, *-ion* junction, fusion, *-ism* Darwinism, euphemism, *-ition* tradition, *-itis* arthritis, telephinitis, *-ity* nudity, formality, humanity, ferocity, *-ization/isation* atomization, *-ledge* knowledge, *-ment* development, *-ness* darkness, *-or/our* color, labour, *-osis* osmosis, psychosis, *-red* hatred, *-ship* chieftainship, hardship, *-sis* synthesis, *-sy<sup>1</sup>* minstrelsy, *-sy<sup>2</sup>* epilepsy, *-th* warmth, *-tude* magnitude, *-ure* debenture, departure, *-ution* distribution, *-y* infamy.

*Forming groups, collections, and classifications.* *-a* arthropoda, *-acea* cetacea, *-aceae* rosaceae, *-age* assemblage, *-alia* marginalia, *-ana* Americana, Shakespeariana, *-aria* filaria, *-ata* chordata, *-dom* Christendom, *-hood* brotherhood, *-ia* amphibia, bacteria, *-iana* Darwiniana, *-idae* Formicidae, *-ilia* reptilia, *-ish* the British, *-kind* humankind, *-oidea* Crinoidea, *-ry* circuitry, peasantry, *-ship* readership.

*Forming places, lands, locations, and institutions.* *-a* Cuba, Java, hacienda, veranda, *-ada* Nevada, *-ades* the Cyclades, *-aea* Judaea, *-age* hermitage, vicarage, *-ain* Britain, *-aine* Aquitaine, *-alia* Australia, *-an* the Vatican, *-ana* Montana, *-ania* Romania, *-any* Brittany, *-arium* aquarium, *-ary* aviary, formicary, *-ate* caliphate, emirate, *-ea* Judea, *-ery* monastery, nunnery, rookery, *-ia* India, Somalia, *-iana* Louisiana, *-ides* the Hebrides, *-ory* dormitory, priory, observatory, *-um* asylum, mausoleum, Elysium, *-y* county, Italy.

*Forming national and ethnic types and associations.* *-ad* nomad, *-al* Oriental, Vandal, *-alian* Australian, *-an* American, Cuban, Moroccan, *-ard* Savoyard, *-arian* Bavarian, *-ch* French, *-ck* Canuck, Polack, *-ean* Galilean, *-ee* Chinese,

Maccabee, Shawnee, Yankee, *-er* Londoner, Iceland, islander, villager, westerner, *-ese* Chinese, Japanese, Viennese, Congolese, *-i* Iraqi, Pakistani, *-ian* Brazilian, Canadian, Romanian, *-ic* Asiatic, *-ie* Scottie, townie, *-ish* British, Yiddish, *-ite* Hittite, Manhattanite, *-ot* Cypriot, Epirot, *-(s)e* Erse, Scots, *-tch* Dutch, *-wegian* Glaswegian, Norwegian, *-x* Manx, *-y* gypsy, Romany, Taffy.

*Forming adjectives.* *-able* teachable, *-aire* doctrinaire, *-al* doctrinal, ducal, incremental, royal, *-alian* Episcopalian, *-alic* vocalic, *-an* human, *-ane* humane, *-ant* concomitant, radiant, *-ar* solar, *-arian* vegetarian, *-aric* velaric, *-ary* arbitrary, *-astic* enthusiastic, *-atic* dramatic, phlegmatic, *-eal* laryngeal, *-ean* subterranean, *-en* brazen, golden, drunken, priest-ridden, *-ent* current, nascent, *-erly* southerly, *-ern* southern, *-ernal* fraternal, *-ernmost* southernmost, *-esque* Bunyanesque, grotesque, *-e(u)tic* phonetic, therapeutic, *-iac* cardiac, *-iacal* maniacal, *-ial* circumstantial, colonial, residential, *-ian* draconian, *-iar* peculiar, *-ible* tangible, *-ic* civic, comic, *-ical* ethical, heretical, *-id* horrid, *-il* civil, *-ile* fertile, *-ine* adamantine, feminine, *-ique* oblique, *-ish* owlsh, sevenish, greenish-yellow, *-itic* arthritic, *-ly* princely, yearly, *-mental* incremental, developmental, *-oidal* adenoidal, *-ory* inflammatory, *-sy* cutesy, tricky, *-uble* voluble, *-ular* granular, molecular, *-y* naughty, sandy, tidy, worthy.

*Forming verbs of causation and inception.* *-ate* accentuate, *-efy* liquefy, *-en* harden, *-esce* effervesce, *-ify* purify, *-ize/ise* atomize.

*Forming diminutives and hypocorisms.* *-cle* tabernacle, icicle, *-er(s)* champers, rugger, soccer, *-ette* cigarette, *-ie* Jackie, lassie, *-ikin(s)* mannikin, sleepikins, *-ipoo* drinkipoo, *-let* leaflet, *-ling* darling, duckling, *-nik* beatnik, peacenik, *-o* arvo, cheapo, journo, reffo, *-ock* hillock, *-ola* granola, payola, *-ula* uvula, *-ule* granule, molecule, *-ulus* cumulus, *-y* Molly, Tommy.

**Suffixes and stress.** Many suffixes of Latin and Greek origin trigger a shift in stress (technically, *stress shift* or *accent shift*) when added to polysyllabic bases: for example, *-ity* attracts stress to the syllable preceding it (*cóplex/compléxity*). No vernacular suffixes cause stress shift, nor do all classical suffixes do so: for example, there is no shift in the vernacular set *shárp/shárpener*, nor in the Romance set *devélop/dévèlopmént*, but a shift occurs when this set is extended with *-al*: *dévèlopmént/developméntal*. In terms of stress shift, there are three groups of suffixes:

(1) *Vernacular: no shift.* Suffixes and compounding elements which do *not* cause stress shift: *-dom* kingdom, *-ed* salted, red-haired, *-en* darken, *-er* writer, *-erly* easterly, *-ern* northern,

*-erner* westerner, *-ernmost* southernmost, *-ful* hopeful, *-fulness* truthfulness, *-hood* adulthood, *-iness* dirtiness, *-ing* startling, soap-making, *-ish* roundish, *-ishness* reddishness, *-less* useless, *-lessness* meaninglessness, *-let* leaflet, *-like* stone-like, *-liness* loneliness, *-ling* hireling, *-ly* womanly, *-ness* darkness, *-ship* readership, *-y* sandy.

(2) *Romance and classical: no shift.* Suffixes and compounding elements which do *not* cause stress shift: *-able* breakable, *-age* marriage, *-al* renewal, *-ant* dependant, *-ar* similar, *-ary* legionary, *-cy* accuracy, normalcy, *-ible* incorrigible, *-ion* attention, *-ism* Darwinism, *-ist* socialist, *-ite* meteorite, *-ive* suggestive, *-ment* development, *-or* dictator, *-ure* fixture. Although they do not themselves affect stress, they may occur in composites which do, such as *-ability*, in which the *-ity* attracts the stress to the syllable preceding it: *téachable/teachability*.

(3) *Classical: causing shift.* The lists indicate the form which the shift takes when the words containing the suffixes are pronounced in isolation. Minor changes relating to primary or secondary stress may occur in the flow of longer utterances. When the suffix is attached, stress falls: (a) on the only syllable of the suffix: *-ee* referée, réfugiée, *-eer* auctionéer, ingénéer, *-ese* Japanese, Vietnámése, *-esque* picturésque, Júnóésque, *-ette* cigárette, usherétté. (b) on the first syllable of a composite suffix with two syllables: *-ation* comendátion, dégradátion, transformátion, *-ition* compositión, définítion, édigión, *-ution* dissolútion, révolútion, *-atic* dogmátic, systémátic, *-etic* énergétic, pathétic, *-iety* sobriety, society, *-mental* développéméntal, expérimental, *-ental* continéntal, *-ential* présidéntial. (c) one syllable before the (composite) suffix: *-an* subúrban, *-ian* Canádián, *-ial* torréntial, *-eal* laryngéal, *-ual* résidual, *-ify* humidify, *-ic* économíc, históric, *-ical* économícal, históricál, *-ity* compléxity, informálicity. (d) two syllables before the suffix: *-al* colónial, indústrial, *-ar* moléculár, rectángular, *-ize* décentralize, réalize, *-ous* censóricous, labóricous.

See ABBREVIATION, ADJECTIVE, AFFIX, CAUSATIVE VERB, COMPLEX WORD, DIMINUTIVE, INCEPTIVE/INCHOATIVE, PRODUCTIVE, SEXISM, STRESS, WORD-FORMATION. [GRAMMAR, LANGUAGE, SPEECH, WORD]. T.MCA.

### Paradigms of suffixation

In the following 14 derivational paradigms (see SUFFIX, functions), X stands for a base that fits a paradigm. If the words shown as products of a paradigm are marked (\*), they are no more than potential, no attested use of such words having

been found by 1990. They may well be impossible for various reasons, both structural and semantic. Although the tables are relatively detailed, some of their information remains implicit, such as:

(1) The precise kinds of base feeding into particular paradigms. In principle, all verbs feed into Paradigm 1, producing the appropriate derived forms, subject to such factors as irregularity and strong-verb forms, spelling, pronunciation, comprehensibility, and practicality. For many Latinate verbs, there is a sub-paradigm in which *Xer* becomes *Xor*: *act/actor*, not *act/\*acter*.

(2) The kinds of paraphrase that suggest the meanings of derivatives. Every form produced in a paradigm can be interpreted by means of a paraphrase such as: *climber* someone who is climbing (at a particular time) or climbs (as a pastime, occupation, etc.); *centrality* state or condition of being central.

(3) What happens if a prefix is added to a base or derivative. Prefixes enter the system at any appropriate point: *non-* may be added in Paradigm 5, so that *central* becomes *non-central*, after which the paradigm continues to produce words beginning with *non-* as long as they meet the tests of comprehensibility and practicality: *\*non-centralitarian* is improbable, but not impossible.

The 14 paradigms represent a core of productive suffixial patterns available in present-day English, despite the existence of many 'rogue' items that do not successfully fit into the appropriate system. There are other such paradigms, as for example the *-able/-ible* paradigm (*teach/teachable/teachability*) and the *-ment* paradigm (*develop/development/developmental*), but they are excluded for reasons of space or because of the complexities involved in their description.

### (1) Words from basic verbs

	X > Xer		
	> Xing		
	> Xed		
climb	climber	run	runner
	climbing		running
	climbed		ran

### (2) Words from basic adjectives

	X > Xly		
	> Xness		
	> Xie		
	> Xish	> Xishness	
	> Xen	> [P1]	

dark	darkly		
	darkness		
	darkie		
	darkish	*darkishness	
	darken	[darkener darkening darkened]	
red	redly		
	redness		
	*reddie		
	reddish	reddishness	
	redde	[*reddener reddening reddened]	

### (3) Words from basic animate nouns

	X > Xhood/Xdom/Xship		
	> Xly	> Xliness	
	> Xish	> Xishly	
		> Xishness	
child	childhood		
	childly	*childliness	
	childish	childishly	
		childishness	
king	kinghood/kingdom/kingship		
	kingly	kingliness	
	*kingish	*kingishly	
		*kingishness	
woman	womanhood		
	womanly	womanliness	
	womanish	womanishly	
		womanishness	

### (4) Words from basic inanimate nouns

	X > Xy	> Xily		
		> Xiness		
dirt	dirty	dirtyly	water	watery
		dirtyness		*waterily
				wateriness

### (5) Words containing *-al* (but excluding P8)

	X > Xal	> Xally		
		> Xalism	> [P13]	
		> Xality	> Xalitarian	
		> Xalness		
		> Xalize	> [P12]	
			> [P1]	
centre	central	centrally		
		centralism	[centralist	
			centralistic	
			centralistically]	
		centrality	*centralitarian	
		centralness		
		centralize	centralization	
			[centralizer	
			centralizing	
			centralized]	

## 1004 SUFFIX

<i>leg-</i>	legal	legally	
		legalism	[legalist legalistic legalistically]
		legality	*legalitarian
		legalness	
		legalize	legalization [legalizer legalizing legalized]

*Note.* When *l* occurs in the base (as in *pole* and *sol-*), *-al* becomes *-ar* (*polar*, *solar*) and the paradigm continues in the same form.

**(6) Words containing *-an* (especially geographical uses)**

X	> Xan	> Xanism	> Xanist
		> Xanness	
		> Xanize	> [P12]

Africa	African	Africanism Africanness Africanize	Africanist [Africanization Africanizer Africanizing Africanized]
--------	---------	---	--

India	Indian	Indianism Indianness Indianize	Indianist [Indianization Indianizer Indianizing Indianized]
-------	--------	--------------------------------------	---

**(7) Words containing *-id*, *-ile*, *-ine*, *ous***

X	> Xid	> Xidly
	Xile	Xilely
	Xine	Xinely
	Xous	Xously
		> Xidity
		Xility
		Xinity
		Xosity
		> Xidness
		Xileness
		Xineness
		Xousness

<i>luc-</i>	lucid	lucidly
	lucidity	
	lucidness	
<i>fert-</i>	fertile	fertilely
	fertility	
	fertileness	
<i>femin-</i>	feminine	femininely
	femininity	
	feminineness	

<i>visc-</i>	viscous	viscously
	viscosity	
	viscousness	

**(8) Words containing *-ic***

X	> Xic	> Xical	> Xically
		> Xicity	
		> Xicness	

history	historic historicity historicness	historical	historically
irony	ironic *ironicity ironicness	ironical	ironically
symbol	symbolic symbolicity symbolicness	symbolical	symbolically

**(9) Words containing *-ion* and *-ive***

Xion	> Xional	> [P5]
	> Xive	> Xively
		> Xivism
		> [P13]
		> Xivity
		> Xiveness

predict	prediction predictive	*predictional predictively *predictivism *predictivity predictiveness
*receive	reception receptive	*receptional receptively *receptivism receptivity receptiveness
select	selection selective	selectional selectively selectivism [*selectivist] selectivity selectiveness

**(10) Words based on *-ics***

X	> Xics	> Xicist/Xician
	> Xicize	> [P12]
	> Xic	> Xical
		> Xically

<i>eth-</i>	ethics	ethicist	
	ethicize	*ethicization	
	ethic	ethical	ethically
<i>polit-</i>	politics	politician	
	politicize	politicization	
	politic	political	politically

**(11) Verbs in -ify**

	X > Xify	> Xification	> Xificational/Xificatory	> [P1]
class	classify	classification	classificational/atory	[classifier classifying classified]
ver-	verify	verification	verificational/atory	[verify verifying verified]

**(12) Verbs in -ize**

	X > Xize	> Xization	> [P1]
creole	creolize	creolization	[*creolizer creolizing creolized]
maximum	maximize	maximization	[*maximizer maximizing maximized]
Stalin	Stalinize	Stalinization	[Stalinizer Stalinizing Stalinized]

**(13) Words based on -ism (uncountable)**

	X > Xism	> Xist	> Xistic	> Xistically
commun-	communism	communist	communistic	communistically
Darwin	Darwinism	Darwinist	Darwinistic	*Darwinistically
Narcissus	narcissism	narcissist	narcissistic	narcissistically

**(14) Words based on -ism (countable)**

	X > Xism	> Xistic	> Xistically
euphem-	euphemism	euphemistic	euphemistically
Spooner	Spoonerism	*Spooneristic	*Spooneristically

**SUFFOLK.** See EAST ANGLIA.

**SUGGESTOPEDIA.** See ELT, LANGUAGE TEACHING.

**SUMMARY** [15c: from Latin *summarius* highest, chief, main, from *summus* highest. Compare Latin *summa* a synthesis of all that is known about something, such as the *Summa theologica* of St Thomas Aquinas]. (1) (Now rare) containing the chief or essential points: *a summary*

*journal; summary aphorisms.* (2) Concise, brief; stated or done very quickly: *summary proceedings; summary justice.* (3) A comprehensive and usually brief abstract or digest of a text or statement. See ABRIDG(E)MENT, ABSTRACT, PRÉCIS. [WRITING]. T.MCA.

**SUPERLATIVE (DEGREE).** In grammatical theory, the third degree of an adjective or adverb. This is usually formed either by adding *-est* to the uninflected positive or absolute form of shorter words (*kindest, fastest*) or by putting *most* before longer words and adverbs (*most extraordinary, most quickly*). Irregular superlatives include *best* and *worst*. See ADJECTIVE, ADVERB, COMPARATIVE DEGREE, DEGREE POSITIVE. [GRAMMAR]. S.C.

**SUPERORDINATE CLAUSE.** In grammatical analysis, a term for a clause that contains another clause. In *It was raining when I left home*, the sentence constitutes a superordinate clause, since it contains a subordinate *when*-clause. In *I think it was raining when I left home*, the clause beginning with *it* remains superordinate to the *when*-clause, but is at the same time subordinate to the superordinate clause that constitutes the sentence. See CLAUSE, SUBORDINATION. [GRAMMAR]. S.G.

**SUPERORDINATE TERM.** See HYPONYM, SEMANTICS.

**SUPERSCRIPT** [16c: from Latin *superscriptus* written above]. (1) Also *superior*. Written above: *superscript numbers.* (2) Also *superior*. A character, letter, or symbol written or printed next to and partly or wholly above another, usually in a smaller size. The main applications of superscripts are: to denote footnotes, both at the note itself and the point in the text to which the note refers; to identify homographs in a dictionary or glossary (*bat<sup>1</sup>* the animal, *bat<sup>2</sup>* the implement); in mathematics and science, to denote various functions of numerals, especially the power of a number (*10<sup>3</sup>* representing  $10 \times 10 \times 10$ ); in bibliographies, to denote an edition of a work cited (*CAH<sup>2</sup>* identifying the 2nd edition of the *Cambridge Ancient History*), and in bibliographical collation to indicate the number of leaves in a gathering of a book. (3) Formerly, a *superscription*, such as a postal address at the beginning of a letter. Compare SUBSCRIPT. See DIACRITIC, HOMONYM, NOTES AND REFERENCES. [TECHNOLOGY, WRITING]. R.E.A.

**SUPERSTRATE** [1980s: from Latin *superstratus* spread or laid above]. Also **superstratum** [1800s]. A language or aspect of a language which affects another less prestigious or socially and culturally dominated language: for example,

Latin or French influencing Old and Middle English; English influencing many of the indigenous languages of Africa and Asia. Compare SUBSTRATE. [LANGUAGE]. S.R.

**SUPPLETION** [13c: from Latin *suppletio/suppletionis* making complete]. A term in linguistics for a situation in which a form in a grammatical paradigm bears no family resemblance to the base form: for example, *went* in *go/goes/going/went/gone* and *better* and *best* in *good/better/best*. Suppletive forms are common in irregular usage in many languages. [GRAMMAR]. S.G.

**SUPRASEGMENTAL**. A term in phonetics and linguistics, used especially in the US to refer to features of stress and intonation. Structural linguists adopted this term because in their notations, the features were marked on paper 'above' (*supra-*) the morphological features (*segments*) of an utterance. In Britain, the equivalent term is *prosodic*. See PROSODY. [SPEECH]. T.MCA.

**SURFACE STRUCTURE**. See CHOMSKY, MODEL, TRANSFORMATIONAL-GENERATIVE GRAMMAR.

**SURINAM**, also **Suriname**. Officially *Republic of Surinam*. A state of the Caribbean coast of South America. Capital: Paramaribo. Currency: the gulden (guilder). Economy: agriculture, mining. Population: 399,000 (1988), 508,000 (projection for 2000). Ethnicity: 45% African (including 10% Morron, Bosneger, or Bush Negro), 34% East Indian, 16% Javanese, 3% Amerindian, 2% Chinese. Religions: 27% Hindu, 25% Protestant, 23% Roman Catholic, 20% Muslim, remainder traditional beliefs. Languages: Dutch (official), Sranan and other Creoles, English, Hindi, Javanese. Education: primary 98%, secondary 66%, tertiary 3%, literacy 90%. The first European settlers in the area were British from Barbados in 1651, but the Dutch gained the territory in 1667 in a swap that gave Nieuw Amsterdam (to become New York) to Britain. After this, the colony became *Dutch Guiana*. The British held it again (1799-1818) during the Napoleonic wars. The colony became independent as Surinam in 1975. It is remarkable for its variety of English-based creoles: *Ndjuka*, *Saramaccan*, and *Sranan* or *Taki-Taki*. See BEHN, CARIBBEAN ENGLISH CREOLE, ENGLISH, NDJUKA, SARAMACCAN, SRANAN. [AMERICAS, NAME, VARIETY]. L.D.C.

**SURNAME**. See PERSONAL NAME.

**SURVEY OF ENGLISH DIALECTS**. A survey of the dialects of England directed by Harold Orton and published under his editorship in

twelve volumes by E. J. Arnold, Leeds, from 1962 to 1972. In the 1930s, Orton engaged in discussions with European and American colleagues on a project that would lead to a *Linguistic Atlas of England*, but the plan did not mature until after the Second World War, when he re-established contact in 1946 with Eugen Dieth at Zurich. They spent several summers preparing, testing, and revising a survey form duly published in 1952 by the Leeds Philosophical and Literary Society. This questionnaire differed from others before it in being not simply a worksheet setting out items to be collected but also presenting some 1,300 questions to be asked in such a way that later reviewers of the material would know how it had been gathered, and so that the questions would be seen to have avoided planting a pronunciation or a word in the minds of informants. These were to be older people born and living in the 313 areas surveyed. Since the survey was largely rural, the questions were mainly based on agricultural topics. The aim, however, was not simply to elicit farming vocabulary but to gain samples of every conceivable realization of the development of vowels and consonants from earlier English forms, as well as giving a comprehensive view of differences in morphology and syntax in contemporary dialect.

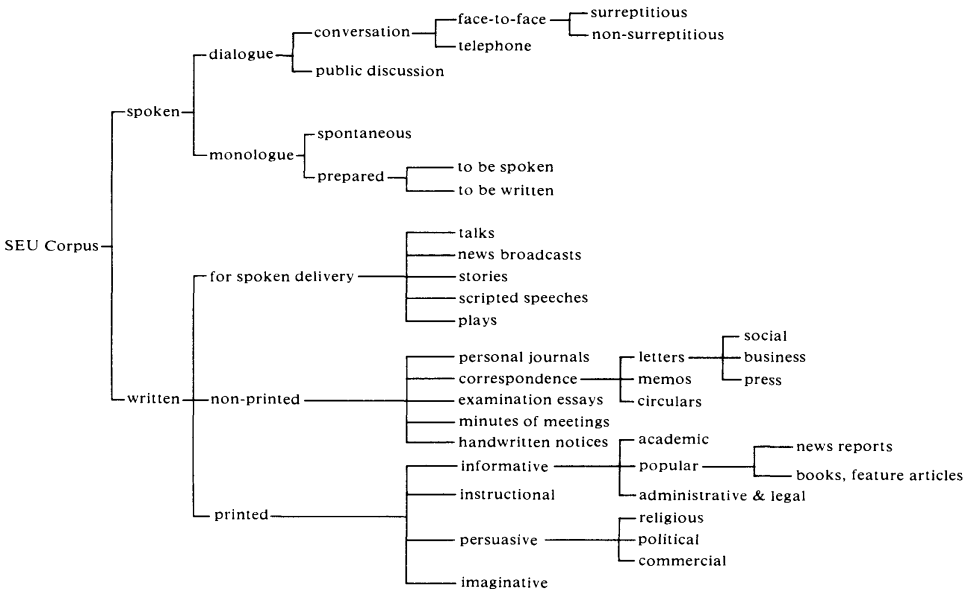

The first full-time fieldworker was Peter Wright (1949-52), the second Stanley Ellis (1952-9), assisted by graduate researchers who included some American Fulbright Scholars. With the help of W. J. Halliday, a retired headmaster active in the Yorkshire Dialect Society, three volumes of material for the North of England and the Isle of Man were published in 1962, material for the rest being published over the next ten years. Co-editors with Orton, after Halliday in the North, were P. M. Tilling for the East Midlands, Michael V. Barry for the West Midlands, and Martyn Wakelin for the South. Publication was in pages of phonetic answers to the questionnaire, presented under the heading of each question. Orton supervised the preparation of the *Linguistic Atlas of England* from Survey materials, but its publication came after his death in 1978. See DIALECT, LINGUISTIC ATLAS OF ENGLAND, ORTON. [EUROPE, VARIETY]. S.E.

**SURVEY OF ENGLISH USAGE**, short form *SEU*. A survey founded by Randolph Quirk in 1959 at the U. of Durham, England. It was moved to permanent premises at U. College London in 1960, when Quirk became Professor of English Language there. He remained its Director until 1981. The present Director is Sidney Greenbaum, who assumed the position in 1983, when he succeeded Quirk as Quain Professor of English Language and Literature.

**Aim.** The aim of the Survey is to provide the resources for accurate descriptions of the grammar available to, and used by, adult educated native speakers of BrE. It was assumed that grammarians cannot rely simply on their own knowledge to provide the grammatical data that are at the disposal of speakers of English in a range of stylistic contexts. The major activity of the Survey was therefore the collection and analysis of representative samples of spoken and written BrE. A subsidiary activity was the development and administration of experiments eliciting use and judgement among native speakers. The elicitation tests supplemented corpus data on features that were in divided use or that were infrequent in the corpus, such as the choice of the subjunctive, the *should*-construction, or the indicative after verbs such as *demand* and *recommend*; the normal positions of different types of adverbials; the verbs that collocate with such intensifiers as *badly* and *entirely*.

fiction, news reports, legal and administrative documents.

**Analysis of the Corpus.** In its original form the Corpus was and is available in photocopied booklets and slips. Each slip (6 × 4 inches) contains 17 lines, including four lines of overlap with preceding and following slips to provide context. For each collected feature there is one slip that is marked for that item. The Survey has collected 65 grammatical features (such as adverbs, names, negation, direct speech); over 400 specified words or phrases that were felt to have grammatical significance (such as *a*, *is*, *could*, *not*, *and*, *in spite of*); for spoken texts, about 100 prosodic features (such as rising and falling tones) and paralinguistic features (such as laughing, sobbing); and for written texts, all punctuation marks. The slips are in specified drawers of filing cabinets in text order. Scholars from many parts of the world visit the Survey's premises at UCL to consult the files.

**Content of the Corpus.** The Corpus consists of 200 samples ('texts'), each of 5,000 words, for a total of one million words. The texts cover a wide range of subject matter, situations, and degrees of formality. The 100 spoken texts comprise face-to-face conversations and telephone conversations, discussions, interviews, broadcast commentaries, lectures, demonstrations, sermons, committee meetings, and dictations. The 100 written texts comprise: scripted material that was read aloud, such as drama and news broadcasts; manuscript material, such as social and business letters; printed publications, such as learned and popular books on various topics,

**The London-Lund Corpus.** In 1975, the Survey of Spoken English was established by Jan Svartvik at Lund University in Sweden with the aim of transferring the Survey spoken texts to machine-readable form. This version of the spoken texts reduces the amount of detailed information in the Survey transcriptions by omitting some of the original prosodic features and all the paralinguistic features. The 87 Survey spoken texts (all that had by then been processed at the Survey) became available in machine-readable form for distribution in the early 1980s. This set of texts is called the *London-Lund Corpus* because it derived from the Survey Corpus

in London and was computerized at Lund University. A selection of 34 texts of face-to-face conversations, totalling some 170,000 words, has been published in *A Corpus of English Conversation*, edited by Jan Svartvik and Randolph Quirk (Lund: Gleerup, 1980). The Lund Survey of Spoken English has since been engaged in developing a semi-automatic, interactive system of grammatical tagging that can be used primarily for research into the interrelationship of grammar and prosody.

**Survey corpus: status and plans.** In 1989 (30 years since its founding), the Survey completed the collection of its 200 texts, the transcription of its spoken material, the computerization of the remaining 13 spoken texts (which have been added as a supplement to the original London-Lund corpus), and (with financial assistance from IBM and practical assistance from Geoffrey Kaye, an IBM researcher) the computerization of the 100 written texts. For copyright reasons, the written texts must be consulted at the Survey premises. The whole corpus is being provided with an interactive concordance browser, which allows the user to request concordance lines for any lexical string and to gain access for any line to the full preceding and subsequent contexts. A program is being applied that automatically assigns word-class tags to every word. Plans include applying a program for automatic parsing of sentences, and processes for the digitization of sound recordings. These analyses will be available on the interactive concordance browser.

**Survey publications.** Numerous books and articles have drawn on data from the Corpus (including its computerized spoken texts in the London-Lund Corpus) and from the results of experiments conducted at the Survey or by associates of the Survey. Prominent among them are two major reference works: *A Grammar of Contemporary English* (Longman, 1972) and *A Comprehensive Grammar of the English Language* (Longman, 1985), both by R. Quirk, S. Greenbaum, G. Leech, and J. Svartvik. Two advanced-level textbooks based on the 1972 reference grammar are used in universities and colleges throughout the world: *A University Grammar of English*, by Quirk and Greenbaum (Longman, 1973; US title *A Concise Grammar of Contemporary English*, Harcourt Brace Jovanovich, 1973) and *A Communicative Grammar of English*, by Leech and Svartvik (Longman, 1975). An advanced-level textbook based on the 1985 reference grammar has also been published: *A Student's Grammar of the English Language*, by Greenbaum and Quirk (Longman, 1990). A select bibliography of other books using Survey data appears below.

**International Corpus of English** (short form *ICE*). In 1988, Greenbaum initiated discussions on a proposal for an International Corpus of English that will be available for distribution on computer disks. The collection of texts began in 1990. At the time of writing, research teams participating in the project are drawing on English used in Australia, Canada, East Africa (Kenya, Tanzania, Zambia), Hong Kong, India, Jamaica, New Zealand, Nigeria, the Philippines, Singapore, the UK, and the US. Supplementary projects deal with translations into written English and English used in international spoken communication, and English in teaching material for learners of the language. The national corpora will each contain one million words and will be compiled and analysed in similar ways. The texts in the supplementary corpora will be drawn from varieties similar to those in the national corpora. The Survey will be providing the UK component. The ICE project will facilitate comparative studies of national varieties of English, including the English used in countries such as India and Nigeria where English is primarily a second language. The Survey component will also provide the means for investigating recent changes in the language through a comparison with the Survey corpus. **SURVIVAL LITERACY.** See FUNCTIONAL LITERACY.

**SUSPENSION POINTS.** See ELLIPSIS.

**SWAHILI** [Early 19c: from Arabic *sawāḥilī* coastal, bordering, from *sāḥil* coast, edge]. Also **Kiswahili**, **KiSwahili**, formerly **Swahilese**. A Bantu language spoken as a mother tongue or a second language in the East African mainland and islands, from Lamu Island in Kenya in the north to the southern border of Tanzania, and west to Zaïre. It may have arisen from a Bantu language pidginized through contact with Arabic. As a language of trade, it spread inland from the coast during the 19c. It is the official language of Kenya and Tanzania and a lingua franca in Uganda and Zaïre. Arabic has provided many loanwords, and the earliest Swahili literature, from the 18c, is in Arabic script. Its most important varieties are: *Kiunguja* or *KiUnguja* in Zanzibar and mainland Tanzania, *Kimvita* or *KiMvita* in Mombasa and other areas of Kenya, and *Kiamu* or *KiAmu* on Lamu and in adjacent coastal areas. Early literature consisted of local narratives, Arabic tales, and translations of European writers. The British colonial administration in the 1930s encouraged the development of standard Swahili from *Kiunguja* and literary Swahili is a strong medium for East African literature. The body of work reflects colonial and post-colonial experience, as in James Mbotela's historical novel *Uhuru wa Watumwa* (Freedom for the Slaves, 1934) and the work of the poet and novelist Shaaban Robert. Swahili nouns are divided into classes according to the grammatical prefixes they take. Such prefixes also bring verbs, adjectives, demonstratives, and possessives into concord with the subject of a sentence: for example, in *Watu wetu wale*

*wakubwa wamekuja* (Those big people of ours have come), *watu* is the plural of *mtu* (person), and other words harmonize by beginning with *wa*. Comparably, *mbenzi* is a rich person (who owns a Mercedes-Benz), plural *wabenzi*. In the proverb *Kidole kimoja kikiumia vidole vingine vitatoa damu* (If you hurt one of your fingers, the others will bleed), *ki* in the first clause marks singular concord, while *vi* in the second marks the plural. Swahili is one of the few indigenous black African rivals to English. Because it is used over such a wide area, it tends to be ethnically neutral. See AFRICAN ENGLISH, AFRICAN LANGUAGES, AGGLUTINATING, ARABIC, BANTU, EAST AFRICAN ENGLISH, KENYA, TANZANIA, UGANDA. [AFRICA, LANGUAGE]. T.MCA.

**SWAZILAND.** Officially: English *Kingdom of Swaziland*, Siswati *Umbuso weSwatini*. A country in southern Africa, between South Africa and Mozambique. Administrative capital: Mbabane. Legislative capital: Lobamba. Currency: lilangeni (100 cents), plural *emalengeni*. Population: 738,000 (1988), 1.1m (projection for 2000). Ethnicity: Swazi 90%; Nyasa, Sotho, Zulu 7%; European and mixed 3%. Religions: 49% Protestant, 43% traditional, 8% Roman Catholic. Languages: Siswati or SiSwati (also known as Swazi, the Zulu form of the name) and English (both official). Education: primary 85%, secondary, 40%, tertiary 3%, literacy 68%. The Swazi occupied the territory in the early 19c, in competition with the Boers. Their autonomy was guaranteed by Britain, but the territory was administered by the Boer province of Transvaal until 1903, when it came under the British governor of Transvaal, then a province of the Union of South Africa. Independence was gained in 1968. See ENGLISH, SOUTH AFRICA. [AFRICA, NAME, VARIETY]. T.MCA.

**SWEARING.** A term that refers to both taking an oath and using language that is regarded as foul, abusive, and profane. In Macaulay's *Lays of Ancient Rome* (1842) are the lines: 'Lars Porsena of Clusium / By the Nine Gods he swore / That the great house of Tarquin / Should suffer wrong no more.' When he swore this oath, Lars Porsena invoked the punishment of the gods on himself if he should fail to help the house of Tarquin. Similarly, when people in a Christian culture swear on the Bible to tell the truth in court, they assume that God will punish anyone who then lies, quite apart from the legal consequences of 'being forsworn' (*perjury*). When people swear something or swear to do something, for example on their honour, they pledge that honour as a security to be forfeited if forsworn. When the ringleader of a plot swears fellow conspirators to secrecy, or the Chief Justice

of the US Supreme Court 'swears in' a new president, a binding oath is administered. To 'swear off' smoking is to take an oath to stop smoking and to 'swear by' the *OED* is to have great faith in it. Oaths sworn to a god or God are solemn matters, but over the centuries have passed from being ritual formulas to being exclamations. The negative aspect of oath-swearing (retribution) allows other kinds of negatively charged language to be called *oaths*, and their exclamatory use to be called *swearing*. The extension of these notions from *By God!* through *Hell!* and *Shit!* to *You son of a bitch!* is striking but not surprising; the last three can be called both *oaths* and *curses*, and the activity in general can be called *cursing* and *swearing*. The notion of cursing has undergone a similar development: solemn cursing invokes supernatural retribution on someone or something the curser holds odious. By swearing an oath, Lars Porsena invited the punishment of the Nine Gods on his own head. He might equally well have urged them to punish the offending Romans by cursing the Romans in their name.

See ABUSE, (A)ESTHETICS, ANGLO-SAXON, AUSTRALIAN, AUSTRALIAN LANGUAGE, BAD LANGUAGE, BLASPHEMY, CENSORSHIP, COPROLALIA, CURSING, DEROGATORY, DICTIONARY OF SLANG AND UNCONVENTIONAL ENGLISH, ETHNIC NAME, EUPHEMISM, EXCLAMATION, EXPLETIVE, FOUL LANGUAGE, FOUR-LETTER WORD, GRAFFITI, GREAT AUSTRALIAN ADJECTIVE, INFIX, LANGUAGE, MALEDICTA, OATH, OBSCENITY, PARTRIDGE, PEJORATIVE, PLAIN ENGLISH, PYGMALION, READ, SCATOLOGY, SLANG, SLUR, SMUT, STRONG LANGUAGE, SWEARWORD, TABOO, VULGAR, VULGARISM. [STYLE, USAGE]. R.F.I.

**SWEARWORD.** A non-technical term for a word or phrase that is obscene, abusive, and socially offensive. Swearwords are usually associated with the genitals and sexual activity (*cunt*, *fuck*, *prick*), excrement (*crap*, *shit*), or religion (*Jesus Christ!*), and may combine elements from each area (*fucking shit*, *fucking hell*). Conceptions of what is or is not, should or should not be, a swearword have varied over the years. In the 19c, *damn* was widely regarded as a swearword, but is nowadays generally considered mild because, by and large, religious topics such as heaven and hell are no longer taken as seriously as in the past. See SWEARING. [STYLE]. T.MCA.

**SWEDISH.** A Germanic language spoken in Sweden and parts of Finland, where it is an official language together with Finnish. In comparison with Danish and Norse, it has had relatively little historical contact with or impact on English, but in the late 20c English has begun to have a considerable impact on Swedish. See

BORROWING, SCANDINAVIAN LANGUAGES. [EUROPE, LANGUAGE]. P.C.

**SWEET, Henry** [1845–1912]. English philologist, phonetician, and grammarian. Born in London, and educated at King's College School, London, he matriculated in 1864 at the U. of Heidelberg, where he gained experience of German philological method. After a spell in a commercial office he entered Balliol College, Oxford, in 1869, acquiring a fourth-class degree in 1873 because of interests not directly related to his courses: in 1871, while still an undergraduate, he edited King Alfred's translation of the *Cura Pastoralis* for the Early English Text Society, his commentary laying the foundation of Old English dialectology. Further works on Old English include: *An Anglo-Saxon Reader* (1876); *The Oldest English Texts* (1885); *A Student's Dictionary of Anglo-Saxon* (1896). He has been described by C. L. Wrenn as 'England's greatest Anglo-Saxonist' (in *Transactions of the Philological Society*, 1946).

Having failed in his candidacy for the Merton Chair of English at Oxford in 1885, Sweet concentrated on other interests. In 1877, he had published *A Handbook of Phonetics*, which attracted attention among scholars and teachers of English on the Continent. He followed it with *Elementarbuch des gesprochenen Englisch* (1885), adapted as *A Primer of Spoken English* (1890). This was the first scientific description of educated London speech, the accent later known as Received Pronunciation. Sweet used phonetic script throughout this work, including specimens of connected speech in transcription. By emphasizing the spoken language and the use of phonetics he was a pioneer in language-teaching methodology. His views on the subject were set out in *The Practical Study of Languages* (1899). His last book on English pronunciation was *The Sounds of English* (1908). Other interests to which Sweet gave attention in later life were the historical development of the sounds of English (*The History of English Sounds*, 2nd enlarged edition, 1888), the theory and philosophy of grammar (*A New English Grammar, Logical and Historical*, 1892–8), and comparative philology, including the relationship between Indo-European and other language families (*The History of Language*, 1900).

In 1901, Sweet was again unsuccessful in an application for a professorship at Oxford, this time the Chair of Comparative Philology that had become vacant on Max Müller's death. Instead, he was offered a Readership in Phonetics, which he accepted and held until his death. To outsiders, including admirers on the Continent, his failure to gain appropriate academic recognition at Oxford seemed incomprehensible.

Those familiar with the local scene knew of a clash of personalities, with faults on both sides. Sweet's own behaviour was at times 'almost suggestive of nascent "persecution-mania"' (Wrenn, above). After his death, his widow told Jespersen that she had tried to persuade the Clarendon Press to publish her husband's autobiography. The Press had refused on the grounds that it contained libellous attacks on persons still living. Jespersen read it in the spring of 1914 and found it a moving *document humain* which threw light on much in Sweet's character. The manuscript has since disappeared. Bernard Shaw, who knew Sweet personally and regarded him as a man of genius, writes in the preface of *Pygmalion* about his 'Satanic contempt for all academic dignitaries and persons in general who thought more of Greek than of phonetics'. The play's Professor Higgins, he says, is not a portrait of Sweet: 'With Higgins's physique and temperament Sweet might have set the Thames on fire.' There are, however, 'touches of Sweet in the play'. In 1984, a society was formed in Oxford to promote the study of the history of linguistic thought, and named the *Henry Sweet Society*. Its membership is international. See index. [BIOGRAPHY, EDUCATION, EUROPE, GRAMMAR, HISTORY, SPEECH]. P.C.

**SWEET TALK** [1920s]. An informal term for cajolery or 'soft soap' (smooth, slick, persuasive talk). *To sweet-talk (people)* is to use cajoling words to persuade them: compare *to soft-soap (someone)*. In Black English Vernacular and West African Pidgin English, *sweet talk* covers everything from flattery to fluent, well-chosen expressions. See TALK. [SPEECH, STYLE]. T.MCA.

**SWIFT, Jonathan** [1667–1745]. Anglo-Irish clergyman and satirist, born in Dublin, and educated at Trinity College, Dublin. After a time as secretary to the diplomat Sir William Temple, he returned to Ireland, where he was ordained in 1694. During a second period in Temple's service, he wrote *The Battle of the Books* (1697), ridiculing the critical debate between the 'ancients' and the 'moderns', and *A Tale of a Tub* (1704), which satirized contemporary religious disputes. Although he received a prebend at St Patrick's Cathedral in Dublin, Swift spent much of his time in the London literary world. The Whig Government's tolerance of dissenters made him a Tory supporter and propagandist. His *Journal to Stella* (1710–13), a sentimental correspondence with Esther Johnson, was written in an infantile language of his own devising. In 1713, he became Dean of St Patrick's. Anger at the Whig treatment of Ireland drove him to write defences of Irish rights, including the *Drapier's Letters* (1724) and *A Modest Proposal*

(1729). His most famous work, *Gulliver's Travels* (1726), satirized both contemporary and universal follies under the guise of a seaman's visits to various imaginary countries, among them *Lilliput*, a land of tiny people, and *Brobdingnag*, a land of giants.

Swift's contributions to English include these names and their adjectives, *Lilliputian* and *Brobdingnagian*. Swift expressed strong opinions in the contemporary debate about good English; his *Proposal for Correcting, Improving and Ascertaining the English Tongue* (1712) assigns the best English to the period from the accession of Elizabeth Tudor to the beginning of the Civil War in 1642, after which came corruption. He particularly disliked fashionable slang words, and practices such as the clipping of words, as when *physiognomy* became 'phi(z)' and *mobile vulgus* ('the fickle crowd') became 'mob': pronouncing the first syllable in a word that has many, and dismissing the rest; such as *phizz*, *hipps*, *pozz*, *rep*, and many more; when we are already overloaded with monosyllables, which are the disgrace of our language' (*Tatler*, 1710). His humorous *Complete Collection of Polite and Ingenious Conversation* (1738) is a valuable record of contemporary speech. Swift's prose style is plain, deceptively simple, and incisive in the command of irony. He also wrote poetry, much of it satirical, and some of it revealing his feelings of disgust with the human body. In his later years, his mind was affected by illness, but the view that he died insane is not now generally held. See index. [BIOGRAPHY, EUROPE, LITERATURE, STYLE].

R.C.

**SWUNG DASH** [1950s]. A name for the tilde (~) when used in dictionaries as a space-saving device: in an entry for *house*, ~*boat* stands for *houseboat* and ~ *style* for *house style*; in an entry for *hero*, ~*es* stands for *heroes*. The device is common in bilingual dictionaries, when it is generally called a tilde, and has been extensively used in Oxford dictionaries. The name *swung dash* first appeared in the introduction to the 4th edition of the *Concise Oxford Dictionary* (1950), the first edition to use it. It has been disappearing from recent editions of Oxford dictionaries, including the 8th edition of the *COD* (1990). See CONCISE OXFORD DICTIONARY, DASH, TILDE. [TECHNOLOGY, WRITING]. R.E.A.

**SYLLABARY**. See ALPHABET, JAPAN.

**SYLLABIC ACRONYM**. See ACRONYM, TELESCOPING.

**SYLLABICATION**, also *syllabification*. The division of a word into syllables: either phono-

logically, in terms of speech sounds, or orthographically, in terms of letters. In orthographic syllabication, there may be correspondences with spoken syllables (*native* into *na-tive*) and/or with elements of morphological and etymological significance (*nat-ive* from Latin *natus* born, and *-ive*). The two kinds of division do not always correspond. Neither syllable boundaries in speech nor morphological/etymological elements are always clear-cut, and the fact that the same word may be pronounced differently in different varieties of English can mean a different number of syllables and different syllable boundaries: *medicine* generally pronounced with two syllables in BrE and three in AmE. Nevertheless, orthographic syllabication is straightforward in many words, as with the division of *postman* into *post-man*, which satisfies phonetic, morphological, and etymological criteria in both BrE and AmE. Such a word as *structure* is more problematic; both BrE and AmE phonology dictate *struc-ture*, while morphology and etymology require *struct-ure*. It has been claimed that when such a conflict occurs, AmE favours the phonetic and BrE the morphological and etymological. Rules for syllabication are given in various style manuals: for BrE, *Hart's Rules for Compositors and Readers at the University Press Oxford* (1893, 39th edition, 1983); for AmE, *The Chicago Manual of Style* (13th edition, 1982). The syllabication of individual words is routinely provided in the headwords of AmE dictionaries, less often in BrE dictionaries, unless they are EFL learners' dictionaries or mother-tongue dictionaries influenced by American practice (with AmE syllabication sometimes shown for BrE). Some dictionaries, such as *Webster's Ninth New Collegiate* and the *Oxford Advanced Learner's*, show only those syllable boundaries where a word can be divided at the end of a line (*gar gan tuan*); others, such as the *American Heritage* and the *Longman Dictionary of Contemporary English*, show all boundaries (*gar gan tu an*), whether or not they can serve as end-of-line divisions. The second policy is probably more frequent than the first. See HYPHEN, SYLLABLE. [REFERENCE, SPEECH, WRITING]. R.F.I.

**SYLLABIC CONSONANT.** See SYLLABLE, and the letter entries L, M, N, R.

**SYLLABLE** [14c: from Anglo-Norman *sillable*, Old French *sillabe*, Latin *syllaba*, Greek *sullabē* taken, brought, or put together]. The smallest unit of speech that normally occurs in isolation, consisting of either a vowel alone (as in the pronunciation of *ah*) or a combination of vowel and consonant(s) (as in the pronunciation of *no*, *on*, and *non*). Some consonants can be pronounced

alone (*mmm*, *zzz*), and may or may not be regarded as syllables, but they normally accompany vowels, which tend to occupy the central position in a syllable (the *syllabic position*), as in *pap*, *pep*, *pip*, *pop*, *pup*. Consonants occupy the margins of the syllable, as with *p* in the examples just given. A vowel in the syllable margin is often referred to as a *glide*, as in *ebb* and *bay*. *Syllabic consonants* occur in the second syllables of words like *middle* and *midden*, replacing a sequence of schwa plus consonant; here, the time needed to pronounce the schwa is transferred to the following consonant: for example, in the pronunciation /'mɪdɫ/ for *middle* and /'mɪdŋ/ for *midden*. As the examples show, a syllabic consonant is marked phonetically with a subscript vertical dash ( ). See L, M, N, R.

The structure and arrangement of syllables vary from language to language: for example, in English a syllable can begin with /tr/ and /tw/ but not /tl/ (*tree* and *twee*, but not \**tlee*), while in another language initial /tl/ may be unexceptionable: for example, among speakers of Tlingit, an aboriginal language of Canada and Alaska. There may also be variations among varieties of the same language: for example, in mainstream English the initial clusters /fr/ and /sl/ occur (*from* and *slow*), but not /vr/ and /zl/, but such pronunciations as 'vrom' and 'zlow' are shibboleths of the West Country dialects of England. However, an unusual syllabic sequence is not necessarily difficult to say: initial /vr/ is easily pronounced in the unique word *vroom* and /zl/ in the Polish loanword *zloty*.

A syllable standing alone is a *monosyllable*, and may be a word in its own right, as with *a*, *an*, *big*, *cat*, *no*, *the*, *yes*. A word containing many syllables is a *polysyllable* or *polysyllabic word*, such as *selectivity* and *utilitarianism*. A *disyllable* or *disyllabic word* has two syllables, a *trisyllable* or *trisyllabic word* has three.

See BREVE, DISYLLABLE, FLESCH READABILITY FORMULA, FOG INDEX, FOOT, HYPHEN, JUNCTURE, MACRON, METRE/METER, MONOSYLLABLE, POLYSYLLABLE, RHYTHM, ROOT WORD, SCANSION, SYN-(A)ERESIS, TONE. [SPEECH]. G.K., T.MCA.

**SYLLABLE-TIMING/TIMED.** See RHYTHM.

**SYLLABLE WORD** [1980s]. An occasional term in word-formation for a word formed from syllables or syllable-like elements drawn from two or more other words: *sial* from the first syllables in *silicon* and *alumin(i)um*. Compare ACRONYM, LETTER WORD, MONOSYLLABLE, SYLLABLE. [WORD]. T.MCA.

**SYLLABOGRAM.** See WRITING.

**SYLLABUS.** See CURRICULUM, LANGUAGE TEACHING.

**SYLLEPSIS.** See ZEUGMA.

**SYLLOGISM** [14c: from Latin *sylogismus*, Greek *sullogismós* a thinking out]. (1) A piece of deductive reasoning, from the general to the particular. (2) A subtle, sophisticated, and misleading argument. (3) In logic, an argument usually containing three categorical statements or *propositions*, the first the *major premiss/premise*, the second the *minor premiss/premise*, the third the *conclusion*, as in: *All men are mortal* (major): *Socrates is a man* (minor): *therefore Socrates is mortal* (conclusion). By applying the minor to the major premiss, a valid conclusion is reached. In such a syllogism, there is also a *major term* (mortal), a *middle term* (men), and a *minor term* (Socrates). The middle term connects the major and minor terms, but is absent in the conclusion. An invalid syllogism may arise for many reasons, such as the inaccurate framing of the major premiss, as in: *All birds fly: ostriches are birds: therefore ostriches fly*. This syllogism is false because ostriches do not fly and yet are birds. The fallacy of the *undistributed middle (term)* occurs when the middle term refers only to some members of the class which it designates, as in: *All birds fly: a bat flies: therefore a bat is a bird*. The syllogism is false because not all flying things are birds. The fallacy of the *missing middle (term)* occurs when no such term appears in the premisses, as in: *All birds fly: a bat is a mammal: therefore a bat does not fly*. This is false because there has been no discussion of what mammals may or may not do. On occasion, word-play can be introduced into a syllogism, as in: *All sovereigns are made of gold: a king is a sovereign: therefore a king is made of gold*. Because of the multiple meaning of *sovereign*, there are four terms in this 'syllogism', not three. See EQUIVOCATION, FALLACY, LOGIC, PREMISS/PREMISE. [LANGUAGE]. T.MCA.

**SYMBOL** [15c: partly through French *symbole* from Latin *symbolum*, Greek *symbolon* ('put together') a mark, token, or sign]. (1) Something that represents something else, such as a drawing of a heart pierced by an arrow (standing for romantic love). Symbols arise from association; in this instance, the heart has traditionally been regarded as the seat of emotion and especially of love (as opposed to the head, the seat of reason), while the arrow indicates being stricken or wounded (especially by Cupid, the Roman god of love). In principle, anything can symbolize anything else, temporarily or permanently, especially something concrete or material used to represent something abstract or non-material, if

an association can be formed between them: for example, a river symbolizing the flow of life; a circle symbolizing completion; a light symbolizing God. A word, phrase, image, character in a story, etc., may, in addition to its immediate nature and purpose, have symbolic status: for example, in Orwell's allegory *Animal Farm* (1945), the dogs symbolize the police in a repressive state. Religions, mythologies, works of literature, etc., have distinctive *symbol systems* that believers, investigators, and readers seek to interpret, develop, and benefit from. In the discussion of art, literature, language, etc., the term *symbolism* may refer to symbolic meaning as a whole, to the use of symbols, or to the disposition to invest things with symbolic meaning. (2) A mark, figure, character, etc., alone or in combination, that serves to designate something else, such as *x* as used in algebra to stand for an unknown number, or the chemical formula *O*, representing oxygen. Compare ARCHETYPE, CHARACTER, ICON, IMAGE, LOGO, SIGN. See LITERACY, NOTATION, SEMIOTICS. [LANGUAGE, WRITING]. T.MCA.

**SYMBOLISM.** See SYMBOL.

**SYNAERESIS**, AmE also **syneresis** [16c: from Latin *synaeresis*, Greek *sunairesis*, a taking together. Stress: 'si-NEH-ri-sis']. In poetics and phonetics, the collapsing of two syllables into one: in verse, *thou see-est* becoming *thou seest* (pronounced like 'thou ceased') and *The Almighty* becoming *Th'Almighty*. This occurs when the first syllable ends and the second begins with a vowel. It is common in everyday usage, as when the last syllables of *familiar* ('fa-mi-li-ar') are merged in 'familyer'. In some words, the merger becomes fixed: for example, although in the past *righteous* had three syllables ('ry-te-ous'), there can now only be two ('ry-chous'). In some kinds of English, a stressed diphthong merges with a following schwa: for example, in varieties of RP sometimes regarded as affected, where *flower pot* sounds like 'flah pot' and *lawn-mower* like 'lawn-myrrh'. [SPEECH, STYLE]. G.K., T.MCA.

**SYNCHRONIC.** See DIACHRONIC AND SYNCHRONIC.

**SYNCOPE** [16c: through Latin from Greek *synkopē* a cutting off. Stress: 'SING-ko-py']. A traditional term for contraction in the middle of a word through the loss of a sound or letter, commonly marked (especially in verse) by an apostrophe: *ever* reduced to *e'er*, *even* to *e'en*, *taken* to *ta'en*. The process or act of making such a contraction is *syncope*. See ELISION, STRINE. [SPEECH, STYLE]. T.MCA.

**SYNECDOCHE** [14c: through Latin from Greek *sunekdokhē* gathering together. Stress: 'sin-EK-doh-ky']. In rhetoric, a figure of speech concerned with parts and wholes: (1) Where the part represents the whole: 'a hundred *head* of cattle' (each animal identified by head alone); 'All *hands* on deck' (the members of a ship's crew represented by their hands alone). (2) Where the whole represents the part: '*England* lost to *Australia* in the last Test Match' (the countries standing for the teams representing them and taking a plural verb).

Synecdoche is common in the use of geopolitical terms, often leading to confusion, ambiguity, and resentment: (1) When *Russia* and *Russian* were formerly used for *Soviet Union* and *Soviet*, the names of a part were used for a whole. In the process, offence was often given to such non-Russians as the Armenians, Estonians, and Georgians. (2) The names *America* and *American* have been transferred from a whole (the Americas) to a part (the United States of America). On occasion, Canadians and Latin Americans may be unsure about what is intended when these names are used, especially by US citizens, and may resent any limitation or centrality implied. (3) In the usages *Anglo-*, *England*, and *English*, a part (England) is often used for a whole (the island of Britain; the United Kingdom of Great Britain and Northern Ireland), often distressing the Scots, Welsh, and Northern Irish. Such usages tend to reflect historical patterns of power. See COLLECTIVE NOUN, METONYMY. [NAME, STYLE]. T.MCA.

**SYNONYM** [15c: from Latin *synonymum*, Greek *sunōnumon*, neuter of *sunōnumos* having the same name, from *sun* together and *ónoma/ónuma* name]. A word that means the same as another. Linguists and many writers agree that there is 'no such thing as a synonym', though the reasons for their opinions may differ. Linguists maintain that no two words have the same distribution, frequency, connotation, or language level; the reasons given by others are often vague, but in essence focus on differences in connotation, or reactions evoked in the reader or hearer by alternative words for the same thing. It is therefore perhaps best to say that a synonym is a word that shares the same denotation with another word. Notwithstanding disputes over the validity of the concept, there is a substantial body of published information containing synonym lists and studies, and it has become standard practice among dictionary publishers to include some of that information in general dictionaries.

**Synonyms in dictionaries.** Many present-day dictionaries, particularly those of 'college size'

in the US, include as an attraction information about synonyms in either or both of two different forms: a simple list of synonyms may be shown at the end of a given entry, usually identified with one or more specific definitions; in some dictionaries, longer treatments called *synonymies* or *synonym studies* offer discussions in which various nuances of application are discriminated, often with illustrative examples. Thus, *The Random House College Dictionary* contains synonym studies at *male* (for discriminations between *male* and *masculine*) and at *persuade* (for a discussion of *persuade*, *induce*, and *convince*). This entry also has a short list of synonyms: *urge*, *influence*, *entice*, *impel*. A more subtle use of synonyms can be seen in some dictionaries, in which many definitions consist largely or entirely of one-word equivalents for the headwords. In many cases, however, lexicographers resort to the use of a string of synonyms in place of an explanatory form of defining. Dubbed 'scatter-gun defining' by Clarence L. Barnhart, it was widely used in *Webster's Third New International Dictionary* (1961), as in the definitions for *lurking*: 1 *CONCEALED*, *LATENT* . . . 2 *PERSISTENT*, *LINGERING*. It is more often used to supplement an explanatory definition, as in *Webster's Third*: for example, *luxuriant* 1 (a) yielding or capable of yielding abundance: *FRUITFUL*, *PRODUCTIVE* . . . (b) characterized by abundant growth: *LUSH*, *FLOURISHING*. The synonyms were capitalized to indicate that they were defined elsewhere in the book.

**The synonym dictionary.** Scores of books, ranging in length from a few thousand words to almost a million, are available for those who seek an alternative word or one that cannot be readily brought to mind but is close in meaning to one thought of. Such sources are useful as a 'promptory': a means for reminding users of words that have slipped their minds. Selecting an unfamiliar word from a synonym list, however, may lead to an inappropriate choice, either because the word chosen is less formal or more formal, less technical or more technical, or less common or more common than the other words in the text. Generally, synonym books are arranged in alphabetical or thematic order. In alphabetical order, a given entry may be followed by several numbered listings of synonyms, corresponding, more or less, to the several sense discriminations of the headword and to its different parts of speech. For example, the entry for *obedient* might have one set of synonyms for one sense (such as 'compliant, acquiescent') and another for another sense (such as 'servile, obsequious'); *object* is likely to have several sets of synonyms for the noun and several for the

verb. Reflecting the view that there are no 'true' synonyms in the language, the choices listed vary considerably in length and precision: shorter books may list alternatives that hew more closely to the meaning of the headword; longer books may list such words first, then (after a break of some sort, like a semicolon) go on to list words and phrases that are farther afield in meaning, on the assumption that the user, who might have only a vague notion of the word being sought, should be offered as wide a selection as possible. Most such books offer no guidance as to the syntactic or idiomatic usage of the synonyms listed and only sparse information concerning their language level (whether they are formal, slang, taboo, technical, etc.). A few give illustrative examples for each listing, showing the headword in a context in which the listed synonyms are more or less substitutable. Alphabetically arranged synonym dictionaries often tend to be repetitious, a typical example being the entries for *ailment, malady, illness, sickness, complaint, disease*, etc., each of which lists all the others. Because of the structure of the book, a certain amount of repetition is unavoidable, but it does tend to make such books appear to contain far more than they do.

**The thesaurus.** The term *thesaurus* is commonly associated with the *Thesaurus of English Words & Phrases* (1852) by Dr Peter Mark Roget (1779-1869), in which the author created a meta-physical structure of the universe and listed words in categories within each part of the system. Modern editions of Roget, which retain the original hierarchical system, exhibit the expansion needed to allow for the great number of words added during the past century or so, particularly in the sciences and technology. It is doubtful that many users of *Roget's Thesaurus* pay much attention to its structure: most resort to the index to find the word for which they seek alternatives, either synonyms or antonyms. While a virtue of the arrangement is that a given word is listed only once for each of its senses, the index is as long as the book. The large number of editions in which versions of the *Thesaurus* are available attests to its continued popularity. See ANTONYM, BINOMIAL NOMENCLATURE, BISOCIATION, DEFINITION, -ONYM, ROGET'S THESAURUS, SEMANTICS, SYNONYMY, THESAURUS. [LANGUAGE, WORD]. L.U.

**SYNONYMY** [17c: from Latin *synonymia*, Greek *sunōnumia* ('name-togetherness') possession of the same name or meaning, from *sun* together, *ónoma/ónuma* a name]. (1) Equivalence in meaning, as with *enormous* and *immense*, both having the general sense 'very

big'. Such equivalence may be precise, as is generally the case with these adjectives, or may be relative, as with *big* and *large*: the phrases *a big house* and *a large house* may communicate the same idea of size, but in *That was a big help* and *He was in large part to blame for what happened*, the two words are not interchangeable. (2) The study of words of similar meaning. (3) In biology, an annotated list of the scientific names for a taxonomic group. (4) A set, list, system, or book of synonyms. There have been many such works since the 18c, including books that seek through short essays to make discriminations among the members of sets of words. One of the earliest of these in English was Hester Thrale Piozzi's *The British Synonymy* (1794), which set the style for later works of the same kind: see PIOZZI. George Crabb brought out in 1816 a detailed work entitled *English Synonyms Explained in Alphabetic Order*, containing etymologies, citations, and discursive personal comment, and in 1851 Elizabeth Jane Whately published *A Selection of English Synonyms*, arguing that words in need of discrimination are not synonyms as such but 'pseudo-synonyms'. Since the mid-19c, alphabetically ordered synonymies are usually called dictionaries, and include Richard Soule's *A Dictionary of English Synonyms* (1871, revised by A. D. Sheffield, 1937: lists only), *Webster's New Dictionary of Synonyms* (ed. Rose Egan, 1968: largely with discriminating statements and described on the cover as a 'thesaurus'), and the *Longman Synonym Dictionary* (ed. Laurence Urdang, 1979: without discriminations but with usage labels). See SYNONYM, THESAURUS. [REFERENCE, WORD].

T.M.CA.

**SYNOPSIS** [17c: through Latin from Greek *synopsis* an overview, a shared view. The *Synoptic Gospels* of the New Testament (Matthew, Mark, and Luke) are so called because they make similar statements about the life of Christ]. (1) A set of headings or statements that summarizes a text, formerly often placed at the beginning of chapters in books: 'A conference betwixt an angler, a falconer, and a hunter; each commending his recreation' (the synoptic title of the first chapter of Izaak Walton's *The Compleat Angler* 1653). (2) A brief, condensed list or statement of the elements of a topic; the contents page of a book or periodical is in effect a synopsis of what it contains. (3) A summary of the plot of a novel, play, motion picture, or the like. See ABRIDG(E)MENT. Compare ABSTRACT, LIST, SUMMARY, TITLE. [WRITING]. T.M.CA.

**SYNTAGMATIC.** See PARADIGMATIC AND SYNTAGMATIC.

**SYNTAX** [16c: from Latin *syntaxis*, Greek *sun-taxis* (things) drawn up together, arranged in

order]. A term in general use and in linguistics for the study of the ways in which words combine into such units as phrase, clause, and sentence. The sequences that result from the combinations are referred to in linguistics as *syntactic structures*. The ways in which components of words are combined into words are studied in *morphology*, and syntax and morphology together are generally regarded as the major constituents of *grammar*, although in one of its uses, *grammar* is strictly synonymous with *syntax* and excludes morphology. In models of language description that are divided into levels of analysis or components, the syntactic level or component is contrasted with the phonological and semantic levels or components. Syntactic descriptions do not usually go beyond the level of the sentence, though they may deal with relationships between sentences such as are signalled by a pronoun (*it, them*) or a conjunct (*therefore*). See COMPONENT, LEVEL OF LANGUAGE, LINGUISTIC TYPOLOGY, MORPHOLOGY. [GRAMMAR]. S.G.

**SYNTHETIC** [17c: from Greek *sunthetikós* put together, combined]. A term in linguistics for a language in which words tend to be composed out of two or more grammatical units (morphemes), as in Latin *amabamus* (we loved), which combines 'love', *past, first person, plural*. English

has such synthetic words as *distrustful* (dis-trust-ful), *unfindable* (un-find-able), and *repainted* (re-paint-ed). The notion of synthesis applies to the number of morphemes involved rather than the method by which they are combined. When many are combined, a language is known as *polysynthetic*, for example Siberian Yupik, with such words-cum-sentences as *angyaghllangyugtuq* (*angya-ghlla-ng-yug-tuq*, boat-argumentative-acquire-desiderative-third singular, He wants to get a big boat). See LINGUISTIC TYPOLOGY. [LANGUAGE]. J.M.A.

**SYNTHETIC SCOTS**. See LALLANS, SCOTS.

**SYSTEM** [17c: from Late Latin *systema*, Greek *sústēma* ('a standing together') a whole formed of various parts]. (1) An orderly complex of elements and patterns constituting a functioning whole: *a system of currency; a transport system; a system of philosophy; a language system*. If approaches or people are *systematic*, they proceed in an orderly way, step by step; if a theory or an approach is *systemic*, it arises from or relates to a particular system or to certain assumptions about systems: *systemic grammar*. (2) In computing, a working combination of hardware, software, and other devices. Compare NETWORK, STRUCTURE. See HALLIDAY. [LANGUAGE, TECHNOLOGY]. T.MCA.

**SYSTEMIC GRAMMAR/LINGUISTICS**. See HALLIDAY, SYSTEM.

# T

**T, t** [Called 'tee']. The 20th letter of the Roman alphabet as used for English. It originated as the Phoenician symbol *taw*, which the Greeks adopted and adapted as *tau* (Τ), which was in turn adopted by the Etruscans and then the Romans as *T*.

**Sound value.** In English, the letter *t* represents a voiceless alveolar plosive stop, produced by the release of breath blocked by the tongue being placed against the roof of the mouth behind the front teeth. The aspiration of /t/ is slight after *s*, the *t* in *stub* being less forceful than in *tub* and rather resembling /d/. Before another stop, or *m*, or in syllable-final position, *t* may occasion no audible release of breath, as in *hatpin*, *atmosphere*, *Wait!* Before syllabic *l*, *n*, and (in rhotic accents) *r* the breath may be released nasally (*bitten*) or past the sides of the tongue (*little*) or its tip (*falter*).

**Glottalized T.** In some accents, especially in Britain, the tongue may not touch the roof of the mouth, the *t* being spoken as a glottal stop, as for example in London and Glasgow working-class pronunciations of *a bit of butter*: see GLOTTAL STOP.

**Voiced T.** The letter *t* may be voiced almost as /d/ following a stressed vowel and before a second vowel. This pronunciation is typical of AmE and AusE, making virtual homophones of such pairs as *atom/Adam*, *latter/ladder*, *waiting/wading*, *writing/riding*. It is also heard sporadically in BrE, especially in certain rapid colloquial expressions, such as *I'd better go*, *get out*, and *not a hope*.

**Palatalized T.** (1) When *t* is palatalized before *u*, it represents the affricate otherwise spelt *ch* as in *church*: before *-ure* (*capture*, *culture*, *fracture*, *legislature*, *picture*, *temperature*), before *-ual* (*actual*, *intellectual*, *perpetual*), and in some other environments (*century*, *fortune*, *statue*, *virtue*).

Compare palatalized *d*, *s*, *z* in *verdure*, *closure*, *seizure*. (2) This affricate value also occurs before *i* in the ending *-stion* (*question*, *digestion*, *combustion*) and in *Christian*, and before *e* in *righteous*. However, in precise, conservative speech, the value of *t* in such words may be /tʃ/ followed by a *y*-sound rather than /tʃ/. (3) Elsewhere, when followed by unstressed *i* and another vowel, *t* is commonly palatalized to produce the voiceless palato-alveolar fricative *sh*-sound. This value of *ti* is found in such words as *inertia*, *patient*, *ratio*, *nasturtium*, and the proper names *Domitian*, *Horatio*, *Titian*, but particularly in the endings *-tial* (*palatial*, *essential*, *initial*, *partial*, *potential*, *presidential*, *substantial*), *-tious* (*conscientious*, *superstitious*, *vexatious*), and the hundreds of *-tion* words (*association*, *completion*, *discretion*, *ignition*, *motion*, *solution*). Some of these also have a preceding consonant: *action*, *infarction*, *mention*, *adoption*. In words ending in *-tiate*, etc., the *i* usually remains syllabic: *negotiate*, *substantiate*. (4) Uniquely, *equation* may be heard with *zh*, rhyming with *invasion*. Occasionally, some of these words are pronounced carefully with non-palatalized *t* heard as /s/: *inertia*, *negotiate*.

**Double T.** (1) Syllables containing a stressed short vowel double a final *t* before a suffix that begins with a vowel: *mat/matted/matting*, *bet/betting*, *fit/fitted/fitter/fittest*, *rot/rotted/rotting*, *cut/cutting/cutter*, *regret/regretted/regretting* (contrast *wait/waited/waiting*, *visit/visited/visiting*). *Format* commonly has *formatted/formatting*, while *benefit* is found with *benefited/benefiting* and, less commonly, *benefitted/benefitting*. (2) Disyllables commonly have medial *tt* following a stressed short vowel: *batter*, *better*, *bitten*, *bottle*, *butter*. (3) *T* is doubled when the Latin prefix *ad-* is assimilated to a stem beginning with *t*: *attain*, *attend*, *attract*. (4) Some cognate words vary

## THE CAPITAL LETTER

EARLY FORMS			CURRENT FORMS		
Phoenician	Greek	Etruscan	Roman (Latin)	roman	italic
𐤕	Τ	Ɑ	T	T	T

## THE SMALL LETTER

EARLY FORMS			CURRENT FORMS	
Roman cursive	Roman uncial	Carolingian minuscule	roman	italic
Ɑ	Ɑ	Ɑ	t	t

in their doubling: *Britain/Brittany, catty/caterwaul, letter/literate, matter/material*. (5) Few words other than proper names end in *tt*: *watt* originated in the proper name *Watt*; *matt, nett* are alternatives for *mat* (not shiny); *net* (not gross); *mitt* is a clipped form of *mitting*; *putt* originated as a Scottish variant of *put*; *butt* (noun) may have retained double *t* so as to be distinguished from *but*.

**Inflectional T.** (1) Regular verbs form their past tense with *-(e)d*, but many irregular verbs use *t*: *deal/dealt, feel/felt*. (2) Some have alternative forms, especially in BrE (*burnt/burned, learnt/learned, spoilt/spoiled*), the *t*-versions often being favoured as adjectival forms (*burnt papers, badly learnt lines, spoilt food*). (3) Some reduce a doubled consonant before *t*: *smelt/smelled, spelt/spelled, spilt/spilled*, and formerly also *past/passed*. (4) Some shorten their stem vowel (but not its spelling) before *t*: *dreamt/dreamed, leant/leaned, leapt/leaped*. (5) Many shorten sound and spelling before *t*: *cleave/cleft, creep/crept, feel/felt, keep/kept, kneel/knelt, leave/left, lose/lost, shoot/shot, sleep/slept, sweep/swept, weep/wept*. (6) Some substitute *-t* for final *-d* in their root: *bend/bent, build/built, gild/gilt* (also *gilded*), *gird/girt* (also *girded*), *lend/lent, rend/rent, send/sent, spend/spent*. (7) Some make more substantial changes to the vowel and/or final consonant of the stem in adding *-ought* or *-ought*: *besech/besought, bring/brought, buy/bought, catch/caught, seek/sought, teach/taught, think/thought*. (8) Some have stems with final *-t* which is preserved without inflection in all tenses: *burst, cast, cost, cut, hit, hurt, let, put, quit, set, shut, slit, split, thrust*. (9) Some change their stem-vowel, but not final *t*: *fight/fought, light/lit, meet/met*.

**Epenthetic T.** (1) The letter *t* and sound /t/ have sometimes intruded in words originally without them: *peasant, tapestry* (from French *paysan, tapisserie*). (2) In *against, amidst, amongst, betwixt, whilst*, *t* has arisen parasitically, perhaps by analogy with the superlative inflection of adjectives: see PARASITIC.

**Silent T.** (1) In word- and syllable-final position in loans from French, both early and recent: *ballet, beret, bouquet, buffet, cabaret, chalet, crochet, croquet, depot, mortgage, parquet, pot-pourri, trait, valet*. (2) Elided after *s* following a stressed vowel: before /l/, especially in the terminal syllable *-le*, in *castle, nestle, pestle, trestle, wrestle, bristle, epistle, gristle, mistletoe, thistle, whistle, apostle, jostle, throstle, bustle, hustle, rustle*; before /n/, especially the terminal element *-en*, in *chasten, hasten, fasten, christen, glisten, listen, moisten*; and in isolated words such as *Christmas, postman, waistcoat*. (3) Elided

after *f* in *soften* and often in *often*. (4) In *boat-swain*, the elision is reflected in such alternative spellings as *bo's'n, bosun*. (5) The historical function of *t* before *ch*, typically after short vowels as in *match, fetch, pitch, botch, hutch*, is the equivalent of doubling a simple letter, but is in present-day English redundant. The redundancy is particularly apparent in *ditch/rich, hutch/much*.

**Variations.** Some variation occurs between *t* and other letters in related words, as between *benefit/beneficial, space/spatial, extent/extend/extension* (contrast *retention*).

**TH.** This digraph is regularly used to represent a common, characteristically English phoneme, the dental fricative, both voiced /ð/ as in *this* and voiceless /θ/ as in *thin*. Sometimes related forms vary: voiceless *smith*, but voiced *smithy*. In Old English, the sounds were represented interchangeably by the runic letter *thorn* (þ) and *eth* (ð), a modification of the letter *d*. A relic of *thorn* occurs in the form *Ye* for *the* in 'old' inn and shop signs, such as *Ye Olde English Tea Shoppe*, the *y* being a corruption of handwritten þ. English borrowed the digraph *th* from Latin, where it served to transliterate Greek *theta* (θ); *th* superseded other symbols for the dental fricative following the advent of printing. See ETH, THORN. In Modern English *th* occurs in common words of Old English origin and in many, usually technical, words of Greek origin. The *h* is ignored in the pronunciation of a small number of words: *thyme, Thomas*, in BrE but not necessarily in AmE in *Thames* (for example, the *Thames River* in Connecticut has a spelling pronunciation), and usually in *Anthony, Esther*. *Th* may be silent in *asthma, isthmus, clothes*. *Th* in *north, south* is commonly omitted in nautical language: *nor' nor' east, sou'wester*. The form *good-bye* also arose from the omission of *th*, being a clipping of *God be with ye*.

**Voiced TH.** (1) Initially in many grammatical words: *than, that, the, thee, their, them, then, thence, there, these, they, thine, this, thou, though, thus, thy*, but contrast *through*, in which the following *r* may have prevented the voicing of the *th*. (2) Medially: *bother, brother, father, further, gather, hither, leather, mother, northern, rather, smithy, southern, weather, wether, whether, whither, wither, withy, worthy*, but contrast *brothel* and the derived forms *healthy, wealthy*. (3) Some nouns voice final *th* in the plural (*baths, mouths, truths, youths*) but not in the corresponding inflected BrE verb *baths*. (4) A following final *e* indicates a voiced *th*, a long preceding vowel, and usually a verb form (contrast *breath/breathe*): *bathe, clothe, lathe, lithe, loathe, seethe, sheathe, soothe, swathe, teethe*,

wreathe, writhe, but to mouth, to smooth lack final e.

**Voiceless TH.** (1) Initially, in lexical words: *thank, thatch, theft, thew, thick, thimble, thin, think, third, thirst, thistle, thong, thorn, thorough, thought, thousand, thrash, thread, threat, three, thresh, thrift, thrill, throat, throb, throes, throng, throttle, throw, thrush, thrust, thud, thumb, thump, thunder, thwack, thwart.* (2) Finally, in both lexical and grammatical words: *bath, birth, both, breath, broth, cloth, dearth, death, earth, filth, forth, froth, girth, health, hearth, heath, loath, mirth, month, moth, mouth, north, oath, path, smith, south, stealth, tooth, truth, wealth, worth, wrath, youth,* but contrast voiced *smooth* and *booth* with either pronunciation (but historically voiced). *Th* is voiced in the derivatives *mouths, northerly, southerly.* The word *with* is variable. (3) In Greek-derived words: *antithesis, epithalamium, hyacinth, pathos, theatre/theater, theme, theory, Theseus,* but not in *rhythm.*

**Morphological TH.** The ending *-th* was formerly a present-tense verb inflection (for example, *maketh* for Modern English *makes*), and occurs as the ordinal ending for numerals (*fourth, fifth, twentieth, hundredth, thousandth*, but with written assimilation of preceding *t* in *eighth, from eight*). It creates abstract nouns from several common adjectives often suggesting measurement: *breadth, depth, length, strength, warmth, width* (but only *t* after *gh* in *drought, height, sight*). See ALPHABET, LETTER!, SPELLING. [WRITING].

C.U., T.MCA., E.W.

**TABLOID** [1900s: from *tabl(et)* and *-oid*]. A newspaper with pages half the size of broadsheet and usually five columns wide. The term was coined in the pharmaceutical industry, to describe a concentrated form of pill; the journalistic sense was used by Lord Northcliffe, in the UK, to describe the new, half-size *Daily Mirror* (which he re-launched in 1904), to imply that it was a concentrate of good things for its readers (and much better than the old *Mirror*, launched as a 'paper written by gentlewomen for gentlewomen'). The term currently means a newspaper of this size, written in a popular and sensational style, sometimes crudely infringing on personal privacy. The tabloids now occupy 60% of the British newspaper market. In addition to *The Daily Mirror* (circulation over 3m), the category includes *The Sun* (circulation 4m), *The News of the World* (circulation 5m), and *The People* (circulation nearly 3m). The reputation of the tabloids has, however, declined. Even among the tabloids the term is one of condemnation: 'He went public in a sleazy tabloid' (*Daily*

*Mirror*, 9 Feb. 1989). The term *tabloid journalism*, first recorded in 1901, was originally complimentary, referring to a concentrated and compressed news-style, but has come to denote journalism which is unashamedly sensationalist and profits by appealing to the lowest instincts. The term *tabloidese* is used, often pejoratively, for the style used in tabloids or any similar style. Typical tabloid coverage has been criticized as mainly concerned with 'skin' or 'tit and bum' (especially through scandalous revelations and revealing photographs, as for example the so-called 'page 3 girl' in Britain). See JOURNALISM, NEWSPAPER, QUALITY PRESS. [MEDIA, STYLE]. G.H.

**TABOO** [1770s: from Malayo-Polynesian, both Fijian *tabu* and Tongan *tapu*, consecrated or limited to a special use, and therefore prohibited]. In language terms, something taboo is not to be mentioned, because it is ineffably holy or unspeakably vulgar. The taboo is enforced by religious or social convention rather than by statute: it may be illegal to reveal official secrets, but it is not taboo to do so. English Puritanism caused such words as *God* to be banned on the stage during the early 17c and references to *Hell* have also often been removed. It is not easy to distinguish between taboo matters and taboo words. Sex and excrement are, or have been, taboo topics in English and other languages, and many of the words relating to these topics have been stigmatized as *bad language, foul language, or four-letter words*. They have been in effect banned in polite conversation, in writing, and especially in print; though occasionally recorded in earlier dictionaries, they were not entered in such works c.1760-1960. When taboo subjects must be broached, the techniques for doing so include:

**Truncation.** Taboo words can be amended both in writing (by a dash as in *G-d* and asterisks as in *f\*\*k*) and in speech (by using the letter *p*, usually spelt *pee*, for *piss*). The Biblical Third Commandment enjoins believers not to take God's name in vain; in Orthodox Judaism, this has come to be interpreted so strictly as to preclude writing out *God* in full; the resulting form *G-d* exhibits a process of abbreviation like that through which *Mister* became *Mr*.

**Adaptation.** Because of a combination of the sense of taboo and the need for expletives, taboo words when used as exclamations have been adapted and softened so as to be less direct, sacrilegious, and offensive: (*by*) *God!* becomes (*by*) *Gosh!* and (*by*) *Golly!*, *Jesus!* is shortened to *Gee!* and adapted to *Jeepers!* and *Gee-whiz!*, *Christ!* becomes *Crikey!*, *Crimey!*, and *Cripes!*, and *Jesus Christ!* becomes *Jeepers Creepers!* and

*Jesum Crow!*, *Damn (it)!* becomes *Darn (it)!*, *Damnation!* becomes *Tarnation!*, *Hell!* becomes *Heck!*, and *Fucking hell!* becomes *Flipping heck!* See MINCED OATH.

**Substitution.** Taboo expressions can be replaced with other words through euphemism, as with *make love* for 'have sex', and through the use of elevated technical terms, such as *coitus/coition* and *sexual intercourse*. In dealing with smuttier topics, users of English often find that there is no neutral phraseology available. Furthermore, the substitute for a taboo word can itself become socially awkward if its referent remains taboo: *intercourse* is avoided by some people in any of its other uses because of its sexual use. The notion of taboo has come to be extended, at least for humorous and facetious purposes, to refer obliquely to any topic likely to be controversial, cause envy, etc. Politics and religion may be taboo subjects in certain places; death, money, and details of one's personal life in others. The interaction of taboo and euphemism occurs in late 20c combinations of a capital letter such as *L* with *-word*, as in the *L-word* (liberal) and the *N-word* (nigger), on the analogy of the *F-word* (fuck). Such phrases use only 'the initial letter of a word under real or pretended taboo' (J. & A. Algeo, *American Speech*, Winter, 1988). See ELLIPSIS, NAME (NAME TABOOS), SWEARING, VICTORIAN. [STYLE]. R.F.I.

