**The dissenting academies.** The first movement away from the classical monopoly in education came in the 17c, among the English Protestant dissenters, for whom texts in English served as sources for exercises in grammar and rhetoric. When the Act of Uniformity (1662) excluded dissenters from the universities, a number of clergymen dispossessed of their livings opened schools in their own houses, and after the restrictions were slightly eased by the Act of Toleration (1689), some of these schools developed into the *dissenting academies*, offering an alternative to the ancient universities. Their curricula were usually similar to those of Oxford and Cambridge in the study of the classical languages, but gradually broadened to include history, science, modern languages, and English literature. The Northampton Academy, founded by Philip Doddridge in 1729, was one of the first to teach English authors, and John Aikin lectured on Milton and 18c English poets at Warrington Academy, founded in 1757. The influence of those academies was widespread, not only in the UK but in many other parts of the English-speaking world.

**The universities.** The first chair of English Literature was in Scotland, at the U. of Edinburgh (1762), and was known as the *Chair of Rhetoric and Belles Lettres*. Its first occupant was the rhetorician Hugh Blair. This was followed in the 19c by the first colleges of the U. of London: U. College (1828) and King's College (1831). Chairs of English Literature were then created at Owens College, Manchester (1850) and at the U. of Glasgow (1862), after which the practice extended widely. In 1848, Frederick Denison Maurice and others founded in London the Queen's College for Women. Here, in 1848, Charles Kingsley, in his inaugural lecture as Professor of English, spoke of literature as suitable preparation for women's lives. In the US, the academic study of English literature was established in the early 19c. The first Boylston Professor of Rhetoric and Oratory at Harvard, in 1806, was John Quincy Adams (later US president). In 1851, Francis J. Child occupied the same chair as Professor of English.

Oxford and Cambridge were slow in taking the subject up, but when they did their prestige helped establish it firmly in the English-speaking world. At Oxford, English literature was offered in the pass degree in 1873 and the Merton Chair of English Language and Literature was created in 1885. After much controversy, the Oxford honours school of English was founded in 1894, its growth owing much to the work of J. C. Collins and W. A. Raleigh. At Cambridge, the Edward VII Chair of English Literature was first held in 1912 by Arthur Quiller-Couch. In 1917,

it became possible to take English with another subject, for a degree, but English did not rank as a sole honours subject until 1926. However, Cambridge made up for this late start by its influence on literary criticism, notably through the work of I. A. Richards (1893–1979) and F. R. Leavis (1895–1978). There was considerable controversy about the study of early forms of the language, especially Old English, in an honours school of English, although Old English had been studied by some Oxford scholars since the 17c. A chair of Anglo-Saxon had existed at Oxford since 1849 and at Cambridge since 1878.

**Literary scholarship.** The growth of the study of English literature as an examinable university subject with its own departments was encouraged by three developments: an interest in the study of texts both as literary specimens and as philological evidence; a new appreciation of cultural history and an interest in the influence of the past on present conditions; the greater availability of inexpensively printed texts, especially of material previously available only in manuscripts and codices. The study and teaching of English literature has long been international. Early work in mainland Europe includes A. W. Schlegel's Romantic criticism in his *Über dramatische Kunst und der Literatur* (1809–11) and the *Shakespeare Commentaries* of Georg Gervinus in 1850 (translated into English in 1875). The Shakespeare Society, founded at Weimar in 1864, has brought out the *Shakespeare Jahrbuch* annually since 1865. Bernhard ten Brink, born in the Netherlands, became Professor of Modern Languages and Literature at Marburg in 1870 and at Strasbourg in 1873. He wrote on English philology and published *Chaucer-Studien* (1870) and *Geschichte der englischen Literatur* (1874). Universities in Commonwealth and other countries throughout the world have built up departments in which English literature is now taught and researched. At recent conferences of the Association of University Professors of English, the papers read have been divided almost equally between scholars from English-language countries and from others. Books and journals appear annually in countries where English is a second or foreign language and include, among many others, *Études Anglaises* (France), *Indian Journal of English Studies*, *Neuphilologische Mitteilungen* (Germany), and *Shakespeare Studies* (Japan).

**Literature in the schools.** Encouraged by growing interest at the university level, English literature was increasingly studied in the schools as a preparation for university and in its own right. As new universities and polytechnics were founded in Britain, many in the expansion of the 1960s, departments of English Literature multiplied. Fully established as a major university discipline

by 1930, the subject filled much of the gap created by the slow decline in the study of classical languages and literatures. English Literature, often referred to simply as *English*, has become one of the most popular sixth-form subjects taken for the Higher Certificate of Education and its successor the Advanced Level of the General Certificate of (Secondary) Education (England and Wales) and as part of the Higher School Leaving Certificate (Scotland).

There have been many changes in the university teaching of English literature. Students in the first UK honours schools were examined on *period papers*, with concentration on major authors like Chaucer, Shakespeare, Milton, Pope, and Wordsworth as representatives of their times. These have been supplemented by *genre papers* and special areas such as women's writing, black literature, and regional varieties of literature around the world, with texts by living writers. There has been in recent years decreasing certainty about a canon of literature on which study should be based; texts not conforming to traditional literary criteria are often included in the English syllabus. In the past, the language element in an honours course meant mainly philology: the study of texts written before 1500. Currently, much attention is given to the language of literature as a whole, with stylistic analysis based on linguistic theory. Papers in aspects of general linguistics and semiotics can form part of an English degree whose main component is still literature.

**Literature and the media.** The cinema and television have used many works of English literature, including versions of plays and adaptations of novels: for example, BBC television has presented all of Shakespeare's plays in a five-year cycle and its serialized dramatizations of writers like Charles Dickens and Anthony Trollope have proved highly popular. English literature is now often taught as part of cultural and media studies. The *Centre for Contemporary Cultural Studies* at the U. of Birmingham in England and the *Centre for Critical and Cultural Theory* at University College, Cardiff, in Wales are representative of institutions in the UK and elsewhere in which literature is studied integrally with other media in relation to present-day life and thought.

**Canons and classics.** The literary texts of a language can be many things to many people; attitudes vary regarding the social and educational value or the appropriateness of certain texts and authors. Many people, whether or not they read acknowledged works of literature, regard them as a repository of 'good English' and as models for both the written and spoken language. The works form a canon (*the classics*), a greater or

less knowledge of which is shared by the culturally literate. Historians, lexicographers, and other scholars, regardless of whether they share this view or gain aesthetic as well as academic satisfaction from their studies, find in the body of English literature a record of language usage over many centuries. Currently, many teachers and critics of English literature waver between a traditional aesthetic and value-laden approach to their subject and linguistic, Marxist, Freudian, postmodernist, feminist, or deconstructionist views of the inherited canon as texts to be dissected to provide proof of the rightness of a doctrine or reveal a writer's hidden agenda. They may seek at the same time to enlarge the canon by including overlooked writers (especially women) or adjust it by reassessing writers whom they see as overly revered: including Shakespeare.

**ENGLISHMAN/WOMAN.** See MAN/WOMAN.

**ENGLISH-MEDIUM SCHOOL.** A school in which the medium of instruction is English, in a country in which English is not indigenous and may or may not have official or other status. Such schools are usually private and run on British or American lines. Many employ expatriate native speakers of English, but some, such as the Anglo-Indian schools in India, recruit almost entirely locally. Often, in addition to the teaching, the social and recreational life of the school is also carried on in English. In many cases, such institutions serve not only as centres of education but also as vehicles and symbols of social improvement or privilege for both the pupils and their families. In many countries, certain English-medium schools have great prestige, such as Mayo College and the Cathedral School (Bombay) in India. Compare ARGENTINA (BILINGUAL SCHOOL), CULTURA, ENGLISH LANGUAGE SCHOOL, HONG KONG (ANGLO-CHINESE SCHOOL). [EDUCATION]. T.MCA.

**ENGLISH-ONLY MOVEMENT.** A name given, in the main by their opponents, to groups that since the early 1980s have aimed at an amendment to the US constitution, making English the official language of the republic. Proponents refer to the movement as *Official English* and deny that they wish to restrict people's options to English alone. See ENGLISH LANGUAGE AMENDMENT. [AMERICAS, MEDIA]. T.MCA.

**ENGLISH PALE.** See PALE.

**ENGLISH PLACE-NAMES.** The place-names of England can be divided into seven primary chronological groups, according to the language or languages dominant when the names were first used: *Pre-Celtic, Celtic, Latin, Old English, Norse, Norman French, Modern English*. These groups are called 'primary' because there has been widespread adaptation and hybridization as older names have been adopted and adapted by later peoples to produce 'secondary' and further forms: for example, a Celtic settlement known to the Romans as *Eboracum* became Old English *Eforwicceaster*, then Modern English *York*; part of Roman *Letoceto* (from a Celtic source meaning 'grey forest') combined with Old English *feld* (open area) to become modern *Lichfield* in Staffordshire; *Lincoln* (now pronounced 'Linken') derives from Celtic *lin* (pool) and Latin *colonia* (colony).

**Pre-Celtic and Celtic.** The earliest inhabitants of Britain, before the Celts settled there around 500 BC, spoke a language or languages about which almost nothing is known. Pre-Celtic traces, however, may have been preserved in some otherwise unaccountable names, such as the rivers *Itchen*, *Soar*, *Tamar*, *Wey*; the meanings of such names are at best conjectural. The Celts of what later became England spoke an Indo-European language that is the ancestor of Welsh and is now generally known as *British* or *Brythonic*. It survives in many place-names, some of whose meanings are known, some open to various interpretations, some obscure. These include rivers (*Avon* 'river', *Severn* meaning unknown, *Thames* perhaps 'dark'), hills (*Malvern* bare hill, *Quantocks* edge, *Penkridge* chief ridge), forests (*Arden* steep place, *Chute Forest* wood, *Melchet Forest* bare wood), and settlements (*Dover* waters, *Andover* ash waters, *Wendover* white waters).

**Latin.** The Romans dominated Britain from the 1c to early 5c AD, but added few names of their own during their long occupation. Names directly derived from Latin, wholly or in part, include: *Catterick* in Yorkshire, from *cataracta* a waterfall; *Speen* in Berkshire, from *spinis* (ablative plural of *spina*) at the thorn bushes; *Faversham* in Kent, from *faber* a smith.

**Latinized Celtic.** Generally, the Romans Latinized local Celtic names, especially those of rivers, to provide names for their fortified settlements. Many of these names continue in use, particularly in combination with variants of Old English *ceaster* (from Latin *castra* a camp, walled town). Anglo-Saxon versions of Latinized Celtic provide the names of many English cities: *Doncaster* (from Romano-British *Danum*, referring to the river *Don*), *Dorchester* (from *Durnovaria* a fist fight, perhaps referring to local boxing contests), *Gloucester* (from *Glevum* bright), *Manchester* (from *Mamucium*, perhaps 'breast', referring to a nearby hill), *Rochester* (from *Durobrivae* bridge fort), *Winchester* (from *Venta* special place). Less regular *ceaster* names include: *Chichester* (Old English: Cissa's Roman fort, unrelated to the Romanized name *Noviomagus* new market), *Exeter* (from *Isca*, now the river *Exe*, the element *ceaster* being almost entirely lost). In the name *Chester*, the Roman name *Deva* (meaning 'goddess' and referring to the river now called *Dee*, on which the city stands) has not survived. Many names with long and complex histories have kept only a fragment of the original, as in *Rochester*, of which only the *ro* of *Durobrivae* survives.

**Latin in Old English.** Further place-name elements borrowed from Latin into Old English

include: *camp* field (from *campus*), as in *Warringcamp* (Wærna's people's field); *port* port (from *portus*), as in *Portsmouth* (mouth of the port); *stræt* road (from *via strata* paved way), as in *Stratford*; *wic* settlement, farm (from *vicus* settlement), as in *Warwick* (weir settlement). Two elements probably from Latin through British are *ecles* church (from Greco-Latin *ecclesia*), as in *Eccles*, and *funta* (from *fons/fontis* spring), as in *Havant* (Hama's spring).

**Old English.** The Anglo-Saxon settlers of the 5c and later both bestowed Germanic names and adopted Romano-British names as they spread across southern and south-eastern Britain. Old English place-name elements include: (1) *burh* fort, with the later variants *-bury* as in *Canterbury* fort of the Kentish people, *-borough* as in *Peterborough* St Peter's fort, *-brough* as in *Middlesbrough* middle fort, and *-burgh* as in *Bamburgh* Bebba's fort. (2) *dūn* hill (modern *down*, as in the *South Downs*), now *-don* as in *Faringdon* fern hill, *Huntingdon* (probably) Hunta's hill, *Swindon* swine hill. (3) *feld* open land, now *-field* as *Macclesfield* Maccel's open land, *Petersfield* St Peter's open land. (4) *ford* river crossing, as in *Oxford* ford of the oxen, *Stamford* stony ford. (5) *hām* settlement, homestead (modern *home*) or *hamm* enclosure (modern *hem*), as in *Birmingham* settlement of Beorma's people, *Fareham* ferny homestead. (6) *stoc* place (modern *stock*), now also *-stoke*, as in *Basingstoke* place of Basa's people, *Woodstock* place in the wood. (7) *tūn* farm, village (modern *town*), now *-ton* as in *Eton* riverside farm, *Surbiton* southern barley farm. (8) *worth* enclosure, as in *Ainsworth* Ægen's enclosure, *Papworth* Pappa's enclosure.

In many Anglo-Saxon names of this type, the first element identifies a person, group, rank (such as *cyning* king, as in *Kingston* king's town) occupation (such as *prēost* priest, as in *Preston* priest's town), or the like, while the second indicates a settlement of some kind. Such individuals as Ægen and Pappa (above) were probably the original settlers. Most of the names are of men, but several places have women's names, such as *Bognor* Bucge's slope, *Edburton* Eadburg's farm, *Kenilworth* Cynechild's settlement, and *Wilbraham* Wilburg's village. In some cases, it is difficult to say if an element is a personal name or a standard word, so that *Radford* could mean either 'Rēada's ford' or 'red ford'. The latter in this case is more likely, referring to the red soil of the ford, but *Reading* refers to a group (Rēada's people), as does *Hastings* (Hæsta's people).

Recent studies suggest that such names were among the earliest, the *-ham* names like *Bloxham* (Blocc's village) coming first, then the *-ingham* names (like *Birmingham*), then those in *-ing* and

-ings (*Reading* and *Hastings*). Not all names of this type contain a personal name, however, and some have either a river name as a first element, such as *Avening* in Gloucestershire (people by the Avon), or another topographical word, such as *Nazeing* in Essex (people by the spur of land). In some instances, -ing means 'place', as in *Clavering* in Kent (place of clover). This sense could also appear in some -ington names, so that *Whittington* could mean either 'farm at the white place' or 'farm of Hwīt's people'.

Some Old English place-name elements have a very precise meaning: for example, *ōra* usually denotes a flat-topped hill, as distinct from *dūn*, which is a rounded hill. The name *Bognor* (above) therefore relates not so much to the sea-shore of this coastal town as the flat-topped hills of the South Downs lying behind it. Similarly, *stōw*, as in *Padstow*, often means 'holy place', implying a place of worship or a church, in this case dedicated to St Petroc. Careful distinction is also needed between such similar elements as *hām* and *hamm* (above), either of which can give -ham. The latter implies 'hemmed-in land', such as a valley between hills on three sides or land in a river bend. *Southampton* contains *hamm*, so means 'farm on riverside land' (the city being located at the confluence of the Itchen and the Test), but *Northampton* has *hām*, so means 'northern home farm'. Again, certain Old English words can have apparently opposite meanings in place-names: for example, *lēah* (modern *lea*), which can mean either 'wood' or 'clearing', the latter having the sense 'meadow'. The appropriate sense can often be determined either by an examination of the local topography or by a consideration of the names of nearby places. If a name ending in -ley or -leigh is surrounded by a number of -ton names, it is likely to refer to an isolated wood, but if there is a cluster of -ley/-leigh names, it indicates a number of clearings where people settled. Not surprisingly, *lēah* is frequently found in combination with the names of different kinds of trees, such as *Alderley*, *Ashley*, *Berkeley* birch-lea, *Elmley*, *Lindley* lime-lea, *Oakley*, *Thornley*. It can equally follow a personal name: *Dudley* Dudda's clearing, *Wembley* Wemba's clearing.

The division of England into shires (counties) mainly took place in the 9-10c, Old English *scīr* (literally 'office') denoting a defined region of jurisdiction. However, the counties called *Cornwall* and *Devon* derive from Celtic tribal names (respectively, the *Cornovii* and *Dumnonii*, in their Latinized forms), with Old English *walh* (foreigner) forming the latter half of Cornwall. See WALES. The earliest shires were in the kingdom of Wessex, and took their names from the local administrative centre, so that *Wiltshire* relates to

*Wilton*, Hampshire to *Southampton*, and *Somerset* to *Somerton*. The name *Wessex* (West Saxons) did not survive as an administrative area, but the lesser kingdoms of *Essex* (East Saxons), *Middlesex* (Middle Saxons), and *Sussex* (South Saxons) in due course became counties. *Norfolk* (northern folk) and *Suffolk* (southern folk) were similar tribal districts, but not kingdoms, before they became counties. The element -shire can be added to many of the old county names, necessarily in such names as *Leicestershire*, *Yorkshire*, *Warwickshire*, optionally for *Devon*, but not to the -ex group, the -land group, or such distinctive names as *Cornwall* and *Kent*.

**Old Norse.** The next major settlers after the Anglo-Saxons were the Vikings from Scandinavia, during the 9-11c. Danish place-names fall generally within the area of eastern and northern England (the *Danelaw*), while Norwegian names are found mainly in the north-west. The commonest place-name element of Old Norse was *bý* (village, fortified place), as in *Corby* Kori's village, *Formby* Forni's village, and *Whitby* Hviti's village. In a few instances, the -by superseded -bury, as with *Rugby* (Hroca's fort), recorded in Domesday Book as *Rocheberie*. *Derby* (deer village) is a complete Old Norse replacement of Old English *Northworthy* (north enclosure). Another Scandinavian element is -thorp (village), implying a secondary settlement near a primary one. This is found only in Danish names and should be distinguished from its Old English equivalent *throp*. The theory that many Old Norse *thorp* names were formerly Old English *throp* names has not been conclusively proved. Most such names are in Lincolnshire and Humberside and refer to small villages, with the exception of *Scunthorpe* (Skúma's outlying settlement).

As with Old English names, many Old Norse names consist of personal and generic elements: for example, *Corby* (above). However, there are some names in which a Scandinavian personal name is followed not by Old Norse -by but Old English -ton. These are called *Grimston hybrids*, since the name *Grimston* (Grimr's village) is a typical example of forms in North Yorkshire. Places with names of this type would have had an Old English personal name replaced by a Danish name. A more general renaming is thought to have occurred with villages now called *Kirkby* and *Kirby* (church village), where Old Norse names have replaced Old English names. The East Midland shires came into existence at this time and, like the Saxon shires, took their names from their local administrative centres: for example, *Bedfordshire*, *Cambridgeshire*, *Derbyshire*, *Leicestershire*, *Northamptonshire*, and *Nottinghamshire*.

**Norman French.** The last major invasion of England was the Norman Conquest of 1066. From then until the late 14c, the language of government and of most of the clerical work of the kingdom was Norman French. Although by and large traditional place-names were left unchanged, some 'difficult' indigenous pronunciations were given a 'smoother' Gallic form: for example, 'hard' *ch* became 'soft' *c* in *Worcester*, *th* became *t* in *Turville*, *r* became *l* in *Salisbury* (earlier *Saresbury*), and *n* became *r* in *Durham* (earlier *Dunholm*). Where there was a consonant cluster, the Normans might simplify it, as in the county name *Salop*, Norman French for the *Shrop* in Old English *Shropshire*. Its county town *Shrewsbury* was *Scrobbesbyrig* before the Conquest. A famous instance of such Norman influence is *Cambridge*, originally *Gron-tabricc* (as if 'Grantabridge': compare the nearby village of *Grantchester*). The altered spellings are to be found primarily in Domesday Book, where they were made by Norman scribes.

The second contribution of the Normans was the addition of French manorial family names to many existing Old English names, as in *Bovey Tracy*, *Charlton Musgrove*, *Drayton Cerne*, *Littleton Panell*, *Melton Mowbray*, and *Stapleford Tawney*. These places are named respectively for Eva de Tracy, Richard de Mucegros, Henry de Cerne, William Paynel, Roger de Mowbray, and Richard de Tauny. The Norman names in turn often developed from French place-names: for example, Roger de Mowbray came from *Montbray*. Where the Normans gave names of their own, they were mainly evaluative, many based on Old French *beau*, *bel* (beautiful, fine), as in *Beaulieu* beautiful place, *Beaumont* fine hill, *Beachy Head* fine headland (with English *head* added later), *Belper* beautiful retreat, *Belsize* fine seat, *Belvoir* fine view. Other names include *Devizes* boundaries, *Fountains Abbey*, *Haltemprice* high enterprise (referring to the building of a monastery), *Malpas* bad step (that is, a difficult passage), *Pontefract* broken bridge, and *Richmond* strong hill. *Beaumont* in Essex is a deliberate improvement on the earlier *Fulepet* (foul pit).

**Modern English.** Place-names in what can be regarded as Modern English date from c.1500, and include: *Camberley*, from earlier *Cambridge Town* and *-ley* as in nearby *Frimley*, etc.; *Coalville*, from its colliery; *Devonport*, originally *Plymouth Dock*; *Maryport*, for the wife of its founder; *Nelson*, for Admiral Nelson's victory over the French at Trafalgar; *Newhaven* new harbour; *Peacehaven*, to mark the end of the First World War; *Peterlee*, a new town, for a local trades union leader; *Raynes Park*, for a local landowner, *Southsea*, for Henry VIII's 'south sea

castle'; *Telford*, a new town, for the engineer Thomas Telford; *Tunbridge Wells*, for the nearby springs, discovered in 1606, with the spelling altered to distinguish it from nearby *Tonbridge*; *Waterlooville*, for Wellington's victory over Napoleon at Waterloo; *Westward Ho!*, for Charles Kingsley's novel. Most new towns, however, together with new counties and administrative regions formed as a result of local government reorganization in 1974 were given borrowed or revived historic names, such as the river names used for the new counties of *Avon*, *Humberside*, *Merseyside*, and *Tyne and Wear*.

A special type of modern name arises from *back-formation*, in particular that of a river named after the town standing on it. Well-known examples include the *Cam* after *Cambridge*, *Chelmer* after *Chelmsford*, *Chelt* from *Cheltenham*, *Rother* from *Rotherbridge*, and *Wandle* from *Wandsworth*. Such names were frequently devised by 16c map-makers and topographers and replace earlier names: for example, the *Rother* was earlier the *Shire*, and the *Mole* was the *Nymet*. Some well-known London districts have post-1500 names, such as *Barons Court*, *Camden Town*, *Earls Court*, *King's Cross*, *Pimlico*, *Swiss Cottage*, and *White City*, and similar names can be found in many cities. They often arise from a particular individual or building, or commemorate an event, such as London's *Maida Vale*, named after the battle of 1806 in which Sir John Stuart defeated the French in Maida, in southern Italy. See CORNWALL, PLACE-NAME. [NAME]. A.R.

**ENGLISH PLUS.** A pressure group formed in the US in 1985 to promote bilingualism and counter the drive by *US English* for an amendment to the constitution, making English the official language of the republic. The name means 'English plus one or more other language(s)'. See ENGLISH LANGUAGE AMENDMENT. [AMERICAS, MEDIA]. T.MCA.

**ENGLISH PRONOUNCING DICTIONARY**, short form *EPD*. A work of reference by the phonetician Daniel Jones, based on his *Phonetic Dictionary of the English Language* (1913). The *EPD* was published during the First World War by J. M. Dent (1917); it is one of the most influential ELT books ever published, is widely regarded as an institution, and is closely associated with the Department of Phonetics and Linguistics of U. College London, where Jones worked and where its revision has been maintained first by A. C. Gimson, then Susan Ramsaran. Revisions have appeared in 1924 (2nd edition: with supplement), 1926 (3rd: with revised introduction), 1937 (4th: enlarged and reset), 1940 (5th), 1944 (6th), 1945 (7th: with

supplement), 1947 (8th), 1948 (9th), 1949 (10th), 1956 (11th: enlarged and reset), 1963 (12th: with supplement and phonetic glossary; with corrections and revisions by Gimson in the 1964 reprint), 1967 (13th: enlarged and reset), 1977 (14th: reset, with revisions and a supplement by Ramsaran in 1988). The dictionary is a pronouncing glossary that lists words and names in Roman letters followed by their equivalents (with variants, where appropriate) in a phonemic transcription that uses the International Phonetic Alphabet to represent RP as a pronunciation model. There is an account in the introduction of the model and the notation. The 14th edition contains over 59,664 items (44,548 words, 15,116 names) in the main list and over 1,000 in the supplement. See JONES (D.), PHONETIC TRANSCRIPTION, PRONUNCIATION MODEL, PUBLIC SCHOOL PRONUNCIATION, RECEIVED PRONUNCIATION. [EUROPE, REFERENCE, SPEECH]. T.MCA.

**ENGLISHRY** [13c: from Anglo-French *englescherie*, from early forms of *English* and *-ry*]. (1) The condition or fact of being English, especially in the obsolete legal phrase *Presentment of Englishry*, providing proof that a slain person was English, to escape the fine for murdering a Norman. (2) Englishness: 'Our Englishry is often a shallow veneer. Scratch a Teuton, and you find an O'Shaughnessy' (*Westminster Gazette*, 21 Sept. 1894); 'The high romance, the doggedness, the talent for nonsense that are still, to the connoisseur of Englishry, staples of life in this drab, unhygienic island' (*Times Literary Supplement*, 26 Sept. 1958). (3) Obsolete: an English population, community, area, or quarter: 'The English law made treasonable any marriage of the Englishry with persons of Irish blood' (John R. Green, *A Short History of the English People*, 1882). Compare IRISHRY, WELSHRY. [EUROPE, NAME]. T.MCA.

**ENGLISH-SPEAKING UNION**, short form *ESU*. A non-political and voluntary worldwide organization whose aim is 'improving understanding about people, international issues, and culture through the bond the English language provides'. It was founded in 1918, at the end of the First World War, by Sir Evelyn Wrench, an Englishman, Alexander Smith Cochran, an American, and associates from the British Isles, the US, the West Indies, and Australia. Under the chairmanship of Winston Churchill in the 1920s, it aimed at partnership between the UK, its self-governing dominions, and the US. The ESU is a confederation of national branches coordinated by a consultative International Council (formed in 1974) and a Commonwealth Board of Governors (since 1927). Its major divisions are the *English-Speaking Union of the Commonwealth* with 50 branches (headquarters in

London, shared with the International Council) and the *English-Speaking Union of the United States* with 80 branches (headquarters in New York). There are ESUs or representatives in Australia, Bangladesh, Belgium, Canada, Finland, Germany, Ghana, Hong Kong, India, Malaysia, Mauritius, Monaco, New Zealand, Nigeria, Norway, Pakistan, Sri Lanka, Switzerland, the UK (England and Wales, and Scotland), and the US.