**TAG** [20c in this sense]. A term in linguistics for several types of structure in which one or more words are tagged on to a clause or sentence, including: (1) *Continuation tags*. Words and phrases used as shorthand at the end of a list: *etc.*; *and so on*; *and so forth*. (2) *Questioning and commenting tags*. Questions, questioning words, and commenting words that can be added to statements are common in formal conversation: 'She's pretty, *don't you think?*'; 'It's more acceptable in the north, *wouldn't you say?*'; 'He's disappeared, *do you mean?*'; 'You'll pay me back tomorrow, *OK?*'; 'It's difficult, *I suppose*'; 'You know, it can't be easy for her.' Such forms can usually be rearranged as standard questions and statements: *Don't you think she's pretty?*; *I suppose (that) it's difficult*. (3) *Focusing and emphasizing tags*. These usually restate the subject and sometimes the verb: 'She's amazing, *(is) my grandmother*'; 'My grandmother, she's amazing'; 'She's amazing, *she is*'; 'She comes here often, *does Joan*' (a usage common in the North of England). (4) *Additions, alternatives, and responses*. These characteristically consist of one or two introductory words plus auxiliary and subject (or subject and auxiliary): 'She refused, *and so did I*'; 'She wouldn't agree, *nor would my grandfather*'; 'I've been there before, *but she*

*hasn't*'; 'You surely wouldn't tell them. *Or will you?*'; 'So she's been there before?'—'Yes, *she has*.' Some grammarians also classify as tags the subject + verb (or verb + subject) in reported speech: "'That's amazing," *he said*.' The commonest use of the term is, however, in *question tag* and *tag question*. See LATIN TAG, NEW ORLEANS, QUESTION TAG, TAG QUESTION. [GRAMMAR]. S.C.

**TAGALOG** [Stress: 'ta-GA-log']. (1) A Malayan people of the island of Luzon, the largest ethnic group of the Philippines and the majority population of Manila, the capital. Most are farmers, but the importance of Manila has given urban Tagalogs a leading position in manufacturing, business, and the professions. (2) A Malayo-Polynesian language of the Philippines, one of the major indigenous languages, the mother tongue of some 10m Filipinos, and the basis of the official and national language referred to as both *Filipino* or *Pilipino*. See BORROWING, FILIPINO, PHILIPPINES, TAGLISH. [ASIA, LANGUAGE, NAME]. T.MCA.

**TAGLISH** [1960s: a blend of *Tagalog* and *English*]. Also **Mix-Mix**. A half-serious name given to a mixture of Tagalog and English, as used in the Philippines and particularly in Manila and the island of Luzon: 'Pwede kayong magbayad three months after arrival. Pwede pang i-extend up to two years ang payment. At sa pinakamabang interest rate pa' (quoted by Lily V. Kapili, *English Today* 16, Oct. 1988) [Translation: 'It is possible to pay three months after arrival. It is possible to extend payment up to two years. And the interest rate is the lowest.' *Pwede* is from Spanish *puede* it is possible]. The Philippine continuum between full English and full Tagalog is covered by the terms *English*, *Taglish*, *Engalog*, *Tagalog*. See -GLISH AND -LISH, PHILIPPINE ENGLISH, TAGALOG. [ASIA, VARIETY]. T.MCA.

**TAG QUESTION.** A grammatical term for a statement with a *question tag* added at the end, turning it into an actual or apparent question: *They're coming here next week, aren't they? You really shouldn't do that, should you?* See NEGATION, QUESTION TAG, TAG. [GRAMMAR]. S.C.

**TAILED N.** See ENG.

**TAIWAN.** See CHINA, EAST ASIAN ENGLISH.

**TAKI-TAKI.** See SRANAN.

**TALK** [12c: cognate with *tale*]. (1) Speech or conversation, especially of an easy, informal kind: *a fireside talk/chat*. (2) An informal

account, speech, or lecture: *a short talk on local radio*. (3) A conference or negotiating session: *peace talks*. (4) Rumour, gossip: *There's been talk about big changes here; It's the talk of the town*. (5) Empty speech: *a lot of idle talk*. (6) A way of talking or speaking, usually embracing what one talks about: *teacher talk* the usage of teachers in the classroom; *chalk and talk* an informal term for teaching methods that do not use complex technology; *small talk* trivial news and gossip. The term is informal in such forms as *country talk* and *local talk*, and pejorative in such forms as *nigger talk*. (7) A variety or dialect, especially if not taken too seriously or low in prestige: *Bungo Talk* 'country bumpkin' speech in Jamaica; *Creole Talk of Trinidad and Tobago* (title of a book, 1980): see CARIBBEAN DICTIONARIES. This sense has long been associated with English-based pidgins and creoles; the word has been adopted and adapted, usually in the written form *tok*, in various names, such as *Kamtok* in Cameroon and *Tok Pisin* in Papua New Guinea. It may also occur in such pidgin and creole usages as *tumantok* ('two-man talk') a tête-à-tête. (8) Sound that approximates to speech, whether produced by an animal, an infant, or a machine: *baby talk*. Compare -ESE, LINGO, -SPEAK. See ABORIGINAL ENGLISH, AKU (TALK), BABY TALK, DOUBLE TALK, FLYTAAL, FOREIGNER TALK, KAMTOK, RASTA TALK, SRANAN/TAKI-TAKI, SWEET TALK, TALKING BOOK, TALKING HEAD, TEACHER TALK, TECHNOBABBLE, TOK PISIN. [LANGUAGE, NAME, SPEECH, STYLE]. T.MCA.

**TALKIE.** See TALKING PICTURE.

**TALKING BOOK** [1930s]. A phonograph record or tape recording of the entire text of, or excerpts from, a book, magazine, or other publication, made especially for the blind. See TALK. Compare AUDIOBOOK. [MEDIA]. T.MCA.

**TALKING HEAD** [1960s]. (1) A slang expression for a close-up television picture of someone talking, usually for some time, especially in a talk show or a documentary. (2) By extension someone whose talk is empty and pretentious. See TALK. [MEDIA]. T.MCA.

**TALKING PICTURE** [1900s]. Informal short form *talkie*. Especially formerly, a motion picture with synchronized sound. See MOTION PICTURE. [MEDIA]. T.MCA.

**TAMIL.** A Dravidian language of south India, comparable to Sanskrit in its antiquity and textual traditions. It is written in a derivative of the southern Brahmi script (c.250 BC) and its literary and grammatical works date from the same period. Tamil is one of the 15 major languages

of India and the state language of Tamilnadu. Its speakers number some 50m and constitute a significant minority in Malaysia, Singapore, and Sri Lanka, all of which recognize it as one of their official languages. The Tamil community distinguishes between Brahmin and non-Brahmin dialects on the one hand, and a High variety (*centamil*) and Low variety (*kontuntamil*) on the other. Modern standard Tamil is based on the High non-Brahmin dialect of central Tamilnadu. Speakers are loyal to their heritage, and do not tolerate borrowing from either Sanskrit or English for modernization, though mixing with English is fairly common in colloquial High Tamil. See BORROWING, DRAVIDIAN ENGLISH, FIJI, INDIA, INDIAN ENGLISH<sup>1</sup>, INDIAN LANGUAGES, MALAYALAM, MALAYSIA, SINGAPORE, SINHALA, SOUTH AFRICA, SRI LANKA. [ASIA, LANGUAGE]. Y.K.

**TANZANIA** [20c: a blend of *Tanganyika* and *Zanzibar*, with *-ia*. Usual stress: 'Tan-zan-EE-a']. Official title: English *United Republic of Tanzania*, Swahili *Jamhuri ya Mwangano wa Tanzania*. A country of East Africa and member of the Commonwealth. Capital: Dodoma. Currency: the shilling or shilling (100 senti or cents). Population: 24.8m (1988), 36.8m (projection for 2000). Ethnicity: 97% black African (Chaga, Luo, Makonde, Masai, Nyamwezi, etc.), 2% Arab, 1% other. Religions: 40% Christian, 35% Muslim, 25% traditional. Education: primary 65%, secondary 3%, tertiary below 1%, literacy 85%. The Germans colonized Tanganyika from the late 19c until in 1920 it became a League of Nations mandate and later a United Nations trust territory administered by the British. Zanzibar was a British protectorate from 1890 to 1963. The territories united on independence in 1964. English was a joint official language with Swahili until 1967. This political empowerment of Swahili improved its prestige in relation to English and other indigenous languages. English continues to be important for higher education, media, and international relations, while Swahili has taken over roles in pre-college-level education and internal government and business. A number of loans associated with administration, politics, etc., have passed from English into Swahili, such as *parliament*, *president*, *capitalism*. The *Daily News* (established 1930) is the major English-language newspaper. Creative writing in English is represented by writers such as novelist Peter Palangyo (b.1939).

Tanzanian English shares many features with Zambian English: see ZAMBIA. Devoicing of word-final /b, v/ is common ('laf' for *love*), and /v/ may alternate ('lavin' for *laughing*). Mass or singular nouns may be construed as plurals

(behaviours, breads). Borrowings from indigenous languages are frequent, and may become standardized as marking the Tanzanian variety: *sufuria* cook-pot, *pole* (an expression of sympathy), *foforu car* fancy car. Some typical local usages are: *Thank you for your postcard extended to us recently*; *We were happy to learn (hear) from you*; *Please inquire if she had the mails* (got the letters); *I decided to mail* (write) *you*. Code-mixing, particularly Swahili/English, is common: *Ile accident ilitokea alipo-lose control na aka-overtun and landed in a ditch* The accident occurred when he lost control and overturned and landed in a ditch. Here, mixing includes putting Swahili prefixes on English stems, as with *alipo-lose*. See: Josef Schmied, 'Attitudes towards English in Tanzania', *English World-Wide* 6: 2 (1985); Casmir M. Rubagumya (ed.), *Language in Education in Africa: A Tanzanian Perspective* (Clevedon & Philadelphia: Multilingual Matters, 1990). See EAST AFRICAN ENGLISH, ENGLISH, SWAHILI. [AFRICA, NAME, VARIETY]. C.L.N.

**TAP, TAPPED R.** See R-SOUNDS.

**TAUTOLOGY** [16c: from Latin *tautologia*, Greek *tautologia* repeating what has been said, from *tautó* the same, from *tò autó* the (thing) itself]. (1) Also *pleonasm*. A term in rhetoric for unnecessary and ineffective repetition, usually with words that add nothing new: *She was all alone by herself*; *Me myself personally*. Many tautological (or tautologous) expressions occur in everyday usage. The tautology in some is immediately apparent: *all well and good*; *to all intents and purposes*; *cool, calm, and collected*; *free, gratis, and for nothing*; *ways and means*. In others, it is less obvious, because they contain archaic elements: *by hook or by crook*; *a hue and cry*; *not a jot or tittle*; *kith and kin*; *null and void*; *part and parcel*; *rack and ruin*; *weird and wonderful*; *without let or hindrance*. (2) In logic, a compound proposition that is always true: *A or not-A*, as in *Either it is raining or it is not raining in Dublin today*. Compare CIRCUMLOCUTION, PLEONASM, REDUNDANCY. [LANGUAGE, STYLE, USAGE]. T.M.CA.

**TEACHER TALK.** A semi-technical term in educational research and applied linguistics for the characteristic (often simplified) style of speech of teachers. In general terms, this may be prompted by the social setting of the classroom, with repetition, rephrasing for the sake of clarity, and patterns of stereotyped interaction with learners, such as question, response, and evaluation. For teachers of English as a foreign language, speech may be slower and clearer than is usual, avoiding and minimizing elided usages

such as *must've/musta* and *'sno good y'know*, repeating the same thing in several ways, and using expressions particularly associated with education, classrooms, and textbooks. See TALK. [EDUCATION, SPEECH]. C.J.B., T.M.CA.

**TEACHING ENGLISH**, also **teaching of English** and **English teaching**. General, non-technical terms for the work of teachers of English, whether with children, adolescents, or adults, and whether as a first, second, foreign, or additional language. However organized, whatever the aim, and whatever the methods used, such teaching currently proceeds on a scale well beyond that of any other language past or present, and approached only (in a more restricted geographical area) by Putonghua in the People's Republic of China. In language teaching and applied linguistics, and increasingly in education generally, the teaching of English is divided into five categories, each with its own tradition, terminology, perspective, theory, practice, publications, organizations, and conferences. They are:

(1) **Teaching English as a Native Language.** Also *Teaching English as a Mother Tongue* and *Teaching English as a First Language*. In the English-speaking world, the teaching of children, adolescents, and adults in institutions of primary (elementary), secondary, and tertiary (higher) education, and of adults in continuing education, including literacy programmes. *English* is often used as a shorthand (but sometimes ambiguous) term for the teaching and study of both language and literature, being understood as meaning mainly language at the primary level, both at the secondary level, and at the tertiary level literature (perhaps with traditional philology), language (usually the modern language), or sometimes both. In recent years, however, there has been a tendency in secondary schools, universities, and other institutions to reduce the possibility of ambiguity by distinguishing 'English Language' and 'English Literature' clearly as the names of the courses, the subjects of degrees, and subjects for examination. The term *ENL countries* ('ee-en-ell': English as a Native Language) refers to those territories in which English is the first, and for many the only significant, language, such as Australia, anglophone Canada, Britain, the Irish Republic, New Zealand, and the US.

(2) **Teaching English as a Second Language.** Short form *TESL* ('tessle'). (1) The teaching of English in countries where the language is not a mother tongue but has long been part of the fabric of society, usually for imperial and colonial reasons in the relatively recent past, either as a lingua franca or a medium of education, or

both. The term *ESL countries* ('ee-ess-ell') refers to those territories in which English has a statutory role such as (co-)official language or medium of education, but is not generally used in the home, such as India, Nigeria, and Singapore. (2) The teaching of non-English-speaking immigrants to ENL countries. The comparable term *TESOL* ('tee-sol': *Teaching English to Speakers of Other Languages*), originally used in North America primarily for the teaching of immigrants, is now used worldwide in both senses. See TESOL, TESL.

**(3) Teaching English as a Foreign Language.** Short form *TEFL* ('teffle'). (1) The teaching of English in countries where it is of interest and/or importance but is not or has not been until recently a local medium of communication or instruction, such as Japan, Saudi Arabia, and Sweden. In the late 20c, the term *EFL countries* ('ee-eff-ell') refers in effect to the rest of the world. (2) Providing courses in ENL countries for visiting students from EFL countries. Another term used principally for this category, especially in Britain, is *English language teaching* or, more commonly, *ELT* ('ee-ell-tee'). See ELT, TEFL.

**(4) Teaching English as an International Language.** Short form *TEIL* ('teel', 'tee-ee-eye-ell'). Teaching English as a global lingua franca, making people aware in the process of the worldwide role of the language and the problems that derive from or are related to that role. EIL ('ee-eye-ell') embraces all countries, learners, and users (ENL, ESL, and EFL), its proponents arguing that native users of English need as much consciousness-raising with regard to an adequate international use of the language as those who learn it as a second or foreign language. They also argue that the more English becomes institutionalized as the world's main medium of international expression the more native and non-native users will need to learn to acclimatize to each other's ways of using it. See TEIL.

**(5) Teaching English as a Second Dialect.** Short form *TESD* ('tezd', 'tee-ee-ess-dee'). Teaching the standard language to speakers of non-standard varieties of English, such as a dialect (Scouse in the UK, Appalachian in the US) or a creole (Nation Language in Jamaica or any Caribbean Creole in the UK). Here, the term *English* is restricted to a use traditionally given to it (usually implicitly) by many educationists and grammarians: the language of professional and business people educated to college level or its equivalent and of the major media: that is, the standard language, dialect, or variety. Both term and abbreviation have been modelled on the labels of the preceding three categories. To

make their standpoint clear, however, some proponents of TESD use the term *Standard English as a Second Dialect* (short form *SESD*) to present standard English as one dialect among many, and not as a specially prestigious entity in its own right. See TESD.

**Mother-tongue English teaching.** In all ENL countries, the educational profession in general and a significant part of the interested public regard good English teaching (whatever 'good' is taken to mean) as fundamental to all schooling at all levels, and as an essential underpinning for students' later lives. Despite the often acrimonious debate that follows from close concern for the language and how it is taught, it is widely accepted that the roles of the people teaching English are so different at the three educational levels that in fact there is no such thing as a 'typical' teacher of English for all seasons:

(1) In primary schools, because of the nature of the work, most teachers teach English along with everything else that the children learn. Such teachers are not so much English specialists as educational generalists who integrate the key elements of elementary English teaching (such as listening, speaking, reading, and writing) into the whole fabric of the child's experience at school.

(2) In secondary schools, again because of the nature of the work, most teachers are (at least ideally) specialists in different subjects or groups of subjects. However, while English specialists have an obviously central role, the others are also in a serious sense teachers of English (whether they wish to see themselves in that light or not), because the language is the medium through which they work. When for example science teachers introduce new terms, indicate how the notes of an experiment should be kept, or discuss relevant texts, they are providing instruction in the register of scientific and technical English, something that is not usually the concern of the English specialist.

(3) In tertiary institutions, teachers are not only (at least ideally) 'general' specialists in 'English', but also teachers and researchers in sub-specialties of their own, such as the Victorian novel, Creole Studies, Media Studies, or aspects of grammatical or literary theory. As a result, the precise nature of a degree course in English often rests not only on an understanding among the teachers and administrators of what must or should be covered as a foundation, but also on a supplement of courses arising from the special interests and inclinations of the staff available at any time in a department.

**The secondary-school teacher of English.** Although it is relatively easy to specify what is going on at the primary and tertiary stages, it is

difficult to be clear about the precise nature and aims of the work done in the middle years. As a result, the secondary level tends to receive more critical attention from the public than the others. The two professional comments that follow, on the nature of the teacher's work at this level, demonstrate the burden that English-speaking societies have long placed on the secondary specialist. The first quotation is from the US in 1965, the second from the UK in 1991, both periods of vigorous and controversial debate:

*The United States, 1965.* Like any other professional person, the professional English teacher is one who has been trained, or has trained himself, to do competent work. For him professional competence should mean, at the minimum: a college major in English or a strong minor, preparation sufficient to qualify him to begin graduate study in English; systematic postcollegiate study, carried on privately or in a graduate school; a reading command of at least one foreign language, ancient or modern; a deep interest in literature, old and new, and a solid set of critical skills; the ability to write well and the habit of writing, whether for publication or not; a knowledge of the development of the English language and familiarity with recent work in linguistics; a desire not simply to know but to impart knowledge; skill in the handling of instructional problems and knowledge of the research concerning them; an unflagging interest in the processes by which the young learn to use language effectively and richly (from *Freedom and Discipline in English*, the Report of the Commission on English, chaired by Harold C. Martin of Harvard University, College Entrance Examination Board, New York, 1965).

*The United Kingdom, 1991.* English teachers are asked to cover a wide spectrum. In addition to the fundamentals of reading, writing, listening, speaking and spelling required by the National Curriculum [for England and Wales, 1987 onward], they usually teach drama and media studies and are expected to show greater interest in the whole child than many other subject specialists. Most children probably write more prose, and certainly compose more poetry in school than many of their parents. Hence the joke: 'Don't look out of the window or she'll make you write a poem about it.' Both science and English are important subjects in the curriculum, but if something goes amiss in adult life, then it is more likely that blame will be attached to English teachers than to science teachers. In the Sixties, Andrew Wilkinson drew attention to this wide role when he described several models of English teaching, ranging from 'proof reader', which involved meticulous correction of every spelling and punctuation error, to 'Grendel's mother, guardian of the word-hoard', the person with the awesome responsibility of keeping alive and enhancing the nation's cultural heritage. Fortunately, English teachers are among the best qualified academically to undertake such an assignment. Analysis of graduate recruits to teaching shows that English, history and modern languages entrants have more firsts and upper seconds than in any other subject (from 'Peace in the Civil English War', Schools Report, *Observer*, 22 Sept. 1991, by Ted Wragg, head of the School of Education, Exeter University, England).

**Society and the teacher.** In the last analysis, however, all teachers involved in English, primary or secondary, are regarded as responsible for the quality of the language skills of young people when they leave school. If employers and politicians, among others, complain (rightly or wrongly) about falling standards, the spotlight is turned on these teachers and their trainers, and on the theories that underpin their practices. It often seems to the professional English teacher that in public discussions of English teaching everyone has a view of how things should be done, where there might be caution in the expression of opinions about the teaching of mathematics or science, or about the work of lawyers and doctors. In public debate, there is often an elemental polarization: between conservatives who consider that changes in ways of teaching grammar and spelling (among other things) are symptomatic of a more general social decay, and radicals who consider that progress will never be made until the outdated methods favoured by the conservatives are utterly uprooted. As is often the case in other areas, most teachers are located at neither end of the spectrum, but are somewhere in the middle, where efforts can be made to unite, as judiciously as possible, the most effective aspects of the old and the new.

**TECHNICAL TERM.** See TERM, TERMINOLOGY.

**TECHNOBABBLE** [1980s: a combination of *techno-* as in *technology* and *babble*. Compare PSYCHOBABBLE. See BABBLE]. An informal term for the use or overuse of technical jargon. John A. Barry in the introduction to *Technobabble* (MIT Press, 1991) says that 'the word connotes meaningless chatter about technology' but 'is

also a form of communication among people in the rapidly advancing, computer and other high-technological industries'. As an example he gives: *This paper-based, productized module is designed to support the robust implementation of a friendly, context-driven interface between the developer and the end-user* (a facetious description of his own book). In his glossary, he provides five near synonyms for the term: *compuspeak, computalk, tech speak, techno-talk, and technojive*. Compare COMPUTERESE, TECHNOSPEAK. [STYLE, TECHNOLOGY, WORD]. T.MCA.

**TECHNOLOGY** [17c: from Latin *technologia*, Greek *tekhnologia* systematic study, from *tekhnē* craft, and *logia* speech, study]. The methods, knowledge, and theory needed to create and maintain tools and other types of equipment, and such tools, etc., viewed collectively: *science and technology, clay-and-cuneiform technology in ancient Mesopotamia, courses in computer technology*. Technology relates to language in two ways: (1) Pragmatically, by providing aids to communication, such as: the clay tablet and the reed stylus, used for cuneiform writing (c.3,500–500 BC); pen, ink, and parchment, especially as used in bound codices, the beginning of the world's book culture (c.300 BC–AD 1500); printing presses with movable type (developed in the 15c); the typewriter, with keys, platen, and inked ribbon (since the late 19c); and the word-processing computer, with keyboard, screen, and peripherals (a product of the late 20c). (2) Terminologically, requiring large numbers of words and phrases for naming and discussing tools, products, and processes, such as *amniocentesis, CAT scan, mammography, radiography, scalpel, and surgery* in the language of medical technology, and *CD-ROM, compact disk, laser printer, microfloppy, telephone, and television* in the language of the technologies of communications and computers.

**Technology and language.** Technologies of various kinds have played a fundamental part in creating and preserving language artefacts that can be read years, centuries, or even millennia later. The transmission of information over time is impossible without the use of physical equipment such as paper, pens, pencils, scrolls, books, audio- and video-tapes, and computer storage media, and of the varied conventions that govern their use, such as writing in one direction (horizontally, from right to left or left to right; vertically, from top to bottom), and a more or less closed set of devices for presentation and punctuation, such as spacing and points. The technology needed to create, use, and maintain language-related equipment often dictates the kinds of linguistic convention used with such

equipment: for example, the flag positions used in sending a semaphore message; the dots and dashes of alphabet-related Morse code flashed by heliograph or tapped out in telegraphy. At other times, attempts to address the needs of the user lead to a particular kind of linguistic expression, such as the raised dots of the Braille system by which the blind can read special kinds of printed matter.

**Standardization, fossilization, and change.** Since the 15c, the technology of printing, which underpins the production of all books and periodicals, has encouraged the relative standardization of type and orthography throughout the world and also, in some languages, the fossilization of forms more closely associated with past than present linguistic situations, as with the retention in French of verbal endings long since gone from the spoken language, such as the *-ent* inflection in *ils aiment* (they love), and the *-gh* digraph in the English words *bough, dough, and tough*. In the earlier 20c, the emergence of radio broadcasting tended to disseminate, endorse, and lend prestige to certain educated accents of English, such as Received Pronunciation as used by the BBC and the accent widely associated with Network English in the US. In the later 20c, a global market in films, television programmes, and print products (with a common technological denominator in their use of photography) has affected national and regional language usages within the English-using world, especially in speech, orthography, and vocabulary: for example, the extensive distribution of American material in the UK and British material in the US, which has led to the adoption of Americanisms in the UK and to a lesser extent Britishisms in the US. A small indicator of technology-related exchange appears in the terminology of the computer industry: the BrE use of the AmE spelling *program* (not *programme*) and the AmE use of the BrE spelling *programming* (not *programing*). Such recent technological developments as personal radio transmitter-receivers and electronic mail also offer scope for innovation in the use of language: for example, a truck-driver using citizens' band radio in the US can talk and listen to many other people, all using the conventions, codes, and slang of CB radio; similarly, the use of telephone answering machines has meant distinctive new speech conventions, and sending messages by electronic mail has created an exchange of screen-borne or printed-out messages whose conventions lie somewhere between those of letter-writing and making a telephone call. The entries in the technology theme discuss such relationships between technology and language. [LANGUAGE, MEDIA]. M.L., T.MCA.

**The technology theme.**

ALGORITHM, ALPHABET, ALPHABETIC(AL) ORDER, ALPHANUMERIC, ARTIFICIAL INTELLIGENCE, ARTIFICIAL LANGUAGE, ASCENDER AND DESCENDER, ASCII, AUDIOBOOK, AUTHORS' AND PRINTERS' DICTIONARY, BACK MATTER, BAR, BIT, BLACK LETTER, BOILERPLATE, BOOK, BOOKLET, BRAILLE, BRITISH LIBRARY, BROADCASTING, BROADSHEET, BROADSIDE, BROCHURE, BYTE, CARET, CARTOON, CASE<sup>2</sup>, CATCHWORD, CHARACTER, CHARACTER SET, COLOPHON, COMMUNICATIVE SHIFT, COMPUTATIONAL LINGUISTICS, COMPUTERATE, COMPUTER LITERACY, COMPUTER TYPESETTING, COMPUTER USAGE, COMPUTING, CONCORDANCE, COPPERPLATE, COPY, CROSS-REFERENCE, CROWN, CURSOR, DATA, DEMY, DESKTOP PUBLISHING, DICTATION, DUMMY, DVORAK, EDITION, ELECTRONIC MAIL, ELECTRONIC PUBLISHING, EM, FAX, FEEDBACK, FIST HAND, FOLIO, FONT/FOUNT, FOOLSCAP, FORMAT, FRONT MATTER, GALLEY, GATHERING, GOTHIC, GRAPHIC DESIGN, GRAPHICS, HARD AND SOFT COPY, HART'S RULES, HEADERS AND FOOTERS, IMAGE, IMPRESSION, IMPRINT, INDEX, INDEXING LANGUAGE, INFORMATION, INTERFERENCE, ITALIC, JUSTIFYING, KEYBOARD, KNOWLEDGE REPRESENTATION, LASER, LEAF, LEAFLET, LEGAL-SIZE, LETTER<sup>1</sup>, LETTERPRESS, LETTERSET, LETTER-SIZE, LIGATURE, LINE, LINOTYPE, LITERAL, LITHOGRAPHY, LOGO, LOGOTYPE, LOWER CASE, MACHINE LANGUAGE, MACHINE-READABLE TEXT, MACHINE TRANSLATION, MACHINE WORD, MANUAL, MANUSCRIPT, MASTHEAD, MIMEOGRAPH, MINIM, MISPRINT, MNEMONIC, -MO, MODERN, MONOTYPE, MOUSE, MULTIMEDIA, NETWORK, OBLIQUE, OCTAVO, OFFSET, PAGE, PAGE PROOF, PAGINATION, PAMPHLET, PAPER, PARCHMENT, PARSING, PEN, PHOTOCOPYING, PHOTO-OFFSET PRINTING, PICA, PLAGIARISM, PLATEN, PUNCTUATION, PRESS, PRINT, PRINTER, PRINTHEAD, PRINTING, PRINTING PRESS, PRINTOUT, PROOF-READING, QUAIR, QUARTO, QUIRE, QWERTY, REAM, RECTO, REDUNDANCY, RELIEF PRINTING, ROMAN, ROYAL, RUNNING HEAD/TITLE, SAN SERIF, SCRIPT, SCROLL, SERIAL, SERIES, SERIF, SEXTO, SIGNATURE, SIXMO, SIXTEENMO, SPACE, SPELLING CHECKER, STEREOTYPE, STYLE CHECKER, SUBSCRIPT, SUPERScript, SWUNG DASH, TECHNOBABBLE, TECHNOLOGY, TECHNOSPEAK, TELECOMMUNICATIONS, TELEGRAPHESE, TELEPHONE, TELEPRINTER, TELEVISION, TEXT, THEMATIC ORDER, TRANSCRIPTION, TRANSLITERATION, TYPE, TYPEFACE, TYPESCRIPT, TYPESETTING, TYPEWRITER, TYPOGRAPHICAL ERROR, TYPOGRAPHY, UPPER CASE, VELLUM, VERSO, VOLUME, WHITE SPACE, WIDOWS AND ORPHANS, WORD PROCESSOR, WYSIWYG, XEROGRAPHY.

**TECHNOSPEAK** [1980s: a blend of *technology* and *Newspeak*]. An informal term for a prose style used by high-technology industries, their associated media, and the marketing and publicity groups that surround them, as in: 'LISA lookalike systems, such as VisiCorp's VisiOn software, require a massive 256K bytes of Random Access Memory and a 5 megabyte hard disc capable of storing five million characters of information' (*Observer*, 7 Aug. 1983); 'Elegant, innovative and Inphone at its most ingenious, the Versatel features press-button dialling

incorporated in the sleek lines of the handset' (*Inphone Info*, 1980s ad, British Telecom); 'Three modes of operation are provided: voice-activated-mode (VOX), press-to-talk (PTT) and call. With the selector switch set on VOX, the Easy Talk will automatically transmit whenever you talk' (*Motorcyclist*, Feb. 1984). There are at least ten identifying features: (1) The use of letter symbols, initialisms, and acronyms: *K*, *PTT*, *LISA* (local integrated software architecture). (2) Number-and-letter groups: 256K. (3) Blends: *SELECTaCOM*, *Versatel*. (4) Vogue usages: *info*, *mega*. (5) Compounds: *lookalike*, *press-button*. (6) Fixed phrases: *hard disc*, *Random Access*. (7) Word-play: *LISA lookalike*, *VisiOn*. (8) Novel orthography: *SELECTaCOM*, *VisiCorp*. (9) Heavy pre-modification: *Advanced Videotech Bike-to-Bike Intercom*, *LISA look-alike systems*. (10) A generally dense presentation. The style invites parody: 'Megaforce is a movie for mini-minds set at maxi-gullibility and zero-taste' (*Montreal Gazette*, 29 June 1982). See ACRONYM, AGGLOMERESE, BLEND, COMBINING FORM, COMPUTERESE, INTERFIX, LETTER<sup>1</sup>, -SPEAK, TECHNOBABBLE, VOGUE (WORD). [STYLE, TECHNOLOGY, WORD]. T.MCA.

**TEFL**, short for *Teaching English as a Foreign Language*. Also *EFL* alone. The teaching of English to learners in or from countries where it has not been traditionally used. The terms (T)EFL, (T)ESL, and TESOL all emerged after the Second World War, and in Britain, no distinction was made between (T)EFL and (T)ESL before 1950, both being subsumed under *ELT* (*English Language Teaching*). *EFL* and *TEFL* are usually pronounced 'ee-eff-ell' and 'teffle'. Informally, someone engaged in TEFL is a *TEFLer*.

**Background.** The teaching of English as a foreign language has been common since at least the mid-19c, and for most of that time was comparable to the teaching of any other foreign language. However, with the explosion in the importance of English since the Second World War, teaching it to foreign learners has been so institutionalized that it has acquired a distinct name and acronym. Traditionally, such teaching has been mainly in the care of local teachers at the secondary and tertiary levels in such countries as France and Germany. It has been primarily cultural, more or less on a par with learning a musical instrument. In EFL, however, the teaching has mainly social and economic importance, and such cultural aspects as literature have a secondary role. The focus of (T)EFL is largely on everyday communication, business, and access to English-medium education. In such work, the place of native-speaking teachers has become significant, particularly in privately run

schools and colleges. Currently, in Britain, EFL is largely a private, often entrepreneurial activity, ranging from well-established and respected institutions to 'cowboy' outfits. Rates of pay for teachers are generally low, conditions of service vary, and the quality of teaching varies with them.

**Current situation.** Between 1960 and 1990, as demand for courses in Britain steadily increased, TEFL became a significant earner of foreign currency. Some 1,000 private language schools, mainly in southern England, provide short courses for some 250,000 students a year, mostly young adults. A wide range of course materials, published and unpublished, has been produced to cater to this demand and the needs of learners elsewhere. There has been a great increase in radio and TV courses and the provision of examinations and certificates of attainment. The British Council is closely involved in EFL, providing scholarships for foreign students to attend courses or obtain higher degrees in applied linguistics and EFL/ESL. Organizations include the *Association of Registered English Language Schools* (1960) and the *International Association of Teachers of English as a Foreign Language (IATEFL)* (1971). Associated publications include the *ELT Journal* and *EFL Gazette*. Teachers at British language schools were at first mainly graduates in English Literature, usually without training as language teachers. In the 1970s-80s, however, there has been a move towards professionalization. Centres for research and development in applied linguistics and EFL/ESL have been established in such universities as Edinburgh, Lancaster, and Reading, strengthening the academic base of the profession and helping to provide teachers with an awareness of the theory and practice of foreign-language teaching.

**Principles.** EFL, as represented by the major language schools and the universities in Britain, generally aims at a working command of the spoken and written language. Methods tend to be eclectic and the range of materials wide, generally emphasizing fluency and accuracy. Features of grammar are explained after rather than before being used. The explicit teaching of grammar is not dominant and most teachers do not consider that command of the language is a consequence of knowing a set of rules. The four skills of listening, speaking, reading, and writing are by and large taught in an integrated way. Classroom activity varies, and pair work, group work, tasks, and projects are all favoured. Reading and writing tend to be taught with practical aims in mind: letters, reports, notes, instructions, stories. Many teachers create their own materials as a supplement to, or a substitute for, published

courses, which are available in great variety. By and large, teaching techniques are flexible, varying according to a student's level of attainment (beginner, intermediate, advanced) as well as the aims of the course and students' hopes and expectations.

**EFL and FLT.** Despite its international predominance, EFL is only one among many kinds of *foreign-language teaching (FLT)*. With common origins in the direct method of the late 19c, EFL and other FLT began to diverge about 1960, but have recently begun to come together again. The source of the divergence was greater demand for English than any other language, creating resources for developments in theory, methodology, and materials, and strengthening the academic basis for EFL, largely through a coming together of applied linguistics and descriptive studies of the contemporary language. Since the mid-1970s, the Council of Europe has helped integrate EFL and the teaching of other European languages.

Stevens, Peter. 1977. *New Orientations in the Teaching of English*. Oxford: University Press.

**TEIL**, short for *Teaching English as an International Language*. Also *EIL* alone. A term in language teaching and applied linguistics for teaching the use of English between or among speakers from different nations. Such persons may be native speakers (such as Americans and Britons who may not always understand each other well), non-native speakers (such as Thais dealing with Arabs or Mexicans dealing with Japanese), or native speakers and non-native speakers (such as Americans dealing with Hungarians, or Ethiopians dealing with Australians). The term differs from both *TEFL* and *TESL* in that native speakers are also seen as needing help in cross-national and cross-cultural communication, rather than as representing the norm at which non-natives should aim. It is assumed in *TEIL* that English belongs to all of its users (whether in its standard or any other form), and that ways of speaking and patterns of discourse are different across nations.

**Communication and miscommunication.** Problems of interpretation are especially likely to

occur when native and non-native users are communicating, or when one non-native is communicating with another. In many instances, miscommunication is often linked to two mistakes and often unconsidered assumptions: (1) Someone with a native or native-like control of pronunciation, grammar, and vocabulary has no cross-national communication problems, or should not have such problems. (2) The ways of speaking and patterns of discourse of all fluent speakers of English are similar. TEIL stresses that a good command of English is helpful for efficient international communication but is not enough, because information and argument are structured differently in different nations, and topics of conversation, speech acts, expressions of politeness and respect, irony, understatement and overstatement, and even uses of silence are different in different nations. People using English in an international context could benefit from knowing more about such things.

**Englishes.** Practitioners of EIL do not usually claim that English is or should be the universal language, and recognize the roles of other languages. They note, however, that English is the most frequently used international medium, but argue that international communication in English cannot be reduced to the limited range of material and communication patterns that characterize ESL and EFL. Practitioners do not usually claim that more people should use English or that if everyone used the same language, the world would be a better place. The term *Englishes* is often used when discussing EIL, because it describes the functional and formal variation in the language and its acculturation in Africa, Asia, the Caribbean, and Oceania, as well as its traditions in the UK, the US, Ireland, Australia, Canada, and New Zealand.

**Teaching.** The goal of TEIL is to increase proficiency when using English across nations. Its students are both native and non-native speakers of English, and its concerns are intelligibility, comprehensibility, and interpretability. These concerns are not speaker- or listener-centred, but are shared by both speaker and listener; international communication is interactional, and meaning must be negotiated. Students are exposed to varieties of English from many different parts of the world and are encouraged where appropriate to become proficient users of their own country's educated variety. Cultural information is not limited to native English-using countries, but is given for countries in all three of Braj B. Kachru's English-using circles: the *Inner Circle* (the traditional English-speaking countries), the *Outer Circle* (the countries where English is developing new varieties), and the *Expanding Circle* (countries in which the use of

English is increasing). A discussion of the subject is provided in Peter Strevens, *Teaching English as an International Language* (Oxford: Pergamon, 1980). See ENGLISH, ENGLISHES, INTERNATIONAL LANGUAGE, TEACHING ENGLISH. [AFRICA, AMERICAS, ASIA, EDUCATION, EUROPE, OCEANIA, VARIETY]. L.E.S.

**TELECOMMUNICATIONS.** See TELEPHONE.

**TELEGRAPHESE** [Late 19c]. An informal term for the concise expression achieved in telegraphic messages: *Arriving Monday 1800 Heathrow Sheila*, which condenses *I will be arriving on Monday at 1800 hours at Heathrow Airport, London: (this note is from) Sheila*. Such concision risks ambiguity and even wilful misinterpretation: a cable is said to have been sent by a movie agent who wanted to know Cary Grant's date of birth; it read HOW OLD CARY GRANT, and received the reply from Grant himself OLD CARY GRANT FINE HOW YOU. In the first edition of the *Concise Oxford Dictionary* (1911), H. W. and F. G. Fowler noted: 'If common words are to be treated at length, and their uses to be copiously illustrated, space must be saved both by the curtest possible treatment of all that are either uncommon or fitter for the encyclopaedia than the dictionary, and by the severest economy of expression—amounting to the adoption of telegraphese—that readers can be expected to put up with.' Recent editions of the *COD* have relaxed this policy. See CABLESE, CONCISE OXFORD DICTIONARY, -ESE. Compare TELESCOPING. [MEDIA, STYLE, WORD]. T.MCA.

**TELEPHONE** [1820s: from Greek *tele-* afar, *phōnē* voice, a term with various applications in the 19c, including to what are now known as the foghorn, the megaphone, the speaking tube, and a system of signalling by musical notes. The invention of Bell's *Electrical Speaking Telephone* in the 1870s fixed the term in its present-day use]. Short form *phone*. An electrical instrument or process for the conversion, transmission, reception, and reconversion of especially acoustic signals such as the human voice by wire or by a combination of wire and radio. The inventor of the first successful telephone, the Scottish audiologist Alexander Graham Bell (1847–1922), had been trained by his father, Alexander Melville Bell, in elocution and the written representation of sound. After the family moved to Canada in 1870, the younger Bell continued his father's work there and in the US, teaching speech phonetically to the deaf and seeking to create an electric hearing instrument for their

benefit. In 1876, before he was 30, he had patented a device with much more extensive applications and implications. In 1877, he formed the *Bell Telephone Company*, since 1900 known as the *American Telephone & Telegraph Company (AT&T)*. By 1887, there were over 150,000 telephones in the US, 16,000 in the UK, 9,000 in France, and 7,000 in Russia; by 1987, the number of telephones throughout the world was reckoned in hundreds of millions. Links across continents and oceans by short-wave relay were established by the 1920s, and in 1956 the first transatlantic cable was laid from Scotland to Newfoundland to Nova Scotia.

**Telephone voices, formulas, and procedures.** Use of the telephone has led to various adapted styles of speech, necessary because people cannot see each other when talking. In its earlier period, because of cost, communication tended to be brief and direct, sometimes borrowing from radio such expressions as *roger* (meaning 'message received and understood'). As the telephone became part of everyday life, and less expensive to use, speaking through it has become closer to normal face-to-face conversation, and may include an unconscious use of gestures and expressions that the listener never sees. The inability of the listener to perceive any such paralinguistic aids to speech makes it necessary, however, for the speaker to be precise, to repeat points in order to be fully understood, to avoid silences because these are not understood or may be misunderstood, and to repeat what the other person has said to confirm that the message has been successfully communicated. Speakers may also make a list of notes before a phone call, and summarize the main points made in the call before ending it. In business, secretaries and receptionists are expected to have a good *telephone manner*; their styles of speech often exhibit features valued in traditional elocution, such as clarity, restraint, and refinement, and they often use politeness formulas intended to impress callers and safeguard people not on the line: *I'm afraid Mr Smith is in conference at the moment; could you call again later?/if you can let me have your number he'll call you back the moment he's free/but he'll be glad to know you called and will get in touch as soon as he can.*

**Uses and services.** The ease with which the telephone makes immediate contact (often interrupting and taking precedence over face-to-face discussions in progress when it rings) has prompted a range of developments, from *telemarketing* (using the telephone for commercial research and promotion) to obscene and abusive calls (especially by men to women, and accompanied by 'heavy breathing'). In recent years, technological additions have included the

(*telephone*) *answering machine*, which invites speakers to ad-lib to a tape recorder and enables receivers of calls to monitor such messages without revealing their presence, and the *modem* (an acronym for *modulator/demodulator*), a device that converts digital to analog signals and vice versa, passing them along a telephone line from computer to computer. Services offered by *telecom* (telecommunications) companies range from dialling special numbers for the time or such services as *Dial-a-Prayer* or *Dial-a-Song*, to encyclopedic numbered services in which a customer dials for specific taped information about, for example, aspects of health. Emergency services include numbers for the police, fire, and ambulance, *helplines* for people in distress (such as victims of assault or those considering suicide), and *hotlines* (for information relating to particular critical needs, usually associated with disasters, but including *grammar hotlines* that offer advice on linguistic usage). Radio broadcasting has also been made more open to public involvement by programmes referred to as *phone-ins* or *call-ins*, in which commentators, celebrities, and experts talk over the radio with individuals who are telephoning them. *Teleconferencing*, in which several people can link up by telephone, and take turns in a discussion, has also become common.

**Telecommunications.** Activity associated with telephone use has grown so greatly since the Second World War that it is now generally known as *telecommunications*, the transmission of information (words, sounds, or images) over often great distances primarily by telephone but also by telegraph, radio, and television. Over the last decade there has been at least a sixfold increase in international telephone communication. In the late 1980s, to measure the flow of this traffic, Gregory Staple and Mark Mullins of the *International Institute of Communications* in London devised a statistical unit called the *minute of telecommunication traffic* or *MiTT*, which measures contact by voice, fax, or data transmission on public circuits. Their survey showed that, in gross terms, Americans are the primary users of telephones, clocking up 5.3bn MiTTs in 1988. However, a comparative measure of MiTTs per 1,000 people in a given territory showed that in 1988 Hong Kong led the field with 56,296 units (one-third to China), followed by Singapore, Canada, the Netherlands, and West Germany. On this scale, the US ranked ninth, with 21,839 units per 1,000 (a fifth to Canada, a tenth each to Britain and Mexico, then 7% to West Germany and 4% to Japan). The next six receivers of US calls, around 2-3% each, were France, Italy, South Korea, the

Dominican Republic, Colombia, and the Philippines. In return, nearly three-quarters of South Korea's outward calls and half of Taiwan's went to the US and Japan, while Singapore spent the same proportion, around 13%, on each of Indonesia, Hong Kong, Japan, and the US. Europeans mainly called each other, except for the British, who made more than a fifth of their calls to the US. Such links are axes of influence and interdependence, and provide a means of mapping global relationships, in which English appears to have a major share. See COMMUNICATIVE SHIFT, REDUNDANCY, TELEPHONE. [MEDIA, SPEECH, TECHNOLOGY]. T.MCA.

**TELEPRINTER.** See PRINTER.

**TELESCOPING** [1870s: *telescope* as a verb]. The contraction of a phrase, word, or part of a word, on the analogy of a telescope being closed: *biodegradable* for *biologically degradable*; *sitcom* for *situation comedy*. There are two main processes: (1) Adapting classical combining forms through reducing the first word in a compound or fixed phrase: when *biologically degradable* is telescoped to *biodegradable*, *bio-* refers not to life alone but to biology; when *telephone communications* is reduced to *telecommunications*, *tele-* refers to the whole technology of remote communication. (2) Creating syllabic acronyms like *sitcom* and blends like *smog*. The reduction of a series of words to some of their component syllables (or syllable-like elements) creates such new usages as *sitrep* for *situation report*, *Saceur* for *Supreme Allied Commander Europe*, and *NAVFORCOR* for *Naval Forces Korea*. Such forms are common in military, industrial, and technical usage. Some options are more telescopic than others. The computer language *SNOBOL* comes from the capitalized elements of *StriNg Oriented symBolic Language*. A possible letter acronym would be *SOSL* and syllabic acronyms *Sorsyl* and *STORSYMLANG*. However, a variety of factors, such as convenience, ease of memorization, suitability of meaning, and whimsy, all contribute to the form finally adopted. See ABBREVIATION, ACRONYM. Compare TELEGRAPHSE. [WORD]. T.MCA.

**TELEVISION.** See BROADCASTING, MEDIA.

**TELUGU**, also **Telegu**. A Dravidian language of south India with some 52m speakers. It is one of the 15 major languages of India and the official language of the state of Andhra Pradesh. Written in a script based on southern Brahmi, it has a literary tradition that dates from the 11c, though inscriptions dating from the 7c point to an earlier development of the language. Telugu, unlike Tamil, is tolerant of borrowings from

Sanskrit, and like Tamil has diglossic variation between a High (*grānthika*) and Low (*vyāvahārika*) variety, with the modern standard based on the High variety. See DRAVIDIAN ENGLISH, FIJI, INDIAN LANGUAGES, SOUTH AFRICA. [ASIA, LANGUAGE]. Y.K.

**TENNYSON, Alfred (Lord)** [1809–92]. English poet, born in Somersby, Lincolnshire, and educated at Trinity College, Cambridge. His early life was saddened by family difficulties and the death in 1833 of his close friend A. H. Hallam. He published his first volume of poetry, in collaboration with his brothers, in 1827; subsequent volumes in 1830, 1833, and 1840 gained him the status of a major poet, and in 1850 he was appointed Poet Laureate on the death of Wordsworth. In *Memoriam* (1850), his elegy for Hallam, was widely acclaimed and helped to bring him the favour of the widowed Queen Victoria. He was made a peer in 1884. His mature work included the long poem *The Princess*, with a portrayal of university education for women, and successive pieces on the Arthurian legends, collectively titled *Idylls of the King*. He continued to publish poetry to the end of his life and also wrote several plays in verse, of which *Queen Mary* (1875) was the most successful. Tennyson's reputation, high in his lifetime, was being challenged before the end of the 19c. Later, he suffered partly from critics' preference for Browning as a precursor of Modernism. He was a spokesman of the Victorian era, expressing its doubts and self-division in *Maud*, its optimism tinged with anxiety in *Locksley Hall*, and its bellicose patriotism in *The Charge of the Light Brigade*. The *Idylls of the King* expressed 19c idealization of the Middle Ages as a period of faith and chivalry. In them, he used such archaisms as *elfin*, *thrall*, *whate'er betide*, and the *-eth* ending of the verb. Tennyson had a fine ear for English word music; he used the full resources of the language in rhyme, rhythm, and alliteration and was a bold metrical experimenter as well as using blank verse and other traditional forms. His dramatic monologues are stately, lacking the colloquial quality that Browning gave to his speakers. His 'Lincolnshire Farmer' poems are in the dialect he heard in his early years. General educated usage includes such Tennysonian phrases as *theirs not to reason why*, *the old order changes*, and *ring out the old, ring in the new*. See index. [BIOGRAPHY, EUROPE, LITERATURE]. R.C.

**TENSE**<sup>1</sup> [13c: from Old French *tens* (Modern *temps*), from Latin *tempus* time]. The grammatical category, expressed in forms of the verb, that locates a situation in time. In English, tense must be expressed in all finite verb phrases. It is

marked by the choice of the first or only verb in the verb phrase: *play* versus *played*; *has played* versus *had played*; *will play* versus *would play*; *is playing* versus *was playing*. Since contrasts in number and person, where they apply, are also marked on the first or only verb, these choices combine with tense: present *I/They play* versus present *She plays*; present *I am/She is* versus present *We/They are*; past *I/She was* versus past *We/They were*. By definition, non-finite verb phrases do not have tense marking. There is also no tense choice for the imperative ('*Play harder*') or the subjunctive ('*We insisted that he play harder*').

**Tense in English.** In terms of morphology, English has only two tenses, the present or non-past (*take/takes*) and the past (*took*). The paradigm is extended by the use of the auxiliaries *be* and *have*: *be* followed by the present participle forms the progressive or continuous (*is taking*); *have* followed by the past participle forms the perfect (*has taken*). Although these are traditionally known as tenses, recent terminology refers to them as *aspects* (such as progressive aspect) and (for the perfect) *phase*. All three features can be combined: *had been taking* is past, progressive, and perfect. The passive voice is formed within the same paradigm, by *be* followed by the past participle, but is not a tense. The sequence of the auxiliaries is fixed: *have + be + present participle, be + past participle*, with the full verb in final position and a modal verb preceding all other auxiliaries: *may have been taken*.

**The simple present.** With dynamic verbs, this tense expresses habitual activity and 'timeless truths': *He goes to London every day; Water boils at 100 Celsius*. In commentaries, demonstrations, and performatives, it serves to report events simultaneous with the speech event: *He passes the ball to Smith, and Smith scores; I take three eggs and beat them in this basin; I name this ship 'Fearless'*. With static verbs, it refers to a present or timeless state: *It contains sugar; Air consists of oxygen and other gases*. With private verbs (of sensation, mental processes, etc.) it expresses how things are: *I smell something burning; I think he'll come*. In statements about the future, it shows that events have been arranged: *We fly to Paris tomorrow*. In literature and conversation, as the *historic present*, it reports past events dramatically and dynamically: *He comes up to me and says . . .* With verbs of communication, it states or informs: *The Bible says . . .; John tells me that he is going to Spain*.

**The simple past.** Generally, this tense refers to events, habitual activities, and states in the past: *I talked to my brother this morning; The Normans conquered England in 1066; He went to London every day; It contained sugar*. In the 'sequence of

tenses' rule in reported speech, it restates the present tense of the original utterance: 'He likes chocolate' as reported in *She said he liked chocolate*. However, the present tense may be retained if the state of affairs being reported is covered by the time of speaking: *John said he likes chocolate*. It is used to express unreality, especially in unreal conditional sentences (*If John came, Mary would leave*; compare *If John comes, Mary will leave*), with wishes and recommendations, etc. (*I wish I knew; It's time we went*), and for tentativeness or politeness (*Did you want to talk to me?*). This accounts for some of the uses of the modal forms *might, could, and would*, as in: *Might they want to see her?; Would you like us to come?*

**The progressive.** The present progressive is most commonly used to indicate an event in progress at the time of speaking: *He's reading a book*. With the past progressive, the time of the continuous event is often explicitly shown to overlap a point of time or another briefer event: *I was reading at ten o'clock/when he arrived*. In contrast, the simple past would suggest that the event was subsequent to the point of time or other event: *When he arrived, I left*. In standard English, static and private verbs are non-progressive, in that they do not usually occur in the progressive, the simple present being used instead (no \**I am loving you*, no \**I'm thinking he will come*, although such usages occur in varieties of IndE and PakE). There are a number of verbs with inherent duration which may be used in the non-progressive form, even if the duration is clearly indicated: *I worked all morning; She slept for eight hours*. The progressive may indicate: (1) Incompletion: *I was painting the house this morning* versus *I painted the house this morning*. (2) Simple futurity, especially with verbs of motion: *I'm flying to Paris tomorrow*. (3) Limited duration of habitual activities or with non-progressive verbs: *We're eating more meat now; We're living in London these days* (compare *We live in London*). (4) Sporadic repetition: *My car's always breaking down* versus *My car always breaks down when I forget to service it*.

**The perfect.** The non-progressive perfect refers to an event in the past with current relevance: *I've broken the window* indicates that I broke the window and that the window is probably still broken: *I've seen John* might suggest that I have told him what I intended to, or that he is now nearby. It is also used with *just* for events in the immediate past: *I've just seen him*. The progressive perfect relates to activity beginning in the past and continuing up to the present, or, for past-tense forms, to a point of time in the past: *I've been reading for two hours; I'd been reading for two hours when he arrived*. It may

also indicate continuous activity in the past with current relevance: *Someone's been moving my books—they are no longer where I left them.* The present perfect is not normally used with past-time adverbials: no \**I've broken the window yesterday.* The simple past is often used in AmE where BrE uses the perfect: (1) BrE *Have you washed your hands?*, AmE *Did you wash your hands?* (2) BrE *Have you done it yet?*, AmE *Did you do it yet?* There is, however, wide variation in the use or non-use of the perfect in AmE.

**The future.** Traditionally, grammarians have taught that English has a future tense formed with *shall* and *will*, *shall* being used with first-person subjects (*I shall be happy to see her*) and *will* with the others (*She will be happy to come*). However, *will* is also commonly used with first-person subjects (*I will be happy to see her*) to indicate futurity, though conversely *shall* is not used in the same way with the other persons (no \**She shall be happy to come*). The view that *will* and *shall* mark the future tense is widely held and often strongly asserted, but there are three arguments against it: (1) Morphologically, there are only two tenses, present and past; to talk about the future tense is to confuse time marking with grammatical tense. (2) *Will* and *shall* are formally modal verbs, and should be handled in the modal system, not the tense system. (3) *Be going to* is as good a candidate for the marker of the future tense as *will* and *shall*.

In the majority of instances, *will* and *shall* express a conditional future and are the forms used in the apodosis of future conditionals (the part without *if*): *If you ask them, they will do it.* *Be going to* indicates an envisaged progression towards a future event: *It'll cost me a lot of money* may imply 'if I buy it', whereas *It's going to cost me a lot of money* suggests that the decision to buy has been made. There are two arguments in favour of treating *will* and *shall* as markers of the future tense: (1) Future tenses in other languages also often express conditional futures. This is not unexpected, since the future is not factually known as the present and past are, and it is not surprising, therefore, if the future tense in English is marked by modal-type verbs. (2) *Will* and *shall* function in some ways more like tense markers than modal verbs, particularly in that they cannot be marked independently from the main verb for negation, as most modal verbs can. Thus, there is only one negative of *You will see him tomorrow* (*You will not/won't see him tomorrow*), as there is only one negative of *You saw him yesterday* (*You did not/didn't see him yesterday*), but there are two negatives of *He may be in his office*: (1) *He can't be in his office* (It is not possible that he is in his

office). (2) *He may not be in his office* (It is possible that he is not in his office). See MODAL VERB, VERB. [GRAMMAR].

F.R.P., S.G.

**TENSE?** See VOWEL QUANTITY.

**TERCET** [16c: from Italian *terzetto* a little third]. A stanza of three lines, usually rhyming *aaa*; an unrhymed tercet or *tristich* is rare. The lines may be of equal lengths (Robert Herrick's 'Upon Julia's Clothes', 17c) or of varying lengths (Richard Crashaw's 'Wishes to his Supposed Mistress', 17c). A more elaborate form is *terza rima* (third rhyme), in which the tercets are linked by a continuing rhyme scheme, *aba bcb cdc*. This is the form of Dante's *Divina Commedia*, was first used in English in the 16c by Sir Thomas Wyatt, and is well known in Shelley's 'Ode to the West Wind' (1820; italics added):

O wild West Wind, thou breath of Autumn's being,  
Thou, from whose unseen presence the leaves *dead*  
Are driven, like ghosts from an enchanter *fleeing*.

Yellow, and black, and pale, and hectic *red*,  
Pestilence-stricken multitudes: O *thou*,  
Who chariotest to their dark wintry *bed*

The winged seeds, where they lie cold and *low*,  
Each like a corpse within its grave, *until*  
Thine azure sister of the Spring shall *blow*

Her clarion call o'er the dreaming earth, and *fill*  
(Driving sweet buds like flocks to feed the *air*)  
With living hues and odours plain and *hill*.

The tercet is not easily sustained in English, which lacks the Italian facility for rhyme, but *terza rima* can have a compelling effect as expectation is continually drawn forward to the next stanza. See VERSE. [LITERATURE].

R.C.

**TERM** [12c: from Old French *terme*, Latin *terminus* a limit, boundary]. A word, phrase, or a sense of a word or phrase, that has a particular (often unusual) meaning because of the context in which it is used. In the context of botany, for example, the term *ivory* refers to the hard endosperm of the *ivory nut*; in metal-working, the term *pig* means a mould for casting metals. Typically, a term names something within a specialized field: *hysterectomy* is a medical term and *morpheme* is a term in linguistics. Such terms as *hysterectomy* and *morpheme* are generally referred to as *technical terms* in their appropriate fields. See GENERIC TERM, LITERARY TERM, NAME, TERMINOLOGY. [WORD].

T.MCA.

**TERMINOLOGY** [18c: from Latin *terminus* a limit or boundary, and Greek *logia* study]. (1) The vocabulary of a specialized field as contrasted with the general vocabulary of a language. There is, however, no clear dividing

line between general and specialist vocabulary: for example, a common, everyday word can have a technical application, such as *pig* in the senses 'a mass of metal such as iron, copper, or lead when cast into a simple shape' and 'the mould for such casting'. Conversely, there is nothing to prevent a technical term from being used in the general vocabulary: for example, *neon*, the name for a rare gas, as in *neon sign*. Many technical usages are composites in form. They may be: complex, as in *cooperativity* (a kind of molecular interaction in biochemistry) and *luxulianite* (a rare form of granite, named after the village of Luxulyan in Cornwall); compound, as in *scab-bard fish* (a spiny-finned fish of the family *Trichiuridae*) and *oxidation-reduction* (a reversible chemical process involving the transfer of electrons); and fixed phrases, as in *fatty degeneration* (in pathology, the abnormal formation of globules of fat within body cells). In technical terms, especially of the noun-noun variety, there is often a close semantic link between concept and form, as with *pipe|exhaust pipe*, *brake|cantilever brake*. Such usages may or may not seem immediately transparent to lay people and in composites the meaning is usually much more than the sum of the parts involved.

(2) The study of how technical terms are formed, used, and codified. In traditional lexicography, technical usage has been listed thematically or alphabetically, either in standard or specialized works, usually by the same definers as work on the rest of the language. A current approach, however, has been to design specialized encyclopedic glossaries, in which the close link between concept and term is established by the coordinated effort of several experts in the subjects concerned. National and international standards institutions work to achieve agreed multilingual equivalence between standardized terms. Large international bodies such as UNESCO and NATO have special terminology bureaux, often in conjunction with translation services and computer centres: for example, the European Community's *EURODICAUTOM* (*European Automatic Dictionary*).

(3) Also *terminography*. The theory and practice of compiling specialist dictionaries in fields like engineering and medicine. Such works tend to be classified or thematic rather than alphabetic; are often concerned with meanings and concepts rather than with word forms; may relate to or result from the deliberate standardization of terms within a field; and can be multilingual as well as monolingual. An example is the trilingual dictionary *The Machine Tool*, compiled by the Austrian terminologist Eugen Wüster (London: Technical Press, 1968), which follows guidelines established by a United

Nations committee. Terminography has benefited greatly from the use of computers, but further progress depends on agreement about relationships between concepts and terms and the willingness of institutions to pool their databases.

**TERZA RIMA.** See TERCET.

**TESD**, short for *Teaching English as a Second Dialect*. Also *SESD* (*Standard English as a Second Dialect*). The teaching of national or international standard English to speakers of non-standard dialects or varieties, on the principle that the standard will be additional to, rather than a replacement of, the kind of English already used. There are four kinds of non-standard variety: (1) Regional and class dialects, such as Cockney and New Yorkese. (2) Varieties influenced by other languages, such as Hispanic English and Malaysian English. (3) Creoles, such as Krio in Sierra Leone and Jamaican Creole English. (4) Vernaculars with distinctive histories, such as Hawaiian English and Black English. Such varieties have traditionally been regarded as bad or broken English, often by their own speakers as well as others; they tend to be associated with lower-class and/or lower-prestige ethnic, racial, political, and economic groups. Speakers of these varieties have been and often still are assessed at school as deficient in verbal and cognitive skills, as deaf, as learning-disabled, and as educationally or psychologically disturbed, whereas the significant difference lies in a use of language with which their teachers may be unfamiliar and for which they have not been prepared.

**Britain, Canada, and the United States.** In Britain and Canada, the movement against ethnic and linguistic prejudice has focused in the main on immigrant Afro- and Indo-Caribbean students. In the US, the focus has largely been on students of African-American background, and to a

much lesser extent students of Hispanic background. In Canada and the US, some attention has been given to students in Native communities as well. In Britain, an important catalyst for change was a book by Bernard Coard in 1971 (see below), together with rising linguistic nationalism in the Caribbean, and increasing tolerance for and interest in regional and class dialects. In North America, such sociolinguists as William Labov (see below), William Stewart, and J. L. Dillard claimed both social and linguistic validity for these language varieties. Feeling towards their own language usage was often positive within the communities concerned, but parents and teachers also stressed the need for students to succeed in the kind of English (the standard variety) recognized as prestigious and useful by schools, business, and the community at large.

**The TESD approach.** The approach is based on an acceptance of language variation of all types, as exemplified in Mike Raleigh's *The Languages Book* (below) and the Open University packet *Every Child's Language* (Open University, Milton Keynes, 1985). It is often contrastive, examining the grammar and vocabulary of different varieties, emphasizing variation and situational appropriateness in language, and using culturally and linguistically appropriate materials. Unlike ESL students, ESD students generally have a high comprehension and even production of standard English; similarities and overlaps yield positive progress in the beginning, but ESD students reach humps or plateaux which involve core differences between varieties. For example, in standard English *She does wait for the bus*, the auxiliary *does* indicates emphasis; in Trinidadian usage, however, *does* shows habitual action (she waits every day). Throughout the Caribbean, *hand* refers to the whole physical area covered by standard *hand* and *arm*. In Black English, the 'invariant *be*' denotes habitual or ongoing action (*We be playing after school* We play after school every day), and *it* denotes presence (*It ain't nobody there* There isn't anyone/anybody there).

Features such as different vocabulary and pronunciation are generally recognized, even if they are not understood, but differences in prosodic features, such as intonation and stress patterns, may be neither recognized nor understood. Features of discourse, such as patterns of turn-taking in conversation, are not commonly recognized as legitimate differences among varieties of English. For example, children who speak Black English, Caribbean Creole, or Hawaiian English tend to categorize many questions from adults as 'scolding', to which the

proper response is silence, while not looking directly at the questioner; in standard English, such questions may indicate adult interest, but always require a verbal response while looking directly at the questioner's face. All such linguistic and social differences may cause confusion for teacher and student, with the result that responses to difficulties may be misinterpreted as misbehaviour or stupidity. Students may also have low motivation; many perceive themselves as already speaking English, and some may not want to identify with mainstream English and its speakers.

**General issues.** Current issues in TESD are linguistic, social, and political. There continues to be a widespread opposition to overtly anti-racist education and to devoting special attention to groups perceived as educationally and socially marginal. There is also often a lack of awareness of teaching methods that can be helpful with such students. Some educators consider that the particular difficulties for learners who already know some kind of English are unimportant or too subtle; there have always been such problems and in many generations of dialect speakers and immigrants many people have overcome them. Even where teachers and administrators are sympathetic to the principles involved, they may see TESD as legitimating 'substandard forms' and delaying students' progress, a view also held by some parents of these students and the community groups with which they identify. Some attention to language is usually part of programmes focused on 'academic skills upgrading'. In the US, most work specifically directed at language is on an individual teacher, school, or business level. Some national organizations have addressed this area: for example, TESOL's *Standard English as a Second Dialect* Interest Section and newsletter, now defunct because of lack of continued widespread participation, and the NCTE black caucus, which primarily addresses literary concerns. Despite years of attention, both positive and negative, there is little cohesiveness to this area in the US.

A landmark in the US was the 'King' decision in Ann Arbor, Michigan, in 1979, in which the court required the local Board of Education to provide teachers with the best 'existing knowledge' to help them realize educational goals, specifically in reading. Programmes specifically addressing African-American students and Hawaiian English speakers in the US have had varying degrees of success. Some programmes exist for students of English Caribbean background (for example, in Toronto, Ontario, and in Hartford, Connecticut); Caribbean students, however, are often perceived as not numerous enough in any area to justify special courses, or

are lumped in with ESL or special education students. Attention to language in these groups has often been overshadowed by emphasis on social, economic, and disciplinary factors. Little formal research has been done specifically on ESD, particularly in primary and secondary schools, or in literacy classes. The lack of consensus on this topic may stem from the complexity of the problems that children from such backgrounds face. Some observers feel that the language issue is used as a smokescreen to avoid dealing with such larger and more important issues as low socio-economic status, minority racial status, and the need to upgrade academic skills in both teachers and students.

**TESL**, short for *Teaching English as a Second Language*. Also *ESL* alone. The teaching of English to non-native learners in countries where it has an established role, such as India, Nigeria, and Singapore, and to immigrants to English-speaking countries, such as Australia, Canada, the UK, and the US. The terms (T)EFL, (T)ESL, TESOL emerged after the Second World War, and in Britain, no distinction was made between (T)ESL and (T)EFL before 1950, both being subsumed under *ELT (English Language Teaching)*. *ESL* and *TESL* are usually pronounced 'ee-ess-ell' and 'tessel'. The terms apply in particular to two types of teaching that overlap but are in many ways distinct: *Commonwealth ESL* and *Immigrant ESL*.

**Commonwealth ESL**. In this sense, ESL is a major activity in many non-white countries of the Commonwealth, especially where English is official and/or a language of higher education and professional opportunity. It has been largely confined to school-age pupils, often in English-medium schools, and methods have been influenced by developments in language education and methodology generally, especially since the Second World War. It relates in the main to work undertaken not in Britain itself (apart from courses for teacher trainers), but in such countries as India, Nigeria, and Singapore. It assumes that the learners will encounter English outside

the classroom and expects to achieve adequate levels of ability. By and large, emphasis on the acquisition of BrE Received Pronunciation has declined and an educated local accent and pronunciation are often the acknowledged target. An English-language examination is usually part of the school-leaving qualifications and teacher training is usually the responsibility of departments and colleges of education. Most teachers have a degree, and the emphasis in their training is on classroom techniques rather than linguistic theory. British EFL and Commonwealth ESL have much in common.

**Immigrant ESL in North America**. The teaching of ESL for immigrants to the US and Canada has a different tradition. It is concerned principally with adults and the need for learners to be integrated into local life. Waves of immigrants since 1945, especially from Asia and Latin America, have created a great demand. Local communities, particularly in the larger cities, offer adult courses and make provision for non-English-speaking children in schools. Many universities have instituted MA courses in related subjects and created centres for teaching and for research and development. In addition, many countries have looked to the US and Canada for assistance with teacher training. Some universities have therefore set up links with centres in other countries, and a number of in-country projects in English-language training and teacher education have been undertaken in such countries as Peru, the Philippines, and Thailand, with help from such bodies as the Ford Foundation or with government sponsorship. Because many US immigrants are refugees, their ESL teacher may be the only representative of society they can relate to without arousing their fears of authority. This gives a quality of social service to much North American ESL, especially in larger cities, and has led to characteristics not found elsewhere: (1) A sense among teachers that their students need special care because of past or present experiences, resulting in efforts to establish warm relationships in the classroom. (2) The promotion by some teachers of holistic methods that link a concern for the student as a whole person to the teaching of ESL. Such teachers typically have an MA degree in which linguistics and research figure prominently. While practical training is included, classroom methodology is usually secondary to academic content.

**Immigrant ESL in Britain**. Immigrants to the UK are in the main from Commonwealth countries, principally the West Indies and West Africa (where English and English-based creoles are spoken), Uganda (mainly South Asian

traders), South Asia (Bangladesh, India, Pakistan, Sri Lanka), and Hong Kong, where English is widely used in the community. ESL work includes both school-age children and adults, including literacy for women. ESL teachers are mainly teachers of the mother tongue who have received special in-service training. How much and how effective this training is depends on where they work; the London and Birmingham areas currently provide the most thorough training. Because many people of West Indian background speak standard West Indian English in addition to English-based creoles, they have been classified as speakers of English rather than as second-language learners, a factor that can lead to the disregarding of language issues in schools where standard English is the expected norm. Until the mid-1980s, ESL was often taught in separate classes or language centres (where the numbers justified such provision). However, this procedure came to be widely regarded as divisive, even racist, as it cut ESL learners off from the rest of the curriculum. After a court case by the Commission for Racial Equality in 1986, integrated classes became the norm, requiring ESL to become an element in the training of all teachers rather than the concern of only a few. ESL classes are also provided for adults in further education colleges, and by a range of voluntary groups providing individual home-based teaching. Increasingly, ESL teachers have concerned themselves with political issues arising from the status of many learners. In the 1980s, activists from minority groups became increasingly involved, determined to associate language learning more strongly with minority rights. The successive renamings of one association from *Association for Teaching of English to People of Overseas Origin (ATEPO)* to *National Association for Multiracial Education* to *National Anti-Racist Movement in Education* (both *NAME*) illustrate this shift.

**TESL CANADA.** See CANADIAN LANGUAGE ORGANIZATIONS.

**TESOL**, short for *Teaching English to Speakers of Other Languages*. A professional association

for teachers of English as a second language, founded in the US in 1966, and the especially US name for teaching English as a second or additional language, especially to immigrants in English-speaking countries. The organization was at first focused on North America, but in the 1970s-80s became increasingly international. Its core membership at June 1990 was some 16,000 individuals, but as an association of associations, with 70 affiliates worldwide, it represents an additional 26,000 English-teaching professionals. Its stated aim is 'to strengthen the effective teaching and learning of English around the world while respecting individuals' language rights. To this end, TESOL, as an international professional association: supports and seeks to inspire those involved in English language teaching, teacher education, administration and management, curriculum and materials design, and research; provides leadership and direction through the dissemination and exchange of information and resources; and encourages access to and standards for English language instruction, professional preparation, and employment.' TESOL is governed by an Executive Board elected by the membership to represent the affiliates, the 16 special-interest sections, and the membership at large. The Board is headed by a President who holds office for one year.

TESOL's major public activities are an annual conference of about 6,000 participants, usually held in March in either the US or Canada, and a Summer Institute of six to eight weeks, usually in North America but occasionally in Europe. Ongoing activities are supported by six standing committees: professional standards, socio-political concerns, publications, awards, nominations, and rules and resolutions. In addition to books and policy statements, publications include *TESOL Quarterly* (a journal presenting mainly research papers), *TESOL Matters* (a bimonthly medium for news of the organization and the profession at large), and *TESOL Journal* (a quarterly featuring practical concerns). The last two replaced the *TESOL Newsletter*, which ceased publication in 1990. TESOL also publishes a directory of professional preparation programmes in the US, a membership directory, and reference texts. Its 16 interest sections publish newsletters representing such interests as elementary education, applied linguistics, computer-assisted language learning, programme administration, video, and materials writers. TESOL has a mutual recognition agreement with the *International Association of Teachers of English as a Foreign Language*, is represented on the Executive Committee of the *Fédération Internationale des Professeurs de Langues Vivantes*, and has observer status as a

non-government organization at the United Nations in New York. Its headquarters are at 1600 Cameron Street, Suite 300, Alexandria, Virginia, USA.

**TEXAS** [19c: from Caddo *tehas* allies, friendship]. A state of the US Southwest, bordering on Mexico to the south. Its first European colonizers, in the 18c, were speakers of Spanish, and until 1836 the region was part of Mexico. Until the 1870s, there was some debate as to whether a citizen of the state was a *Texan* or a *Texian* (the latter formed by eliding the *c* of *Texican*, a prior term created by analogy with *Mexican*). Although *Texan* won, the earlier variants continue in use, generally for facetious and humorous purposes, as in *Kin Ah Hep You to Talk Texian?* (title of an article about Texas usage: Robert Reinhold, *New York Times*, July 1984). The clipping *Tex* has been used as a nickname (for example, the cowboy *Tex Ritter*) and as a combining form (as in *Tex-Mex* and the town *Texarkana*, on the border with the state of Arkansas). The terms *Texas English*, *Texas*, and *Texian* refer to English as used in the state. The variety is Southern and stereotypically features a twang and a drawl: that is, it is slightly nasal and vowels are elongated into diphthongs which can be shown in eye dialect as *hee-ut* hit, *ray-ud* red. Some diphthongs, however, are rendered as single vowels, most noticeably so that *white* is a homophone of *watt*, *oil* of *awl*, *wire* of *war*. The phrase *the oil business* sounds like 'the awl bidness' and *barbed wire* like 'bob war'. Several vowels are shifted from standard AmE usage, so that *rate* is nearly homophonous with *right* and *star* approaches *store*. Texas English is not homogeneous and shows some variety between East Texas (where phonology and lexicon show greater affinity with Southern usage) and West Texas (where they are somewhat more Midlands and Western). A growing Hispanic population may produce a distinct variety, *Chicano English*, and forms of mixed English and Spanish are already identified by the terms *Spanglish* and *Tex-Mex*. Immigrants from other areas of the US have imported their own speech characteristics or have failed to adopt the Texas variety. Cliff's Notes, the publisher of guides to students, published in the late 1970s a series of six booklets by Jim Everhart with the grandiose title *The Illustrated Texas Dictionary of the English Language*. See AFRO-SEMINOLE, DIALECT IN AMERICA, SOUTHERN ENGLISH. [AMERICAS, VARIETY]. J.A.M.

**TEXIAN**. See TEXAS.

**TEX-MEX** [1940s: a rhyming blend of *Texas* and *Mexico*]. An informal and occasionally pejorative term for: (1) Anything considered to be a combination of Texan and Mexican, most commonly in food, cultural traditions, and language, especially along the common 1,200-mile border. (2) Anything of Mexican origin found in Texas or along the border, presumed by most North Americans to be not as good as the purely Mexican. Tex-Mex food includes *enchiladas*, *frijoles refritos* with *salsa picante* (refried beans with a piquant sauce), and *tacos*, prepared in the Northern Mexican style. In music, it refers to Northern Mexican *ranchera* music adapted to modern themes, North American life, use of some English, and electronic instrumentation. In politics, the *pachanga* (a gathering featuring food, drink, and speeches) is an important Tex-Mex event. In language, the term refers to any of several varieties of Spanish (also sometimes referred to as *Border Lingo*) that may or may not show English influence, including code-mixing with English by Spanish-speakers:

*Husband*. ¿Que necesitamos? *Wife*. Hay que comprar pan, con thin slices. [to sales clerk] ¿Donde está el thin-sliced bread? *Clerk*. Está en aisle three, sobre el second shelf, en el wrapper rojo. *Wife*. No lo encuentro. *Clerk*. Tal vez out of it (from Lorraine Goldman, 'Tex-Mex', *English Today* 5, Jan. 1986) [Translation: *H*. What do we need? *W*. We have to buy bread, with thin slices. Where's the thin-sliced bread? *C*. It's in aisle three, on the second shelf, in the red wrapper. *W*. I can't find it. *C*. Maybe we're out of it].

The term is also sometimes used for a more or less pidginized variety of Spanish spoken by non-Hispanics. See SPANGLISH, SPANISH, TEXAS. [AMERICAS, VARIETY]. J.A.M.

**TEXT** [14c: from Old Northern French *tixte*, *texte*, Latin *textus* something woven, a tissue, version, style, from *texere/textum* to weave. Compare *textile*, *texture*]. (1) A continuous piece of writing, such as the entirety of a letter, poem, or novel, conceived originally as produced like cloth on a loom: *the text of Caesar's 'De Bello Gallico'*. (2) The main written or printed part of a letter, manuscript, typescript, book, newspaper, etc., excluding any titles, headings, illustrations, notes, appendices, indexes, etc. (3) The precise wording of anything written or printed: *He didn't keep to the text; the definitive text of James Joyce's 'Ulysses'; the most authoritative text of Homer's 'Odyssey'*. (4) A theme or topic, especially of a religious nature and related to a topic or statement in the Bible: *The pastor chose as his text the Sermon on the Mount*. (5) A book prescribed as part of a course of study; a textbook: *the prescribed texts for the exam*. (6) In printing, type as opposed to white space, illustrations, etc. The term is also sometimes a synonym for *Gothic* lettering. (7) In linguistics, a

unit of writing or speech, especially if composed of more than one sentence and forming a cohesive whole. (8) In literary criticism, a piece of writing complete in itself and forming the subject of analytical study. (9) In computing, words displayed on a screen or printed out as hard copy. Traditionally, *text* as a concept has suggested something fixed and with a quality of authority about it not unlike scripture. Electronic and laser technology, however, has made the concept more fluid:

*Text* derives originally from the Latin word for weaving and for interwoven material, and it comes to have an extraordinary accuracy of meaning in the case of word processing. Linkage in the electronic element is interactive . . . With economical and virtually invisible storage of multiple versions of documents, the whole notion of an original text shifts. In magnetic code there are no originals (Michael Heim, *Electric Language: A Philosophical Study of Word-Processing*, 1987, pp. 160 ff.).

Under such conditions, the product of script and print begins to combine in new ways its potential for fixity with the dynamism until recently associated only with speech.

[LITERATURE, TECHNOLOGY, WRITING]. T.MCA.

**TEXTBOOK** [Early 18c]. A book written for and used by students as a standard work in a particular subject or as a source of information and exercises, activities, projects, etc., intended to help the user develop specific skills. When used attributively, it suggests something suitable for inclusion in such a work: *a textbook case*. See BOOK, TEXT. [MEDIA, TECHNOLOGY]. T.MCA.

**TEXT LINGUISTICS**. See DISCOURSE ANALYSIS.

**THEATRE** BrE, **theater** AmE [14c: from Latin *theatrum*, Greek *théatron*, from *theâsthai* to behold]. A place where drama is performed. The term, like *stage*, is metonymically extended to drama itself, regarded as presentation rather than text. Basically, a theatrical performance requires only a place where actors can be seen and heard by an audience; the rest is embellishment. A play is a cooperative effort, newly created at every performance and subject to varieties of interpretation. A vital element is the sympathy between actors and audience, which has varied historically with theatrical and other conditions: for example, Greek theatres were large

and the performance stylized, with masked actors, but plays were part of religious festivals and based on myths shared by the whole community. The new beginning of European drama in the medieval mystery plays brought the theatre into the streets, with performances on movable stages surrounded by spectators, who were in sympathy with the religious themes of the plays. The first permanent theatres in the 16c evolved from improvisations in the halls of great houses and the yards of inns. The Elizabethan stage was an open platform, with the audience close to it on three sides of a protruding 'apron', in a daylight performance. When the English theatres were closed by the Puritans at the beginning of the Civil War in 1642, the relationship between the stage and the audience was destined to change. The new theatres after the Restoration of 1660 were indoors, with proscenium arch, front curtain, and artificial lighting. Contact with the audience was not entirely lost at first, but over the next two centuries the separation gradually increased: the proscenium or forestage was brought forward until the apron at the front was lost and the play was viewed in a picture-frame effect. Better lighting (first gas then electricity) gave a brilliant stage and a darkened auditorium.