For the purposes of the English-Speaking Union, an English-speaker is 'anyone who uses English either as a mother tongue or as a second language or foreign language. . . . Equally valuable are the democratic values of individual liberty and free institutions which are the cultural basis of the language.' Its activities fall into four categories: educational exchanges, the creation of informed public opinion, fostering English as a means of international communication, and organized hospitality. It set up the conference that led to the creation of Seaspeak in 1980; has helped to run the BBC & ESU Language School in London for about 20 years; organizes annual public-speaking and Shakespeare competitions (national and international), and the annual *Duke of Edinburgh's English Language Book Competition* (started in 1978 and designed to find new ideas in the field of English language teaching). The ESU offers travel awards, scholarships, fellowships, and book and literacy programmes, and organizes conferences, seminars, lectures, and summer schools. The ESU of the Commonwealth publishes a quarterly newspaper and a journal. In the US, the San Francisco branch has sponsored the publication of *The State of the Language* (US publisher, the University of California Press; UK publisher, Faber), related collections of essays about English published in 1980 and 1990. Although the ESU's interest in the promotion of English and the maintenance of standards of usage is expressed through competitions and sponsored activities rather than examinations, it has been closely associated with attempts to simplify and rationalize EFL examinations by means of the *Framework Project*. This has set up a nine-point scale of English-language achievement into which existing tests have been fitted: see Brendan J. Carroll & Richard West, *ESU Framework: Performance Scales for English Language Examinations* (Longman, 1989). The ESU does not propose any kind of English as a norm, nor does it adopt any prescriptive position with regard to usage. See EXAMINING IN ENGLISH, FABER, SEASPEAK. [AMERICAS, EUROPE, MEDIA]. T.MCA., J.A.

**ENGLISH STUDIES**. A term for the academic study and teaching of English, often primarily

literary but also covering the language, institutions, life, and culture of English-speaking areas, especially England, the UK as a whole, the US, all English-speaking North America, or (increasingly) the entire English-speaking world. Such studies may include aspects of linguistics, philology, literary criticism, semiotics, media, and the communication arts, a distinction sometimes being made between medieval language and literature and *Modern English Studies*. Further subdivisions are possible, depending on the model followed (such as transformational-generative grammar or systemic linguistics) and the level or branch studied (such as phonology, syntax, semantics, or dialectology). Thousands of people throughout the world are currently engaged in the systematic academic study of English: for example, there were in the late 1980s in the UK and Eire over 1,600 scholars in 71 institutions claiming English Studies (the vast majority) or Celtic Studies as their field: see bibliography below. Scholars of English are often consulted on practical issues, such as the framing of policies and recommendations regarding language teaching (as for example in the 1988 *Kingman Report* on the teaching of English in schools in England and Wales), or are asked to contribute to programmes aimed at codifying, comparing, and translating languages (especially in regions or situations where English is in contact with other languages). Their work may take the form of dictionaries, dialect atlases, phonetic guides, and pedagogical grammars, and their interests may be represented by regional, national, and international associations. The results of their research may be published in such periodicals as *The Review of English Studies: A Quarterly Journal of English Literature and the English Language* (Oxford University Press) and *English Studies: A Journal of English Language and Literature* (Swets & Zeitlinger BV, Amsterdam).

**ENGLISH TEACHING.** See ELT, LANGUAGE TEACHING, TEACHING ENGLISH, TEFL, TESOL, TESL, TESOL.

**ENGLISH TEACHING FORUM**, short form *Forum*. A quarterly journal for teachers of EFL/ESL, founded in 1963 and published by the USIA (United States Information Agency). Its first editor was Elizabeth Sadler (1965-75), and its present editor is Anne C. Newton. The *Forum* is distributed to teachers in 130 countries through the US Information Service and US embassies, and current circulation is some 120,000 copies. In some countries it is sold, in others it is free, and in the US it is available on subscription through the US Government Printing Office in Washington, DC. The journal consists mainly of articles from readers worldwide on methods, techniques, and ideas useful in the classroom, complemented by commissioned articles and editorial matter, including questions and answers about grammar, a vocabulary and idioms page, and a 'lighter side' with puzzles and humour. It is produced in-house on a Macintosh desktop publishing system. See UNITED STATES INFORMATION AGENCY. [AMERICAS, EDUCATION, MEDIA]. T.MCA.

**ENGLISH TODAY**, full title *English Today: The International Review of the English Language*. Short form *ET*. A quarterly founded in 1984 as a forum for the discussion of English throughout the world. Published by Cambridge University Press, it seeks to blend the styles of academic journal and popular magazine, including scholarly papers, news, reviews, letters to the editor, and such lighter features as word games and examples of neologisms. Contributors come from many professional and national backgrounds, and *ET* follows a policy of publishing their material in either BrE or AmE orthography and, within limits, the conventions a contributor needs in order to make a particular point (including kinds of reformed spelling). The Editor is Tom McArthur, the Consulting Editor David Crystal. The readership is drawn from professionals and amateurs, linguists and literary

scholars, the media and publishing, and native and foreign users of the language. It is read in some 50 countries worldwide. Compare ENGLISH WORLD-WIDE, VERBATIM, WORLD ENGLISHES. See ETYMORPHS. [EDUCATION, EUROPE, MEDIA, VARIETY]. T.MCA.

**ENGLISH WORLD-WIDE**, short form *EW*. A biannual scholarly journal concerned with varieties of English around the world. Founded in Germany in 1980 and originally published by Julius Gross, Heidelberg, it has since 1982 been published by John Benjamins, Amsterdam and Philadelphia. It is edited by Manfred Görlach, Professor of English at the U. of Köln, Germany. To date, *EW* has published over 80 articles: 11 relating to Africa, 6 to Australasia, 3 to Canada, 12 to the Caribbean, 10 to England, 5 to Ireland, 6 to Scotland, 5 to South Asia, 6 to South and East Asia, 6 to the South-West Pacific, and 6 to the US, as well as 11 articles on general language topics and comparative regional studies. Dialects, pidgins, and creoles have been included. General topics include: English as an international language; the social significance of English; attitudes, evaluations, and domains associated with English; emerging standards and usage problems; types of texts and their uses in the media, in education, and in creative writing; interference and code-mixing. The review and notices sections have covered some 300 books. Compare ENGLISH TODAY, VERBATIM, WORLD ENGLISHES. See VARIETIES OF ENGLISH AROUND THE WORLD. [EDUCATION, EUROPE, MEDIA, VARIETY]. T.MCA.

**ENGLISHY** [1870s]. An informal term for anything especially ethnically English: 'such Englishy faces' (W. D. Howells, *Chance Acquaintance*, 1873); 'The English teacher [in Canada] needs much tact, for if she is suspected of being "Englishy", there will not be much reward of gratitude from the parents' (*Times Educational Supplement*, 26 Apr. 1930). Compare WELSHY. [EUROPE, NAME]. T.MCA.

**ENG LIT**, also **Eng. Lit.** [1850s]. The short form of *English Literature* as a subject taught in educational institutions, used formally as an official abbreviation, and informally and often wryly to refer to and comment on the subject, its teachers, and its students: 'Here, surely, are the makings of some future Ph D thesis: "The fictionalisation of Margaret Thatcher in popular literature, 1979-1992." No doubt some enterprising Eng Lit department will one day run a course on it' (Robert Harris, 'We are a heroine', *Sunday Times*, 8 Apr. 1990); 'We are so respectful of Eng. Lit. that it is startling to come on someone like Ober, who has ambled behind the scenery

with a flash-light' (Byron Rogers, reviewing William Ober's *Bottoms Up and Boswell's Clap* in: *The Times*, 25 Mar. 1990). See ENG LANG (AND LIT), ENGLISH LITERATURE, POTTER. [LITERATURE, NAME]. T.MCA.

**ENIGMA**. See RIDDLE.

**ENJAMBEMENT** BrE, **enjambment** AmE [19c: from French *enjambement* striding over, projecting, from *jambe* leg]. Syntax that runs over the end of a line of verse and reaches a pause within the next line, as in:

Deep in the seas, deep in the southern seas  
The coral palace of Te Tuna lies  
Beneath an ocean. Far above, the breeze . . .  
(Richard Adams, *The Legend of Te Tuna*, 1982)

The tension in verse between metrical and syntactic pauses is a source of pleasure for many readers of poetry and can be a challenge to reciters. End-stopping and enjambement work together to create a distinctive rhythm, especially in a long poem. Compare END-STOPPED LINE. [LITERATURE]. R.C.

**ENTRY** [13c: from Old French *entree*, Latin *intrata*, past participle of *intrare* to enter]. The text provided under a heading in a list, from a long article in an encyclopedia to a one-line item in an index, bibliography, telephone directory, almanac, chronology, account ledger, or other source, usually one in which the information is arranged in some systematic order. In terms of dictionaries, usage varies and is occasionally ambiguous. The main word, phrase, abbreviation, or alphanumeric symbol that appears flush left in alphabetical order in a general dictionary is sometimes called a *headword*, sometimes a *vocabulary entry* or *main entry*, sometimes an *entry*. The ambiguity arose because of the usage in US dictionaries. In 1934, the Department of Treasury (through which, at the time, governmental supplies were purchased) met with interested publishers to establish a standard system for assessing the amount of information contained in a dictionary. The system that they adopted used the term *entry* for each of the following categories of listed information:

(1) Each *headword* (or *vocabulary entry*) that has its own homograph number, each *change in part of speech*, each *inflected form*, each *idiom, phrase, or expression* (usually set off in bold type or in some other distinctive style) that has one or more definitions, each *run-in* (or *run-on*), that is, a word, shown at the end of a dictionary article, that consists of the headword with an added suffix that changes the headword into an adverb, adjective, or noun with obvious meaning, such as *-ly, -ive, -ness*, etc.

(2) *List words*, those words that many dictionaries merely list (without pronunciation, definition, or etymology) to show their spelling and give some credence to their existence, such as those with prefixes that modify their meanings to something obvious, like *re-*, *un-*, *under-*, *self-*, *super-*, *mis-*, etc. attached to words that are treated elsewhere.

(3) Each *variant spelling* that is not given its own headword treatment (because its spelling would place it, alphabetically, far from the preferred spelling form), like the form *esthetic* for *aesthetic*; and *hidden entries*, which are (usually) multi-word forms that are defined within a related entry but are not listed as headwords, as the hidden entry *regular hexahedron* under the entry for *hexahedron* in the *Collins English Dictionary*.

Because of the differences in the styles in which information is presented, there is considerable variation in the methods by which *entries* are counted. For example, *The Concise Oxford Dictionary* lists compounds formed with *off-* as the initial element (like *off-glide*, *off-key*, *off-line*, *off-load*, etc.) under *off*, while other dictionaries might give each its own headword status.

Owing to the influences of American lexicographical publishing practice, counting 'entries' in this way has been adopted by publishers (and lexicographers) in other countries, but the term almost always needs disambiguation. *The American College Dictionary* (New York, 1947) was advertised as containing 'more than 132,000 entries', but in fact contained about 75,000 headwords; *Webster's Third New International Dictionary* (1961), which, excluding *Addenda*, claimed some 450,000 entries (and includes in the count regular inflections of nouns, verbs, adjectives, and adverbs, rarely shown in other dictionaries), contains about 285,000 headwords. See CITATION, DICTIONARY, HEADWORD. [REFERENCE]. L.U.

**EOP**, short for *English for Occupational Purposes*. English taught to foreign learners with particular occupations. Students' needs range from being able to read manuals to conducting negotiations. Typical students are mature, employed, and without high expectations of themselves as language learners. They usually understand and accept the necessity of English and tend to be volunteers. Because the authenticity of teaching materials is paramount, there is generally collaboration between teachers and specialists when preparing them. See ESP, TEFL. [EDUCATION]. P.S.

**EPANALEPSIS** [16c: through Latin from Greek *epanálepsis* taking up again. Stress: 'ep-

a-na-LEP-sis']. In rhetoric, a word or phrase repeated like a refrain: 'Cannon to right of them / Cannon to left of them, / Cannon in front of them / Volley'd and Thunder'd' (Tennyson, *The Charge of the Light Brigade*, 1854). See ANADIPLOSIS, REFRAIN, REPETITION. [STYLE]. T.MCA.

**EPANAPHORA**. See ANAPHORA.

**EPENTHESIS** [17c: through Latin from Greek *epénthesis*, putting in. Stress: 'e-PEN-the-sis']. The insertion of a sound or letter into a word or phrase. An epenthetic vowel can be added to break up a consonant cluster, as in Hiberno-Irish 'fillim' for *film*. Such a vowel often has the value of schwa. An epenthetic consonant can be added through being near another: /p/ close in articulation to both /m/ and /t/, as with *empty* (Old English *æmtiġ*); /b/ close in articulation to /m/, as with *b* in *nimble* (Middle English *nemel*). In RP, epenthetic /r/ is typically added between words that end and begin with certain vowels: *Shah'r of Persia*. Epenthetic vowels are common in non-native forms of English, to handle consonant clusters not found in the speaker's first language, as in 'sakool' for *school* among Punjabi speakers of English and 'iskool' among Kashmiris. See APTRONYM, B, D, INTRUSIVE R, L, LINKING R, N, P, PARASITIC, PARTICIPLE, SOMERSET (BRISTOL L), SYLLABLE, T. [SPEECH]. T.MCA., G.K.

**EPIC** [16c: from Greek *epikós*, from *épos* speech, tale, song, epic poem/poetry; the term *epos* is sometimes so used in English]. (1) A long narrative poem usually divided into books or parts and generally mythic or religious in its theme. It tells a tale of great actions and events that are usually important to a nation or culture, whence the term *national epic*: Homer's *Iliad* in Greece, Virgil's *Aeneid* in Rome, Vyasa's *Mahabharata* in India, *Beowulf* in Anglo-Saxon England, and Milton's *Paradise Lost* in 17c England. The genre is sometimes divided into *natural* or *primary epic*, which is oral or close to oral in style, and *literary* or *secondary epic*, which is literary and intended for silent reading rather than singing, reciting, and listening. (2) By extension, a novel, motion picture, or other work conceived or created on a comparable scale: *Tolstoy's epic 'War and Peace'*, a *Hollywood epic*. (3) The adjective for such a poem or any work or event compared to it; heroic, majestic: *an epic poem, an epic novel, an epic film, the epic events of 1989*. See BEOWULF, COMMUNICATIVE SHIFT, GENRE, HOMERIC SIMILE, MILTON, MUSE, NARRATIVE POETRY/VERSE, ORATURE, POETRY, SANSKRIT, SPENSER. [LITERATURE, MEDIA]. T.MCA.

**EPIC SIMILE**. See HOMERIC SIMILE.

**EPIGRAM** [15c: from French *épigramme*, Latin *epigramma*, Greek *epigramma* ('written on') an inscription]. A brief, witty observation about a person, institution, or experience. Originally only in verse, epigrams now include prose and spoken remarks. They make a point succinctly and may convey a paradox or the inversion of a hackneyed sentiment. A 16c example is Sir John Harington's 'Treason doth never prosper; what's the reason? / For if it prosper, none dare call it treason.' See SAYING, WILDE. [LITERATURE, STYLE]. R.C.

**EPIGRAPH** [17c: from Greek *epigraphē* inscription]. (1) An inscription on a building, wall, or the base of a statue. (2) A short quotation prefixed to a book, chapter, or other text and suggesting its theme. The use of epigraphs on title pages was common in the 16c. The custom was adopted by novelists and became fashionable in the 19c, when each chapter might be headed by a quotation from English or other literatures. Some writers invent their own epigraphs, giving them plausible sources: for example, Rudyard Kipling for each story in *Plain Tales from the Hills* (1888). See MOTTO, QUOTATION. [LITERATURE]. R.C.

**EPILOGUE**, also AmE **epilog** [14c: from Latin *epilogus*, Greek *epilogos* afterword]. (1) A term for both the speech by an actor at the end of a play and the actor delivering the speech. The form arose in Greece and was common in English plays, 16-18c, usually in verse but sometimes in prose. Rosalind in Shakespeare's *As You Like It* (c.1599) begins, addressing the audience: 'It is not the fashion to see the Ladie the Epilogue: but it is no more vnhandsome, then to see the Lord the Prologue.' (2) The concluding part of a literary work, such as a novel, or of a motion picture or television play, often serving to knit up loose ends in the plot or provide information about later events, and often specifically entitled 'epilogue'. See PLOT, PROLOG(UE). Compare APPENDIX, POSTSCRIPT. [LITERATURE, MEDIA]. T.M.C.A., R.C.

**EPISODE** [17c: from Greek *episōdion* ('an entering-in') an addition, used especially for a section of a drama that carried part of the main action, originally one of a number of interludes inserted between odes sung by a chorus]. (1) A section or scene in a narrative, usually well developed in its own right and an integral part of the story line. (2) In motion pictures, radio, and television: one of the sequential productions that make up a serial or series. (3) By extension, an incident or event in a series of incidents or

events. See CHAPTER, NOVEL, SERIAL, SERIES. [LITERATURE, MEDIA]. T.M.C.A.

**EPISTLE**. See LETTER<sup>2</sup>.

**EPISTOLARY NOVEL**. See LETTER<sup>2</sup>, NOVEL.

**EPITAPH** [14c: through French from Latin *epitaphium*, Greek *epitáphion*, from *epitáphios* *lógos* speech written over a tomb, funeral oration]. A commemorative piece in prose or verse on a tombstone or monument. Epitaphs were common in the Greek and Roman world, and the custom was taken into Christianity. British epitaphs were at their most elaborate in the 18-19c. Whereas some old epitaphs have charm and wit, the current fashion is a factual record and perhaps a Biblical text. A 17c epitaph prematurely composed for King Charles II by John Wilmot, Earl of Rochester, runs:

Here lies our sovereign lord the King  
Whose promise none relies on;  
He never said a foolish thing,  
Nor ever did a wise one.

By and large, however, epitaphs are complimentary. As Johnson observed: 'In lapidary inscriptions a man is not upon oath.' Compare EULOGY. [LITERATURE, STYLE]. R.C.

**EPITHET** [16c: from French *épithète*, Latin *epitheton*, from the neuter form of Greek *epíthetos* put or added on]. (1) An expression added to a name as a characterizing description, before it in *glorious Devon*, after it in *Richard Crookback*, with a definite article in *William the Conqueror*, *Scotland the Brave*. (2) Also *Homeric epithet*, *poetic epithet*. A formulaic phrase containing an adjective and a noun, common in epic poetry: *grey-eyed Athene*, *rosy-fingered dawn*, the *wine-dark sea*. (3) A word or phrase that substitutes for another: *man's best friend* for *dog*, *the water of life* for *whisky*. (4) A word or phrase used to abuse and dismiss: *bastard*, *bugger*, *shit*, especially when used directly (*You shit!*, *You son of a bitch!*) or as a description (*The silly old cow!*). (5) Such a phrase as *that idiot of a lawyer* and *a devil of a doctor*. (6) An adjective or other descriptive word. See ANTONOMASIA, HYPALLAGE, SO(U)BRIQUET, SWEARING. [NAME, STYLE]. T.M.C.A.

**EPITOME** [16c: from Latin *epitome*, Greek *epitomē* ('cut on') an incision, cutting, abridgement. Stress: 'e-PIT-o-mi']. (1) Someone or something that represents a type or class, especially in a positive way: *She's the very epitome of good taste*. (2) Now rare: a condensed account or abstract of a text, discussion, etc. The verb *epitomize* is used with both senses: *to epitomize good taste* and less commonly *to epitomize an argument*. See ABRIDG(E)MENT. [STYLE, WRITING]. T.M.C.A.

**EPONYM** [19c: from Greek *epōnumos* named on]. (1) A personal name from which a word has been derived: *John B. Stetson*, the 19c US hatter after whom the *stetson* hat was named. (2) The person whose name is so used: The Roman emperor *Constantine*, who gave his name to *Constantinople*. (3) The word so derived: *stetson*, *Constantinople*. The process of *eponymy* results in many forms: (1) Such simple eponyms as *atlas*, which became popular after the 16c Flemish cartographer Gerardus Mercator put the figure of the titan Atlas on the cover of a book of maps. (2) Compounds and attributive constructions such as *loganberry* after the 19c US lawyer *James H. Logan*, and *Turing machine* after the 20c British mathematician *Alan Turing*. (3) Possessives such as *Parkinson's Law* after the 20c British economist C. Northcote Parkinson, and the *Islets of Langerhans* after the 19c German pathologist Paul Langerhans. (4) Derivatives such as *Bowdlerize* and *gardenia*, after the 18c English expurgator of Shakespeare, Thomas Bowdler, and the 19c Scottish-American physician Alexander Garden. (5) Clippings, such as *dunce* from the middle name and first element of the last name of the learned 13c Scottish friar and theologian *John Duns Scotus*, whose rivals called him a fool. (6) Blends such as *gerry-mander*, after the US politician Elbridge Gerry (b.1744), whose redrawn map of the voting districts of Massachusetts in 1812 was said to look like a salamander, and was then declared a *gerry-mander*. The word became a verb soon after. Works on eponymy include: Rosie Boycott's *Batty, Bloomers and Boycott: A Little Etymology of Eponymous Words* (Hutchinson, 1982) and Cyril L. Beeching's *A Dictionary of Eponyms* (Oxford University Press, 1988). See -ONYM, WORD-FORMATION. [NAME, WORD]. T.MCA.

**EPSILON** [From Greek *è psilón* bare or simple *e*]. Also **Greek e**. The fifth letter of the Greek alphabet: upper case *E*, lower case *e*. Modified versions of the lower-case form have three further symbolic uses: in phonetics, the sign for Cardinal Vowel 3 in the IPA system (that is, the value of short *e* in the English word *net* /net/); in mathematics, the sign either for set membership or for the representation of a quantity that is either very small or close to zero. See ALPHABET, E, LETTER<sup>1</sup>. [SPEECH, WRITING]. T.MCA.

**EQUIVOCATION** [14c: from Latin *aequivocatio/aequivocationis* having equal voices or meanings, roughly translating Greek *hōmonymia* the same name]. (1) Ambiguity and uncertainty that arise from unclear meaning. An equivocal usage can be interpreted, according to context, in two or more ways: for example, the ethnic name *Brit* may be pejorative (*Brits out!* in

Northern Ireland), casual and neutral (*Lots of Brits do this*), or amiable (*Nice to see so many Brits in the States this year*). Because of such contextual variation, people can become uncertain about the basic connotations of such a usage, and correspondingly cautious in using it on any occasion. (2) Action taken to evade an issue, as when someone says, *Well, y'know, it takes all sorts to make a world*, and avoids assigning praise or blame. (3) Also *equivocatio*. In logic, the use of an ambiguous expression in one sense in one premiss and another sense in another premiss or in the conclusion of a syllogism: *Everybody needs to feel safe: insurance provides safety: so everybody needs insurance*. The equivocation lies in the meaning of *safe*(ty). Compare AMPHIBOLY. [LANGUAGE, STYLE]. T.MCA.

**ERIN** [From the dative form of *Eire* as in *Bás in Eirinn* Death in Ireland: that is, May you be lucky enough to end your exile and die in Ireland]. A poetic name for Ireland, given currency by such popular songs as *Let Erin remember the days of yore*. [EUROPE, NAME]. L.T.

**ERRATUM (SLIP)**. See PROOF-READING.

**ERROR** [13c: from Latin *error/erroris* going astray, from *errare* to wander, stray, err: compare *erratic*]. A mistake; a deviation from accuracy, correctness, or the truth; belief in something untrue or held to be untrue; a mistaken view; wrongdoing; (original) sin. This continuum of senses derives from the single metaphor of losing one's way or straying from the path (Biblically, of righteousness). It has at times made possible the association (strong or weak) of errors in using and learning a language with moral and religious shortcomings, especially in institutions that have interpreted teachings on sin, salvation, and education of the young with particular rigour. Compare CORRUPT. See ERROR ANALYSIS, EXAMINING IN ENGLISH, MALAPROPISM, MISTAKE, PROOF-READING, SLIP OF THE TONGUE. [EDUCATION, USAGE]. T.MCA.

**ERROR ANALYSIS** [1960s]. In applied linguistics, the study of patterns of error. Analysts have proposed six kinds of error, arising from inaccurate learning, inadequate teaching, wrong guessing, poor memory, the influence of the mother tongue, and the process of learning. In 1967, S. Pit Corder in the UK distinguished between a *mistake* (a flaw in performance: a casual breakdown in speech or writing) and an *error* (a failure in competence: a systemic fault). In this view, errors are part of the learner's *transitional competence*. In 1972, Larry Selinker in the US

coined the term *interlanguage* for an intermediate state of knowledge of a language; a person's interlanguage develops through successive approximations to the target, starting with the dominance of the mother tongue and ideally ending in native-like fluency. Because many learners cease to develop beyond a certain point, their interlanguages are said to *fossilize* at various stages. See ERROR, INTERFERENCE, INTERLANGUAGE, LANGUAGE TEACHING, MISTAKE. [EDUCATION, LANGUAGE]. P.S., T.MCA.

**ERSE** [14c: a Scots variant of *Irish*, originally the term for Scottish Gaelic and its speakers. Compare INGLIS, IRISH, SCOTS]. A rare alternative name for Gaelic, used both neutrally and dismissively. It is rarely used in Ireland, where it may be regarded as offensive. In the 18-19c, it was an English literary term for both Scottish and Irish Gaelic, and for this reason is sometimes thought to be the correct term. See GAELIC. [EUROPE, LANGUAGE]. T.MCA.