**Actors and audiences**. Changes in the cohesion of society have tended to make the theatre a spectacle rather than an experience. Drama draws people together and, when it can be based on common assumptions, reflects the concerns of the community. Greek and medieval drama enacted contemporary religious beliefs. The Elizabethan playwrights were sure of an audience generally united in religious and secular attitudes and, in theory if not in practice, a common sense of morality. In a plural society of many ideologies, and with a wide choice of theatrical entertainments, the theatre occupies a different role. Audience and actors can never be totally distanced from each other, even on radio and television; the audience colludes in the illusion of the play and suspends its realistic perception for the time of enactment. Even today, the unpredictable differences between audiences can markedly effect a live performance. A feeling of participation is essential, though repartee across the footlights is generally confined to the pantomime and music hall. The present-day tendency is to return to a wider playing-space: for example, performances at the Royal Shakespeare Theatre, Stratford, and the Barbican Theatre, London, take place on stages without the proscenium arch. Some dramatists have invited the audience to feel the importance of issues in the play and to make a decision about them; this approach has been taken by Bertolt

Brecht (1898–1956) in Germany and Clifford Odets (1906–63) in the US. Brecht wanted the spectator not to merge in a collective audience but to respond individually and apply problems being acted out in the play to the present world. Songs, chorus characters, and direct homily invite such identification in plays like *The Good Woman of Setzuan* (1938) and *The Caucasian Chalk Circle* (1941). Odets used naturalistic dialogue and direct address to draw the audience into the stage situation. In *Waiting for Lefty* (1935), the actors created the atmosphere of a trade union meeting so successfully that the question from the stage, 'Well, what's the answer?' produced cries of 'Strike!' from the audience.

**Theatrical language.** The structure of the theatre has its effect on dramatic language. Asides and soliloquies, accepted on the open stage with a visible audience, seem artificial when spoken into the darkness, and have largely gone out of fashion. Shared beliefs produce shared imagery and phraseology which can make dramatic dialogue communicate more easily. Both dramatists and actors must always be sensitive to the speech community to which they belong, combining dramatic economy and emphasis with naturalism. The language of early plays, perhaps strange in lexis and syntax, is usually delivered today in a comparatively familiar and conversational manner that would make older styles of acting appear flamboyant. Descriptions of actors in earlier centuries record rhetorical delivery and ample gesture which would have removed the stage more radically from common experience than the later development of naturalism in acting. There appear always to have been degrees of 'theatricality'; the advice to the players that Shakespeare puts in Hamlet's mouth satirizes the style evidently associated with the rival company of Henslowe. Response to the directly spoken word is not a priority in a late 20c culture whose education is centred in book, screen, and image; because of this, live theatre remains significant as a linguistic resource with its roots in more directly oral times.

Simon, E. 1982. *The Ancient Theatre*. London: Methuen.

**THEATRE OF THE ABSURD.** Drama that depicts life as basically meaningless and inconsequential. It attracted a number of dramatists in the middle decades of the 20c, expressing feelings of loss and alienation that had been explored philosophically by the French existentialists. The leading writers in English have been Samuel Beckett (1906–89), Harold Pinter (b.1930), and, in lighter vein, N. F. Simpson (b.1919). Beckett's *Waiting for Godot* (1954) came to typify a movement that, after some initial incomprehension, was accepted as making serious dramatic statements of human tensions:

VLADIMIR. That passed the time.

ESTRAGON. It would have passed in any case.

VLADIMIR. Yes, but not so rapidly.

(Pause.)

ESTRAGON. What do we do now?

VLADIMIR. I don't know.

ESTRAGON. Let's go.

VLADIMIR. We can't.

ESTRAGON. Why not?

VLADIMIR. We're waiting for Godot.

ESTRAGON (*despairingly*). Ah!

Dialogue is disjointed, often failing to keep the normal 'turns' of conversation, and digressing into apparent irrelevance. It suggests that real speech itself is often more discursive than is generally supposed. Banalities and clichés appear as the only available verbal response to serious situations. A theatre built on the impossibility of effective communication would seem paradoxical, but has produced some powerful drama. See DIALOG(UE), THEATRE. [LITERATURE]. R.C.

**THEMATIC ORDER**, also **classified order**, **topical order**. The ordering of information according to themes or topics, as in a classified index or a thematic encyclopedia. Works ordered in this way may or may not also use alphabetic order: for example, in *Rogel's Thesaurus* there is a non-alphabetic and numbered set of categories, alphabetic order appearing only in the index; some works alphabetize their themes, but may use chronological or other order within them, as in the *Bloomsbury Thematic Dictionary of Quotations* (1988); others may thematize their contents and use numbered illustrations and lists in their sections, as in the *English Duden: A Pictorial Dictionary* (1960). In many works of reference, a thematic system of defining entries in sets underlies the alphabetic

order in which the entries are finally published, as in this volume. Such an arrangement is implicit in any work with consistent and widespread cross-referencing. See ALPHABETIC(AL) ORDER, CATALOG(UE), CROSS-REFERENCE, HYPER-TEXT, LEXICOGRAPHY, LEXICON, MENU, THESAURUS. [REFERENCE]. T.MCA.

**THEMATIC VOWEL**, also **thematic**. In an inflected language like Greek or Latin, the vowel which adheres to a root or base, to form its stem or theme. This vowel then usually controls the inflectional and derivational affixes attaching to it: for example, in the Latin verb *amare* (to love), the base is *am*, the thematic vowel *-a-*, and the stem *ama-*. The vowel appears in all or most of the other inflected forms and derivatives of a thematic group; for the *amare* group (the first conjugation of Latin verbs), *a* appears throughout the imperfect tense: *amabam*, *amabas*, *amabat*, *amabamus*, *amabatis*, *amabant*. A selection of Latin words formed by means of thematic *-i-* is shown in the accompanying table.

Base	Thematic vowel	Addition	Outcome
<i>aud</i> (hear)	-i-	<i>o</i>	<i>audio</i> (I hear)
		<i>ens</i>	<i>audiens</i> (hearing)
		<i>tor</i>	<i>auditor</i> (hearer)
<i>agr</i> (field)	-i-	<i>cola</i>	<i>agricola</i> (field-tender)
		<i>cultura</i>	<i>agricultura</i> (field-tending)
<i>hort</i> (garden)	-i-	<i>cultura</i>	<i>horticultura</i> (garden-tending)

Thematic vowels from Greek and Latin are common in English, often serving to mark sets or families of words: (1) *Latin*, *-a-* as in *dictate/dictator*, *negotiate/negotiator/negotiable*, *audacious/audacity*, *tenacious/tenacity*; *-e-* as in *complete/completion*, *convenient/convenience*, *Venus/veneraeal*, *larynx/laryngeal*; *-i-* as in *audit/audience/audition*, *agriculture/horticulture*, *minister/ministerial*, *president/presidential*, *space/spatial*; *-o-* as in *atrocious/atrociousity*, *ferocious/ferocity*; *-u-* as in *residue/residual*, *use/usual*, *vacuous/vacuity*, *ambiguous/ambiguity*, *acupuncture/acupressure*; *-y/i-* as in *colony/colonial*, *Italy/Italian/Italianate*, *auditory/auditorium*. (2) *Greek*, *-a-* as in *dogma/dogmatism*, *theme/thematic*; *-e-* as in *frenzy/frenetic*, *phonetic/phonemic*; *-eu-* as in *hermeneutic/pharmaceutical*; *-i-* as in *arthritis/arthritis*, *basis/basic*, *crisis/critic/criticism*; *-o-* as in *astrophysics/astrophysicist*, *biography/biographical*, *hypnosis/hypnotic/hypnotism*, *neurosis/neurotic*. See COMBINING FORM, INTER-FIX, STEM. [GRAMMAR, WORD]. T.MCA.

**THEME** [13c: from Old French *te(s)me* (Modern *thème*), Latin *thema*, Greek *théma* something put down, proposition: compare THESIS. In the 16-17c, often spelt *theam*]. (1) Sometimes, more formally, *thema* (plural *themata*, *themas*). A topic for a discourse, discussion, composition, sermon, or meditation; a unifying or dominant idea, motif, or field; in music, a principal melody. (2) (Now especially AmE) an exercise written on a given subject, especially in school: *an English theme*. (3) In classical grammar, either the part of a word left when all endings and affixes are removed (the root), or the first-person singular present indicative of a verb, such as Latin *amo* (I love). (4) Also *thema*. In philology, the inflectional base or stem of a word, to which other elements (thematic vowels and consonants; inflections) are added: for example, in Greek, the root *lip* underlies the present theme *leip* to which the inflection *ein* is added to form the present infinitive of the verb *léipein* (to leave). (5) Also *topic*. In some linguistic analyses, that part of a sentence or utterance which expresses what is being talked or written about (often carried over from the preceding context), as opposed to the *rheme* (1890s: from Greek *rhēma* something said, verb, predicate), also called the *comment*, that part which provides new information. Anything pertaining to a theme or thema is *thematic*. See DISCOURSE ANALYSIS, STEM, THEMATIC ORDER, THEMATIC VOWEL, TOPIC. [GRAMMAR, REFERENCE, WORD, WRITING]. T.MCA.

**THEME AND RHEME**. See DISCOURSE ANALYSIS, THEME.

**THESAURUS** [19c: through Latin from Greek *thēsaurós* a store(house), treasury, repository. There are currently two plurals: traditionally *thesauri*, more recently and less formally *thesauruses*. See DOUBLET]. (1) A work of reference presented as a treasure house of information about words, such as Thomas Cooper's bilingual dictionary, the *Thesaurus Linguae Romanae et Britannicae* (1565), and the thematic *Rogel's Thesaurus of English Words & Phrases* (1852). (2) A work of reference containing lists of associated, usually undefined, words (such as synonyms) arranged thematically, in the style of *Rogel's Thesaurus*. (3) A work of reference containing such lists but presented alphabetically, such as *The New Rogel's Thesaurus in Dictionary Form* (ed. Norman Lewis, Putnam's, 1961), *The New Collins Thesaurus: A Creative A-Z Word-finder in Dictionary Form* (1984), and *The Oxford Thesaurus* (ed. Laurence Urdang, 1991). (4) In information technology, an alphabetic index list of key terms, through which information of a specialist nature (such as terms used in a particular industry) can be retrieved from a

database. In such a thesaurus, terms are commonly linked associatively by cross-reference through such relations as synonymy and antonymy. (5) In word processing, a stored list of synonyms and antonyms, to be consulted in the preparation of texts, and provided as a service comparable to a spelling checker. See FACTS ON FILE, LEXICOGRAPHY, LEXICON, MARCH, ROGET, ROGET'S THESAURUS, SLANG, SYNONYMY, THEMATIC ORDER. [REFERENCE]. T.MCA.

**THESIS** [14c: through Latin from Greek *thesis* setting down, something set down or put in place, a lowering (of the voice). Plural: *theses*]. (1) In classical prosody, setting down the foot or lowering the hand when beating time; in Greek, the half of the metrical foot in which the voice falls; the part of a foot that bears the ictus; an accented syllable. In music, the downward stroke in conducting; the downbeat. The opposite of the thesis is the *arsis* (14c: through Latin from Greek *arsis* raising): raising the foot or hand; the half of the foot in which the voice rises; an unaccented syllable; the upward stroke in conducting; an upbeat. Among later Latin writers such as Priscian (c.500 AD), however, the relationship was reversed: *thesis* became the lowering of the voice on an unaccented syllable while *arsis* was its raising on an accented syllable, from which developed the use of *thesis* for an unaccented and *arsis* for an accented syllable. The terms have often been used in these latter senses in discussing Old English prosody. Because of the confusion, however, both terms were virtually abandoned in the 19c, perhaps encouraged by the awkwardness of the plural form of *arsis*: *arses*. (2) In logic and rhetoric, a proposition to be considered or defended; a statement, assertion, or tenet. In rhetoric, its opposite is *antithesis*. In the dialectic of the German philosopher G. W. F. Hegel, a *thesis* or proposition is contradicted by an *antithesis* or opposing proposition, after which at a higher level thesis and antithesis are resolved by a *synthesis* of opposites. (3) A theme for an educational exercise, or more commonly, especially in BrE, a dissertation supported by original research, presented in order to obtain a usually higher university degree: a *doctoral thesis*. Compare ANTITHESIS, ICTUS, PROPOSITION, THEME. See ACCENT, FOOT, PROSODY. [LANGUAGE, LITERATURE, STYLE]. T.MCA.

**THIEVES' LATIN**, also **Thieves' cant**. Archaic terms for the language of criminals: 'A very learned man [who] can vent Greek and Hebrew as fast as I can Thieves' Latin' (Walter Scott, *Kenilworth*, 1821). Compare ARGOT, CANT, SLANG. [STYLE]. T.MCA.

**THOMAS, Dylan (Marlais)** [1914-53]. Welsh poet and journalist, born in Swansea, son of an English master at Swansea Grammar School, where he was educated. After working as a local reporter, he followed a career of journalism, broadcasting, and writing in London. His early volumes *Eighteen Poems* (1934) and *Twenty-Five Poems* (1936) gained attention, and with *Deaths and Entrances* (1946) he came to be regarded as a leading poet. His poetry deals with nature, sex, time, and death. He wrote strongly rhythmic free verse, using traditional devices of alliteration and internal rhyme with novel collocations and compounds; he liked to present startling paradigmatic choices in seemingly familiar phrases ('happy as the grass was green', 'once below a time', 'a grief ago'). He rewrote many times before publication. Although he did not speak Welsh, forms of Welsh poetry influenced his work. Thomas took care with the appearance of words on the page, occasionally elaborately shaping poems in the style of George Herbert (17c). He also wrote a number of short stories, many autobiographical. His radio play *Under Milk Wood* (1954), later presented on the stage, is a portrait of life in a Welsh village painted with the idiom of South Wales:

Me, Mrs Dai Bread One, capped and shawled and no old corset, nice to be comfy, nice to be nice, clogging on the cobbles to stir up a neighbour. Oh, Mrs Sarah, can you spare a loaf, love? Dai Bread forgot the bread. There's a lovely morning!

Although some critics dismissed him as lacking content and needlessly obscure, Thomas was an influence on young 'neo-romantic' poets in the 1940s. He died in the US after one of many heavy drinking bouts. See index. [BIOGRAPHY, EUROPE, LITERATURE]. R.C.

**THORN** [From the Old English mnemonic name *þorn*]. The name of a runic letter and its manuscript and printed form þ, used in Old and Middle English for voiced and voiceless *th*. In late medieval times, its form became similar to, and in some handwriting identical with, *y*, with the result that *ye*, *yis*, *yat*, etc., were used (well into modern times) as variants of *the*, *this*, *that*, etc.: the origin of *ye* for *the* in such phrases and names as *Ye Olde Englishe Tea Shoppe* (often facetiously pronounced 'ye oldy Englishy tea shoppy'). The character has sometimes been used in phonetic transcriptions for the sound of voiceless *th*, now more commonly represented by the IPA symbol /θ/. See ETH, LETTER<sup>1</sup>, RUNE, T. [WRITING]. E.W.

**THORNDIKE, Edward L(ee)** [1874-1949]. American psychologist and lexicographer, born in Williamsburg, Massachusetts, and educated at Wesleyan U., Connecticut, and Harvard. He

won a fellowship to Columbia, where he studied with the psychologist James McKeen Cattell and the anthropologist Franz Boas, from whom he acquired a lifelong interest in the quantitative treatment of psychological data. His doctoral dissertation *Animal Intelligence* (1899) implied that the mind was not a separate entity but a total response of the organism to the environment. Influenced by the writing and teaching of William James, he spent his life educating teachers and school administrators, particularly at Teachers College, Columbia (1899-1940). Through his lectures, research, and publications (in particular *Educational Psychology*, three volumes, 1921), he popularized the use of fact-finding, statistics, and experimental techniques in education. His research on stimulus-response and transfer of learning had a major impact on English-language instruction in US schools for both native and second-language speakers. Thorndike suggested that conditioned responses account, in part, for word meaning in everyday life and maintained that words which occur frequently in contiguity come to be associated with each other and function as a class. The meaning of a word could therefore be described as a 'habit bond'. To demonstrate his contention that the frequency of a word's usage was related to the recognition of its meaning on the part of the learner, Thorndike prepared with Irving Lorge several lists of the most commonly used English words (published as *The Teacher's Word Book* series, 1921, 1931, 1944) which were used by editors of elementary school readers and ESL texts to select vocabulary for their publications.

Applying the results of his research on language and learning, Thorndike influenced the design, order, and writing style of *The Thorndike Junior Dictionary* (1935) and *The Thorndike Senior Dictionary* (1941), on which he collaborated with Clarence Barnhart. The definitions and illustrative sentences in these dictionaries emphasized what he held to be the ultimate aims in education: happiness, appreciation of beauty, utility, and service. The entry on *eugenics* reads:

the science of improving the human race. Eugenics would apply the same principles to human beings that have long been applied to animals and plants, and develop healthier, more intelligent, and better children; science of improving offspring.

To help users of the dictionaries with spelling, he entered important variant spellings in their alphabetical positions, and followed each spelling with the definition(s) associated with it. He excluded the history of words and word origins from his school dictionaries on the basis that such facts 'are valuable for students who have certain special abilities and interests and knowledge of foreign languages; but there are

relatively few such students in the present population of high schools, and even of colleges' (Preface, *TSD*, 1941). Although many of his opinions were controversial, his influence was widespread. He produced more than 500 works, including *Reading Scales* (1919), *The Thorndike Test of Word Knowledge* (1922), and *Teaching English Suffixes* (1941), and served as president of the New York Academy of Sciences and the American Psychological Association. See index. [AMERICAS, BIOGRAPHY, EDUCATION, REFERENCE].

R.W.B.

**THRALE, (Mrs) Hester.** See PIOZZI.

**THREE-PART VERB.** An alternative name, especially in the US, for a type of phrasal verb, also especially in Britain called a *phrasal-prepositional verb*, that consists of a verb plus an adverb plus a preposition: *look forward to, put up with*. See PHRASAL VERB, PREPOSITIONAL VERB. [GRAMMAR]. S.C.

**THRENODY** [17c: From Greek *thrēnōidia* song of lamentation]. Also **threnode**. An ode, song, or speech expressing grief and loss. See ELEGY. [LITERATURE]. R.C.

**THRESHOLD LEVEL, The.** The name of certain specifications for a survival level of language competence, developed by the Council of Europe in the 1970s and adopted as a basis for English-language examining by several British examining boards: for example, in the Preliminary English Test (PET) of the Cambridge U. Local Examination Syndicate. See COUNCIL OF EUROPE, UCLES. [EDUCATION]. W.S.

**TILDE** [1860s: from Spanish *tilde*, from Latin *titulus* superscription; cognate with French *titre*, English *title*: see TITLE. Stress: 'TIL-day']. A diacritic (˘) placed over *n* in Spanish (as the *ñ* in *señor*), to indicate a palatalized nasal sound (sometimes rendered into English as a de-palatalized *ny*, as in *canyon*, from *cañon*), or over a vowel in Portuguese (as in *são* saint), to indicate nasality. (2) A symbol used in mathematics to indicate equivalency or similarity between two values, and in logic to indicate negation. (3) A swung dash. See DIACRITIC, CIRCUMFLEX, SWUNG DASH. [WRITING]. T.MCA.

**TIME MAGAZINE.** An American weekly newsmagazine founded by Henry R. Luce and Britton Haddon in 1923 and published by *Time Inc.*, one of the largest magazine publishers in the world (headquarters New York). *Time* is sold in six regional editions based on the same core format and content: the US, Canada, Latin America, Asia, the South Pacific, and 'the

Atlantic' (Europe, Africa, and West Asia). Its English-language circulation is around 5m and there are several foreign-language editions. Sister publications include *Fortune* (founded 1930), *Life* (founded 1936, discontinued 1972, revived in a different format 1978), *Sports Illustrated* (1954), *Money* (1972), *People* (1974), and *Discover* (1980). There is also a significant book-publishing group, centred on *Time-Life Books*, which was set up in 1960 and publishes book series and single titles in 30 languages, and including *Little, Brown & Company* and *Book-of-the-Month Club*. A video-publishing group includes the pay-television system *Home Box Office (HBO)* and the cable-TV operation *American Television & Communications Corporation*. The format and style of the newsmagazine has led to such rivals as *Newsweek*, and many imitative periodicals in many languages. See AMERICAN PRESS, MAGAZINE, NEWSMAGAZINE, TIMESPEAK. [AMERICAS, MEDIA]. G.H., T.MCA.

**TIMES, The**, sometimes referred to as *The Times of London*, *The London Times*. Britain's oldest, best-known, and most influential newspaper, founded in 1785 by John Walter as *The Daily Universal Register* and renamed *The Times* in 1788. His son, John Walter II, made it the country's leading newspaper, independent of government and with its own news-gathering service. In 1805, he published the first news of the Battle of Trafalgar. Under the editorship of Thomas Barnes (1817-41), the influence of the newspaper grew and it was nicknamed *The Thunderer*; under his successor John Thaddeus Delane, who edited it until 1877, it became in effect the nation's newspaper of record and the voice of the British establishment, at times almost a partner in government. Delane hired the first war correspondent, William Howard Russell, to cover the Crimean War (1853-6). The British government's first knowledge of Russia's peace proposals came through the pages of *The Times*. During the editorship of George Earle Buckle (1854-1935), because of overspending and the publication of what proved forged letters (attributed to the Irish political leader Charles Parnell), *The Times* experienced a serious loss in reputation and circulation. To counter this, it entered into an agreement to advertise and sell the 9th and 10th editions of the *Encyclopaedia Britannica*. In 1906, the press tycoon Alfred Harmsworth (Lord Northcliffe) bought the paper, and during the editorship of Geoffrey Dawson (from 1912 to 1919) ground was regained. Dawson quarrelled with Northcliffe and left, but returned after his death. He edited the paper from 1922 to 1941 with considerable success until his advocacy of appeasement towards the Nazis brought discredit on both him

and *The Times*. The Astor family owned the paper from 1922 to 1966, after which it was acquired by Lord Thomson of Fleet. In 1981, after four years of industrial strife, the Thomson Organization sold it to the Australian media tycoon Rupert Murdoch. Despite its vicissitudes, *The Times* continues to be a national institution to which its *leaders* (editorials), court circular (of the activities of the royal family), letter page, personal column, crossword, law reports, obituaries, and book reviews all contribute. In 1822, the companion *Sunday Times* was published, and in 1902 a weekly literary supplement, *The Times Literary Supplement (TLS)*. More recently, two educational supplements have been added: *The Times Education Supplement (TES)* and *The Times Higher Education Supplement (THES)*. It has 'lent' its name to many newspapers in the English-speaking world, including *The New York Times*, *The Los Angeles Times*, *The Times of India*, and *The Straits Times* in Singapore. See CROSSWORD PUZZLE, NEWSPAPER. [EUROPE, MEDIA]. T.MCA.

**TIMESPEAK**, sometimes **Timese** [Later 20c: see -SPEAK, -ESE]. An informal term for the style of the writers of *Time Magazine* and similar newsmagazines. Often pejorative, it identifies a homogenized, racy, digest-like prose in which the following often overlapping features are prominent: (1) Heavy pre-modification, in such phrases as 'Surgeon Barnard's cardiologist colleagues', 'William Littlewood, 69, aircraft engineer and longtime (1937-1963) vice president of American Airlines', 'Black Power Proselyster [sic] Stokely Carmichael'. (2) A wide-ranging, often whimsical vocabulary that uses such pseudo-archaisms as *atop*, *afoul*, and *awry*, such recherché terms as *bravura* and *quondam*, such slang terms as *glitz(y)*, *miffed*, *natty*, and *wacky* (often in formal contexts), such neologisms as the blend *shopaholic*, the compound *sweetspeak*, the derivative *hippiedom*, and such phrase words as 'Johnson's *close-to-the-vest* method' and 'the ebullient, inexhaustible, larger-than-life campaigner'. (3) A mix of registers, especially in headlines, as in 'Welcome to the Champs des Yobs', 'First-Class Philippic', 'hell-driving citizenry', 'A back-slapping braggart with the laugh of a hyena and the implacable euphoria of a lobotomy patient'. (4) Word-play, again common in headlines: 'Call it Politics Lite, with lots of froth and little annoying substance'; 'Turning Swords into Trade Fairs'; 'Once and Future Champ'; 'Tressed to the Nines'. (5) Current clichés, catchphrases, and buzz words worked into the copy, often in adapted form, as when the name of the popular film *Fatal Attraction* was exploited in a feature on European road safety entitled 'A New Summer of Fatal Traction'

(*Time*, 15 Aug. 1988). (6) An enthusiasm for sharp images: 'Ambulances scream to multiple pileups', 'vacationers of the white-knuckle variety', 'Once the precinct of elegant stone edifices, Paris's finest shops and stately homes, the Champs has become a chrome-and-glass jumble, a jangle of outlets for *le fast food*, neon signs and porn emporiums' (*Time*, 15 Aug. 1988). See HEADLINESE, JOURNALESE, -SPEAK, TIME MAGAZINE. [AMERICAS, MEDIA, STYLE]. G.H.

**TINKERS' CANT.** See CANT, SHELTA.

**TIP OF THE TONGUE.** See SPEECH, TONGUE.

**TITLE** [From Old English *titul*, from Latin *titulus* label, superscription, title. Compare TILDE]. (1) The name of a book, poem, picture, piece of music, or the like; a heading in a book or periodical, or of an article, chapter, or section in a text. A title that comes under another is a *subtitle*; when a story gives its name to an entire collection, it is the *title story*; when a catalogue provides only the titles of works, it a *title catalogue*; when a title is given to a work, the preferred verb in BrE is *entitle* (a novel entitled 'Bleak House'), in AmE is *title* (a novel titled 'Gone With the Wind'). The conventions for entitling texts vary from language to language and age to age: for example, it was common in Latin and in 16-17c English to begin with a focusing word or phrase, as in Caesar's *De Bello Gallico* ('On the War in Gaul') and Locke's *Essay Concerning Human Understanding* (1690). Formerly the titles and subtitles of books, etc., often occupied several lines, in effect offering more than one title, as in: *Encyclopaedia Britannica, or a Dictionary of Arts and Sciences, compiled upon a New Plan* (1768-71). Currently, they tend to be short and to the point, as in: *The Hutchinson Encyclopedia* (1988). (2) An additional name gained through inheritance, attainment, rank, or office, either permanently or for a given length of time, such as the *sir* in *Sir Arthur Conan Doyle*, the *lord* in *Alfred Lord Tennyson*, the *captain* in *Captain Ahab*, and the *president* in *President Bush*. (3) A championship in sport (*winning the top golf title, title-holder*); an established or recognized right to something (*Do they have title to the money?*); in law, a legal right of possession (*a title to a piece of land, title deeds*). (4) Usually plural: written matter inserted into a film or programme, such as a list of *credits* (names of actors, administrators, etc.); (also *subtitles*) superimposed on motion pictures and television presentations, brief text in a language other than that of the performance. See CAPTION, COLOPHON, FORM OF ADDRESS, HEADING, HEADLINE, RUBRIC, TITLE PAGE. [MEDIA, NAME].

T.M.C.A.

**TITLE PAGE** [17c]. The page at the beginning of a book that indicates the title and any subtitle, the name or names of any authors or editors, etc., brief publication information (such as publisher's name and location), and perhaps date of publication. Further information on copyright, printing history, British and American library cataloguing, name and location of printer, etc., appears on the *copyright page* (the verso of the title page). See BOOK, FRONT MATTER, TITLE. [MEDIA, TECHNOLOGY]. T.M.C.A.

**TMESIS** [1600: through Latin from Greek *tmésis* a cutting]. The insertion of one word into another: for example (archaic) *work in what work soever he may do* instead of *whatsoever work he may do*; (current) *bloody* and *blooming* for emphasis in *every-bloody-where* and *absoblooming-lutely*. See GREAT AUSTRALIAN ADJECTIVE, INFIX. [STYLE, WORD]. T.M.C.A.

**TOEFL.** See EDUCATIONAL TESTING SERVICE, EXAMINING IN ENGLISH.

**TOK BOI.** See TOK PISIN.

**TOK PISIN** [Late 19c: from English *Talk Pidgin*. Pronounced 'tock pizzin']. Also **Tok Boi, Pidgin**. Technically, **Papua New Guinea Pidgin**, and, especially formerly, **Neo-Melanesian, Neomelanesian, Melanesian pidgin**. Names for the English-based lingua franca of Papua New Guinea (PNG), officially named *Tok Pisin* in 1981. It descends from varieties of *Pacific Jargon English* spoken over much of the Pacific during the 19c and used as a lingua franca between English-speaking Europeans and Pacific Islanders. It was learned by Papua New Guineans on plantations in Queensland, Samoa, Fiji, and in PNG itself. Typically, male workers learned the pidgin and took it back to the villages, where it was passed on to younger boys. Tok Pisin crystallized in the New Guinea islands and spread to the mainland c.1880. Although a by-product of and sustained by colonialism, it quickly became more than a means of communication between the local people and their European colonizers. It has become the most important lingua franca for PNG and is now being acquired by children as a first language. In sociolinguistic terms, Tok Pisin is an expanded pidgin currently undergoing creolization. It now has more than 20,000 native speakers and some 44% of the population of 3.5m claim to speak it. There has been considerable discussion as to whether it should become the national language of PNG. Currently, it has official status with English and another pidgin, Hiri Motu, which is largely restricted to the Papua area, and only about 9% of the population speak it.

**Grammar.** Many structural traits have been transferred from indigenous languages. Even where items derived from English are used to express grammatical categories, their patterns and meanings often follow structures in the substrate languages. For example, in most if not all of the Melanesian languages and in Tok Pisin, but not in English, there is a distinction between inclusive and exclusive first-person plural pronouns. The speaker of Tok Pisin distinguishes between *we* (speaker and person or persons addressed), and *we* (speaker and another or others, excluding anyone addressed). Where English has only *we*, Tok Pisin has inclusive *yumi* (from *you* and *me*) and exclusive *mipela* (from *me* and  *fellow*). Although the lexical material used to make the distinction is from English, the meanings derive from categories in Melanesian languages. The element *-pela* (fellow) serves additional grammatical ends as a suffix marking attributives: *gupela man* a good man; *naispela haus* a nice house; *wanpela meri* a woman. In the pronoun system, it appears as a formative in the first- and second-person plural, *mipela* (*we* exclusive) and *yupela* (*you* plural).

**Vocabulary.** There are five sources of words: (1) English, which makes up most of the approximately 2,500 basic words: *mi* I, *yu* you (singular), *askim* a question, to ask, *lukautim* to take care of. (2) German, because of the German administration of the northern part of New Guinea (1884–1914): *rausim* to get rid of, *beten* to pray. (3) Spanish and Portuguese words are widely found in European-based pidgin and creole languages and also occur in Tok Pisin: *save* to know (from *sabir/saber*), *pikinini* a small child (from *pequeño*, small). (4) Polynesian languages: *kaikai* food, *tambu taboo* (from *tabu*). (5) Indigenous PNG languages: *kiau* an egg (from Kuanua, a language of East New Britain, which played an important part as a substrate language). In some cases, Tok Pisin expressions have been borrowed into the varieties of English used by expatriates in PNG: *going finish* (from *go pinis*), as in *going finish sale* a sale of household goods held when people leave for good.

Traditionally, Europeans have regarded Tok Pisin as a bastardized form of English. In it, some everyday vulgar words have taken on different and socially neutral meanings: *baksait* (from *backside*) the back rather than the buttocks; *as* (from *arse*) the buttocks, but extended to refer to the base or foundation of anything, as in *as bilong diwai* (the base or foot of a tree) and *as bilong lo* (the reason or cause of a law); *bagarap* (from *bugger up*) used as noun and verb, as in *Em kisim bagarap* (He had an accident) and *Pik i bagarapim gaden* (The pig ruined the garden); *sit* (from *shit*), as in *sit bilong paia* (shit

belonging to fire: ashes); *bulsitim* (from *bullshit*) to deceive. The Tok Pisin word for excrement is locally derived: *pekpek*. Some European dictionary-makers, often missionaries, have often gone to some length to invent respectable etymologies for such words. Tok Pisin has other terms of abuse often quite different from or completely unrelated to English: *pyslama* (sea slug) for a lazy person; *tu kina meri* (where *kina* is a unit of currency and *meri* means 'woman') for a prostitute. Accounts by Europeans often contain concocted versions of pidgin expressions, such as the alleged circumlocution for piano. A. Deiber, a German traveller in the south Pacific, wrote in 1902: 'All in all the black does not lack a sense of humour. His description of the first piano brought to the German South Seas is also delightful. It was a Papuan who, horrified, told of big fellow box, white fellow master fight him plenty too much, he cry (of the box which the white man beats so much that it screams).'

**Status and functions.** Tok Pisin has undergone structural and functional expansion. Although English is the official medium of education, Tok Pisin is used in a variety of public domains, not only in political debates in the House of Assembly (where it is the preferred medium), but also in broadcasting and journalism, and for all its new functions it has drawn heavily on English. So much English has been borrowed into the language, particularly by educated urban speakers, that there are now two main varieties: urban pidgin and rural or bush pidgin. There are also a number of registers, such as *tok piksa* (talk picture), a way of speaking in similes and metaphors, and *tok bokkis* (talk box), a way of giving words hidden meanings. Most of the printed material in Tok Pisin until recently has been religious, centred on a translation of the Bible. Since 1970, there has been a weekly newspaper in Tok Pisin called *Wantok* (one talk: one language), a word used to refer to members of one's own clan group. The use of Tok Pisin for literary purposes is becoming more common. See CREOLE, MELANESIAN PIDGIN ENGLISH, PACIFIC JARGON ENGLISH, PAPUA NEW GUINEA, PIDGIN. [OEANIA, VARIETY]. S.R.

**TONE** [13c: from French *ton*, Latin *tonus*, from Greek *tónos* tension, sound, tone]. A term used generally for musical and vocal pitch and quality, and in phonetics and linguistics for a level or contour of *pitch*, the quality or choice of which is known as *tonality*. Specifically, tone is a *pitch contour* that begins on an accented syllable and continues to the end of a *tone group*: that is, up to but not including the next stressed syllable. Simple tones move only in one direction: *fall* and *rise*. In English, these tones suggest finality, the fall frequently occurring at the

end of a statement, the rise at the end of a *yes-no* question. The compound tones *fall-rise* and *rise-fall* are non-final, suggesting that the speaker has not yet finished (see below).

**Tone group and breath group.** Normal speech does not consist of unorganized strings of words, but stretches of words in the utterance of which breath and tone are integral parts. The *breath group* is a group of words uttered on a single breath, after which the speaker either stops speaking or draws breath to continue. This group may or may not correspond to phrases and sentences as recorded in writing or print, and will consist of one or more further groups of words organized in terms of tone. Such a further group is a *tone group* or *tone unit*. Major tone groups correspond more or less closely to sentences of prose, while minor tone groups (those which phoneticians have analysed in particular detail) are phrasal or lexical. The division of tone groups in speech is analogous to punctuation in writing, and in historical terms the conventions of punctuation have by and large arisen as attempts to reflect on a surface such aspects of speech as tones and pauses for breath or effect: see PUNCTUATION. Where a punctuation mark like a period or a comma is appropriate in writing, a tone-group boundary is usually appropriate in speech. However, the reverse is not true: if a spoken text is written down, the position of many tone-group boundaries cannot be marked by punctuation.

**The constituents of the tone group.** The nature of the tone group relates to the natural rhythm, stress, and intonation of English. Each group contains one or more stressed syllables known as the *nucleus*, the *tonic syllable(s)*, or the *tonic(s)*: for example, the capitalized syllables in *YES* and in *OH YES it is*. The nucleus is often assumed to be the most prominent syllable in the tone group, but this is not always the case. Any syllables following the nucleus form the *tail*: for example, *it is* in *Yes it is*, *-shire* in *YORKshire*. If there is more than one stressed syllable, the first is referred to as the *onset*: the *OH* in *OH YES it is*, the *NEW* in *NEW YORK is big*. The term *head* is used for a group of syllables beginning with the onset up to but not including the nucleus. Any weak syllables preceding the onset are generally known as the *prehead*: for example, *she* in *she WONT*. A combination of prehead, nucleus, and tail occurs in *TasMANia*. The end of a major tone group is typically marked by a pattern indicating finality: for example, a fall in pitch to close a statement. Non-final minor tone groups are often marked by levelling off in the pitch contour, or by a rise in pitch: for example, in a list-like series, with a fall on the closing item.

**Individual tones.** There are five tones in English: the falling tone or fall, the rising tone or rise, the rise-fall, the fall-rise, and the level tone: (1) The *fall* moves from a higher to a lower pitch, and there are two subtypes. A *low fall* is used to end statements, give orders, ask non-emphatic *wh*-questions, and ask emphatic and rhetorical *yes-no* questions. The *high fall* is used in contrastive stress: for example, in *John loves Mary* it is on *John* if he is being contrasted with *Bill*, on *loves* if it is contrasted with *hates*, and on *Mary* if she is contrasted with *Helen*. (2) The *rise* moves from a lower to a higher pitch, and there are two subtypes. The *low rise* is used for incomplete statements (often signalling an intention to continue speaking), in listing (until the end, when the tone falls), for requests, and in expressions of politeness and interest. The *high rise* occurs in asking non-emphatic *yes-no* questions, echo questions, and emphatic *why*-questions. (3) The *rise-fall* moves from a lower to a higher pitch, then back. It is like the fall, but more emphatic or exclamatory, and may also express disagreement and irony. It is rare in RP, but common in some other varieties, such as WelshE, IrE, and IndE. In varieties which do not use it much, its actual or apparent overuse can suggest naivety, unwarranted enthusiasm, and a patronizing attitude. (4) The *fall-rise* moves from a higher to a lower pitch, then back. It may express assertion and contradiction. (5) The *level tone* is one in which the 'slope' of the pitch movement is not enough for it to be classed as a rise or a fall. Its functions are similar to those of the rise. See INTONATION, MONOTONE, PITCH, RHYTHM, SYLLABLE. [SPEECH]. G.K.

**TONGA.** Official title: *Kingdom of Tonga*. A country in Oceania and member of the Commonwealth, consisting of 170 islands due south of Western Samoa. Capital: Nuku'alofa. Currency: pa'anga (100 seniti). Economy: agriculture, fishing, industry, tourism. Population: 98,000 (1988), 110,000 (projection for 2000). Ethnicity: 98% Tongan. Languages: Tongan, English (both official). Education: primary 100%, secondary 70%, tertiary 5%, literacy 90%. Tonga was a British protectorate from 1900 until independence in 1970. See ENGLISH. [NAME, OCEANIA, VARIETY]. T.MCA.

**TONGUE** [From Old English *tunge*, cognate with Dutch *tong* and German *Zunge*]. A flexible mass of tissue attached to the lower back of the mouth of most vertebrate animals; an aid to chewing and swallowing, the organ of taste, and an important component in the articulation of speech. Words for 'tongue' in many languages stand for speech itself. English has a number of words and phrases of different origin which do

this: *language*, through French *langue*, from Latin *lingua*, tongue; *linguistics*, directly from Latin; *polyglot* and *isogloss*, from the Greek *glōssa*, tongue; the phrases *mother tongue*, *foreign tongue*, and the Biblical *gift of tongues*; such idioms as *Has the cat got your tongue?* (said to someone who will not speak), *to bite one's tongue* (to remain silent despite provocation), *it's on the tip of my tongue* (I know it but I can't quite recall it), *Hold your tongue* (Be quiet).

In terms of anatomy and phonetics, the tongue has five parts: the *tip* (of the tongue), the *blade* (of the tongue), the *front* (of the tongue), the *back* (of the tongue), and the *root*, which lies not in the mouth but in the pharynx. Sounds made at the tip (the 'apex' of the tongue) are *apical*. The blade is immediately behind the tip, lies opposite the alveolar ridge of the upper mouth when the tongue is in a state of rest, and sounds made with the blade (Latin *lamina*) are *laminal*. The area behind the blade is the *front*, which lies opposite the hard palate when the tongue is in a state of rest, and sounds made with the front are *palatal*. The back of the tongue lies opposite the soft palate or velum when the tongue is in a state of rest, and sounds made with the back include *velar consonants* and *back vowels*. See APICAL, GLOSSOLALIA, LINGUAL. [LANGUAGE, SPEECH]. G.K., T.MCA.

**TONGUE-TWISTER** [1890s]. A sentence, phrase, or rhyme that is difficult to pronounce, especially when said quickly. The difficulty is usually caused by alliteration: the presence of similar-sounding consonants interspersed with a variety of vowels, as in *Peter Piper picked a peck of pickled pepper* and *The Leith police dismisseth us*. Such tongue-twisters may be accidental or deliberately used for especially comic effect, such as Shakespeare's: 'Whereat, with blade, with bloody blameful blade, / He bravely broach'd his boiling bloody breast' (*A Midsummer Night's Dream*, 5 : 1 : 145-6). They became particularly popular in the 19c as rhymes designed to cause pronunciation problems and elocutionists used examples like *Truly rural* and *She sells sea-shells on the sea-shore* to improve enunciation. See ALLITERATION, ALLITERATIVE VERSE, ELOCUTION, WORD GAME. [WORD]. T.A.

**TONIC (SYLLABLE)**. See TONE.

**TOPIC** [16c: from Latin *topica*, Greek (*tà*) *topiká* (title of a philosophical work by Aristotle, *The Topics*) things that pertain to *tópoi* places, categories (particularly *koinoi tópoi* commonplaces, shared or general categories)]. (1) In traditional rhetoric, a field of considerations from which arguments can be drawn; a heading under which arguments may be organized. (2)

The subject of a discourse, essay, treatise, speech, etc.: *religious topics*; a *topic of conversation/for discussion*. (3) A theme or heading: a *subject arranged according to topics and subtopics*. (4) In linguistics, an item serving as the subject or focus of a sentence or utterance. The process by which any such item is given prominence is called *topicalization*. (5) The adjective *topical* refers to: formerly, a locality (*topical gods*); in medicine, a part of the body (*topical application of a powder*); in classification, headings or themes (*topical order*); in general usage, something of current interest (*topical events*). See PARAGRAPH, THEME. [GRAMMAR, LANGUAGE, REFERENCE, STYLE]. T.MCA.

**TOPICAL ORDER**. See THEMATIC ORDER.

**TOPONYM** [1890s: from Greek *tópos* place, *ónoma/ónuma* name]. A place-name, such as *London*, *New York*, *the North Sea*, *the Bay of Fundy*, *Mount Everest*, *Kilimanjaro*: See PLACE-NAME, TOPONYMY. Although not toponyms properly so called, many nouns have toponymic origins and/or associations, such as *champagne* from Champagne in France, *gin* from Geneva in Switzerland, *calico* from Calico in India, *muslin* from Mosul in Iraq. Such words are often associated with trade and food. Their categories appear to be: (1) *Simple words*. The name, usually with a small initial letter, used as a noun and perhaps with some adaptation: *cashmere* (sometimes *kashmir*) a kind of wool associated with Kashmir in India; *port* a fortified wine from Oporto in Portugal; *tweed* (probably from *tweel* twill, but influenced by the name of the River Tweed) a kind of cloth associated with Scotland. (2) *Fixed phrases, compounds, etc.* Special developments from toponyms proper, such as *Loch Ness Monster* from *Loch Ness*, a lake in Scotland. Fixed phrases whose attributive element is a toponym (or its derivative) may lose both the capital letter and the last element: *a Balaklava helmet* becoming *a balaklava*; *an Alsatian dog* (a dog from Alsace) becoming *an Alsatian*. The practice is common in naming breeds of animal: for example, *Guernsey cattle* becoming *Guernseys*. Occasionally, a fixed phrase such as *Cheddar cheese* becomes the base for further fixed phrases: for example, *Canadian cheddar cheese*, *Scottish cheddar*. (3) *Clippings*. Examples include *gin* from *Geneva*, and *Champ*, the informal name for a monster said to live in *Lake Champlain* in the US. Some clippings involve the diminutive *-ie*: *Nessie* for the *Loch Ness Monster*, and *Chessie* for its supposed equivalent in *Chesapeake Bay*. Some words, though originally toponymic, are more properly *eponyms* (coined from personal names and titles drawn from place-names): for example, *cardigan*, the knitted

garment named after J. T. Brudenell (b.1797), the 7th Earl of Cardigan. Compare EPONYM. See -ONYM. [REFERENCE, WORD]. T.MCA.

**TOPONYMY** [1870s: from Greek *tópos* place, *-ōnumía* naming]. The system of place-names of an area or a language; the study of such place-names. A place-name within such a system is a *toponym*. Toponymic study covers the type of referent, etymology, and structure of the name. The broadest division among types of places named is between natural features of the landscape and political divisions. Natural features include bodies of water (oceans, seas, gulfs, lakes, ponds, rivers, streams, swamps) and land masses (continents, peninsulas, islands, shores, mountains, hills, plateaus, canyons, valleys), including areas characterized wholly or in part by their flora (deserts, plains, forests). Political divisions are: nations; states and provinces; counties and other districts; cities, towns, and other settlements; neighbourhoods and streets. Structures like bridges and buildings may be thought of as either places or things.

The etymology of toponyms treats the sources from which the names have been derived and the process of their creation. Particularly, it treats the languages from which the names come, as well as whether the names echo other place-names, or honour the names of persons, or commemorate events, or describe the locale, or have various other origins. British toponymy has focused mainly on the language of the etyma of names, whether Celtic, Roman, Anglo-Saxon, Scandinavian, or Norman, and is thus aligned with antiquarianism. Toponymy in other English-speaking countries concentrates instead on the type of etymo-referent, that is, whether the place is named for a person, another place, etc. This difference correlates with a difference in time depth of names in Britain and other anglophone nations. In structure, many place-names consist of two terms: a generic and a specific, as in *the Firth of Forth*, the generic *Firth* naming the type of place and the specific *of Forth* narrowing it. Such names are typically endocentric constructions, with the generic as head and the specific as modifier.

Names of bodies of water tend to have both terms, although the generic is often omitted in practice, especially when the resulting name is still distinctive: *the Atlantic (Ocean)*, *the (English) Channel*, *the Great Lakes*, *the North Sea*, *the Mediterranean (Sea)*. The order of the generic and the specific is partly a matter of language variety, with BrE favouring the order generic-specific in some river names (*River Thames*, *River Clyde*) whereas AmE prefers specific-generic (*Thames River*, *Colorado River*). Names of other sorts of referent vary in the frequency with which

they include a generic. Names of countries commonly lack a generic (*Brazil*, *France*, *Japan*, *New Zealand*), even if a generic is part of the official name of the land (*The United States of Brazil*). Some nation names have a generic as an integral part: *the United Kingdom*, *the United States*, or may even use the generic alone: *the States*, as a short form for *the United States of America*. *Great Britain* is an endocentric construction without a generic, a minor pattern seen also in *the Lesser Antilles* and *the Outer Hebrides*. See AUSTRALIAN PLACE-NAMES, CANADIAN PLACE-NAMES, ETYMON, -ONYM, PLACE-NAME, TOPONYM. [NAME, REFERENCE]. J.A.

**TORRES STRAIT BROKEN/CREOLE**. See BROKEN.

**TOWN TALK**. See FLYTAAL.

**TRACHEA** [14c: from Latin *trachea*, Greek *trākheía* (*arteria*) rough (passage). Stress: 'tra-KEE-a']. An anatomical term for the tube carrying air to and from the lungs, commonly known as the *windpipe*. [SPEECH]. G.K.

**TRACT** [15c: apparently a clipping of Latin *tractatus* treatment; cognate with *treat*, *treatise*]. An essay of an instructional or propagandistic kind, often in pamphlet form and on a religious topic: *Tracts for the Times* (also *the Oxford Tracts*, *the Tracts*), a series of theological pamphlets (1833-41) started by John Henry Newman. Any similar work may be described as 'a tract for the times'. See SOCIETY FOR PURE ENGLISH. Compare ESSAY, PAMPHLET, PROPAGANDA, TREATISE. [LITERATURE, MEDIA]. T.MCA.

**TRADE JARGON** [1930s]. Also *trade language* [1950s]. A semi-technical term for a minimal language used by people with no common language, as a means of communication for trading purposes, such as *Chinook Jargon* and *Trader Navajo* in North America. Such languages do not generally stabilize and expand. See JARGON, PIDGIN. [LANGUAGE]. S.R.

**TRADEMARK**, also **trade mark**, **trade-mark**, [16c]. (1) A sign or name that is secured by legal registration or (in some countries) by established use, and serves to distinguish one product from similar brands sold by competitors: for example, the shell logo for *Shell*, the petroleum company, and the brand name *Jacuzzi* for one kind of whirlpool bath. Legal injunctions are often sought when companies consider that their sole right to such marks has been infringed; the makers of *Coke*, *Jeep*, *Jell-O*, *Kleenex*, *Scotch Tape*, and *Xerox* have all gone to court in defence of their brand (or proprietary) names:

see WEBSTERS. Although companies complain when their trademarks begin to be used as generic terms in the media or elsewhere, their own marketing has often, paradoxically, caused the problem: 'Most marketing people will try hard to get their brand names accepted by the public as a generic. It's the hallmark of success. But then the trademarks people have to defend the brand from becoming a generic saying it is unique and owned by the company' (trademark manager, quoted in *Journalist's Week*, 7 Dec. 1990).

There is in practice a vague area between generic terms proper, trademarks that have become somewhat generic, and trademarks that are recognized as such. The situation is complicated by different usages in different countries: for example, *Monopoly* and *Thermos* are trademarks in the UK but generics in the US. Product wrappers and business documents often indicate that a trademark is registered by adding *TM* (for 'trademark') or *R* (for 'registered') in a superscript circle after the term, as with *English Today*<sup>TM</sup>, *Sellotape*<sup>®</sup>. The term usually differs from *trade name* [first used c.1860s] by designating a specific product and not a business, service, or class of goods, articles, or substances: but some trademarks and trade names may happen to be the same. Everyday words of English that were once trademarks (some now universal, some more common in one variety of English than another, some dated, all commonly written without an initial capital) include *aspirin*, *band-aid*, *cellophane*, *celluloid*, *cornflakes*, *dictaphone*, *escalator*, *granola*, *hoover*, *kerosene*, *lanolin*, *mimeograph*, *nylon*, *phonograph*, *shredded wheat*, *zipper*. Trademarks facing difficulties include *Astroturf*, *Dacron*, *Formica*, *Frisbee*, *Hovercraft*, *Jacuzzi*, *Laundromat*, *Mace*, *Muzak*, *Q-Tips*, *Scotch Tape*, *Styrofoam*, *Teflon*, *Vaseline*, *Xerox*. The inclusion of such names in dictionaries, even when marked 'trademark' or 'proprietary term', indicates that their status has begun to shift. Trademark names used as verbs are a further area of difficulty, both generally and in lexicography. One solution adopted by publishers of dictionaries is to regard the verb forms as generic, with a small initial letter: that is, *Xerox* (noun), but *xerox* (verb). (2) A mark or feature characteristic of, or identified with, a person or thing: *That slow drawl is his trademark*. See GENERIC, NAME (TRADE NAMES). [NAME, WORD].

T.MCA.

**TRADE NAME.** See NAME, TRADEMARK.

**TRADITIONAL-DIALECT.** See GENERAL ENGLISH.

**TRADITIONAL ORTHOGRAPHY** [20c]. Usual short form *t.o.* A term used especially by spelling reformers for the conventional orthography of standard English, usually in contrast to proposed replacements. See INITIAL TEACHING ALPHABET, ORTHOGRAPHY, SPELLING REFORM. [WRITING].

T.MCA.

**TRAGEDY** [14c: from Latin *tragoedia*, *tragedia*, Greek *tragōidia* goat-song. The connection with goats is obscure: a goat may have been the prize for a winning play, the reference may be to the figures of goat-like satyrs associated with rural festivals, or actors may have worn goat-like masks]. Drama dealing with serious themes, ending in the suffering or death of one or more of the principal characters. The main influence on European ideas of tragedy is Aristotle's *Poetics*, based on the Greek drama of the 5c BC. Aristotle defined tragedy as 'the imitation of an action that is serious and also, as having magnitude, complete in itself' (translation I. Bywater). The tragic hero should be of high worth or standing, but not perfect: a tragic flaw, weakness, or transgression (*hamartia*) or an excess of arrogant ambition (*hubris*) leads to downfall. The effect of the inevitable disaster (*catastrophe*) on the spectators is the purgation or cleansing (*catharsis*) of the emotions of pity and terror through what they have seen.

**History.** Greek tragic drama proper begins with Aeschylus (525–456 BC), who added a second actor to the existing dialogue between an actor and the leader of the chorus. His plays, which include the *Oresteia* trilogy on the family of Agamemnon, are notable for their insistence on wisdom through suffering and the long retribution for *hubris*. Sophocles (496–406 BC) introduced a third actor and gave more attention to the inner struggles and personal choices of the characters. His *Oidipous Tyrannos* (*Oedipus Rex*, Oedipus the King) exemplifies Aristotle's theory of tragedy; Oedipus, removed from his parents in infancy, unwittingly fulfils the prophecy that he will kill his father and marry his mother. He becomes king of Thebes but his *hamartia* is at last revealed in a terrible moment of *anagnorisis* (discovery). He tears out his eyes and the *catastrophe* is complete when he goes into a disgraced exile. Euripides (480–406 BC) further emphasized the element of moral doubt and took a more sceptical attitude towards the official religion, in *Medea* and *Alcestis*; his plays show a new concern for the position of women in society. In Rome, Seneca (c.4 BC–AD 65) wrote verse tragedies on subjects of Greek mythology. His rhetorical and often bloodthirsty plays were intended for reading rather than performance, but their rediscovery and translation in the

16c had an influence on the development of Elizabethan and Jacobean stage drama.

Aristotle's criteria do not fit every example of tragedy, but they remain useful, particularly in explaining why people benefit from watching in a theatre events that would be distressing or intolerable in life. The word has been applied at different periods to various types of literature. In the Middle Ages, tragedy was the narrative of an individual fall from high position: 'Of him that stood in greet prosperitee / And is y-fallen out of high degree / Into miserie, and endeth wretchedly' (Chaucer, *The Monk's Prologue*). There is much sorrow and suffering in the medieval mystery plays, but as representations of the Christian story they cannot be reckoned tragic. Dramatic tragedy in England developed in the 16c, reaching its height in the last decade and the beginning of the 17c. The influence of Seneca is seen in the many tragedies of revenge, usually with supernatural prompting, of which Thomas Kyd's *Spanish Tragedy* (1592) is the prototype and Shakespeare's *Hamlet*, the most famous and complex.

The archetypal Renaissance tragic hero, filled with fatal *hubris*, appears in Christopher Marlowe's *Tamburlaine* (c.1587) and *Dr Faustus* (1604). It is not, however, possible to fit the leading figures in the tragedies of Shakespeare and his contemporaries into a single mould. *Macbeth* raises different questions from *King Lear*, and both differ from Webster's *Duchess of Malfi*: the avenger in *Hamlet* is the hero who engages our sympathy, but Webster's *Duchess* is the victim and her brothers who work revenge on her are the villains; *Lear* is redeemed and brought to humble self-knowledge by suffering, but *Macbeth* dies still defiant. The Renaissance hero, unlike the Greek, is seldom wholly ignorant of the situation and a strong *anagnorisis* is rare, though it is found in *Othello*. The sense of fate and retribution remains, but there is more concern with the freedom of individual action. Inexorable suffering as the consequence of action is an Aristotelian characteristic that remains.

High or aristocratic tragedy did not survive in English beyond this period; domestic tragedy, however, dealing with humbler people, was written in the early 17c and again in the 18c. Many 20c plays are serious and moving, but critics dispute whether they are tragedies in the classical sense, especially as the effects of social problems and personal inadequacy largely replace the mythic conflict of good and evil. A play like Arthur Miller's *Death of a Salesman* (1949) may be reckoned a tragedy of the common man. Eugene O'Neill adapted classical themes in *Mourning Becomes Electra* (1931), J. M. Synge used Irish legends, and Samuel Beckett dramatized the inarticulacy of alienation.

**Language.** Traditionally, the language of tragedy has been elevated, as befitting great events and noble characters. It was considered a fit vehicle for the 'high style' of literature and rhetoric and was originally always in verse, even when dealing with humbler people in plays like the anonymous *Arden of Feversham* (1592). George Lillo's *The London Merchant* (1731) is one of the few early examples in English of a prose tragedy of ordinary life. In English, a grand style in prose tends to sound artificial and stilted when it is spoken in the form of a dialogue, especially in 19c melodrama. Modern serious dramatists write dialogue in the common register, with the greater economy and precision which is customary in dramatic speech. Sean O'Casey raised the everyday speech of Dublin to tragic grandeur. Tennessee Williams and Arthur Miller successfully used natural-sounding American speech. Dramatists in the *theatre of the absurd* have come closer to the inconsequential features of daily speech, but it may be disputed whether their work, though powerful and moving, can be called tragic.

Although tragedy is a dramatic form, its qualities are readily acknowledged in fiction, as in the 'tragic' quality of Thomas Hardy's novels, exemplified in the combination of character and circumstances which leads to the downfall of Henchard in *The Mayor of Casterbridge* (1886) and the execution of Tess in *Tess of the D'Urbervilles* (1891). The use of such words as *tragedy*, *tragic*, and *tragically* in relation to public or private misfortune in life is as old in English as the dramatic form itself; although it departs from Aristotelian technicalities, it expresses feelings of loss, horror, sympathy, and awe comparable to those which prompted the original development of dramatic ritual in ancient Greece. The styles in which journalists have reported on disastrous events have been significant in extending the reference of such words; in their reports, the vocabulary of tragedy relates to deep distress and misfortune without any necessary moral concomitant. See COMEDY, DRAMA, THEATRE OF THE ABSURD, TRAGICOMEDY. [LITERATURE].

R.C.

**TRAGICOMEDY** [16c: from Latin *tragicomoedia*, syncope of *tragicocomoedia*]. Drama that mixes elements and styles of tragedy and comedy. Dramatists have sometimes ignored the rigid theoretical distinction made in classical Greece between the two types. The Roman playwright Plautus called his *Amphitryon* a *tragicomedia* because noble and divine persons appeared in comic situations. The Renaissance dramatists, particularly in England, used considerable freedom, including noble and humble characters in the same play, introducing comic

scenes into tragedy, or even pairing a tragic plot with a comic sub-plot, as Middleton and Rowley did in *The Changeling* (1622). The name is given particularly to Jacobean plays with romantic and exciting plots in which disaster threatens but is diverted into a happy resolution. This form was written by Beaumont and Fletcher, as in *A King and No King* (1611), and by Shakespeare in such late plays as *Cymbeline* (c.1610) and *The Winter's Tale* (c.1611). Critics were divided about the propriety of the form; Sidney castigated plays which were 'neither right Tragedies, nor right Comedies' (*An Apologie for Poetrie*, 1597-80), but Dryden approved the effect of 'a Scene of Mirth mix'd with Tragedy' (*Of Dramatick Poesie*, 1668). Plays that provoke amusement yet end tragically have been common since the 19c, and many are currently written for the cinema, radio, and television. See COMEDY, DRAMA, TRAGEDY. [LITERATURE]. R.C.

**TRANSCRIPTION** [16c: from Latin *transcriptio/transcriptionis* writing 'over' (from one text to another)]. The act or result of writing or printing material already available in some other form, especial recorded oral matter such as courtroom speech, office dictation, phonetic data, and linguistic fieldwork. Transcribing involves the visual or aural interpretation of the matter, its mental processing, and the motor activity of copying by hand or with type. Errors can occur at any stage: a monk might misread a word; a secretary might not be able to decipher the boss's handwriting; a keyboarder might strike the wrong key; a phonetician might enter the wrong symbol. Even if the matter is clearly set out, the eye can err: *eye-skip* causes the transcriber to jump from a word in one line to the same word three lines lower; misrecognition turns a badly written word like *Munby* into *Meenby*; a tendency to banalize turns the unfamiliar *Foresman* into the everyday *Foreman*; mistyping turns *heart* into *heat*. The mind can also work on the material, substituting for what is in the text an item that the transcriber thinks is there. Such problems have long been known to scholars of manuscripts and other documents, who try to work their way back to an original from the evidence of an error. Compare NOTATION, PROOF-READING, TRANSLITERATION. [TECHNOLOGY, WRITING]. W.W.B.

**TRANSFERRED EPITHET.** See EPITHET, HYPALLAGE.

**TRANSFORMATIONAL-GENERATIVE GRAMMAR**, short form *TG*. In theoretical linguistics, a type of generative grammar first advocated by Noam Chomsky in *Syntactic Structures* (1957). Since then, there have been

many changes in the descriptive apparatus of *TG*. Common to all versions is the view that some rules are transformational: that is, they change one structure into another according to such prescribed conventions as moving, inserting, deleting, and replacing items. From an early stage of its history, *TG* has stipulated two levels of syntactic structure: *deep structure* (an abstract underlying structure that incorporates all the syntactic information required for the interpretation of a given sentence) and *surface structure* (a structure that incorporates all the syntactic features of a sentence required to convert the sentence into a spoken or written version). *Transformations* link deep with surface structure. A typical transformation is the rule for forming questions, which requires that the normal subject-verb order is inverted so that the surface structure of *Can I see you later?* differs in order of elements from that of *I can see you later*. The theory postulates that the two sentences have the same order in deep structure, but the question transformation changes the order to that in surface structure. Sentences that are syntactically ambiguous have the same surface structures but different deep structures: for example, the sentence *Visiting relatives can be a nuisance* is ambiguous in that the subject *Visiting relatives* may correspond to *To visit relatives* or to *Relatives that visit*. The ambiguity is dissolved if the modal verb *can* is omitted, since the clausal subject requires a singular verb (*Visiting relatives is a nuisance*), whereas the phrasal subject requires the plural (*Visiting relatives are a nuisance*). See CHOMSKY, GENERATIVE GRAMMAR. [GRAMMAR]. S.G.

**TRANSITIVE AND INTRANSITIVE** [16c and 17c: from Latin *transitivus* passing across]. A transitive verb (*enjoy, make, want*) is followed by an object (*We enjoyed the trip; They make toys; He's making progress*), or is preceded by its object, in such questions as *What do you want?* Such verbs are not normally found in the forms *\*We enjoyed, \*They make/He's making, \*Do you want?* In this, they contrast with *intransitive* verbs, which do not have objects: *They shouted; He's fallen down; She hurried home*. Many verbs can, however, be both transitive and intransitive: *He is playing (football); She hurried (the children) home; He ran (a good race)*. Some grammarians divide transitive verbs into: *monotransitive verbs*, which take one object (*She ate the apple*); *ditransitive verbs*, which take two objects (*Give a dog a bad name*); *complex transitive verbs*, which take an object and a complement (*Paint the town red*). [GRAMMAR]. S.C.

**TRANSLATION** [14c: from Latin *translatio/translatiois* what is carried across, from *trans*

across, *ferre/latum* to carry. A doublet of *transfer*]. The restatement of the forms of one language in another: the chief means of exchanging information between different language communities. Translation is a fundamental yet often overlooked element in life and has played a decisive part in the development of languages like English, especially by promoting the flow of ideas and the spread of the literary forms in which they have been expressed: for example, Homeric poetry from ancient Greece and the Bible translated from Hebrew and Greek. As the Canadian historian of translation Louis Kelly has observed, 'Western Europe owes its civilization to translators' (1979). Translation derives from the universal need for mediation between speakers and writers of different languages. It depends on bilingual competence, and five distinctions are commonly made when discussing it, none of which represent absolute positions, but rather end-points in an appropriate continuum:

(1) *Translating and interpreting*. Written translation can be distinguished from oral translation or interpreting, which came first, as for example in military and diplomatic exchanges. However, because of its relative permanence and lasting influence on the transmission of culture and technology, written translation has traditionally been considered more important. Whereas such translation usually allows time for reflection and redrafting, professional interpreting does not usually allow time to think about alternatives. It takes two forms: *simultaneous interpreting* (at international conferences, etc.) and *consecutive interpreting* (in court, at diplomatic gatherings, in business transactions, etc.).

(2) *Word-for-word and free translation*. Languages do not match neatly in the way they form messages. Depending on the level at which translation equivalence can be established (word with word, phrase with phrase, word with phrase, etc.) translations can be more *literal* (that is, one-to-one at the level of words), or *free* (restatement of the message regardless of formal correspondence).

(3) *Literary and technical translation*. Depending on the type of discourse translated, a distinction is often made between literary translation (of aesthetic, imaginative, fictional texts) and technical translation (of workaday, pragmatic, non-fictional texts). However, boundary lines between them are sometimes difficult to draw, as in the translation of religious texts such as the Bible (which is currently available in over 2,000 languages). Such a text may contain both literary and other passages: for example, the drama of the Book of Job and the listing of laws in Leviticus.

(4) *Professional and pedagogical translation*. Depending on the context and the practitioner, a distinction can be made between translation as a vocation or trade (working for a client) and translation as an exercise in the process of language learning (working for a teacher). It has been argued that traditional grammar-translation tasks in school do not constitute a suitable training for translating as such; they have also, however, been widely believed to have value as an analytic discipline on a par with playing chess.

(5) *Human and machine translation*. The high cost of professional translating and interpreting has encouraged institutional investment in experiments with large-scale electronic translation and dictionary systems. Fully automatic translation of high quality seems still to be a long way off, but some computer manufacturers are currently offering PC workstations for ordinary translators which provide assistance with word processing and the making of glossaries.

**Target and source.** The intricacies of translation can be considered in terms of communication within a single language. This is usually more or less unimpeded, provided that both the sender and the receiver share and understand any dialects involved, and the channels (mouth and ear; eye and text) allow unbroken transmission. When sender and receiver do not speak the same language or dialect, translators/interpreters can mediate, if their bilingual and bicultural competence is sufficient to convert the message in Language A (*the source language*) into a more or less equivalent message in Language B (*the target language*). This is a big 'if': the translator must be skilful enough to understand the text in the source language (*receptive phase*), find suitable equivalences (*code-switching phase*), and then produce an appropriate version within the norms of the target language (*productive phase*). The success of the mediation depends on the completion of the three phases. Each phase requires a range of skills haphazardly present in all bilingual speakers and capable of being honed to a professional standard in training schools and through experience, aided by such tools as bilingual dictionaries.

**The spectrum of translation.** At its widest, the process of restatement from one language into another can include both *transliteration* (transfer from one writing system to another) and the range of options from strict word-for-word literalism to free adaptation. The following excerpts, all from *The Bhagavad-Gita* (Book 2, verse 22) illustrate, more or less, the whole spectrum.

(1) *The source*. The original Sanskrit verse, printed in the Devanagari script:

वासांसि जीर्णानि यथा विहाय  
नवानि गृह्णाति नरोऽपराणि  
तथा शरीराणि विहाय जीर्णा-  
न्यन्यानि संयाति नवानि देही

(2) *Transliteration.* The Sanskrit verse, printed in a variety of the Roman alphabet:

vāsāmsi jīrṇāni yathā vihāya  
navāni grhṇāti naro 'parāṇi  
tathā śarīrāṇi vihāya jīrṇāny  
anyāni saṁyāti navāni dehī

(3) *Word-for-word literalism:*

clothes worn-out just-as casting-off  
new-ones takes a-man others  
in-the-same-way bodies casting-off worn-out  
different-ones takes-on new the-embodied.

(Tom McArthur, *Yoga and the Bhagavad-Gita*, Thorson, 1986)

(4) *A close blank-verse translation:*

As leaving aside worn-out garments  
A man takes other, new ones,  
So leaving aside worn-out bodies  
To other, new ones goes the embodied (soul).

(Franklin Edgerton, *The Bhagavad Gītā*, Harvard University Press, 1944)

(5) *A close translation in prose:*

As a man casts off his worn-out clothes and takes on other new ones, so does the embodied (self) cast off its worn-out bodies and enters other new ones.

(R. C. Zaehner, *The Bhagavad-Gītā*, Oxford University Press, 1969)

(6) *A freer translation in prose:*

Just as a person casts off worn-out garments and puts on others that are new, even so does the embodied soul cast off worn-out bodies and take on others that are new.

(Sarvepalli Radhakrishnan with Charles A. Moore, in *Indian Philosophy*, Princeton University Press, 1957).

(7) *A free 'Biblical' prose translation:*

As a man leaves an old garment and puts on one that is new, the Spirit leaves his mortal body and then puts on one that is new.

(Juan Mascaró, *The Bhagavad Gita*, Penguin, 1962)

(8) *A free colloquial version:*

You know how easily a man changes his clothes; in the same way this inner something casts off its old worn body and takes on a new one.

(Tom McArthur (above), 1986)

For specimens of translations of two verses of the Bible over some six centuries of English, see BIBLE.

**The subtleties of translation.** Below are four lines from the German poet Johann W. von Goethe's

fourth 'Mignon's Song' (in *Wilhelm Meisters Lehrjahre*, 1795). They are followed by three translations into English and a brief comment.

Kennst du das Land, wo die Zitronen blühen,  
Im dunkeln Laub die Gold-Orangen glühen,  
Ein sanfter Wind vom blauen Himmel weht,  
Die Myrte still und hoch der Lorbeer steht . . . ?

(1) *Literary translation:*

Know'st thou the land where lemon trees do bloom,  
[earlier]  
citron-apples bloom,  
[later]

And oranges like gold in leafy gloom;  
A gentle wind from deep blue heaven blows,  
The myrtle thick, and high the laurel grows?  
(from Thomas Carlyle's *Wilhelm Meister's Apprenticeship and Travels*, 1824/7)

(2) *A translation set to music:*

Knowst thou the land in which the citrons grow,  
And oranges in golden splendour glow,  
A gentle wind is breath'd from azure skies,  
The myrtle bends, and proud the laurels rise?  
(from H. Stevens, *Beethoven: 67 Songs with Piano Accompaniment*, 1949)

(3) *A 'prose' translation:*

Do you know the land where the lemons blossom?  
Where golden oranges glow among the dark leaves,  
a soft breeze blows from the blue sky,  
and the still myrtle and the tall laurels grow?  
(from S. S. Praver (ed.), *The Penguin Book of Lieder*, 1964)

Carlyle's rhymed version captures the essential grammatical, semantic, and cultural associations, although in a second version he changed part of the first line; he may have been aware of the parallel line 'Know ye the land where the cypress and myrtle', from Byron's *Bride of Abydos*, 1813. Stevens's adaptation produces a translation which can be sung to Beethoven's setting, retaining all the features of form and content. Praver's translation, which accompanies Hugo Wolf's setting of the song, ignores formal features, including singability, in line with the purpose of the book: that is, to provide a non-literary guide for listening to German art songs.

**Translation and publishing.** Much of the world's publishing depends on translation, although the centrality of the translator's role is often only minimally indicated in the credits of particular works. Thousands of translators and interpreters around the world continue to perform essential tasks in often less-than-ideal conditions. Professional bodies such as the *Institute of Translating and Interpreting (ITI)*, the *American Translators Association (ATA)*, the *International Federation of Translators (FIT)*: French acronym, and the *Association Internationale des Interprètes de Conférence (AIIC)* represent their

interest nationally and internationally. By the early 1970s, close to half of the world's book production was made up of translations, the chief source languages being English, French, Russian, German, Spanish, and Italian, the chief target languages German, Russian, Spanish, English, Japanese, and French. The main text categories are literary works and material from the social and applied sciences, with Vladimir Ilyich Lenin, Karl Marx, Jules Verne, and Enid Blyton as the top-ranking authors. Because of worldwide demand for translation of all kinds, the 20c has been referred to as 'the age of translation'.

**TRANSLATION DICTIONARY.** See BILINGUAL DICTIONARY.

**TRANSLATION EQUIVALENT.** An expression from a language which has the same meaning as, or can be used in a similar context to, one from another language, and can therefore be used to translate it: for example, English *I don't understand*, French *Je ne comprends pas*, Italian *Non capisco*, Modern Greek *Dhen katalaveno*, Japanese *Wakarimasen*. Achieving such correspondences involves special bilingual skills to cope with the tendency among languages to 'lack of fit' (technically, *non-isomorphism* or *anisomorphism*). Thus, the source-language expression may be a single word, a phrase, or a sentence within a text, but its target-language equivalent may have to be rendered at a different level: for example, the English idiom *It's pouring (with*

*rain)* cannot be translated word-for-word into German, but the meaning can be redistributed as *Es regnet in Strömen* (It rains in streams). Most bilingual speakers can supply examples of such equivalents, and bilingual dictionaries codify them in bulk, but it is the job especially of the translator and interpreter to decide whether a particular expression is a fitting match for a particular passage. A number of complex strategies are needed to find translation equivalents, ranging from literal procedures such as direct transfer, substitution, and loan translation to devices of free translation such as transposition, adaptation, and circumlocution (which aim to find the closest functional equivalent). The literal approach can work well when language pairs have a similar structure: for example English and German with *mother/Mutter*, *Mother's Day/Muttertag*: but see FAUX AMI. The free style, however, is demanded even in similar languages whenever anything close to idiom occurs: *mother country/Heimat* (homeland), *mother-fucker/Saftsack* (juicebag), *necessity is the mother of invention/Not macht erfinderisch* (need makes inventive). [LANGUAGE]. R.H.

**TRANSLITERATION** [1860s: from Latin *trans-* across, *lit(t)era* a letter, and *-ation*]. The action, process, or result of converting one set of signs to another, usually involving at least one set of alphabetic letters. Where two writing systems have a common base, such as for Polish and English, which use variants of the Roman alphabet, transliteration is unnecessary, despite differences in sound-symbol correspondence. Transliteration becomes necessary when the systems differ greatly. Such differences range along a continuum, from the somewhat similar (Roman and Cyrillic), through the significantly dissimilar (Roman alphabet, Arabic script), to the utterly different (Roman alphabet, Japanese syllabaries and ideograms). Transliteration became important in the 19c, when European scholars wished to find Roman equivalents for the writing systems of various 'exotic' languages. As a result, there are systems of Roman transliteration (each more or less standard for its purposes) for Arabic, Chinese, Greek, Japanese, Persian, Russian, Sanskrit, and Tamil, among others. Conversion to Roman requires, in varying degrees, diacritics and special symbols for sounds or practices that have no equivalent in any prior Roman system. See ACUTE ACCENT, ALPHABET, ARABIC, CHINA, GREEK, JAPAN, NOTATION, ROMAN, SANSKRIT, TRANSCRIPTION. [TECHNOLOGY, WRITING]. T.MCA.

**TRAVELLER'S CANT.** See SHELTA.

**TREATISE** [14c: from Anglo-French *tretiz*, ultimately Latin *tractare/tractatum* to handle, treat]. (1) Formerly, a story, narrative, description, or work of literature. (2) A text, usually longer than an essay, but usually similar in style, that treats a subject in a formal, methodical, scholarly manner. The literary term *treatise poem* was coined by C. S. Lewis (*The Allegory of Love*, 1936) for 18c poems intended to instruct and edify the reader. Compare ESSAY, NARRATIVE, STORY, TEXT, TRACT. [LITERATURE, WRITING] T.MCA.

**TRENCH, Richard Chenevix** [1807–86]. Anglo-Irish clergyman, poet, and philologist; Dean of Westminster (1856–63), Archbishop of Dublin (1863–84). Born in Dublin. Educated at Twyford School in Hampshire, at Harrow, and at Cambridge. His many publications include the popularizing works *The Study of Words* (1851) and *English, Past and Present* (1855). In 1857, Trench joined the Philological Society and in the same year read to its members two papers 'On Some Deficiencies in our English Dictionaries', dealing especially with inadequacies in the treatment of word histories. At the same time, he indicated the principles which a more perfect dictionary might follow, along lines laid out by the German classicist Franz Passow in 1812 and demonstrated by H. G. Liddell and Robert Scott in their *Greek-English Lexicon* (1843). The immediate effect was to crystallize the plans which Trench, Herbert Coleridge, Frederick Furnivall, and others in the Philological Society had been developing for a new dictionary of English on historical principles. A longer-term effect was the influence the papers exerted on the aims and practice of those who eventually brought the *Oxford English Dictionary* into being. See index. [BIOGRAPHY, EUROPE, REFERENCE]. A.J.A.

**TRILL, TRILLED R.** See R-SOUNDS.

**TRILOGY** [17c: from Greek *trilogia* three-part discourse]. A sequence of three literary works linked by a common set of characters; originally three related tragedies performed at the festival of Dionysus in Athens. Trilogies are not common in English, though there are examples of a single sequel to a novel and, especially in the 20c, the novel sequence or *roman fleuve*. Eugene O'Neill (1888–1953) derived his dramatic trilogy *Mourning Becomes Electra* (1931), set in the aftermath of the American Civil War, from the *Oresteia* of Aeschylus. Evelyn Waugh (1903–66) wrote a trilogy of novels about the Second World War (*Sword of Honour*, 1965) and Joyce Cary (1888–1957) produced two trilogies, one on the life of a politician and the other of an artist. The name is sometimes applied to three works

with a common purpose but without necessary continuity of characters or action, like the three political novels of Benjamin Disraeli (1804–81) (*Coningsby*, 1844; *Sybil*, 1845; *Tancred*, 1847). The name is often incorporated as part of the title of three novels: *The Deptford Trilogy* of Robertson Davies (*Fifth Business*, 1970; *The Manticore*, 1972; and *World of Wonders*, 1975). [LITERATURE]. R.C.

**TRINBAGONIAN**, also **Trinagonian**, **Trinibagonian** [20c: blends of *Trinidad* and *Tobago*, and *-ian*. Compare TANZANIA]. Non-technical terms, used largely on an experimental basis by the local media, as composites to refer to the two-island nation, its people, and their Creole vernacular(s). The need for such a composite arises from the clumsiness of using the phrase *Trinidadians and Tobagonians* to refer to citizens and as a general-purpose adjective in a situation where it is no longer politic to subsume Tobago (the smaller island) and its residents under Trinidad or Trinidadian. The terms are more commonly written than spoken and have limited acceptance. Compare TRINBAGIANESE. [AMERICAS, NAME, VARIETY]. L.D.C.

**TRINBAGIANESE** [1970s: a blend of *Trinidad* and *Tobago*, and *-ese* as in *Japanese*]. A non-technical name for the Creole vernacular(s) of Trinidad and Tobago, coined by C. R. Ottley and used in his *Creole Talk of Trinidad and Tobago: Words, Phrases and Sayings Peculiar to the Country* (1971). See *-ESE*, TRINBAGONIAN. [AMERICAS, NAME, VARIETY]. L.D.C.

**TRINIDAD AND TOBAGO**. Official title: *Republic of Trinidad and Tobago*. A Caribbean country and member of the Commonwealth, consisting of the two major islands at the southern end of the Lesser Antilles, close to the South American coast. Capital: Port of Spain. Currency: the dollar. Economy: mixed. Population: 1.23m (1988), 1.4m (projection for 2000). Ethnicity: 41% African, 40% East Indian, 17% Afro-Indian. Religions: 36% Roman Catholic, 23% Hindu, 13% Protestant, 6% Muslim. Languages: English (official), English Creole, and some Bhojpuri, Hindi, French, and Spanish. Education: primary 91%, secondary 76%, tertiary 4%, literacy 96%. Both islands were visited by Columbus in 1498. The Spanish settled in Trinidad in the 16c and the island was periodically raided by the French, British, and Dutch. In 1802, it was ceded to the British under the Treaty of Amiens. Tobago, after being colonized by Dutch, British, and French settlers, became a British colony of the Windward Islands group in 1814. It was administratively

linked with Trinidad in 1899 and the joint territory became independent in 1962.

The term *Trinidadian English* refers to the variety of English used for formal communication by educated speakers of Trinidad and Tobago. Its lexical distinctiveness derives from the use of Spanish and of a French-based Creole before the arrival of English speakers, as well as from the influence of East Indian languages dating from the earlier 19c. Its phonetic characteristics result from pressure from the Trinidadian and Tobagonian English-based creoles with which it coexists. See CARIBBEAN, CARIBBEAN BROADCASTING, CARIBBEAN DICTIONARIES, CARIBBEAN ENGLISH, CARIBBEAN ENGLISH CREOLE, CARIBBEAN PRESS, ENGLISH, FRENCH, NAIPAUL, TRINBAGONIAN, TRINIBAGIANESE. [AMERICAS, NAME, VARIETY]. T.M.C.A., L.D.C.

**TRINITY COLLEGE LONDON.** An examining body founded in 1873 primarily for music, but with a wide range of examinations in Spoken English as a Foreign or Second Language. [EDUCATION]. W.S.

**TRIOLET** [17c: from French, a little trio]. An eight-lined piece of verse, rhyming *abaabab*. The first line is repeated as the fourth, and the first two lines are repeated as the seventh and eighth, as in this example by Thomas Hardy:

At last one pays the penalty—  
The woman—women always do.  
My farce, I found, was tragedy  
At last!—One pays the penalty  
With interest when one, fancy-free,  
Learns love, learns shame . . . Of sinners two  
At last *one* pays the penalty—  
The woman—women always do!

There is no set metre and the lines are usually short. The repeated lines can be so presented as to change their significance and allow the writer to exercise ingenuity in structure and connection. See VERSE. [LITERATURE]. R.C.

**TRIPHTHONG** [16c: from French *triphthongue*, Latin *triphthongus*, Greek *triphthongos* a triple sound]. (1) In phonetics, a vowel that starts with one quality, moves through another, and ends in a third: that is, a sequence of three vowel sounds together, such as those of *fire* and *flower*. In rhotic varieties of English, these three vowel sounds are always followed by an *r*-sound, /'faiə, 'flaʊə/; in non-rhotic varieties, they are not, /'faɪ, 'flaʊ/. (2) By analogy, three letters together, whether or not they represent a triphthong; technically, a *trigraph*, such as the *eau* in *plateau*. See DIGRAPH, DIPHTHONG, MONOPHTHONG, RHOTIC AND NON-RHOTIC, VOWEL. [SPEECH, WRITING]. T.M.C.A.

**TRIPLE RHYME.** See FEMININE ENDING, TRIPLET.

**TRIPLET** [17c: from *triple* and *-et* as in *couplet*]. (1) In verse, another name for a tercet, but often applied to the insertion of *triple rhyme* into a sequence of heroic couplets:

Chiefs shall be grudged the part which they pretend,  
Lords envy lords, and friends with every friend  
About their impious merit shall contend.  
(John Dryden, *The Medal*, 1682)

Restoration and Augustan poets used the triplet, sometimes with an alexandrine as the third line, to make a strong emphasis or to come to a definitive point in a long poem. Compare TRISTICH. (2) One of three words in a language like English, all derived from the same ancestral word, such as *cattle*, *chattel*, *capital*, all ultimately from Latin *caput/capitis* head. See DOUBLET. [LITERATURE, WORD]. R.C.

**TRISOCIATION.** See BISOCIATION.

**TRISTAN DA CUNHA**, short form *Tristan*. A British dependency in the South Atlantic. Main settlement: Edinburgh. Economy: mainly fishing (especially rock lobsters) and Tristan stamps. Language: English. Administration: an *Island Council* and an elected *Chief Islander*. The Portuguese discovered St Helena and the Tristan Archipelago in 1506 and the British occupied Tristan in 1816 during the exile of Napoleon at St Helena. In 1961, the islanders were evacuated after a volcanic eruption, but returned in 1963. The people, among whom there are only seven surnames, number some 350. Their speech is thought to have elements in common with Highland English. Distinctive features include: (1) An intrusive initial /h/: 'highland happle' for *island apple*. (2) Such words as *first*, *herb* pronounced 'farst', 'harb'. (3) Tense and possessive inflections often dropped and *is* often omitted. (4) Such usages as *plant in* (intransitive) to plant potatoes, *the sea put up bubbles* the sea grew (too) rough (for fishing), and *eastings* and *westings*, to indicate which way the island is circled. (5) The term *gulch* is common, as are such complex place-names as *Down-where-minister-pick-up-his-things*, *Ridge-where-the-goat-jump-off*, and *Blackinthehole Hill*. The island has a monthly newspaper, *Tristan Times*, produced by roneo and free to all households. Unique features of local life include *Queen's Day*, a patriotic festival, and *fishing days* regulated by the sounding of the *gong* by the Chief Islander. See SAINT HELENA. [AFRICA, NAME, VARIETY]. J.B.

**TRISTICH** [19c: from Greek *tri-* three, *stikhos* a row, line, verse]. A stanza or poem consisting of three lines. See TERCET. [LITERATURE]. T.M.C.A.

**TRITE** [16c: from Latin *tritum* worn, common, from *terere*/*tritum* to rub, wear away: compare *detritus*]. Worn out by repetition; stale, hackneyed, commonplace: a *trite adage*; *trite phrases*. Compare HACKNEYED, STOCK. See CLICHÉ. [STYLE]. T.MCA.

**TROCHEE** [16c: from French *trochée*, from Latin *trochaeus*, Greek *trokhaios* (*poús*) running (foot)]. A metrical foot of two syllables, long then short in quantitative metre, as in Latin, stressed then unstressed in accentual metre (-∪), as in the words *open* and *better*. In English verse, the trochee is often used as a variation in iambic lines. It is generally avoided at the end of a line, where it disturbs the rhythm. A trochaic line often omits the last syllable, to give a masculine ending. Such a line is *catalectic* (Greek, *katalēktikós* incomplete) and the foot in question is a *catalectic foot*, as in the opening lines of Blake's 'The Tyger' (1794):

- ∪ - ∪ - ∪ - ∪ - ∪  
Tyger! Tyger! burning bright  
In the forests of the night.

See FOOT, IAMB(US), METRE/METER, SCANSION. [LITERATURE]. R.C.

**TROPE** [16c: from Latin *tropus*, Greek *trópos* a turn, manner, style]. (1) Also *turn of phrase*. In rhetoric, both an expression that deviates from the natural and literal through a change in meaning, often with a pleasing effect, and the device or technique that makes such a change possible. For the Roman rhetorician Quintilian, tropes were metaphors and metonyms, etc., and figures (*figurae*) were such forms of discourse as rhetorical questions, digression, repetition, antithesis, and periphrasis (also referred to as *schemes*). He noted that the two kinds of usage were often confused (a state of affairs that has continued to the present day). In the 18c, the term became associated with over-ornate style and fell into disrepute when a plainer style came to be preferred. As a result, what were once known as tropes and figures are now generally called *figures of speech* or, more broadly still, *rhetorical devices*. (2) A musical adornment in medieval Christian liturgy that included dialogue and increased the popular appeal of the services. The expansion and elaboration of one particular trope, the Latin dialogue *Quem quaeritis?* (Whom do you seek?), part of the Introit of the Easter Mass, is generally regarded as the beginning of medieval drama. See FIGURATIVE LANGUAGE/USAGE, FIGURE OF SPEECH, SCHEME. [LITERATURE, STYLE]. T.MCA.

**TRUISM** [Early 18c]. A self-evident (and usually trivial) truth, and the inclination to make such

statements; a comment (considered) so obviously true that it does not need discussion, such as *We cannot live without food, you know*. The term is often a neutral synonym of  *cliché* and *platitude*. See -ISM. [STYLE]. T.MCA.

**TSOTSI-TAAL**, also **tsotsi taal** [1940s: perhaps from *tsotsi* a flashily dressed African street thug, from *potso-tso* stove-pipe trousers, possibly an Africanized adaptation of the AmE rhyming compound *zoot-suit*; and Afrikaans *taal* language]. An argot or street language among the members of young black urban gangs in South Africa: 'Black lawyers are required to be fluent in English, Afrikaans, Latin, Zulu, Venda and Tsotsi-taal whose vocab changes annually from place to place and depending on which gangs are in power' (O. Musi, *Drum*, Jan. 1987). See FLYTAAL, SOUTH AFRICAN LITERATURE IN ENGLISH. [AFRICA, NAME, VARIETY]. T.MCA.

**TUNE**. See INTONATION, RHYTHM, TONE. [SPEECH].

**TURKISH**. See AFRICAN LANGUAGES, AGGLUTINATING, ARABIC, BORROWING, EUROPEAN LANGUAGES, LANGUAGE, LINGUISTIC TYPOLOGY, URO-ALTAIC LANGUAGES, VOWEL HARMONY.

**TURKS AND CAICOS ISLANDS**. A British Caribbean dependency, consisting of two groups of 30 islands and cays forming the south-east end of the Bahamian archipelago. Capital: Grand Turk. Currency: the US dollar. Economy: tourism, fishing. Population: 7,413 (1980). Ethnicity: African, mixed. Languages: English (official), Creole. In 1765, the islands were formally linked with the Bahamas, then in 1848 with Jamaica. When Jamaica became independent in 1962, the islands were again associated with the Bahamas, then in 1972 became a British colony by local choice. See CARIBBEAN, ENGLISH. [AMERICAS, NAME, VARIETY]. T.MCA.

**TURNER, George William** [b.1921]. Australasian linguist and lexicographer, born in Dannevirke, New Zealand, and educated at the U. of New Zealand and U. College London. He was trained as a librarian before being appointed to the English department of the U. of Canterbury, New Zealand. He held a readership in English at the U. of Adelaide, Australia, from 1965 until his retirement in 1986, and was elected a Fellow of the Australian Academy of the Humanities in 1974. His publications include *The English Language in Australia and New Zealand* (1966), *Stylistics* (1973), a revision of Grahame Johnston's *Australian Pocket Oxford Dictionary* (1987), and an annotated edition of

the novelist Joseph Furphy's *Such is Life* (forthcoming). See index. [BIOGRAPHY, LANGUAGE, OCEANIA, REFERENCE]. W.S.R.

**TURNER, Lorenzo Dow** [1895–1972]. American linguist, born in Elizabeth City, North Carolina, and educated at Howard U. and Harvard U., with a Ph.D. at the U. of Chicago (1926). His dissertation was *Anti-Slavery Sentiment in American Literature Prior to 1865* (published 1931). Turning his attention to the history of English, Turner became the first African-American member of the Linguistic Society of America. He studied at the School of Oriental and African Studies, U. of London, to test his conviction that AmE showed greater linguistic influence from Africa than had hitherto been supposed. His findings appeared in a series of articles beginning in 1941 and culminating in *Africanisms in the Gullah Dialect* (1949). In this volume, he traced to West African sources usages common in the Sea Islands of South Carolina and Georgia. Using a form of the protocol developed for the *Linguistic Atlas of the United States and Canada*, Turner secured the cooperation of Gullah-speakers where others had failed. Almost alone in his field, Turner demonstrated the importance of African languages for the understanding of AmE. In 1951, Raven I. McDavid Jr. and Virginia Glenn McDavid noted that his work was 'perhaps the greatest single contribution to an intelligent reappraisal of the relationships between white and Negro speech' (in 'The Relationship of the Speech of American Negroes to the Speech of Whites', *American Speech* 26, p. 11). Moving from a professorship at Fisk U. in Nashville to Roosevelt U. in Chicago, Turner published a series of textbooks on Sierra Leone Krio for the use of Peace Corps volunteers. In 1969, he was elected to the Hall of Fame of the city of Chicago. His surviving papers, audio-recordings of Gullah, and correspondence are maintained at the Herskovits Library of African Studies, Northwestern U., Evanston, Illinois. [AFRICA, AMERICAS, BIOGRAPHY, LANGUAGE, VARIETY]. R.W.B.

**TURN OF PHRASE.** See TROPE.

**TURN-TAKING.** See CONVERSATION.

**TUVALU.** A country of Oceania and member of the Commonwealth. Capital: Funafuti. Currency: the dollar (Australian dollar also legal tender). Economy: fruit, fishing. Population: 8,500 (1988), 11,000 (projection for 2000). Languages: Tuvaluan, English (both official). Education: primary 100%, secondary 18%, tertiary 5%, literacy 70%. Formerly known as the *Ellice Islands* and part of the British colony of the

*Gilbert and Ellice Islands*, Tuvalu gained its independence in 1978. See ENGLISH, KIRIBATI. [NAME, OCEANIA, VARIETY]. T.MCA.

**TWADDLE** [17c: originally slangy, perhaps a variant of *twattle*, blending *twiddle* and *tattle*]. Senseless, silly, trifling talk or writing; commonplace nonsense; drivel, rubbish. Compare WAFFLE. [STYLE]. T.MCA.

**TWAIN, Mark** [1835–1910]. Pen name of *Samuel Langhorne Clemens*. American author, born in Florida, Missouri. A few years after his birth, the family moved to Hannibal, a village beside the Mississippi River. He had little formal schooling and went to work as a printer's apprentice soon after his father's death in 1847. When his brother Orion started a newspaper, young Sam went to work for him and wrote his first humorous sketches for the paper. He left Hannibal at 18, to travel as a journeyman printer, but his greatest ambition, fulfilled for several years until the outbreak of the Civil War closed shipping on the Mississippi, was to be a steamboat pilot. He produced a series of articles, 'Old Times on the Mississippi', in which he laid the groundwork for Huckleberry Finn's account of his adventures along the river. Mark Twain's ability to record with fidelity and insight the varied languages of the people he met was a central feature of his art. In *A Tramp Abroad* (1880), an illiterate miner tells a story about the animals and birds he has encountered in his solitary labours, and whose language (he has persuaded himself) he can understand. Here Jim Baker reflects on the unreliable grammatical usage of some of these creatures:

I've noticed a good deal and there's no bird, or cow or anything that uses as good grammar as a bluejay. You may say a cat uses good grammar. Well, a cat does—but you let a cat get excited once; you let a cat get to pulling fur with another cat on a shed, nights, and you'll hear grammar that will give you the lockjaw. Ignorant people think it's the *noise* which fighting cats make that is so aggravating but it ain't so; it's the sickening grammar. Now I've never heard a jay use bad grammar but very seldom, and when they do, they are as ashamed as a human, they shut right down and leave.

A special satiric target was pretentious language. In the following sample of an 'absurd mixture of elegant and vernacular styles' (from *The Gilded Age*, 1873), David R. Sewell has highlighted the clash of styles by putting markedly 'genteel' expressions in italics, non-standard or regional usages in boldface. A woman with newly acquired wealth and status is speaking:

*I should think so. Husband says Percy'll die if he dont have a change, and so I'm going to swap round a little and see what can be done. I saw a lady from Florida last week and she recommended Key West. I told her*

Percy couldn't abide winds, as he was *threatened with a pulmonary affection*, and then she said try St. Augustine. It's a *awful* distance—ten or twelve hundred miles, they say—but then in a *case of this kind a body cant stand back for trouble*, you know (as quoted in Sewell, *Mark Twain's Language: Discourse, Dialogue, and Linguistic Variety*, 1987).

In *The Adventures of Huckleberry Finn* (1885), Mark Twain, speaking through the voice of a semi-literate runaway boy, evokes the mythic greatness of the river and universal truths about mankind. 'The beauty of Huck Finn', says Perry Miller, 'is that the boy sees all there is to see about human depravity, violence, skulduggery, as well as virtually all which is noble, lovely, self-sacrificing, and that he tells about both without yielding to florid language.' Miller cites a passage that conveys the beauty and mystery of a dawning day on the Mississippi, as seen by Huck:

Not a sound anywhere—perfectly still—just like the whole world were asleep, only sometimes bullfrogs a-cluttering maybe. The first thing to see, looking away over the water, was a kind of dull line—that was the woods on t'other side; you couldn't make nothing else out; then a pale place in the sky; then more paleness spreading around; then the river softened up away off, and warn't black any more, but gray; you could see little dark spots drifting along ever so far away—trading scows, and such things; and long black streaks—rafts; sometimes you could hear a sweep screaming; or jumbled-up voices, it was so still, and sounds come so far; and by and by you could see a streak on the water which you know by the look of the streak that ther's a snag in a swift current which breaks on it and makes that streak look that way; and you see the mist curl up off the water, and the east reddens up, and the river, and you make out a log cabin in the edge of the woods, away on the bank on t'other side of the river, being a wood-yard, likely, and then the nice breeze springs up, and comes fanning you from over there, so cool and fresh and sweet to smell on account of the woods and flowers; but sometimes not that way, because they've left dead fish around, gars and such, and they do get pretty rank; and the next you've got the full day, and everything smiling in the sun, and the song-birds just going it! (ch. 19).

Miller's observation about this passage sums up the dimensions of Twain's achievement: 'Several dawns break over Walden Pond, and in *Moby-Dick* the sun rises over the Pacific Ocean; but had the plain style ever before so woven together the mystery and the depravity? Surely not in any American writing!' (*Nature's Nation*, 1967). See index. [AMERICAS, LITERATURE]. B.L.

**TWANG** [16c: probably echoic like *bang*, *ping*, suggesting both plucking a string and a ringing sound]. (1) Also *nasal twang* and (obsolete) *twang of the nose*. A nasal way of speaking attributed to English Puritans in the 16/17c: 'To make incoherent Stuff (seasoned with Twang and Taology) pass for high Rhetorick' (Robert South,

*Sermons*, 1661); 'odious as the nasal twang heard at conventicle' (William Cowper, *The Task*, 1784). (2) A distinctive accent or voice quality: 'You talk very good English, but you have a mighty Twang of the foreigner' (Farquhar, *The Beaux Stratagem*, 1707); 'You must not be too near them or you will hear the Cockney twang' (*Good Words* 12, 1883). See ACCENT, CHEE-CHEE ENGLISH, NASAL, NEW ENGLAND, PURITAN. [SPEECH]. T.MCA.

**TWO-LINER**. A joke in two parts, such as a question and an answer, a riddle and its resolution, a statement and a response, a proposition and an added comment. The first line 'plants' the joke, establishing the reference that is playfully exploited in the second line: 'The meek shall inherit the earth'—'But not its mineral rights' (see the Bible, Matthew 5: 5); 'Waiter, what's this fly doing in my soup?'—'It looks like the breast-stroke, sir.' See JOKE. [STYLE]. W.N.

**TWO-PART VERB**. An alternative name, especially in the US, for a phrasal verb or prepositional verb that consists of a verb and one particle: *grow up*, *look at*. See PHRASAL VERB. [GRAMMAR]. S.C.

**TYNDALE, William** [c.1492–1536]. English cleric, Bible translator, and Protestant martyr. Born in Gloucestershire, he studied at Oxford and probably Cambridge, was ordained in 1521, and entered a Gloucestershire household as chaplain/tutor, where he resolved to translate the Bible and issued a challenge to a local priest: 'If God spare my life I will cause that the boy that drives the plough shall know more of the scripture than thou.' He preached and wrote in London before moving to Germany, where his New Testament was printed in Worms (1524–5), with a later revision printed in Antwerp (1534). Copies smuggled to England were rigidly suppressed. He also translated the Pentateuch and Jonah, and possibly other parts of the Old Testament, after contact with Jews at Worms in Germany. He was betrayed to officials of the Holy Roman Emperor in Antwerp and was strangled and burned as a heretic at Vilvorde, near Brussels. Besides Bible translation, Tyndale wrote English expositions and treatises including 'Obedience of a Christian Man' and 'Parable of the Wicked Mammon'. His original work shows scholarship and literary ability; his Biblical translation was deliberately homely and without pedantry, yet was assured and with some happy renderings of Hebrew idiom, as in the phrases *for ever and ever*, *to die the death*, *a man after his own heart*, *apple of his eye*, which have passed into general English usage. The work fulfilled his aim of appealing to all classes in English society

and formed a basis for most subsequent renderings, including the Authorized Version. His translation was reissued in modern spelling as *Tyndale's New Testament*, with an introduction by David Daniel (Yale University Press, 1989). See index. [BIOGRAPHY, EUROPE, HISTORY, LITERATURE]. M.LA.

**TYPE** [15c: from Latin *typus* a figure, image, bas-relief, ground plan, from Greek *tupos* a blow, impression of a seal, stamp on a coin, mould, replica, image, shape, model]. (1) A kind, class, group, or character: *a type of book; the right type (of person) for the job*. When people or things are typed, they are categorized or classified. (2) In logic and linguistics, the general form of a word, symbol, or expression, as opposed to any instance or occurrence of that word, symbol, or expression: see TYPE AND TOKEN, WORD. (3) In traditional printing, a small individual rectangular block of hard material (sometimes wood, usually metal, generally lead), with a letter or character reversed in relief on its face; such pieces collectively; the marks or impressions made with ink by such pieces on surfaces like paper. (4) Analogous marks produced without impact, such as through photocopying and heat transfer, and electronically on screens. (5) If text is typed, it is printed by means of a typewriter or more recently by computer technology that imitates the typewriter: laser printer, dot printer, etc. See COMMUNICATIVE SHIFT, STANDARD, TYPE AND TOKEN, TYPEFACE, TYPESETTING, TYPEWRITER, TYPOGRAPHY. [LANGUAGE, TECHNOLOGY]. T.MCA.

**TYPE AND TOKEN**. In statistical and related contexts, a *type* is a generic form and a *token* is any instance of that form. Thus, the word *love*, when cited as a lexical item, is a type. If that word occurs 14 times on a page, each of those forms is its token; there are therefore 14 tokens of the type *love* on the page. In addition, the variant (usually inflected) forms of a word are also counted as tokens: if there were 7 occurrences of *loves* and 7 of *loved*, these would constitute a further 14 tokens, making 28 in all. In addition, if *lover* were also regarded for the purposes of the count as a form of *love*, and there were 2 occurrences of that form, there would be a grand total of 30 tokens of the type *love* on the page. See GENERIC, TYPE. [LANGUAGE, WORD]. T.MCA.

**TYPEFACE** [1900s]. Also **face**. The printing surface of a piece of type and the style, design, and sometimes size of the character formed by the printing surface. There are many kinds of typeface, usually divided into *body type* or *text faces*

for the printing of standard text, such as *Bas-kerville*, *Bembo*, *Bodoni*, *Caledonia*, *Century Schoolbook*, *DeVenne*, *Electra*, *Garamond*, *Janson*, *Meliior*, *Optima*, *Plantin*, *Times Roman*, and *display type* or *display faces* for the printing of titles, headings, advertisements, etc., such as *Avant Garde*, *Friz Quadrata*, *Futura*, *Helvetica Heavy*, *Italia*, *ITC Franklin Gothic*, *Palatino*, *Serif Gothic*, *Stymie*. Compare FONT, ROMAN. [TECHNOLOGY]. T.MCA.

**TYPESCRIPT**. See MANUSCRIPT, SCRIPT.

**TYPESETTING**. The setting of type for printing. Procedures for setting type remained standard from the time of Gutenberg (mid-15c) to the late 19c; type was cast in metal, character by character, from moulds. Thousands of pieces of this type were arranged letter by letter in two cases, one for the capitals (the *upper case*, so called because of its usual position on the workers' sloping bench) and another for the smaller letters (the *lower case*). The man who set the type (the *compositor*) would pick up one piece of type at a time and line the pieces up in an adjustable frame (a *composing stick*). When some lines of such type had been assembled, they were put in a tray (a *galley*) before the mass of lines was arranged into pages and made ready for printing. Hand typesetting was slow, even when done by skilled workers: some 2,500 pieces of type (including spaces) in an hour was fast. By the late 19c, a number of mechanical inventions served to speed the process up. On these, an average skilled worker could set some 10,000 characters in an hour. In the 1960s, *phototypesetting* was introduced, in which images of the letters were projected through to photosensitive paper. *Photo-offset* plates would then be created from these images. Earlier with the cathode-ray tube and now with the laser, images can be created directly on to plates for printing. Verbal and visual electronic data can be manipulated by laser and computer in extremely subtle ways, but the danger of rapidly succeeding technologies is that refinements essential for the legibility of printed text can be neglected. See LINOTYPE, MONOTYPE, PRINTING, TYPOGRAPHY. [TECHNOLOGY]. W.W.B.

**TYPEWRITER** [1860s AmE: a term applied at first to both the machine and the person using it. The term *typist* was first used from the 1880s and took several decades to become established]. A machine for writing mechanically, using the letters and characters of traditional printing. Such a device for stamping letters through an inked ribbon on to paper was first thought of in the early 18c, and working machines were known by the early 19c, but the typewriter as such was

established in the later 19c. It revolutionized office life and, even more than the printing press in the 15c, contributed to the replacement of scribes, copyists, and many of the traditional functions of clerks. The invention of a workable typewriter is usually credited to the American journalist Christopher Latham Sholes, who, with a group of co-inventors, produced a series of models, the first of which was patented in 1868. Their invention was sold to the gunmakers E. Remington & Sons, who produced a machine with a QWERTY keyboard for commercial sale in 1873. Mark Twain bought one and noted: 'It piles an awful stack of words on one page. It dont muss things or scatter ink blots around. Of course it saves paper' (his first typed letter, 1873).

The first typewriters wrote only in capitals, but a shift key (to allow both upper- and lower-case letters) was introduced by Remington in 1878. One result of their use was the complaint that typewritten letters were insulting. An early objection ran: 'I do not think it was necessary then, nor will be in the future, to have your letters to me taken to the printers, and set up like a handbill. I will be able to read your handwriting and am deeply chagrined to think you thought such a course necessary.' By the 1920s, however, the manual typewriter was thoroughly accepted and had a smooth, efficient action. Electric typewriters were attempted at the turn of the 20c and were first made available by the International Business Machine Company. The *golfball* typing head is usually associated with IBM machines of the 1960s onwards, but Thomas Edison had already described a workable model in the 1870s, and such devices as the *daisy wheel* are also 19c technology reapplied to modern machines.

Although the word-processing computer shows signs of replacing the typewriter, various generations of these machines continue to be used by the million throughout the world, and manufacturers continue to refine the technology, often in combination with word processing in various kinds of electronic typewriter. The printers used with computers (dot-matrix and laser printers) use a technology that render the type-stamping mechanical typewriter archaic. Yet the typewriter set the stage for the computer and its keyboard has been retained for computer purposes. It established the widely held view that typed material has precedence over handwritten material. The typewritten document has less individuality than the handwritten script, and may have had some influence on style of verbal expression, especially in the usage of business and government offices. The decline of handwriting as a widely practised art may well be due to the dominance of the typewriter. See BRAILLE,

COMMUNICATIVE SHIFT, DIACRITIC, KEYBOARD, MANUAL, QWERTY, TYPE. [TECHNOLOGY]. W.W.B.

**TYPOGRAPHICAL ERROR**, short form *typo*. An error in setting type, in typing, and in key-boarding. Such an error is easy to make in the process of transcribing manuscript or typescript into print and can be easy to miss in proof-reading. The word *typo* usually refers to a minor error, but typographical error can range from missing out a letter to omitting or transposing pages, or entering the wrong word: *Judas* for *Jesus* (in John 6: 67) in three Bibles published by the same printer, Robert Barker, between 1608 and 1611. Compare LITERAL, MISPRINT, MISTAKE. [TECHNOLOGY]. W.W.B.

**TYPOGRAPHY** [17c: from Latin *typographia*, from Greek *túpos* type, and *-graphía* writing]. The art and design of typeset material. Most literate people are so accustomed to text that they are almost oblivious to the effects of layout and type design on their reading. Their concern is usually limited to the size of page and type, but such matters as length of line, space between lines (leading), size of indentation, thickness and opacity of paper, and shade and reflectivity of ink are all important in typography, which involves every aspect (sometimes in the most minute detail) of the presentation of text.

**Legibility**. The ease with which a text can be read is the first concern of the typographer, and is not a simple concept. What is legible under certain conditions for certain readers is not necessarily legible for others. Moreover, the rules of typographic legibility for books does not hold true for other forms of reading: an elegant book roman, such as Baskerville, displayed on a screen or used in a traffic sign can be hard to read because the thin areas of the shaped letter become lost in definition by the screen or over distance. Even though there is considerable disagreement over what is most legible for the typography of reading-matter in quantity, there are some generally accepted central principles:

(1) *Kinds of type*. Plain serified roman is easier to read than sanserif type or any variant form of a typeface (italic, condensed, solid capitals, expanded). Even boldface, which is easier for some, does not significantly enhance legibility for most readers. Serifs (the brackets and feet found on traditional typefaces) create a flow from one letter to the next. Sanserifs (which lack these elements) do not sit so tightly together and are not weighted heavily along the base line of the type. They can be perfectly readable in small quantities, but generally need more leading and the type areas have to be smaller. Italics,

which have greater flow than romans, run narrowly together and are therefore less legible in quantity.

(2) *Spacing*. There should in a full typeset page be more apparent space between the lines than between the words. The words should be set fairly tightly, and should never (as is common with some computer typesetting) be letter-spaced: spaces introduced between the letters of the words to break up the 'fit' of the letters (type characters for reading are designed to fit snugly together so that the words can be recognized almost by their outline). Gaps between words can create vertical lines or *rivers* running up and down the page; these are distracting and break the left-to-right movement of the eye. The problem of spacing is especially apparent in typewritten material where the strong vertical orientation of single-spaced typewritten material resists (sometimes imperceptibly) the horizontal movement of the eye.

(3) *Line*. The type line should be about ten to twelve words long, with a minimum of seven words. The eye may become lost in a page with longer lines. A newspaper column, meant to be scanned as much as read, may successfully be narrower than the type area of a standard book.

These rules for legibility are constantly broken. The designer of a text for children, a popular magazine or newspaper, or various forms of advertising wants effects different from the kind of legibility thought suitable for continuous prose. No one would want an index or telephone book set ten or twelve words across, because the information is scanned vertically, then horizontally, not read sequentially. Typography, like most applied arts, is on the whole conservative: one may imaginatively stretch the limits of the normal, but beyond a certain point legibility (based on conventions previously learned by readers) must be acknowledged.

**White space.** Above all, typography is the art of using space intelligently. Few readers see the *white space* (empty areas) on a page. Yet for the designer this space is as essential as the black of the letters. It is basic to the way information is structured visually: on a microscopic level, the empty holes in type (*counters*) influence their legibility, and space between words is a key marker for meaning and governs the way people read. Empty space can be used to organize data, as in paragraph indentations, the small blanks that separate entries in a dictionary, the gaps between columns of numbers, or the spaces that signal the end of a section or a chapter. Graphs and other displays of information are places where verbal and numerical data intersect in spatial configurations.

**Margins.** Another significant empty space in a page is the margin. In a paperback novel, outer margins are sacrificed for a larger type-size, but in a work of reference wider margins may be kept for ease in consultation. The *gutter* of a book (the internal margins running down the centre of the opening) is often misunderstood by the inexperienced designer: a book can be rendered almost unusable by a narrow gutter, because the binding must then be constantly forced so as to get at the text. This is especially troublesome with so-called *perfect-bound* books, in which the leaves are held together only by flexible adhesive.

**Layout grids.** Type areas, margins, headings, the placement of illustrations, and so on are often governed by *grids*: areas of space that are in predetermined relationships. The grid layout is most apparent in a newspaper, with its often highly structured arrangement of advertisements, columns, spreads, illustrations. Such a grid creates expectations and guides our consumption of information and language. A simpler grid structure is used in the layout of books. Early printed books sometimes show a sophisticated use of the double grid space created by an opening of two facing pages (a two-page spread) where the relations of margins and type space are sometimes derived from mathematical harmonies such as the Golden Section. The grid is especially important in magazines and books that use illustrations.

In determining the architecture of a book or other printed document, one may analyse a design in terms of the related elements of letter, line, page, and whole work. Decisions regarding each aspect are controlled by the nature of the text and by the cost of creation, materials, and promotion. The large quantity of material in a work like *The Oxford Companion to the English Language* requires a smallish type and a two-column page format. The type will be chosen for maximum legibility in a small size. Running heads, essential in an alphabetic work of reference, must also be of a clear size. White space is especially important as a means of marking of entries and sections. The book is organized both to be consulted and browsed in, and must look like other Oxford Companions. All the decisions for typographic design, down to the use of small capitals for cross-references and the style of numbers, are marked on a specification sheet which guides the typesetter, who will enter codes into the electronic text. The elements of design, while to some extent predetermined by a standard layout, may vary from other Companions for a variety of reasons specific to the subject in question: this is a Companion to a language, not to music or the mind.

**TYPOLOGY OF LANGUAGE.** See LINGUISTIC TYPOLOGY.

# U

**U, u** [Called 'you']. The 21st letter of the Roman alphabet as used for English. It originated in the Phoenician consonant symbol *waw*, the common ancestor of the letters *F, U, V, W, Y*. The Greeks adopted *waw* as *upsilon* (*Y*, lower case *v*), which the Romans took from the Etruscans as *V*. The distinction in English between *u* as vowel and *v* as consonant was not made consistently in print until the 17c. Previously, the distinction tended to be positional, not phonological, with *v* used word-initially and *u* medially: *vnder, liue*. Until the 19c, some dictionaries listed *u* and *v* together rather than successively, or *v* before *u* in the alphabet. The use of *V* for *U* has survived into the 20c for some lapidary inscriptions: the BBC's *Bush House* in London has *BVSH HOVSE* carved over the entrance.

**Sound values.** (1) Formerly, the common feature in the pronunciation of *u, v, w*, was lip movement: lip-rounding is a feature of the back vowel in *put* and *truth* and the front vowel in French *tu*; /v/ is a labio-dental consonant; /w/ is a labial semi-vowel. In Modern English, French *u* has been Anglicized as a diphthong with a preceding *i*-glide (*music, argue*) and *u* commonly represents /w/ before a vowel after *g, q,* and *s* (*anguish, quiet, persuade*). (2) Beside these traditional values of *u*, most English accents have a further value. By the 17c, a vowel shift in southern England had changed the *put*-value of *u* in many words to a new sound, now heard in most accents, but not in the accents of the English Midlands and North. This is the value of *u* in *but* (except for the North of England), which today no longer rhymes with *put* and involves no lip-rounding. (3) In general pronunciation, the letter *u* spells four distinct vowel sounds, as in *but, put, truth, music,* as well as the /w/ in *quiet,* etc. The four vowel sounds will be referred to below as the values *but-u, put-u, truth-u, music-u.*

**Long and short U.** The four vowel values can be grouped into long and short pairs: *but-u* and *put-u* are short, *truth-u* and *music-u* are long. Like the long and short values of the other vowel letters, short and long *u* alternate in related words: *assumption/assume, humble/humility, judge/judicious, number/numerous, punish/punitive, reduction/reduce, study/student.*

**Variation in values.** The four values are not consistently distinguished. Scots typically do not distinguish *put-u* and *truth-u*, and AmE often gives a *truth-u* to words pronounced with *music-u* in RP: AmE *duty* rhyming with *booty*, RP *duty* rhyming with *beauty*. This change occurs only after alveolar consonants: /d, l, n, r, s, t/. Because the *but/put* split did not take place in the Midlands and North of England, *but/put* rhyme in the accents of these regions. This non-distinction of *but-u* and *put-u* has often been stigmatized as non-standard, while their occasional reversal (*butcher* being pronounced with *but-u* rather than *put-u*) is considered to be hypercorrection towards RP. Variation between *truth-u* and *music-u* is not always regional, the distinction generally being blurred after *l, s,* as when *lute/loot* may or may not be pronounced as homophones, and *sue/suit* may in BrE have either long value of *u*.

Although four possible vowel values in many accents make *u* a complex letter (with division into short and long realizations, and with variation between these values), a particular value is generally apparent from the environment. *U* is normally short except syllable-finally, and *truth-u* only arises after certain consonants.

**Other spellings.** The values of *u* have common alternative spellings. As a result of vowel shifts or spelling changes, patterns have arisen with the sound values of *u* in *but, put, truth,* but using *o* (*son, wolf, do, move*), or *oe* (*does, shoes*), or *oo*

(*blood, good, food*), or *ou* (*touch, could, youth*). Similarly the sound of long *u* is commonly spelt *ew* (*crew, dew, few, newt, pewter, steward*); arguably *w* should be seen here as a positional variant of *u* (compare *few/feud*).

**But-U (short).** Short *u* occurs before final consonants and (usually multiple) medial consonants: initial *u* in words of Old English origin (*udder, ugly, under, up, us, utter*, and the negative prefix *un-* as in *unborn, uneventful*); before two consonants in some non-English words (*ulcer, ultimate, umbilical, umpire*); in monosyllables ending in a consonant letter (*tub, bud, cuff, mug, luck, cull, bulk, hum, sun, bunk, cup, bus, just, hut*); in short-vowel monosyllables ending in silent *e* (*budge, bulge, plunge*). A few monosyllables contain *put-u* (see below), and the *truth-u* in *truth* itself (and also in *Ruth*) is an exception. In polysyllables, *but-u* usually precedes two consonants, either doubled (*rubble, bucket, rudder, suffer, nugget, sullen, summer, supple, hurry, russet, butter*) or as a string (*publish, indulgent, number, abundant*). Words ending in *-ion* similarly have short *u* before two consonants: *percussion, convulsion, compunction, destruction, assumption*, but long *u* before a single consonant in *confusion, evolution*. Exceptions to these patterns include long *u* in *duplicate, lucrative, rubric* and as indicated by final magic *e* in *scruple* (contrast short *ou* in *couple*); short *u* before a single consonant in *study* (contrast *muddy, Judy*) and in *un-ion* (contrast *trun-ion, union*).

**Put-U (short).** The lip-rounded *put-u* occurs in a few words, especially after the labial consonants *b, p*, and before *l*: *bull, bullet, bulletin, bullion, bully, bush, bushel, butcher, cuckoo, cushion, full, pudding, pull, pullet, pulley, pulpit, push, puss, put, sugar. Muslim* is heard with both *but-u* and *put-u*. *Put-u* is nevertheless not a rare sound in English, being also spelt *ou* in the common *could, would, should*, and frequently *oo*, as in *foot, good*.

**Truth-U and Music-U (long).** Long *u* (whether *truth-u* or *music-u*) occurs in polysyllables before a single consonant with following vowel: contrast *fundamental/funeral* and the patterns in *cucumber, undulate*. Long *u* occurs in: *alluvial, deputy, educate, fury, ludicrous, lunar, peculiar, refusal, ruby, rufous, ruminate, superb*. In final closed syllables, long *u* is usually shown by magic (lengthening) *e*: *amuse, flute, fume, huge, prelude, puce, puke, pure, refute, rude, rule, ruse, tube, tune*. In accordance with the above patterns, the monosyllabic prefix *sub-* has *but-u* (*subject*), but disyllabic *super-* has long *u*. In most circumstances, long *u* is *music-u*, the initial *i*-glide being assimilated to produce *truth-u* only after certain consonants. *Music-u* is therefore found word-initially before a single consonant, especially in

derivations from the Latin root *unus* (one), as in *unicorn, unify, union, unity, universe*. Other cases include *ubiquitous, urine, use, utility. Music-u* follows consonants as in *ambulance, acute, confuse, coagulate, music, annual, compute, enthuse, revue*, and in RP but commonly not in AmE as in *duke, tube*. Both *music-u* and *truth-u* are heard after *l, s* (*lute, suit*). *Truth-u* occurs after *r, sh* (including the affricate *j*) and is explicit in *yu: truth, prune, Shute, chute, Schubert, June, jury, yule*. In an unstressed medial syllable, 'long' *music-u* tends in fact to be a rather short vowel: contrast *deputy, educate* with *despite, duke*.

**Final U.** Syllable-final *u* is pronounced long. Word-finally, it has an additional silent *e* in long-established English words (*argue, continue, due, rue*), although this commonly disappears before suffixes (*argue/argument, continue/continual, due/duty, true/truth*). Final *u* occurs without following *e*, particularly in recently formed or borrowed words: *emu, flu, guru, Hindu, jujitsu, menu*. Long *u* also arises syllable-finally before a vowel (contrast *annul, annual*): *dual, suet, fluid, fluoride, vacuum*.

**U before R.** Before *r* with no following vowel, RP gives *u* the same value as *e* or *i* before *r*: *fur, hurt, nurse, absurd, purchase, concur* (compare *her, sir*). When a vowel follows, *u* is long (*rural, bureau, during*), but is modified with the hint of an inserted schwa (*cure, pure, endure; rural, bureau, during*). Like other multiple consonants, *rr* normally induces a preceding *but-u*: *burrow, current, flurry, furrier* (noun): but the adjective *furry* retains the value of *u* of its base form *fur*, and its comparative *furrier* is then a homograph of the noun *furrier* with its *but-u*.

**U and schwa.** Like all vowel letters in English, *u* when unstressed in fluent speech may lose distinctive value, being reduced to schwa: initially (*until, upon*), before a stressed syllable (*suggest, surround*), and after the main stress especially before *l, m, n, r, s* (medially, as in *faculty, calumny, voluntary, Saturday, industry*, and in final syllables *awful, difficult, autumn, album, minimum, museum, tedium, vacuum, murmur, injure, circus, radius*). In some words, *u* is reduced to schwa while retaining the preceding *i*-glide of *music-u*: *century, failure*. In *lettuce* and in the noun *minute*, *u* is commonly reduced to schwa, and in RP to the value of short *i*. The adjective *minute* has *music-u*.

**Assimilation.** Phonetically, *music-u* is a diphthong consisting of a glide *i*-sound followed by *truth-u*, but in fluent speech the glide often affects the value of a preceding consonant, sometimes being assimilated with it entirely, as when *duty, tune* are spoken as 'jooty', 'choon' (typically not in North America), and *casual, picture* are

spoken as 'kazhel', 'pikcher'. Such assimilation is usual before the suffixes *-ual*, *-ure* after *d*, *s*, *t*, *z*: *gradual*, *casual*, *mutual*; *verdure*, *closure*, *picture*, *azure*. The assimilation with initial *s* in *sugar*, *sure* is of such long standing that the *s* is perceived as having an abnormal value. For some speakers, the tendency extends to *assume* and *presume* spoken as 'ashoom', 'prezhoom'.

**Semi-vowel U.** (1) The value of *u* as a semi-vowel occurs commonly in words of French derivation and typically after *g* (*distinguish*, *guava*, *language*, *sanguine*), *q* (*quash*, *quail*, *quest*, *quit*, *quiet*, *quote*, *acquaint*, *equal*, *loquacious*), and *s* (*suave*, *suede*, *suite*, *persuade*). (2) In similar contexts, however, *u* may have its full vowel value: contrast *suite*/*suicide*. (3) Some words with initial *qu* are of Old English origin, having changed their spelling after the Norman Conquest from *cw-* to *qu-*: *cwen*, *cwic* now written *queen*, *quick*.

**Silent U.** (1) Especially in words of French derivation: after *g* (where it serves to distinguish hard and soft *g*: *page*/*vague*), as in *vague*, *fatigue*, *vogue*, *fugue*, and after *q*, as in *opaque*, *technique*, *mosquito*. (2) In initial *qu* (*quay*, *queue*) and in *conquer* and often *languor*, although pronounced /w/ in *conquest*, *languid*. (3) Elsewhere, *u* is inserted only to preserve the hard value of preceding *g*: *Portugal*/*Portuguese* (see G, Q). (4) Although apparently part of a digraph, *u* is effectively silent in *gauge*, *aunt*, *laugh*, BrE *draught* (compare AmE *draft*), *build*, *cough*, *trough*, *though*, BrE *mould*, *moult*, *smoulder* (compare AmE *mold*, *molt*, *smolder*), *boulder*, *shoulder*, *soul*, *buoy* (especially BrE), *buy*. Although *u* is silent in *biscuit*, *circuit*, it arguably indicates preceding hard *c* (contrast *explicit*). It is optionally silent in *conduit*.

**Digraphs.** *U* often has the secondary function of indicating a modified value for a preceding letter. For the digraph *au* (as in *taut*) and *ou* (as in *out*), see A, o respectively. *Eau* in *beauty* has the value of *music-u*. For final *eau* (*bureau*, etc.), see E. The main digraphs having one of the four sound values of *u* are:

**EU.** (1) The digraph *eu* regularly represents *music-u*, especially in words of Greek derivation (*Europe*, *esology*, *pseudo-*, *neurotic*), but occasionally elsewhere (*feud*). (2) In *sleuth*, the *eu* represents *truth-u*, as does *oeu* in BrE *manoeuvr* (AmE *maneuver*).

**OU.** (1) The digraph *ou* has one of the values of *u*, except when it is used as a standard digraph for the diphthong in *out* and for long *o* as in *soul*. See o. The spelling *ou* sometimes derives from French, and sometimes represents earlier pronunciation with a long vowel. (2) It represents *but-u* as in *country*, *couple*, *cousin*, *double*, *southern*, *touch*, *trouble*, *young*, with following

/f/ spelt *-gh* as in *enough*, *rough*, *tough*, and in BrE *courage*, *flourish*, *nourish*, AmE giving this *-our-* the value as in *journey*. (3) It represents *put-u* in *could*, *should*, *would* and *truth-u* in *ghoul*, *group*, *soup*, *through*, *uncouth*, *wound* (noun), *young* and also in such recent French loans as *boulevard*, *bouquet*, *coup*, BrE *route* (in AmE often homophonous with *rout*), *souvenir*, *tour*, *trousseau*. (4) It represents modified *u* before *r*: *courteous*, *courtesy* (compare cognate *curts[e]y*), *journal* (cognate *diurnal*), *journey*, *scourge* (compare *urge*).

**UE, UI.** The combinations *ue* and *ui* usually indicate long *u*: *Tuesday*, *juice*, *sluice*, *bruise*, *nuisance*, *cruise*, *fruit*, *suit*, *pursuit*, *recruit*. The *i* is redundant when the word already ends in *e*: compare *reduce*/*juice*, *ruse*/*bruise*. In the verbs related to *suit*, *pursuit*, the *i* is replaced by *e*: *sue*, *pursue*.

**Variations.** (1) Historically, there has been variation of spelling and pronunciation, especially between *u* and *o*: in the cognates *custom*/*costume*, *ton/tun*, *tone/tune*. See o. One factor may have been a need to distinguish the vertical strokes or minims of *u* from the vertical strokes of adjacent letters in Middle English manuscripts; hence Middle English *son* rather than *sune* for Old English *sunu* and Modern English *son*. (2) Similarly, *w* may sometimes have been used to avoid confusion of *u*/*v* (contrast *coward*/*cover* and French *coward*), or to distinguish homophones (*foul*/*fowl*), or even meanings of the 'same' word, such as the recent differentiation of *flour*/*flower*. (3) In general, *ou* occurs medially (*house*, *though*) and *ow* more often finally (*how*, *throw*), before vowels (*tower*), and before *l* (*howl*, *bowl*), *n* (*clown*, *sown*), and *d* (*crowd*). However, the choice between *ou*, *ow* is often arbitrary, as in the cognates *noun*/*renown*. (4) For AmE *-or*, BrE *-our*, see o. (5) The number *four* loses *u* in the derivative *forty*, though not in *fourteen*. See ALPHABET, CLASSICAL ENDING, LETTER<sup>1</sup>, SPELLING, v, w. [WRITING].

C.U., T.MCA., E.W.

**U AND NON-U** [1954: abbreviations of *Upper class* and *Non-Upper class*, coined by the philologist A. S. C. Ross]. Upper-class and non-upper-class usage, linguistic and social: terms first used by Ross for academic purposes and popularized through inclusion in *Noblesse Oblige* (1956), edited by Nancy Mitford, a work whose lists of expressions that served as social clues inspired over the next few years a search for further U-isms and non-U-isms: 'In this article I use the terms *upper class* (abbreviated: U), *correct*, *proper*, . . . to designate usages of the upper class; their antonyms (*non-U*, *incorrect*, *not proper*, . . .) to designate usages which are

not upper class' (A. S. C. Ross, *Neuphilologische Mitteilungen* 55, 1954); 'Fault, also, Balkans are pronounced by the U as if spelt *fawlt, awlso, Bawlkans*' (Ross, in *Noblesse Oblige*); ' "I don't think he's really U, though, do you?" — "Oh no. Shabby genteel, maybe" ' (Alison Lurie, *Love and Friendship*, 1962); 'He had spoken with a distinct English accent. Very U indeed' (D. Bennett, *Jigsaw Man*, 1977); 'The Wicked Queen said "Mirror, mirror, on the wall", instead of "Looking glass, looking glass, on the wall" . . . So the Wicked Queen exposed herself as not only wicked but definitely non-U' (Frederic Ogden Nash, *You can't get there from here*, 1957). [STYLE, VARIETY]. T.MCA.

**UCLES**, short for *University of Cambridge Local Examination Syndicate*. Also informally *the Cambridge Syndicate, the Syndicate*. A local examining body based on the U. of Cambridge and established in 1858. It is responsible for schools examinations in England (as a member of the Midland Examining Group), for the *General Certificate of Secondary Education (GCSE)*, and individually for the *General Certificate in Education at Advanced Level*. The strong involvement of UCLES in overseas examining dates from c.1870 with the *School Certificate* and examining in English as a foreign language from 1913, with the *Certificate of Proficiency in English*. See CAMBRIDGE CERTIFICATE OF PROFICIENCY IN ENGLISH, CULTURA, EXAMINING IN ENGLISH, FIRST CERTIFICATE IN ENGLISH, IELTS, ROYAL SOCIETY OF ARTS. [EDUCATION, EUROPE, MEDIA]. W.S.

**UGANDA**. Official title: *Republic of Uganda*. A country of East Africa and member of the Commonwealth. Capital: Kampala. Currency: shilling (100 cents). Population: 16.2m (1988), 23.6m (projection for 2000). Ethnicity: 18% Baganda, 14% Banyoro, 10% Bagisu, 8% Banyankole, 8% Turkana, 8% Iteso, 7% Bachiga, 7% Lango, 4% Acholi, 3% Karamajong, 13% others. Religion: 33% Protestant, 33% Roman Catholic, 18% traditional, 16% Muslim. Languages: English (official), Swahili, and Luganda and other indigenous, mainly Bantu, languages. English is the language of education, government, and the media, including the leading newspaper, the *Uganda Times*. Education: primary 54%, secondary 10%, tertiary 1%, literacy 58%. Uganda was visited by Arab traders in the 1830s, by the British explorer Captain John Speke in the 1860s, and in 1888 granted by the Crown to the Imperial British East Africa Company. In 1893, the Company withdrew and the territory was administered by a commissioner, the kingdom of Buganda becoming a British Protectorate in the same year. Between 1900 and 1903, treaties with the four Ugandan kingdoms resulted in the

entire territory becoming a protectorate. Uganda gained its independence in 1962. The English of Uganda is a variety of East African English. It is non-rhotic and tends to be stress-timed. Because local Bantu languages generally have only two fricatives, /f, s/, the other English fricatives tend to be obscured: 'sooeh' for *sure*, 'ferry' for *very*. Many do not distinguish *r* and *l*: 'rorry', 'lolly', and 'rolly' are all variants for *lorry*. There are fewer consonants in the vernaculars than in English and consonant clusters are managed by means of an epenthetic vowel ('sitting' for *string*) or by reducing the cluster (in various ways: for example, 'lents' or 'lenss' for *lengths*). See BANTU, EAST AFRICAN ENGLISH, ENGLISH, SWAHILI. [AFRICA, NAME, VARIETY].

C.L.N., L.T.

**UK, U.K.** See UNITED KINGDOM.

**ULSTER**. The name of one of the four historic provinces of Ireland, also applied to Northern Ireland, which covers less territory. It is associated with the Celtic epic cycles of Cúchulain and Finn MacCumhail and with the Scots who went from Ireland in the 6c to settle in the west of what later became Scotland. There are nine counties in Ulster proper, six in Northern Ireland (Antrim, Armagh, Derry, Down, Fermanagh, Tyrone) and three in the Irish Republic (Cavan, Donegal, Monaghan). During the English conquest of Ireland, Ulster was the most rebellious province and was therefore more heavily 'planted' (settled) than Connaught, Leinster, and Munster, creating the *Ulster Plantation* of Protestant English and Scots. It is the most linguistically varied region of Ireland: Gaeltacht areas in Donegal; Hiberno-English communities especially in Fermanagh and Tyrone; Ulster Scots especially in Antrim and Down; Anglo-Irish especially in the south; RP speakers among the Northern Ireland Ascendancy (landed gentry). See BELFAST, HIBERNO-ENGLISH, IRELAND, NORTHERN IRELAND, PROTESTANT ASCENDANCY, ULSTER ENGLISH, ULSTER SCOTS. [EUROPE, NAME]. L.T., T.MCA.

**ULSTER ENGLISH**. English as used in any part of the historic province of Ulster, which includes Northern Ireland and three counties of the Irish Republic. See NORTHERN IRISH ENGLISH, ULSTER. [EUROPE, VARIETY]. T.MCA.

**ULSTERMAN/WOMAN**. See -MAN/WOMAN.

**ULSTER SCOTS**. A variety of Scots spoken in the north of Ireland, mainly in parts of Antrim, Derry, Donegal, and Down, but influencing all varieties of speech in Northern Ireland and adjacent parts of the Irish Republic. The extent of

Ulster Scots in a person's speech is related to region, education, and social position. The lower down the social ladder, the more likely is the speaker to roll the /r/ in words such as *war* and *work*; lose the postvocalic /l/ in words like *fall* and *full* (*fa, fu*); rhyme *die* with *me* ('dee'), *dead* with *bead* ('deed'), *home* with *name* ('hame'), *now* with *who* ('noo'); and use the voiceless velar fricative in the pronunciation of *Clogher*, *laugh*, *trough* (like ScoE *loch*). The phonological similarity between Ulster and Lowland Scots is reinforced by vocabulary, although many traditional words are in decline. Words shared by the two communities include *ava* at all, *bairn* a baby, child, *brae* a hill, steep slope, *firnest* in front of, *greet* to cry, *ken* to know, *lum* a chimney, *message* an errand, *nor* than, *oxther* an armpit (Scots *oxter*), *peerie* a spinning-top, *tae* to. Two distinctive grammatical features are the negatives *no* (*We'll no be able to come; Do ye no ken who A mean?*) and *-nae/ny* added to auxiliary verbs (*A didnae think he would do it; Ye canny mean it*), and the demonstratives *thon* *yon*, *thonder* *yonder* (*Thon wee lassie's aye bonny; Thonder he is*). Ulster Scots has had a literary tradition since the peasant poet James Orr in the 18c. G. F. Savage-Armstrong and Adam Lynn have used it in the 20c. It has also been used for prose, especially for comic purposes, by writers such as W. G. Lyttle in the novel *Betsy Gray* (1888). The following passage is from Savage-Armstrong's poem 'Death and Life' (1901):

'Puir Wully is deed!' — 'O, is he?'  
 'Ay, caul' in his coffin he's leein!'  
 'Jist noo A em muckle tae busy  
 Tae trouble me heed about deein';  
 There's han's tae be got fur the reapin'  
 We're gaun tae the wark in the murn;  
 An' A'm thinkin' the rain 'ill come dreepin',  
 The-night, an' destroyin' the curn.'

[*puir* poor, *deed* dead, *caul'* cold, *leein'* lying, *jist noo* A em muckle tae busy just now I am much too busy, *me heed* my head, *han hand* (worker), *gaun tae the wark* going to work, *murn* morning, *dreepin* dripping/dropping, *the-night* tonight, *curn* corn]

See BELFAST, IRISH ENGLISH, NORTHERN IRELAND, NORTHERN IRISH ENGLISH, SCOTCH-IRISH, SCOTS, SCOTTISH VOWEL-LENGTH RULE, ULSTER. [EUROPE, VARIETY]. L.T.

**UMLAUT** [1830s: German, from *um* around (signifying making a change), *Laut* sound]. A diacritic placed over a vowel in some languages to mark a modification in quality: in German, the *a* in *Mann* modified in the plural *Männer* (compare English *man/men*). The symbol originated in German as a superscript *e*. In English, the umlaut is sometimes rendered by a following *e*: *Duesseldorf* for *Düsseldorf*. See ABLAUT, DIACRITIC, DI(A)ERESIS. [WRITING]. C.U.

**UNABRIDGED.** (1) [16c]. Not shortened: *an unabridged dictionary*. (2) [mid-19c: AmE]. A dictionary that has not been shortened but is as comprehensive as constraints of size, effort, and expense permit: 'You small boy there, hurry up that "Webster's Unabridged"' (Oliver Wendell Holmes, *The Professor at the Breakfast-Table*, 1860); *The Random House Dictionary of the English Language: Second Edition, Unabridged* (title, 1987). See ABRIDG(E)MENT, RANDOM HOUSE DICTIONARY, WEBSTER'S NEW INTERNATIONAL DICTIONARY. [REFERENCE]. T.MCA.

**UNATTACHED PARTICIPLE.** See PARTICIPLE.

**UNCIAL** [17c: from Late Latin *unciales* (*litterae*), from *uncialis* relating to a twelfth part, weighing one-twelfth of a *libra* (pound), from *uncia* a twelfth part. The words *inch* and *ounce* also derive from *uncia*]. (1) Relating to an inch or ounce; divided into twelve parts; based on a duodecimal numbering system. (2) Relating to a form of majuscule writing with unjoined and generously curved or rounded letters that are faster to write than standard Roman capitals. Uncial writing was used chiefly for Greek and Latin manuscripts c.3–9c, and characterized much early Christian writing. The minuscule letters of the English Carolingian style were developed from uncial and 'half-uncial' forms. Half-uncial was the hand used in writing the Book of Kells, a Latin work that is displayed in the library of Trinity College, Dublin. The term is also applied to letters of a similar type, whether or not they are capitals in form. The original relationship of letters to weights and sizes is unclear: they may at first have been an inch high or large enough to suggest the comparison, or the word may have originally been *uncinales* hooked, bent. (3) An uncial letter (*written in uncials*); uncial writing (*Irish uncial, Roman uncial*); an uncial manuscript; a large or capital letter. See CALLIGRAPHY, and the uncial letters shown beside the letter entries (A, B, C, etc.) in this volume. [WRITING]. T.MCA.

**UNCLE SAM** [During the War of 1812, a jocular expansion of the initials *U.S.*]. A personification of the United States, its government, or its people. By the mid-19c, the figure now associated with the name (a tall, gangling man with long white hair and chin whiskers, dressed in striped trousers, a tailcoat, and a tall hat with stars) had begun to appear in cartoons and by 1870 had been popularized by the cartoonist Thomas Nast. The figure of Uncle Sam is derived partly from two earlier personifications, *Brother Jonathan* and *Yankee Doodle*, and like them is historically associated, by name and

appearance, with New England, although few present-day Americans make the association. Compare JOHN BULL. [AMERICAS, NAME]. J.A.

**UNCOUNTABLE NOUN.** See COUNTABLE AND UNCOUNTABLE.

**UNDERSTATEMENT** [19c]. A semi-technical term for saying less than one might or saying something less forcefully than one might; any occasion of doing this. Understatement is often used as a kind of emphasis in reverse, especially in BrE: *We're (quite) pleased* (said when something has been an outstanding success and jubilation would be appropriate). See LITOTES, MEIOSIS. [STYLE]. T.MCA.

**UNDERSTOOD.** A traditional term for a word or words not present but required in interpreting a construction: the subject *you* is 'understood' in the order *Go away* (You go away); auxiliary and subject *have you* in *Got any cake?* (Have you got any cake?); auxiliary *is* in *Anybody in?* (Is anybody in?). See ELLIPSIS. [GRAMMAR]. S.G.

**UNDERTONE** [18c]. Both a continuous low or subdued tone, whether of a voice (*conversing in undertones; chanting a dirge in an undertone; a wheedling undertone*) or a sound (*the faint undertones of insects' wings*), and an underlying quality, especially of feeling (*an undertone/undercurrent of resentment in their arguments*). Speaking in an undertone is comparable to whispering, especially so as to make asides and private comments to a neighbour while someone is speaking normally, giving a talk, or the like; its effect is often to make such a speaker irritated or nervous. Compare ASIDE, TONE. [SPEECH].

T.MCA.

**UNILINGUAL.** See LINGUAL.

**UNIT CREDIT.** An examination system testing one portion of the syllabus at a time, with accumulative certification. As a language examination, the concept was introduced by the Council of Europe in 1976, as part of their *Threshold* and *Waystage* specifications. Applications in the field of English as a Foreign Language (EFL) include the RSA/UCLES examination in the *Communicative Use of English as a Foreign Language*, the UCLES *Diploma of English Studies*, and the UCLES *Cambridge Examination for English Language Teachers*. See COUNCIL OF EUROPE, EXAMINING IN ENGLISH. [EDUCATION, EUROPE]. W.S.

**UNITED ARAB EMIRATES.** See ARABIC, ENGLISH.

**UNITED KINGDOM, The.** Full form *The United Kingdom of Great Britain and Northern Ireland*. Short form *the UK*. A country of Western Europe, also known as *Great Britain* or *Britain*. It is a monarchy consisting of the formerly separate kingdoms of England and Scotland, the principality of Wales, and the province of Northern Ireland, is a member of the Commonwealth, and has various dependencies around the world, such as Anguilla in the Caribbean, Gibraltar in the Mediterranean, and until 1997 Hong Kong in East Asia. Capital: London. Currency: the pound sterling (100 pence). Economy: mixed. Population: 56.96m (1988): 73% English, 10% Scottish, 5% Welsh, 4% Irish, 2% Caribbean, 2% South Asian, Chinese, Cypriot; 2% foreign nationals. The projection for 2000 is 57.5m. Religions: 59% Protestant (including 49% Anglican, mainly in England, 4% Presbyterian, mainly in Scotland, and 1% Methodist), 28% non-professing, 10% Roman Catholic, 2% Muslim, 1% Jewish, Hindu, Sikh. Languages: English is the national language, Welsh is spoken in Wales, Gaelic in parts of Scotland, and many other languages variously throughout the country (and especially in London): see BRITISH LANGUAGES. Education: primary 97%, secondary 89%, tertiary 22%, literacy 99%. See AMERICAN ENGLISH AND BRITISH ENGLISH, ANGLO-, BRIT, BRITAIN, BRITANNIA, BRITICISM, BRITISH, BRITISH EMPIRE, BRITISH ENGLISH, BRITISHER, BRITISH PUBLISHING, BRITON, COMMONWEALTH, DIALECT IN ENGLAND, DIALECT IN SCOTLAND, DIALECT IN WALES, ENGLAND, ENGLISH, GREAT BRITAIN, HISTORY OF ENGLISH, JOURNALISM, LITERACY, LONDON, NEWSPAPER, NORTHERN IRELAND, SCOTLAND, SPELLING, TELEPHONE, TESD, TESL, ULSTER, WALES. [EUROPE, NAME]. T.MCA.

**UNITED STATES.** In full *United States of America*. Short forms *US, USA*. A republic of North America, comprising 50 states (49 continental states, made up of the 'lower 48' contiguous states and Alaska, and Hawaii). There are also: a capital territory (the District of Columbia, comprising the city of Washington and its immediate environs); the US Virgin Islands and the Commonwealth of Puerto Rico in the Caribbean; and various dependencies elsewhere, such as islands of the Pacific. Capital: Washington. Currency: the dollar (100 cents). Economy: industrial, agricultural, services, tourism. Population: 245.2m (1988), 262.7m (projection for 2000). Ethnicity: 83% Caucasian (including 5% Hispanic), 11% African-American, 1% Amerindian, 1% Asian, Polynesian, Inuit, Aleut. Religions: some 40% non-professing, 33% Protestant, 22% Roman Catholic, 2% Jewish, 2% Orthodox, 1% other. Languages: English in general and governmental

use (the *de facto* but not *de jure* official language); many other languages. See AMERICAN LANGUAGES. Education: primary 99%, secondary 95%, tertiary 57%, literacy 99%. See AMERICA, AMERICAN ENGLISH, AMERICAN ENGLISH AND BRITISH ENGLISH, AMERICANISM, AMERICAN LITERATURE, AMERICAN PLACE-NAMES, AMERICAN PRESS, AMERICAN PUBLISHING, AMERINDIAN, DIALECT IN AMERICA, ENGLISH, ENGLISH LANGUAGE AMENDMENT, SPELLING, TELEPHONE, TESD, TESL, TESOL, UNCLE SAM, UNITED STATES ENGLISH. [AMERICAS, NAME]. T.M.CA.

**UNITED STATES ENGLISH**, also **US English**, **USE**. An alternative term for *American English*, the English language as used in the United States of America. The term is used especially by those who wish to make a clear distinction between US and Canadian usage or avoid the ambiguities inherent in the word *American*. The difficulty arose because the name *United States of America* has no simple and natural adjectival form; citizens of the land early solved the problem for their own purposes by adopting *American* from the last word of the country's name, an adjective already used for the western hemisphere and in colonial times for its English-speaking settlers. See AMERENGLISH, AMERICAN<sup>1</sup>, AMERICAN ENGLISH, AMERICAN ENGLISH AND BRITISH ENGLISH, AMERICAN LANGUAGE, NORTH AMERICA. [AMERICAS, VARIETY]. J.A., T.M.CA.

**UNITED STATES INFORMATION AGENCY**, short form *USIA*. An agency of the US government. The *USIA* is a descendant of the Office of War Information (1941–6). It was separated from the Department of State in 1953 to oversee international information and cultural programmes. It supervises the Voice of America, the Worldnet satellite television system, and the Fulbright scholarships. Its overseas arm is the *United States Information Service* (short form *USIS*), which operates 204 posts in 127 countries. It is charged with strengthening foreign understanding and support of US policies and actions, advising US government officials on the impact of foreign opinion, and administering international cultural exchanges. See VOICE OF AMERICA. Compare BRITISH COUNCIL. [AMERICAS, MEDIA]. D.E.B.

**UNITED STATES INFORMATION SERVICE**. See UNITED STATES INFORMATION AGENCY.

**UNITIES, THREE**. See LITERARY CRITICISM, POETICS.

**UNIVERSAL**. See LANGUAGE UNIVERSALS.

**UNIVERSITY OF CAMBRIDGE LOCAL EXAMINATION SYNDICATE**. See UCLES.

**UNIVOCALIC**. See LIPOGRAM.

**UNMARKED TERM**. See MARKED AND UNMARKED TERMS.

**UPPER CASE**. A technical term for capital letters or majuscules (that is, letters larger in size and form than *lower-case letters*), so named because they were stored in the upper of the two cases used by compositors when setting type by hand. See CAPITAL, CASE<sup>2</sup>, TYPESETTING. [TECHNOLOGY]. W.W.B.

**URDANG, Laurence** [b.1927]. American lexicographer, born and educated in New York, including B.S. and postgraduate work at Columbia U., New York, as a student of the French linguist André Martinet and the American linguist Allen Walker Read. He taught English and general linguistics at New York U. (1955–60) before becoming Director of the Reference Department at Random House (1957–69). He was Managing Editor of the *Random House Dictionary of the English Language—Unabridged Edition* (1966), and Editor-in-Chief of the *College Edition* (1968), pioneering the application of computers to lexicography. He then set up his own company, *Laurence Urdang Inc.*, offering consultancy services to publishers in the preparation of reference books and to publishers and compositors in automatic typesetting and the use of computers in the compilation of reference books. In 1970, he was asked by Jan Collins, Managing Editor of Collins Publishers, to prepare a 'college-type' dictionary for the British market. This led to the establishment of a company, *Laurence Urdang Dictionaries*, in Aylesbury, Buckinghamshire, which undertook the work on the *Collins English Dictionary* (1979). An ancillary company, *Laurence Urdang Associates, Ltd.*, was organized to research, compile, design, typeset, and produce other reference works, while Laurence Urdang Inc. in the US was expanded in the mid-1970s to undertake reference-book preparation for American publishers.

Between 1975 and 1987, the three companies produced more than 125 dictionaries, encyclopedias, indexes, and other kinds of reference materials under his direction, mainly for British and American publishers. These include: *New York Times Everyday Reader's Dictionary of Misunderstood, Misused, Mispronounced Words* (NY Times Books, 1972, 1985); *Official Associated Press Almanac* (1972, 1973, 1974); *CBS News Almanac* (1975, 1976, 1977); *Basic Book of Synonyms and Antonyms* (New American

Library, 1978, 1985); *Longman Dictionary of English Idioms* (Longman, 1979); *Synonym Finder* (US: Rodale, 1978; UK: Longman, 1988); *-ologies & -isms* (Gale, 1978, 1981, 1986); *Urdu Dictionary of Current Medical Terms* (UK: Oxford/Corgi, 1980; US: Wiley/Bantam, 1981); *Macmillan Encyclopedia* (1981); *Allusions—Cultural, Literary, Biblical, and Historical: A Thematic Dictionary* (Gale, 1982, 1986); *Idioms & Phrases Index* (3 volumes: Gale, 1983); *Loanwords Index* (Gale, 1983); *Slogans* (Gale, 1984); *Mottoes* (Gale, 1986); *Dictionary of Differences* (UK: Bloomsbury, 1988; US: *Dictionary of Confusable Words*, Facts on File, 1988); and *The Oxford Thesaurus* (1991). He is founder and editor of *Verbatim*, *The Language Quarterly*, and of Verbatim Books, which publishes popular and scholarly books about language. See index. [AMERICAS, BIOGRAPHY, REFERENCE]. T.MCA.

**URDU** [18c: from Persian *zabān-i-urdū* language of the camp, from Turkic *ordu* camp, whence also Russian *orda* clan, crowd, troop, Polish *horda*, and English *horde*. Compare the *Golden Horde*, a Tatar tribe in Central Asia, 14–15c]. An Indo-Aryan language of the Indian subcontinent, associated with the Moghul Empire, in which Persian was the court language. It is used especially by Muslims and written in a variant of the Perso-Arabic script. Closely related to Hindi, Urdu has a similar pronunciation and grammar but a more heavily Persianized and Arabicized vocabulary. It is the national language of Pakistan and is its co-official language with English. In India, it is the state language of the state of Jammu and Kashmir, and associate state language of the state of Uttar Pradesh. It is spoken as a first language by c.30m and as a second language by c.100m people in India and Pakistan, and some thousands of people of Indo-Pakistani origin in Fiji, Guyana, South Africa, the UK, and the US. The literary tradition of Urdu dates from the 16c in the Deccan (South India). By the 18c, the centre had shifted north, and present-day literary Urdu was fashioned in Delhi and Lucknow in India and in Karachi and Lahore in Pakistan. See BANGLADESH, HINDI, HINDI-URDU, HINDUSTANI, INDIA, INDIAN LANGUAGES, PAKISTAN, PERSIAN, SOUTH AFRICA. [ASIA, LANGUAGE]. T.MCA., Y.K.

**URO-ALTAIC LANGUAGES**, also **Ural-Altai languages**. A proposed family of languages made up of the *Uralic languages*, comprising the Finno-Ugric group (which includes Finnish, Estonian, and Hungarian in Europe) and Samoyed (in Europe and Asia), and the *Altaic languages*, comprising the Turkic, Mongolian, and Tungusic languages, spoken from south-eastern Europe to the northern Pacific

coast of Asia. Korean and Japanese are sometimes tentatively included in the family. See BORROWING (TURKISH/TATAR, TUNGUS, FINNISH, HUNGARIAN), EUROPEAN LANGUAGES, JAPAN, KOREA, SCANDINAVIAN LANGUAGES, TURKISH. [ASIA, LANGUAGE]. T.MCA.

**US, U.S.** See USA.

**USA, U.S.A.** The abbreviation for both *United States Army* and *United States of America*, a full name that is typical of formal or ritualistic contexts and therefore likely to sound pompous in other situations. Just as the name of the country is usually clipped to *United States*, so the abbreviation *US* is more neutral than *USA*. The latter is used in some contexts (for example, as an abbreviation in formal contexts or in the name of the newspaper *USA Today*, where it makes a memorable rhyme), but its use generally implies a sense of patriotism, as in the Bruce Springsteen song title 'Born in the USA'. The fuller abbreviation *US of A* is either jingoistic or humorous. See UNITED STATES. [AMERICAS, NAME]. J.A.

**USAGE** [13c: an adoption of Old French *usage*, corresponding to medieval Latin *usaticum*, from Latin *usus* use]. (1) In general terms, the customary or habitual way of doing something; what is done in practice as distinct from principle or theory; an instance or application of this, a customary practice, as in religion, commerce, military matters, and diplomacy. (2) In linguistic terms, the way in which the elements of language are customarily used to produce meaning; this includes accent, pronunciation, spelling, punctuation, words, and idioms. It occurs neutrally in such terms as *formal usage*, *disputed usage*, and *local usage*, and it has strong judgemental and prescriptive connotations in such terms as *bad usage*, *correct usage*, *usage and abuse*, and *usage controversies*.

**History.** The first citation of the term *usage* in the *OED* in a linguistic sense is from Daniel Defoe in 1697, referring to the proposed English Academy to monitor the language, on the model of the Académie française: 'The voice of this society should be sufficient authority for the usage of words.' Before the 17c, the concept of usage or custom in English was hardly known: individuals spoke and wrote largely as they wished, and each printer had his own conventions. During the 17–18c, however, writers and leaders of society were concerned to codify the language in grammars and dictionaries, usually drawing on principles established in Latin and Greek. Defoe, Swift, Pope, and others held the view that usage should be monitored; but this notion failed along with the attempt to set up an Academy, and guidance about usage became

largely the concern of teachers, publishers, and self-appointed usage guardians.

The present-day scholarly concept of usage as a social consensus based on the practices of the educated middle class has emerged only within the last century. For many people, however, the views and aims of the 17-18c fixers of the language continue to hold true: they consider that there ought to be a single authority capable of providing authoritative guidance about 'good' and 'bad' usage. For them, the model remains that of Greek and Latin, and they have welcomed arbiters of usage such as Henry Fowler who have based their prescriptions on this model. In spite of this, and although public opinion responds to arguments that the language is in decline, no nation in which English is a main language has yet set up an official institution to monitor and make rules about its usage. New words, and new senses and uses of words, are not sanctioned or rejected by the authority of any single body: they arise through regular use and, once established, are recorded in dictionaries and grammars. This means that, with the classical model of grammar in rapid decline, the users of English collectively set the standards and priorities that underlie all usage.

**Standard usage.** Guidance tends to centre on *standard English*, a form assumed to be shared, used, and accepted by educated speakers throughout the English-speaking world, despite great variety in accent, grammar, and vocabulary; it is based partly on intellectual argument and partly on received opinion. Standard usage is taught in schools on the assumption that students should speak and write English that is acceptable across a broad spectrum of society. The forms of standard usage correspond to the major national standards of English, such as those of BrE, AmE, and AusE. In Britain, and especially England, correct usage has long been identified with the form of the language in use among the educated middle and upper classes in southern England, and surveys carried out in the US also suggest a class orientation. In both countries, a desire for guidance tends to predominate among the linguistically less secure, especially the lower-middle classes, while demands that 'good' usage be maintained may come from all levels of society, but particularly from those who feel secure in the prevailing standard forms and look to authorities on usage as much for reassurance and support as for guidance. Guidance is therefore based on what is thought to be acceptable to educated users of English, and is often reinforced by the institutional authority associated with a famous scholar or publisher (Webster, Fowler, Merriam Webster, and the like).

**Criteria for criticism.** Criteria traditionally invoked in the criticism of usage include analogy (or precedent), logic, etymology (usually Greek and Latin, rarely Germanic), and questions of taste and social acceptability:

*Analogy.* Reference to analogy is the most influential criterion, because analogy underlies the working of all language. Often, proponents of a particular usage tend to choose the analogies that suit their preference: for example, the stress patterns *conTROversy* and *forMIDable* are widely deplored and *CONtroversy* and *FORmidable* favoured, following the analogy of *MATrimony* and *MANAgeable* rather than *orTHOgraphy* and *aMENable*. *KiLOmetre/kiLOmeter* follows the analogy of *speedOMeter* rather than that of *KILOgram* and *CENTimetre/CENTimeter*. Inflection also follows analogy: reference to two *Germanies* follows the example of *Ptolemies* and *Maries* and the behaviour of countable nouns in *-y* generally, but the form *Germanys* also occurs. See ANALOGY.

*Logic.* Appeals are regularly made to logic: for example, in determining what a group of words ought to mean from its constituents. Such appeals work when logic and standard usage happen to coincide, but can often fail because the use of language is not always amenable to logic: for example, *Aren't I* as a tag question is widely regarded in BrE as the proper form, and *Amn't I*, though eminently logical, is discounted as childish, while *ain't I* is considered either slovenly or archaic. The double negative, as in *I didn't do nothing*, has been condemned since the 18c solely on the ground that two negatives make a positive; before the 18c, the logic worked the other way in regarding the succession of negatives as cumulative in effect. Similarly, the grammatical treatment of collective nouns (*committee, government, etc.*), if based on logic, should require a singular verb, but usage often favours a plural verb to emphasize the collective sense of the word: *The committee have not yet reached agreement*.

*Etymology.* Appeals made to etymology to defend the language against change rarely satisfy by themselves, because they fail to recognize the independent development of words: for example, Latinate words such as *formula* and *stadium* have vernacular plurals *formulas, stadiums* that are often rejected by purists in favour of *formulae, stadia*, as if origin should be the predominant consideration. These are, however, adopted words, and may be treated on the analogy of words in English rather than Latin; *ultimatum* is so treated and few propose *ultimata* as a plural rather than *ultimatums*.

*Personal preference.* Criteria based on intuition, personal preference, or what one

thinks educated users prefer, are common and may be supported by appeals to such further criteria as euphony ('*Biofeedback* sounds ugly and clumsy'), good taste ('No literate person says *irregardless* and *for free*'), and chauvinism ('Our language is rich enough; it doesn't need words like *chutzpah* and *shlep*'). Attitudes towards, and avoidance of, clichés such as *conspicuous by one's absence* and *at the present time* are a highly subjective matter that belongs in this category.

For all these reasons, it is difficult to evaluate usage objectively. In the view of linguists and lexicographers, evaluation must depend on sound evidence of what constitutes current established use; if not, it tends to become an argument for individual custom or preference. Establishing current majority usage is not as straightforward as it sounds, even in the age of mass media, because it rests on the need to be sure of what constitutes currency and majority. Until the development of databases, scholarly evidence consisted of collections of citations, generally from printed sources. Depending on the range of sources studied, the evidence has tended to have a literary or formal bias; usage criticism based on it does not therefore take adequate account of ordinary English spoken and written in everyday communication. Even computer corpora are collected mainly from the language in print, although conversational texts do exist, notably in the Survey of English Usage at University College London, which aims at a million words available for on-line analysis. Grammars based on this kind of evidence have been published, but in general the traditional sources of usage prevail.

**Usage controversies.** There are always issues of special concern; these do not, however, remain constant. The split infinitive has been a controversial matter since the 18c, but is now of less importance; ending a sentence with a preposition was once considered a grave offence in formal writing, but is now generally accepted as a common feature of informal usage. Other controversies prove to be ephemeral, usually overwhelmed by the weight of actual usage: for example, *nice* was once strongly deplored in the now dominant sense 'agreeable', 'pleasant', in favour of the sense 'precise'. On the other hand, the double or multiple negative has long been deplored and is generally still regarded as uneducated, although it is used by many speakers of English throughout the world. A good example of the unpredictable and often capricious nature of usage controversies is the current issue of *hopefully* as a sentence adverb: *Hopefully, it won't rain tomorrow*. Well-established uses of other words as sentence adverbs, such as *Clearly,*

*there is no case to answer*, and *Generally, the weather is fine in July*, are by contrast hardly noticed. So a particular use has been singled out for disapproval while others like it are passed over, and this is typical of many controversies. Usage controversies fall into several categories, with some overlap: *pronunciation*, including accent, stress, and the relationship of sound to spelling; *grammar*, including collocation, concord, and word order; *spelling and morphology*, including problems of inflection and confusable words; and *vocabulary*, especially with regard to the choice and meaning of words.

**Pronunciation.** Most pronunciation controversies concern *stress*, such as the examples *controversy* and *formidable* mentioned above. An older example is *abDOMen* (the second syllable stressed and pronounced like *dome*), now resolved in favour of *ABdomen*. Other current examples are *dispute* (where stress on the first syllable of the noun is deprecated but common), *harass* (where the same applies in BrE to stress on the second syllable; this, however, is standard in AmE), and *kilometre*, which is pronounced in AmE and increasingly in BrE with stress on the second syllable, by (false) analogy with *speedometer* and related words. Problems also arise with vowel quality in words like *deity*, *spontaneity* and *homograph*, *homosexual*. In general preferences are based on what educated speakers are thought to prefer. The pronunciation of foreign words also causes difficulty, as with *garage* and *apartheid*. Recourse is often had to the pronunciation in the original language, but this can be a misleading criterion because the original pronunciation is usually based on rules and procedures that are inherently different from the phonology of English. Examples of loanwords now fully absorbed phonetically into English are *cadet* and *coupon*; sometimes a 'foreign' pronunciation is revived, as with *turquoise* and *valet*.

**Grammar.** Two grammatical categories account for a high proportion of disputes: *collocation* (the constructions with which words are assembled into phrases and sentences), and *concord* (the way in which words of one part of speech agree with others). Among the most troublesome collocational issues is the word that follows *different*. In recent years, advice in usage guides has moved from prescribing *from* exclusively (as the traditionally preferred educated usage) to allowing and even advocating *from*, *to*, and *than*. The evidence suggests that *different than* is now the majority usage in North America, *different to* the majority usage in Britain, while *different from* retains a powerful influence on more conservative speakers and writers. This is because, with a classical model, *different* is seen as an extension of *differ*, and

thought to require the same construction (*differ from*, and so *different from*). The same classical model applies to the construction required with *none*. Traditionally, *none* has been taken to represent *no(t) one* and should therefore be followed by a singular verb, as in *none of them is here* rather than *none of them are here*. This position is not, however, supported by actual usage over several centuries nor by many current usage guides, which advocate a choice of singular or plural according to sense: *none of them are here* when the sense is collective, *none of them is here* when the emphasis is on individuals.

Many grammatical problems have to be seen in the context of *register* or the kind of language being used. In formal English, especially in literature and official documents, grammar is usually given a higher value than idiom and ease of communication; in informal English, especially everyday speech, established custom is more predominant, because fluent and easy communication is the main consideration. None the less, the more prescriptive guidance on usage still tends to give insufficient weight to this factor. Especially relevant are problems of word order, where there is less scope or need for precision in ordinary spoken English. The position of *only* has been the subject of much comment over many years. In formal and precise English the difference between *I only found them by chance* and *I found them only by chance* may be significant, but in speech it matters less, because intonation will usually clarify the sense.