**-ESE** [From Old French *-eis* (Modern *-ais, -ois*) and cognate with Italian *-ese*, from Latin *-ensis* belonging to]. A suffix added to nouns and adjectives. Its primary use is the identification of nationalities, languages, and the like, as in *Chinese, Congolese, Japanese, Javanese, Viennese, Vietnamese*, but a significant secondary use is the labelling of styles or registers of English. The primary use is neutral, but the secondary use is often pejorative, associated with individuals whose style is distinctive and idiosyncratic (*Carlylese, Johnsonese*), groups whose stylistic tendencies are seen as undesirable (*academese, bureaucratese*), language varieties considered deficient or peculiar (*Brooklynese, Pentagonese*), and the media and technology (*cablese, computerese*). Nonce and stunt creations are common, such as *UNese*, a diplomatic style said to be used in the United Nations Organization. See ACADEMESE, AGGLOMERESE, AMERICANSE, AUSTRALIANESE, BROOKLYNESE, BUREAUCRATSE, CABLESE, CARLYLE (CARLYLESE), COMMERCIALESE, COMPUTERESE, HEADLINESE, JOHNSONESE, JOURNALESE, LEGALESE, NEW YORKESE, OFFICIALESE, SOCIOLOGESE. Compare -ISM, LINGO, -SPEAK, TALK. [STYLE, VARIETY, WORD]. T.MCA.

**ESH** [Probably 20c: blending the name of the letter *s* (ess) with the sound of the digraph *sh*]. In phonetics, an elongated form  $\int$  of the symbol *s*, that serves in IPA to represent the voiceless palato-alveolar central laminal fricative, a sound represented in English by the digraph *sh* as in *shape* and *rush*. The form was used by Isaac Pitman in 1845 with this value in his phonotypic alphabet. See ALPHABET, LETTER<sup>1</sup>, LONG S. [SPEECH, WRITING]. T.MCA.

**ESKIMO**. See INUIT.

**ESL**. See ENGLISH, EXAMINING IN ENGLISH, TEACHING ENGLISH, TESL.

**ESP**, short for *English for Specific/Special Purposes*. The English language taught for professional, vocational, and other specified purposes. Originating in courses of business English for foreign learners, ESP developed in the 1960s in response to demands for courses geared to practical and functional rather than educational and cultural ends. Whereas general EFL/ESL teaching offers courses to schoolchildren and to adults of mixed ages and backgrounds, ESP addresses learners with a common reason for learning, such as the English of air traffic control or of dyestuff chemistry. Planning an ESP course starts with a *needs analysis*, to establish the limits of the language learners' needs. Courses and materials are then designed to teach all and only that subset of English. Success appears to depend on the quality of the needs analysis, the authenticity of the materials used, and the sensitivity of the teacher to the maturity and status of the students. Although the development of such language teaching has been mainly in English, it is of growing importance for other languages as part of *languages for specific purposes (LSP)*. A recent work on the subject is Pauline Robinson's *ESP Today: A Practitioner's Guide* (New York & London: Prentice Hall, 1991). Within ESP, there are further divisions: see EAP, EOP, LIBRARY LANGUAGE, TEFL. [EDUCATION]. P.S.

**ESPERANTO** [1888: in Esperanto it means 'one who hopes' from Latin *sperare* to hope]. An artificial language invented for universal use by the Polish oculist Ludwig Lazarus Zamenhof (1859-1917), and the most successful of such languages. His first publication was in Russian, *Mezh-dunarodnyy yazyk: predislovie i polnyy uchebnik* (An international language: introduction and complete manual, 1887), written under the pseudonym 'Doktoro Esperanto'. In 1905, he established the canonical form of the language in *Fundamento de Esperanto*. Because its structure and vocabulary derive from the major European languages, Esperanto is Indo-European, sometimes described as a planned pidgin of the Romance and Germanic languages (with Greek and Slavonic admixtures).

The word order is usually similar to English: *Rozo estas floro* A rose is a flower; *Rozoj estas floroj* Roses are flowers; *La besto estis kato* The animal was a cat. The grammar is inflectional, with a range of affixes: nouns in *-o* (*rozo* rose, *besto* animal), adjectives in *-a* (*bona* good, *forta*

strong), plurals in *-j* (*bonaj rozoj, fortaj bestoj*), indicative forms of the verb in *-as* for the present tense, *-is* for the past, and *-os* for the future. The vocabulary is eclectic: *amiko* friend (from Latin *amicus*), *kaj* and (from Greek *kai*), *havas* have, *jes* yes (from English). The spelling is phonetic, and stress in polysyllables is on the next-to-last syllable. Accents vary according to speakers' backgrounds. The extensive literature consists of both translations and original works. A representative sentence is: *Zamenhof arde deziris ke lia inventita lingvo fariĝu la dua lingvo de la mondo* Zamenhof fervently wished that his invented tongue would become the world's second language (from a bilingual text in *Time*, 27 July 1987).

Esperanto is promoted and regulated by the *Universal Esperanto Association*, which claims 10–15m users worldwide. Esperantists refer to it as a *planned language* and to the world's natural languages as *ethnic languages*. They argue that it takes far less time to become competent in Esperanto than in English and that it is a more efficient and fairer international medium. The British phonetician and Esperantist John C. Wells notes:

It is more efficient, because it is easier to learn (grammatically completely regular, no exceptions, regular spelling, virtually no idioms). It is fairer in that it is not the native language of any country or national group, so does not give enormous unjust advantage to the native English-speakers, which the adoption of English would. At most, one-tenth of the world's population speaks English as a first language: it is more equitable that everyone should learn a relatively easy second language (Esperanto) than that nine-tenths of the world should have to learn a relatively difficult one (English) (quoted in 'Bonvenon al Brighton', *EFL Gazette*, Jan. 1990).

In English, the term is sometimes used to refer to forms of expression that are international and/or artificial: 'Latin, the Esperanto of the Middle Ages and Renaissance' (*Westminster Gazette*, 1905); 'the special esperanto of *ciné-club* experts' (*Times Literary Supplement*, 1958). The name is also occasionally facetiously adapted: *Eurospeak Desperanto* a patois allegedly used by European Community bureaucrats; *Ozperanto* Esperanto in Australia. The extracted suffix *-anto* has a similar sense: *Euranto* a system of English spelt phonetically, proposed in the 1970s as the auxiliary language for the EC. See ARTIFICIAL LANGUAGE, BASIC ENGLISH, CHINA, COMPUTING, JESPersen. [EUROPE, LANGUAGE]. T.MCA.

**ESSA AND ASSA.** See SOUTH AFRICANISM.

**ESSAY** [16c: from French *essai* an attempt, from Late Latin *exagium*, ultimately from *exigere/exactum* to drive out, try, examine]. A piece of extended writing, usually in prose, ranging from

set-piece exercises in school to university dissertations in the *belles lettres* tradition. At first, an essay was a piece of writing that lacked finish or polish: 'an irregular or undigested piece' (Johnson, *Dictionary*, 1755), but at an early date there developed the contrary notion of the finished product, with the result that an essay in its highest form is now expected to be reflective, elegant, and philosophical. Both term and form were borrowed from French after the publication of Michel de Montaigne's *Essais* (1580), translated by John Florio (1603, 1613); the first major essayist in English was Francis Bacon, who adopted a pithy, epigrammatic style, each piece usually dealing with one topic (*Essays*, 1597, 1612, 1625). The form is also associated with the periodicals written and edited by Steele, Addison, Goldsmith, and Johnson in the 18c, though Pope's *Essay on Criticism* (1711) and *Essay on Man* (1733–4) were in verse. The essay flourished in the 19c, with such writers as Lamb, Hazlitt, Dickens, Matthew Arnold, and Henry James, and in the earlier 20c, with Shaw, D. H. Lawrence, T. S. Eliot, and Orwell. Such contemporary stylists as Anthony Burgess, Paul Johnson, Bernard Levin, and Gore Vidal continue the tradition as a form of 'higher journalism'. Reviews in essay form are the primary feature of *The New York Review of Books* and *The London Review of Books*. Because of the number of essays annually written by students, as exercises in literacy and organizing one's thoughts, the genre is perhaps the most common prose form ever developed. Compare ARTICLE<sup>2</sup>, COMPOSITION, MONOGRAPH, THEME, TRACT, TREATISE. [EDUCATION, LITERATURE, MEDIA, WRITING]. G.H.

**ESTHETICS.** See AESTHETICS.

**ETH**, also **eth**. In Old English, the letter *ð* or *ð*, used to represent both a voiced and an unvoiced apico-dental fricative (the *th* in both *these* and *three* in Modern English); in Modern Icelandic and IPA, the letter *ð*, used to represent a voiced apico-dental fricative (as in *these*). It originated in Old English as a crossed *d*. Its upper-case form is *Ð*. See ICELANDIC, LETTER<sup>1</sup>, THORN. [SPEECH, WRITING]. T.MCA.

**ETHNIC** [18c: from Latin *ethnicus*, Greek *ethnikós* national, from *ethnos* people, tribe, nation. An obsolete sense in English is 'heathen, pagan']. An adjective referring to a community whose members share or appear to share certain features, such as distinctive origin, culture, religion, and/or language: *ethnic Italians in Toronto*, *ethnic Chinese in New York*. The term became widespread in the 1970s–80s as a means by which

minority groups with such characteristics could be discussed in countries like the US and Canada. Such groups have often had special interests, needs, or aims: Vietnamese immigrants in the US requiring ESL classes, 'native' peoples in Canada seeking rights in a land in which they were once the sole inhabitants. Although the term serves principally to contrast such minorities with a 'mainstream' population, its use has prompted an awareness that everyone is in some sense ethnic. Defining *ethnicity* precisely, however, has proved formidable. There is no consensus among sociologists; many studies give no definition.

Common descent and kinship (actual or presumed) are usually taken to be central to ethnicity; it is, however, an involuntary matter, and one may or may not celebrate one's good fortune at having been born an X, especially where Xness results in persecution by or ridicule and disdain among Ys. In addition, patterns of thought and behaviour change over time, so that the practices of the sixth generation of Xs may be almost completely unlike those of the first, with which however a connection is felt and, for some Orthodox Xs, may be the most important thing in life. Although cultural content, geographical location, and language of daily use may change, some boundaries and some sense of 'groupness' can and often do persist for centuries, sometimes millennia. Objective boundary markers, such as language and culinary habits, are mutable, but ethnicity is felt as long as there are enough features at any time, even if only symbolic (such as the official use of Irish in the Republic of Ireland, or Highland Games as a point of focus in Nova Scotia, Canada). No single attribute is essential, except perhaps a conviction among enough members and enough others, identifying certain people as Armenians, Basques, Gaels, Gypsies, Jews, Latinos, WASPs, and so forth. *Ethnicity* would therefore seem to be membership of, or allegiance to, a group (large or small, dominant or subordinate) with which one has, or believes one has, or is believed by others to have, ancestral links. See AMERICAN LITERATURE, CULTURE, ETHNIC JOKE, ETHNIC NAME, INCLUSIVE LANGUAGE, RACISM, STANDARD. [LANGAUGE]. J.E., T.MCA.

**ETHNIC JOKE.** A joke turning on the alleged psychological and social characteristics of a particular nation or group, such as the Irish (for whimsical foolishness: 'The *Irish Times* published its £20,000 prize competition crossword today. For those who don't wish to take part, the answers are on page nine'), the Scots (for meanness: 'Whilst in London's West End tonight, a Scotsman died of starvation on the back seat of a Pay-as-You-Leave-Bus'), and the

Welsh (for quaintness and sentimentality: 'We'll take time out to meet Dai Evans, inventor of the Welsh boomerang. It doesn't come back, it sings about coming back'). All three jokes are from *The Two Ronnies*, a British TV comedy series in the 1970s-80s. The ethnic joke implies the superior stance of the casually mocking narrator, though it is well known that nations and communities often manufacture their own jokes and tell them among and against themselves. They may also tell jokes against sub-communities and subcultures: for example, the jokes told about the Irish are in turn told by the Irish about the inhabitants of Kerry, a south-western county widely regarded as rustic. See ABERDEEN JOKE, ETHNIC NAME, HUMO(U)R, IRISH BULL, IRISH JOKE, JEWISH JOKE, JOKE, NEWFIE JOKE, SCOTTISH JOKE. [STYLE]. W.N., T.MCA.

**ETHNIC NAME**, also **ethnic label** and, when pejorative, **ethnic slur**. A nickname for someone from a particular nationality, race, community, or culture. The spectrum of ethnic names in English ranges from more or less affectionate nicknames (such as *Jock* for a Scotsman, as used in England) through relatively neutral terms (such as *Brit* for someone British) through the use in affectionate abuse of terms that can otherwise be offensive (such as *Limey* and *Yank* between American and British friends), to highly offensive racial and/or religious slurs used without restraint, such as *dago* for someone of Spanish, Portuguese, or Latin American background, and *Yid/yid* for someone Jewish.

**Social and etymological categories.** Ethnic names in English generally fall into three social categories: (1) For peoples (and their languages) outside the English-speaking world: *Frog/Froggie*, someone from France or who speaks French; *Kraut*, a German; *Polack*, a Pole; *Wop/wop*, an Italian. (2) For national and regional identities within the English-speaking world: *Limey*, especially in the US, for someone British; *Pom(mie)/pom(mie)*, in Australasia, for someone from England; *Newfie*, in Canada, for a Newfoundlander. (3) Groups marked as different by habitat, race, language, and/or religion: *Wog/wog* for an Arab, South Asian, or black African; *Yid/yid* a Jew. Such terms also generally fall into four etymological categories: (1) Taken from personal names already common in the group concerned: *Jock*, a common Scottish pet form of *John*; *dago*, from the common man's name *Diego* in Spanish. (2) Taken from names associated with the entire group: *Abo*, an abbreviation of *Aborigine*; *Newfie*, an abbreviation of *Newfoundlander*; *Yid*, a word already meaning 'Jew'. (3) Referring to something seen as characterizing the group in question, such as complexion (*Coloured* and *Negro/nigger*), food (*Frog*

from the eating of frogs' legs in France; *Kraut* from the eating of *sauerkraut* in Germany), or an emblem (*Kiwi*, the name of a flightless New Zealand bird; *bogwog*, in which the element *bog* is associated with Ireland: whence 'an Irish wog'). (4) Formed as plays on words associated with the target group: *Pommy*, an abbreviation of *pomegranate*, in turn a play on *immigrant* (see below).