*Spelling and morphology.* The role of usage in spelling is complex, and forms the basis on which dictionaries assess and record variants and state preferences, as well as the basis of approved practice in matters such as inflection and hyphenation, where English is unpredictable. The eighth edition of the *Concise Oxford Dictionary* (1990) records many changes in hyphenation practice, including *benchmark*, *birdsong*, *figurehead*, *lawbreaker*, and *script-writer*, all previously hyphenated. These changes have been made on the basis of usage, and there is no theory of hyphenation beyond what is discernible in the evidence. This shows, in particular, that there is an increasing tendency to put two single-syllable elements together as single words, as with *benchmark* and *birdsong*. In other cases, practice varies and defies attempts at classification. The rules of *inflection* are also based on established practice, which is unpredictable, as in the matter of doubling a final consonant in forms such as *budgeted* and *travelled* (but *paralleled*). On the other hand, usage has to be critically assessed and tempered by considerations such as analogy and patterns of

form. Variant spellings are not admitted in dictionaries simply on the grounds that they are known to be used; that would admit forms such as *\*accomodate* and *\*mischievious*, which are regarded as incorrect. They are rejected because they do not have sufficient authority in sources deemed to conform to standard English. On the other hand, Samuel Johnson's deviant spelling *despatch* for *dispatch* was established by its inclusion in his dictionary, and rapidly confirmed by usage afterwards. Borderline cases are *alright* (for *all right*; compare *altogether*, *almighty*), *nearby* (still resisted in its one-word form, especially as an adverb), and *onto* (resisted in printed BrE, despite its frequency in casual use, the analogy of *into*, and its standard use in AmE).

*Vocabulary.* There is a long-established, widespread belief that words have a 'true' meaning, usually based on etymology. If this were so, the earliest senses of all words would be the only proper senses: a *camera* would denote a room, not a machine, and a *doctor* would be a learned person, not a physician. Change in the meaning of words is the signal most clearly discernible to ordinary users that the language is changing. This is generally recognized and accepted as a historical phenomenon when the results are convenient to present-day users, but change as it happens is often resisted: *anticipate* in the sense 'expect', *aggravate* in the sense 'annoy', and *transpire* in the sense 'happen' (all disapproved of in current guidance on usage). Resistance is particularly strong where change occurs, or is perceived as occurring, in confusable words, such as *disinterested* (impartial) and *infer* (deduce). The senses just given are regarded as standard, while other senses (uninterested, imply) are often deprecated, despite equally sound historical credentials. Maintaining the distinctions between *disinterested* and *uninterested* and *infer* and *imply* is considered useful, in the same way as preserving the distinct senses of *childish* and *child-like*, *alternate* and *alternative*, and *regretful* and *regrettable* is useful. Usage guidance also deals with more accidental confusions of unrelated words, such as *sinecure/cynsure* and *prevaricate/procrastinate*. In all these cases, the purpose is to retain a distinction in the interests of clear meaning, and this is arguably the most sound basis on which any usage guidance relating to words can depend.

**Social and cultural factors in usage.** An important element of usage is the degree of social acceptability of certain terms and uses; these vary from age to age, and are matters of social or moral concern rather than of linguistic correctness. In the 16c, titles and forms of address such as *gentleman*, *master*, and *woman* had to be used with care because of the sensitivities arising

from social status. *Chinaman*, once standard, is now regarded as offensive, as are *Eskimo* and *Mohammedan*. The preferred terms are now *Chinese*, *Inuit*, and *Muslim*. A far-reaching contemporary concern arises from the feminist movement and its wish to avoid the perpetuation of sex-based prejudice in language: for example, in the titles *Mrs.*, *Miss*, relating to marital status. The neutral replacement *Ms* was originally based on the prescription of a social group on moral grounds, was taken up by some style guides in the US, and came to be widely endorsed as socially convenient. Such prescription succeeds only rarely. Despite the invention of a variety of experimental forms, there is still no widely agreed gender-neutral third-person pronoun to replace generic *he* or stand for the often awkward *he or she*. In informal spoken English, and in some written English, the plural form *they* has emerged (or re-emerged, having been common though non-standard since the 16c) to fill the need, as in *If anyone calls, tell them to come back later*. Received opinion may regard this as bad grammar, but it shows that as grammar changes with usage a new model of grammar has to emerge. See USAGE GUIDANCE AND CRITICISM. **USAGE GUIDANCE AND CRITICISM.** The concept of usage and usage criticism in English dates from the 17c, when the first grammars of the language were written by William Bullokar (1586), Ben Jonson (1640), John Wallis (1658), and others. A more critical approach to the use of English emerged with literary figures such as John Dryden, Joseph Addison, Richard Steele, and Jonathan Swift. Bishop Robert Lowth's *Short Introduction to English Grammar* was published in 1762; it attempted to show that good use of language could be determined by the application of rules, and it became the largely unacknowledged source of the better-known work of Lindley Murray, an American grammarian who lived in England and wrote the school grammars *English Grammar*, *English Exercises*, and others, published from 1795 onwards. Robert Baker's *Reflections on the English Language* (1770) was one of the earliest works that would now be regarded as a usage book. The genre developed in the 19c, with Henry Alford (Dean of Canterbury) in Britain, author of *A Plea for the Queen's English* (1864), and Edward S. Gould (*Good English*, 1867), and Richard Grant White (*Words and Their Uses*, 1870) in America. Since the turn of the century, usage criticism in print has proliferated, in the form of reference books, usually arranged alphabetically as dictionaries, and columns on language in newspapers.

Another strand of usage criticism is represented by George Orwell. Explicitly in a number of essays, and implicitly in his novel *Nineteen Eight-Four* (1949), Orwell criticized language use that he saw as artificial and bureaucratic, and remote from the language of ordinary people. In his view, it had the effect of confusing and obscuring rather than communicating effectively, for example by writing 'in my opinion it is a not unjustifiable

assumption that . . . ' instead of 'I think . . . ' He was not attempting to set standards of ordinary usage, but was condemning authoritarianism, seeing misuse of standard English as its instrument. This theme has also been pursued—though not with the same political implications—by Ernest Gowers and Ifor Evans (see below), and others, and in the work of societies promoting the cause of 'plain' or 'direct' English. See PLAIN ENGLISH, SOCIETY FOR PURE ENGLISH.

**British usage books.** The most famous and controversial British usage book is H. W. Fowler's *A Dictionary of Modern English Usage* (1926), in which he developed ideas presented earlier in the thematically organized *The King's English* (1906). *MEU* is a blend of prescription, tolerance, and idiosyncrasy, and was the first usage book of its kind to be organized as a dictionary, thereby departing from the traditional codified grammar. It was also the first to include the name *usage* in its title. Fowler wrote about what he thought usage should be, not about what it was, and his evidence, as far as can be judged from the citations in the book, was selected to show where he thought users of English went wrong. None the less, it is to Fowler's credit that he avoided (especially misplaced) pedantry, as in his article on the *split infinitive*. The book was published in a second edition in 1965 with revisions by Sir Ernest Gowers, a senior civil servant who twenty years earlier had attempted to persuade the British Civil Service to avoid pretentious and often incomprehensible jargon in *Plain Words* (1948), in later editions *The Complete Plain Words*. Other works on usage include Eric Partridge's *Usage and Abusage* (1942, with many revisions), B. Ifor Evans's *The Use of English* (1949), G. H. Vallins's *Good English* (1951) and *Better English* (1953), Logan Pearsall Smith's *Words and Idioms* (1925), A. P. Herbert's *What a Word* (1935), and Ivor Brown's *Words in Our Time* (1958) and other works. Current guides include Martin H. Manser's *Bloomsbury Good Word Guide* (1988), Sidney Greenbaum and Janet Whitcut's *Longman Guide to English Usage* (1988), *The Oxford Guide to English Usage* (1983), and John O. E. Clark's *Word Perfect* (Harrap, 1987).

Today, no major British reference publisher can afford to lack a usage guide, and some boast several, each with its own philosophy and style. In some cases, guidance is associated with a publisher's *house style*, as in *The Oxford Dictionary for Writers and Editors* (1981), a work largely concerned with spelling and hyphenation. Most current usage manuals are written by grammarians and lexicographers in alphabetical format and concentrate their advice on specific

points, usually with made-up examples of use; an exception is *The Oxford Miniguide to English Usage* (1983), which organizes its material into thematic sections covering grammar, vocabulary, etc., and bases its advice on usage exemplified by established writers, mostly of fiction. None of these, however, has attained the level of authority achieved by Fowler and by Partridge.

**American usage books.** Usage criticism in the US has tended to be in the conservative, prescriptive tradition of Lindley Murray, whose works remained in print to the end of the 19c. Standard works include Bergen and Cornelia Evans's *A Dictionary of Contemporary American Usage* (1957), Wilson Follett's *Modern American Usage* (1966), which derives its format and approach from Fowler and Fowler's US adaptation by M. Nicholson as *A Dictionary of American English Usage* (1957), and William and Mary Morris's *Harper Dictionary of Contemporary Usage* (1975, 1985), which drew on a usage panel of 166 consultants. A recent work that examines a wide range of issues, quoting extensively from printed sources, is *Webster's Dictionary of English Usage* (1989). H. W. Horwill's *Modern American Usage* (1935; 2nd edition, 1944) is primarily intended to help Britons with AmE, and Norman W. Schur's *British English A to Zed* (1987) is intended to help Americans with BrE.

**Usage criticism in newspapers.** Usage criticism and guidance is provided on a regular basis as a column in newspapers and other periodicals. The doyen of usage columnists in the US in the late 20c is William Safire of the *New York Times*, whose articles are widely syndicated. American journalism has also been the foundation of systematic usage and style guides, notably Theodore Bernstein's *The Careful Writer* (1965) and William Strunk Jr. and E. B. White's *The Elements of Style*, known affectionately as 'the little book' (3rd edition, 1979; earlier editions 1959, 1972). In Britain, Philip Howard in *The Times*, John Silverlight in *The Observer*, and Robert Burchfield in *The Sunday Times* have a more limited following, often seeming to entertain and inform the converted rather than advising the doubtful. A feature of some columns is a response to queries from readers, on which the columnists provide personal comment along with quotations from dictionaries and usage guides.

**Usage panels and usage notes.** Current general dictionaries of English often include usage notes attached to individual entries. The first such work to employ a team of advisers was the Random House *American College Dictionary* (1947). The practice was extended by Houghton Mifflin in the *American Heritage Dictionary*

(1969), whose usage notes were compiled from replies to questionnaires from a panel of consultants including linguists, writers, journalists, and broadcasters. The results are often colourful and distinctive, as at *hopefully*: 'this usage is by now such a bugbear to traditionalists that it is best avoided on grounds of civility, if not logic' (2nd edition, 1982). The editor of the *AHD* was William Morris; with Mary Morris he took the panel approach further in the *Harper Dictionary of Contemporary Usage* (above), in which a range of controversies was treated with reference to the opinions of panellists, often quoted in full or given statistically. The panellists included writers, journalists, broadcasters, and academics, with many famous names among them, such as Isaac Asimov, W. H. Auden, Saul Bellow, Anthony Burgess, Alistair Cooke, Walter Cronkite, Jessica Mitford, and William Zinsser. The method affords flexibility, with different levels of usage distinguished. Panellists' comments are varied and colourful: 'The English language is the finest tool for communication ever invented. Since it is used indiscriminately by hundreds of millions, it is no wonder that it is badly misused so often' (Isaac Asimov); 'The English language began to curl up and die, instead of being regenerated, sometime after the Second World War, until now it has become like, wow!, you know' (Douglas Watt). The use of usage notes is now common in dictionaries on both sides of the Atlantic, for native speakers and foreign learners alike.

**Kinds of guidance.** The nature, style, and content of the guidance provided by usage guides over the years is illustrated in the following sequence of advice and comment on a classic controversy, the *split infinitive*: 'to boldly go' as opposed to 'boldly to go' and 'to go boldly'. The comments range from 1851 to 1983.

Of the infinitive verb and its preposition *to*, some grammarians say that they must never be separated by an adverb. It is true, that the adverb is, in general, more elegantly placed before the preposition than after it; but, possibly, the latter position of it may sometimes contribute to perspicuity, which is more essential than elegance (Goold Brown, *The Grammar of English Grammars*, US, 1851).

A correspondent states as his own usage, and defends, the insertion of an adverb between the sign of the infinitive mood and the verb. He gives as an instance, 'to scientifically illustrate'. But surely this is a practice entirely unknown to English speakers and writers. It seems to me, that we ever regard the *to* of the infinitive as inseparable from its verb, and when we have a choice between two forms of expression, 'scientifically to illustrate', and 'to illustrate scientifically', there seems no good reason for flying in the face of common usage (Henry Alford, *A Plea for the Queen's English*, UK, 1864).

If you do not immediately suppress the person who takes it upon himself to lay down the law almost every day in your columns on the subject of literary composition, I will give taking up the *Chronicle*. . . . Your fatuous specialist . . . is now beginning to rebuke 'second-rate newspapers' for using such phrases as 'to suddenly go' and 'to boldly say'. I ask you, Sir, to put this man out . . . without, however, interfering with his perfect freedom of choice between 'to suddenly go', 'to go suddenly' and 'suddenly to go' (George Bernard Shaw, in a letter to the *Chronicle*, UK, 2 Sept. 1892).

A constant and unguarded use of it is not to be encouraged. . . . On the other hand, it may be said that its occasional use is of advantage in circumstances where it is desired to avoid ambiguity (C. T. Onions, *An Advanced English Syntax*, UK, 1904).

The English-speaking world may be divided into (1) those who neither know nor care what a split infinitive is; (2) those who do not know, but care very much; (3) those who know and condemn; (4) those who know and approve; and (5) those who know and distinguish. . . . Those upon whom the fear of infinitive-splitting sits heavy should remember that to give conclusive evidence, by distortions, of misconceiving the nature of the split infinitive is far more damaging to their literary pretensions than an actual lapse could be. . . . The attitude of those who know and distinguish is something like this: We admit that separation of *to* from its infinitive . . . is not in itself desirable, and we shall not gratuitously say either 'to mortally wound' or 'to mortally be wounded'; but we are not foolish enough to confuse the latter with 'to be mortally wounded', which is blameless English. . . . We will split infinitives sooner than be ambiguous or artificial; more than that, we will freely admit that sufficient recasting will get rid of any split infinitive without involving either of those faults, and yet reserve to ourselves the right of deciding in each case whether recasting is worth while (H. W. Fowler, *A Dictionary of Modern English Usage*, UK, 1926).

The name is misleading, for the preposition *to* no more belongs to the infinitive as a necessary part of it, than the definite article belongs to the substantive, and no one would think of calling 'the good man' a split substantive (Otto Jespersen, *Essentials of English Grammar*, UK, 1933).

(1) There is no doubt that the rule [against the split infinitive] at present holds sway, and on my principle the official has no choice but to conform (Ernest Gowers, *Plain Words*, UK, 1941). (2) A friend whose opinion I value has reproached me for this. . . . I ought, he tells me, to have the courage of my convictions. I ought to say about the split infinitive . . . that it is right for the official to give a lead in freeing writers from this fetish. . . . My friend may be right. Rebels will find themselves in good company (Ernest Gowers, *The Complete Plain Words*, UK, 1954).

Avoid the split infinitive wherever possible; but if it is the clearest and the most natural construction, use it boldly. The angels are on our side (Eric Partridge, *Usage and Abuse*, UK, 1947).

The temptation to split an infinitive is extremely rare in spoken English, because the voice supplies the stress needed by the unsplit form or conceals by a pause the awkwardness of the adverb placed before or after. It is

in written work that splitting is called for, and desk sets should include small hatchets of silver or gold for the purpose (Wilson Follett, *Modern American Usage*, US, 1966).

The split infinitive is another trick of rhetoric in which the ear must be quicker than the handbook. Some infinitives seem to improve on being split, just as a stick of round stovewood does (Strunk & White, *The Elements of Style*, 3rd edition, US, 1979).

It is often said that an infinitive should never be split. This is an artificial rule that can produce unnecessarily contorted sentences. Rather, it is recommended that a split infinitive should be avoided by placing the adverb before or after the infinitive, unless this leads to clumsiness or ambiguity. If it does, one should either allow the split infinitive to stand, or recast the sentence (E. S. C. Weiner, *The Oxford Miniguide to English Usage*, UK, 1983).

**Conclusion.** With the current proliferation of usage books, publishers will need to strike a balance between two kinds of authority: that based on received opinion (backed up by their name and the names of their authors) and that derived from intellectual argument. This argument will in its turn depend on a model of English grammar that has yet to evolve.

See (A)ESTHETICS, COMPLETE PLAIN WORDS (THE), CRITICISM, DICTIONARY OF MODERN ENGLISH USAGE, ELEMENTS OF STYLE (THE), FOWLER, GOWERS, KING'S ENGLISH (THE), WEBSTER'S DICTIONARY OF ENGLISH USAGE. [GRAMMAR, MEDIA, REFERENCE, STYLE, USAGE].

R.E.A.

**USAGE GURU.** See POP GRAMMARIAN.

**US ENGLISH.** (1) An occasional term for the English language as used in the US. See AMERICAN ENGLISH, UNITED STATES ENGLISH. (2) The name of an organization formed in 1983 to promote an amendment to the US constitution making English the official language of the republic. See ENGLISH LANGUAGE AMENDMENT. [AMERICAS, VARIETY].

T.MCA.

**USIA, USIS.** See UNITED STATES INFORMATION AGENCY.

**UTTERANCE** [15c: from *utter*, from Middle Dutch *ūteren* (Modern *uiteren*) to show, make known, speak, probably introduced as a term of commerce: compare the archaic sense *utter* to put on the market, dispose of by sale]. (1) Speech; the power of speech; an act of uttering or saying; something uttered or said; a word, phrase, sentence, etc., especially taken in isolation. (2) In linguistics, a term for something spoken that is more or less equivalent syntactically to a written or printed sentence. See SEMANTICS, SENTENCE, SPEECH ACT. [GRAMMAR, SPEECH].

T.MCA.

**UVULA** [14c: Latin, little grape]. The anatomical term for the soft, fleshy protuberance at the back of the mouth, hanging down from the velum. The adjective *uvular* describes sounds made by raising and retracting the tongue towards the uvula: for example, the uvular fricative /r/, the *r grasseyé* of Parisian French. See ORGANS OF SPEECH, R-SOUNDS. [SPEECH].

G.K.

**UVULAR R.** See BURR, R-SOUNDS, UVULA.

# V

**V, v** [Called 'vee']. The 22nd letter of the Roman alphabet as used for English. It originated, along with *F, U, W, Y*, in the Phoenician consonant symbol *waw*, which the Greeks adopted first with the form *V*, then as *Y* (called *upsilon*: that is, *Y-psilón*, bare or simple *Y*). The Etruscans and then the Romans adopted the first symbol. In Latin, *V* was a vowel letter, but in Romance languages such as French and Italian its value before a second vowel evolved to the modern consonantal pronunciation /v/. Until the 17c, *v* was ambiguous in English, capable of representing the sounds of both *u* and *v*. Further ambiguity arose with the introduction of the letter *W*, which originated as *VV*. This prevented the doubling of *v* in the same way as other consonants are doubled in English, except in such rare and recent forms as *revving/revved*.

**Sound value.** (1) In English, *v* nearly always represents a voiced labio-dental fricative. It occurs word-initially (*valley*), medially (*even*) and finally, usually supported by a following *e* (*active, drove; rev*). (2) Over centuries, there has been a tendency for medial *v* to become a vowel or disappear: *hawk* from Old English *heafoc*, the *f* pronounced /v/, *head* from Old English *heafod*, *curfew* from Anglo-Norman *coeverfu*, *kerchief* from Old French *cuevre-chef*, *lady* from Old English *hlæfdige*, *laundry* from Old French *lavandier*, *lord* from Old English *hlaford*, *manure* from Anglo-Norman *mainoverer*, *poor* from Middle English *povere*. (3) The once colloquial and now poetic forms *e'en, e'er, ne'er, o'er* mark the omitted *v* with an apostrophe.

**Word-initial V.** (1) In Old English, initial /v/ did not generally occur, and therefore *v* was not written word-initially. Latin *vannus* was for example respelt *fan*, and most words currently spelt with initial *v* are of later Romance derivation: *vacant, vaccine, vague, vain, valley, value,*

*valve, vanish, vapour, vary, vase, vassal, vault, vegetable, vehicle, vein, velvet, venom, vent, verb, vermin, very, vest, veto, vex, vibrate, vice, victory, view, vigil, vigour, vile, village, vine, viola, virgin, virus, vision, vital, vivid, vocal, volley, volume, vomit, vortex, vote, vowel, vulgar.* (2) Exceptions have arisen from dialects in which *f*- became *v*- (*vane, vat, vixen*) or are exotic loans (*vaishya, Valhalla, Vanuatu, Viking, Vladimir, voltaic*). (3) *V* does not normally occur syllable-initially before other consonants, *vroom* representing a conspicuous break with customary spelling patterns.

**Word-final V.** (1) Except for a few modern slang or clipped forms such as *lav, rev, spiv, gov, luv, v* does not occur as a final letter in English. (2) Where /v/ occurs as a final sound, as in *have, give, live, love*, the present spelling became fixed before the final *e* fell silent. Although final *e* may indicate a preceding long vowel (*save, eve, dive, rove*), that vowel value is often already indicated by a digraph (*waive, leave, sleeve, receive, believe, groove*), or a modified value is indicated by *r* (*starve, swerve, curve*), and the final *e* again serves simply to camouflage final *v*.

**Double V.** Medial *v* is found equally in words derived from Old English and Romance sources: *anvil, envy, heavy, marvel, over*. Because *vv* was already adopted as an early form of *w*, English did not double *v* even to indicate a preceding short vowel, as is common with other consonants (compare *comma/coma*), and ambiguity as to the length of a preceding vowel letter resulted. The spelling gives no indication of the differing vowel values in: *having/shaving, seven/even, driven/enliven, hover/rover, lover/mover*. More recently coined words not normally used in formal prose are under no such inhibition: *bovver, navy, viking, skivvy* are all written with double *v*.

## THE CAPITAL LETTER

EARLY FORMS			CURRENT FORMS		
Phoenician	Greek	Etruscan	Roman (Latin)	roman	italic
𐤅	Ϝ Ϛ	Ϝ	V	V	V

## THE SMALL LETTER

EARLY FORMS			CURRENT FORMS	
Roman cursive	Roman uncial	Carolingian minuscule	roman	italic
u	Ϝ	u	v	v

**Miscellaneous.** (1) *V* does not normally occur after *u*, since until *u* and *v* were regularly distinguished, the sequence *uv* could equally be read as *vu*, *vv*, *uu* (but note for example *uwular*). A preceding *u*-sound is therefore commonly written *o*, as in *dove*, *love*, *glove*, *move*, *cover*, *discovery*. However, a modern mock-spelling such as *luv* for *love* doubly flouts the conventions, with preceding *u* and final *v*. (2) In the 16c, *nevewe* was respelt *nephew*, and now usually has a spelling pronunciation with /f/ (but compare French *neveu*). Similarly, *Stephen/Steven* are variants, both with a /v/ pronunciation, and etymological variation between *b* and *v* occurs in *devil/diabolical*. (3) Oral variation between *v/w* formerly occurred in Cockney: Sam Weller in Dickens's *Pickwick Papers* (1836-7) spells his name *Veller*, and his father refers to the letter *v* as *we*. See ALPHABET, COCKNEY, F, LETTER<sup>1</sup>, SPELLING, U, W. [WRITING]. C.U., T.MCA., E.W.

**VAGUE WORD** [1980s]. An occasional semi-technical term for a word of imprecise reference, such as *thingummy*, *widget*. There are two broad types: (1) Fillers for moments of haste or forgetfulness: *Put the thingummy on the whatsit*. They are usually casual, often have whimsical spellings, and may be regionally distinct: BrE *doodah*, AmE *doodad*. They may be: phrase words based on a question (*whadyamecallit*, *what's-his-name/face*, *whatsit*, *whoosis*), variants of *thing* (BrE *thingie*, *thingummy*, BrE *thingummybob* AmE *thingamabob*, BrE *thingummyjig* AmE *thingamajig*, AmE *thinkumthankum*, *chingus*, *dingbat*, *dinglefoozie*, *dingus*, *ringamajigger*, *ringamajizzer*, *majig*, *majigger*), extensions of *do* (*doings*, *doodah/doodad*, *doflickety*, *dofunnies*, *doowillie*, *doowhistle*). (2) Pseudo-technical but usefully non-specific terms: *Suppose you suddenly need 50,000 widgets*. They tend to be plays on numbers (*umpteens*, *zillion*), reduplications of *so* and *such* (*old so-and-so*, *such-and-such a person*), forms containing *g*- and *j*-sounds that suggest a tool or piece of equipment (*gadget*, *gidget*, *gimmick*, *gismo*, *gizwatch*, *goofus*, *gubbins*, *jiggus*, *widget*), or made up of 'rustic' nonsense syllables: *boozennannie*, *hoot-malalie*, *oojah*, *wingdoodle*. Virtually by definition, all such words are open to improvisation and miscegenation. See NONSENSE, NUMBER. [WORD]. T.MCA.

**VANUATU.** Official title: *Republic of Vanuatu*. A country of Oceania and member of the Commonwealth, consisting of twelve main islands and 70 islets. Capital: Port-Vila. Currency: vatu (100 centimes). Economy: agriculture, fishing. Population: 142,000 (1988), 198,000 (projection for 2000). Ethnicity: 91% Melanesian (known as

*ni-Vanuatu*), 3% French, 3% Polynesian. Languages: English, French, Bislama (all official), and ethnic languages. Education: primary 86%, secondary 11%, tertiary 2%, literacy 30%. Until 1980 known as the *New Hebrides*, jointly administered since the late 19c by Britain and France. See BEACH LA MAR, BISLAMA, ENGLISH, FRENCH, MELANESIAN PIDGIN ENGLISH. [NAME, OCEANIA, VARIETY]. T.MCA.

**VARIANT** [14c: from Latin *varians/variantis* changing (in colour, etc.). Compare VARIETY]. (1) Different in some aspects while the same or similar in others: *a variant reading of a text*; AmE *color* and BrE *colour* are *variant spellings* of the same word, each conforming to different national norms. (2) A similar but distinct form: the words *despatch* and *dispatch* are *spelling variants*, the first common in BrE, the second common in AmE; the Scots word *warsle* can be regarded as a variant of standard English *wrestle*. Compare VERSION. [LANGUAGE, VARIETY]. T.MCA.

**VARIETIES OF ENGLISH AROUND THE WORLD**, short form *VEAW*. A series of scholarly studies of the English language, edited by Manfred Görlach (first at the U. of Heidelberg then at the U. of Köln, Germany) and from 1979 to 1982 published by Groos (Heidelberg), thereafter by John Benjamins (Amsterdam & Philadelphia). The constituent titles are intended as both reference books and teaching manuals for use in departments of linguistics and English. Topics include dialects, registers, national forms of English, and pidgins and creoles. There are two subseries: (1) *The Text Series*, each title illustrating the range of English in an area by means of texts. Volumes include: *Cameroon* (Loreto Todd, 1982), *Central American English* (John Holm, 1982), *Glasgow* (Caroline Macafee, 1983), *Singapore and Malaysia* (John Platt, Heidi Weber, & Mian Lian Ho, 1983), and *The Southwest of England* (Martyn F. Wakelin, 1986). Individual volumes contain: introductions to the social history of the communities concerned, to attitudes, norms, and social and regional variations; selected and annotated texts; bibliographies and glossaries. Most are accompanied by cassettes linked to texts in the books. (2) *The General Series*, which contains collections of scholarly articles, revised dissertations, bibliographies, and other material for academic research and teaching. Volumes published to date include: *The Standard in South African English and its Social History* (L. W. Lanham & C. A. MacDonald, 1979, 1984), *Issues in English Creoles: Papers from the 1975 Hawaii Conference* (ed. R. R. Day, 1980), *A Bibliography of Writings on Varieties of English*,

1965-1983 (ed. Wolfgang Viereck, Edgar W. Schneider, & M. Görlach, 1984), *Focus on: England and Wales* (ed. W. Viereck, 1985), *Focus on: Scotland* (ed. M. Görlach, 1985), *Dialect and Accent in Industrial West Yorkshire*, (K. M. Petyt, 1985), *Chicano English: An Ethnic Contact Dialect* (J. Penfield & J. Ornstein-Galicia, 1985), and *Focus on: The Caribbean* (ed. M. Görlach & J. Holm, 1986). See ENGLISH WORLDWIDE. [VARIETY].

T.MCA.

**VARIETY** [16c: from Latin *varietas*/*varietatis* diversity, from *varius* speckled, diverse]. A term in sociolinguistics for a distinct form of a language:

Let me give some recent examples where the word *English* is preceded by an adjective or noun to designate a specific 'variety': American English, Legal English, Working-class English, Computer English, BBC English, Black English, South Asian English, Queensland Kanaka English, Liturgical English, Ashkenazic English, Scientific English, Chicago English, Chicano English (Randolph Quirk, 'Language Varieties and Standard Language', *English Today* 21, Jan. 1990).

Varieties fall into two types: (1) *User-related varieties*, associated with particular people and often places, such as *Black English* (English as used by blacks, however defined and wherever located, but especially African-Americans in the US) and *Canadian English* (English as used in Canada: either all such English or only the standard form). In this sense, the term *variety* is similar to but less likely to carry emotive and judgemental implications than *dialect*, *patois*, etc.: compare the phrases *speaking the local patois* and *speaking the local variety*. (2) *Use-related varieties*, associated with function, such as *legal English* (the language of courts, contracts, etc.) and *literary English* (the typical usage of literary texts, conversations, etc.). In this sense, the term *variety* is conceptually close to *register* and in practice is a synonym of *usage*, as in *legal usage*, *literary usage*. See REGISTER, USAGE.

Users and uses of English can be characterized in terms of variation in region, society, style, and medium. Regional variation is defined in terms of such characteristics as phonological, grammatical, and lexical features, as when *American English* is contrasted with *British English*: see AMERICAN ENGLISH AND BRITISH ENGLISH. Social variation represents differences of ethnicity, class, and caste, as in *Black English* and *Chicano English* in the US, *Anglo-Indian English* in India, and *Hiberno-English* in Ireland: see entries. Stylistic variation is defined in terms of situation and participants (such as formal versus informal usage, colloquial versus literary usage) and function (as with *business English* and the restricted variety known as *Seaspeak*): see entries. Variation according to medium is defined in terms of

writing, speech, and the use of sign language for the deaf (where there are, for example, differences between American and British practices).

In discussing English at large, the term *variety* permits the identification of differences without pre-empting the argument in favour of one or other set of such differences: for example, standard usage is no more or less evidence of a 'variety' than non-standard usage, and non-standard forms need not be approached as 'deviations' from a norm. In order to describe regional varieties of English, the Indian scholar Braj B. Kachru has proposed a model consisting of three concentric circles: inner, outer, and expanding. The *Inner Circle* contains territories where English is the primary or *native* language. To it belong such varieties as *American English* and *New Zealand English*. The *Outer Circle* refers to territories colonized by Britain (such as India, Nigeria, and Singapore) and the US (such as the Philippines). In it can be found such institutionalized and increasingly autonomous *non-native* varieties as *Indian English* and *Philippine English*. The *Expanding Circle* contains those countries not colonized by Inner Circle nations: that is, the rest of the world. To it belong such *performance varieties* as *German English* and *Indonesian English*. For further discussion, see DIALECT, ENGLISH. [LANGUAGE, VARIETY].

**VELAR.** See VELUM.

**VELARIC** [20c: from *velar* and *-ic* as in *italic*]. A term referring to an air-stream mechanism used for making click sounds. The velaric mechanism involves raising the back of the tongue to make contact with the velum, and then sliding the tongue back, sucking air into the mouth: for example, in the sound conventionally written *tut-tut/tsk-tsk*, the 'gee up' sound used with horses, and the pecking kind of kiss. In English, clicks are not strictly regarded as part of the language, but in such African languages as Xhosa (South Africa), they are consonants. They can appear in the English used by speakers of such languages when including words from their own languages in their conversation. [AFRICA, SPEECH].

G.K.

**VELLUM.** See PARCHMENT.

**VELUM** [18c: from Latin *velum* an awning, sail, veil]. Also *soft palate*. The soft part of the roof of the mouth, behind the *hard palate*. There are two adjectives: *velar*, for the velum itself and sounds made by raising the back of the tongue towards the velum; *velaric*, referring to a stream of air. See AIR-STREAM MECHANISM, ARTICULATION, VELARIC. [SPEECH]. G.K.

**VERB** [14c: from Latin *verbum* word]. A class of words that serve to indicate the occurrence or performance of an action, or the existence of a state or condition: in English, such words (given here in the infinitive with *to*) as *to climb*, *to cultivate*, *to descend*, *to fish*, *to laugh*, *to realize*, *to walk*. Although many verbs in English have the same base form as nouns (*climb*, *fish*, *hound*, *love*, *walk*), they are morphologically and syntactically a distinct word class and one of the traditional parts of speech. There are two main types: *full verb*, *auxiliary verb*. In terms of form, full verbs divide into *regular* and *irregular verbs*. Auxiliaries may be further divided into *primary auxiliaries* (*be*, *have*, *do*) and *modal auxiliaries* or *modal verbs* (*may*, *can*, *will*, *shall*, *must*, *ought to*, *need*, *dare*).

**The morphology of regular verbs.** Regular verbs have four forms used in the *verb phrase*: (1) The base form, for example *walk*, used for the present tense with all persons (except third-person singular) as subjects, for the imperative, and (usually with *to*) for the infinitive. (2) The *-s* form *walks*, used for the present tense with third-person singular subjects. (3) The *-ing* form, that is, the present or *-ing* participle, *walking*. (4) The *-ed* form, for both past tense and the past or *-ed* participle, *walked*. There are some spelling conventions associated with these forms, especially: (1) The doubling of the final consonants before *-ing* and *-ed* after a stressed syllable (*beg/begging/begged*) and, in BrE, of final *-l* and some other final consonants (*travel/travelling/travelled*, *worship/worshipping/worshipped*). (2) The dropping of final *-e* before *-ing* and *-ed* (*like/liking/liked*), except for the *-ing* forms of *dye* (*dyeing*), *hoe* (*hoeing*), some verbs ending in *-nge* (*singeing*), and optionally in *ag(e)ing*. (3) The addition of *e* before *-s* after sibilant consonants (*pass/passes*) and final *-o* (*go/goes*). (4) The change of *-y* to *-ie* before *-s* and to *-i* before *-ed* (*carries/carried*). The *-s* form is usually pronounced /z/ after sibilants (*miss/misses*) and voiced sounds (*tab/tabs*), and /s/ after all other voiceless sounds (*fit/fits*). The *-ing* form usually has its spelling pronunciation, but is also widely pronounced as if it were *-in* (sometimes shown with an apostrophe, as in *huntin'*, *shootin'*, and *fishin'*). The *-ed* form is pronounced as /ɪd/ or /əd/ after *d* and *t* (*pat/patted*), as /d/

after all other voiced sounds (*save/saved*), and as /t/ after all other voiceless sounds (*pack/packed*).

**The morphology of irregular verbs.** The *-s* forms and *-ing* forms are regular except that the *-s* form of *say* is usually pronounced 'sez'. Many irregular verbs distinguish the past tense and participle (*take/took/taken*), but others do not distinguish one (*come/came/come*) or both (*hit/hit/hit*) from the base form. Many have a vowel change in either or both of the past tense or participle (*swim/swam/swum*), and may have an *-n* or *-en* ending for the past participle (*broken*, *driven*, *shaken*). There are seven main classes: (1) The past tense and participle are identical, but either the suffix is optionally devoiced and spelt with *-t* (as in *burn/burnt* : *burned*) or a final *-d* is changed to *-t* (as in *send/sent*). *Make/made* is idiosyncratic, but may be included here as it does not distinguish the two forms. (2) The past tense and participle are identical, the suffix usually devoiced, a vowel change occurring in the spoken form though not always shown in the spelling (as in *keep/kept*, *mean/meant*, *sell/sold*), but in BrE the forms *dreamt*, *leant*, *leapt* often occur, whereas in AmE only *dreamed*, *leaned*, *leaped* occur. Some forms are even more irregular with loss of final consonants (*teach/taught*). (3) The past participle has an *-(e)n* suffix (*show/showed/shown*) and in a few cases a vowel change (*shear/sheared/shorn*). (4) There are both an *-(e)n* suffix for the past participle and vowel changes of many kinds in either or both forms (*steal/stole/stolen*, *grow/grew/grown*, *bite/bit/bitten*). (5) Both forms are identical with the base form (*hit/hit/hit*). (6) There is a vowel change (not always shown in the spelling), no suffix, and the two forms are identical, but always pronounced and usually written differently from the base (*feed/fed/fed*, *read/read/read*, *dig/dug/dug*, *shoot/shot/shot*). (7) There is vowel change, no suffix, and the two forms are different (*sing/sang/sung*). With a small number of verbs, the past participle is the same as the base form (*come/came/come*). See IRREGULAR VERB, for list.

**The morphology of auxiliaries.** *Be*, *have*, and *do* function not only as auxiliaries, but also as full verbs. The only morphological difference is that, except for *be*, the auxiliaries do not have the full range of non-finite forms (the infinitive and the participles). *Be* has eight different forms: in the present tense, *am* with first-person singular subjects; in the present tense, *is* with third-person singular subjects; in the present tense, *are* with the other pronouns; in the past tense, *was* with singular subjects; in the past tense, *were* with plural subjects and also with *you* when used in the singular; a present participle *being*; a past

participle *been*; *be* itself, used as the infinitive and imperative. *Have* has an irregular *-s* form, *has*, and a past-tense *had*; the past participle *had* occurs only as a form of the full verb. *Do* has an irregular *-s* form in speech only (*does*), a past-tense form *did*, and a past participle *done*, but only the finite forms occur as auxiliaries. The present participles *being*, *having*, and *doing* are regular.

The modal auxiliaries have only one present-tense form, the base form (there is no *-s* form). Only *may*, *can*, *will*, *shall* have past-tense forms *might*, *could*, *would*, *should*, though these are not regularly used for the expression of past time: see MODAL VERB. Many of the auxiliaries have contracted forms: 'm (*am*), 's (*is* or *has*), 're (*are*), 'd (*had* or *would*), 'll (*will*). These are reflected in speech by 'weak' forms, but there are other weak forms not shown in the spelling, such as /wəz/ for *was*. Except for *am* and (usually) *may*, there is a full set of written contracted negative forms: *isn't*, *aren't*, *wasn't*, *weren't*, *can't*, *couldn't*, *mightn't*, *won't*, *wouldn't*, *shan't*, *shouldn't*, *mustn't*, *oughtn't*, *needn't*, *daren't*. These reflect speech, but not all the changes from the spoken forms are fully indicated by the spelling (for example, the omission of *t* in *mustn't*); especially in the English of England and of South Africa, the distinctive vowel of *can't*; the nasalized vowel and no /n/ in AmE *can't*.

**The syntax and semantics of auxiliaries.** The primary auxiliaries *be* and *have* mark aspect, phase, and voice (see TENSE) and the modal auxiliaries function in the modal system (see MODAL VERB). A striking feature of the auxiliaries, which can be used as a criterion for recognizing them, is that there are four environments in which they alone of English verbs can occur: (1) Negation: *He isn't coming*, *He can't come*, but not \**He comesn't* or in contemporary English \**He comes not*. (2) Inversion of the subject: *Is he coming?*, *Can he come?* but not in contemporary English \**Comes he?* (3) In reduced clauses: *Yes, he is* and *Yes, he can* as replies, but not normally *Yes, he comes* as a reply to such a question as *Is he coming?* (4) Emphatic affirmation: *He IS coming*, *He CAN come* as confirmation of doubting questions or remarks. Where an auxiliary verb is not required by the semantics (to mark aspect, voice, or modality), *do* is used, functioning as an 'empty verb': *He doesn't/didn't come*, *Does/did he come?*, *Yes he DOES/DID*, *He DOES/DID come*. However, *be* and *have*, even when used as full verbs, occur in these four environments without *do*: *He isn't very happy*, *Have you any money?*—*Yes, I HAVE*, *He IS very unhappy*, though *have* is also used with *do*, especially in AmE: *Do you have/Have you got any money?*—

*No, I don't have any money, Do you have any money?*—*Yes, I do/I DO have some money.*

**Active and passive.** The passive is formed with *be* plus the past participle and involves placing the object of the active sentence in subject position and putting the subject after the verb, preceded by *by* (*John saw Mary* becoming *Mary was seen by John*). The function of the passive is to bring the object of the active sentence into focus, and not merely to remove the subject from focus, but frequently to omit it altogether, especially if it is unimportant or unknown. Constructions of the latter type are agentless passives: *Mary was seen*. The meaning is otherwise unchanged. With a small number of verbs it is the traditional indirect object that is placed in subject position (*The boy was given a book by the teacher*), but it can be argued that this is an interpretation derived from Latin. The corresponding active sentence is *The teacher gave the boy a book*, in which there is no formal evidence that *the boy* is an indirect rather than a direct object. Some prepositional objects are also placed in subject position: *The woman looked after the old man* becomes *The old man was looked after by the woman*; *No one has slept in the bed* becomes *The bed's not been slept in*. Here, *look after* and *sleep in* are treated as if they were single-word verbs. A few verbs appear not to be used in the passive, such as *resemble*, *have*, *hold* (in the sense of 'contain'), and *marry* (in the sense of 'wed': *Mary was married by John* is only possible if John is a priest or official and not the husband).

**The syntax of full verbs.** There are seven major clause types into which a full verb can enter, their constituents being S for subject, O for object, C for complement, and A for adverbial. They are: (1) SV: *The smoke disappeared* (intransitive verbs). (2) SVO: *The boy broke the window* (transitive verbs). (3) SVC: *The child seems happy*. (4) SVA: *My home is in London*. (5) SVOO: *The teacher gave the boy a book* (ditransitive verbs). (6) SVOC: *Her success made her happy* (ditransitive verbs). (7) SVOA: *The girl put the book on the table*. A verb may belong to more than one of these classes. For example, *get* belongs to all but the first: *get a present*, *get angry*, *get into difficulties*, *get someone a present*, *get one's hands dirty*, *get someone into a business*.

**Minor categories.** There are various minor categories of verbs, such as *catenative verbs*, so named because they form a 'chain' with another verb: *He keeps singing*; *She persuaded him to come*. They may be classified in two ways: (1) In terms of the form of the non-finite verb: infinitive without *to* (*He helped clean up*), infinitive with *to* (*He wants to come*), present participle (*She keeps talking*), or past participle (*He got hurt*). (2) In terms of whether there is a noun phrase

between the two verbs or not: *He made them come, He wants them to come, She kept them talking, He had them punished*. Where there is no intervening noun phrase, the subject of the main verb functions as the subject of the subordinate verb: *John wants to come* refers to John's coming. Otherwise, the intervening noun phrase has that function: *John wants Mary to come* refers to Mary's coming. *Promise* is an exception: *I promised John to come* relates to my coming, not John's. The intervening noun phrase may or may not also function as the object of the main verb (*I persuaded John to come* versus *I wanted John to come*), where the meaning is that I persuaded John, but not that I wanted him. Syntactically, the difference is shown by the passive (which moves the object of the main verb to subject position): *John was persuaded to come*, but not \**John was wanted to come*. Many verbs belong to more than one of these classes: *He wants to come, He wants them to come, He wants it done*. An idiosyncratic class contains verbs like *seem* and *happen*, the verbs with voice neutrality: *John happened to meet Mary* becoming *Mary happened to be met by John*. Another category is *need* and *want*, where the present participle, in contrast with the infinitive, has a passive meaning (*They need/want watching* versus *They need/want to watch*). Further categorization of full verbs can be made in terms of the type of finite subordinate clause that may follow them, for example, *say, announce*, etc., followed by a *that*-clause: *They said that they would do it*.

Palmer, F. R. 1988. *The English Verb*, 2nd edition. London: Longman.

Quirk, R., Greenbaum, S., Leech, G., & Svartvik, J. 1985. *A Comprehensive Grammar of the English Language*. London: Longman.

**VERBAL** [15c: from Latin *verbalis* to do with words]. (1) Relating to words or consisting of words, often in contrast to something else: *verbal ability; a verbal protest*, as opposed to a protest in writing; *a verbal distinction*, as opposed to a distinction in reality. (2) Relating to the verb: *verbal as opposed to nominal elements of syntax; a verbal noun*. (3) Also *deverbal*. Derived from a verb: *a verbal noun, a deverbal adjective*. [GRAMMAR, WORD]. T.MCA.

**VERBALISM** [18c]. (1) A verbal expression; a word, phrase, or sentence. (2) Wording or phrasing. (3) A word, phrase, or sentence with an adequate form but little or no meaning. (4) Emphasis or overemphasis on words rather than what they refer to. (5) Being too verbal; wordiness. Someone either good with words or more concerned with words than with ideas or reality is a *verbalist*. Compare VERBIAGE, VERBOSITY, WORD-MONGER. [STYLE, WORD]. T.MCA.

**VERBAL NOUN**. A category of non-countable abstract noun derived from a verb, in English by adding the suffix *-ing*. Like the verb from which it derives, it refers to an action or state: *writing in The writing has taken too long; hearing in His hearing is defective*. Verbal nouns are frequently combined with the preposition *of* and a noun phrase that corresponds to the subject or object in a clause: *The grumbling of his neighbours met with no response* (compare *His neighbours grumbled*); *His acting of Hamlet won our admiration* (compare *He acted Hamlet*). Verbal nouns contrast with *deverbal nouns*, that is, other kinds of nouns derived from verbs, such as *attempt, destruction*, and including nouns ending in *-ing* that do not have verbal force: *building in The building was empty*. They also contrast with the *gerund*, which also ends in *-ing*, but is syntactically a verb. See GERUND, NOUN, VERBAL. [GRAMMAR]. S.G.

**VERBATIM**. See QUOTATION.

**VERBATIM**, Full title *Verbatim, the Language Quarterly*. An international periodical dealing with language in general and the English language in particular, founded in 1974 by its editor and publisher, the American lexicographer Laurence Urdang. Its stated purpose is to inform, amuse, and entertain a readership in 80 countries that includes linguists, translators, language teachers, writers, and members of the public. A typical issue contains several articles, a number of reviews of specialized and popular books (including dictionaries), correspondence, short humorous pieces, brief commentaries on etymology, grammar, usage, style, meaning, etc., a cryptic crossword puzzle, a word game, and,

till it was discontinued in 1989, a catalogue offering many language and reference books. Till 1989, \$2,500 in prizes in the *Verbatim Essay Competition* was offered. In that year it was replaced by the *Verbatim Award*, an annual donation of £1,500 in grants administered by EURALEX, 'for the pursuit of scholarship in lexicography'. See EURALEX, URDANG. [AMERICAS, MEDIA]. T.MCA.

**VERBIAGE** [18c: from Latin *verbum* word, and *-age* as in *foliage*]. (1) An overabundance of words: 'The Homeric phrase is thus often muffled and deadened by Pope's verbiage' (Sir Leslie Stephen, *Alexander Pope*, 1880). (2) Rare: the wording of a document. Compare VERBALISM, VERBOSITY. [STYLE, WORD]. T.MCA.

**VERBICIDE** [19c: from Latin *verbum* word, and *-cide* as in *regicide*]. An emotive non-technical term for: (1) Someone who 'kills' words: 'It is this laziness in speaking which makes [people] grow up habitual verbicides' (letter to the *Melbourne Argus*, 10 Jan. 1894). (2) The act or process of destroying or perverting the meaning and value of a word or words: 'The verbicidal impulses of Pentagonese' (*The Times*, 27 Mar. 1985). [STYLE, WORD]. T.MCA.

**VERBLESS SENTENCE**. A term in some grammatical descriptions for a construction that lacks a verb but can be analysed as consisting of grammatical units functioning as subject, object, etc., as in: (1) Elliptical responses: *Who took my pencil?—Sam; Where did they go?—Straight home.* (2) Questions: *What about another drink?; Why no mail today?* (3) Commands: *Inside, everybody!* (4) Idiomatic usage: *The sooner, the better.* Subordinate verbless constructions, traditionally called phrases, often now called clauses, are also common: 'I can help you if necessary'; 'Though in great pain, they struggled on.' See CLAUSE, SENTENCE. [GRAMMAR]. S.G.

**VERB OF INCOMPLETE PREDICATION**. A traditional term now usually replaced by *copular verb* or *linking verb*, the most frequent being the copula *be* as in 'Justin is intelligent'. Such verbs have been so called because the main meaning of the predication is conveyed by the complement required to 'complete' the meaning of the verb. Other copular verbs (with possible complements) are: *become (mature); seem (tired); remain (my friend); go (mad); grow (old); appear (the best choice); taste (good)*. See COPULA, PREDICATE, VERB. [GRAMMAR]. S.G.

**VERBOSITY** [16c: from Latin *verbositas*, from *verbosus* full of words]. The use of more words

than necessary, especially Latinate words intended to impress. The British politician Benjamin Disraeli (1878) illustrated the style ironically by calling his rival William Gladstone 'a sophistical rhetorician, inebriated by the exuberance of his own verbosity'. Compare CIRCUMLOCUTION, JOHNSONESE, VERBALISM, VERBIAGE. [STYLE, WORD]. T.MCA.

**VERB-PARTICLE CONSTRUCTION**. See PHRASAL VERB.

**VERB PHRASE**. (1) Also *verbal phrase*. In traditional grammar, a term for the main verb and any auxiliary or combination of auxiliaries that precedes it: *can spell; may have cried; should be paid; might have been transferred*. (2) In generative grammar, a term roughly equivalent to the traditional *predicate*. It includes the traditional verb phrase with (at least) any complements of the verb, such as the non-bracketed parts of the following sentences: (*They*) *have understood his intention; (Susan) was very patient; (My parents) promised me a computer; (We) haven't been to Paris*. See NOUN (FUNCTION), PHRASE, VERB. [GRAMMAR]. S.G.

**VERNACULAR** [c.1600: from Latin *vernaculus* domestic, indigenous, native, from *verna* a home-born slave, native: compare CREOLE, *native* (see ETHNIC NAME)]. (1) Occurring in the everyday language of a place and regarded as native or natural to it: *vernacular usage, expressions vernacular to English*. The term is used contrastively to compare the mainly or only oral expression of a people, a rural or urban community, or a lower social class (*a vernacular Indian language, a vernacular poet, vernacular West Country English, vernacular Glasgow*) with languages and styles that are classical, literary, liturgical, or more socially and linguistically cultivated and prestigious (*a classical Indian language, Augustan English, liturgical usage, standard English, polite Glasgow*). (2) Such a language or variety: *speaking (in) the vernacular; written in the Yorkshire vernacular*. The term is used across the judgemental spectrum, from the warm approval of 'vernacularists' through the more or less neutral usage of linguists to a traditionally casual and dismissive attitude among many writers and teachers. (3) Relating to the plain standard style or variety of a language as opposed to more ornate, pedantic, classical, or complex styles and varieties; such a style or variety: *What's that in the vernacular?* (4) Relating to any medium or form that reflects indigenous and usually simple style, or popular as opposed to sophisticated taste: *vernacular architecture*. (5) Relating to the common name of a plant or

animal, as opposed to its name in Latinate scientific nomenclature; such a name. See BINOMIAL NOMENCLATURE, BLACK ENGLISH VERNACULAR, CLASSICAL, CLASSICAL LANGUAGE, COLLOQUIAL, DEMOTIC, DIALECT, LITERARY, PLAIN, STANDARD, TESD, VERNACULARISM, VERNACULARIST. [LANGUAGE, STYLE]. T.MCA.

**VERNACULARISM** [1840s]. (1) A vernacular or native word or saying. (2) Use of a vernacular, a native language, etc.: 'If Rome not merely allows, but authorises such vernacularism, who can forbid us to employ our own Ecclesiastical English?' (*Ecclesiologist* 11, 1850, p. 176). See ATTICISM, CLASSICISM, COLLOQUIALISM, -ISM, VERNACULAR, VERNACULARIST. [LANGUAGE, STYLE, WORD]. T.MCA.

**VERNACULARIST** [1860s]. (1) A person who advocates the use of a demotic, regional, or working-class language or dialect, who speaks and/or writes it, or advocates its use instead of a classical, standard, literary, liturgical, or other form: 'There was ample material . . . in the industrial struggle with which Clydeside was so familiar, which in the hands of a Vernacularist of genius could produce a play so striking as "Strife"' (*Glasgow Herald*, 27 July 1926); 'Creosote bush, which the Spaniards call *hedonillo* but the American vernacularists termed "little stinker"' (*Saturday Review*, 4 Dec. 1974). (2) Of any such person, tendency, fashion, or movement: 'Mr St John Stevas's Latin is not good . . . , but that is a venial sin in these vernacularist days' (*Observer*, 25 Apr. 1982). See VERNACULARISM. [LANGUAGE, STYLE]. T.MCA.

**VERNER'S LAW.** A statement of the evolution of certain consonants in Germanic languages, already affected by Grimm's Law; see entry. It was made in 1875 by the Danish philologist Karl Verner. Greatly simplified, Verner's Law holds that Primitive Germanic voiceless fricatives (such as *s*) were voiced (in this case, to *z*) when the immediately preceding vowel did not carry the chief word-accent. Because the past plural and past participle were stressed on the suffix but other parts of the verb were stressed on the root syllable, some portions of the original conjugation met these conditions and others did not; hence the Law is sometimes called *Grammatical Sound Change*. The consonants that changed in accordance with Verner's Law underwent further changes; thus, when original *s* became *z*, it usually went on to become *r*, and the voiceless *th* sound (as in *thought*) voiced by Verner's Law (as in *though*) went on to become *d*. Analogy levelled out many of these effects, but modern English still has *dead*, *sodden*, (*for*)*lorn*, *rear*, *were*, and (*Val*)*kyrie*, all affected by Verner's

Law, alongside the related *death*, *seethe*, *lose*, *raise*, *was*, and *choose*, which were unaffected by it. Compare GREAT VOWEL SHIFT, GRIMM'S LAW. [HISTORY, SPEECH]. W.F.B.

**VERSE** [Before 10c: from Old English *fers*, from Latin *versus* a turn of the plough, furrow, line of writing, from *vertere* to turn: compare LINE, PROSE]. (1) Language in metrical form. (2) Poetry, especially when contrasted with prose. (3) A particular metrical structure, such as iambic or trochaic verse. (4) A stanza or other short division of a poem, as in *a poem of four verses*. (5) One of the small sections into which the Bible is divided: *chapter and verse*; *Chapter 23, Verse 2*. In this article, the first two senses predominate.

**Structure.** The succession of syllables gives natural rhythm to speech through stress, vowel quantity, and pitch. Verse builds on this rhythm, organizing it into stretches of speech with recurring syllabic patterns. Such stretches have traditionally been written as sequences of lines, with the result that the expression *a line of verse/poetry* is used in discussing all such works, whether oral or written. *Metre*, the measured use of vocal rhythm, remains fundamental to verse, its basic pattern generally enhanced by such other features as rhyme, alliteration, and the repetition of words or phrases; verse draws on the natural resources of language, but imposes organization not found in common discourse. There may be regularity or variation in the length of lines, stanzas, or verse paragraphs, and the discourse can be brief or extended for thousands of lines. As an oral conception, verse depends on the repetition of sound effects. Many cultures without a written language have or have had verse, often in elaborate forms. Written verse is therefore a translation from the oral to the written code, in which a literate society reinterprets verse as a written form whose pattern is 'heard' imaginatively in silent reading or re-expressed orally in various ways, through reading aloud or recitation from memory. Written verse, however, adds an element of graphic design, in the appearance of the line on the page, no longer mechanically constrained by the width of the paper but displaying conscious choice of a linguistic unit: see CONCRETE POETRY.

Differences between languages produce differences in verse. Greek and Latin verse is quantitative; the metrical structure of the line depends on the duration of the syllables, determined by rules concerning individual vowels and their combination with consonants. English verse is based on syllabic stress, although there have been experiments with quantitative metres.

These were most frequent in the 16c when classical influence was strong. Thomas Campion defended classical metres in *Observations on the Art of English Poesie* (1602); his argument was countered by Samuel Daniel in *A Defence of Rhyme* (1603). Campion practised his own principles by writing in classical forms. His 'English eleigick' uses alternative iambic and trochaic quantitative lines:

Constant to none, but euer false to me,  
Traiter still to loue through thy faint desires,  
No hope of pittie now nor vain redresse  
Turns my griefs to teares, and renu'd laments.

Later poets experimented with classical forms. The effect is usually forced if it is maintained through a long poem. A successful example is A. H. Clough's *The Bothie of Tober-na-Vuolich* (1848), written in hexameters:

Great was the surprise in college at breakfast, wine and supper,  
Keen the conjecture and joke; but Adam kept the secret.

Terms like *iambic pentameter* have long been accepted as appropriate for the stress-based metres of English verse-making. English is not rich in rhymes, as compared with some Romance languages. Forms like *terza rima* are difficult to sustain, writers in English usually preferring simple schemes with frequent changes of rhyme. Strong initial consonants made alliteration a feature of Old English verse, and response to alliteration has survived in modern English. However, many of the forms and terms of Latin and Greek have been successfully adapted to English versification, as in: 'I hear lake water lapping with low sounds by the shore' (W. B. Yeats, 'The Lake Isle of Innisfree').

**Rhythm and syntax.** The effect of verse is to draw attention to the manner as well as the matter of the discourse. The flow of language is not simply an extension in time but becomes consequential and fulfils an expectation of recurrence. There is a doubleness about it, the first rhythmic structure working with a second syntactic structure that is necessary to give meaning. The needs and aims of the two systems may coincide, metre and rhyme demanding pauses that are in harmony with the demands of syntax, as in:

Little Jack Horner  
Sat in a corner  
Eating his Christmas pie  
(from a nursery rhyme)

or enjambement can make the two systems coexist in tension:

At the round earth's imagined corners, blow  
Your trumpets, Angels, and arise, arise

From death, you numberless infinities  
Of souls, and to your scatter'd bodies go.  
(John Donne, *Holy Sonnets*, 7)

**The functions of verse.** In traditional literary criticism, the terms *verse* and *poetry* are not synonymous, although in everyday usage the two are often treated more or less as synonyms. Critics usually see verse as technique, not art: to call a composition 'verse' is generally descriptive, not evaluative, and the decision to make verse does not always produce poetic quality. The term *verse* is sometimes used to imply that, in a critic's opinion, some poems do not deserve to be called poetry, and the terms *versifying* and *versifier* have been used pejoratively to suggest inferior work. However, poetry is written in verse and cannot be fully discussed without attention to its technical aspect. Verse stands in opposition to prose, and thus makes poetry also different from prose. When someone speaks of 'poetic' prose, the phrase suggests either that certain features of poetry have moved away from their natural form of expression into prose, where they are essentially alien, or that the creative writer is free to move elements traditionally identified with one type of expression into the other. Verse is not used only for poetry. Its patterning gives it a strong mnemonic value which is essential in a non-literate society and remains useful in a literate one. The oral origins of early written verse can often be detected by the presence of repeated formulas and stock phrases which aid the mnemonic effect of the metre. There are charms and riddles in Old English, as well as heroic poetry. Spells, charms, weather-lore, and useful information are passed on and remembered in aphoristic verse:

Thirty days hath September . . .

Red sky at night, shepherd's delight,  
Red sky in the morning, shepherd's warning.

Mnemonic verse can also have a more formal pedagogic value:

In fourteen hundred and ninety-two  
Columbus sailed the ocean blue.

**Conclusion.** The contemporary world is rich in verse. Popular songs continue the tradition of songs and ballads with (often meaningless) refrains that allow the audience to participate. Children make up jingles about people and places as well as repeating traditional nursery rhymes. Advertisers use the power of verse and, through commercial media, have adapted orality and combined it with the pictorial, so that advertising jingles have, while they last, a role comparable to the nursery rhyme. Verse can be spontaneous or planned, ephemeral or enduring. How it works is described by *prosody*, which

discerns and states the patterns. In addition, contemporary linguistic study can aid understanding of how verse works, especially within the field of *stylistics*, pointing out how verse serves to isolate and emphasize such features of everyday language as rhythm and tone, figurative usage, grammatical form, and the meanings of words. See POETRY, PROSODY, STYLISTICS. [LITERATURE].

**VERSIFIER.** See POET.

**VERSION** [16c: through French from Latin *versio/versio*nis a turning (a sense taken into English, but now obsolete), a translation. Compare TROPE, VERSE]. (1) A rendering of a text or the like, especially by translation (the *Authorized Version* of the Bible, published in 1611; an *English-language version* of a work created in another language) or after the passage of time (*a modern version of an old song*). (2) An account or report of something when compared with one or more other accounts or reports of the same thing: *There are at least three versions of this story; Each side has its own version of what happened. A generally received version of something is the one that most people accept.* Compare VARIANT. [STYLE].

**VERS LIBRE.** See FREE VERSE, VERSE.

**VERSO.** See PAGE.

**VICTORIAN** [1870s]. (1) Relating to the reign of Queen Victoria (1837–1901): *Victorian literature, Victorian values*. The period was highly significant in the history of England, of Britain, and of the British Empire; it is noted for its industrial, commercial, technological, and cultural vigour, for the expansion of British influence throughout the world, and for the attendant spread of the English language and British conceptions of education in Africa, the Americas, Asia, and Oceania. Attitudes and viewpoints that can be classified as ‘Victorian’ are generally considered not to have been restricted to Britain and its Empire, but to have been widespread in the rest of Europe, in the US, and elsewhere, and to have survived the death of Victoria herself, who was often considered to be their embodiment. There was, for example, a widespread taboo in English and other languages against

both the use of strong language and direct references to sexuality in print and in the middle-class drawing-room. Subsequent views of the era have varied: some have looked back on the period as a time of unsurpassed visionary optimism and admirable moral rectitude; others, however, have seen it as a time of strict, stifling, bigoted, and often hypocritical narrow-mindedness; still others have focused on the struggle between social reformers and liberal thinkers and an entrenched élite regarded as self-serving exploiters of the people and the natural world (both at home and in the colonies). The collective term *Victoriana* covers the objects, institutions, and attitudes of the period: ‘The dear old Princes Theatre . . . a perfect specimen of Victoriana’ (*Lancashire Life*, Mar. 1978); ‘The terrifying Victoriana within’ (Ngaio Marsh, *Final Curtain*, 1947). The term *Victorianism* refers to the attitudes and style of the era, and to anything that characterized it. (2) A person who lived during, or was born in, the Victorian era: *Eminent Victorians* (title of a collection of biographical essays by G. Lytton Strachey, 1918). Compare AUGUSTAN, ELIZABETHAN, JACOBEAN, RESTORATION. See ARNOLD (M.), BIOGRAPHY, BRITISH EMPIRE, BRONTË, CARLYLE, CARROLL, DICKENS, ENGLISH LITERATURE, HARDY, HUMO(U)R, IMPERIALISM, LITERARY CRITICISM, MACAULAY, NOVEL, PUNCH, ROMANTICISM, TENNYSON. **VICTORIANISM.** See ENGLISH LITERATURE, VICTORIAN.

**VIETNAM(ESE).** See AMERICAN LANGUAGES, JAPANESE PIDGIN ENGLISH, LINGUISTIC TYPOLOGY.

**VIËTOR, Wilhelm** [1850–1918]. German phonetician and authority on language teaching methodology. Born at Kleeberg (Hesse-Nassau), Germany, he trained as a teacher of English. He taught German in schools in England (1872–4) and was Lecturer in German at U. College, Liverpool (1882–4). His pamphlet *Der Sprachunterricht muss umkehren* (Language Teaching Must Start Afresh), published in 1882 under the pseudonym Quousque Tandem (Latin: Just how long), initiated the Reform Movement for language teaching in Germany and neighbouring countries (whose other leading members were Otto Jespersen, Paul Passy, and Henry Sweet). Viëtor was Professor of English Philology at the U. of Margburg from 1884 until his death. His works include *Elemente der Phonetik des Deutschen, Englischen und Französischen* (Elements of German, English and French Phonetics, 1884) and *Die Methodik des neusprachlichen Unterrichts* (Modern Language Teaching

Methodology, 1902). See LANGUAGE TEACHING. [BIOGRAPHY, EDUCATION, EUROPE]. P.C.

**VIRGIN ISLANDS.** Caribbean dependencies of Britain and the US in the Lesser Antilles. The economies of both depend largely on tourism, their currencies are the US dollar, and their languages English and Creole. The *British Virgin Islands* consist of four large islands (Tortola, Virgin Gorda, Anegada, Jost Van Dyke) and numerous small islands, with their capital Road Town on Tortola. The Dutch settled the islands in 1648 and gave way to British planters in 1666. They became part of the colony of the Leeward Islands in 1872 and a separate colony in 1956. The *US Virgin Islands* (official title *Virgin Islands of the United States*) consist of more than 50 neighbouring islands formerly known as the *Danish West Indies*, the three main islands being St Croix, St Thomas, and St John. Capital: Charlotte Amalie, on St Thomas. Population: 95,591 (1980). Ethnicity: mainly African, many from other Caribbean territories, with 10% US Caucasian, 5% European. In 1671, the Danish West Indies Company colonized St Thomas and St John and in 1733 bought St Croix from France. The islands were Danish for 200 years, with a short break in Napoleonic times. The US purchased them in 1917 as part of a strategic passage to the Panama Canal and they are an unincorporated territory of the US, with a republican-style democracy. See CARIBBEAN, ENGLISH. [AMERICAS, NAME, VARIETY]. T.MCA.

**VIRGULE.** See OBLIQUE.

**VOCABLE** [16c: from Latin *vocabulum* a little voice, a bit of language, a word, a vowel]. A rare term for a word, common among 18c Scottish writers. See VOCABULARY. [WORD]. T.MCA.

**VOCABULARY** [16c: from Latin *vocabularium* a list of *vocabula* words. The medieval *vocabularium* was a list of Latin words to be learnt by clerical students. It was usually arranged thematically, with translation equivalents in a vernacular language]. A traditional term with a range of linked senses: (1) The words of a language: *the vocabulary of Old English*. The general vocabulary of a language is sometimes called its *wordstock* and is generally referred to by linguists as its *lexicon* or *lexis*. (2) The words available to or used by an individual: *a limited French vocabulary*. (3) The words appropriate to a subject or occupation: *the vocabulary of commerce*. (4) A word list developed for a particular purpose: *Use the vocabulary at the back of the book; a dictionary with a restricted defining vocabulary*. (5) A list or set of code words, gestures, symbols, styles, or colours.

**Specialized vocabularies in a language.** The vocabulary or lexicon of a language is a system rather than a list. Its elements interrelate and change subtly or massively from generation to generation. It increases through *borrowing* from other languages and through *word-formation* based on its own or borrowed patterns. It may decrease or increase in certain areas as interests change. Whole sets of items may vanish from general use and awareness, unless special activities serve to keep them alive. For example:

(1) *A vocabulary of carving.* There was in 16c England a set of verbs for carving kinds of game, fish, and poultry, which included *allaying a pheasant, barbing a lobster, chining a salmon, fracting a chicken, sculling a tench, and unbracing a mallard*.

(2) *A vocabulary of falconry.* Until at least the 17c, the names of birds classed as hawks and used in falconry included *falcon, gerfalcon, jerkin, tassel-gentle, laner, laneret, bockerel, bockeret, saker, sacaret, merlin, jackmerlin, hobby, jack, steletto, waskite, eagle, iron, goshawk, tarcel, sparhawk, musket, French Pye* (from Izaak Walton, *The Compleat Angler*, 1653). Few people would currently class an eagle as a kind of hawk.

(3) *A vocabulary of coaches.* In the 19c, there were many terms for horse-drawn vehicles, including *brougham, buckboard, buggy, cabriolet, carriage, chaise, coach, coupé, droshky, gig, hackney (carriage), hansom (cab), jaunting/jaunty car, landau, stagecoach, tonga*. The use of horse-drawn vehicles has steeply declined, but many such words are kept alive in historical novels and films, some refer to vehicles still in use in certain places, and some have moved into the vocabulary of rail travel and the automobile.

There is a present-day Japanese parallel to the carving verbs of Tudor England. Whereas, in English, people *put* their clothes *on* (whatever form the clothes take), Japanese has a set of verbs of dressing that differentiate kinds of clothing: to put on a kimono is *kimono-o kiru*, to put on a hat *oshi-o kaburu*, to put on shoes *kutsu-o haku*, to put on gloves *tebukuro-o hameru*, to put on a muffler *erimaki-o suru*, to put on a hair-piece *heapisu-o tsukeru*. Typically, the verb *kiru* collocates with kimonos, cloaks, slips, blouses, and clothing in general, *kaburu* collocates with words for headgear and face coverings, *haku* with footwear and items for the lower body and legs, *hameru* with gloves, rings, and bracelets, *suru* with headbands, scarves, and wrist-watches, and *tsukeru* with wigs, false eyelashes, hearing aids, ear-rings, brooches, medals, perfumes, and powders (from A. E. Backhouse, 'Japanese Verbs of Dress', *Journal of Linguistics* 17: 1, 1981).

**Distinctive vocabularies across languages.** Just as the vocabulary of a language changes from age to age, so the vocabularies of different languages are distinct in their systems, uses, and references. There may be some close translation equivalents among several languages, but items and arrangements of items in one language may have no precise parallel elsewhere, because the culture in which the vocabulary has evolved rests on unique needs, interests, and experiences. As the American anthropologist Stephen Tyler has put it:

The people of different cultures may not recognize the same kinds of material phenomena as relevant, even though from an outsider's point of view the same material phenomena may be present in every case. For example, we distinguish (in English) between dew, fog, ice, and snow, but the Koyas of South India do not. They call all of these *mancu*. Even though they can perceive the differences among them if asked to do so, these differences are not significant to them. On the other hand, they recognize and name at least seven different kinds of bamboo, six more than I am accustomed to distinguish (*Cognitive Anthropology*, 1969).

**The vocabulary of English.** Historically, the word-store of English is a composite, drawn in the main from the Indo-European language family. There is a base of Germanic forms (mainly Old English and Old Norse) with a superstructure of Romance, mainly from French and Latin, with a technical stratum contributed by Greek (mainly through Latin and French): see BISOCIATION. In addition, there are many acquisitions from languages throughout the world. Because of such a complex background, and because dictionaries and other resources state that they list thousands of headwords and other items, the question often arises: *How many words are there in the English language?*

No easy answer is possible. In order to reach a credible total, there must be agreement about what to count as an item of vocabulary and also something physical to count or to serve as the basis for an estimate. Counting words (however defined) is wearisome, complex, and difficult, and experience suggests that no matter how well organized the count there can never be enough data to ensure completeness. There are at least five reasons for this: (1) There is no corpus available in a countable form which represents the whole language. (2) Even if there were, it would only indicate what was available at the time the count started. It would therefore be a static assessment of a dynamic process. (3) The result of the counting would consequently be out of date before the counting was completed. (4) Even with careful safeguards, the total reached would be different for each counter. In practice, counters tend to interpret instances differently and so count items in different ways. (5) The

administrative work needed to homogenize the efforts of the counters would be formidable and time-consuming, making the survey even more out of date by the time it appeared.

Points 4 and 5 can be demonstrated by means of one example: the *-ing* form in *running* and *walking*. There are three ways to handle this suffix in a word count: (1) Count every item containing *-ing* as a distinct word. (2) Omit every item, treating *-ing* as an inflected form of the verb, like *runs* and *walks*, and therefore a matter of grammar, not lexis. (3) Count only some instances, like *clearing* and *drawing*, because these are used as distinct nouns with the plurals *clearings* and *drawings*, and ignore the rest. Whatever decision is taken significantly affects the outcome, because there are as many *-ing* forms as there are such verbs as *run* and *walk*. If Solution 3 is chosen, it poses further problems, because in the corpus to be counted will appear citations like *rustlings* and *twitterings among the trees*. If *rustling* and *twittering* are taken as distinct words on this occasion, how will the counters handle the fact that many *-ing* forms can be so used, even if they are not recorded in the corpus?

In effect, the overall vocabulary of English is beyond strict statistical assessment. Nonetheless, limited counts take place and serve useful ends, and some rough indications can be given about the overall vocabulary. The *Oxford English Dictionary* (1989) defines over 500,000 items described as 'words' in a promotional press release. The average college, desk, or family dictionary defines over 100,000 such items. Specialist dictionaries contain vast lists of words and word-like items, such as the *Acronyms, Initialisms & Abbreviations Dictionary* (Gale, 1989), which contains over 450,000 accredited abbreviations. When printed material of this kind is taken into account, along with lists of geographical, zoological, botanical, and other usages, the crude but credible total for words and word-like forms in present-day English is somewhere over a billion items.

**Individual vocabularies.** No one person can know, use, or imagine the entire available lexical resources of English. Many people are, however, curious about either how many words they or someone else knows, or what the 'average educated person' might be supposed to know and use. When such questions arise, they raise issues comparable to those of the vocabulary at large. Even in the case of writers whose texts are available for analysis, different totals emerge: the vocabulary of Shakespeare's works is variously listed as c.25,000 (Simeon Potter, *Our Language*, 1966), c.30,000 words (Robert McCrum *et al.*, *The Story of English*, book, 1986), and c.34,000

(J. Barton, in McCrum *et al.*, *The Story of English*, TV series, episode 3, 1986). Such totals apparently depend on what has been counted and the information passed on is a very rough approximation.

It is not unusual, however, to find assertions that the average person makes use of, for most purposes, fewer words than Shakespeare: perhaps 15,000 items. If, however, the count starts with the c.3,000 words in lists used for the early stages in the learning of English as a foreign language, such a total is soon exceeded simply by adding compounds, derivatives, phrasal verbs, abbreviations, and fixed phrases commonly associated with those c.3,000 words. For example, words formed on *run* alone include *runner*, *running*, *run in*, *run out*, *run on*, *run off*, *run up*, *run down*, *runway*, *gun-runner*, all with meanings and uses that qualify them as distinct words. All or most of such items are well within the range of most users of English educated to around 16–18 years of age. A crude extrapolation of  $10 \times 3,000$  suggests that such people are familiar with some 30,000 such items, or twice the above estimate. Bringing in many everyday words not in the basic 3,000, and applying the same multiplier, soon takes the average person to double or treble this number without discomfort, every personal 'list' of words and word-like items differing from every other.

**Active and passive vocabulary.** When teachers and linguists discuss the words people know, a distinction is commonly made between an *active* or *productive vocabulary* (what one can use) and a *passive* or *receptive vocabulary* (what one can recognize). The passive vocabulary is larger than the active, and the dividing line between the two is impossible to establish. All such terms and statements founder on the rock of what is meant by 'word' and 'vocabulary'. Lexical skills go well beyond the simplicities of printed words with white space on either side. These skills include knowledge of the *senses* of words. To take this knowledge into account would multiply what an individual knows many times over, because common words like *head* and *foot* have over a dozen important senses each, and many nuances. A person who 'knows' 50,000 'words', each with an average of five clear-cut senses, is actively or passively acquainted with 250,000 nuggets of lexical information. Such an estimate, however crude it may be, is decidedly impressive.

See: (1) DEFINING VOCABULARY, FREQUENCY COUNT, LEXICON, LEXIS, TERM, TERMINOLOGY, USAGE, VOCABULARY CONTROL. (2) The vocabulary sections of entries for major varieties of English, such as CANADIAN ENGLISH. [EDUCATION, LANGUAGE, WORD]. T.M.C.A.

**VOCABULARY CONTROL.** A term in applied linguistics for the organization of words into groups and levels, especially as the outcome of frequency counts and in the form of word lists intended to help in writing, reading, and learning languages. An early approach in English was made by Isaac Pitman (*Phonotypic Journal*, Oct. 1843), making available to stenographers a list of words 'showing how often each occurs in 10,000 words, taken from 20 books, 500 from each'. This served as a guide in selecting what he called *grammalogues* (words such as *and*, *the*, and *of*, that can be written in shorthand as single symbols). A later approach in German, also with stenographers in mind, was made by F. W. Kaeding, who counted 11m words from a variety of texts, providing the results in alphabetic lists that showed the frequency of occurrence of each item (*Häufigkeitwörterbuch der deutschen Sprache*, 1898). Since the beginning of the 19c, the organization of English vocabulary has been undertaken mainly to improve reading skills and make learning the language easier. For details of such work, see BASIC ENGLISH, COBUILD, DEFINING VOCABULARY, FREQUENCY COUNT, GENERAL SERVICE LIST, LEXICON, READER, THORNDIKE, WEST.

Counting words and creating word lists is a complex task, and for useful results requires an initial conception of 'word' for the purpose in hand. Problems regarding what to count as a word include: (1) The orthographic problem of spelling variants such as *colour* and *color*. (2) The homonymic problem of identical forms such as *bear* (animal) and *bear* (carry). (3) The homographic problem of identical forms such as *wind* (air on the move) and *wind* (to turn, twist). (4) The phonological problem of statistics relating to spoken (and informally written) language (do items like *'ll* and *n't* count as *will* and *not*, are they special events to be counted on their own, or are they parts of units like *I'll* and *didn't*, to be counted separately?). (5) The morphological problem of the forms of *be* (are *be*, *am*, *art*, *is*, *are*, *was*, *were* different words or realizations of the same word?). (6) The lexical problems of counting compounds and distinguishing them from attributive forms (is a *key decision* one word or two, in the same way that a *keyhole* or *key-hole* or *key hole* is one word?). (7) The statistical problem that, even granted that there is a utilitarian solution to the preceding problem, should the count include only agreed compounds or both compounds and their elements (so that for *keyhole* one counts *keyhole*, *key*, *hole*)? (8) The grammatical problem of particles and prefixes (does one count the *up* in *put up* with alongside the *up* in *up the hill*, and with the *up* in *uproot*?). (9) The onomastic problem of personal and place names (are *Manchester*, *Manila*, and *Manitoba*, etc., to be counted as

words simply because they appear in texts?). (10) The polysemic problem of deciding whether to count *fire* in a grate and *fire* at an artillery range as the same or a different word. (11) The lexicographical problem of how to describe and list the findings of any such survey, so that people of different experience can see and appreciate what has been counted. After all of these, there are two further problems: how to train the personnel and program the computer so that such highly sophisticated work can be brought to a successful conclusion. Anyone taking part in such work usually ends up with a cautious respect for words. See ATTRIBUTIVE, COMPOUND, HOMONYM, ONOMASTICS, POLYSEMY, TYPE AND TOKEN, VARIANT, VOCABULARY, WORD-FORMATION. [EDUCATION, REFERENCE, WORD].

T.MCA.

**VOCAL CORDS**, also **vocal chords**, **vocal folds**. Anatomical terms for folds inside the larynx, stretching from front to back, which control the flow of air from the trachea or windpipe into the pharynx, mouth, and nose. When muscular action pulls them apart a voiceless sound is produced, such as /s, t/. When they are held loosely together, air passing through forces them to vibrate, producing voiced sounds, such as /z, d/. See VOICE. [SPEECH].

G.K.

**VOCAL FOLDS**. See VOCAL C(H)ORDS.

**VOCAL TRACT**. A term in anatomy and phonetics for the area of the mouth and throat from the lips to the larynx, used in the production of speech. [SPEECH].

G.K., T.MCA.

**VOCATIVE** [15c: from Latin (*casus*) *vocativus* the naming case]. (1) Also *vocative case*. A term in the case system of Latin and other inflected languages, in which it marks the form of address for a noun or other word. The vocative of *dominus* occurs in the question *Quo vadis, Domine?* (Whither goest thou, Lord?). The element *O* was formerly regarded as marking the vocative in English: 'O Caesar, these things are beyond all use' (Shakespeare, *Julius Caesar*, 2. 2). See CASE. (2) In contemporary grammar, the function of a name or noun phrase used to attract attention, start a letter, or show the speaker's relationship to the person addressed: *Waiter, can we have the bill/check, please?*; *I'm sorry, darling*; *Fred, what's the time?*; *The gloves are in the next section, madam*. See FORM OF ADDRESS. [GRAMMAR, NAME].

S.C.

**VOGUE**, especially as used in **vogue word** [16c: from French *vogue* rowing, course, success, from Italian *voga* rowing, fashion, from *vogare* to row, go well]. If something is *in vogue*, it is fashionable

and widely used for a time. Linguistic usages can be as much in vogue as clothes or ideas: 'Pox on your Bourdeaux, Burgundie . . . no more of these vogue names . . . get me some ale' (Howard & Villiers, *Country Gentleman*, c.1669). *Vogue word* is a semi-technical term, and the terms *vogue name*, *vogue phrase*, *vogue term*, *vogue usage* all occur. When usages are taken up by journalists, publicists, and media celebrities, they quickly become fashionable and may prompt analogue forms: for example, *junk food* leading to *junk bonds*, *junk mail*, *junk fax*; *marathon* leading to *beg-a-thon*, *readathon*, *telethon*; *sit-in* leading to *be-in*, *love-in*, *teach-in*; the *F-word* (fuck) prompting the *L-word* (liberal), the *T-word* (tax), the *W-word* (wimp). Common sources of vogue expressions include: (1) Technology: *interface*, *input*, *downtime*, from the use of computers. (2) Advertising and publicity: *bottom line*, *targeting*, *yuppie*. (3) Medicine, health care, social science, and accompanying social comment: *aerobic*, *battered wives syndrome*, *executive stress*, *fitness freak*, *Type-A personality*, *workout*. Compare BUZZ WORD, KEYWORD, NONCE WORD. [STYLE, WORD].

**VOICE** [13c: from Anglo-Norman *voiz*, *voice*, Old French *vois*, *voiz* (Modern *voix*), from Latin *vox/vocis* a sound, tone, cry, voice, word, saying, sentence]. A term that refers to four aspects of language, of which the first two concern sound, the third is grammatical, and the fourth literary. The distinctions are illustrated in the phrases *a high-pitched voice* (general usage), *a voiceless consonant* (in phonetics), *the passive voice* (in grammar), and *narrative voice* (in literary theory).

**Voice as vocal sound**. The typical sound of someone speaking, the product of the vibration of the vocal cords, the resonant effect of the pharynx, mouth, nose, and tongue, the effect of rhythm and pitch, and such qualities as huskiness and throatiness. Individual voices differ, but the voices of members of certain groups have common features: adult male voices are usually 'deeper' (have a lower pitch) than women's and children's voices; the voices of people from the same region and/or social group usually share features of a particular accent. Kinds of voice can be categorized according to musical register: *a tenor voice*, *a falsetto voice*. Figuratively, the concept of voice extends to such things as: the words that someone utters (*the voice of experience*); the opportunity to say something (*have a voice in a decision*); being able to express a point of view (*to voice an opinion*); kinds of sound (*the voice of the wind in the trees*). See SOUND, TELEPHONE, VOICE OF AMERICA, WHISK(E)Y VOICE, WHITE VOICE.

**Voice in phonetics.** The buzzing sound made in the larynx by the vibration of the vocal cords or folds. In terms of this vibration, sounds are said to be *voiced* or *voiceless*. Voiced sounds such as /b, d, g, z/ are made by bringing the vocal folds close together so that the air stream forces them to vibrate as it passes through the glottis. This action reduces the amount of noise generated in the mouth for obstruents (stop and fricative consonants). Voiced obstruents are therefore said to be *lenis* (weak). Voiceless sounds such as /p, t, k, s/ are made by pulling the folds apart to allow the air to pass through unimpeded and increase the amount of noise generated in the mouth for obstruents. Voiceless obstruents are therefore said to be *fortis* (strong). The difference between voice and voicelessness can be checked by holding the larynx and saying *zzzz* and *ssss* in alternation, feeling vibration then lack of vibration. See ARTICULATION, DEVOICING, HARD AND SOFT, PITCH, SPEECH, VOICE QUALITY.

**Voice in grammar.** A category that involves the relationship of subject and object in a sentence or clause. In English, the contrast is between *active voice* and *passive voice*, affecting both the structure of the sentence and the form of the verb: *Susan chose the furniture* is an active sentence whose corresponding passive is *The furniture was chosen by Susan*. The active object (*the furniture*) is identical with the passive subject, while the active subject is incorporated in a *by*-phrase (*by Susan*). The two sentences have the same truth value, though there are differences in style and emphasis, in that passives are usually more formal than actives and the end of a sentence or clause tends to have the greatest emphasis. The *by*-phrase is often omitted from the passive sentence, especially in technical writing, producing an *agentless passive*. The passive verb adds auxiliary *be* to the corresponding active verb, and is followed by the passive participle of the main verb (*-ed* in regular verbs): active *washes, washed, was washing, has washed*; passive *is washed, is being washed, was washed, was being washed, has been washed*. The distinction between active and passive applies only when the verb is transitive, since only a transitive verb can be accompanied by an object. Typically, the active subject is the doer of an action (*Ted in Ted was repairing the computer*), whereas the passive subject (like the active object) is the person or thing affected by the action (*the computer*). See PASSIVE (VOICE), PASSIVIZATION.

**Narrative voice.** A term in literary criticism for the person who 'speaks' in a story, either a narrator who represents the author ('third person': the *implied author* or *omniscient narrator*) as in novels by Fielding and George Eliot, or who is represented by a character ('first person'), as in

Defoe's *Robinson Crusoe* or Swift's *Gulliver's Travels*. Within a narrative, other 'voices' may be heard in dialogue, in direct speech, and in some works of fiction several first-person voices may take up the same story from different perspectives, as in Susan Howatch's *The Wheel of Fortune*. The concept of narrative voice can become problematic in 'indirect' modes of speech presentation. In indirect speech and free indirect speech the voice is predominantly the (third person) narrator's, but the style may be coloured by the voice of the character whose words are being reported. Compare:

*direct speech* He said, 'I'll cough up the cash tomorrow.'

*indirect speech* He said (that) he would cough up the cash the next day.

*free indirect speech* He would *cough up* the cash tomorrow.

In the free indirect style (without the reporting clause *He said*), although the main voice is the narrator's, the perspective is predominantly the character's. See DIRECT AND INDIRECT SPEECH, NARRATION. [GRAMMAR, LITERATURE, SPEECH].

G.K., S.G., K.W., T.MCA.

**VOICE BOX.** See LARYNX, SPEECH.

**VOICED AND VOICELESS.** See VOICE.

**VOICE OF AMERICA**, short form *VOA*. Begun in 1942 under the Office of War Information, the VOA first broadcast in German to occupied Europe. Funded by Congress and charged from the outset with the delicate task of reporting the news objectively while representing US policy overseas, the VOA has often been subject to political pressure. After World War II, the VOA, as a division of the US State Department, broadcast news and anti-communist propaganda to audiences in Eastern Europe, the Soviet Union, and the People's Republic of China. Its signals were frequently jammed. In 1953, the VOA was purged as a result of Senator Joseph McCarthy's blanket accusation that the US State Department was riddled with traitors who were soft on communism. The new VOA was transferred to the newly formed *United States Information Agency (USIA)*, where it has remained, though not always comfortably. The VOA charter lays down a strict policy of objective reporting of verified news and its broadcast manual has always carefully separated news from editorializing. However, the agency still has difficulty juggling the potentially conflicting roles of newscaster and diplomatic representative, and VOA broadcasts are still charged by their critics with being too pro- or anti-American. The VOA currently broadcasts in more than 40 languages, producing 160 hours

of programming per day for a world audience of 120m, mostly educated, urban, politically aware young adults. A subsidiary, Radio Marti, has broadcast to Cuba since 1985. Although the News Division remains VOA's primary focus, and attracts the greatest number of listeners, the VOA also promotes US cultural interests through feature programmes on American history, science and agriculture, jazz and rock music, interviews with celebrities, and commentaries on English vocabulary. Special English broadcasts of news and features (including adaptations of short stories by American writers) are aimed at learners of English and are read at a slower pace using a simplified vocabulary of 1,500 words, short, active sentences, and few numbers or technical terms. See PROPAGANDA. [AMERICAS, MEDIA]. D.E.B.

**VOICE QUALITY.** The characteristic sound of the voice brought about by the mode of vibration of the vocal cords or folds. Differences in the degree and manner of glottal closure distinguish *modal voice* and *whisper*, and *breathy voice* and *whispery voice*. The quality of the voice also depends on the degree of tension in the larynx and pharynx, and on the vertical displacement of the larynx: a raised larynx produces a thin tense voice, and a lowered larynx a booming 'clergyman's' voice. Apart from distinguishing voiced and voiceless sounds, voice quality does not make linguistic contrasts, but conveys information about the speaker. Languages and dialects have characteristic voice qualities; personal voice quality enables a listener to recognize a particular individual. The quality of someone's voice also conveys emotions and attitudes. See ACCENT, ARTICULATORY SET(TING), VOICE. [SPEECH]. G.K.

**VOLUME** [14c: through French from Latin *volumen/voluminis* a coil, roll (of sheets of papyrus or parchment, usually wound on a spindle)]. (1) (Obsolete) a roll or scroll of written work. (2) (Obsolete) especially in 17-19c poetry, the coils of a serpent or the winding of a stream ('Her twisting volumes and her rolling eyes': Pope, *Thebais*, 1703). (3) A collection of written or printed sheets bound to form a book. The terms *Sacred Volume* for the Bible and *Christian Volume* for the New Testament were common in the 18-19c. The phrase *to speak volumes* (to say a great deal, to be expressive or meaningful) is a figurative extension of this sense. (4) A book in a set or series, usually large in size, such as the volumes of an 18-19c novel, a large dictionary, or an encyclopedia (*Volume II of the OED*); a set of issues of a periodical, usually covering one year and sometimes kept in a special binding (*The 1970 volume of American Speech*). (5) Bulk

or quantity, as in a large book, object, or mass of material: *Volumes of smoke/water poured from the hole; They received volumes of mail.* (6) A total amount: *The volume of sales was down last year.* (7) In physics mathematics, quantity measured in cubic units: *They measured the volume of water displaced.* (8) The power or tone of a singing voice or a musical instrument. (9) The degree of loudness in a machine that gives out sound, such as a radio or music centre: *Turn the volume down.* See BOOK, PARCHMENT, PERIODICAL, ROLL, SCROLL. [MEDIA, TECHNOLOGY, WRITING]. T.M.C.A.

**VOWEL** [14c: from Old French *vouel*, a variant of *voyel* (Modern *voyelle*), from Latin *vocalis* (*littera*) vocal (letter), a letter representing uninterrupted voice or breath]. A term in general use and in phonetics for both a speech sound that is distinct from a consonant (also *vowel sound*) and the letter of the alphabet that represents such a speech sound (also *vowel letter*). In general usage, the distinction between vowels in speech and writing is not always clearly made, but linguists and phoneticians seek to keep the two kinds of vowel distinct.

**Vowel sounds.** Phonetically, a vowel is a speech sound characterized by voicing (the vibration of the larynx) and by absence of obstruction or audible friction in the vocal tract, allowing the breath free passage. The quality of a vowel is chiefly determined by the position of the tongue and the lips: see VOWEL QUALITY. Vowel sounds divide into *monophthongs* (single vowel sounds that may be long or short), *diphthongs* (double vowel sounds formed by gliding from one vowel position to another), and *triphthongs* (triple vowel sounds formed by gliding from one through another to a third vowel position). See entries. The human speech mechanism is capable of producing a wide range of simple and complex vowel sounds. As with consonants, however, in each language (or language variety) a particular range of vowels is used: for example, in standard Parisian French, there are 12 non-nasal and 4 nasal monophthongs (16 vowel sounds in all); in BrE, the basic vowel system of RP has 12 monophthongs and 8 diphthongs (20 vowel sounds in all) while the basic vowel system of ScE has 10 monophthongs and 4 diphthongs (14 vowel sounds in all).

**Vowel letters.** The five classic vowel letters of the Roman alphabet are *a, e, i, o, u*, to which *y* is usually added; apart from its syllable-initial role as a semi-vowel or semi-consonant in words like *year*, *y* functions in English largely as an alternative vowel symbol to *i*. Phonetically, the letters *w* (as in *win*) and *y* (as in *year*) are articulated

similarly to vowels, but positionally they function as consonants, initiating syllables and introducing vowels: compare *wear/bear* and *year/fear*. Phonetically, too, the liquid consonants written as *l*, *r* and the nasal consonants written as *m*, *n* have some of the characteristics of vowels (such as continuous non-fricative voicing), and when used syllabically (as in the pronunciations of *apple*, *spasm*, *isn't*, *centre*) they in effect represent a preceding schwa vowel sound in addition to their own sound value.

Whereas the five classic vowel letters match the five vowel phonemes of a language like Spanish, they are insufficient to distinguish the much larger number of vowel phonemes of English. When unaccompanied by another vowel letter, the five letters usually have a basic 'short' sound value in medial position in English words (as in *pat*, *pet*, *pit*, *pot*, *putt/put*), but in some words (such as *yacht*, *pretty*, *son*, *busy*) their values are aberrant, and in certain environments, such as after /w/ and before /l, r/, they are commonly modified (as in *was*, *word*, *all*, *old*, *far*, *her*, *fir*, *for*, *fur*). For each of the short values there is a corresponding 'long' value which formerly (before the Great Vowel Shift of the 15c) was close to the short value, but is today in varying degrees removed from it (and is not the 'long' value as understood in phonetics). The present-day long values are as heard in *mate*, *meet*, *might*, *moat*, *mute*. Native speakers perceive the long values as intimately associated with the short values; the two often alternate in related words (as in *sane/sanity*, *abbreviate/brevity*, *five/fifth*, *depose/deposit*, *student/study*) and the long values are heard as the names of the letters themselves (heard as *ay*, *ee*, *eye*, *oh*, *you*). See LONG AND SHORT.

The spelling of the long values of the vowels is varied and unpredictable: for example, Edward Rondthaler and Edward J. Lias (*Dictionary of American Spelling*, 1986) list 114 alternative spellings for the five sounds. These include single graphemes (units of writing), as in *mind*, *post*, *truth*, digraphs as in *leave*, *sleeve*, *receive*, *believe*, and longer graphemes as in *beau*, *queue*. Some of these longer graphemes include consonant letters (as in the *igh* of *weigh* and the *et* of *ballet*) that are in effect constituents of vowels. Highly characteristic of English vowel spellings is the 'magic' *e* placed after a consonant, which has the effect in Modern English of showing the long value of a preceding vowel, as in *mate*, *mete*, *mite*, *mote*, *mute*. In addition to these parallel sets of short and long vowels corresponding to *a*, *e*, *i*, *o*, *u*, English also needs to spell several vowel sounds for which alternative pairs of digraphs are widely (but not consistently) used according to position: for example, initial and medial *au*, *eu*, *ou*, *ai*, *oi*, but final *aw*, *ew*, *ow*,

*ay*, *oy* (contrast *fault/flaw*, *feud/few*, *count/cow*, *rain/ray*, *coil/coy*). A corollary of the many alternative spellings for the same vowel sound is the many alternative pronunciations that may be required for the same vowel letters: for example, *ea* is pronounced in nine different ways in *eat*, *threat*, *great*, *react*, *create*, *pear*, *hear*, *heart*, *hearse*.

**Unstable pronunciation of vowel letters.** The pronunciation of vowel letters varies between communities and individuals, and within the speech of individuals. Variation between communities includes the tendency of BrE to reduce words such as *secretary*, *monastery*, *dormitory* to rhyme with *ministry*, while in AmE the penultimate vowel letter usually receives full value. Within Britain, different speech communities vary in the distinctions they make between the values of *u*. In England, Northern English does not distinguish the vowel sounds of *putt* and *put*, and many East Anglians pronounce *beauty* like *booty*; in ScoE, no distinction is made between the vowel sounds of *pull* and *pool*. Variation between individuals occurs when some give the first vowel of *either* the long value of *e* and others give it the long value of *i*. In addition, unstressed vowels may vary from occasion to occasion, formal, careful speech being more likely to give vowels their full orthographic value while fluent, conversational speech is more likely to reduce them to schwa or elide them altogether: *February* may have each letter pronounced explicitly, or be reduced in various ways, including in BrE 'Febry'.

See A, ABLAUT (VOWEL GRADATION), ACCENT, AITKEN'S VOWEL, ALPHABET, APHESIS, CONSONANT, DIACRITIC, DI(A)ERESIS, DIGRAPH, DIPHTHONG, E, ELISION, EPENTHESIS, GREAT VOWEL SHIFT, I, LETTER<sup>1</sup>, LIGATURE, LONG AND SHORT, MONOPHTHONG, O, RECEIVED PRONUNCIATION, RHYTHM, S(C)HWA, SCOTTISH VOWEL-LENGTH RULE, SPELLING, STRESS, SYLLABIC CONSONANT, SYLLABLE, TRIPHTHONG, U, UMLAUT, VOWEL HARMONY, VOWEL LENGTH, VOWEL QUALITY, VOWEL QUANTITY, VOWEL SHIFT, W, WEAK VOWEL, Y. [SPEECH, WRITING].  
C.U., G.K.

**VOWEL GRADATION.** See ABLAUT.

**VOWEL HARMONY.** A distinctive phonological patterning in which the vowels in a word share certain features. As in Irish Gaelic, they may all be front vowels (*cipini* sticks, *telefis* television), open vowels (*balla* wall, *hata* hat), or back vowels (*lúdrú* buffeting, *solus* light). Vowel harmony is found in Gaelic, Turkish, Hungarian, Finnish, and many West African vernaculars, but not in mainstream English. In Kamtok (Cameroonian Pidgin English), however, the same vowel may appear in adjacent syllables

(*palava* talk, *pikin* child, *potopoto* mud, muddy), and when different vowels occur in adjacent syllables, a fixed pattern of exclusion is followed (for example, *i* cannot be followed by *e*, producing *witi* with, and not \**wite*). See ANGLO-IRISH, KAMTOK. [SPEECH]. L.T.

**VOWEL LENGTH.** See LONG AND SHORT, VOWEL QUANTITY.

**VOWEL LIGATURE.** See LIGATURE.

**VOWEL QUALITY.** A term in phonetics for the property that makes one vowel sound different from another: for example, /i:/ as in *sheep* from /ɪ/ as in *ship*. The quality of a vowel is determined by the position of the tongue, lips, and lower jaw, and the resulting size and shape of the mouth and pharynx. Vowels are classed as *close* or *open* (in British terminology) and *high* and *low* (in American terminology) according to whether the tongue is held close to the roof of the mouth or low in the mouth. They are classed as *front* or *back* in both terminologies according to whether the body of the tongue is pushed forward or pulled back. They are classed as *rounded* or *spread* according to the shape of the lips: for example, the /i:/ in *sheep* is a close front spread vowel, the /ɪ/ in *ship* a semi-high front unrounded vowel.

**Cardinal vowels.** While this general classification provides an approximate description of vowel quality, it is not sufficient to define all the vowels in a system such as English. Some vowels can only be defined in relation to other vowels: for example, /ɛ/ in *bet* is intermediate between close /i/ in *bit* and open /æ/ in *bat*. The most widespread method of dealing with relative vowel quality is based on the system of *cardinal vowels* devised by Daniel Jones. These vowels are used as reference qualities for the vowels of all languages. The eight primary cardinal vowels are shown in Fig. 1.

Cardinal [i] is produced with the body of the tongue held forward in the mouth, and with the tongue surface as close as possible to the palate without generating turbulence (which would turn it into a consonant). Cardinal [a] is produced with the body of the tongue held back in the mouth, and with the root of the tongue as close as possible to the back wall of the pharynx, again without generating turbulence. The remaining cardinal vowels are placed at equidistant points on the lines from [i] to [a]. The system of cardinal vowels provides a means of describing vowel sounds, as shown in Fig. 2.

Cardinal [i] has spread lips; from [i] to [a] the vowels become less spread and progressively more lip neutral. From [a] to [u] they are

FIG. 1

FIG. 2

FIG. 3

progressively more rounded, and [u] is fully rounded. For ease of reference, the cardinal vowels are numbered anti-clockwise (counter-clockwise) from 1 to 8. The statement 'a vowel in the region of cardinal 2' is equivalent to 'a vowel in the region of [e]'. Both refer to a 'half-close front spread vowel'. Most vowels in most languages combine lip spreading with frontness, and rounding with backness, as in the primary cardinal vowels, but this is not always the case. *Secondary cardinal vowels* have the lip positions reversed from those of the primary cardinals, the first five being rounded and the last three spread. These cardinal vowels are numbered anti-clockwise from 9 to 16: see Fig. 3.

See VOWEL, VOWEL QUANTITY. [SPEECH]. G.K.

**VOWEL QUANTITY.** A term in phonetics and poetics for the length of a vowel, usually indicated in phonetic transcription by a length mark [ː] or a colon [:] after a vowel, as in /a:/. Vowels so marked have in general greater duration than the same vowels with no such mark. Vowels so marked are described as *long*, and unmarked vowels are *short*, a distinction known as *vowel*

*length*: see LONG AND SHORT. However, the measurable duration of vowels depends also on at least two other factors: (1) Vowel height, in terms of the position of the tongue. Open vowels as in *ban* /bʌn/ or *balm* /bɑ:m/ are longer than close vowels as in *bin* /bɪn/ or *beam* /bi:m/. (2) Environment, in terms of preceding and following sounds. Vowels are shortened before some consonants and lengthened before others, for example /u:/ is longer in *move* /mu:v/ than in *boot* /bu:t/. These factors have different weightings in different varieties of English, and contribute to the variety of rhythms in English. In many varieties, short vowels may have greater duration than long vowels: for example, /a/ in *jaz* may be longer than /i:/ in *sleep*. To avoid the confusion, some phoneticians consider it preferable to treat the length mark as a mark of quantity rather than duration, and refer to 'heavy' and 'light' vowels. If a vowel has sufficient duration, as in *halve* /hɑ:v/, there is time for the organs that form it to move into their target positions and remain there briefly before moving to the next target. Such a vowel is described as *tense*. If the vowel is too short, the organs have to leave the target as soon as they reach it, and in extreme cases (for example, in *six* /sɪks/) may not reach the target at all. Such a vowel is described as *lax*. In view of the time required to move to more peripheral vowel positions, tense vowels tend to be peripheral and lax vowels closer to *schwa*, the neutral or central vowel. If an English word ends in a vowel, then the vowel must be either heavy (that is, it is either marked with a length mark or is a diphthong) or reduced: for example, *me* /mi:/, *day* /deɪ/, *banana* /-nə/. See LENGTH MARK, VOWEL, VOWEL QUALITY. [SPEECH].

G.K.

**VOWEL SHIFT.** A term in philology and phonetics for a process under which a set of vowels

undergoes changes. The term *Great Vowel Shift* is used for a number of long-term changes which affected the English vowel system during the 15c-17c. In this shift, the long vowels in *reed*, *road* changed from [e:, o:] to [i:, u:], and close vowels became diphthongs, the vowels in *five*, *house* changing from [i:, u:] to [aɪ, aʊ]. The degree to which vowels have shifted varies from one variety of English to another: for example, conservative dialects of Scotland, Ireland, and the North of England retain a monophthong [e:, o:] in words like *raid*, *road*, whereas these vowels have generally become diphthongs elsewhere, as in RP [eɪ, əʊ]. See ABLAUT, GREAT VOWEL SHIFT, VOWEL. [SPEECH].

G.K., T.MCA.

**VULGAR** [14c: from Latin *vulgaris* common, from *vulgus* the people]. A non-technical term that has moved from a neutral and general to a pejorative meaning. Formerly, it referred to ordinary life and ordinary people, as opposed to an upper-class or educated minority. *Vulgar Latin* was the everyday Latin of the Roman Empire and, until the 19c, European vernacular languages were referred to as *vulgar tongues*. Concomitantly, a sense of coarseness and lack of breeding and culture developed, associated with the 'lowest orders' of society, and now dominates, particularly with reference to language: *a vulgar remark*. See PARTRIDGE, RECEIVED STANDARD AND MODIFIED STANDARD, SWEARING, VERNACULAR, VULGARISM. [STYLE].

T.MCA.

**VULGARISM** [17c]. A coarse expression, especially when used in elevated discourse or on formal occasions: for example, *fart* appearing in an academic treatise or *crap* said loudly at an elegant dinner party. It is a vulgarism if a sailor or a saint says *You're pissed* to someone who is drunk, but in the case of the sailor it provokes less comment. See VULGAR, -ISM. Compare SWEARWORD. [STYLE, WORD].

T.MCA.

# W

**W, w** [Called 'double-you']. The 23rd letter of the modern Roman alphabet as used for English. The Romans had no letter suitable for representing the phoneme /w/, as in Old English, although phonetically the vowel represented by *v* (as in *veni, vidi, vici*) was close. In the 7c, scribes wrote *uu* for /w/, but from the 8c they commonly preferred for English the runic symbol *wynn* (*ƿ*). Meanwhile, *uu* was adopted for /w/ in continental Europe, and after the Norman Conquest in 1066 it was introduced to English as the ligatured *w*, which by 1300 had replaced *wynn*. Early printers sometimes used *vv* for lack of a *w* in their type. The name *double-u* for double *v* (French *double-v*) recalls the former identity of *u* and *v*, though that is also evident in the cognates *flour/flower, guard/ward, suede/Swede*, and the tendency for *u, w* to alternate in digraphs according to position: *maw/maul, now/noun*.

**Sound value.** In English, *w* normally represents a voiced bilabial semi-vowel, produced by rounding and then opening the lips before a full vowel, whose value may be affected.

**Vowel digraphs.** (1) The letter *w* commonly alternates with *u* in digraphs after *a, e, o* to represent three major phonemes. Forms with *u* typically precede a consonant, with *aw, ew, ow* preferred syllable-finally: *law, saw, taut; dew, new, feud; cow, how, loud*. (2) When the preceding vowel opens a monosyllable, silent *e* follows the *w*: *awe, ewe, owe* (but note *awful, ewer, owing*). (3) Word-finally, *w* is almost always preferred to *u* (*thou* is a rare exception), but *w* occurs medially quite often (*tawdry, newt, vowel, powder*), and the choice of letter may be arbitrary (compare *lour/lower, flour/flower, noun/renown*). (4) In some words, digraphs with *w* have non-standard values: *sew, knowledge, low*. Final *-ow* with its non-standard value in *low*

occurs in nearly four times as many words as the standard value in *how*. (5) In the name *Cowper*, *ow* is uniquely pronounced as *oo* in *Cooper*. (6) Final *w* in many disyllables evolved from the Old English letter *yogh* (*ȝ*) for *g*, as in *gallows, hallow, tallow, bellows, follow, harrow, borrow, morrow, sorrow, furrow* (compare German *Galgen, heiligen, Talg, Balg, folgen, Harke, borgen, Morgen, Sorge, Furche*).

**WH.** (1) The digraph *wh* occurs word-initially, and in ScoE, IrE, often in AmE, and among some RP speakers it has the once universal voiceless, aspirated pronunciation often represented as /hw/, sometimes as /m/: *whale, wharf, what, wheat, wheel, wheeze, welk, when, whelp, where, whet, whether, which, while, whimper, whip, whirl, whisker, whistle, white, whither, whorl*. Such forms were mostly spelt *hw* in Old English. The *h* in *welk* appears to be a late insertion. (2) Several common parallel spellings without *h* are homophones for speakers who do not make the *w/wh* distinction: *whale/wail, where/ware, whet/wet, whether/weather, whey/way, which/witch, whig/wig, while/wile*. See WH-SOUND.

**Silent W.** (1) Initial *w* fell silent before *r* in the 17c, but is written in *wrack, wraith, wrangle, wrap, wrath, wreak, wreath, wreck, wren, wrench, wrest, wrestle, wretch, wriggle, wright, wring, wrinkle, wrist, writ, write, writhe, wrong, wrote, wroth, wreak, wrought, wrung, wry*. The form *awry* derives from *wry*. (2) The *w* in *two, who, whose, whom* is thought to have fallen silent under the rounding influence of the following *u*-sound, while the *w* in *whole* (cognate with *hale, heal*) and *whore* was added in the 15c under the influence of dialects in which a *w*-sound arose before the vowel *o* (as in the pronunciation of *one*). This was once the case with *whoop*, which now has the optional pronunciations 'hoop' and '(h)woop'. A modern instance of adding an

## THE CAPITAL LETTER

EARLY FORMS			CURRENT FORMS

𐌶	Ϝ	Ϝ	w	w

etymologically inappropriate *w-* occurs when Greek-derived *holistic* (compare *holocaust*, *holograph*, from *hólos* entire) is spelt *wholistic*, on the assumption that it derives from *whole*. (3) Medial *w* has fallen silent after *s* in *answer*, *sword*, and after consonants when initiating unstressed final syllables in English place-names: *Chiswick* ('Chizzik'), *Norwich* ('Norritch', 'Norridge'), *Southwark* ('Suthark'), *Welwyn* ('Wellin'). This *w* has also fallen silent in nautical usage, with adapted spellings *bosun*, *bo's'n* for *boatswain*, and *gunnel* for *gunwale*. (4) In informal or non-standard, often archaic, speech, *w* is elided in *allus* always, *forrad* forward, *ha'p'orth* half-pennyworth, *summat* something. (5) *Will*, *would* lose *w* when they assimilate to preceding pronouns, as in *he'll*, *I'll*, *it'll*, *he'd*, *I'd*.

**Variations.** (1) The sound /w/ has other spellings. Because lip-rounding is a feature of most pronunciations of *u*, /w/ is spelt *u* in some words, chiefly of French derivation, after *g*, *q*, and *s*, as in *languish*, *question*, *quiet*, *suite*, *persuade*. (2) Recent French loans may keep the French *oi* for the sound /wa/: *boudoir*, *memoir*, *repertoire*, *reservoir*, *soirée*, a pattern which may have influenced the respelling of *quire* as *choir* in the late 17c. (3) A change of pronunciation has given an unspelt initial /w/ to *one*, *once*, but not to their cognates *only*, *alone*. (4) *R* is sometimes spoken /w/. This has long been regarded as a shibboleth of some kinds of BrE upper-class accents and may occur in the speech of small children and in imitation of such speech (*Weally weally big!*), and in defective articulation. It is sometimes referred to as *rhotacism*. (5) Historically there has been some parallel development of Anglo-Norman spellings with *w* and French spellings with *g*: *ward/guard*, *warranty/guarantee* (compare French *garde*, *garantie*), *reward/regard*, *-wise/guise*. See A, ALPHABET, E, H, I, LETTER<sup>1</sup>, O, RHOTACISM, SPELLING, WH-SOUND. [WRITING]. C.U.

**WAFFLE** [Late 19c: formerly Scots and Northern English, from obsolete *waff* to yelp, and *-le*]. Also **woffle**. An informal especially BrE term for rambling, uninformative, and boring talk or writing, and for talking and writing in such a way: 'I under-estimated his shrewdness . . . I thought he was waffling' (Laurence Meynell, *Bandaberry*, 1960). The comment *waffle* or *Stop waffling* is a common note by teachers in students' essays. Compare TWADDLE. [STYLE].

T.MCA.

**WALCOTT, Derek Alton** [b.1930]. Caribbean poet, playwright, and critic, born on St Lucia, and educated at St Mary's College, St Lucia, and U. College of the West Indies, Mona, Jamaica

(1950–3). He has taught at Grenada Boys' Secondary School, St Mary's College, St Lucia, and Jamaica College, and has been a feature writer for *Public Opinion*, Jamaica (c.1956), and the *Trinidad Guardian* (1960–8). He went to Trinidad in 1957, having been commissioned to write *Drums and Colours*, an epic drama for the 1958 West Indian Festival of Arts, and in 1958 was awarded a Rockefeller Foundation Fellowship to study theatre in New York. In 1959, he founded the *Little Carib Theatre Workshop* (later known as the *Trinidad Theatre Workshop*), whose company toured the West Indies and Canada. His publications include: *25 Poems* (Bridgetown, 1948), *Epitaph for the Young* (Bridgetown, 1949), *Poems* (Kingston, 1951), *In a Green Night* (London: Jonathan Cape, 1962), *Selected Poems* (New York: Farrar Strauss, 1964), *The Castaway and Other Poems* (Cape, 1965), *The Gulf and Other Poems* (Cape, 1969), *Dream on Monkey Mountain and Other Plays* (New York: Farrar, Strauss, & Giroux, 1970), *Another Life* (Cape, 1973), *Sea Grapes* (Cape, 1976), *The Joker of Seville and Oh Babylon* (Farrar, etc., 1978), *The Fortunate Traveller* (Farrar, etc., 1981), and *The Arkansas Treatment* (Farrar, etc., 1987). Honours include the Royal Society of Literature Award, the Hummingbird Medal Gold (Trinidad), the Guggenheim Award, and Honorary Member of the American Academy of Arts and Literature. Walcott has observed: 'You start off as a colonial writer, you get promotion to Commonwealth writer, West Indian writer, then maybe to the international club by the people who run this thing called English literature. The horrific thing for them is that English literature is out of their control' (quoted in 'Conquering English', *South*, July 1988). See CARIBBEAN LITERATURE IN ENGLISH. [AMERICAS, BIOGRAPHY, LITERATURE]. L.D.C., T.MCA.

**WALES** [From Old English *Wealas*, plural of *Wealh* foreigner, Welshman. Welsh equivalent: *Cymru*, from Celtic *Cumbroges* compatriots. Pronounced 'Kumry']. A principality in south-western Britain and part of the United Kingdom. Capital: Cardiff. Economy: mixed. Population: 2.8m (1981). Languages: English (c.100%), Welsh (some 25%). Education: mainly in English, with some state-supported Welsh-medium schools. In classical times, the region was part of the general Celtic culture of north-western Europe, strongly influenced by Rome during the four centuries in which southern Britain was a province of the Roman Empire. After the expansion of the Anglo-Saxons (5–9c), Wales was the sole surviving autonomous Celtic territory in southern Britain; for centuries its peoples warred among themselves and with the English, Irish, Norse, and Danes. In the 8c, to

strengthen the defence of the Welsh Marches, King Offa of Mercia built a wall from the Dee to the Wye, which came to be known as *Offa's Dyke*. In the 9c, Rhoddri Mawr (Rhoddri the Great) united the country for the first time since the Romans.

In 1282, during the invasion of Edward I of England, the last native Welsh prince, Llewelyn ap Gruffydd, was killed. In 1301, Edward's son was crowned *Prince of Wales*, a title since borne by most of the eldest sons of English, later British, monarchs. Wales may be regarded as England's first colony, and served almost immediately after the Norman Conquest as a springboard for the invasion and settlement of Ireland. The part-Welsh nobleman Henry Tudor became Henry VII of England in 1485 and Wales was effectively incorporated into England in the Acts of Union of 1535 and 1543, English becoming the language of administration, education, and trade. Although there was a body of Welsh law, the *Cyfraith Hywel* (Law of Howel), it had been increasingly superseded by English law from the 13c and after the Union the law of England was applied throughout the country.

The distinctness of Wales has survived integration, but the dominance of England and English, and the ambiguous status of Wales (administratively united with, but psychologically distinct from, England) have created a tension that centres particularly on whether, to be truly Welsh, one must know Welsh. Unilingual English-speaking people born in Wales do not regard knowledge of Welsh as a criterion of Welshness, and may resent the assumption that it can or should be. Wales is known for: song and poetry in both languages, including the male-voice choirs that originated in the English-speaking south during industrialization in the 19c; *eisteddfodau* (arts festivals) in Welsh; nonconformist Protestantism ('the chapel'); a tradition of radical politics; and a passion for rugby football that transcends language. The principality has in effect an Anglo-Celtic culture that blends ancient tradition with local forms of a language and institutions that were once alien, but have long since been thoroughly digested.

See ANGLO-WELSH LITERATURE, BRITISH, BRITON, BRYTHONIC, CELT, CELTIC LANGUAGES, CORNWALL, CUMBRIC, ENGLISH, ENGLISH PLACE-NAMES, HISTORY OF ENGLISH, PATRONYMIC, PLAID CYMRU, SCOTLAND, SCOTTISH LITERATURE, SCOTTISH PLACE-NAMES, THOMAS, WALES, WALIAN, WELSH, WELSH ENGLISH, WELSH LANGUAGE SERVICE, WELSH LANGUAGE SOCIETY, WELSH LITERATURE, WELSHMAN/WOMAN, WELSHNESS, WELSH PLACE-NAMES, WELSHRY, WELSH WALES, WELSHY. [EUROPE, NAME]. T.MCA.

**WALIAN** [1890s: from *Wales* and *-ian*]. An element in the compounds *North Walian* and *South Walian*, referring respectively to North Wales and South Wales and serving to name people from these regions: 'He was a Methodist preacher, though he was a South Walian' (*Wales*, Aug. 1894); 'the stern North Walian' (D. E. Allen, *British Tastes*, 1968). See WALES, WELSH. [EUROPE, NAME]. T.MCA.

**WASP** [1950s: an acronym for *White Anglo-Saxon Protestant*]. An informal, sometimes pejorative term for what is widely thought to be the dominant cultural group in the US. Hispanics in the Southwest talk about *Anglos* (English-speakers) and African Americans about *whitey* or *Mr Charlie* (whites); but *Wasp* refers particularly to whites of English (or at least not notably other ethnic) origin who are mainline Protestant in church affiliation. From the insect may come associations of irritability, annoyance, and pettiness. Wasps are thought to set the standards, including those for language, in the US. See ETHNIC NAME, WHITE. Compare ANGLO. [AMERICAS, NAME]. J.A.

**WATERMARK**. See PAPER.

**WATSON, George Marr** [1876-1950]. Scottish lexicographer and author of the *Roxburghshire Word-Book* (1923), an account of the vocabulary of his native county. Apprenticed as a printer and self-educated, Watson is typical of the learned sub-editors on whom the success of the major historical dictionaries of English has depended. Brought to Oxford in 1907 by his fellow Borderer James Murray, Watson worked for 20 years preparing *OED* entries for the volumes N to W. Under the editorship of William Craigie, he worked (1927-37) on the *Dictionary of American English*. A memorial notice declares: 'Service in the First World War did not interrupt his work, for he continued to read the proofs of the *Dictionary* even in the trenches.' In recognition of his work, Oxford awarded him an honorary MA in 1933. See DICTIONARY OF AMERICAN ENGLISH. [BIOGRAPHY, EUROPE, REFERENCE].

R.W.B.

**WAYSTAGE**. See COUNCIL OF EUROPE.

**WEAK FORM**. See STRESS.

**WEAK VERB**. In the traditional description of Germanic languages, a verb that indicates such meaning differences as tense through the addition of inflections: Modern English *play*, *played*. In contrast, strong verbs modify their vowels: *ring*, *rang*, *rung*. The terms are usually replaced in grammars of Modern English by *regular verbs*

(in place of weak verbs) and *irregular verbs* (in place of strong verbs). See STRONG VERB, VERB. [GRAMMAR]. S.G.

**WEAK VOWEL.** In phonetics, a vowel that normally occurs only in unstressed syllables. There are two weak vowels in English: schwa /ə/, as in the unstressed syllables of *above* and *sofa*, and short *i* /ɪ/, as in the unstressed syllables in RP *example* and *Sophie*. See s(c)HWA, VOWEL. [SPEECH]. G.K.

**WEBSTER, Noah** [1758-1843]. American teacher, writer, editor, lexicographer, lecturer, and lobbyist, born in West Hartford, Connecticut, educated at Yale College (1778), and admitted to the bar (1781). His best-known works, *The American Spelling Book* (the 'Blue-Back Spelling Book', 1783) and *An American Dictionary of the English Language* (1828), greatly contributed to lessening US dependence on British models of the standard language. His career as a schoolmaster led to the publication of *A Grammatical Institute of the English Language*, which included *The American Spelling Book* (1783), a grammar (1784), and a reader (1785). The speller was particularly popular, notably for its moral and patriotic flavour as opposed to the religious orientation of earlier texts. The grammar, influenced by Robert Lowth and in subsequent editions by John Horne Tooke, was less popular; it was criticized for being too advanced for schoolchildren and for overemphasizing elocution. Webster's achievement with *A Grammatical Institute* was in separating spelling, grammar, and reading into individual texts, a strategy which may have influenced other text-writers to stage the learning process for children. His vigorous lobbying to protect his work from piracy led to the institution of the first federal copyright laws in 1790.

Webster also wrote essays on educational reform. His *Letters to a Young Gentleman Commencing His Education* (1802) shows his desire to 'delight and allure' students by emphasizing science and reason rather than philosophy and religion. His celebration of the beauty and regularity of English is as notable as his emphasis on civic responsibility. Webster's lexicographical career began with the compilation of *A Compendious Dictionary* (1806), which was marked by innovations in spelling and by adherence to New England educated speech for pronunciation. Public criticism of the innovations eventually led to the 'dictionary wars' in which Joseph Emerson Worcester, who favoured BrE norms, led the opposition. Webster modified his stance in *An American Dictionary of the English Language* (1828, 1840), and considered its etymologies to be the most important aspect of his

work. He adhered to the Biblical account of the origin of languages, claiming that all languages derived from 'Chaldee'. The inclusion of technical terms and an attempt at precision in definitions distinguished this dictionary, but few Americanisms were included.

Some of Webster's recommendations for spelling reform, suggested as early as his *Disertations* (1789), survived modification in later editions of his texts. The principles behind his reforms were analogy, etymology, reason, and usage. He was most concerned about superfluous letters and indeterminate sounds and characters. Although most of his early suggestions were retracted, the US spelling of such words as *honor*, *center*, *defense*, *public* can be attributed to his choice of them rather than *honour*, *centre*, *defence*, *publick*. He recognized that language influences people and he sought to ensure that American texts reflected American values as he understood them. His greatest achievement was probably his influence rather than the scholarship of his works. His view that 'the process of a living language is like the motion of a broad river which flows with a slow, silent, irresistible current' (*Letters*, 369) prefigured attitudes of later language scholars. Although traces of his social, religious, and regional affiliations are evident in all his work, his adoption of current educated usage as standard was an advance in lexicography. See index. [AMERICAS, EDUCATION, REFERENCE, WRITING].

**WEBSTERS.** An informal American term for dictionaries and related works. The first dictionary referred to in this way was George & Charles Merriam's 1847 edition of Noah Webster's *An American Dictionary of the English Language* (1828) and the name was later used for the Merriam editions of 1847, 1864, and 1890, the last entitled *Webster's International Dictionary*. Because of the popularity of these works, when the copyright of the 1847 edition (registered under the name *An American Dictionary of the English Language*) expired, several companies published dictionaries with Webster's in their titles and sold them cheaply. Some were photolithographed with various additions to and deletions of material from that edition. G. & C. Merriam sued for damages in several states. In

1917, it was determined by federal court decision that Merriam did not own exclusive rights to the name *Webster* and that, after the expiration in 1834 of the 1806 copyright on Webster's *Compendious Dictionary*, anyone could publish a 'Webster' dictionary. It was recognized, however, that by 1904 the name had acquired a 'secondary meaning', designating the Merriam dictionaries. To protect this interest, other publishers were required to distinguish their dictionaries from those of G. & C. Merriam; refrain from using the Merriam 'open book' logo on advertisements, circulars, letterheads, etc.; attach printed slips to title pages notifying the purchaser if the publication was a reprint of an earlier edition (1892); distinguish their company on the dictionary covers (1908); and disclaim any relationship with G. & C. Merriam (1909). Merriam, however, was burdened with the responsibility of proving financial losses incurred by other publishers' practices (1909, 1911, 1912). In the litigation with the Ogilvie and Saalfeld companies, Merriam objected to their use of the description 'authentic Webster'. Until legally restrained, Saalfeld published a desk dictionary called *Webster's Intercollegiate*. However, Merriam was not able to convince others of its exclusive right to the name and the claim was repeatedly rejected by the courts. The name is therefore in the public domain: since 1953 Simon & Schuster have published a desk dictionary, *Webster's New World Dictionary of the American Language*, which does not contain the legal disclaimer of affiliation with the Merriam-Webster line and is obviously distinct in its appearance and editorial content. See MERRIAM-WEBSTER, WEBSTER. [AMERICAS, MEDIA, REFERENCE].

R.W.B.

**WEBSTER'S COLLEGIATE DICTIONARIES.** A line of best-selling desk dictionaries produced by Merriam-Webster, Springfield, Massachusetts. The first *Collegiate* (1898) was compiled to be used by college students, taking its place in a series of abridgements intended to serve students from primary to university level. However, it was soon dubbed 'the busy man's dictionary', indicating its general usefulness. Subsequent editions appeared in 1910, 1916, 1931, 1936, 1946, 1963, 1973 (which sold over 11m copies) and 1983 (the 9th Edition, with almost 160,000 entries based on a file of some 13m citations). The dictionaries, in addition to detailed coverage of pronunciations, spellings, word senses, and common synonyms, are known for their encyclopedic appendices, covering foreign words and phrases, biographical and geographical names, US and Canadian colleges and Universities, signs and symbols, and a style manual. The 9th Edition added the dates of first entry

words into the language (where well substantiated) and usage notes at the ends of entries subject to controversy. The term *collegiate* is now used to describe not only the Webster products but similar desk dictionaries produced by other publishers. See MERRIAM-WEBSTER, WEBSTERS. [AMERICAS, REFERENCE]. R.W.B., T.MCA.

**WEBSTER'S DICTIONARY OF ENGLISH USAGE,** short form *WDEU*. A 978-page guide to disputed points of usage, edited by E. Ward Gilman and published in 1989 by Merriam-Webster. A typical entry defines and describes the history of a dispute, gives citations as illustrations, summarizes what usage critics have said, analyses present usage on the point (drawing on Merriam's file of 14m citations), and lays out options of use with the probable consequences of choosing one over the other. See PASSIVE, USAGE GUIDANCE AND CRITICISM. For an example of the *WDEU*'s editorial comment, see CLICHÉ. [AMERICAS, REFERENCE, USAGE]. J.A.

**WEBSTER'S NEW INTERNATIONAL DICTIONARY.** The descendant of Noah Webster's *An American Dictionary of the English Language* (1828) and the most comprehensive English-language dictionary currently published in the US. The 1961 edition, known as *W3* and published by Merriam-Webster, treats nearly 0.5m words. Since its appearance, Webster's dictionary has undergone five complete revisions and appeared in eight editions. After Noah Webster's death in 1843, the Merriam brothers secured the publishing and revision rights from his heirs and from J. S. & C. Adams of Massachusetts, which had published a commercially unsuccessful version of the 2nd edition (1840). The Merriams produced a 3rd one-volume edition (1847) edited by Chauncey A. Goodrich, Noah Webster's son-in-law. The 4th edition (1864) and all subsequent editions were completely revised. Officially entitled *An American Dictionary of the English Language*, the 4th edition was popularly known as *the Unabridged*. It was edited by Noah Porter, later president of Yale. A German scholar, C. A. F. Mahn, so thoroughly revised the etymologies that the dictionary took undisputed lead over the remaining and waning popularity of Joseph Worcester's rival works.

The 5th edition (1890), also edited by Porter, was titled *Webster's International Dictionary* in recognition of the company's market, which had expanded to Britain and the British colonies, continental Europe, and Asia. A supplement followed in 1900. What was in fact the 6th edition was marketed as the first of a new series: *Webster's New International Dictionary of the*

*English Language* (1909), edited by William Torrey Harris and F. Sturges Allen. Its 2nd edition (the 7th in line) was *W2* (1934), edited by William Allan Neilson and Thomas A. Knott. The *W3* (1961; 8th in line) was edited by Philip B. Gove. The development of the unabridged dictionary has been toward more precise etymology, more thorough description of the sounds of the language, and more generous inclusion of the technical and specialized lexicon of English, and away from an encyclopedic and prescriptive vision of the work of the lexicographer.

**Controversy.** The publication of *W3* sparked one of the most intense debates about lexicography and word usage since the Webster–Worcester dictionary wars. Gove eliminated the labels ‘colloquial’ and ‘informal’, which had often been interpreted as pejorative. Instead, he carefully defined usage labels to identify cultural dimensions (*nonstandard*, *substandard*, *slang*), temporal dimensions (*archaic*, *obsolete*, with 1755 as the pivotal date), and spatial dimensions (geographical labels like those in regional atlases). Overall, fewer labels were used. The debate aroused a controversy over the alleged ‘permissiveness’ of the dictionary. Through reviews and editorials, many critics deplored what they regarded as an abdication of the dictionary’s responsibility to foster good English. Most knew little of the long-standing tradition in English lexicography of describing the language as actually used and were distressed to find *ain’t* included, even with the explanation ‘though disapproved by many and more common in less educated speech, used orally in most parts of the U.S. by many cultivated speakers esp. in the phrase *ain’t I?*’.

Research by the linguist E. Bagby Atwood had, in 1953, determined that one-third of ‘cultured informants’ in the coastal Southern speech area employed *ain’t I*: ‘informants in the South seem to be least inhibited about the use of *ain’t*, those in Rhode Island and the New York City area, most inhibited’. Since an overwhelming number of the reviewers were from New York City or influenced by its intellectual climate, their shock at the ‘permissive’ description in *W3* might have been foreseen. The controversy mirrored deep-seated attitudes and biases concerning linguistic correctness and cultural changes reflected in AmE usage. One unhappy critic, Jacques Barzun, named the dictionary ‘the longest political pamphlet ever put together’ (1963). Supporters, defending the editorial policy of *W3* and the ideas which had influenced it, pointed out that, for those who wished it, information about usage could be gleaned from other features of the entries: synonyms, usage notes, illustrative quotations, and labels. An

anthology of the many editorials, reviews, and periodical essays commenting on *W3* is *Dictionary and THAT Dictionary: A Case Book of the Aims of Lexicographers and the Targets of Reviewers*, ed. James Sledd and Wilma R. Ebbitt (Scott Foresman, 1962).

There were, however, other criticisms of *W3* even by those who were generally satisfied with it. ‘Permissive’ was a charge levelled at the dictionary for the inclusion of many words outside educated usage and for the citations taken from popular mid-20c US culture. Other critics charged that it was mainly a tool for the language scholar and did not adequately serve the public. Thus, the Merriam lexicographers chose to increase the number of minutely described pronunciation variations provided for headwords. The entry for *a fortiori* contained 132 theoretically possible variations. Other complaints concerned some of the space-saving decisions, such as the use of symbols instead of repetitions of entry words and the use of lower case for all entry words except *God* and trademarks. Still others complained about the small size of type, the numerous spelling variants supplied, allegedly unsystematic categorizations of definitions, and such extended definitions as definition 2b of *hotel*:

a building of many rooms chiefly for overnight accommodation of transients and several floors served by elevators, usu. with a large open street-level lobby containing easy chairs, with a variety of compartments for eating, drinking, dancing, exhibitions, and group meetings (as of salesmen or convention attendants), with shops having both inside and street-side entrances and offering for sale items (as clothes, gifts, candy, theater tickets, travel tickets) of particular interest to a traveler, or providing personal services (as hair-dressing, shoe shining) and with telephone booths, writing tables, and washrooms freely available

The American Heritage Publishing Company tried to buy out the G. & C. Merriam Company in order to rescue the Webster line from ‘sabotage in Springfield’. The company was ultimately sold to Encyclopaedia Britannica Inc. in 1964 and there has been no fourth (or ninth) unabridged since. See AMERICAN HERITAGE DICTIONARY, MERRIAM–WEBSTER, RANDOM HOUSE DICTIONARY, UNABRIDGED, WORCESTER. [AMERICAS, REFERENCE].  
R.W.B.

**WEBSTER'S NEW WORLD DICTIONARY**, short form *WNWD*. A work published in 1951 by the World Publishing Company of Cleveland, Ohio, in a two-volume *encyclopedic edition*, followed in 1953 by a single-volume *college edition*. The latter, edited under the supervision of Joseph H. Friend and David B. Guralnik, was claimed to be the largest of the US desk dictionaries, treating 142,000 words. The senses of

entries were in chronological order of development (as in the *Webster's Collegiate* series), and biographical and geographical names were included in the main alphabet (as in the *American College Dictionary*). A second college edition appeared under Guralnik's editorship in 1970, with a supplementary pronunciation key (a *phonoguide*) in the form of a small recording. A five-pointed star was used to indicate words and senses added to English in the US, information provided by Mitford M. Mathews, editor of *A Dictionary of American English*. World Publishing was purchased in 1980 by Simon & Schuster (New York), but its offices remained in Cleveland, and updates of the *New World* have continued on a biennial schedule. In 1989, a revised *third college edition* was issued under the editorship of Victoria Neufeldt. The dictionaries in this series are unusual in giving etymologies for place-names. [AMERICAS, REFERENCE].

R.W.B., J.A.

**WEEKLEY, Ernest** [1865–1964]. English lexicographer and writer, born in London, and educated at Cambridge, London, Paris, and Berne. From 1898 till 1938, he was Professor of French at U. College, Nottingham. His publications include *The Romance of Words* (1912), *The Romance of Names* (1914), *Surnames* (1916), *An Etymological Dictionary of Modern English* (1921), *Words Ancient and Modern* (two series: 1926, 1927), and *Words and Names* (1932). See COLLINS, LAWRENCE. [BIOGRAPHY, EUROPE, REFERENCE].

T.MCA.

**WELLS, H(erbert) G(eorge)** [1866–1946]. English writer, born in Bromley, Kent, and educated at Midhurst Grammar School and, after work as a draper's apprentice and an assistant teacher, at the Normal School of Science in London. His long and varied writing career began with *The Time Machine* (1895), followed by a number of other scientific romances. Some, like *The War in the Air* (1908), were prophetic works of science fiction; others, like *The Island of Doctor Moreau* (1896), were fantasies that obliquely commented on contemporary life. His combination of scientific and literary interests made these novels seem real. Wells's sense of social concern led him to join the socialist Fabian Society in 1903 and is apparent in such novels as *The History of Mr Polly* (1910) and *Tono Bungay* (1909). These, written with humorous social realism, indicted the waste and hypocrisy he discerned in Edwardian England. *Ann Veronica* (1909) portrayed the struggle for women's emancipation and suffrage. After a political novel, *The New Machiavelli* (1911), he turned to polemical and informative writing, such as the vast *Outline of History* (1920). By the time of his death, however, he had

lost faith in human progress. Wells did not see the novel as important and preferred to be regarded as a reporter rather than an artist. He recorded life among shop-keepers, clerks, and teachers, represented Cockney and other uneducated forms of the speech of southern England (such as Miriam's 'Elfrid' for 'Alfred' in *Mr Polly*), and was skilful with the conversation of scientists and professionals. In *The Shape of Things to Come* (1933), he imagined a world free from conflict in which English would be an international medium capable of expressing previously inaccessible ideas. This book, like *The Invisible Man* (1897), reached a wider audience through its filmed version. In 1938, Orson Welles's radio adaptation of *The War of the Worlds* (1898) in New York caused widespread panic when people believed that an actual Martian invasion was under way. See index. [BIOGRAPHY, EUROPE, LITERATURE].

R.C.

**WELL-SPOKEN**, also **wellspoken** [15c]. A general term for speaking clearly, politely, elegantly, etc.: 'He is wel spokyn in Inglyshe, metly wel in Frenshe' (*Paston Letters*, 1476); 'A very well-spoken, genteel, shrewd lady' (Jane Austen, *Persuasion*, 1816); 'It is still common in Britain for job advertisements to specify "well-spokenness", which implies clarity of articulation and a restricted range of accents which certainly excludes any broad regional or social accent' (John Honey, *Does Accent Matter?*, 1989). See ACCENT. [SPEECH].

T.MCA.

**WELSH** [From Old English *Wilisc*, *Wylisc*, *Welisc*, *Walisc*, from *Wealth*, *Walh* a foreigner, slave, Briton, equivalent to Middle High German *Walch* and German *Wahle* a Celt, Roman, foreigner, and Old Norse plural *Valir* Gauls, Frenchmen. The English adjective corresponds to Middle High German *walh-*, *wälhisch*, *walsch* and German *wälsch*, *welsch*, used to describe the Romans, Italians, and French, and Dutch *waalsch* Walloon. By the 16c the major form was *Welsh* or *Welch*, supplanting such earlier variants as *Welische*, *Welsc*, *Walsse*, and *Walsh*, which however survives as a family name, like the Scottish name *Wallace*, which derives from Anglo-French *Waleis*. *Welch* survives in *Royal Welch Fusiliers*, with the same pronunciation as *Welsh*.

(1) An adjective relating to Wales and its people, also used elliptically for the nation: *the Welsh*. The Anglo-Saxon original referred to the Britons in general, seen as foreigners and slaves, but by the 12c it had been generally restricted to Wales proper, its people, their language, customs, etc., largely losing the original connotations: 'Sir, there is a fray to be fought, betwene Sir Hugh the Welch Priest, and Caius

the French doctor' (Shakespeare, *Merry Wives of Windsor*, 2. 1, 1598); 'All the water in Wye, cannot wash your Maiesties Welsh flood out of your pody' (Shakespeare, *Henry V*, 5. 1, 1599). It commonly occurs in such compounds as *Welsh dresser*, *Welsh terrier*, *Welsh rabbit/rarebit*.

(2) The Celtic language of Wales, known to its speakers as *Cymraeg*. Welsh and Breton are the only surviving members of the ancient British or Brythonic subdivision of the Celtic language family. The original British language was highly inflected, but its descendant, Modern Welsh, has lost some of these inflections. Once the principal language of Wales and a literary language since the 6c, Welsh has been in decline since the accession of the partly Welsh Henry Tudor (Henry VII) to the English throne in 1485. There are now few monolingual speakers of Welsh, and some 500,000 of the people of Wales are bilingual: that is, 25% of the population. The condition of Welsh at the end of the 20c is relatively stable, and it is being learnt by non-Welsh-speaking Welsh people and others, including immigrants from England. It is taught in all schools and is a medium of instruction in some. In the northern county of Gwynedd it is a language of local government and appears with English on road signs. Language activists, however, consider that much remains to be done.

The spoken language consists of several dialects, and has had a significant influence on the English language as used in Wales, but has had little impact on English at large. The most characteristic sounds of Welsh are the voiceless alveolar lateral fricative (spelt *ll* as in *Llanelli*), the voiceless alveolar roll /ɬ/ (spelt *rh* as in *Rhondda*), and the velar fricative (represented as in Scots and German by *ch*, as in *Llywarch*). As in all Celtic languages, grammatical mutations occur, as in the noun *ci* (dog), where the initial sound is affected by the modifier, as in *dy gi* your dog, *fy nghi* my dog, *ei chi* her dog, and *tri chi* three dogs. See AUSTRALIAN LANGUAGES, BORROWING, CELTIC LANGUAGES, CORNISH, CUMBRIC, LINGUISTIC TYPOLOGY, WALES, WELSH ENGLISH, WELSH LANGUAGE SERVICE, WELSH LANGUAGE SOCIETY, WELSH LITERATURE. [EUROPE, LANGUAGE, NAME]. T.MCA.

**WELSH ENGLISH.** The English language as used in Wales. The term is recent and controversial. According to G. Williams (quoted in Coupland, 1990, below), 'establishing "Welsh English" or even discussing its possible existence is a political act', invoking 'distinctions such as that between "the state" (and its language—necessarily English), and "the region" (and its subordinate variety of the state language—Welsh English)'. English is, however, the majority language of Wales, and as in other parts of

the English-speaking world, a concise term such as *Welsh English* (analogous to, among many others, *Canadian English* and *South African English*) appears unavoidable. It is increasingly applied by sociolinguists to a continuum of usage that includes three groups of overlapping varieties of English: those influenced by the Welsh language, those influenced by dialects in adjacent counties of England, and those influenced by the standard language as taught in the schools and used in the media. The influence of Welsh is strongest in the northern counties (sometimes referred to as *Welsh Wales*), where Welsh/English bilingualism is most commonly found; it is weaker in mid-Wales, and weakest in the south, but even in such southern cities as Cardiff and Swansea the influence of Welsh is present.

**Origins.** It is not certain when speakers of an English dialect arrived in Wales, but it seems probable that Mercian settlers were in the Wye valley by the 8c, when King Offa built his Dyke. In the winter of 1108-9, Henry I established a group of Flemish settlers in Pembrokeshire and it is likely that there were English-speakers among that group. Other English settlements grew up in the 12-13c in the Gower Peninsula, the Usk valley, and in the towns of Beaumaris, Caernarfon, and Harlech in the north and in the southern towns of Brecon and Carmarthen. Since most trade was in the hands of the English, the earliest regular Welsh users of English were almost certainly traders: see WALES.

**Pronunciation.** Accent varies according to region, ethnicity, and education. RP is spoken mainly by English expatriates and its influence is strongest in the south-east. The following generalizations refer to the English of native Welsh people: (1) Speakers of Welsh are often described as having a lilting or singsong intonation in their English, an effect created by three tendencies: a rise-fall tone at the end of statements (where RP has a fall); long vowels only in stressed syllables, the vowels in the second syllables of such words as 'increase and 'expert being short; reduced vowels avoided in polysyllabic words, speakers preferring, for example, /tʃket/ for *ticket* and /kənɛkʃən/ for *connection*. (2) Welsh English is usually non-rhotic, but people who regularly speak Welsh are likely to have a postvocalic *r* (in such words as *worker*). (3) The accents of South Wales are generally aitchless. In North Wales, word-initial /h/ is not usually dropped, partly because it occurs in Welsh. (4) There is a tendency towards the monophthongs /e/ and /o/ and away from the diphthongs /eɪ/ and /əʊ/ in such words as *late* and *hope*. (5) The vowel /a/ is often used for both *gas* and *glass*. (6) Schwa is often preferred to /ʌ/ in such words as

*but* and *cut*. (7) Diphthongs are often turned into two syllables with /biə/ for *beer* becoming /bijə/ and /puə/ for *poor* becoming /puwə/. (8) There is a preference for /u/ over /ju/ in such words as *actually* /aktuali/ and *speculate* /spɛkulet/. (9) The inventory of consonants is augmented from Welsh by the voiceless alveolar lateral fricative /ɬ/ (spelt *ll* as in *Llangollen*), the voiceless alveolar roll /ɣ/ (spelt *rh* as in *Rhyl*), and the voiceless velar fricative /x/ (spelt *ch* as in *Pent-yrch*). (10) In many parts of the south, /l/ tends to be light and clear in such words as *light* and *fall*; in the north, it tends to be dark in both. (11) The voiced plosives /b, d, g/ are often aspirated in initial position, as with /bʰad/ for *bad*, often heard by non-Welsh people as 'pad'. The voiceless plosives /p, t, k/ are often aspirated in all positions, as with /pʰip/ for *pip*. Consonants between vowels are often lengthened, as in /mɪsɪn/ for *missing*, and /apɪz/ for *happy*. (12) The *-ing* participle is often realized as /ɪn/, as in /dansɪn/ for *dancing*. (13) There is a tendency, especially in the north, to substitute /s/ and /ʃ/ for /z/ and /ʒ/, so that *iss* becomes 'iss' and *division* 'divishon'. (14) The *-y* ending in words such as *happy* and *lovely* is realized by /i:/ 'apee', 'lovelee'.

**Grammar.** (1) Working-class users of English in Wales tend to use the following constructions, also found elsewhere in the UK: multiple negation (*I'ven't done nothin' to nobody, see?*); *them* as a demonstrative adjective (*them things*); *as* as a relative pronoun (*the one as played for Cardiff*); non-standard verb forms (*She caught it, The coat was all tore*); *'isself* for *himself* and *theirselves* for *themselves* (*'E done it 'isself and they saw it for theirselves*); the adverbial use of an adjective (*We did it willin'*: that is, willingly); the addition of *-like* at the end of phrases and sentences (*'E looked real 'appy-like*); and the use of the *-s* verb ending with all subjects in the present (*I goes to school an' they goes to work*). (2) Non-standard forms reflecting an influence from Welsh include: *do/did* + *verb*, to indicate a regularly performed action (*He do go to the rugby all the time; He did go regular-like*); foregrounding for emphasis (*Goin' down the mine 'e is He is going down the mine; Money they're not short of They aren't short of money*); *there* and *not how* in exclamations (*There's lovely you are!*); untransformed embedded sentences, especially after verbs of saying and thinking (*I'm not sure is 'e in I'm not sure if he's in*); the over-generalization of the question tag *isn't it?* (*We're goin' out now, isn't it?*); occasional *yes* replacing a positive question tag (*You're a teacher, yes?*); *will* and *not will* be (*I'm not quite ready, but I will soon*); and *too* for *either* (*I don't like it.—I don't like it too*). (3) *Look you* (you see) is often

regarded as a shibboleth of Welsh English in such sentences as *Tried hard, look you, but earned nothin'*. *See* is also often used: *We were worried about 'im, see*. The non-use of the subject pronoun is also characteristic of Welsh-influenced English: *Saw 'im, bach. Saw 'im yesterday*.

**Vocabulary.** (1) Words drawn from Welsh generally relate to culture and behaviour: *carreg* a stone, *clennig* a gift of money, *eisteddfod* (plural *eisteddfodau*) a cultural festival, *glaster* a drink of milk and water, *iechyd da* ('yachy da') good health (a salutation or toast, from *iechyd* health, *da* good); the use of *bach* and *del* as terms of affection: *Like a drink, bach? Come near the fire, del*. (2) Words that are shared by Welsh English and dialects of England include: *askel* a newt, *dap* to bounce, *lumper* a young person, *pilm* dust, *sally* willow, *steam* a bread-bin. (3) General English words with local extensions of meaning include: *delight* a keen interest, as in *She's gettin' a delight in boys*; *lose* to miss, as in *'Urry or we'll lose the train*; *tidy* good, attractive, as in *Tidy 'ouse you've got, bach*. (4) The form *boyo*, from *boy*, is common as both a term of address and reference, and is sometimes negative in tone: *Listen, boyo, I've somethin' to tell you; That boyo is not to be trusted*.

**Social issues.** There seems to be little or no stigma attached to the use of Welsh English in Wales, as compared with, for example, Gutter Scots in Scotland, or Brummie in Birmingham. Experiments reported in 1975 suggest that speakers of Welsh English are positively viewed in the principality. There is, however, considerable tension with regard to the use of the Welsh language, especially in schools and the media, and this can affect attitudes to English. Many consider that education should be bilingual, so that all Welsh people have access to Welsh as their 'national' language; others, however, including some parents originally from England, feel that bilingualism in schools puts an unnecessary strain on children, and do not necessarily regard Welsh as part of their patrimony. See BRITISH ENGLISH, WALES, WELSH, WELSHNESS. [EUROPE, VARIETY]. L.T.

**WELSH LANGUAGE SERVICE**, in Welsh *Sianel Pedwar Cymru*. Short form *S4C*. A bilingual television network set up in Wales in 1980, broadcasting since 1982 on the fourth British TV channel. It is administered by the Welsh Fourth Channel Authority on behalf of the Independent Broadcasting Authority, and is funded through advertising, levies on independent TV companies, and a BBC contribution. S4C transmits English-language items from the UK Channel Four service and programmes in Welsh made by the BBC and Harlech Television, providing about 22 hours of Welsh-language material per week, mostly at peak viewing, 7-9 p.m. The service is a response to pressure for a Welsh-language TV service. See BRITISH BROADCASTING, PLAID CYMRU, WELSH, WELSH LANGUAGE SOCIETY. [EUROPE, MEDIA]. T.MCA.

**WELSH LANGUAGE SOCIETY**, in Welsh *Cymdeithas yr Iaith Gymraeg*. An organization formed in Wales in 1962 to promote the Welsh language. Although a militant element in the Welsh nationalist movement, its primary role is linguistic, its demands including bilingual road signs and official forms, and a separate television channel for Welsh. Its methods include demonstration, civil disobedience, and selective law-breaking, such as painting out English-only road signs and the non-payment of broadcasting licence fees. Militants from time to time damage property, such as television transmitters and the holiday homes in Welsh-speaking areas of people living in England. If the perpetrators are caught, the ensuing court appearances are used to raise demands for trials conducted in Welsh. The activities of the society evoke a mixed response in Wales and little attention elsewhere. There has been some reaction to the society's demands, with bilingual signs in some areas, some bilingual forms made available in the 1970s as a result of the Welsh Language Act of 1967, and the creation in 1980 of a bilingual TV service. See WELSH, WELSH LANGUAGE SERVICE. Compare PLAID CYMRU. [EUROPE, LANGUAGE, MEDIA]. T.MCA.

**WELSH LITERATURE**. Either literature written in the Welsh language or the literature of Wales, whether in Welsh, Latin, or English. Artistic performance in Welsh dates from the 6c, the earliest surviving texts relating to oral composition in the 5c in Cumbria, the long-extinct Welsh-like language of what is now the Scottish

Lowlands: see CUMBRIC, SCOTTISH LITERATURE. The bardic period began with the legendary poets Aneurin, Taliesin, Myrddin (Merlin), and Llywarch Hen, and is marked by strict rhyme and metre in heroic and elegiac works. The *Mabinogion* of c.1060, however, is a prose narrative about Celtic gods and heroes. Such early works had a disproportionate impact on the literature of Western Europe and are the primary source of the *Matter of Britain*: accounts of Arthur, the Round Table, and the Holy Grail, written in Latin, French, English, and German: see BRETON, LATIN<sup>1</sup>. Towards the end of the Middle Ages, the poetic style became more relaxed and the topics more varied, and prose works were concerned mainly with the law and storytelling. In the 16c, the translation of both the Bible and the Book of Common Prayer into Welsh strengthened the position of the language, and the Renaissance encouraged a brief revival of classical Welsh verse forms. The tradition, however, declined because of its formalism and the strength of English, especially among the gentry as patrons of the arts.

In the 18c, the Morris brothers (Lewis, Richard, and William) preserved medieval texts and encouraged poets to use the ancient metres. A neo-classical school was started by Goronwy Owen, whose verse was modelled on the bards. The *Cymmrodorion Society* was established by the Welsh in London as a centre of literary studies, cooperating with the *Cymreigyddion Society* and *Gwyneddigion Society* in Wales to encourage the revival of *eisteddfodau* or poetic assemblies. As a result, the *National Eisteddfod* was revived in the early 19c. At this time, lyrical hymns and religious verse were popular, as well as ballads that used *cynghanedd*, a complex traditional blend of accentuation, alliteration, and internal rhyme. The modern period of literature in Welsh began in the late 19c with the establishment of the U. of Wales, a federal institution with campuses throughout the country. Current writing encompasses all the genres of Western literature. See ANGLO-WELSH LITERATURE, WALES. [EUROPE, LITERATURE]. T.MCA.

**WELSHMAN/WOMAN**. See -MAN/WOMAN.

**WELSHNESS** [17c]. The quality of being Welsh, often debated on the basis of whether it is necessary to speak the Welsh language in order to be properly Welsh: 'In spite of the strangeness, the *Welshness*, of Pontypool, [he] had been disappointed to find that it was not *in Wales*' (Amelia H. Stirling, *Life of J. H. Stirling*, 1912). See WELSH. [EUROPE, NAME]. T.MCA.

**WELSH PLACE-NAMES**. The place-names of Wales are mainly from the Welsh language, most

of them providing a topographical or historical description. Other languages that have shaped Welsh place-names are Norse, Norman French, and English.

**Welsh.** River names are among the oldest and are usually descriptive, such as *Gele* blade (that is, straight and shining), *Taff* water, *Ystwyth* winding. Names associated with heights are also frequent: for example *Carnedd Llywelyn* Llywelyn's burial mound, *Moelfre* bare hill, *Mynydd Du* black mountain. Some names, especially in the south-east, date from Roman times, notably *Caerleon* fort of the legion, referring to the Second Legion stationed at *Isca Silurum* ('place on the river) Usk of the Silures (a Celtic tribe)', and *Caerwent* fort of Venta (the Roman *Venta Silurum*). Common Welsh words occurring in place-names are: (1) *aber* river mouth, as in *Abergavenny* mouth of the Gefenni, *Aberystwyth* mouth of the Ystwyth. (2) *caer* fort, as in *Caernarvon* fort in Arfon, *Caerphilly* Ffili's fort. (3) *cwm* valley, as in *Cwmbran* valley of the (river) Bran, *Cwmfelin* valley of the mill. (4) *din* fort, as in *Dinas Powys* fort of Powys, *Dinefwr* fort of the yew. (5) *llan* church, as in *Llandaff* church on the Taff, *Llanfair* Mary's church. (6) *llyn* lake, as in *Llyn Fawr* big lake, *Llyn Glas* green lake. (7) *maen* stone, as in *Maentwrog* stone of Twrog, *Penmaenmawr* head of the great rock. (8) *nant* stream, as in *Nantgaredig* gentle stream, *Nantyglo* stream of the coal. (9) *pen* head, end, as in *Penarth* head of the promontory, *Penrhyndeudraeth* headland of the two beaches. (10) *rhos* moor, as in *Rhosgoch* red moor, *Rhosllanerchrugog* moor of the heather glade. (11) *tref* farm, homestead, town, as in *Tregarth* ridge farm, *Tremadoc* Madoc's farm. (12) *pont* bridge, as in *Pontnewydd* new bridge, *Pontypridd* bridge by the earthen house. (13) *porth* port, harbour, as in *Aberporth* harbour mouth, *Porthcawl* harbour of the sea kale. Both *pont* and *porth* entered Welsh from French (see next).

**Norse and Norman French.** Norse raids on the coasts of Wales in the 9-10c have left some Scandinavian names as a legacy, especially for islands: *Anglesey* Ongull's island, *Bardsey* Bardr's island, *Caldy* cold island, *Ramsey* wild garlic island, *Skokholm* block island, *Skomer* cloven island. Also Norse in origin are the names of the towns *Fishguard* fish yard, *Milford Haven* harbour of the sandy inlet, and *Swansea* Sveinn's sea (place). The Normans invaded Wales in the 11c and left such names as *Beaumaris* beautiful marsh, *Grosmont* big hill, *Malpas* bad passage, *Montgomery* (castle of Roger of) Montgomery.

**English.** Edward I of England conquered Wales in the 13c, leaving many of the names that are still in use today. Sometimes the present name has evolved as an Anglicization of the Welsh:

*Cardiff* for *Caerdydd*, *Carmarthen* for *Caer-fyrddin* fort of the seaside stronghold, *Denbigh* for *Dinbych*, *Lampeter* for *Llanbedr* Peter's church. In other instances, the name was English from the first: *Chepstow* market-place, *Haverfordwest* western goats' ford, *Holyhead* holy headland, *Knighton* knights' settlement, *Newport* new port, *Presteigne* priests' household, *Welshpool* Welsh pool (that is, on the Welsh side of the border), *Wrexham* Wryhtel's pasture, *Snowdon* snow-covered hill (the name of the highest mountain in Wales, recorded as early as the 11c). Most English names are found close to the border, although a pocket of such names is notable in the south-west. This region, on the Gower peninsula and in the south of the former Pembrokeshire, has been predominantly English-speaking since the 12c, when the Welsh were driven out, and is still known as 'Little England in Wales'. Examples of names in the area are *Cheriton* church settlement, *Middleton* middle settlement, and *Newton* new settlement.

In the 18c and early 19c, several villages arose with Biblical names, based on the names of the Nonconformist chapels that were the focal points of the communities. They include *Bethel*, *Bethlehem*, *Carmel*, *Hebron*, and *Salem*. Most are small, but *Bethesda* in Gwynedd, North Wales, grew into quite a large town because of its slate quarries. The industrial development of South Wales in the 19c, and especially its coal mines, led to the giving of a number of modern names, often those of mine-owners, forge-masters, and other entrepreneurs. They include *Griffithstown*, *Treharris*, *Trelewis*. *Tredegar* is also in this category, after the title of Sir Charles Morgan, created Baron Tredegar in 1859, the title deriving from his family seat.

**English and Welsh.** The present names of the Welsh counties were introduced in 1974 on the reorganization of local government, and are mostly revivals of territorial names: *Clwyd* hurdle (a river name), *Dyfed* territory of the Demetae (a Celtic tribe), *Gwent* special place, *Gwynedd* territory of Cunedda (an ancient chief), *Powys* province. The older county names date from the 13c, and were based on the chief town of the region, as with *Breconshire*, *Cardiganshire*, *Montgomeryshire*, *Pembrokeshire*. Today, most places with names of non-Welsh origin have their own unrelated name in Welsh, such as: *Abergwaun* mouth of the river, for *Fishguard*; *Caer gybi* Cybi's fort, for *Holyhead*; *Trefaldwyn* Baldwin's homestead, for *Montgomery*. *Snowdon* is *Yr Wyddfa* the cairn place, and *Swansea* is *Abertawe* mouth of the (river) Tawe. See CORNWALL, PLACE-NAME. [NAME].

A.R.

**WELSHRY** [14c]. A now rare term for Welsh people, a part of Wales where Welsh is used, an

area where Welsh people live, and Welsh descent: 'This Shere is taken to be divided into two partes, that is to the Englishrie, and Welshrye' (G. Owen, *Pembrokeshire*, 1603). Compare ENGLISHRY, IRISHRY. [EUROPE, NAME]. T.MCA.

**WELSH WALES.** An informal term for the parts of Wales (the north-west and central west) where the Welsh language, culture, and traditions are strongest: "'The Vale of Glamorgan is legally Wales, isn't it, though no one speaks any Welsh here?'"—"Quite right . . . This is Wales, if not Welsh Wales"' (G. Daniel, *Welcome Death*, 1954). See WALES, WELSHNESS. [EUROPE, NAME]. T.MCA.

**WELSHY** [18c]. (1) Welsh-like: 'Then we get towards a wild and Welshy country' (*Bentley's Miscellany*, Jan. 1848). (2) An informal name for someone Welsh: 'You'd think I was a Welshy by my name, Gwen Evans, but I'm a proper Cockney' (E. Coxhead, *One Green Bottle*, 1951). Compare ENGLISHY. [EUROPE, NAME]. T.MCA.

**WESSEX.** (1) The kingdom of the West Saxons, whose foremost king was Alfred the Great and foremost scholar Aelfric. Before their time, the dialect was unrecorded, but from the 9c records are abundant, including the Parker Manuscript of the Anglo-Saxon Chronicle, manuscripts of Alfred's own translations, Aelfric's works, the West Saxon Gospels, and many royal documents. (2) A fictional region of England in the *Wessex novels* of Thomas Hardy, roughly corresponding to the old kingdom, and centred on Dorset. See AELFRIC, ALFRED, ANGLO-SAXON, ANGLO-SAXON CHRONICLE, DIALECT IN ENGLAND, HARDY, OLD ENGLISH' WEST COUNTRY. [EUROPE, HISTORY, NAME]. T.MCA.

**WEST, The** [Usually with an initial capital]. (1) The western part of a country: *The West of Ireland*. The adjective commonly contrasts with *East*, as in *West Africa*, *West Asia*, but note *Western Europe*, not usually \**West Europe*. *West Virginia* contrasts as the name of a US state with *Virginia* alone, and is very different from *western Virginia*. (2) Also *The West Country*. The West of England, especially the counties of Somerset, Devon, and Cornwall: see WEST COUNTRY. (3) The West of Scotland, especially around Glasgow. (4) The area of the US west of (especially, the Mississippi River, including in particular the Great Plains, the Rocky Mountains, and the Pacific Coast, and associated with 'western' films and novels, 'country and western' music, and the myth of the cowboy: *the wild and woolly West*; *the fastest gun in the West*; *the Old West*. Subdivisions of the American West are: *The Midwest*/*Middle West*, including among

others the states of Illinois, Indiana, Minnesota, and Ohio; the *Southwest*, including Texas, Arizona, and New Mexico; the (*Pacific*) *Northwest*, including Idaho, Washington and Oregon. See DIALECTS OF AMERICA (THE WEST). (5) The non-Communist countries of Europe and the Americas, and their allies, as opposed to *the East*, a term referring to the former Soviet Union, its former Eastern European satellites, and China. (6) Also *the Western world*, sometimes *the Occident*. The part of the world traditionally understood to be where the sun sets, as opposed to *the East* or *Orient*, where it rises. The term focuses primarily on Western Europe and North America, and has strong cultural and economic connotations. It is an emotive term long associated with empire (*western imperialism*) and industry (*western technology*). Because of the widespread influence of Western countries in recent times, it is geographically elastic: 'New Zealand [has] transformed itself from the West's first and most protective welfare state into its most deregulated economy' (*Time*, 16 Dec., 1991); 'The request comes amid an unusually high level of tension over technology between the West's two biggest economic competitors. American corporate executives and members of Congress have complained that Japan has acted as a sponge for technologies developed in the United States' (*International Herald Tribune*, 1 June 1990). New Zealand, in the southern hemisphere, is here described as Western because it was heavily settled by the British; Japan, in East Asia (and 'the Land of the Rising Sun'), is called Western because of the success of its deliberate policy of Westernization. The implication of these citations is that 'the West' grows as its impact on the non-Western world increases. Compare ASIA, NORTH, SOUTH. See DIALECT IN AMERICA, IMPERIALISM, WEST COUNTRY, WESTERNIZE. [AMERICAS, ASIA, EUROPE]. T.MCA.

**WESTERNIZE** AmE & BrE, **westernise** BrE & AusE [19c: with and without an initial capital]. To make western in culture, character, language, etc., usually in terms of *the Western World* (see WEST, sense 6): 'Some of the nations of the East, notably Japan, are rapidly westernizing' (L. F. Ward, *Pure Sociology*, 1903). Westernization has in the 19–20c been a worldwide process, a leading feature of which is the use of Western languages, as with French in North Africa and English in India, or of elements from such languages: for example, the absorption of general English words into Japanese and of its technical terms into Malay. Compare NORTHERNIZE, SOUTHERNIZE. [AMERICAS, ASIA, EUROPE]. T.MCA.