Once established, however, a name's origin is often lost to its users, with the result that etymologists may have difficulty tracing its provenance. Many ethnic names have uncertain or disputed etymologies, among them folk etymologies that may have been created as jokes: for example, *wog* has been explained as a pseudo-abbreviation of 'Westernized Oriental Gentleman' and, in the plural, as originally an official British acronym for 'workers on government service' in the Suez Canal area, who are said to have worn armbands emblazoned *WOGS*. Probably, however, *wog* is a clipping of *golliwog/gollywog*, the name for a soft cloth doll with a black face and fuzzy hair, taken in turn from the name of a doll character in *The Adventures of Two Dutch Dolls—and a Golliwog* (1895), a children's book by the US writer Bertha Upton, and illustrated by her sister Florence.

**Some individual names.** The terms listed below, drawn from all parts of the English-speaking world, have complex histories that variously illustrate the points made above:

*Canuck* [1820s: probably from Iroquoian *kanuchsa* someone in a *kanata* (village: compare CANADA), but possibly from Hawaiian *kanaka* man, through a pidgin used in the fur trade (in which Pacific Islanders were employed), and taken into French as *canaque*, perhaps being originally applied to French Canadian canoemen]. A nickname used informally and neutrally throughout Canada for a Canadian, but in the US Northeast referring pejoratively to French Canadians. In the 1900s, Emily Murphy, a feminist and the first woman magistrate in the British Empire, wrote under the pen name *Janey Canuck*. During the Second World War, when American comic books were not imported into Canada, Leo Bachle created the character *Johnny Canuck*, a hero who fought the Nazis single-handed.

*Coloured* BrE, *colored* AmE. (1) Having a skin other than white, and especially referring to someone either wholly black African in origin or part-European, part-African: 'Among the coloured circles of New Orleans' (Harriet B. Stowe, *Uncle Tom's Cabin*, 1850). (2) A person with such a complexion: 'A spot where fine young American coloureds can destroy themselves with female white trash' (C. MacInnes, *City of*

*Spades*, 1957). Although the term is currently regarded as offensive in the US, the organization for African-American civil rights continues to be known as the *National Association for the Advancement of Colored People (NAACP)*. (3) Also *Cape Coloured/Colored*. In South Africa, terms (adjective and noun: formerly with initial capital letter) for a person of mixed African and European descent: 'The new house will contain 163 members, four of them representing the newly separate Coloured electorate in the Cape' (*New Statesman*, 12 Apr. 1958); 'the few Indians and Coloureds who also study there' (*The Times*, 30 June 1955). The term is widely disliked in South Africa, and is currently often printed lower-case and in quotation marks (*the so-called 'coloured' area*), but no serious alternative designation has emerged to date.

*Honky* [1940s: AmE, perhaps a variant of *hunky*, a nickname applied, usually disparagingly, to immigrants from east-central Europe: perhaps from *Hungarian*, with devoicing of /g/]. Also *honkey*. A black American slang term for a white person and white people collectively: 'Blacks should "beware of honkies bearing gifts"' (*Black World*, Mar. 1971); 'Mary forcefully shoved him away. "Split, honky, you smell"' (Bernard Malamud, *Tenants*, 1971).

*Kaffir* [17c: from Arabic *kāfir* ('one who denies'), an unbeliever, probably through Portuguese or Dutch]. Also formerly *Cafar*, *Caffer*, etc. (1) Originally, a non-Muslim, an infidel: 'He was to drive the English Caffers out of India' (T. Munro, letter, 1799); 'Being Mahommedans, they gave the general name of Cafer (Liar, Infidel) to all the inhabitants of the coasts of southern Africa' (A. Plumtre, *Liechtenstein's South Africa*, 1812). (2) In southern Africa, a European term for any black African, often used neutrally in earlier times, but generally disparaging, increasingly resented, and now an actionable insult in South Africa. (3) An element in compounds in South African English, now mostly obsolete or obsolescent: *kaffir beer* beer made by blacks from grain sorghum, now known as *sorghum beer*; *kaffirboom* (Afrikaans -boom tree) the coral tree (now its usual name); *kaffir sheeting* coarse white cotton cloth, sometimes euphemized as *K-sheeting*.

*Limey* [1880s: a clipping of *lime-juicer*, a slang nickname for an English or British sailor, because such sailors were required by law to drink lime juice aboard ship in order to ward off the disease scurvy. British ships were also called *lime-juicers* and *limeys*, because of this practice]. An often disparaging and offensive name used especially by Americans (but also in the recent past by Australians, New Zealanders, and South

African whites), for someone from Britain, especially England: 'Guy always plays up the limey accent when he's in the States' (D. Jordan, *Nile Green*, 1973).

*Native* [14c: directly from Latin *nativus* born in a place, from *natus* born, replacing Middle English *natif*, from French]. Formerly, people could be native to many things: a place, a condition of life (such as slavery), a sign of the Zodiac, or a characteristic (such as a mole). By the 18c, *native* as an adjective most commonly referred to being born in a place and as a noun was increasingly pejorative: 'superior to the rest of the odious natives in the neighbourhood' (Mrs Hervey, *Mourtray Farm*, 1800). In the 17c, the term began to be applied to the indigenous people of colonized territories, and this sense was dominant in the 19c and early 20c: 'Whether the native swaggers or cringes, there's always something behind every remark he makes' (E. M. Forster, *Passage to India*, 1924). In the 19c, Australia was for a time an exception, the term referring to a locally born white as opposed to an Aborigine, but Australians duly adopted the general use: 'The native is a strange child, and he needs sympathetic dealing . . . Make a boy laugh and you can do anything with him' (G. Page, *Jill on the Ranch*, 1921). Shaw played with the usage in *On the Rocks* (1934):

*Sir Bemrose*. If a Conservative Prime Minister of England may not take down a heathen native when he forgets himself there is an end of British supremacy.

*Sir Arthur*. For heaven's sake don't call him a native. You are a native.

*Sir Bemrose* (very solemnly). Of Kent, Arthur: of Kent. Not of Ceylon.

In 1948, the observation was made in *The Times Literary Supplement* (Oct.): "'Native" is a good word that may not now be employed without giving deep offence.' In 1950, J. C. Furnas wrote sardonically: 'The meaning of "Native" can be approximated. It means: Darker. Productive of quaint handicrafts . . . Greedy for beads . . . and alcoholic drinks. Suspect of Cannibalism. Addicted to drum-beating and lewd dancing. More or less naked. Sporadically treacherous. Probably polygynous and simultaneously promiscuous. Picturesque. Comic when trying to speak English or otherwise ape white ways.' In 1988, the Afghan writer Idries Shah reversed the direction in *The Natives are Restless*, a book about Britain. Currently, the term is used with care, and the sense of 'born in a place' is strong again. There are, however, distinctive uses in various parts of the world. In the US, the term *Native American* has been widely promoted as a preferred term to *Amerindian*, (*American*) *Indian*, *Red Indian*, or *Redskin*. In Canada, the terms *Native Peoples* and *Native* are officially used for the original inhabitants of the land.

*Negro* [16c: through Spanish and Portuguese from Latin *niger* black]. A noun and adjective used generally and in anthropology until the late 20c for a member of various dark-skinned sub-Saharan peoples of Africa currently most commonly known as *black*, *Black*, *black African*, *Black African*, or *African*. Once common in expressions such as *American Negro* and continuing in *Negro spiritual*, the term is now generally disliked by Africans and people of African descent. Formerly, however, it was often used in a positive sense (and often in contrast to *black*, which was formerly considered pejorative). Such terms as *Negroophile* and *Negrophobe*, in use since the 17c, were at one time more or less neutral, like *Angloophile* and *Anglophobe*, but are now virtually obsolete, as is *Negroism*, a 19c AmE term for a social or linguistic usage typical of blacks and for the advocacy of equal rights for blacks, especially in the US.

*Nigger* [17c: from French *nègre*, Spanish *negro*, Latin *niger* black]. A word long used abusively or dismissively of any dark-skinned person: "'You're a fool nigger, and the worst day's work Pa ever did was to buy you," said Scarlett slowly . . . There, she thought, I've said "nigger" and Mother wouldn't like that at all' (Margaret Mitchell, *Gone with the Wind*, 1936). The word continues to give offence, although some blacks, especially in the US, use it as a form of affectionate abuse among themselves. It has sometimes posed problems in the titling of books: for example, Agatha Christie's detective novel *Ten Little Niggers* (1939), whose title refers to a reductive rhyme in which one after another ten statuettes are broken, was not regarded as distasteful when it was published (at least among whites), but has since been renamed both *And Then There Were None* and *Ten Little Indian Boys*; the original name appears, however, to be in the process of rehabilitation. The title of Joseph Conrad's novel *The Nigger of the 'Narcissus'* has not been affected by changes in attitude and taste since it first appeared in 1897.

*Paki* [1960s: a clipping of *Pakistani*, plural *Pakis*]. Also *Pakki*, *Pakky*. A pejorative and offensive name used mainly in Britain and Canada for someone from Pakistan in particular and South Asia generally, or of such descent. It is usually applied to immigrants, especially in BrE *Paki-bashing* and CanE *Paki-busting*, compounds referring to physical attacks on South Asians, and in BrE *Paki shop*, a corner shop run by South Asians.

*Pom*, also *Pommie*, *Pommy* [c.1910]. An equivocal term used mainly in Australia and New Zealand for someone from England, especially an immigrant. It became popular in 1912, especially in the columns of the Sydney *Truth*. It is

not, as is sometimes supposed, an acronym of *Prisoner of Her Majesty* or *Prisoner of Mother England*, but derives from word-play: *immigrant*, *jimmygrant*, *pomegranate*, *pommygrant*, *pommy*, *pom*. Of the fixed phrases *pommy bastard* and *whinging pom*, the first is often a term of affectionate abuse, the second is straightforwardly pejorative.

*Sassenach* [18c: From Gaelic *Sasunnach* English, Englishman, Englishwoman, from English *Saxon*]. An ethnic name formerly applied by the Highlanders of Scotland to the Lowlanders and the English (regarded as the same in race and language), and since the 19c commonly used more or less amiably by all Scots to refer to the English: *Next week the Scots take on the Sassenachs at rugby at Murrayfield*.

*Teuchter* [Origin uncertain: 'It seems to have come into oral currency about 1910 and to have been vaguely associated with Gaelic' (*Scottish National Dictionary*, 1931-76). Pronounced /'tju:xtɪr/. A disparaging term used by Lowland Scots to refer to a Highlander or Hebridean Islander, especially one who speaks Gaelic. In some places, it is applied by city people to any country person.

*Yid* [mid-19c: from Yiddish *yid* a Jew, from Middle High German *Jude*, Old High German *Judo*, Latin *Iudaicus*, Greek *Ioudaios*, Hebrew *Yehudah* Judah (the ancient Jewish kingdom). Cognate with *Jew*. The first known reference in English is in the 1874 edition of John C. Hotten's *The Slang Dictionary*]. An ethnic slur applied to someone Jewish, although it derives from a Yiddish word that is in itself in no way pejorative.

**Conclusion.** Generally, ethnic names are restricted to informal and slang usage and ethnic slurs are associated with strong emotion and often unexamined bias on the part of the user. The degree of acceptability or unacceptability of such a name may change over the years, and from group to group. Sometimes, names that cease for a time to be used because of their derogatory associations are later revived with positive associations, as for example *Black/black* (see entry). See ABORIGINES, (A)ESTHETICS, AFRICAN-AMERICAN, AMERICAN ENGLISH, AMERICAN LANGUAGES, ANGLO, AUSSIE, BLACK, BRIT, CALIBAN, CHICANO, ETHNIC, ETHNIC JOKE, FANAKALO, GRINGO, HILLBILLY, JOHN BULL, KITCHEN, KIWI, MCWORD, MESTIZO, MÉTIS, MULATTO, NATIVE LANGUAGE, NATIVE SPEAKER, NATIVE USER, NATIVISM, NATIVIZATION, NICKNAME, PAKEHA, RACISM, UNCLE SAM, WASP, WHITE, YANK(EE). T.MCA., M.F., W.B., W.S.R., A.J.A., S.S.

**ETHNOCENTRIC** [1900s]. (1) Centred on a particular ethnic community and its culture, language, etc., usually one's own and often in the belief that it is superior to all others. (2) Inclined to view other communities and cultures from the perspective or security of one's own, and therefore inclined to judge them by the norms or conventions with which one is familiar. See CENTRICITY, ETHNIC. [LANGUAGE, STYLE]. T.MCA.

**ETHNOLINGUISTICS** [1940s: a blend of *ethnology*, from Greek *éthnos* nation, *-logia*, study, and *linguistics*]. Also **anthropological linguistics**. A branch of linguistics that studies language and the part it plays in the life and culture of such groups as Amerindians, Australian aborigines, and minority (often immigrant) communities. See ETHNIC. [LANGUAGE]. J.E.