**WEST, Michael** [1888–1973]. English language teacher and lexicographer, educated at Oxford

before joining the Indian Education Service. In 1923, he was commissioned to carry out a major examination of bilingualism that resulted in the report *Bilingualism, with Special Reference to Bengal* (1926). Basing his argument on an analysis of the needs of learners, he concluded that reading should have a prominent place in bilingual education. The rest of his life was devoted to exploring the implications of that idea in materials and theoretical analysis. The *New Method Supplementary Readers*, based on controlled vocabulary, were produced by Longman under his editorship, and he convened the 1934 *Carnegie Conference on Vocabulary Selection* in New York which eventually led to *The General Service List of English Words* (1953), providing the ELT world with a minimum vocabulary based on frequency statistics. He also published widely in the teaching of oral language, writing, and methodology. See index. [ASIA, BIOGRAPHY, EDUCATION, EUROPE]. C.J.B.

**WEST AFRICA.** See AFRICA.

**WEST AFRICAN ENGLISH**, short forms *WAfrE*, *WAE*. English as used in West Africa, the official language of Nigeria, Ghana, Sierra Leone, Gambia, and Cameroon. It is typically acquired as a second, third, or fourth language, and the line between English as used by a small élite and the more general West African Pidgin English is difficult to draw. Speakers in the five countries generally understand each other well, but there are differences inside and between countries. WAE is non-rhotic, and /r/ is often trilled. Intonation is influenced by the tonal systems of West African languages, and because there is a tendency towards syllable-timing, the schwa in unstressed syllables is usually replaced by a full vowel, as in 'stu-dent' and 'quiet-ness' for *student* and *quietness*. The consonants /θ, ð/ are generally realized as /t, d/, *three of these* being pronounced 'tree of dese'. Such words as *gush* and *fur* sound like *gosh* and *for*, and the vowel sounds of *bake* and *toe* are commonly the single vowels /e, o/, not diphthongs as in RP. Grammar is generally the same as standard BrE, but such constructions occur as *a country where you have never been there* and *He is an important somebody*. Regional vocabulary includes: loans from local languages, such as *buka* a food stand (from Hausa), and *danfo* a minibus (from Yoruba); compounds of English and vernacular words, such as *akara ball* a bean cake, and *juju music* a kind of music; loan translations and adaptations of local usages, such as *bush meat* game meat, and *father* and *mother* used for relatives, as in *He is staying with his fathers* (He is staying with relatives of his father); and local

extensions of general English words, such as *corner* a curve in a road, *go slow* a traffic jam, *to wet plants* to water plants. See AFRICAN ENGLISH, AFRICAN LANGUAGES, AFRICAN LITERATURE IN ENGLISH, CAMEROON, CARIBBEAN ENGLISH, ENGLISH, GAMBIA, GHANA, LIBERIA, NIGERIA, SIERRA LEONE, WEST AFRICAN PIDGIN ENGLISH. [AFRICA, VARIETY]. S.S.M.

**WEST AFRICAN EXAMINATIONS COUNCIL.** See EXAMINING IN ENGLISH.

**WEST AFRICAN PIDGIN ENGLISH**, also **Pidgin English**, **Pidgin**. Short form *WAPE*. A continuum of English-based pidgins and creoles from Gambia to Cameroon, including enclaves in French- and Portuguese-speaking countries. Among its varieties are *Aku* in Gambia, *Krio* in Sierra Leone, *Liberian Settler English* and *Liberian Pidgin English*, *Nigerian Pidgin English*, and *Kamtok* or *Cameroon Pidgin English*. It originated in the 16c in contacts between West Africans and British sailors and traders. Its varieties are more or less mutually intelligible, and there is a complex continuum from constructions close to standard English to those far removed from it. WAPE is located midway between West African English and vernaculars spoken natively by those of its users for whom it is an additional language; some speakers, especially in cities, do not speak an African vernacular. Syntactic features of the variety farthest from standard English and with the lowest status (the basilect) are similar to those of the New World creoles, prompting researchers to speak of a family of 'Atlantic creoles' that includes WAPE, Gullah, Bahamian, Jamaican, Trinidadian, and Belizean. Tense and aspect are non-inflectional: *bin* denotes simple past or past perfect (*Meri bin lef Mary left, Mary had left*), *de/di* the progressive (*Meri de it Mary is eating, Mary was eating*), and *don* the perfective (*Meri don it Mary has eaten, Mary had eaten*). Depending on context, *Meri it* means 'Mary ate' or 'Mary has eaten' and *Meri laik Ed* means 'Mary likes Ed' or 'Mary liked Ed'. Adjectives are used without a copula when predicative: *Meri sik Mary (is) sick*. In *Meri de sik Mary is falling sick*, the progressive *de* marks transition into the condition of being sick. See AFRICAN ENGLISH, CREOLE, GHANA, KAMTOK, KRIO, LIBERIA, NIGERIA, PIDGIN, ROTTEN ENGLISH, WEST AFRICAN ENGLISH. [AFRICA, VARIETY]. S.S.M.

**WEST COUNTRY**, also **West of England**, **South-West**. A region of England with imprecise boundaries but generally agreed to centre on Avon, Devon, Dorset, Gloucestershire, and Somerset ('the cider counties'). Wiltshire and parts of Hampshire are sometimes included, as

is Cornwall because of its location and despite its Celtic background, distinctive and controversial Cornish language, and dialect of English influenced by Cornish. The range of accents in the West Country extends from broad in the working class and in rural areas through accents modified towards RP in the towns and the lower middle class to RP proper in the middle and upper classes. Local speech is rhotic, with a retroflex /r/ in such words as *rap*, *trip* and *r-coloured* vowels in such words as *car/cart*. Postvocalic /r/ is widely retained in such cities as Bristol and Exeter, despite the influence of RP, which is non-rhotic. In other cities, such as Plymouth and Bournemouth, rhoticity varies. Traces of variable *r*-pronunciation are found as close to London as Reading in Berkshire.

**Pronunciation.** For many people in Britain and elsewhere, traditional West Country has become stereotyped as rustic. Two particular shibboleths are associated with 'yokels' leaning on gates and sucking straws: a strong West Country burr, as in *Arrr, that it be* Yes, that's so; voiced initial fricatives, as in *The varmer zeez thik dhree-vurrow plough* The farmer sees that three-furrow plough. The stage accent known as *Mummerset* has long exploited these features. Shakespeare appears to have been the first to use a special spelling for it, as when Edgar in *King Lear* (4. 5), disguised as the peasant Tom a Bedlam, says 'Chill not let go Zir, without vurther 'cagion' (I'll not let go, sir, without further occasion). Although the accent is now largely confined to the west and south-west, it was once common across England south of a line from the Severn to the Thames. The current boundary is a line from the Severn round Gloucestershire, including the Forest of Dean on the other side of the river, round the north-east boundary of Wiltshire, and passing through Hampshire to the sea around Portsmouth. West Country rhotic pronunciation is widely considered a survival of the /r/ of Old English. It turns preceding alveolar sounds into post-alveolars, resulting in a burr that contrasts strongly with RP, and is often remarked on as a pleasing feature of West Country; it is similar to the Irish /r/ and that of many parts of the US. Another local feature is an initial /w/ in such words as *old* and *oak*, giving 'wold' and 'woak'. Before /ɔɪ/, a /w/ may also occur, as in 'bwoys' for *boys*. In a stretch of country from the Somerset coast to the sea in Dorset there is an *h*-sounding area; elsewhere in the West Country, initial *h* is not pronounced.

**Grammar.** Forms of grammar associated with traditional West Country speech are generally regarded as working-class and rural. They include: (1) The use of *thick* or *thicky* /ðɪk(i)/ as a singular demonstrative, with *they* as plural:

*thick man* that man, *they houses* those houses. (2) Present and past participles often preceded by *a-*, as in *a-goin*, *a-done*. (3) The use of periphrastic *do*, as in *He do go every week* He goes every week, *They do be ard-workin*. (4) The present tense of the verb *be* has been regularized to a single form that is still widely used: *I be*, *you be*, *he be*, *she be*, *we be*, *you be*, *they be*. (5) The negative *baint* is widely used: *I baint I* am not, *baint I* am I not, *ye baint you* aren't, *baint ye* aren't you, *they baint they* aren't, *baint they* aren't they.

**Vocabulary.** (1) Many West Country words are now restricted to part of only one county. Words formerly well known include: *fardel* a burden, *lew dry*, *mazzard* a black cherry, *truss* a bale (of hay), *tiddly* to do light housework. (2) In *The Grockles' Guide: An Illustrated Miscellany of Words and Phrases of Interest and Use to 'Voreigners' in Somerset* (Jeremy Warburg & Tessa Lorant, Thorn Press, 1985), the following are listed, among many others, as current: *anywhen* any time, *aps* a boil, *backalong* homeward (I'll be *doddlin backalong*), *brize* to bring pressure to bear on (I'm *goin to brize down on thik*), *caddle* a muddle or difficulty, *chammer* to chew noisily, chatter, *chatterbag* a gossip, *clumble-fisted* awkward with the hands, *combe* (pronounced 'coom') valley, *emmet* an ant, small fly, *gert* great, large, *jibber* a restless horse, *leary* hungry, tired, thin, empty, *mugget* the intestines of a young heifer or sheep, *pissabed* the dandelion, *quirk* to moan, whine, complain, *rafty* rancid, off, crafty, *randy* a party (*on the randy* out to enjoy oneself), *rozzum/ruzzum* a tall tale, *scrumpy* farmhouse cider, *somewhen* some time, *teddy* a potato, *verdic* a viewpoint, opinion (compare *verdict*). The term *grockle* for a holiday-maker or tourist is of uncertain origin and apparently recent, its first *OED* citation being 1964.

**Literary West Country.** Most admired among West Country writers is Thomas Hardy, who in numerous novels attempted to represent the speech of rural men and women. His written dialect varies according to the speaker. Tess, the heroine of *Tess of the d'Urbervilles* (1891), although a peasant, had received some education and so had a regional accent, some local words, but more or less standard grammar. Hardy himself says of her: 'The dialect was on her tongue to some extent, despite the village school: the characteristic intonation of that dialect for this district being the voicing approximately rendered by the syllable UR, probably as rich an utterance as any to be found in human speech.' The dairy maids, on the other hand, use such forms as *zid* (saw), *hwome* home, and *I be*, *so be you*.

The 19c philologist and language reformer William Barnes wrote poetry in the Dorset dialect:

Then they took en in hwome to his bed,  
An' he rose vrom his pillow no mwore.  
Vor the curls on his sleek little head  
To be blown by the wind out o' door.  
Vor he died while the hay russedled grey  
On the saddle so leately begun:  
Lik' the mown-grass a-dried by the day—  
Aye! the zwath-flo'r's a-killed by the zun.  
(‘The Child and the Mowers’)

[*en* him, *saddle* lower part of a stack of corn, *zwath* swath, a line of mown crops]

The novelist and playwright Eden Philpotts (1862–1960), most of whose novels are set on Dartmoor, also wrote dialect poetry:

Then old man's talk o' the days behind 'ee,  
Your darter's youngest darter to mind 'ee;  
A li'l dreamin', a li'l dyin'  
A li'l lew corner o' airth to lie in.  
(‘Man's Days’)

More recently, representations of Cornish dialect have appeared in the historical *Poldark* novels of Winston Graham, often for comic relief and to point up differences between the common people and the gentry:

‘Nay, nay, sur, I never heard such words out of me mouth! Yer worship, I never thought upon no such thing. Tedn fair, tedn just, tedn right.’

‘This statement, I would remind you, Paynter, was made before witnesses and signed with your mark. It was read over to you before you signed.’

‘Well, I'm 'ard of hearing,’ said Jud, staring barefaced at the counsel. ‘Tes more'n likely they mistook what I did say an' I mistook what they did say. Tes more'n likely, that's for certain’ (*Jeremy Poldark*, 1961).

The *Devon Dialect Society* was started in the early 1980s and received support from Radio Devon and local newspapers. For a time it had a strong membership, work went forward on tape-recorded memories of local speech, and an annual journal similar to those of the Northern dialect societies was published from 1983. There were members from many parts of England and as far away as Newfoundland and Japan. The constitution was, however, ‘temporarily suspended’ in the late 1980s. See: Martyn F. Wakelin, *The Southwest of England*, in the *Varieties of English around the World* series (John Benjamins, 1986). See BARNES, BURR, CORNISH, CORNWALL, DIALECT IN ENGLAND, DORSET, ENGLISH IN ENGLAND, HARDY, MUMMERSSET, NEWFOUNDLAND ENGLISH, SOMERSET, Y-. [EUROPE, NAME, VARIETY].  
S.E., T.M.C.A.

**WEST COUNTRYMAN/WOMAN.** See -MAN/WOMAN.

**WESTERN.** See DIALECT IN AMERICA, WEST.

**WESTERN ISLES, The,** also **the Hebrides.** The islands off the north-western coast of Scotland. See HIGHLAND ENGLISH, SCOTLAND, SCOTTISH GAELIC. [EUROPE, NAME].  
T.M.C.A.

**WESTERN SAMOA.** A country of Oceania, a monarchy, and member of the Commonwealth. Capital: Apia. Currency: tala (100 sene). Economy: agriculture, timber. Population: 168,000 (1988), 197,000 (projection for 2000). Ethnicity: 90% Polynesian, 7% mixed, 1% European. Languages: Samoan, English (both official). Education: primary 100%, secondary 40%, tertiary 5%, literacy 97%. A German colony from late 19c, Western Samoa was a League of Nations mandate in 1920, and later a United Nations trust territory administered by New Zealand, gaining its independence in 1962. [NAME, OCEANIA, VARIETY].  
T.M.C.A.

**WEST INDIAN,** occasionally **Westindian.** (1) Relating to the West Indies. (2) Someone born in the West Indies or of West Indian descent. Self-identification as a West Indian is most common when natives of the region find themselves in some other part of the world. The term usually includes the peoples of the former British islands and of Guyana, and usually also Belizeans, and may include the peoples of the French islands (Martinique and Guadeloupe), Haiti, and the Netherlands Antilles, but usually not those of the Spanish-speaking Caribbean. The term stands in opposition to *Caribbean*, which is usually seen as geographical. See ANTILLES, CARIBBEAN, EAST INDIAN, INDIAN, WEST INDIES. [AMERICAS, NAME].  
L.D.C.

**WEST INDIAN CREOLE.** See CARIBBEAN ENGLISH CREOLE.

**WEST INDIES, The.** An ambiguous traditional term used in its widest geographical sense to refer to the islands of the Greater and Lesser Antilles, excluding the Bahamas. At mid-century, it was used to designate the *Federation of the West Indies*, a union of British possessions excluding Guyana and Belize. The union lasted from 1958 to 1962. Residents of the region use the term to refer to countries that were former members of the union and are now linked in a loose common-market arrangement called the *Caribbean Community (Caricom)*. It also refers to the cricket team that draws its players from ex-members of the Federation and Guyana, and occurs in the official title of the regional *University of the West Indies*. See EAST INDIES, INDIA, INDIES, WEST INDIAN. [AMERICAS, NAME].  
L.D.C.

**WEST OF ENGLAND.** See WEST COUNTRY.

**WEST SAXON.** See **WESSEX**.

**WH-ADVERB.** See **ADVERB**.

**WHISKY VOICE**, also **whiskey voice**. A hoarse voice associated with sustained heavy drinking: 'The women in the souk, with those long red finger-nails and blue hair in bandanas and those cracked whiskey voices' (John Updike, *Coup*, 1978). In phonetic terms, it combines the features voice, creak, and whisper. See **VOICE**. [SPEECH]. T.MCA.

**WHITE** [From Old English *hwit*; akin to *wheat*]. (1) The colour of milk, snow, a fleecy cloud, the crests of waves, etc. Technically, the colour called *white* is not part of the spectrum, but arises from the reflection or emission of most of the rays of light all together; most so-called 'white' colours are shades of grey. (2) Having such a colour: *white clothes*; *a white Christmas*. (3) (Of hair) without pigment: *an old man with a white beard*. (4) (Of sound and other kinds of radiation) mixed like the elements of white light, often heard as a background to other sounds (for example, as hiss on a telephone line), making specific sounds hard or impossible to hear or detect: *white noise*, *white sound*. A *white voice*, however, translating Italian *voce bianca*, is a singing voice that lacks *dark* emotional 'colour', such as provided by vibrato. (5) (Used variously of food and drink) *white bread*, made from highly refined flour, as opposed to *brown bread*; *white wine*, yellowish in colour, in contrast to *red wine*; especially in BrE *white coffee*, which has milk or cream in it, as opposed to *black coffee*, which does not. (6) (Both adjective and noun) in politics, usually opposed to *red*, ultra-conservative, anti-revolutionary, royalist: *White Russians*; *fighting for the Whites*. (7) Spiritually pure; used with good intentions; respectable: *white magic* as opposed to *black magic*; *a white lie*; 'It is I whose duty it is to see that your name be made white again' (Anthony Trollope, *Orley Farm*, 1862). (8) (With and without an initial capital letter) marked by the slight skin pigment typical of people of European/Caucasian origin: *the white races*; *the White Dominions*; *white blood*. The ethnic slur *poor white trash/folks* has been used by American blacks and whites in the 19–20c for white people of few means and low social standing: 'I wouldn't do my hair in a three strand braid on no account; it is too poor-white-folksy for me' (*Harper's Magazine*, Aug. 1864). (9) (With and without an initial capital letter) a white person, often referred to especially in the US as a Caucasian: *South African Whites*; *poor whites*; *clubs operating a whites-only policy*. The ethnic nickname *Whitey* for a (usually male) Caucasian is common among African-

Americans. (10) (Originally AmE, informal, now obsolescent) honourable, in a manner once avowedly expected by whites of whites, as in the phrases *That's real white of you* and *I mean to act white by you*: 'There ain't a whiter man than Laramie Jack from the Wind River Mountains down to Santa Fe' (*Century Magazine*, Feb. 1890). (11) Limited, restricted to, or typical of white people: *a white neighbourhood*; *White English*; 'A couple who affected sophisticated white manners and even spoke English with an almost white accent' (J. McClure, *Artful Egg*, 1984). (12) (Used of white people) very pale because blood has left the face: *white with rage/terror*. (13) Usually in plural only, a blank space in printing. (14) Verb, also *white out*. A printer's term for making part of a page white by leaving blank spaces and whitening areas of artwork. In general usage, however, to *white (something) out* means to cover errors in a text with white correction fluid, or to censor text by covering it with white ink. See **ANGLES**, **BLACK**, **RACISM**, **WASP**, **WHITE ENGLISH**, **WHITE SPACE**. [LANGUAGE, TECHNOLOGY, VARIETY]. T.MCA.

**WHITE ENGLISH**. [Late 1980s]. The English language as used wholly or mainly by white people, especially in the US and UK: 'We saw a very good foreign film here the other night, one of those coming-of-age movies in exotic settings. The people were attractive, likable types trying to survive in a hostile environment. The language was a little hard to follow, but the customs and costumes were interesting in a kind of National Geographic way. It was called "Boyz N the Hood" and it was set in a place called South-Central Los Angeles. The film is the work of a gifted 23-year old black man named John Singleton—from the hood. That's "neighbourhood" in white English' (Richard Reeves, Universal Press Syndicate, July 1991). See **BLACK ENGLISH**, **WHITE**. [AMERICAS, EUROPE]. T.MCA.

**WHITE SPACE** [1840s]. A term in printing, editing, and design for the area left free of text and illustrations on a page, poster, etc. The use of white space as part of the layout and appearance of published material is considered important by graphic designers and is a factor that often affects the readability and attractiveness of a publication. See **GRAPHIC DESIGN**, **LAYOUT**, **SPACE**, **TYPOGRAPHY**, **WHITE** (13, 14). [TECHNOLOGY, WRITING]. T.MCA.

**WHITE VOICE.** See **WHITE**.

**WHITNEY**, **William Dwight** [1827–94]. American orientalist, grammarian, and lexicographer, born in Northampton, Massachusetts, and educated at Williams and Yale

Colleges. His older brother, Josiah (later a geologist at Harvard), had studied in Germany and brought home, among other works, Bopp's *Sanskrit Grammar*, which William enthusiastically studied. He enrolled at Yale in the Sanskrit course of Edward E. Salisbury, then the only trained US orientalist, and in 1850 went to Germany, spending three years studying with Weber, Bopp, and Lepsius in Berlin and Roth in Tübingen. On his return, Salisbury resigned in Whitney's favour and provided the funds for his salary. He edited Sanskrit texts and wrote his *Sanskrit Grammar* (1879), still standard in US universities. Two compilations of lectures (*Language and Study of Language*, 1867; *The Life and Growth of Language*, 1875) were published in many editions and attracted a wide public to developments in philology and linguistics. These works earned the notice of Ferdinand de Saussure and influenced 20c structuralism. Whitney's contribution to studies of English arose from an extramural appointment at the Sheffield Scientific School in New Haven, where he taught English, German, and French. For each language he published a grammar; his *Essentials of English Grammar* (1877) went through 18 editions before 1903. Its distinguishing features included his restriction of tenses to two, present and past, a syntactic definition of *verb* in place of the 'wholly erroneous' notional and Latin-based definitions in schoolbooks, and a method of 'diagramming' sentences to show a constituent's role in larger constructions. His work is among the first school grammars to show the influence of 19c linguistic ideas, above all Bopp's scepticism about unquestioningly following the ancient grammarians. Whitney contributed to *Webster's New International Dictionary* (1864) and edited *The Century Dictionary*. See index. [AMERICAS, ASIA, BIOGRAPHY, GRAMMAR, LANGUAGE, REFERENCE]. R. W. B.

**WHODUNIT, whodunnit.** See DETECTIVE STORY.

**WHORF, Benjamin Lee** [1897-1941]. American amateur linguist. Born and raised in Winthrop, Massachusetts. Educated as a chemical engineer at Massachusetts Institute of Technology. He became a fire-prevention officer, a career he continued throughout his life, in spite of being offered academic posts. His interest in linguistics began in his mid-twenties, when he studied Maya writing. In his thirties, he was profoundly influenced by the work of Edward Sapir, and also by his own study of Hopi, an American Indian language of Arizona. In his own work, he also noted the uses and effects of particular words, for example that factory workers used the word *empty* to mean 'empty of liquid' when gasoline cans were still full of combustible fumes, and he

advocated the use of *flammable* as a warning rather than *inflammable*, because the prefix *in-* was often taken to mean 'not'. From study and personal experience, he formed the opinion that people's language profoundly affected their behaviour and world-view. In particular, he argued that speakers of European languages envisaged concepts of space and time differently from speakers of Hopi. He claimed that 'formulation of ideas is not an independent process . . . but is part of a particular grammar. . . . We dissect nature along the lines laid down by our native languages' (1940). This view is known as the *Whorfian hypothesis* or the *Sapir-Whorf hypothesis* (see entry). Whorf's best-known papers were collected and published after his death under the title *Language, Thought and Reality: Selected Writings of Benjamin Lee Whorf* (ed. John B. Carroll, 1965). [AMERICAS, BIOGRAPHY, LANGUAGE]. J. M. A.

**WHORFIAN HYPOTHESIS.** See SAPIR-WHORF HYPOTHESIS, WHORF.

**WH-QUESTION.** See QUESTION.

**WH-SOUND.** In phonetic terms, the voiceless counterpart of /w/. The distinction between /hw/ and /w/ in such pairs as *whales/Wales* and *which/witch* was once universal in English and is currently a matter of controversy and sometimes confusion. In Old English, *h* could precede *l, n, r, w*, as in *hlāf* loaf, *hnecca* neck, *hwa* who, and was pronounced in each case. Only the /hw/ now survives, normal in IrE and ScoE, widespread in AmE and CanE, and common among older speakers of RP. The Old English written sequence *hw* was reversed to *wh* in the Middle Ages to align it with the other *h*-patterns (*ph, th, ch, sh*). In the process, an anomalous *w* was added in such words as *whole* (Old English *hāl*), *whore* (Old English *hōre*), while *whelk* (Old English *weoloc*) acquired a superfluous *h*. In Older Scots and formerly in Northern English, the /hw/ sound was distinctively represented as *quh*: *quhat* what, *quhilk* which. In *who, whom, whose, w* rather than *h* has fallen silent. The presence of *wh* can cause spelling difficulties for speakers who do not distinguish /hw/ and /w/: \**wen* for *when*, \**wheather* for *weather*, \**whent* for *went*. Some speakers in England use /hw/ as a self-consciously 'correct' pronunciation in which overcompensation produces, for example, \**the Prince of Whales*. See DIALECT IN SCOTLAND, W. [SPEECH, STYLE, USAGE]. G. K., C. U., T. MCA.

**WIDOWS AND ORPHANS** [Apparently 20c in this sense]. Terms in printing. A *widow* is an excessively short line of type, usually at the end of a column or paragraph; more specifically, a

short concluding line of a paragraph that appears on its own at the *top* of the following page. An *orphan* is the first indented line of a paragraph or other short line found at the *bottom* of a page, with the rest of the related material on the following page. Both are considered typographically unattractive and are usually eliminated at the proofing stage by changing the number of lines per page or by otherwise adjusting the page make-up. See LINE. [TECHNOLOGY].

W.W.B.

**WILDE, Oscar (Fingal O'Flahertie Wills)** [1854–1900]. Irish writer, born in Dublin, and educated at Trinity College, Dublin, and Magdalen College, Oxford. He had early success in London as a wit, poet, and exemplar of the *Aesthetic movement*; he was satirized by W. S. Gilbert in *Patience* (1881); see CARICATURE. His comedies of manners, such as *Lady Windermere's Fan* (1892), were theatrical successes, with the mannered but witty style of dialogue that had already appeared in his novel *The Picture of Dorian Gray* (1891). Capacity for more serious social thinking was shown in *The Soul of Man under Socialism* (1891). During the run of his most successful play, *The Importance of Being Earnest* (1895), he began a suit for criminal libel against the Marquis of Queensberry which resulted in his own prosecution and imprisonment for homosexual offences. After his release in 1897, he lived in France, where he wrote of his prison experiences in *The Ballad of Reading Gaol* (1898), often quoted in the campaign for the abolition of capital punishment, and *De Profundis* (posthumously published in 1905). Despite their apparent superficiality, Wilde's comedies addressed the follies and pretences of contemporary life and recorded the mood and idiom of fashionable London in the last decade of the 19c. He was a master of epigram ('a cynic is a man who knows the price of everything and the value of nothing') and the unexpected reversal of clichés ('her hair has gone quite gold with grief'; 'work is the curse of the drinking classes'). See index. [BIOGRAPHY, EUROPE, LITERATURE, STYLE]. R.C.

**WILD IRISH.** A term formerly used by the English for the Irish who lived beyond the Pale: 'Ireland is deuyded in ii. partes, one is the Engly[sh] pale, & the other, the wyld Irysh' (Andrew Boorde, *The breviary of healthe*, c.1547). After the 16c conquest, the term was applied to the *mere Irish* (mere meaning *pure* here), considered less civilized because they spoke Gaelic, did not conform to English norms, were Roman Catholics, and were not (particularly) loyal to the Crown. However, *wild* has also been used positively in Ireland: by Lady

Morgan in her novel *The Wild Irish Girl* (1806), to mean free, unfettered, and natural; in the phrase *the Wild Geese* (17–18c Jacobite Irish soldiers of fortune) and the song *The Wild Colonial Boy*, set in Australia. See BLACK IRISH, IRISHRY, PALE. [EUROPE, NAME]. T.MCA., L.T.

**WILSON, Thomas** [1525?–1581]. English government official and author of *Logique* (1552), which he claimed to be the first work of its kind in English, and *The Arte of Rhetorique* (1553, 1560), which was not the first manual of rhetoric in English but was among the most influential of the period. He condemned such affectations as unnecessary borrowing, archaizing, and *inkhorn terms*, and included a parody of pedantic writing, noting 'I know them that thinke Rhetorique to stande wholie vpon darke wordes, and hee that can catche an inke horne terme by the taile, him they coumpt to be a fine Englisheman, and a good Rhetorician.' See index. [BIOGRAPHY, EUROPE, HISTORY, STYLE]. W.F.B.

**WINDPIPE.** See SPEECH, TRACHEA.

**WINDWARD ISLANDS.** See ANTILLES.

**WISECRACK** [1910s: AmE slang, related to meanings of *crack* as conversation and loud, boastful talk]. Also **crack**. A brief witticism, generally facetious, aggressive, or disparaging: for example, a hungry diner in an expensively fashionable and snobbish restaurant, contemplating a very thin serving of very thin soup, says: 'Waiter, take this plate away, it's wet.' See BISOCCIATION, JOKE. [STYLE]. W.N.

**WIT** [Before 10c: from Old English *wit*, *gewit*, cognate with German *Witz*, Old Norse *vit*, the mind, conscious thought, thinking, knowing, wisdom, as fossilized in such expressions as *use your wits*, *lose one's wits*, *at one's wits' end*, *witless*, *unwitting*, *nitwit*]. In current usage, quickness of mind and ability in pointed verbal humour. Lord Chesterfield's smart comment on the placing of Beau Nash's (full-length) portrait between the busts of Newton and Pope significantly twins *wisdom* and *wit*: 'The picture plac'd the busts between, / Adds to the thought much strength; / Wisdom and Wit are little seen, / but Folly's at full length.' This quatrain, originally by Jane Brereton (1685–1740), is itself a witticism embodying a definition of the role of wit in all ages: to *add to the thought much strength*.

Not everything that is witty is by the same token funny. Jonathan Swift's remark that 'We have just enough religion to make us hate, but not enough to make us love one another' (*Thoughts on Various Subjects*, 1727) is far from

humour but close to wit. The thought takes added strength from a formulation that points the antitheses of 'just enough . . . not enough', and 'love . . . hate'. Paraphrase, however faithful to the content, would destroy the witty form: 'Our religion is not strong enough, because it only makes us hate rather than love each other.' Witty sayings in general follow a well-accentuated design. It is often said that 'Brevity is the soul of wit', but a better version might be 'Design is the test of wit', with a rider that economy is the test of design. The stylistic designs characterizing wit's brevity are often rhetorical schemes of parallels and antitheses, such as 'Truth is never pure, and rarely simple' (Wilde, *The Importance of Being Earnest*, 1895). Other recurrent forms are the definition and the quasi-philosophical proposition: 'It is a truth universally acknowledged, that a single man in possession of good fortune, must be in want of a wife' (Austen, *Pride and Prejudice*). Such schemes are the structural foundation of literary wit, in prose or verse. The wit structure provides an expandable frame for the development of the witty image, as in this sentence from Edith Wharton's story *Xingu* (1916): 'Her mind was an hotel where facts came and went like transient lodgers, without leaving their address behind, and frequently without paying for their board.'

Ability to create appropriate linguistic frames is only one aspect of the power of wit; a complementary aspect is the understanding of semantic categories and the possibility of juxtapositions that are both novel and revelatory. This perception is the source of figures of speech, such as puns and metaphors, and also of discursive modes like irony and paradox. Essentially, it is the perception of concord within semantic dissonance, and vice versa. Wit is therefore a central element in satire and polemic, genres which require the pointed representation of ideas in conflict or the arbitrary yoking of discrete notions, and in this satirico-critical role takes on a colouring not only of humour but also of aggression: 'Mr X was a little out of his shallows', declares a television critic. This punning and metaphorical play on *shallows* as opposed to *depths* is witty. It would probably be said by anyone who has formed an opinion of Mr X to 'add to the thought much strength'. What is added, however, is cruel, and wit can be unabashedly cruel when wisdom is overwhelmed by the impulse to raise a laugh or make an impression. See ATTIC SALT, HUMO(U)R, JOKE, WITTICISM. [STYLE]. W.N.

**WITTICISM** [17c: from *witty*, coined by John Dryden on the analogy of *criticism*, blending English and Greek]. A witty remark. Like aphorisms, witticisms are brief utterances that neatly

encapsulate a perception, an argument, an analysis. Common forms include the definition *A X is Y* ('A mistress is something between a mystery and a mattress') and quasi-syllogisms like Wilde's 'All women become like their mothers. That is their tragedy. No man does. That is his' (*The Importance of Being Earnest*, 1895). Witticisms of the definitional kind occur in such cynics' lexicons as Ambrose Bierce's *The Devil's Dictionary*:

**Bride**, *n.* A woman with a fine prospect of happiness behind her.

**Backbite**, *v.t.* To speak of a man as you find him when he can't find you.

Such witticisms are *constructed*, thought out at leisure, while others, often more striking for that reason, are *elicited*, in response to a some kind of conversational 'feed' or even as a consequence of the witty person's self-priming. This process of elicitation suggests an affinity of the witticism and the riddle, the witticism often assuming the function of the riddle's pay-off line. Wilde mimics the process: 'What is a cynic?'—'A man who knows the price of everything and the value of nothing' (*The Picture of Dorian Gray*, 1891). A kind of spontaneous riddling appears in the following exchanges among guests in a TV chat show: *Host* But now, what's all this about 'secondhand food'? *First guest* Well, I'm calling it 'secondhand food'. *Second guest* [incredulously] You mean regurgitated? *Third guest* Oh, I did hope you wouldn't bring that up.

Unlike its parent terms *wit* and *witty*, the word *witticism* can have a pejorative colouring, as a vehicle for jeering or disparaging, and is occasionally stigmatized as 'cheap'; cheap witticisms, like cruel wit, arise when the passion to score a point ignores the moderating influences of reason, justice, and tact. However, the effect of a disparaging witticism can always be nullified by repartee: the Oxford wit who remarked that 'Learning at Cambridge is a closed book' (alluding to that university's coat of arms) was answered with, 'Yes, but yours is always open at the same page' (alluding to the Oxford arms). See BIERCE. Compare BON MOT, EPIGRAM, HUMO(U)R, -ISM, WIT. [STYLE]. W.N.

**WOLLSTONECRAFT, Mary** [1759-97]. English writer and worker for women's rights. Born in London, she spent an insecure childhood with her prodigal father. In 1780, she and her sister opened a school in London. She published *Thoughts on the Education of Daughters* (1787) and a novel, *Mary* (1788). She spent some time in Ireland as a governess, and after returning to London published *A Vindication of the Rights of Man* (1790) as a riposte to Edmund Burke, then *A Vindication of the Rights of Women* (1792).

After an unhappy liaison with an American, Gilbert Imlay, she married William Godwin in 1797. She died soon after the birth of their daughter Mary, who married the poet Shelley and wrote the novel *Frankenstein*. Wollstonecraft argued that it was the social system and not any basic difference between the sexes that forced women into subordinate status. Although generally considered subversive and unwomanly, her works were well received by radicals and she laid the foundation for later suffragism and feminism. [BIOGRAPHY, EDUCATION, EUROPE].

R.C.

**WOOLF, Virginia** [1882–1941]. English novelist, born in London, daughter of Leslie Stephen, the first editor of the *Dictionary of National Biography*. Through her brothers, she was drawn into the circle of writers, painters, and critics who came to be known as the *Bloomsbury Group*. They included Lytton Strachey, Roger Fry, Clive Bell (who married her sister Vanessa), and Leonard Woolf (whom she married in 1912). Her first novel, *The Voyage Out* (1915), had few technical innovations, but foreshadowed some of her later approaches to fiction. In *Jacob's Room* (1922) she made a break from the contemporary novel whose attention to externals she attacked in her essay 'Mr Bennett and Mrs Brown' (1923). *Mrs Dalloway* (1925) and *To the Lighthouse* (1927) established her as a leading practitioner of the *stream of consciousness* in fiction. She concentrated on the inner life of thought and motivation, using indirect narrative through the viewpoint of individual characters. She did not take the flow of free association and incomplete expression of ideas as far as Joyce did in *Ulysses*, but *The Waves* (1931) presented a story of six lives through sequences of shared and separate experience. Woolf used more traditional techniques in *Night and Day* (1919) and *The Years* (1937); *Orlando* (1928) is a lively excursion through English history in a pastiche of styles from different periods. Her last novel, *Between the Acts* (1941), partly returned to her earlier style; it was published after she committed suicide while suffering from the depression that had afflicted most of her adult life.

For Woolf, the novel was an impressionistic record of individual experience rather than a mimetic picture of society: 'Life is a luminous halo, a semi-transparent envelope surrounding us from the beginning of consciousness to the end' ('Modern Fiction', 1919). Her characters live between past and present, finding some of their strongest experiences in moments of recall. Her descriptive passages were often poetic, in balanced and rhythmic prose with extended similes; the passages describing the changing aspects of the sea in *The Waves* are notable examples:

The sun rose. Bars of yellow and green fell on the shore, gilding the ribs of the eaten-out boat and making the sea-holly and its mailed leaves gleam blue as steel. Light almost pierced the thin swift waves as they raced fan-shaped over the beach. The girl who had shaken her head and made all the jewels, the topaz, the aquamarine, the water-coloured jewels with sparks of fire in them, dance, now bared her brows and with wide-opened eyes drove a straight pathway over the waves.

Woolf was an acute literary critic, particularly of women writers; her essays were collected in *The Common Reader* (1925, 1932). From 1917, she and her husband ran the Hogarth Press, which published many leading contemporary writers, including Katherine Mansfield and T. S. Eliot. Woolf was a strong feminist and has been highly esteemed by recent feminist criticism. She was anxious to present the feminine view of life which literature had generally neglected and was among the first to suggest that language has been shaped by men: 'It is useless to go back to men writers for help, however much one may go to them for pleasure . . . [They] never helped woman yet, though she may have learned a few tricks of them and adapted them to her use. The weight, the pace, the strikes of a man's mind are too unlike her own for her to lift anything substantial from him successfully . . . A book is not made of sentences laid end to end, but of sentences built, if an image helps, into arcades of domes. And this shape too has been made by men out of their own needs for their own uses' (*A Room of One's Own*, 1929). See index. [BIOGRAPHY, EUROPE, LITERATURE, STYLE].

R.C.

**WORCESTER, Joseph E(merson)** [1784–1865]. American scholar and lexicographer. His first publications included *A Gazetteer of the United States* (1818) and *Elements of History, Ancient and Modern* (1826), which were used as textbooks. His lexicographical career began with an 1828 abridgement of Samuel Johnson's *Dictionary of the English Language* that included John Walker's *Key To The Classical Pronunciation of Greek, Latin, and Scripture Proper Names*. In 1829, he published an abridgement of Noah Webster's *American Dictionary of the English Language* which included a synopsis of words pronounced differently by various orthoepists as well as Walker's *Key*. Worcester published *A Comprehensive Pronouncing and Explanatory Dictionary* in 1830, with subsequent editions in 1835, 1855 (with a new title), and 1860. The appearance of this work marked the beginning of the so-called 'dictionary wars'. Worcester was a linguistic conservative who used the speech of London as his standard and was not a spelling reformer; he also cited British writers in his illustrative material. Webster advocated spelling reform, current American

usage, and cited many American writers. Webster later retracted some of his more unusual spelling proposals, such as *tuf* tough, *dawter* daughter, *fateeg* fatigue, while Worcester became more lenient towards some widely accepted American pronunciations and in his abridgement of Webster's dictionary modified some words even more than Webster, such as *gold* to rhyme with *fold*, not *fooled*, and *medicine* to a three-syllable pronunciation. The publication in Britain in 1853 of *A Universal and Critical Dictionary* (1st edition, 1846) intensified the 'war'. In the preface, Worcester had denied basing his dictionary on Webster's book. The British publisher, however, omitted that disclaimer and to increase sales put on the title page the statement that Worcester's dictionary 'was compiled from the Materials of Noah Webster'. The ensuing pamphlet war carried out by Webster's publishers lasted into the 1860s. Among the innovations attributed to Worcester are: the introduction of synonyms into dictionaries, the inclusion of given names and their etymologies (1855), and pictorial illustrations (1860), all of which were included in his *Dictionary of the English Language* of 1860. See index. [AMERICAS, BIOGRAPHY, REFERENCE]. R.W.B.

**WORD** [Cognate with German *Wort* word, Greek (*w*)*eirein* speak, Latin *verbum* word, Sanskrit *vr̥tām* command]. A fundamental term in both the general and technical discussion of language. The entry on *word* in the *OED* (2nd edition, 1989) displays its senses under the three headings used in 1927 by C. T. Onions:

(1) *Speech, utterance, verbal expression*, divided into eleven sense groups: speech, talk, utterance; a speech, an utterance; speech as distinct from writing; verbal expression as contrasted with thought; contention, altercation; a report, news, rumour; an order, request; a promise, undertaking; a declaration, assertion; an utterance in the form of a phrase or sentence, a saying or proverb; a divine communication, scripture, and Christ.

(2) *An element of speech*, a single twelfth sense initially defined as: 'a combination of vocal sounds, or one such sound, used in a language to express an idea (e.g. to denote a thing, attribute, or relation), and constituting an ultimate minimal element of speech having a meaning as such'. This technical definition is followed by the seven sense groups: a name, title, idea, term; engraved or printed marks on surfaces; in contrast with the thing or idea signified; the right word for the right thing; a telegraphic message; a mathematical sequence; a string of bits in a computer.

(3) *Phrases*, a heterogeneous collection of such usages as *take a person at his word*, *in so many words*, *word of honour*, and *by word of mouth*.

**Other dictionary definitions.** The technical definition provided above comes twelfth in the order of *OED* senses because the dictionary was compiled on historical principles. Most 20c dictionaries are, however, synchronic and tend to place their equivalent of the technical sense first. The following selection of primary definitions of *word* is drawn from recent editions of two American and two British works:

(1) *Webster's Ninth New Collegiate Dictionary* (1984): 'a speech sound or series of speech sounds that symbolizes and communicates a meaning without being divisible into smaller units capable of independent use'.

(2) *American Heritage Dictionary* (1985): 'a sound or a combination of sounds, or its representation in writing or printing, that symbolizes and communicates a meaning and may consist of a single morpheme or of a combination of morphemes'.

(3) *Collins English Dictionary* (1986): 'one of the units of speech or writing that native speakers of a language usually regard as the smallest isolable meaningful element of the language, although linguists would analyse these further into morphemes'.

(4) *Chambers English Dictionary* (1988): 'a unit of spoken language: a written sign representing such an utterance'.

**Literacy and the word.** The earliest known word study in the Western world took place in ancient Greece. Latin words were later analysed in terms of Greek words, the model being adapted in minor ways to fit a second but similar language, and since then the classical analysis, adapted and refined for other languages, has evolved into a model through which Western scholars analyse all languages. In Greece, word study was an inseparable part of the study of texts, which had been prompted by the invention of script. Prior to that, *name* was a more clearly delineated concept than *word*, which was rather imprecisely associated with *speech* (apparently the meaning of \**wer*, the Indo-European root underlying Latin *verbum*, Sanskrit *vr̥tām*, and English *word*). In oral communities, there appears generally to be no great interest in separating out 'units' of language, a lack of delimitation carried over into the early stages of alphabetic writing, in which letters followed each other in lines without spaces to separate off what are now perceived as 'words'. Spaces between groups of letters became important as the conventions of writing evolved. In alphabetic systems, spaces are now universal and as a result literate people learn to recognize 'words' as visual rather than

auditory units. In a real sense, the first orthographers of a language make the decisions about how words are to be perceived in that language.

The idea that marks on a surface might also relate to speech only slowly emerged from (and coexisted with) the earlier view of words as speech itself, not elements of speech. This ancient lack of distinction between *word* and *language* continues, as in Bernard Groom's comment:

To the imaginative writer, and especially to the poet, language is a medium for self-expression. Hard and unyielding up to a point, words can none the less be so manipulated as to bear the impress of a particular mind (*A Short History of English Words*, 1934).

Children learn about words while learning to write, become more or less comfortable with 'the written word', and may later assume that words as they are written automatically have a place as theoretical units of both speech and script. Grammarians, philologists, and linguists, all the legates of the Greeks, have tended to focus on words as visual entities even when analysing sound, for which phoneticians developed a special alphabet. The place of the word as an ultimate unit of language has not, however, been easy to find, with the result that many 20c linguists have found it necessary to look elsewhere for key units of language: 'below' the word among phonemes and morphemes or 'above' it in sentence and discourse.

**The word in different languages.** The nature of words varies from language to language: *amaverunt* is one word in Latin, but cannot be translated into one word of English (in which it means either *they loved* or *they have loved*). It is a verb with a root *am-*, a thematic vowel *-a-*, a marker of the perfect tense *-v-*, and a complex inflectional ending *-erunt*. The English verbs that translate it have different tenses (simple past *they loved*, present perfect *they have loved*) and bear not the slightest resemblance to the structure of their Latin equivalent. Different from both English and Latin, Swahili has a primary verb form such as *kuta* (meet). The forms *kutana* ('meet each other') and *kutanisha* ('cause to meet each other') may be conceived as either variations of *kuta* or as distinct words. In effect, the conception 'word' is determined afresh within the system of every language, and as a result the word-as-element-of-speech is language-specific, not language-universal. The various kinds of language have their own broadly similar words, but even so there is variation from language to language inside a category: for example, among Romance languages between French and Spanish.

**Eight kinds of word.** Despite such complications, however, certain features are more or less true for many if not all languages. Eight such features

are fundamental to English and each has its own 'word':

*The orthographic word.* The word understood in terms of alphabetic or syllabic writing systems: a visual sign with space around it. It may or may not have a canonical form: in the 14c, before print encouraged standardization, *merry* was also spelled *myry*, *myrie*, *murie*, and *mery*. On occasion, the orthographic word has canonical forms for different varieties within English: BrE *colour* and AmE *color* ('the same word' in two visual forms).

*The phonological word.* The word understood in terms of sound: a spoken signal that occurs more commonly as part of a longer utterance than in isolation and is subject to rhythm. Traditional spoken English is a series of stressed and unstressed syllables which behave in more or less predictable ways: where an experienced listener hears *It's no good at all* being pronounced in a relaxed, informal way, a foreigner may hear *Snow good a tall*. In the flow of speech, words do not have such distinct shapes as on paper, and syllable boundaries do not necessarily reflect grammatical boundaries: the phrases *a notion* and *an ocean* are usually homophonic and only context establishes which has in fact been said.

*The morphological word.* The word in terms of form lies behind both the orthographic and the phonological word: *big* has a spelt-out realization *b-i-g* and a spoken realization /big/, but is independent of both, because it can be expressed in either medium and also in sign language. This entity is capable of realization in different 'substances'; it is distinct from such spelt-out variants as *colour* and *color* as well as from the innumerable ways in which African, American, Australian, Caribbean, English, Irish, Scottish or other people may say 'colo(u)r'. However, all such users have it in common and it is the basis of such further forms as *colourful* and *discoloured*.

*The lexical word* (also called a *full word*, *content word*, *lexeme*, *lexical item*). The word in terms of content relates to things, actions, and states in the world. It is usually realized by one or more morphological words, as when *do*, *does*, *doing*, *did*, *done* are taken to be five 'versions' of the one verb *DO*. Lexical words are generally fitted into the flow of language through such mechanisms as *affixation*, *suppletion*, *stress shift*, and *vowel change*, all of which have morphological and other effects. The set of such words is always open to new members, and in English embraces nouns, verbs, and adjectives, and other parts of speech when they behave like nouns, verbs, and adjectives, as in 'But me no buts'. Lexical words may be simple in structure (*cat*, *mouse*), or composite (*cold-bloodedness*, *incomprehensible*, *teapot*

*blackbird, Commonwealth, stamp collector, put up with, natural selection, Parkinson's disease).*

*The grammatical word* (also called a *form word, function word, structure word*, and in some theories a subvariety of *morpheme*). The word in terms of syntactic function contrasts with the lexical word and is an element in the structural system of a language. It serves to link lexical words. In English, conjunctions, determiners, interjections, particles, and pronouns are grammatical words. They occur frequently and have their own semantic systems, as with such particles as *up* and *down*, which relate to position, direction, space, and time. In principle, such words are a closed set to which new items are seldom added. As lubricants, grammatical words are like affixes: the *out* in *throw out* is like the prefix *e-* in *eject*; the *before* in *before the war* means the same as *pre-* in *pre-war*. They can also function like affixes, as in *he-man* and *yes-man*.

*The onomastic word*. The word in terms of naming establishes special, often unique reference: the difference between *Napoleon* and *emperor*. It may be simple like *Smith* or complex like *Smithsonian*. Names may be motivated, like *Sitting Bull* (a Sioux name derived from an omen involving a bull buffalo) or conventional, like *Smith* today (though not in the Middle Ages, when the name was occupation-based). Although such words are lexical, they are not usually listed in dictionaries and may or may not be relevant in encyclopedias. They are often regarded as apart from normal vocabulary, though they too have to be learned.

*The lexicographical word*. The word in terms of dictionaries is usually presented in an alphabetic setting. Many dictionaries have an entry *did* as the past of *do*, an entry *them* as the object form of *they*, and so on, with cross-references to the representative form. There are therefore two kinds of entry: anything the compilers think anyone might look up, and the *citation forms* under which definition proceeds. The conventional citation form for nouns is the singular (unless a word is always plural) and for the verb is the bare infinitive (unless the verb only occurs as a participle, or is a modal verb).

*The statistical word*. The word in terms of occurrences in texts is embodied in such instructions as 'Count all the words on the page': that is, count each letter or group of letters preceded and followed by a white space. This instruction may or may not include numbers, codes, names, and abbreviations, all of which are not necessarily part of the everyday conception of 'word'. Whatever routine is followed, the counter deals in tokens or instances and as the count is being made the emerging list turns tokens into types:

for example, there could be 42 tokens of the type *the* on a page, and 4 tokens of the type *dog*. Both the tokens and the types, however, are unreflectingly spoken of as words.

**Other 'words'**. In addition, there is a large number of more or less common expressions, some technical, some semi-technical, some general and casual, all specifying kinds of words and word-like units. They fall into overlapping groups that include: (1) Terms in which *word* appears, such as: *base word, buzz word, compound word, long word, root word*. (2) Terms based on the suffix *-ism*, such as: *Americanism, Australianism, burgessism, malapropism*. (3) Terms based on the combining form *-onym*, such as: *antonym, aptronym, characternym, eponym, hyponym, synonym*. (4) Terms that relate to form more than meaning, such as: *abbreviation, acronym, complex word, compound word, initialism, portmanteau word*. (5) Terms that relate to meaning more than form, such as: *antonym, burgessism, eponym, hard word*. (6) Terms that relate to social usage, such as: *anagram, buzz word, confusable, loan(word), malapropism, nonce word, palindrome, stunt word, vogue word*. All such terms fit in various ways and at various levels into the model of the word presented above. Those with their own entries in this volume are shown in the theme list below.

**Words as clusters**. Because of its many dimensions, the concept 'word' is more like a cluster than an atom. On the level of theory, the cluster contains the kinds of words discussed above. On the level of practical activity, people 'know a word' not simply when they can use and understand a single item but when they know a range of variation and practices associated with it: for example, to know the word *know* entails knowing how to say, hear, read, and write its various forms and extensions, fitting them into phrases and sentences (*knows, knowing, knew, known*), relating the simple to the complex (as in *knowledge, knowledgeable, unknowing, unknowable, unknowably, unknown*), relating these to such compounds as *knowhow* and *know-all*, managing idioms (*y'know, in the know, know the ropes, know what's what, know a thing or two*), using and grasping senses, expressions, and collocations (*knowing someone or something, knowing how to do something, knowing better, and even knowing 'in the Biblical sense'*). This cluster, with its clear centre and hazy periphery, shares semantic space with other clusters cited as the words *understand, perceive, grasp, and fathom*. All operate within a system whose size and complexity defy comprehensive description, but without being beyond the reach of the everyday user of the language. [LANGUAGE, WORD].

**The word theme**

A-D. ABBREVIATION, ACRONYM, ACROSTIC, ADAGE, AFFIX, AFRICANISM, AMERICANISM, ANACHORISM, ANACHRONISM, ANAGRAM, ANGLICISM, ANTIGRAM, ANTONYM, APTRONYM, ATTRIBUTIVE NOUN, AUSTRALIANISM, BACK-FORMATION, BASE, BEHEADMENT AND CURTAILMENT, BINOMIAL, BINOMIAL NOMENCLATURE, BISOCIATION, BLEND, BORROWING, BOUND AND FREE, BOUT-RIMÉS, BURGESSISM, BUZZ WORD, CALL MY BLUFF, CALQUE, CANADIANISM, CANONICAL FORM, CARIBBEANISM, CELTICISM, CHARADE, CLASSICAL COMPOUND, CLASSICAL ENDING, CLIPPING, COGNATE, COINAGE, COLLOCATION, COLLOQUIALISM, COMBINING FORM, COMPLEX WORD, COMPOSITION, COMPOUND-COMPLEX WORD, COMPOUND WORD, COMPUTERESE, COMPUTING, CONFUSIBLE, CONSEQUENCES, CONTRACTION, CONVERSION, CROSSWORD PUZZLE, DEFINING VOCABULARY, DEFINITION, DERIVATION, DERIVATIONAL PARADIGM, DICTIONARY, DIMINUTIVE, DISTINGUISHABLE, DOUBLET.

E-K. ECHOISM, ENTRY, EPONYM, -ESE, ETYMOLOGY, ETYMON, ETYMORPHS, FILIPINISM, FIXED PHRASE, FOLK ETYMOLOGY, FOREIGNISM, FORMATIVE, FOUR-LETTER WORD, FREQUENCY COUNT, FREQUENTATIVE, FUNCTIONAL SHIFT, GAELICISM, GAIRAIGO, GALLICISM, GENERAL SERVICE LIST, GENTEELISM, GHOST WORD, GLOSS, HARD WORD, HEADWORD, HEBRAISM, HIBERNIANISM, HOBSON-JOBSONISM, HOLOPHRASE, HOMOGRAPH, HOMONYM, HOMOPHONE, INDO-EUROPEAN ROOT, INFIX, INITIAL, INITIALESE, INITIALISM, INKHORN TERM, INTERFIX, INTERNATIONAL CORPUS OF ENGLISH, INTERNATIONAL SCIENTIFIC VOCABULARY, IRISHISM, -ISM, ITERATIVE, JANUS WORD, KEYWORD.

L-S. LATINISM, LEMMA, LETTER<sup>2</sup>, LETTER WORD, LEXEME, LEXICAL FIELD, LEXICOGRAPHY, LEXICOLOGY, LEXICON, LEXIS, LIPOGRAM, LITERARY TERM, LOAN, LOAN BLEND, LOAN TRANSLATION, LOANWORD, LOCALISM, LONG WORD, MACHINE WORD, MCWORD, -MAN/WOMAN, METANALYSIS, MIS-, MONOSYLLABLE, MORPHEME, NAME, NEW ZEALANDISM, NICE-NELLYISM, NOMENCLATURE, NONCE WORD, NOUN-INCORPORATION, NUMERAL, -ONYM, PALINDROME, PANGRAM, PHON(A)ESTHESIA, PHRASAL VERB, PHRASE WORD, PILGRIM WORD, PLAYING WITH WORDS, POLYSEMY, POLYSYLLABLE, PORTMANTEAU WORD, POTTER, PREFIX, PRIVATIVE, PROCLITIC, PRODUCTIVE, PROTOGRAM, REBUS, REDUPLICATION, REDUPLICATIVE, REGIONALISM, RETRONYM, REVERSAL, RHYMING COMPOUND, RIDDLE, ROGET'S THESAURUS, ROOT, ROOT-CREATION, ROOT-WORD, SAXONISM, SAYING, SCOTTICISM, SCRABBLE, SEMANTIC CHANGE, SEMANTIC FIELD, SEMORDNILAP, SENTENCE WORD, SOUTH AFRICANISM, SPELLING, SPELLING BEE, STEM, STEM FORMATIVE, SUBWORD, SUFFIX, SUPERORDINATE TERM, SYLLABIC ACRONYM, SYLLABLE WORD, SYNONYM.

T-Z. TECHNOBABBLE, TECHNOSPEAK, TELEGRAPHESE, TELESCOPING, TERM, TERMINOLOGY, THEMATIC VOWEL, THEME, TMESIS, TONGUE-TWISTER, TRIPLET, TRISOCIATION, TYPE AND TOKEN, VAGUE WORD, VERBAL, VERBALISM, VERBICIDE, VERBOSITY, VERNACULARISM, VOCABLE, VOCABULARY, VOCABULARY CONTROL, VOGUE, VULGARISM, WORD ACCENT, WORDAGE, WORD BLINDNESS, WORDBOOK, WORD BUFF, WORD CLASS, WORD-FORMATION, WORD LIST, WORD-LORE, WORD-MONGER, WORD ORDER, WORD ORIGINS, WORD PROCESSOR, WORD SALAD, WORDSMITH, WORD SQUARE, WORD STRESS, WORDS WITHIN WORDS, WORD WORD, YIDDISHISM.

**WORD ACCENT.** See STRESS.

**WORDAGE** [1820s]. Words taken collectively, or a quantity or total of words in a book or other document. [WORD]. T.MCA.

**WORD BLINDNESS** [1880s]. A non-technical term for *dyslexia*. See DYSLEXIA. [LANGUAGE, WORD]. T.MCA.

**WORDBOOK** also **word-book**, **word book**. [16c]. An occasional, usually informal term for a dictionary or other work that presents and defines words. It is sometimes used by lexicologists as a generic term covering the *dictionary* (taken to be primarily arranged in alphabetic order), the *thesaurus* (taken to be primarily arranged in thematic order), and works with any other organizing principle, such as frequency of occurrence or pictures. See ALPHABETIC(AL) ORDER, DICTIONARY, THEMATIC ORDER, THESAURUS, VOCABULARY. [REFERENCE, WORD]. T.MCA.

**WORD BUFF** [20c]. An informal term for someone more than usually interested in words. The English word buff Ivor Brown observed that the 'snatchers and hoarders of birds' eggs and of flowers first create a scarcity, then hunt down the rarities. To hunt words is to do no trespass' (*A Word in Your Ear*, 1942). The American collector Paul Dickson has added: 'I am a word collector. I approach my collecting with a zeal that borders on the compulsive' (*Words*, 1982). A formal and (often jocularly) pretentious synonym for 'word buff' is *logophile* (from Greek *lógos* speech, *philos* friend, lover). The word buff's enthusiasm, obsession, or 'vice' is consequently known as *logophilia*. [REFERENCE, WORD]. T.MCA.

**WORD CLASS** [1920s], also **grammatical category**. Terms in linguistics for a category of words that have been grouped together because they are similar in their inflection, meaning, functions, or a combination of these. Many linguists prefer the term to *part of speech*, which has traditionally been used for a more limited set of classes that are less rigorously defined. Others use the three terms as synonyms. See PART OF SPEECH. [GRAMMAR, WORD]. S.G.

**WORD DIVISION**, **word-division**. See HYPHEN.

**WORD-FORMATION** [probably 19c]. (1) The formation of longer, more complex words from shorter, simpler words. (2) The formation of all words, simple or composite, from more basic

elements of language. (3) The study of the formation of words. In the West, the analysis of word form began in classical Greece and passed in due course to Rome. Philosophers including Plato and Aristotle and grammarians including Dionysius Thrax and Terentius Varro developed the study of the ways in which words were formed as a part of grammar, founding a long and subtle tradition that was inherited and extended by 19c comparative philology and 20c linguistics. The classical study was based only on Greek and Latin words, and contrasted *simple word* and *complex word*. The simple word was discussed either in terms of its *root* (a basic element without adaptations or inflections), such as Greek *log*, whose core meaning was 'speech', or as a *root word*, consisting of a root, stem, and inflection (in most cases cited in standard forms, such as the nominative singular for nouns), such as Greek *lógos* (speech, word) and Latin *verbum* (word, verb). The complex word was discussed in terms of two processes or categories: (1) *Derivation*, in which affixes and inflections could be added to a root, as with *logikós*, an adjective formed from *lógos*, and *verbalis*, an adjective formed from *verbum*. (2) *Composition*, in which two or more roots could be combined, with appropriate affixes and inflections added, as with the nouns *biologia* and *biologistēs*, formed from *bios* (life) and *lógos*, and *agricultura*, formed from *ager* (field) and *cultura* (cultivation).

**Contemporary terms.** The classical description was somewhat modified when transferred to English. The concept *root* has continued in use, but in the 20c has been increasingly replaced by *base* when discussing non-historical processes. A *root word* is usually called either a *simple word* or a *simplex*. The classical 'complex' forms divide into *complex words* and *compound words*, the formation of complex words being *derivation* and of compound words being formerly called *composition* but now usually *compounding*. Derivation is the process by which the word *unfriendly* is built up from the simple word or free base *friend*, and *illegality* is built up from the bound base *-leg-* (from Latin, meaning 'law'). Compounding is the process by which the vernacular compound *teapot* is formed from the simple words *tea* and *pot* and the classical compound *biography* is formed from the combining forms *bio-* and *-graphy*. Although derivation and compounding account for a large number of the composite word forms of English and other languages, they do not cover everything. As a result, at various times further descriptive categories have been added, such as *conversion* or *functional shift*, *back-formation*, *phrasal verb*, *blend*, *abbreviation*, and *root-creation*. Sometimes, specific word-formational terms have lagged behind an

awareness of the distinct forms actually occurring in a language: although, in English, verb forms like *put up* and *put up with* have been discussed since at least the 18c, the name *phrasal verb*, by which they are now most commonly known, was not applied to them until the early 20c.

In more detail, these categories are: (1) *Conversion* or *functional shift*, the process by which words extend their grammatical function: for example, from verb to noun (*run* in *go for a run*), and from noun to verb (*position* in *positioning people*). (2) *Back-formation*, the creation of a simpler or shorter form from a pre-existing more complex form: *edit* from *editor*, *intuit* from *intuition*. (3) *Phrasal verb*, a class of verb followed by an adverbial and/or prepositional particle: *put up* provide a bed for, *put up with* tolerate. (4) *Blend*, the outcome of a process which collapses two words into one: *breakfast* and *lunch* into *brunch*; *electro-* and *execute* into *electrocute*. (5) *Abbreviation*, the shortening of words and phrases, in three basic forms: the *initialism*, a set of letters pronounced as such and standing for an idea, group, or institution (*BBC*, pronounced 'bee-bee-see', for *British Broadcasting Corporation*); the *acronym*, a set of letters pronounced as a word (*NATO*, pronounced 'Nay-toe', for *North Atlantic Treaty Organization*); the *clipping*, a short form created by removing one or more syllables (*pro* for *professional*, *phone* for *telephone*, *flu* for *influenza*). Blends are often closely involved with the processes of abbreviation. (6) *Root-creation*, the formation of new roots or bases, which tend to be *echoic*, where a form resembles one or more pre-existing forms (*cuckoo*, *splish*: sounds of nature), or *onomastic*, deriving from names (*atlas* from the name of the mythical titan; *gin* from the city of Genoa). See relevant entries (as listed at the end of this article).

**Word-formation clusters.** In accordance with need, social context, and formational patterns, clusters of derivatives, compounds, and other usages develop around words and bases. The noun *wolf*, for example, is the focus of a wide range of expressions: (1) Compounds like *prairie wolf* and *timber wolf* kinds of wolf, *wolf dog* the offspring of a wolf and a dog, *wolfhound* a dog that hunts wolves, *wolf-fish* a fish in some way like a wolf, *wolf spider* a spider that hunts its prey like a wolf, *wolfsbane* a poisonous plant, *wolf child* a child brought up by wolves, *wolfman* a man who can turn into a wolf, *wolf pack* a pack of wolves, *wolf note* a discordant note in music, *wolf whistle* a whistle of sexual admiration, *she-wolf* a female wolf, *werewolf* (from German) someone who can become a wolf. (2) Derivatives like *wolfer/wolver* a hunter of

wolves, *wolf-like* and *wolfish* like a wolf, *wolfishly* its adverb, *wolfishness* the quality of being wolfish, *wolf down* to swallow food like a wolf, *wolverine* a large weasel-like animal with wolf-like attributes. (3) Fixed phrases like *Tasmanian wolf* a wolf-like animal in Tasmania, *lone wolf* a person who does things alone. (4) Idioms and sayings such as *cry wolf*, *keep the wolf from the door*, *be a wolf in sheep's clothing*, *throw someone to the wolves*.

Although the *wolf*-cluster exhibits the range of word-forming potential, it is an ancient and diffuse system whose members cover many contexts. As such, it does not illustrate the vigour of present-day word-formation, which can be seen in a recent more or less 'nonce' cluster based on the name *Tourette*. In 1885, the French neurologist Georges Gilles de la Tourette described a nervous condition marked by tics, jerks, grimaces, curses, mannerisms, imitative actions, and antic kinds of humour. This became known as *Gilles de la Tourette Syndrome*, then as *Tourette's syndrome*, often further shortened to *Tourette's*. When describing people with Tourette's, the American neurologist Oliver Sacks has used the following derivations, compounds, and other forms: (1) Nouns: *Tourettism* the syndrome and its effects, *motor Tourettism* the physical aspect of the syndrome, *mental Tourette's* the psychological aspect, *Tourette* a symptom of the syndrome, *Touretter* someone with the syndrome, *Tourette's Syndrome Association* a proper name, *TSA* its initialism, *Touretoma* a figurative mind-tumour, *super-Tourette's* a powerfully destructive variety, *super-Touretter* one who has it, *Tourette psychosis* 'an identity frenzy', *Tourettesville* the nickname of the town of LaCrete in Alberta, Canada, many of whose Mennonite inhabitants have the syndrome, *Grandma Tourette* the nickname of a matriarch of the town. (2) Adjectives, adverbs: *Tourettic* (formal) pertaining to the syndrome, *Touretically* its adverb, *Tourette-like* like the syndrome, *Touretty* (informal) showing symptoms, *Touretish* (informal) relating to the syndrome, *Tourettishly* its adverb. (3) Verb forms: *Touretting* displaying the syndrome, *Tourettized* afflicted with the syndrome. (From Oliver Sacks, *The Man Who Mistook His Wife for a Hat*, 1985, and 'Being Moved by the Spirit', *Sunday Times*, 25 Sept. 1988.)

**Paradigms and paraphrases.** Although they often belong in clusters, complex words are usually formed one at a time in accordance with more or less established patterns. Such patterns or *paradigms* are built up analogically and differ for compounds and derivatives. Compound patterns involve a distinctive kind of stress on (the main syllable of) the first element, as in *TEApot*

and *eMERgency plan*, and paraphrase formulas gloss the relationships between the bases in a compound: a *flower pot* is a 'pot for flowers' and so a *slop bucket* is interpretable as a 'bucket for slops'; a *goatskin* is 'the skin of a goat' and so an *iguana skin* is interpretable as 'the skin of an iguana'. Derivational paradigms are often cumulative, as in the set *form/formal/formality*, the paraphrases expressing relationships between base and other elements: *formality* is the condition of being *formal*, and *formal* is the adjective that relates to *form*, and similar relations exist for the set *norm/normal/normality*, but not for *nature, natural, \*natularity*.

**The word-forming continuum.** Although much of English word-formation is regular, few patterns are neat and tidy and many forms blend their categories and mix their patterns. It is useful therefore to introduce the concept *hybrid*: for example, compounds with derivational elements (*schoolboyish* and *mud-walled*) and abbreviations involved in attribution and compounding (*a NATO radar system*), in derivation (*ex-IBMer*, someone who no longer works for International Business Machines), or in both (*an ex-CFL player*, someone who no longer plays for the Canadian Football League). It is likely that word-formation can be most usefully discussed in terms of both a continuum in which categories shade into each other and self-contained classical containers, each more or less insulated from the others. The fluidness of word-formation arises both from complex processes of change over centuries and from casual usage untouched by theories of language and norms of 'good' formation. The American linguist Dwight Bolinger, reflecting on 'the high informality of word-making in English', puts the matter as follows:

Practically all words that are not imported bodily from some other language . . . are made up of old words and their parts. Sometimes those parts are pretty well standardized, like the suffix *-ness* and the prefix *un-*. Other times they are only broken pieces that some inventive speaker manages to re-fit . . . *Hamburger* yields *-burger*, which is reattached in *nutburger*, *Gain-esburger*, and *cheeseburger*. *Cafeteria* yields *-teria*, which is reattached in *valet-eria*, *groce-teria*, and *wash-ateria*. Trade names make easy use of almost any fragment, like the *-roni* of *macaroni* that is reattached in *Rice-a-Roni* and *Noodle-Roni*. The fabrication may re-use elements that have been re-used many times, or it may be a one-shot affair such as the punning reference to being a member of the *lowerarchy*, with *-archy* extracted from *hierarchy*. The principle is the same. Scientists and scholars may give themselves airs with high-bred affixes borrowed from classical languages, but they are linguistically no more sophisticated than the common speakers who are satisfied with leftovers from the vernacular (*Aspects of Language*, 1968).

Word-formation in English operates among hundreds of millions of people, drawing on centuries of complex hybridization and prompting idiosyncrasy in forms and uses. As a result, even the most well-defined categories and patterns identify tendencies rather than absolutes that are thoughtlessly 'flouted' by the ignorant and insensitive. Around such focal points as compounding and affixation, with their relative certainties, swarm innumerable and unpredictable fringe formations, of longer or shorter duration, such as *lowerarchy*, *Rice-a-Roni* and *Grandma Tourette*.

**WORD FREQUENCY (COUNT).** See FREQUENCY COUNT, VOCABULARY CONTROL.

**WORD GAME.** Games can be played with the senses, sounds, construction, or order of words. Playing with the sense of words creates *puns* and such team games as the BBC's *Call My Bluff*. Playing with the sounds of words creates *tongue-twisters*, *spoonerisms*, and poetic games like *bout-rimés* and *echo verse*. Playing with the

construction of words creates *anagrams*, *charades*, *lipograms*, *palindromes*, and *pangrams*. Playing with the order or positioning of words or their letters creates *concrete poetry* and *hidden words*, and cumulative games like *consequences*, in which a story develops, and *I Packed My Bag*, in which more and more things go into the bag and have to be remembered by each player in turn. Words can also be placed in patterns or grids, as in *acrostics*, *crosswords*, *Scrabble*, and *word squares*. There are also numerous guessing games involving words, such as the *conundrum*, the *rebus*, and the *riddle*. Currently, the popularity of word games is shown by the large numbers of publications and television shows involving words. Many newspapers contain at least one crossword, sometimes elevated to the status of a national institution, such as *The Times* crossword in Britain.

Literary devices such as *alliteration*, *assonance*, and *rhyme* can be regarded as forms of word-play, and many writers have been noted for playing with words. The riddles of Old English were games as well as literary exercises; poets like John Skelton and William Dunbar in the 15/16c intermingled English with Latin to make *macaronic verses*; and Sir Thomas Wyatt (16c) and Jonathan Swift and William Cowper (18c) wrote enigmatic poems. William Shakespeare, Jonathan Swift, Thomas Hood, and Lewis Carroll were all addicted to the pun. The 17c metaphysical poets John Donne and George Herbert revelled in the playful use of language; Herbert wrote shaped poetry and echo verses, and some of his other poems were based on anagrams and rebuses. Lewis Carroll was an incorrigible word-player, inventing several word games (including *doublets*) and writing riddles, acrostics, rebuses, charades, and, in the shape of 'The Mouse's Tale' (or tail) in *Alice in Wonderland*, an early specimen of *concrete poetry*. Twentieth-century writers noted for their playful ways with words include James Thurber, e. e. cummings, Ezra Pound, Ogden Nash, Flann O'Brien, and James Joyce. Joyce's *Ulysses* is full of word-play, and *Finnegans Wake* is an extended language game.

**WORD LIST, WORD-LIST.** See FREQUENCY COUNT, VOCABULARY CONTROL.

**WORD-LORE**, also **wordlore** [1860s]. A Saxonism for philology or knowledge of words. See PHILOLOGY, SAXONISM. [WORD]. T.MCA.

**WORD-MONGER** [16c]. An informal pejorative term for someone who uses words pretentiously, plays with them too much, or invents new words without sufficient cause. See VERBALISM. [STYLE, WORD]. T.MCA.

**WORD ORDER.** [Late 19c]. A term for the order in which words appear in phrases and sentences. In such highly inflected languages as Latin and Sanskrit, word order is relatively free, since the relations between words can be signalled by inflections, but it is relatively fixed in English: for example, an adjective generally precedes the noun it modifies (*tall woman*) and a preposition precedes its complement (*on my table*). The normal order of sentence elements in English is Subject-Verb-Object: *Tony wants an egg*. See INVERSION, SENTENCE, SHAKESPEARE. [GRAMMAR, WORD]. S.G.

**WORD ORIGINS.** An informal, non-technical phrase associated with general works on English etymology, such as Eric Partridge's *Origins: An Etymological Dictionary of English* (1958), Owen Barfield's *History in English Words* (1962), and John Ayto's *The Bloomsbury Dictionary of Word Origins* (1990). Whereas scholarly dictionaries of etymology describe the histories of many thousands of words in dense entries with often formidable arrays of abbreviations and parentheses, books and articles on word origins tend to discuss a more limited range of words whose unusual 'stories' are often described in an expansive and relaxed style, as in:

**FAKE** Until a hundred years ago this was one of the words frowned upon by the schoolmasters. It was slang. Not only that, but it was the slang used by thieves and gypsies, not by reputable speakers and writers. The true history is therefore unknown, but some suppose it to have been picked up long before by English soldiers during the Thirty Years War (1618-48) when they were in contact with German allies (Charles E. Funk, *Thereby Hangs a Tale: Stories of Curious Word Origins*, Harper & Row, 1950).

**CAUCUS** Where the word "caucus" comes from is a mystery. There is a Greek word, "kaukos," but this is

a drinking cup. Our word "caucus" means a meeting where political candidates are chosen, usually in private. Some say it could have come from the Algonquian Indians of North America. They had what they called "cau-cau-su"—old, wise men who advised the tribes. "Cau-cau-su" was probably picked up by the early European settlers and changed to "caucus", which was often used by the settlers; the earliest recorded use of it came in 1763. It appeared in the private papers of John Adams, before he became the second President of the United States (Herbert Sutcliffe & Harold Berman, *Words and Their Stories*, Voice of America, 1978).

**FLU.** Even if they are not comforted, sufferers from flu may be interested in some stray facts about its etymology. The OED says that as well as the various senses of the word 'influence', the Italian *influenza* also has the sense—from the notion of 'astral' or 'occult influence'—of 'visitation' on many people at the same time and place of any disease (e.g. *influenza di catarro* or *influenza di febbre scarlatina*). In 1743 the word was 'applied specifically to "the epidemic" (called also *la grippe*) which then raged in Italy . . . for which the Italian word (anglicized in pronunciation) became the English specific name'. The first abbreviation was 'flue' (John Silverlight, *Words*, Macmillan, 1985, a collection of articles that first appeared in the *Observer* newspaper).

Similar light, often humorous comment can be found in works on words whose emphases are not historical, such as Philip Howard's *Weasel Words* (Hamish Hamilton, 1978), Paul Dickson's *A Connoisseur's Collection of Old and New, Weird and Wonderful, Useful and Outlandish Words* (Arena, 1983), and Gyles Brandreth's *The Word Book: or everything you ever wanted to know about the English language but had neither the verbal dexterity nor linguistic flexiloquence to ask!* (Robson Books, 1988). See ETYMOLOGY. [HISTORY, REFERENCE, STYLE]. T.MCA.

**WORD PLAY.** See PLAYING WITH WORDS.

**WORD PROCESSOR**, also **word-processor** [1970s]. In computing, a term for both the software and hardware that organizes text for display on a screen and/or for printing in various forms, and stores it for later use. Software for small computers includes the programs *Word-perfect*, *Microsoft Word*, *MacWrite*, *Nota Bene*; for large computers, *Troff*, *Tex*, *Scribe*. The services include: an *editor* to help enter and rearrange text; a *hyphenator* and *justifier* to help arrange words into paragraphs and produce the equivalent of a traditional galley proof; a *layout processor* to arrange paragraphs on pages, perhaps including automatic handling of footnotes, figures, and typographic details; *specialized processors* to handle mathematical equations, tables, bibliographies, diagrams, or other features; and *auxiliary processors*, for spelling checking, grammar checking, style checking, indexing, marking changes from version to

version, searching text, and other activities. Most word processors require the user to type some kind of code to indicate typographic features such as paragraphing or changes of font. The user edits the document by means of the codes, and the program interprets the codes so that the printer can provide (more or less) the format, characters, and style required. Some programs display the document in one form on screen and another form in actual print. Others display it in the precise form in which it will appear on paper, a process known as *wysiwyg* (what you see is what you get). Such programs are essential to desktop publishing and require an extended form of the QWERTY keyboard, in which *function keys* augment the regular keys. Individually or in combination, such keys allow the user to shift text within a document or file, or from one document or file to another, to consult a *help* menu (for advice) when in doubt about something, and to print out the end-product. See COMPUTING, DESKTOP PUBLISHING, DIACRITIC, ELECTRONIC PUBLISHING, KEYBOARD, MENU, TYPEWRITER. [TECHNOLOGY, WRITING].

M.L.

**WORD SALAD** [1910s]. An informal term for incoherent speech and sometimes writing made up of real and concocted words, lacking overall sense, and often occurring in schizophrenia. Compare DOUBLE TALK. [WORD].

T.MCA.

**WORDSMITH** [1890s]. An informal, non-technical term for someone who is good with words, such as a competent and entertaining journalist or novelist. [WORD, WRITING].

T.MCA.

**WORD SQUARE** [1870s]. A square made from words of the same length. Word squares usually have the same words horizontally and vertically:

S	A	D	C	U	B	E
A	L	E	U	G	L	Y
D	E	N	B	L	U	E
			E	Y	E	S

but *double word squares* use different words in each direction:

A	S	O	R	A	L
T	O	M	A	R	E
		E	V	E	N
		N	E	A	T

Word squares using words of up to six letters are common; squares made of longer words are much harder to compose. Such squares were the precursors of crossword puzzles. See WORD GAME. [WORD].

T.A.

**WORD STRESS.** See STRESS, SUFFIX.

**WORDS WITHIN WORDS**, also **Words, Word-Builder, Word-Hunt, In-Words, Keyword, Multiwords, Target**. A game that involves making as many words as possible from the constituent letters of a word. For example, *Chambers's Journal* (20 Apr. 1872) listed 61 words of four or more letters that can be found within the single word *Cambridge*: bridge, image, ream, ridge, badger, crag, bride, acre, admire, game, dear, brig, crib, care, braid, ride, card, dream, dame, mare, gird, raid, bard, bream, abide, bare, garb, mire, drab, amber, bier, bear, bird, grab, grace, gear, dare, rice, race, mead, crab, brace, bead, cram, grade, read, brim, cigar, dire, dram, cad, rage, grim, cider, maid, cream, badge, crime, cage, drag, mirage. A variation, usually called *Hidden Words*, looks for words concealed in sentences: for example, *Do come soon* (doc, docs, does, dose, dome, doom, noose, nose, etc.). In a further variant, known as *Hidden Words* and *Buried Words*, a single word is concealed in a sentence: thus, in *Zealots are not always brave*, the word *zebra* is hidden. In this version, players are invited to look for the name of an animal. See WORD GAME. [WORD].

T.MCA.

**WORD WORD** [1982: coined by the US writer Paul Dickson]. A non-technical, tongue-in-cheek term for a word repeated in contrastive statements and questions: 'Are you talking about an American Indian or an *Indian Indian*?'; 'It happens in Irish English as well as *English English*.' [WORD].

T.MCA.

**WORDSWORTH, William** [1770-1850]. English poet. Born in Cockermouth, Cumberland. Educated at Hawkshead Grammar School and St John's College, Cambridge. He went to France (1791-2) and admired the Revolution until disillusioned by the subsequent Terror. A small legacy in 1795 gave him leisure to continue writing poetry. He became friendly with Coleridge, with whom he published the influential *Lyrical Ballads* (1798). In the same year, they visited Germany and then settled near each other in the Lake District (hence the sobriquet *Lake Poets* by which they and Robert Southey came to be known). When Wordsworth married in 1802, his sister and constant companion Dorothy lived with the family. *Poems in Two Volumes* (1807), which included the 'Ode to Duty', 'Miscellaneous Sonnets', and 'Ode: Intimations of Immortality from Recollections of Early Childhood', increased his reputation. His long, unfinished philosophical poem *The Excursion* was printed in 1814. His personal and literary development was the subject of *The Prelude*, written between 1799 and 1805 but extensively revised, and published posthumously in 1850. Wordsworth received a government sinecure in 1813

and was made Poet Laureate on Southey's death in 1843.