**ETS.** See EDUCATIONAL TESTING SERVICE.

**ETYMOLOGICAL FALLACY.** A term in linguistics for the view that the first recorded meaning of a word is or must be its correct meaning: 'bristling' as the 'true' meaning of *horrid* (the example given by Jeremy Warburg in 'Notions of Correctness', in R. Quirk, *Use of English*, 1962). It is a fallacy because the meanings of words change with time, so that *horrid* today has no semantic link with Latin *horridus* bristling, from which it derives. See ETYMOLOGY, ETYMON, FOLK ETYMOLOGY, LANGUAGE CHANGE, SEMANTIC CHANGE. [HISTORY, LANGUAGE]. T.MCA.

**ETYMOLOGY** [14c: from Greek *etumologia*, from *étumon* true meaning of a word, and *-logia*, study]. Both the study of the history of words and a statement of the origin and history of a word, including changes in its form and meaning. The sense in which the 17c poet Milton used it ('Etymology, or right wording, teacheth what belongs to every single word or part of speech') is obsolete.

**History.** Classical Greek interest in words owed much to the development of alphabetic writing, in which they were laid out for inspection like merchandise. Early investigators of words included the Stoics of the 4c BC, who held that all languages were in a slow state of decline from erstwhile perfection. They therefore looked for the *etymon* or true first form of a word. Their pessimistic view survives among those who insist that the best writers are long dead, and their belief in etyma continues among those who argue that the original meaning of a word has current as well as chronological priority over any later senses it may develop. In Spain in the 7c, St Isidore of Seville compiled a 20-part encyc-

lopedia called *Originum sive etymologiarum libri* (Books of Origins or Etymologies), more commonly known as the *Etymologiae*. He took the view that the essence of a word could be found associatively: the Latin *homo* (man), adjective *humanus*, derived from *humo* (from the soil), because God made man from clay. This view served a didactic and mnemonic end, and was influenced by Hebrew precedents in the Old Testament, in which words were accounted for through homonymic comparisons (Hebrew *adam* being both man and clay). Isidore's students of Latin remembered *cadaver* as a kind of theological acronym of *CAro DATA VERmibus* (flesh given to worms). Isidore appears to have sought to formalize what is now called *folk etymology*, in which associative guessing dominates. His ideological approach was not unique. In the 20c, it has been used by feminists reinterpreting *history* and *boycott* for propaganda purposes as *his story* and *boy cott*, so as to be able to formulate *herstory* and *girlcott*.

Isidore's views on etymology were affected by his belief that Adam and Eve spoke Hebrew in Eden and that the story of the Tower of Babel was literally true. This continued to be the majority view among scholars through the Middle Ages and the Renaissance and conditioned the research of such 18–19c enthusiasts as the Englishman John Horne Tooke and the American Noah Webster. Both were convinced that language was the product of historical development, but lacked a non-Biblical theory with which to transform traditional speculation into science. The many jugglers with words and letters led Voltaire to make an acid assessment of etymology as a science in which the vowels count for nothing and the consonants for very little. The study was transformed, however, by Sir William Jones and the comparative philologists, who depended on a painstaking analysis of textual evidence from many languages. As a consequence of their work, 20c etymology is part of historical linguistics.

**Nature.** Contemporary etymology is concerned with both fact and hypothesis. As with information in the fossil record of paleontology, what is known of the origin and development of a word or its elements is a matter of chance, since only the earliest recorded forms and meanings can be directly studied. Earlier forms reconstructed by means of this recorded evidence and the meanings assumed for such forms are hypothetical and need to be treated with caution. Where such forms are shown in writing or print, they are conventionally preceded by an asterisk (\*) to mark their status. For English, such forms are usually those of the Indo-European root and its derivatives, or Romanic and Germanic roots.

Thus, the *-logy* part of the word *etymology* goes back to an IE root \**leg-* (collect). Many words, however, cannot be taken so far back; the recorded evidence does not suffice, and so etymologists may tag a word 'o.o.o.' (of obscure origin) or 'origin unknown'.

Historical changes in meaning are unpatterned, because derivations are usually idiomatic; the meaning of the whole is not simply the sum of the meanings of the parts. The adjective *sedate* goes back to the Latin verb *sedare* (to settle: a person, a dispute, a war), which comes from the IE root \**sed-* (sit); hence the basic meaning '(having been) settled'. The derived adjective *sedative* is then something that tends to settle someone. However, in Modern English, the adjective *sedate* means 'deliberately composed and dignified by one's own character or efforts', not (as *sedative* would suggest) 'stupified by the effects of a drug'. The Modern English verb *sedate* is a back-formation from *sedative* and therefore draws on the meaning of *sedative* and not on the meaning of the earlier adjective *sedate*. The homonymic adjective and verb *sedate* share a common origin in IE \**sed-*, but have developed such divergent meanings that the ancient adjective cannot suitably describe someone who shows the effects of the recent verb. As the 19c German philologist Max Müller wrote: 'The etymology of a word can never give us its definition' (1880).

It is therefore not surprising that the etymology of some common words reveals origins very unlike their modern form, meanings, or both. Thus, the four words *dough*, *figure*, *lady*, and *paradise* all derive in part at least from the IE root \**dheigh-* (to knead clay). Three of these words specialize or narrow the *knead* part of that meaning and ignore the *clay* part: (1) *Dough* is something that is kneaded like clay. (2) *Figure* derives from Latin *figura*, which comes in turn from IE \**dhigh-urā*, something formed by kneading or manipulation. *Feign*, *fiction*, and *effigy* are from the same root. (3) *Lady* derives from OE *hlāfdige*, composed of *hlāf* (loaf) and \**digan* (knead). A lady was the member of the house who kneaded the loaf, and the *hlāford* (from which comes *lord*) was its guardian. Paradoxical developments of meaning attend the changes in *lady*. From one who kneads the dough it became both 'the chief female of the household' and hence the one least likely to deal with such chores. However, the fourth word specializes the *clay* part of the original meaning and ignores the *knead* part: *paradise*, originally an enclosed garden, from Indo-Iranian *paiṛi-daēza* (walled around), from *paiṛi* (around: compare *periscope*) and *daēza* (wall, originally made of clay).

Even supposedly objective terms like numerals undergo change with the passage of time. Thus, although *only* was originally 'one-ly', it is now an adverb suitable for any quality or quantity, as in the etymological paradox 'only twelve'. *Combination* is now the mixture of any number of elements, but once it was only of *two* elements, its base being the Latin *bin-* as in *binary*. *Testimony* is from IE \**tristi*, the 'third (person) standing by', but is now evidence given by any person. *Quintessence* was once the *fifth* and highest essential element (in addition to earth, air, fire, and water), but is now simply the pure example of any thing or person. *September* was once the *seventh* month (Latin *septem*, seven), but is now the ninth; the other months from October to December follow the same pattern. *Dean*, now the head of a group, especially academic, of any number, was once specifically a group of *ten* (Greek *déka*, ten, as in *decathlon*); *decimate* once meant to reduce by a tenth (compare *decimal*), but now means to reduce by any substantial amount. *Quarantine* is now a sequestration of any length, but was once of *forty* days (French *quarante*).

Many of these semantic changes fall into discernible categories: *quarantine* results from *generalization*, while *paradise* results from *specialization*. Some arise from *melioration*, which elevates or improves the meaning, like *lady*, some from *pejoration*, which makes it less or worse than what it was, like *quintessence*, and some from *subreption*, which adapts it to a deceptively different use, like *September*. Sometimes it straddles two categories, as with *dean*, which is generalized as regards number of subordinates but specialized as regards their profession. Few words escape such changes, because change of form and meaning is inherent in language. Etymological study works at the level of the individual word, but with reference to more general rules of language change, the basic fact of language.

**ETYMON** [16c: through Latin from Greek *étumon* essential meaning, from *étumos* true, actual. Plurals *etyma*, *etymons*]. (1) In the theory of language of the Stoic philosophers of ancient Greece, the true original form of which a current word is the degenerate descendant. (2) In philology, the earliest traceable form from which a later word is derived: for example, *rex/regis* (king) is the Latin etymon of English *regal*, while the Indo-European verbal root \**reg-* (to move in a straight line, lead, rule) is the etymon of *rex/regis*, of Sanskrit *rājā*, and of the suffix *-ric* in *bishopric*. See ETYMOLOGY, INDO-EUROPEAN ROOTS, NOTATION, ROOT, ROOT-WORD. [HISTORY, LANGUAGE, WORD]. T.MCA.

**ETYMORPHS** [1989: a blend of *etymo*(logy) and *morph*(ology)]. A word game devised by the Australian writer and language teacher Ruth Wajnryb, a regular feature of the journal *English Today*. In it, a series of rare words is listed, each with four multiple-choice definitions and etymologies, only one of which is correct. For example, *ylem* is:

a ( ) The original matter from which the basic elements of the universe were formed after the Big Bang (Middle English from Greek *hyle*, wood, matter).

b ( ) Any of various kinds of hardwood used for props in mines, supports for jetties, piles, foundations, etc. (Old French from Greek *hylema*, hardwood).

c ( ) An acronym for Yankee Loyalists of Eastern Missouri, used during the US Civil War and still a term of abuse in some of the southern states (compare *wog*, short for 'worker on government service').

d ( ) A grey, green, or blue mineral consisting of aluminium silicate in triclinic crystalline form (named after the town of Ylem in Czechoslovakia).

The answer is (a). See CALL MY BLUFF, READER'S DIGEST, WORD GAME. [WORD]. T.MCA.

**EULOGY** [16c: from Latin *eulogium*, apparently a blend of *elogium* an inscription (on a tomb) and *eulogia*, from Greek *eulogia* praise]. A discourse in praise of a person living or dead; an oration at a funeral or memorial service. Milton's eulogistic sonnet 'To the Lord General Cromwell' (1652) celebrates a living hero: 'Cromwell, our chief of men, who through a cloud / Not of war only, but detractions rude, /

Guided by faith and matchless fortitude / To peace and truth thy glorious way hast ploughed.' Compare EPITAPH. [LITERATURE]. R.C.

**EUPHEMISM** [17c: from Greek *euphēmismós* speaking well (of something or someone)]. In rhetoric, (the use of) a mild, comforting, or evasive expression that takes the place of one that is taboo, negative, offensive, or too direct: *Gosh* God, *terminate* kill, *sleep with* have sex with, *pass water*, *relieve oneself* urinate. Official euphemism can prompt wry or rueful comment: 'To an observer of languages, it is interesting to note the new signification of the word *disperse*: that when a Black girl of fifteen is shot down she is said to be *dispersed*' (in *The Australian Race*, Melbourne, 1887, referring to an event in 1880). Official euphemisms can be circuitous and formulaic, as in the British announcement *a man is helping the police with their inquiries*, meaning 'a man has been detained by the police and may soon be charged'.

Arbiters of usage are generally severe on euphemism. Ronald Ridout and Clifford Witting in the UK (*The Facts of English*, 1964) claim that people 'commit a euphemism' when trying to hide something unpleasant, or when using a mild and indirect term: 'It is prudery or a false sense of refinement that causes us to use *paying guest* for *boarder* or *lodger*.' Fowler (*Modern English Usage*, ed. Gowers, 1965) notes: 'Its value is notorious in totalitarian countries, where assassination and aggression can be made to look respectable by calling them *liquidation* and *liberation*.' The US critic Joseph T. Shipley (*Dictionary of World Literary Terms*, 1977) considers euphemism 'the bane of much writing in the 20th c., esp. in the jargon language of sociologists, educationists and bureaucrats'. The US journalist Hugh Rawson, however, responds to euphemism as 'society's basic *lingua non franca* . . . outward and visible signs of our inward anxieties, conflicts, fears, and shames', and adds:

They cover up the facts of life—of sex and reproduction and excretion—which inevitably remind even the most refined people that they are made of clay, or worse. They are beloved by individuals and institutions (governments especially) who are anxious to present only the handsomest possible images of themselves to the world. And they are embedded so deeply in our language that few of us, even those who pride themselves on being plainspoken, ever get through a day without using them (*A Dictionary of Euphemisms*, below).

Because of its genteel associations, the term has itself been used euphemistically. In Edward Albee's *Who's Afraid of Virginia Woolf?* (1964), a guest has said that she would like to *powder her nose*. George responds with: 'Martha, won't you show her where we keep the euphemism?'

 Rawson, Hugh. 1981. *A Dictionary of Euphemisms & Other Doubletalk*. New York: Crown.

**EUPHONY** [17c: from French *euphonie*, Latin *euphonia*, Greek *euphōnia* sounding good]. A pleasant, harmonious quality in speech. The perception of such a quality is partly physiological (soft, flowing, blending sounds: are generally considered pleasanter than harsh, jangling, discordant sounds) and partly cultural (people tend to like sounds that they have been led to like). In English, euphony is often associated with long vowels, the semi-vowels or glides /j, w/, and the consonants /l, m, n, r/. All of these occur in the opening verse of Gray's 'Elegy Written in a Country Church-Yard' (1751):

The Curfew tolls the knell of parting day,  
 The lowing herd winds slowly o'er the lae,  
 The plowman homeward plods his weary way,  
 And leaves the world to darkness and to me.