In his long life, Wordsworth wrote a great deal of poetry; however, it is generally agreed that his later work shows a decline. He was a pioneer of English Romanticism. His love of the natural world, discovered (as he relates in *The Prelude*) during a lonely boyhood, grew into a sense of the mystic bond between humanity and nature. He loved to hear and tell stories of simple people and sought a style suitable to their condition. He regarded the *poetic diction* of his predecessors as mannered and artificial, challenging it in the 'Advertisement' to *Lyrical Ballads* and giving his views more fully in the Preface to the 1800 edition (with further expansion in 1802):

The language too of these men has been adopted (purified indeed from what appear to be its real defects, from all lasting and rational causes of dislike or disgust) because such men hourly communicate with the best objects from which the best part of language is originally derived . . . Accordingly such a language, arising out of repeated experience and regular feelings, is a more permanent, and far more philosophical language, than that which is frequently substituted for it by Poets, who think that they are conferring honour upon themselves and their art, in proportion as they separate themselves from the sympathies of men (Preface, *Lyrical Ballads*, 1800).

Wordsworth claimed that there should be no essential difference between the languages of poetry and prose, and accused the 18c neoclassicists of creating a false poetic style with excessive personifications and abstractions, instead of 'a selection of the language really used by men'. He did not always follow his own principles, however, and sometimes the attempted simplicity was bathetic, distorted by constraints of metre and rhyme as in the lines from 'Simon Lee' (1798):

Few months of life has he in store  
As he to you will tell,  
For still the more he works, the more  
Do his weak ankles swell.

Yet he was more often grandly eloquent without resorting to stilted diction, as in 'Ode: Intimations of Immortality from Recollections of Early Childhood' (1807):

Moving about in worlds not realized,  
High instincts before which our mortal Nature  
Did tremble like a guilty thing surprised.

Despite his reputation, Wordsworth had little direct influence on the language of later 19c poetry. It was not until the new departures of Modernism that 'the language really used by men' became the poetic norm. [BIOGRAPHY, EUROPE, LITERATURE].

R.C.

**WORLD BOOK DICTIONARY**, short form *WBD*. A two-volume American dictionary edited by Clarence L. Barnhart and his son Robert K. Barnhart, available primarily with the *World Book Encyclopedia*. It contains c.225,000 entries, and is based on the Thorndike-Barnhart school dictionaries (1935, 1941), William Dwight Whitney's *Century Dictionary* (1889-91), *The New Century Dictionary* (1927), and the Barnhart citation file. A number of its features, such as the use in the pronunciations of schwa [ə] for unstressed vowels, were pioneered in the US by Clarence Barnhart. See BARNHART, CENTURY DICTIONARY, DICTIONARY, THORNDIKE, WHITNEY. [AMERICAS, REFERENCE]. J.A.

**WORLD ENGLISH** [1960s: with or without a capital w]. An increasingly common term for English as a world language: 'World English' (title, article by Tom McArthur, *Opinion*, Bombay, 28 Feb. 1967); 'We may definitely recognize Australian English and New Zealand English as [forms] making their own special contribution to world English' (Robert D. Eagleson, in Bailey & Görlach (eds.), *English as a World Language*, 1982); 'The traditional spelling system generally ignores both the changes in pronunciation over time and the variations in pronunciation through space; despite its notorious vagaries, it is a unifying force in world English' (Quirk *et al.*, *A Comprehensive Grammar of the English Language*, 1985). Some scholars use the term cautiously or avoid it, because for them it suggests global dominance by English and English-speaking countries, with an attendant downgrading of other languages. See ENGLISH, IMAGE, INTERNATIONAL ENGLISH, WORLD ENGLISHES, WORLD LANGUAGE. [GEOGRAPHY, VARIETY]. T.MCA.

**WORLD ENGLISHES**, full title *World Englishes: Journal of English as an International and Intranational Language*. Short form *WE*. A journal published by Pergamon Press, Oxford, a renaming and restructuring in 1985 of *World Language English*, an international journal about the teaching and learning of English as a foreign or second language that was founded in 1981 and edited till 1984 in the UK by William R. Lee. The new publication is edited in the US by Braj B. Kachru at the U. of Illinois and Larry E. Smith at the East-West Center, Honolulu, Hawaii, and documents and discusses varieties of English, native and non-native, such as *American English*, *British English*, *Indian English*, and *Japanese English*. The editorial stance of *WE* is that the language belongs to all who use it. It provides an international outlook on language, literature, and the methodology of English teaching, publishing articles, notes, book

**WORK OF REFERENCE**. See REFERENCE.

reviews, and notices with an emphasis on theory, research, and English in multilingual settings. See ENGLISHES, WORLD ENGLISH. [MEDIA, VARIETY]. L.E.S.

**WORLD LANGUAGE** [c.1860s, as *world-language*]. A language used throughout the entire world, such as late 20c English (as described for example in Richard W. Bailey & Manfred Görlach (eds.), *English as a World Language*, 1982). The term also refers to a language used in many parts of the world (such as Spanish and Portuguese), in specific large regions (such as the Latin of the Roman Empire, Arabic, Hindi, and Russian), and widely because of a special role (such as French for diplomatic purposes, especially in the 18-19c, and Sanskrit as the language of Hindu learning). Many such languages have risen and declined over the centuries, having achieved their status through empire-building, the spread of a religion, cultural significance, shifting populations, or a mixture of such factors. See CLASSICAL LANGUAGE, DIASPORA, IMPERIALISM, INTERNATIONAL LANGUAGE, KOINE, LINGUA FRANCA, WORLD ENGLISH, WORLD LITERATURE. [GEOGRAPHY, HISTORY, LANGUAGE]. T.M.CA.

**WORLD LANGUAGE ENGLISH.** See WORLD ENGLISHES.

**WORLD LITERATURE** [1830s: compare German *Weltliteratur*]. A term used especially by literary critics for all literature worldwide: 'Instead of isolated, mutually repulsive National Literatures, a World Literature may one day be looked for?' (Thomas Carlyle, *Edinburgh Review*, 1831). It is used especially for that portion of the world's literary texts taken to have universal relevance and merit, as outlined in Tore Zetterholm & Peter Quennell's *An Illustrated Companion to World Literature: The Lives and Works of over 500 Great Novelists, Playwrights, Poets, Philosophers and Essayists* (London: Orbis, 1986: from an earlier version by Zetterholm alone, published in Swedish in 1981). This work classifies world literature in terms of historical and regional groups such as *Greek Antiquity* and *French classicism*. See ENGLISH LITERATURE, WORLD LANGUAGE, WORLD LITERATURE WRITTEN IN ENGLISH. [LITERATURE]. T.M.CA.

**WORLD LITERATURE WRITTEN IN ENGLISH**, short form *WLWE*. The oldest of the journals devoted to critical discussion of post-colonial literatures in English. It began in 1962 as the newsletter of the *Conference on British Commonwealth Literature (CBCL)*, a division of the Modern Language Association of

America, and in due course it became a fully-fledged literary journal, taking its current name from MLA Group 12 in 1968. Its principal concern has been the spread of English and its literature beyond the British Isles (16-20c). It asserts the importance and uniqueness of the various literatures in English and seeks to discern relationships among them. Its editors have been: Joseph Jones, U. of Texas at Austin (1962-8), Robert MacDowell, U. of Texas at Arlington (1968-78), G. Douglas Killam, U. of Guelph, Ontario (1978-89), and Diana Brydon, U. of Guelph (1989-). See COMMONWEALTH LITERATURE, ENGLISH LITERATURE, WORLD LITERATURE. [LITERATURE, MEDIA]. G.D.K.

**WRENN, C(harles) L(eslie)** [1895-1969]. English philologist, born at Westcliff-on-Sea, Essex, and educated privately and at Oxford. After lecturing in English at the U. of Durham (1917-20), he went to India and became Professor of English at Madras (1920-1) and Dacca (1921-8). He was a lecturer in English at Leeds (1928-30) and in Anglo-Saxon at Oxford (1930-9), then Professor of English at King's College, London (1939-46) and Professor of Anglo-Saxon at Oxford (1946-63). His publications include: *The English Language* (1949), an edition of *Beowulf* (1953), *An Old English Grammar* (with Randolph Quirk, 1955), and *A Study of Old English Literature* (1967). Wrenn helped found the International Association of University Professors of English by convening the constituent conference in Oxford (1950) and was its chairman (1950-3). See index. [BIOGRAPHY, EDUCATION, EUROPE, LANGUAGE]. P.C.

**WRIGHT, Joseph** [1855-1930]. English philologist and dialectologist, born in the village of Thackley, in the township of Idle, Yorkshire; he liked to say 'I have been an idle man all my life, and shall remain an idle man till I die' (Elizabeth Mary Wright, *The Life of Joseph Wright*, Oxford University Press, 1932). His father worked for a time in the ironstone mines. His mother was widowed early and kept her children by taking in washing. Wright was unable to read and write until he was 15, and already supported his mother and brothers by working as a wool sorter at Salt's Mill in Saltaire, Yorkshire. In 1870, he started attending night schools, learned German and French, and, when the mill closed for a time in 1876, decided to further his education. He went to Heidelberg in Germany and had enough money to support him for eleven weeks. In 1877, he attended evening classes in Leeds and matriculated in 1878. In 1882, he passed the intermediate examination for the BA at the U. of London, but never took the full degree there. He

went to Germany in 1882 where he stayed for six years, mainly in Heidelberg and Leipzig. He studied under Hermann Osthoff, Professor of Comparative Philology, and gained his doctorate in Heidelberg in 1885. His first work was a translation of K. Brugmann's *Comparative Grammar of the Indogermanic Languages* (1887). Wright became Assistant Professor of Comparative Philology at Oxford (1891). His *Windmill Dialect Grammar* (1893) broke new ground in language studies in being written by a native speaker of a living dialect and in treating dialect as a subject of serious research. He was secretary of the short-lived *English Dialect Society* from 1893 until it was wound up in 1896, by which time he was well on the way to publishing his great *English Dialect Dictionary* (1898–1905), which included, as Volume 6, his *English Dialect Grammar*. The *EDD* included 'so far as it is possible the complete vocabulary of all English dialect words which are still in use or are known to have been in use at any time during the last two hundred years in England, Ireland, Scotland, and Wales' (preface). The six volumes continue to be of immense value to scholars of local varieties of English. Nothing of comparable breadth or depth of dialect scholarship has been published in Britain since. See index. [BIOGRAPHY, EUROPE, LANGUAGE, VARIETY]. S.E., L.T.

**WRITER** [From Old English *writere*]. Someone who can write or engages in writing, especially for professional and/or artistic purposes: 'Writers are people who sit alone in rooms' (Salman Rushdie, *Newsweek*, 19 Nov. 1990). The term is often synonymous with *author* (especially of works of fiction: *a thriller writer*), and is sometimes employed in formal texts so as to avoid using the first person: *In the present writer's view, this matter has become a cause for concern, rather than I think (that) this matter has become a cause for concern.*

**Writers and patrons.** The craft of writing has long been basic to many occupations (such as scribe, priest, clerk, public letter-writer, bureaucrat, surveyor, merchant, lawyer, physician, teacher, scholar, mathematician, and scientist), but writing as a creative activity (of, for example, 'the man of letters', 'the lady novelist', or 'the literary hack') has been a regular paid form of employment only in recent centuries. Since at least the Middle Ages, creative writers have generally had other or additional means of livelihood; Chaucer was an official of the Crown, Shakespeare a partner in a theatre company, and Milton a Latin secretary in government service. Other means by which society has maintained creative writers have included sinecures (granted in consideration of literary merit) and various

scholarships, subsidies, and prizes (with sums of money attached). Until the 19c, those who needed financial support would send dedications and complimentary copies of their work to prominent people, in the hope of attracting gifts of money. In Britain, the system of direct and indirect patronage only slowly came to an end as the profession of letters developed in the 18c, with the spread of literacy, the growth of the novel and the periodical, and in the 19c a consequent capacity of publishers to support full-time paid writers. In 1755, Samuel Johnson completed his dictionary without the promised financial support of Lord Chesterfield. His letter to the Earl in the same year, after Chesterfield had sought to revive his claim to be Johnson's patron, includes a sardonic definition of patrons:

Is not a Patron, my Lord, one who looks with unconcern on a man struggling for life in the water, and, when he has reached ground, encumbers him with help? The notice which you are pleased to take of my labours, had it been early, had been kind; but it has been delayed till I am indifferent, and cannot enjoy it; till I am solitary, and cannot impart it; till I am known, and do not want it.

**Writers, publishers, critics, and agents.** In the early 19c, Walter Scott made a good living and paid substantial debts by writing novels. Direct payment for a manuscript sold to a printer, often meagre and useful only as a supplement to other income, was slowly replaced by the *royalty*, a percentage of the profits on sales agreed by contract before the publication or even the writing of the book in question. Many 19c novelists lived well from their writing and were respected as professionals in need of no other career. Financial rewards have been increased in the 20c by the sale of *rights* (translation rights, distribution rights in certain areas, paperback rights, and film and television rights), while a writer may be paid an *advance* on royalties to encourage the writing of a particular book or to keep other publishers at bay.

The production and distribution of books developed from the copying of single manuscripts to the mass production made possible by the printing press in the 15c and its further developments in the 19–20c. Private and public libraries increased the demand for books, a virtually guaranteed sale for popular authors that offset the many non-contributing readers of one library copy. The 20c increase in outlets (individual bookshops and chains of stores) has favoured writers, as has the growth of periodicals from the early 19c, providing openings for short stories, serialized novels, and poetry. The success of such publishing encouraged two subsidiary professions: the *literary critic*, commenting on and analysing the works of others,

often while holding a post in a university department of English or another language, and the *literary agent*, a professional finder of publishers who receives a percentage of receipts in return for being a successful go-between.

**Writers and the media.** Currently, new works by well-established writers can be auctioned to publishers by agents. Even being short-listed for a significant literary prize, such as the *Booker Prize* in the UK, can greatly affect sales of hardbacks and paperbacks. Relatively few people, however, live solely by creative writing and even fewer make their fortunes from it. The principal financial rewards, apart from a rare 'best-seller' or 'blockbuster', are in films, television, lecturing, adjudicating, and winning a significant prize. Poets, novelists, and literary critics are, however, only a small minority of those for whom writing is a major part of their everyday work. Professional writers in this wider sense include journalists, scriptwriters for radio, television, and the motion-picture industry, advertising copywriters, and publicists, and writing is a key element in teaching, preaching, publishing, government, science, medicine, and commerce. See Victor Bonham-Carter, *Authors by Profession* (vol. 1, 1978, *From the Introduction of Printing until the Copyright Act 1911*; vol. 2, 1984, *From the Copyright Act 1911 until the End of 1981*, London, Society of Authors).

**WRITING** [From Old English *writan* to write, engrave, draw; compare Old Frisian *writa* and Old Norse *rita* to write, score; Saxon *writan* to write, cut; Old High German *rizan* to tear, draw; German *reissen*, to tear, pull, sketch]. The term *writing* encompasses four pairs of linked senses. It may refer to: (1) An activity (*reading and writing*) or the product of that activity (*What illegible writing!*). (2) A concrete process (a *writing exercise*) or the concept behind that process (*Writing was invented over 5,000 years ago*). (3) Handwriting alone (*specimens of their writing*) or both handwriting and print (*Writing systems were extended by the invention of movable type*). (4) A general skill regarded as a social necessity (*Writing is part of everybody's education*) or a minority art form, occupation, hobby, and/or obsession (*This novel is the best example of her writing to date*).

Although written signs need not be permanent (as in writing on a blackboard or sky-writing from an aircraft), they are generally taken to be more or less durable. In the Germanic languages,

as the etymology above indicates, the concept of writing related to cutting signs on wood or inscribing them on stone (see RUNE), but in principle the making of graphic signs is not restricted in either materials or methods: they may be cut with knife, chisel, drill, and other tools on stone, wood, plastic, and similar surfaces, or applied by pen, brush, type, and other instruments to surfaces such as paper, parchment, or cloth. The electromagnetic charges of the computer are also understood to be writing, whether temporary on screens or more permanently on disks and other devices for information storage and retrieval.

**A medium of language.** Each medium that carries language (such as speech, writing, or signing among the deaf) has its special features. All language is linear, but each medium has its distinctive units and marshals them differently: for example, an alphabetic letter, a dash, or the indenting of a paragraph has no equivalent in speech. Forms of writing and print have cultural resonances distinct from those of speech and song, as for example the contrast between capital and small letters, or between the use of roman or italic script. Although each medium of language can 'say' things about another, there is no way in which one medium can be another. In addition, many scholars consider that social systems such as religions and governments for which writing is a normal activity are quite different from those that depend on the more fluid and ephemeral processes of speech and memory: issues of morality become more abstract, reasoning more rigorous, and language more open to objective and logical analysis. With the help of writing, draft plans can be formulated and administrative routines can develop, and in the process the speech of such communities is also changed, becoming imbued with the styles and patterns of written language.

**Speech versus writing.** Since classical times, there have been two contradictory approaches to speech and writing: (1) The view that writing is the primary and speech the secondary medium, because writing is more culturally significant and lastingly valuable than speech. The term *grammar*, for example, derives from the Greek verb *gráphēin* to write. The systematization of classical Greek grammar by such theorists and teachers as Dionysius Thrax, c.100 BC, was the first attempt at language description in the Western world, and unlike the early studies of language in India, which were sound-based, it rested entirely on writing: see GRAMMAR. This tradition was extended to the study and teaching of many languages throughout the world with little change until the early 20c. (2) The view that speech is primary and writing secondary,

because speech is prior to writing both historically and in terms of a child's acquisition of language. In the 4c BC, Aristotle said: 'Spoken sounds are symbols of affections of the soul, and written marks are symbols of spoken sounds' (*On Interpretation*, 16a 3-4). Comparably, but long afterwards, the Swiss philologist Ferdinand de Saussure observed: 'Speech and writing are two separate systems of signs; the sole purpose of the second is to represent the first' (1916: translated from *Cours de linguistique générale*, ed. Tullio de Mauro, Payot, Paris, 1978, Introduction, ch. 6). When Saussure made this comment, he was reacting against centuries of scholarship and education in which the text had been regarded as fundamental.

**Writing systems.** A major feature of writing is that it can operate over distance and time. Memorized and stylized speech that passes from person to person has some of this capacity, but has no existence apart from the performance of one speaker at one time. There is also no guarantee that an oral message will be the same after several stages of transmission, whereas a written document can be read at different times by different people and remain stable, unless overwritten. Although people may interpret such a document differently, they agree that it is an invariant object, and may accept it as incontrovertible evidence in a court of law. The signs on a well-kept 4,000-year-old clay tablet are virtually as legible and perhaps as intelligible today as at the time of writing, save that some shades of meaning and implications of context are likely to have been lost. There was nothing comparably durable for spoken language until the invention of the phonograph in the late 19c, but even so audio-recording remains distinct from text in its effect, its usefulness, and its technologies.

The first known system of writing was not a re-expression of spoken language. It was pictorial in origin, creating two-dimensional analogues of three-dimensional things in the world; only much later did writing systems acquire the capacity to 'reflect' or run parallel to the words and sounds of speech. The first writing was invented in West Asia 5,000-6,000 years ago, in Sumer in southern Mesopotamia. Since that time, writing systems have used a variety of symbolic forms, sometimes as relatively 'pure' systems of one kind of sign, but more commonly in combinations of the following two broad categories of signs:

*Picture-based signs.* The longer-established variety of sign is representational and analogous, as with early Sumerian. Scholars generally identify three types that are not always easy to set off one from another: (1) *Pictograms*, that directly represent things in the world, such as animals,

people, houses, and geographical features, often in stylized and simplified outline forms such as a wavy line for water. (2) *Ideograms* (in effect 'idea grams'), that represent concepts, such as the numerals *I, II, III* or *1, 2, 3*, usually arising from the further stylizing and simplifying of pictograms. (3) *Logograms*, that represent words proper, such as the icons used in international airports: a drawing of a telephone directly standing for *telephone*, a man and a woman side by side indirectly standing for *toilets* (or their equivalents in different languages). The early writing systems of Sumer and Egypt and the writing of China belong almost wholly in the picture-based group, which deals directly in meanings and not in sounds.

*Sound-based signs.* The somewhat younger variety of sign is *phonographic*, relating sound to symbol. Two types can usually be kept distinct (but see ALPHABET): (1) *Syllabograms*, representing individual syllables, as in the *kana* systems of Japanese (see JAPAN). (2) *Phonograms*, or as they are more commonly known, *letters*, signs that represent individual sounds. Such signs have over the centuries often become detached from the specific language in which they were first used, as demonstrated by the many variants of the Roman alphabet (for English, French, German, Polish, etc.), and may therefore represent different sounds in different systems, as for example the letter *c* as used in English and Italian. Phonographic writing systems deal in sounds, not meanings.

**Writing technologies.** The development of technologies of writing is contingent on time, place, and environment. The Sumerian system, for example, developed in marshy terrain, where its inventors used a cut reed to impose wedge-like (*cuneiform*) marks on a soft clay tablet (the reed held in one hand, the tablet in the other). The inscribed clay was then left to dry in the hot sun, or for greater permanence was baked in an oven. Their system was an integrated technology of stylus, clay, and cuneiform that was at first pictographic and became in due course ideographic and syllabographic. The Egyptians, also a riverine people, did not develop clay but concentrated on plants, using a reed brush to paint their signs on papyrus stems that were pressed together to form sheets held in place by their own gum. Theirs was a technology of brush, papyrus, and hieroglyph that later developed phonographic elements. Both Sumerian and Egyptian writing methods were also applied successfully to large vertical surfaces, such as walls and pillars. In medieval Europe, scribes used trimmed feathers from the wings of large birds and various inks to mark a set of alphabetic

letters on parchment skins. Theirs was a technology that combined pen, parchment, and alphabet. At the end of the 20c, as a sum of all the operations of the past throughout the world, a vast array of calligraphic and typographic options is available, for example word-processing, for the preparation of texts of many kinds on surfaces of many kinds.

**Writing implements.** The *pen* (a 13c term from Latin *penna* feather) is the oldest writing implement in general use. It has its origins in both the Sumerian reed and the medieval feather. Vast flocks of geese were once kept in Europe to provide quill pens that were sold in bunches. The writing ends of the goose quill feathers were cut and split with a *pen knife*, after which they could be dipped in *ink-wells* or *ink-horns* and put to use, the ink flowing down the split while one wrote until it was used up. Pens with metal nibs are an industrial-age adaptation of both the cut reed and quill. Letters made by reed or quill have thick and thin strokes, a feature that influenced the shapes given to letters in printing. The *fountain pen*, equipped with a reusable cartridge for holding a large supply of ink to be steadily fed to the nib, was a late 19c advance on the basic metal-nibbed pen. After the Second World War, however, all such pens were generally replaced by the cheap, easily disposable *ballpoint (pen)* or *biro* (named after László Bíró, its Hungarian inventor). The present-day *pencil* (a 14c term from Latin *penicillum* a painter's brush, ultimately from *penis* a tail) is more recent than the pen. It consists of a stick of graphite (often erroneously called 'lead', as in *lead pencil*), protected by a machined sheath of wood. It developed as a variation of the markers that medieval scribes used to draw lines in manuscripts. The late 20c *felt-tip pen* (BrE) or *marker* (AmE) is a variation on the ancient reed brush, its ink supply stored in its stem like a biro.

**Pen and print.** Generally, documents written in ink have had both a higher social cachet and greater physical permanence than documents written in pencil, while texts in print have had still higher prestige and greater permanence (depending on the quality of paper used). Because documents written in pencil and pen are no longer widely circulated, there is less pressure on students to cultivate clear handwriting. Writing by hand continues to be basic to education while at the same time its value has declined in occupational terms. It is useful in note-taking, note-writing, and personal letters, but there are fewer and fewer clerical careers that require no more than the making of handwritten entries in books and ledgers. Handwriting and handwritten documents have become as a result increasingly demotic and spelling and grammar

in personal letters appear to be increasingly seen as personal matters.

**Type and word-processing.** In 20c public life, writing by hand has long been displaced by typing. In recent years, the word-processing *personal computer* (the *PC*: whether desktop, laptop, or palmtop) has adopted and adapted many features from the typewriter, particularly the format of the keyboard, while advanced or 'smart' typewriters have come more and more to resemble PCs. With its battery of word-processing software, spelling and style checkers, dictionaries, thesauruses, and other built-in aids, the PC is, however, as different from the typewriter as the typewriter from the traditional printing press, and the press from the pen. Transmission systems known as *modems* (short for 'modulator demodulators') can send and receive texts electronically over distance, and scanners capable of *optical character recognition (OCR)* can read printed documents and transcribe them directly on to disk with ever greater accuracy. In addition, large computers routinely direct typesetting machinery in the production of books and periodicals. As a consequence, computers used for language work are changing many aspects of, and attitudes towards, traditional written and printed language: see COMPUTING, KEYBOARD.

**Learning to write.** All writing systems demand long periods of apprenticeship in which the student memorizes and learns to use the inventory of signs and the tools associated with them. Over the last two centuries, more and more societies have grown to expect more and more of their members to be able to write. Universal literacy became an aim in most industrialized nation-states over a century ago, but the concept of an adequately literate society remains unclear, and changes over time: see LITERACY. There is also ongoing controversy over the teaching and acquisition of styles and skills in handwriting, and in learning how to spell and read adequately in languages with complex orthographies, such as English and French: see READING, SPELLING, SPELLING REFORM.

**Handwriting.** Basically, methods of teaching children to write have not changed greatly over the centuries. The principal procedure remains an introduction to the elements of the writing system. Models are then provided for copying and developing in various ways: usually the teacher's own handwriting and specimens in copybooks. For English, as with other languages originating in Europe, a cardinal feature in learning to write is learning to join letters as opposed to leaving them in an unjoined form known as *print script*. The ability to link separate letters by means of connecting lines is highly

valued as proof of a child's success in learning to write. A significant subsidiary feature is the ability to move from large early letters formed with great care to smaller letters in a maturer 'hand' that stays within an acceptable size range. Once this is achieved, individuals are free to develop their own handwriting, descriptions of which include such evaluative terms as *generous* or *cramped*, *neat* or *untidy*, *rounded* or *spiky*, *legible* or *illegible*. In educational terms, such matters as a steady reduction in the size of letters relate to stages in children's neuromuscular development and physical coordination.

*Aids to learning.* Analogies and mnemonic devices continue to be common in helping young children write individual letter forms. Such devices are often reminiscent of past or different kinds of writing, as with the pictorial analogy: 'Letter S is a swan who holds her head up high' (Ruth Fagg, *Everyday Writing*, University of London Press, 1963). The visual system developed by Lyn Wendon uses animal and other shapes as templates for the child to work with (*Pictograms*, Barton, Cambridge, 1973/84). One of her pictographic examples is the character Dippy Duck, used to teach the direction and flow necessary when forming small *d*: 'Stroke Dippy's back. Go round his tum. Go up his neck. Then down you come!'

*Factors in learning.* Teaching people to write includes such factors as: (1) Eliminating tension, especially in very young learners, through preliminary relaxing exercises. (2) Checking writing postures and hand grips. (3) Ensuring good writing conditions, such as a suitable seat, desk surface, and lighting. (4) Determining hand dominance and ensuring that left-handers in a society dominated by right-handers are not directly or indirectly penalized or neglected. (5) Providing adequate graded pattern exercises, such as the angular diagonal patterns that underlie the writing of capital *M* and the rounded equivalents for *m*. (6) Helping learners to achieve rhythm, fluency, and reasonable speed. (7) Constructively working on faults (such as wrong pencil grips, ill-formed letters, and inefficient directionality in the shaping of letters). (8) In due course allowing the learner to develop a confident individual hand.

**WYCLIFFE, John**, also **Wyclif**, **Wiclif**, and others [c.1320–1384]. English reformer and Bible translator, born at Wycliffe in Yorkshire, and Master of Balliol College, Oxford (c.1356–c.1382). His role in the Lollard movement and the politics of the Reformation have tended to overshadow his significant contribution to the language. His translations (with collaborators) of the Vulgate Bible were the first complete Bible in English and existed in two forms, the Early Version (c.1380–2) and the Late Version (c.1382–8), the second being more idiomatic, less archaic, and freer from Latinisms and generally more highly regarded. Wycliffe was a friend of Geoffrey Chaucer, who may have used him as the model for the Poor Parson in *The Canterbury Tales*. He did for Middle English prose what Chaucer did for poetry, making English a competitor with French and Latin; his sermons were written when London usage was coming together with the East Midlands dialect, to form a standard language accessible to all, and he

included scientific references, such as to chemistry and optics. His style influenced Reformation and later nonconformist writing, and John Milton was among his admirers. More than 300 of his discourses survive, with some 170 manuscript copies of his Bible, circulated from Lutterworth, where he was rector (1374–84). Its opening words are: 'In the firste made God of nought heuene and erthe. The erthe forsothe was veyn withynne and void, and derknessis weren upon the face of the see.' Wycliffe's own share in the translations bearing his name is uncertain, but was probably considerable. See BIBLE and index. [BIOGRAPHY, EUROPE, HISTORY, LITERATURE]. M.L.A.

**WYLD, Henry Cecil Kennedy** [1870–1945]. English philologist and lexicographer. Born in London of Scottish descent, he was educated at Charterhouse and in Switzerland, then at the universities of Bonn and Heidelberg in Germany, and at Oxford, where he was taught by Henry Sweet. In 1899, he was appointed lecturer in English Language at U. College, Liverpool, and in 1904 became the first Professor of English Language at the U. of Liverpool. In 1920, he was elected Merton Professor of English at Oxford. His publications include: *A Short History of English* (1914, revised 1927), *A History of Modern Colloquial English* (1920, enlarged edition 1936), and the monumental, one-volume *Universal Dictionary of the English Language* (1932). Wyld worked on the history of English sounds and used the terms *Public School English* and *Received Standard* for the accent currently known as *Received Pronunciation* (RP). His dictionary has phonetic transcriptions, detailed etymologies, and illustrations of modern idiomatic usage, and set a pattern followed by A. S. Hornby in the *Advanced Learner's Dictionary of Current English* and in other learner's dictionaries. See index. [BIOGRAPHY, EUROPE, REFERENCE, SPEECH]. P.C.

**WYNN**, also **wyn**, **wen** [Before 12c: from the Old English mnemonic name *wyn(n)* joy]. The name of a runic letter and its manuscript and printed form *ƿ*, used in Old and early Middle English for *w*, as in *snap* snow, *hpit* white. See LETTER<sup>1</sup>, RUNE. [WRITING]. E.W.

**WYSIWYG**. See WORD PROCESSOR.

# X

**X, x** [Called 'eks']. The 24th letter of the Roman alphabet as used for English. It was adapted from the Greek letter *chi/khi* (X) by the Romans, with the value /ks/.

**Sound value.** Phonetically, *x* as used in English is redundant, its standard value /ks/ being equally represented by *cc* in *vaccine*, *ks* in *treks*, *cs* in *tocsin*, and *cks* in *socks*, allowing such homophones as *lax/lacks* and *cox/cocks*. However, *x* is not always pronounced as *ks*, different environments inducing the alternatives /gz/ in *example* and /z/ in *xenophobia*.

**Initial X and EX-** (1) No vernacular English word begins with the sound /ks/, and the pronunciation is /z/ for initial *x* in such Greek-derived bases as *xantho-* yellow, *xeno-* foreign, *xero-* dry, *xylo-* wood, and such names as *Xanthippe* and *Xerxes*. (2) Older Spanish *x* as in *Mexico*, *Texas* is kept, with English pronunciation as *ks*, although in Spain these are today written *Méjico*, *Tejas*, and pronounced with a velar fricative /x/, as in ScoE *loch*. (3) When initial *x* stands for the letter *x* (*Xmas*, *X-ray*), it is pronounced 'eks'. (4) *X* in the Latin prefix *ex-* may be pronounced voiceless as /ks/ (typically when stressed, as in *export*, *extra*) or voiced as /gz/ (typically before a stressed vowel, as in *exact*, *exist*). In practice, however, voicing is often inconsistent, both realizations being heard in *exit*. The *c* in initial *exc-* (*excel*, *excite*) is assimilated into the voiceless value of *x*, while following *h* is usually assimilated into the voiced realization (*exhaust*, *exhibit*, but voicelessly in *exhibition*). A following root beginning with *s* loses the *s* (*ex + sert* becomes *exert*) and the *x* is voiced.

**Medial X.** (1) In medial position, *x* is typically voiceless (*maxim*, *vexatious*, *elixir*, *toxin*, *approximate*, *buxom*, *axle*, *sexton*), but when an *i*-glide

follows (whether represented by *i* with a following vowel, or by *u* with the value in *music*), the glide may be assimilated and *x* sounded as *ksh* (*noxious*, *luxury*, *sexual*), a palatalizing effect paralleled in other spelling patterns such as *fraction*, *actual*. (2) Voicing of this sound may occur medially before a stressed syllable, 'gzh' rather than 'ksh' being often heard in *luxurious*. (3) *Anxious* parallels *noxious* (though with the preceding *n* velarized as 'ng'), but in the noun *anxiety* the *i* is not assimilated, the *n* remains velarized, and *x* is voiced but loses its /k/, being pronounced /z/. (4) English usually retains *x* as derived from Latin, as in *exit* from *exitus* and *crucifixion* from *crucifixio/crucifixionis*, but, since the 17c, *connexion*, *inflexion* (the etymologically appropriate spellings) have increasingly been written *connection* and *inflection*, probably by analogy with *direction*. *Complexion* and *fluxion* do not have alternative forms.

**Final and silent X.** (1) Final *x* is common and except in recent loans has the value /ks/, usually after a short vowel (BrE *axe*, AmE *ax*, *flax*, *relax*, *climax*, *wax*, *index*, *flex*, *complex*, *sex*, *vex*, *fix*, *mix*, *six*, *executrix*, *phalanx*, *jinx*, *ox*, *box*, *fox*, *pox*, *flux*, *crux*), but in *coax*, *hoax* after a long vowel. Final /ks/ is normally spelt *x* in English, except when the /s/ is an inflection: contrast *tax/tacks*. (2) In French loans, final *x* is typically silent (*choux*, *prix*, *Montreux*) or pronounced /z/ if a plural inflection (*tableaux*). *Sioux* is modelled on French with silent *x*, although Amerindian in origin. (3) Latin morphology sometimes affects final *x*. When the plural of *appendix*, *index*, *matrix*, *vortex* follows Latin, *x* becomes *c* in *appendices*, *indices*, *matrices*, *vortices*. However, regular English pluralizing with *-es* (*appendixes*, *indexes*, *matrixes*) is common, though sometimes implying a distinct sense of the word concerned: for example,

## THE CAPITAL LETTER

EARLY FORMS			CURRENT FORMS		
Phoenician	Greek	Etruscan	Roman (Latin)	roman	italic
𐤁	Ξ	𐌕	X	X	X

## THE SMALL LETTER

EARLY FORMS			CURRENT FORMS	
Roman cursive	Roman uncial	Carolingian minuscule	roman	italic
x	x	x	x	x

*appendices* in books, *appendixes* in the body. (4) Similarly, the Latin feminine suffix *-trix* is occasionally used as a counterpart to masculine *-tor* rather than the commoner French-derived *-tress*, as in *dominatrix*, *executrix*, *victrix*, as against *actress*, *benefactress*.

**Miscellaneous.** (1) *X* sometimes alternates with *sk* by metathesis: *Manx* for earlier *Mansk*; *piskey* as a variant of *pixie*; *ax* as a dialect form of *ask*. (2) *Buxom* was formerly *bucksome* and *pox* derives from the plural of *pock*. Comparably, a recent tendency in commercial spelling reduces the morphologically distinct *cs*, *cks* to *x*: *fax* for

*facts* and *facsimile*, *pix* for *pictures*, *sox* for *socks*, *trux* for *trucks*. (3) Disyllables ending in *x* include technical terms from Latin (*helix*, *vortex*) and, apparently as a consequence, many commercial and trade names (*Kleenex*, *Tampax*, *Xerox*). See ALPHABET, C, K, LETTER<sup>1</sup>, SPELLING. [WRITING]. C.U.

**X-HEIGHT.** See ASCENDER AND DESCENDER.

**XHOSA.** See AFRICAN ENGLISH, BANTU, SOUTH AFRICA, SOUTH AFRICAN LANGUAGES.

# Y

**Y, y** [Called 'wy', rhyming with *high*]. The 25th letter of the Roman alphabet as used for English. It originated as one of two letters derived by the Greeks from the Phoenician consonant symbol *waw*. The Greek letter *upsilon* (*Y*, lower case *y*) had a value like *u*, which Latin wrote as *V*. Only later did the Romans adopt the form *Y* as a separate letter specifically to transliterate Greek *upsilon*, adding it to the end of the alphabet (*z* being a later addition still). Many European languages indicate the Greek origin in their name for *y*: French *i-grec*, Spanish *i-griega* (Greek *i*), German *Ypsilon*. The French and Spanish names imply that the letter is an alternative for *i*.

**Origins and early uses.** The name *wy* may derive (with changes in pronunciation) from the sound the letter represented in Old English: a fronted *u* as in French *tu* and the value of *y* in German and the International Phonetic Alphabet: see OLD ENGLISH<sup>1</sup>. In Middle English, this sound typically merged with that of short *i*. In medieval times, *y* was commonly written with a superimposed dot to distinguish it from the similar forms of the Old English letters *thorn* and *wynn*. After the Norman Conquest in 1066, fronted *u* was increasingly spelt in the French fashion as *u*, making *y* available as the alternative to *i*, which may have been useful for breaking up a series of vertical strokes, so that *min* (*mine*) might be more legibly written *myn*. There was, however, little consistency in the use of either *i* or *y*.

In addition, in Middle English, *y* often served to represent the Old English letter *yogh* (*ȝ*), especially word-initially. As this sound lost its velar quality, there emerged the semi-vowel value heard in *year*. This use was reinforced by its availability, unlike *yogh*, in printers' typefaces. A few words with initial *yogh* in Old English dropped it entirely, *enough*, *if*, *ich* now having an initial vowel. On the other hand, *you* has

replaced an initial glide vowel with *y* (Old English *eow*). The similarity of the handwritten forms of *y* and thorn (*þ*) led to its occasional use as an alternative to *th*, the usual Roman equivalent of thorn, especially in *the*, *that*, etc., so producing shorthand forms for these words as *y<sup>e</sup>*, *y<sup>t</sup>* which persisted in private use well into the Early Modern English period. The form *y<sup>e</sup>* is currently used on pseudo-antique shop-signs such as *Ye Olde Englishe Tea Shoppe* (jocularly pronounced 'ye oldy Englishy tea shopp<sup>y</sup>'), in which the *ye* is generally not recognized as an alternative spelling for *the*.

**Sound values.** (1) In English, *y* is widely used as an alternative letter for the sounds represented by *i*, sometimes interchangeably, but often with a different positional distribution: word-initially as a semi-vowel (*year*, *yes*, *you*); word-finally in vernacular words (*caddy*, *hilly*, *sorry*). (2) Like *i*, *y* commonly softens a preceding *c* or *g* (*cypress*, *gypsum*, *fancy*, *bulgy*), but there are exceptions and options in the pronunciation of words derived from Greek: in *Cythera* usually hard, in *gynecology* generally hard but sometimes soft, and in *demagogy*, *hegemony* both hard and soft. (3) The letter *y* alternates with *a* in *scallywag/scalawag*, and in the spellings BrE *pyjamas*, AmE *pajamas*.

**Greek short Y.** Short *y* has the value of short *i* in many words derived from Greek (transliterating *upsilon*), often borrowed through Latin and French: *analysis*, *anonymous*, *chrysanthemum*, *crypt*, *cylinder*, *cynic*, *cyst*, *dynasty*, *dyslexia*, *Egypt*, *etymology*, *gymnasium*, *hymn*, *hypnosis*, *hypocrite*, *idyllic*, *lyric*, *martyr*, *methylated*, *myriad*, *myrrh*, *myrtle*, *mystery*, *myth*, *oxygen*, *physic*, *polygon*, *polyp*, *pterodactyl*, *pyramid*, *rhythm*, *syllable*, *sympathy*, *synagogue*, *system*, *zephyr*. Some words in short *i* may look Greek, but are not, and often have variants in *i*:

## THE CAPITAL LETTER

EARLY FORMS			CURRENT FORMS	
Phoenician	Greek	Etruscan	Roman (Latin)	roman italic
𐤃	Ϛ ϙ	Ϛ	V	Y Y

## THE SMALL LETTER

EARLY FORMS			CURRENT FORMS	
Roman cursive	Roman uncial	Carolingian minuscule	roman	italic
Ϛ	ϙ	ϙ	y	y

for example, *syllabub/sillabub*, *sylvan/silvan*, *syrup/sirup*. However, *gypsy/gipsy* and *pygmy*/*pygmy* are Greek in origin.

**Word-final short Y.** The short *i*-sound in which many native English words end in most accents is always spelt *y*: contrast traditional words with loans, as in *jetty/spagheti*, *windy/Hindi*, *juicy/sushi*. In some accents, however, this vowel has the same value /ɪ/ as medial short *y*; in others, it is lengthened to /i:/ for example, older RP has the value of medial short *y*, while more recent RP has a quality similar to that in *see*. These endings commonly change *y* to *ie* in inflected forms (*pity/pities/pitied*), and in Elizabethan times the base words were often spelt *-ie* (*citie*, *pitie*). Word-final *y* occurs in several common patterns: (1) Disyllabic concrete nouns: *baby*, *jetty*, *city*, *ivy*, *body*, *study*. (2) Disyllabic nouns (mainly concrete) in *-ey*: *abbey*, *alley*, *chimney*, *donkey*, *hockey*, *honey*, *jersey*, *journey*, *medley*, *money*, *monkey*, *parsley*, *spinney*, *turkey*, *valley*. (3) Adjectives: *happy*, *holy*, *merry*, *pretty*, *silly*, *tidy*. This *-y* is often a suffix added to another word: *crazy*, *catty*, *easy*, *fery*. (4) Abstract nouns, such as those based on an adjective ending in *-ous* (*curiosity*, *pomposity*, *notoriety*), on a word ending in *t* (*difficulty*, *pregnancy*, *prophecy*), or otherwise (*facility*, *necessity*, *opportunity*). They include many Greek-derived words: *biology*, *economy*, *hierarchy*, *liturgy*. (5) Adverbs in which the suffix *-ly* has been added to an adjective: *grandly*, *hurriedly*, *slowly*, *stupidly*; sometimes some assimilation takes place with the root: *wholly*, *happily*, *ably*, *incredibly*, *nobly*, *volubly*, *simply*. A few adjectives are formed by the addition of *-ly* to a base: *brotherly*, *friendly*, *kindly*. (6) Verbs, as *carry*, *marry*, *vary*, *pity*, *worry*, *hurry*. In some words, such as *bogey*, *bogy*, *caddy*, *pixy*, *stymy*, final *-(e)y* is alternatively spelt *-ie*.

**Long Y.** The letter *y* often represents the sound of long stressed *i*: *by*, *lyre*. Some related words alternate long and short values: *lyre/lyric*, *paralyse/paralysis*. Long *y* occurs: (1) In monosyllables, typically of Old English origin, in final position: *buy*, *by*, *cry*, *fry*, *guy*, *my*, *ply*, *sty*, *thy*, *why*, *wry*. A silent *e* is added to avoid spelling a non-grammatical word with just two letters: *bye*, *dye*, *eye*, *rye*. (2) In verbs, in final position, such as *ally*, *defy*, *deny*, *modify*, *multiply*, *occupy*, *prophesy*, *qualify*, *satisfy*, *specify*, *supply*. *Y* in *multiply*, *supply* is short when these words are adverbs derived from *multiple*, *supple*. (3) As the dominant pronunciation of Greek-derived bases and prefixes such as *cycl-*, *dyn-*, *gyr-*, *hydro-*, *hyper-*, *hypo-* (but not *hypocrite*), *pyro-* and such words as *hyacinth*, *hyena*, *hygiene*, *hymen*, *hyphen*, *lyre*, *papyrus*, *type*, *tyrant*. In some words of non-Greek origin, medial long *y* is

interchangeable with *i*: *cyder*, *cypher*, *dyke*, *gybe*, *tyro*. (4) In such words as *rhyme* (see entry), *style* (see entry), *typhoon*, and BrE *tyre* (AmE *tire*).

**Semi-vowel Y.** (1) In medial positions, there is no clear phonetic distinction between the semi-vowel *y* and an *i*-glide. In the alternative spellings *lanyard/laniard* they are identical in pronunciation. (2) Semi-vowel *y* occurs in initial position in words mostly of Old English origin, formerly often spelt with yogh: *yard*, *yarn*, *year*, *yeast*, *yellow*, *yeoman*, *yes*, *yesterday*, *yew*, *yield*, *yoke*, *you*, *young*, *your*, *youth*. (3) Most other words beginning with *y* are more recent, and often loanwords: *yacht*, *yak*, *yam*, *yank*, *yodel*, *yoga*. (4) Medial *y* with a semi-vowel value as in *lawyer* is uncommon. (5) The semi-vowel value is also represented in the letter *u* (*cure*, *pure*) and the digraphs *eu*, *ew* (*eureka*, *spew*). The semi-vowel is normally so spelt after a consonant: *fuse*, *few*, *feud*. (6) Word-initially, *u* commonly has the sound of *you* (*union*, *use*), as do *eu*, *ew*; *ewe* and *yew* are homophones.

**Digraphs.** Like *i*, *y* serves as the second letter in digraphs after other vowel letters, *y* usually word-finally, with *i* medially. (1) The digraph *ay* occurs in common monosyllables. This *ay* has the value of long *a* like *ai* as in *rain*: *bray*, *clay*, *day*, *flay*, *fray*, *gay*, *may*, *pay*, *play*, *pray*, *ray*, *say*, *slay*, *spray*, *stay*, *tray*, *way*. When *-r* (syllabic or with preceding schwa) is added, the value of *ay* may be modified: *layer*, *prayer*, *mayor*, *Ayr*. Exceptionally, the two forms *ay*, *aye* have the value of long *i*, while *ay* in *quay* has the value of long *e*. (2) The digraph *ey*, as opposed to the *-ey* ending of *abbey*, occurs in a few monosyllables and disyllables with the value of *ei* in *vein* and *ay* in *day*: *prey*, *they*, *whey*, *convey*, *obey*, *survey*, with modification before *r* in the name *Eyre*. Exceptionally, *ey* has the value of long *e* as in *me* in *key*, *geyser*, *Seymour*, and of short *e* as in *men* in *Reynolds*. (3) The word-final digraph *oy* parallels medial *oi* (*boil/boil*), and represents a diphthong typically deriving from French (*employ*: compare Modern French *emploi*). It occurs in the monosyllables *boy*, *buoy*, *cloy*, *coy*, *joy*, *ploy*, *toy* and the disyllables *alloy*, *annoy*, *convey*, *decoy*, *deploy*, *destroy*, *employ*, *enjoy*, *viceroy*, between vowels in *loyal*, *royal*, *voyage*, and medially before a consonant in *oyster*. See ALPHABET, I, LETTER<sup>1</sup>, SPELLING, THORN, U, WYNN, YOGH. [WRITING]. C.U.

**Y-** A prefix for the past participle in Middle English, as in Chaucer's *were yfounde* were found. The past participle in most Old English verbs began with *ge-*, as in *gefunden* found. By the 14c, this had dwindled to *y-* or vanished: Chaucer also has *hath founde* has found. Later

writers used *y-* as a conscious archaism. Shakespeare, Milton, and Charlotte Brontë, among others, used *yclept* called, named; Spenser used many such forms. In the 19c, William Barnes reports *a-zet*, the equivalent of *y-set*, as the Dorset form of the past participle *set*; *a-* plus past participle remains a marker of dialect in south-western England. See SPENSER, WEST COUNTRY, YOLA (AS EE-). [HISTORY, GRAMMAR]. W.F.B.

**YANKEE** [18c: origin uncertain. The currently favoured origin is *Jan Kees*, a variant of Dutch *Jan Kaas* (Johnny Cheese), a nickname mistakenly taken to be plural and used for an ordinary person. Other proposed origins include the Dutch *Janke*, diminutive of *Jan John*, used as a derisive nickname in New England, and versions of *English* and *Anglais* in Amerindian languages. *Yankee* and *Yank* may or may not have an initial capital]. An informal term associated with the US, with three distinct senses according to place of reference, emotional connotation, and user: (1) In the oldest and narrowest sense, a person from New England, as in the Revolutionary war song *Yankee Doodle*, which satirized the naïve and incompetent New England colonials opposing the redcoats. When the song was adopted as a marching tune by those it satirized, the term was popularized as an expression of pride, particularly after the defeat of the British. (2) A person from the northern states, especially as used (often pejoratively) by people in the southern states. Although it had originated earlier, this sense was particularly associated with the Civil War, when *confederate*, *rebel*, *reb*, or *Johnny Reb* was used for Southerners and *yankee* or *damn yankee* for Northerners. This wider reference is the most common in the US, although the precise limits of yankee territory are unclear. For almost all Americans, *yankee* applies to someone from the Northeast: New England, New York State, New Jersey, and Pennsylvania, the area north of the old *Mason Dixon Line*, the boundary between Pennsylvania and Maryland named for the surveyors who laid it out and later taken as the dividing line between free-soil and slave states. For many, yankee territory extends westward through the tier of northern states that formed the Union during the Civil War; there is, however, uncertainty about how far westward the term applies. Some think it appropriate for anyone outside the old Confederacy (the south-eastern states) and thus to the newer western parts of the US as well. (3) Also *Yank*. The widest sense, an American, invented by the British shortly after the Revolutionary War and now used almost exclusively by non-Americans. The sense became popular during World War I: for example, in George M. Cohan's 1917 marching song *Over There*, with its line 'The Yanks are

coming'. The term is often pejorative, as in *Yankees go home!* It is not used by Americans as a national term. British, European, and other applications of the term to any American are likely to conflict with its other meanings. To call a Georgian or a South Carolinian a *yankee* is equivalent to calling a Scot *English*. It is best not to do so. See ETHNIC NAME, NEW ENGLAND. [AMERICAS, NAME]. J.A.

**YAT.** See NEW ORLEANS.

**YEAR'S WORK IN ENGLISH STUDIES, The**, short form *YWES*. A critical bibliography published annually since 1921 by the English Association. Each volume has a general editor (of whom the first was Sir Sidney Lee); in it, books and articles of the year in question are listed and discussed in period chapters by a number of reviewers. Successive volumes reveal changes in the extent of 'English' studies: American literature was included for the first time in 1954 and Commonwealth literature in 1982. The growth of the literary-critical industry is also indicated: the volume for 1957 has 274 pages, that for 1987 933 pages. The volume for 1987, entitled *YWES 68* and published in 1990, was edited by Laurel Blake and published for the Association by Basil Blackwell (Oxford, 1990). It has the following sections: *I* Reference, Literary History, and Bibliography; *II* Literary Theory; *III* English Language; *IV* Old English Literature; *V* Middle English—Excluding Chaucer; *VI* Middle English—Chaucer; *VII* The Sixteenth Century: Excluding Drama After 1550; *VIII* Shakespeare; *IX* Renaissance Drama—Excluding Shakespeare; *X* The Earlier Seventeenth Century; *XI* Milton; *XII* The Later Seventeenth Century; *XIII* The Eighteenth Century; *XIV* The Nineteenth Century—Romantic Period; *XV* The Nineteenth Century—Victorian Period; *XVI* The Twentieth Century; *XVII* American Literature to 1900; *XVIII* American Literature—Twentieth Century; *XIX* New Literatures in English. These are followed by the appendices *Books Received*, *Best Books and Articles* (as selected by the *YWES* critics, and listed in the same order as the preceding sections), and *Indexes* (Critics; Authors and Subjects Treated). The headquarters of the Association are in London. Compare REFERENCE GUIDE FOR ENGLISH STUDIES. See BIBLIOGRAPHY, ENGLISH ASSOCIATION, ENGLISH STUDIES. [EUROPE, MEDIA]. R.C.

**YELLOW PRESS, The** [1890s: from the comic-strip character 'The Yellow Kid', who first appeared in *The Sunday World* (1895), a New York newspaper owned by Joseph Pulitzer]. A

disparaging colloquial term for low-grade, sensational journalism. In the course of the circulation war between Joseph Pulitzer (1847–1911) and W. Randolph Hearst (1863–1951), ‘The Yellow Kid’ changed sides several times, and the term was born as each party strove to outdo the other. The equivalent British terms, *the gutter press* and *gutter journalism*, emerged in the same period. See AMERICAN PRESS, GUTTER, TABLOID. [MEDIA]. G.H.

**YEMEN.** See ARABIC.

**YES-NO QUESTION.** See QUESTION.

**YIDDISH** [1880s: called by its speakers *Yidish* Jewish, and *mame-loshn* mother tongue]. The language used by Jews of Eastern and Central Europe and their descendants, spoken for nearly a thousand years and until World War II the most widely used Jewish language of modern times, with over 11m speakers. Currently, there are about 4m speakers worldwide, mostly in North and South America, Israel, and the Soviet Union. Yiddish is a Germanic language akin to English, but with a distinctive lexical component of about 18% Hebrew-Aramaic and 16% Slavic (Czech, Polish, Russian, Ukrainian) as well as Romance elements from Old French and Old Italian. It is the only Germanic language to be written in a non-Roman alphabet: like other Jewish languages, Yiddish is written in the Hebrew alphabet, and words of Hebrew or Aramaic origin retain their original spellings, while those of Germanic or other origin are spelled according to phonetic rules. Scholars divide Yiddish historically into four phases: *Earliest Yiddish* from c.1000, *Old Yiddish* from 1250, *Middle Yiddish* from 1500, and *Modern Yiddish* from 1700. Of the two major dialect groups, *Western* and *Eastern*, only the latter survives; Western Yiddish (Germany, Switzerland, The Netherlands, Alsace-Lorraine) went into decline after 1700. The chief dialects of Eastern Yiddish are *North-Eastern* (Lithuania, Latvia, Byelorussia), *South-Eastern* (Ukraine, Romania, eastern Galicia), and *Central* (Poland, western Galicia). *Standard Yiddish* is closest to the North-Eastern dialect in pronunciation, and generally closest in grammar to Central Yiddish. In the US, colloquial Yiddish became heavily influenced by AmE. Many words were replaced by Americanisms, some embodying distinctly US concepts, others reflecting the everyday dominance of English. A number of American Yiddish innovations, such as *alrightnik* and *boychik*, have found their way into colloquial AmE. See AMERICAN LITERATURE, BORROWING,

COCKNEY, DIALECT IN AMERICA, EUROPEAN COMMUNITY, HEBREW, JEWISH ENGLISH, YIDDISHISM. [AMERICAS, EUROPE, LANGUAGE]. S.S.

**YIDDISHISM** [1920s: from *Yiddish* and *-ism* as in *Scotticism*]. An expression or construction typical of the Yiddish language, especially when found in another language. Yiddishisms occur in such languages as Dutch, English, French, German, Hebrew, and Spanish. The earliest recorded Yiddishisms in English either refer to items of the Jewish religion (such as *kosher* ritually fit, and its antonym *treyf*, both first recorded in 1851) or were part of the argot of criminals (such as *ganef* a thief, *goy* a non-Jew, both first recorded in the 1830s). With the immigration of Eastern European Jews into the UK and US during the 1880s Yiddishisms began entering English in great numbers. The centrality of London and New York City, where most of the immigrants settled, played a major role in disseminating such usages as *Yid*, *Yiddish*, *shnorrer*, *shlemiel*, *gefилte fish*, *shul*, *bar mitzva*. Throughout the 20c. Yiddishisms have continued to make their way into English, increasingly as slang. The chief medium of transfer remains the Yiddish-influenced variety of English used by Jews of Eastern European origin or descent. See ETHNIC NAME, JEWISH ENGLISH. [VARIETY, WORD]. S.S.

**YINGLISH** [1951: a blend of *Yiddish* and *English*, perhaps the earliest of the *-(g)lish* terms]. An informal and often facetious term for: (1) English that contains many Yiddish words and expressions. It is an informal synonym of *Jewish English* (of the Ashkenazic or Eastern European variety). (2) Yiddish words and expressions that have become part of colloquial English, an informal collective term for *Yiddishisms*. (3) Words and expressions that blend Yiddish and English, such as *borscht circuit*, *fancy-shmancy*, *a whole megillah*, *a hearty mazel tov*. The term is viewed by scholars of Yiddish as slangy and disparaging. See *-GLISH* AND *-LISH*. [VARIETY]. S.S.

**YOGH** [Before 12c: a Middle English name, often associated with *yoke* and its Latin equivalent *iugum*]. The letter *ȝ*, a loosely written form of the letter *g* in Old English script. In Middle English, it became a distinct letter, having the values /j/ initially and medially, as in *ȝok* yoke, *beȝonde* beyond, /x/ medially, as in *oȝen* own, *eȝe* eye, and /x/ medially and finally, as in *riȝt* right, *plouȝ* plough. In later Middle English, yogh was replaced by *y* and *gh*. See ALPHABET, LETTER<sup>1</sup>, Y, Z. [WRITING]. E.W.

**YOLA** [From Old English, especially West Saxon, *yald* old]. A name for the first English

spoken in Ireland, dating from the 12c and regarded as archaic by settlers in the 16-17c. It was slowly displaced by 17c norms, but survived into the 19c in Fort and Bargy in County Wexford and Fingal in County Dublin. In 'A Glossary of the old dialect of the Baronies of Forth and Bargy' (edited by William Barnes, 1867), Jacob Poole provided a piece of verse called 'A Yola Song':

Joud and moud vrem earchee ete was ee Lough.  
Zitch vapereen, an shimereen, fan ee-daff ee aar scoth!  
Zitch blakeen, an blayeen, fan ee ball was ee-drowe!  
Chote well aar aim was t'yie ouz n'eer a blowe.  
[Throgs and crowds from each quarter were at the Lough.

Such vapouring and glittering when stript in their shirts!

Such bawling and shouting, when the ball was thrown!  
I saw their intent was to give us ne'er a stroke.]

See IRISH ENGLISH, OLD ENGLISH<sup>2</sup>. [EUROPE, VARIETY]. L.T.

**YORKSHIRE.** Historically, the largest county of England, administered from the city of York. The city's name derives from Danish *Jorvik*, from Old English *Eoforwic*, from the Latinized Celtic *Eboracum* in Roman times. Although York was taken by the Angles in the early 5c, Celtic resistance continued in nearby *Leodis*, the present-day Leeds; it is sometimes suggested that the longer survival of Celtic control and language in that area may be responsible for some of the differences in pronunciation in West Yorkshire. The Old English term *scīr* (shire) for an administrative area was taken over by both Danes and Normans, the Danes adding the term *priðjungr* ('thirding' or 'third part'). This survives in the subdivisions known as the *Yorkshire ridings* (East Riding, West Riding, and North Riding), the *t* or *th* of Middle English *t(h)riding* being absorbed by the *t* or *th* of *East*, *West*, *North*. These names were abandoned in the reorganization of counties in 1974, when the ridings became the counties of East, West, and North Yorkshire, with some territory contributed to the new county of Humberside. The name *Yorkshire* continues in informal use, however, for the area of the former county. Used attributively, the term refers to anything in or from the old county: *Yorkshire dialect*, *roast beef and Yorkshire pudding*, *Yorkshire terrier*. Used elliptically, it refers to the Yorkshire dialect: "'Tis as ridiculous . . . as it would be to talk broad Yorkshire or Somersetshire in the drawing room' (M. W. Montagu, *Letters*, I Apr. 1717).

**Yorkshire dialect.** The dialects of the region derive from the northern dialect of Old English known as *Anglian* or *Anglic*; an early text is the song of Caedmon, a lay brother at the monastery of Whitby (c.670). Scandinavian influence, from

invasions and occupations from the 9c to 1066, had its most immediate influence on the non-literate in the area. However, a Danish element from the north entered the standard southern language in such words as *sky* and *outlaw*. Some Middle English writers can be identified as writing a northern English representing Yorkshire speech: for example, Richard Rolle, author of *The Ayenbite of Inwit* (Modern: *The Prick of Conscience*, written c.1340), a hermit who lived near Doncaster, and the authors of the Miracles or Mystery Plays from York and Wakefield. A feature of northern Middle English orthography was *quh* rather than *wh*, as in *quhilk* for the more southern *hwich* (which): compare SCOTS; see Q. Although English as used in Yorkshire is often taken to be a single homogeneous dialect, it is not in fact so. There are many kinds of Yorkshire usage, some of which are mutually unintelligible. The two main varieties are derived from the two groups of speakers in the county, and are divided by the boundary between the Midland and Northern groups of dialects.

**Pronunciation.** (1) Yorkshire accents are non-rhotic, with the exception of East Yorkshire, where a postvocalic alveolar *r* is occasionally heard in stressed syllables and final unstressed syllables, the word *farmer* having two such *r*-sounds. (2) The *a*-sound before *s*, *f*, and voiceless *th* is regularly short, as in *fast*, *staff*, and *path*. Yorkshire-speakers use a short /a/ vowel in *my aunt can't dance*. In southern England, the vowel is nasalized and long. (3) Some, mainly rural, speakers in the North and East Ridings have preserved something of the northern vowels of Middle English in the unrounded vowel of such words as /na:/ and /sa:/ for *know* and *saw*, in /swan/ for *swan* and /kwari/ for *quarry*, and in an unchanged long vowel giving /huz/ for *house* and /du:n/ for *down*. (4) The pronunciation or non-pronunciation of *the* is a well-known Yorkshire shibboleth. It varies from complete absence in the East, through a kind of suspended *t* in the central areas (often represented as *t' book*, *t' man*), to *d'* in the North before voiced consonants and *t'* before voiceless consonants (*d' book*, *t' packet*), and in the extreme West a *th'* before vowels and *t'* before consonants (*th' old man*, *t' book*). (5) Traditional short *u* in Yorkshire and throughout the north has the same sound in such words as *up*, *come* as in standard *wool*, *put*, but *-ook* words have remained long: /bu:k/ and /ku:k/ for *book* and *cook*. (6) Regional variations often contrast greatly, especially between West on the one hand and North and East on the other: for example, *soon*, *road*, *stone* in the West sound like 'sooin', 'rooad', 'stooan', and in the North and East like

'see-en', 'reed', 'steenan' (with 'sioon' for *soon* in the North-West).

**Grammar.** (1) The second-person singular *thou* survives in various forms, with /ðu:/ for *thou* in the East and North, and /ðæ:/ in the West. In the West, *thou* can appear as /tə/, as in /wat duz tə want/ (What do you want?). The accusative form *thee* also survives, as in *Ah'll gi it thee* I'll give it to you. (2) *Happen* is widely used rather than *perhaps*, as in *Happen he'll come* Perhaps he'll come. (3) The form *summat* (something), as in *There's summat up and I've summat to tell thee*, corresponds in use to *something*. (4) There is a common intransitive progressive use of the verb *like* in the question *Are you liking?* (Do you like it here?). (5) *Aye* and *nay* (yes and no) are widely used, especially in rural areas. (6) *While* is often used instead of *until*, as in *I'll stay here while eight*, a usage that occasionally causes confusion, as in the ambiguous *Wait while the light is green*. (7) The use of an echoic tag is common, usually *is that*, as in *It's a good buy, is that!* and *That's right nice, is that*.

**Vocabulary.** (1) The Scandinavian element is strong in rural and especially in agricultural usage that is obsolescent along with the objects it refers to: *flaycrow* scarecrow, *stoops* gateposts, *stower rung* (of a *stee* ladder), *lea* scythe, *flake* hurdle, *pike* small stack of hay. Most of such words were common to much of the north of England. (2) Many items in common use descend from Old Norse, and include: *addle* to earn, *beck* stream, brook, *cleg* horse-fly (shared with ScoE), *lake* or *laik* to play, *spaining* or *speaning* weaning (animals), and *ted* to spread hay. (3) The West Yorkshire form of the northern and Scots verb *thole* (permit, endure, tolerate) is *thoil*, which carries the Old English sense of *suffer*. It is applied mostly to spending money on something desirable but too expensive, as in *Nay, I couldn't thoil ten pound for that*. (4) The northern and ScoE term *bairn* (child) is common, as is the distinctive northern *childer*, plural of *child*, which descends from Middle English *childre* and *childer*, from late Old English *cildru* and *cildra*. The southern and standard *children* was assimilated to a now obsolete *-en* plural, as in *house/housen*. The cognate Scots *chiel(d)* (child, lad) has the regular plural *chiel(d)s*. Typical also, as part of northern English generally, are such usages as *lad* and *lass* (as in *We have a little lass*: a small daughter) and *love*, pronounced /lʊv/, as a form of address (as in *It's time to go, love*).

**Processes of change.** Although there has been considerable immigration from Ireland and Eastern Europe (late 19c, early 20c) and from the Caribbean and South Asia (since the 1950s, mainly to Leeds, Bradford, and Huddersfield), such influxes do not appear to have modified

local speech. The usage of the children of these mainly working-class incomers is more often a variety of Yorkshire (with lexical influences from the parents' mother tongues) than of the standard language. Despite a continuing claim that increasing mobility and the standardization of education are causing dialectal differences to die out, observation of the working-class areas of Yorkshire cities shows that varieties distinct from the standard usage of England, especially in terms of traditional accents, continue to be used by schoolchildren.

**Literary Yorkshire.** Yorkshire dialect began to be written for literary purposes in the 17c with the publication of an anonymous poem, possibly from the Northallerton area, entitled *A Yorkshire Dialogue between an Awd Wife, a Lass and a Butcher* (printed at York, 1673). It opens:

AWD WIFE	Pretha now lass, gang into t'hurn An' fetch me heame a skeel o' burn. Na pretha, barn, mak heeate an' gang, I's mar my deagh, thou stays sae lang.
LASS	Why, Gom, I's gea, bud for my pains You's gie me a frundel o' your grains.
AWD WIFE	My grains, my barn! Marry! not I, My draugh's for t'gits an' galts i' t'sty. Than, pretha, look i' t'garth an' see What owsen I' the stand-hecks be.

[Prithee now, girl, go into the corner of the field / And fetch me home a bucket of water. / Now prithee, child, make haste and go, / I'll spoil my dough, you stay so long. / Why, grandmother, I will go, but for my trouble, give me a handful of your malt-grain. / My malt-grain, my child! Mary! Not I, / My grain-refuse is for the sows and boars in the sty. / Then, prithee, look in the yard and see what oxen there are in the stalls.]

This language would not at the time, nor would it now, be accepted over the whole area as Yorkshire dialect, but would be well understood, especially in parts of the North. Perhaps the most famous representation of Yorkshire dialect in literature is that by Emily Bronte in *Wuthering Heights* (1847), as in the following excerpt from Chapter 9, when the old servant Joseph says:

Yon lad gets wur an' wur! . . . He's left th' yate ut t'full swing and miss's pony has trodden dahn two rigs uh corn, un plotted through, raight o'r intuh t'meadow! Hahsomdiver, t'maister ull play t'divil to-morn, and he'll do weel. He's patience ittselfn wi' sich careless, offlad craters—patience ittselfn he is! Bud he'll not be soa allus—yah's see, all on ye! Yah mumn't drive him out of his heead for nowt!

[That boy gets worse and worse. . . . He's left the gate wide open and the young lady's pony has pressed down two ridges of corn and floundered through right over into the meadow! However, the master will play the devil tomorrow, and he will be right. He's patience itself with such careless, awful creatures—patience itself he is! But he'll not be so always—you'll see, all of you! You mustn't drive him off his head for nothing!]

Many 19c working men tried to represent their vernacular in writing. Their works were often published in *Almanacks*, annual notes of supposed local events, calendar entries interspersed with passages of dialect, usually humorous and knockabout in character. This kind of prose continues in many Yorkshire newspapers. There was also a strain of poetry writing. One 19c poet was Sir Ben Turner, Mayor of Batley and Minister of Mines for the first Labour government. The poetry tradition continues and two 20c poets are Stanley Umpleby (North Yorkshire) and Fred Brown (West Yorkshire). Umpleby's writing is more rural, as in this stanza on the temptations for a country widow to remarry:

There's yowes an' lambs bleeatin'  
 A brawne i' t'ga'th reeatin'  
 A wye cawf at's freeatin'  
 What mud yan want mair?  
 (from *T'Widda Weddin'*)

[There are ewes and lambs bleating  
 A pig rooting in the paddock,  
 A heifer calf that is pasturing,  
 What more could anyone want?]

**Yorkshire Dialect Society.** The first group concerned with the dialect came together in 1894 as

a Yorkshire Committee of the *English Dialect Society*, to assist in the preparation of Joseph Wright's *English Dialect Dictionary*. After the disbandment of the EDS in 1896, the committee re-formed in 1897 as the Yorkshire Dialect Society, which publishes *The Transactions of the Yorkshire Dialect Society*. The society combines the scholarly study of local speech with the publication of prose and poetry in various forms of local dialect. It meets at colleges and university premises throughout the three Yorkshires as well as at industrial and folk museums, and promotes joint meetings with other groups. Papers on place-names and studies of local vocabularies are given as well as readings and recitations by dialect speakers.

See BRONTË (SISTERS), DIALECT IN ENGLAND, ENGLISH DIALECT SOCIETY, ENGLISH IN ENGLAND, ENGLISH PLACE-NAMES, GEORDIE, LANCASHIRE, MIDLANDS, NORSE, NORTHERN ENGLISH, NORTH-UMBRIA, SURVEY OF ENGLISH DIALECTS. [EUROPE, NAME, VARIETY]. S.E.

**YORUBA.** See AFRICAN ENGLISH, AFRICAN LANGUAGES, NIGERIA.

# Z

**Z, z** [In BrE called 'zed', in AmE 'zee']. The 26th and last letter of the Roman alphabet as used for English. It originated as the 7th letter of the Phoenician alphabet and became the 7th letter of the Hebrew and Greek alphabets. The Greeks called it *zeta* (Ζ, ζ), probably first pronouncing it /dz/, then /z/. The Romans adopted Z later than the rest of the alphabet, since /z/ was not a native Latin sound, adding it at the end of their list of letters and using it rarely. They did not always use it to transliterate *zeta*. Old English did not normally use z, the name *Elizabeth* being an exception. The use of *zed* as a term of abuse in Shakespeare's *King Lear* ('Thou whore-son zed! Thou unnecessary letter!', 2. 2) suggests that although it was then being increasingly written it was held in low esteem. The modification of BrE *zed* (from Old French *zede*, through Latin, from Greek *zeta*) to *zee* in AmE appears to have been by analogy with *bee*, *dee*, *vee*, etc.

**Sound values and double Z.** (1) In vernacular English, z represents a voiced alveolar fricative, pairing with s as its voiceless equivalent. It occurs initially, medially, and finally, sometimes doubled: *zebra*, *horizon*, *dazzle*, *daze*, *buzz*. (2) Before the ending *-ure*, the initial *i*-glide of the *u* is commonly assimilated to the z, producing the sound 'zh': *azure*, *seizure* (compare *measure*). (3) The sound /z/ is more frequently represented by s than z. (4) Some possibly echoic monosyllables have zz (*buzz*, *fizz*, *fuzz*, *jazz*, *whiz(z)*), as have disyllables with the iterative suffix *-le* (*dazzle*, *razzle*, *fizzle*, *sizzle*, *guzzle*). (5) Monosyllables ending in single z after a short vowel (*fez*, *quiz*) inflect with zz: *fez/fezzes*, *quiz/quizzing*. (6) Final y requires preceding zz if the preceding vowel is short (*dizzy*, *muzzy*), but only z if long (*lazy*, *crazy*, *dozy*).

**Voiced and voiceless Z.** The voiced/voiceless distinction of /s, z/ in Old English was predictable

and did not need to be shown in spelling; medial s was voiced, as is still largely the case (*busy*, *weasel*), but French influence after the Norman Conquest in 1066 led to the writing of medial voiced s as z or zz in some words of Old English or Old Norse derivation: *adz(e)*, *amaze*, *blaze*, *craze*, *daze*, *dazzle*, *dizzy*, *doze*, *drizzle*, *freeze*, *furze*, *gaze*, *hazel*, *ooze*, *sneeze*, *squeeze*, *wheeze*, *wizen*. Some related nouns have voiceless s (*brazen/brass*, *frozen/frost*, *glaze/glass*, *graze/grass*), others voiced s (*nuzzle/nose*, *wizard/wise*). Words of Old English origin were not spelt with final z: *sneeze*, *booze*, not \**sneez*, \**booz*.

**English Z, French S.** Many French-derived words contain z or zz, sometimes where French has or had s: English *breeze* (French *brise*), *buzzard*, *citizen*, *embezzle*, *frenzy* (French *frénésie*), *frieze* (French *frise*), *gizzard*, *grizzle* (French *grisailleur*), *hazard* (French *hasard*), *lozenge* (French *losange*), *mizzen*, *muzzle* (French *museau*), *razor* (French *rasoir*), *seize* (French *saisir*). *Prize* corresponds to French *prix* and *size*, a clipping of *assize*, is derived from French *assise*. *Baize* appears to have been a misinterpretation of the French plural *baies*. Elsewhere, English z matches French z: *bizarre*, *bronze*, *dozen*, *gauze*, *lizard*.

**Exotic Z.** (1) Initial z was used from the 14c in new words derived from French or Latin, often originating in other languages such as Arabic, Spanish, and Greek: *zeal*, *zebra*, *zenith*, *zero*, *zest*, *zeugma*, *zirconium*, *zither*, *zodiac*, *zone*, *zoology*. German was the source of *zigzag*, *zinc*, while *zombie* originated in Africa. (2) Medial z occurs in more recent loans: Persian *bazaar*, Spanish *bonanza*, *maize*, Kongo *chimpanzee*, Greek *horizon*, German (from Italian) *marzipan*, Polish *mazurka*, Arabic *muezzin*, Italian *stanza*, French (through Latin from Greek) *trapeze*. (3) In recent loans, z usually retains the value given

## THE CAPITAL LETTER

EARLY FORMS			CURRENT FORMS		
Phoenician	Greek	Etruscan	Roman (Latin)	roman	italic
𐤆	Ζ	Ɑ	Z	Z	Z

## THE SMALL LETTER

EARLY FORMS			CURRENT FORMS	
Roman cursive	Roman uncial	Carolingian minuscule	roman	italic
z	z	z	z	z

to it in the source language: /ts/ in German *Alzheimer's disease*, *Nazi*, *Zeitgeist* and Italian *pizzicato* (*mezzo-soprano* has /dz/ in Italian). Older German loans may have a preceding *t*: *quartz*, *waltz* (compare modern German *Quarz*, *Walzer*). (4) In the *tz* combination, the *t* induces devoicing of a following *z*, as in *blitz*, *chintz*. *Quartz* and *quartz* are homophones. (5) Silent *z* occurs in recent French loans: *laissez-faire*, *rendezvous*, *répondez s'il vous plaît*. (6) Because of German influence, in the Greek combining form *schizo-* (as in *schizophrenia*), *z* is pronounced as a voiceless affricate, /ts/. (7) In the word *Czech*, the digraph *cz* has the value of English *ch*, but in *czar* the initial *c* is silent and *z* has its normal value, as also in the alternative (and etymologically more accurate) spelling *tsar*. (8) Of unknown but recent origin are *bamboozle*, *blizzard*, *puzzle*.

**Archaic Scots Z.** In ScoE, some words, including names, have a silent *z* (*capercailzie* pronounced 'capercailie', *Dalrulzion* 'Dalrullion', *Dalziel* 'Deyell', *gaberlunzie* 'gaberloonie') or a digraph *nz* pronounced /ŋ/, as in the name *Menziez*, traditionally pronounced 'Mingis' (*ng* as in *singer*). Here *z* is an adaptation of the Old English letter yogh (3) rather than etymological *z*.

**British and American differences.** Some alternative *s/z* spellings are found, the most widespread the Greek-derived suffix *-ise/ize* (*regularise/regularize*), where *z* is universal in AmE, and *s* is widely used in BrE and preferred in AusE. This variation also occurs in AmE *cozy*, *cognizant*, BrE *cosy*, *cognisant*. See ALPHABET, LETTER<sup>1</sup>, S, SPELLING, X, YOGH. [WRITING]. C.U.

**ZAMBIA.** Official title: *Republic of Zambia*. A country of southern Africa and member of the Commonwealth. Capital: Lusaka. Currency: the kwacha (100 ngwee). Population: 7.5m (1988), 11.1m (projection for 2000). Ethnicity: 34% Bemba, 16% Tonga, 14% Chewa, 9% Lozi, various others, and 1% European. Religions: 46% Protestant, 29% traditional, 25% Roman Catholic. Languages: English (official); seven vernaculars are recognized, including Bemba, Nyanja, and Tonga. Education: primary 86%, secondary 19%, tertiary 2%, literacy 76%. The British colony of *Northern Rhodesia* gained its independence as *Zambia* in 1964. It is one of the most urbanized of East African countries, and the mix of languages in urban areas emphasizes the need for a link language. English is used exclusively in education from the first year and is important in the media. National English-language newspapers include *The Times of Zambia* (set up in 1943), the *Zambia Daily Mail*, and the *Sunday Times*. Zambian English is one of the

most divergent forms of AfrE, with a good deal of borrowing from local languages, even to the extent of adding Bantu affixes to English roots: *maolanges* oranges (where *ma-* is a plural prefix and *l* replaces *r*); *cipoto* a pot (where *ci-* is a Bemba nominal prefix); *washes* he or she washes, *adriver* he or she drives (where *a-* is a subject prefix). Examples of local innovations in the use of adverbial particles are illustrated by the omission of *up* in *I'll come to pick you at half eight*, its addition in *cope up with*, and a reassignment in its use in *I'm fed up* (I'm full). Lexical innovation includes *movious* always on the move. Discourse may be marked by elements that maintain age, sex, and status relationships: a younger man may address an elder as *uncle/father* and be addressed in turn as *son/nephew*. Cultural influences are evidenced in the questions: *How have you stayed the day?* How have things gone since this morning?; *How are you suffering?* as a greeting to one who has suffered a misfortune. See EAST AFRICAN ENGLISH, ENGLISH, RHODESIA. [AFRICA, NAME, VARIETY]. C.L.N.

**ZETLAND, ZETLANDIC.** See SHETLAND, SHETLANDIC.

**ZEUGMA** [16c: through Latin from Greek *zeugma* yoking]. (1) Also *syllipsis*. In rhetoric, a phrase in which a word, usually a verb, is followed by two or more other words that commonly collocate with it, but not together: 'The morning brought misty sunshine and the nurse' (Mary Stewart, *Wildfire at Midnight*, 1956). A figurative use usually precedes a literal use; in Pope's *Rape of the Lock* (1714), the heroine might 'stain her Honour, or her new Brocade' and 'lose her Heart, or Neck-lace, at a Ball'. (2) A form of ellipsis regarded as poor style: *I was on the plane and my bags on the ground*. Here, the singular *was* serves both *I* and *my bags*, but the sentence \**My bags was on the ground* is ungrammatical in standard English. Zeugma is common in such constructions as *X is as big if not bigger than Y*, from which the \**X is as big than Y* can be extracted. The balanced form is *X is as big as, if not bigger than, Y*. [GRAMMAR, STYLE, USAGE]. T.MCA.

**ZIMBABWE.** Official title: *Republic of Zimbabwe*. A country of southern Africa and member of the Commonwealth. Capital: Harare. Currency: the dollar (100 cents). Population: 9.3m (1988), 13.2m (projection for 2000). Ethnicity: 71% Shona, 16% Ndebele, 11% other indigenous peoples, 2% European. Religions: 50% Protestant, 25% Roman Catholic, 25% mainly traditional. Languages: English (official); the indigenous languages Shona and Ndebele, which may be used in the Senate. Education: primary

92%, secondary 43%, tertiary 3%, literacy 74%. Zimbabwe, formerly the British colony of *Southern Rhodesia*, took its present form in 1980. English was introduced into the region toward the end of the 19c in colonial commerce (the ventures of Cecil Rhodes) and in missionary education. English-language newspapers include the *Sunday News* (set up in 1930), *The Chronicle* (1894), the *Herald* (1891), and the *Sunday Mail* (1935). The English of Zimbabwe is non-rhotic. There is some blending of vowels into a five-vowel system and simplification of consonant structures, features shared with other varieties of East and South African English: 'men' the pronunciation of both *man* and *men*, 'fit' of both *fit* and *feet*. Syntactic structures are often attributable to transfer from local languages: *He (has) grown up in my eyes* I saw him grow up; *when the rain is in the nose* when the rainy season approaches. There are loans from local languages in the vocabulary, such as *shimiyaan*

home-made liquor made from treacle, and *muti* medicine, as well as words of various origins common in southern Africa, such as *kraal* village, *veld* high open grassland, *commando* military unit, *trek* a journey (originally by ox-wagon). Local usages include *head-ring* a marker of elder or high status, *impi-line* a Zulu army unit, *love-muti* a love charm, *now-now girl* a modern young woman. Education in the area since the 19c has involved studying classical English literature, which has left this variety, like many others, with a 'bookish' style. See EAST AFRICAN ENGLISH, ENGLISH, RHODESIA. [AFRICA, NAME, VARIETY].