Euphony can be achieved through the skilled use of a language's rhythms and patterns together with positive associations shared by performer and audience. These associations may relate to sound (preferred voice qualities and accents), allusion (oblique references to favoured or familiar poems, songs, etc.), and experience (bringing in positive images like spring, morning, youth, hope, love, and dreams). There may be agreement that X is *euphonic* and Y *cacophonous*, but people may differ as to just how and why this is so. Euphony in the sense of a greater ease in saying and hearing sounds has been cited as important in grammar and word-formation: as the reason for *an apple* rather than \**a apple*, *Aren't I?* and not \**Amn't I?*, *tobacconist* and not \**tobaccoist*, *impossible* rather than \**impossible* or \**unpossible*, and *calculable* rather than \**cal-culatable*. In matters of this kind, however, analogy, convention, and phonology appear to be more significant factors. See (A)ESTHETICS. [SPEECH, STYLE]. T.MCA.

**EUPHUISM** [16c: from *Euphues*, the name of the hero of two prose romances by John Lyly, applied in 1589 to Lyly's style by the classicist Gabriel Harvey; from Greek *euphués* well-grown, fertile]. An ornate prose style, filled with classical and Biblical allusions, and rhetorical figures. Shakespeare emulated it in *A Comedy of*

Errors and parodied it in *1 Henry IV* (2. 5). In the following excerpt, Falstaff (Sir John Oldcastle) defends himself by pretending to be Prince Hal speaking on his (Falstaff's) behalf to the king:

But to say I knowe more harme in him then in myself, were to say more then I know: that he is olde the more the pittie, his white haire doe witness it, but that he is sauing your reuerence, a whoremaster, that I vtterlie denie: if sacke and sugar be a fault, God helpe the wicked; if to be olde and merry be a sin, then many an old host that I know is damnd: if to be fat be to be hated, then Pharaos leane kine are to be loued. No my good lord banish Haruey, banish Rossill, banish Poines, but for sweet lacke Olde-castle, kinde lacke Olde-castle, true lacke Olde-castle, valiant lacke Olde-castle, & therefore more valiant being as he is old lacke Olde-castle,

Banish not him thy Harries companie,  
Banish not him thy Harries companie,  
Banish plump lacke, and banish all the world.

Scott parodied the style through Sir Piercie Shafton in *The Monastery* (1820). Similar styles emerged at roughly the same time in other parts of Europe: for example, *Gongorism*, the style of the 17c Spanish poet Luis de Góngora y Argote. See AUREATE DICTION, HOLOFERNES, LYLly, PROSE. [STYLE, WRITING]. T.M.CA.

**EURALEX.** See EUROPEAN ASSOCIATION FOR LEXICOGRAPHY.

**EURASIAN** [1830s: a blend of *European* and *Asian*]. (1) Relating to *Eurasia* (Europe and Asia together). Both terms are currently in vogue as a means of discussing the territories of the former Soviet Union: 'The evolution of a post-Soviet military establishment in Eurasia will mirror the redistribution of power among the former republics' (Igor Malashenko, 'The Eurasian Security Order' *Time*, 3 Feb. 1992); 'Eurasia is a challenging horse to ride. Gorbachev's business was to relax the reins, Yeltsin's is to pick them up' (Mark Frankland, 'Yeltsin sits astride Eurasia's wild horse', *Observer*, 2 Feb. 1992). (2) Of mixed European and Asian descent; a person of such descent. See ANGLO-INDIAN, BURGHER ENGLISH, EAST INDIAN, RACISM. Compare MESTIZO, MÉTIS, MULATTO. [ASIA, EUROPE, NAME]. T.M.CA.

**EURO-** [1950s: a clipping of *European*]. A combining form for both (*Western European* and the *European Community*): 'I hope *The European* will report the development of Europe in plain, unvarnished terms shorn of the Euro-jargon which so bedevils understanding' (Margaret Thatcher, in the first issue of *The European*, 11–13 May 1990); *Eurobonds go Euro-bust*, *Euro green year*, *Euro jobless figures* (headlines); *Euroforum* (the magazine of the European Commission in Brussels); *Eurobabble*, *EuroComm*

'88, *Euro Disneyland*, *Eurodollar*, *Euro jungle*, *Euro-kids*, *Euro sclerosis*, *Euro-slang*, *Eurotunnel*, *Euroyen*. Word-play includes: *Eurocrat* a European bureaucrat, *Europhoria* European euphoria, *Europhonia* a scheme for a euphoni-ously multilingual Europe, *Eureka* the European Research Co-ordination Agency. The variant *Eur-* sometimes occurs: *Eurasia* the name of the combined land mass of Europe and Asia. See EUROCENTRIC, EUROSPEAK. [EUROPE, NAME].

T.M.CA.

**EUROCENTRIC** [1960s]. Centred on Europe and its culture, languages, etc.: 'Precisely how an "Afrocentric and Latinocentric" approach to history would improve upon a Eurocentric one is unclear' (Jonathan Yardley, 'Temper This Eurocentrism', *Washington Post*, Apr. 1989). See CENTRICITY. [EUROPE, NAME]. T.M.CA.

**EUROCERT.** See EDUCATIONAL TESTING SERVICE.

**EURODICAUTOM**, full title *European Automatic Dictionary*. A multilingual terminological database established in the late 1970s by the language and computer services of the European Community in Brussels, Luxembourg, and Strasbourg. Conceived as a workstation aid to EC translators, it is also offered on-line to other users. The term bank provides continuously updated information on technical terms and abbreviations (currently 430,000 and 110,000 respectively), including equivalents among the nine official languages. [EUROPE, LANGUAGE, REFERENCE]. R.H.

**EUROLISH.** See EUROSPEAK.

**EUROPE** [From Latin *Europa*, Greek *Eurṓpē* name of a maiden carried west from Asia by the god Zeus]. A continent of the northern hemisphere, whose largest offshore islands are Britain, Ireland, and Iceland. Including the European states of the former USSR, the continent occupies 8% of the earth's surface and supports 25% of its population. The British generally refer to the mainland as both *Europe* and *the Continent*, a practice also occasionally adopted by Americans:

Averaged out over the population as a whole, the British adult receives some five items of direct mail each month—just half the average in Europe, and a mere one-tenth of what floods through the average US letterbox' (Alexander Garrett, 'Direct Mail: "To bin or not to bin"', *Observer*, 28 Oct. 1990).

'I've just been in Europe.' The British still catch each other saying it when they get back from France or Germany—implying that their own country still does not belong to the same continent. (Anthony Sampson, *Newsweek*, 4 Dec. 1989).

Yet there is a residual hostility to Europe as well. It is English; the Scots and Irish have always had European ties and alliances. This is perhaps one reason the English fear Europe and the Europeans. (William Pfaff, 'Britain: Nearer the Edge in Tomorrow's EC?', Los Angeles Times Syndicate, Nov. 1989).

The terms *Europe* and *European* are often ambiguous. They may refer to all of Europe, the European Community, the mainland without the British Isles, or the mainland European Community without Britain (and perhaps the Irish Republic), as in the phrase *going into Europe*. Compare AMERICAN<sup>1</sup>, ENGLISH (AMBIGUITY). [GEOGRAPHY, NAME]. T.MCA.

**EUROPEAN, The**, full form *The European: Europe's First National Newspaper*. A weekly English-language broadsheet newspaper founded in 1990, based in London, 50% in full colour, and aimed at a pan-European readership. Its founding publisher and editor-in-chief was the media tycoon Robert Maxwell, a British national of Czech origin; its first editor was Ian Watson, a Scot; and its staff and contributors are drawn from throughout the continent. After Maxwell's death in 1991, the newspaper was sold in early 1992 to the shipping and property magnate brothers, David and Frederick Barclay. Compare INTERNATIONAL HERALD TRIBUNE. [EUROPE, MEDIA]. T.MCA.

**EUROPEAN ASSOCIATION FOR LEXICOGRAPHY**, short form *EURALEX*. An association founded in 1983 to promote scholarly and professional activities related to lexicography. It holds an annual conference, publishes a *Bulletin*, and supports the *International Journal of Lexicography* (Oxford University Press) and *Lexicographica (International Annual and Series Maior*, Tübingen, Germany). Compare DICTIONARY SOCIETY OF NORTH AMERICA. [EUROPE, REFERENCE]. R.H.

**EUROPEAN COMMUNITY**, also **European Economic Community**. Short forms *EC*, *EEC*, *Europe*. An association of European countries, 12 in number in 1990: Belgium, Denmark, France, Germany, Greece, the Irish Republic,

Italy, Luxembourg, the Netherlands, Portugal, Spain, and the United Kingdom. Its headquarters is in Brussels in Belgium, its Parliament mainly in Strasbourg, northern France, with some central institutions in Luxembourg. Its official working languages are English and French, and its official languages Danish, Dutch, English, French, German, Greek, Italian, Portuguese, and Spanish. All nine are used in EC meetings with simultaneous translation as a matter of course. Official documents must be published in all the official languages. In the period 1982-90, 40m ECUs (European Currency Units) were provided for EUROTRA automatic translation. There are between 30 and 40 minority languages, depending on definition, some of them varieties of official languages (such as Alsatian German in France), some unique (such as Breton in France and Basque in France and Spain). All member countries save Portugal have regional minority languages (such as Gaelic and Welsh in the UK). The *European Bureau for Lesser-Used Languages*, set up in 1982, represents all such languages but not the 'trans-European' minority languages Yiddish and Romany.

English is increasingly the lingua franca. Representatives of smaller countries, such as Denmark and Greece, often give press conferences in English: 'The Danes are keener to speak English even than the British. . . . The Spanish on the other hand tend to talk French. On political subjects both languages are used in discussions. The French are very concerned to protect their language. But in more technical sectors—telecommunications or research for example—it is overwhelmingly English, as the technical vocabulary has developed on a more global basis' (Michael Berendt, *The Times*, 23 Oct. 1989). In Brussels, many shop signs and service notices are in English, Belgium's largest cash card is called *Mister Cash*, and its airline is officially known as *Sabena, Belgian World Airlines*; its in-flight signs are only in English and its in-flight magazine is mainly in English. In Belgium, a country often disturbed by tensions between speakers of Flemish and French, English is a neutral medium. British television is widely watched along the north-western European coast, and in the Netherlands interviews in English on national television are often not translated.

While the aim of the Community is harmonization rather than homogenization, there is a strong EC-wide tendency towards greater use of English. Indeed, the results of any drive towards foreign-language learning may strengthen the already most prominent language: English is the first second language in all EC countries, including France. The breakup of

the Eastern Bloc in the late 1980s may strengthen the position of German, which is widely used as a lingua franca and trans-European language in Eastern Europe; it is, with some 90m speakers in the region (77m within the EC), the largest single language bloc. At the same time, however, with the opening up of East European countries to the West in the late 1980s and early 1990s there has been a surge in demand for English courses and a decrease of interest in Russian, to the extent that in Hungary, for example, many schoolteachers of Russian are being retained as teachers of English. [EUROPE, NAME]. T.MCA.

**EUROPEAN FREE TRADE ASSOCIATION**, short form *EFTA*. A free-trade association of European countries, six in number in 1990: Austria, Finland, Iceland, Norway, Sweden, and Switzerland (and Liechtenstein). Its headquarters are in Geneva, in Switzerland. Within EFTA, each nation retains its own trade policy towards non-members. When the group was formed in 1958, it also included the UK and Portugal, now members of the EC. English is the official language of EFTA, despite the fact that none of its present members has it as a mother tongue. Compare EUROPEAN COMMUNITY. [EUROPE, NAME]. T.MCA.

**EUROPEAN LANGUAGES**. The languages of Europe, most of which belong to the *Indo-European language family*. Exceptions are *Basque* (spoken around the southern shores of the Bay of Biscay, and apparently unrelated to any other language), and *Hungarian* and *Finnish* (members of the *Finno-Ugric language family*). Although *Turkish* is spoken in European Turkey (west of the Sea of Marmara), it is not usually considered a European language. Pragmatically, the term covers all long-established languages used in Europe, but not yet such immigrant languages of the 20c as *Arabic* in France, *Gujarati* in England, and *Turkish* in West Germany. Between the late 15c and 20c, many European languages have been carried to many parts of the world through empire-building, colonization, commerce, and Christian missionary work. In this diaspora, colonizing languages such as *Dutch*, *English*, *French*, *Italian*, *Portuguese*, *Russian*, and *Spanish* have predominated, but most other European languages have been carried in their wake: *Basque* to the north-western US, *Scottish Gaelic* to Nova Scotia (Canada), *Ukrainian* to Manitoba (Canada), and *Welsh* to Argentina. English, Portuguese, and Spanish have become the foremost languages of the Americas; English, French, Dutch (in the form of *Afrikaans*), and Portuguese have become major languages of Africa; and English and French have become dominant in Oceania. In

Asia, only Russian has succeeded as a settler language, spreading east from the Urals to the Kamchatka Peninsula to the north of Japan; English has been established as an official language of India, first Spanish then English have been important in the Philippines, and English is the primary language of Singapore. See BORROWING, BRETON, CELTIC LANGUAGES, DANISH, ENGLISH, FAROESE, FRISIAN, FRENCH, GAELIC, GEOGRAPHY AND GEOPOLITCS OF ENGLISH, GERMAN, GERMANIC LANGUAGES, GREEK, ICELANDIC, INDO-EUROPEAN, IRISH, ITALIAN, LATIN', MALTA, NORSE, NORWEGIAN, PORTUGUESE, ROMANCE LANGUAGES, RUSSIAN, SCANDINAVIAN LANGUAGES, SCOTS, SLAV(ON)IC LANGUAGES, SPANISH, SWEDISH, WELSH, WORLD LANGUAGE. [LANGUAGE]. T.MCA.

**EUROSPEAK** [1980s]. Also **Eurolish**, **Minglish**. Generally pejorative or facetious terms for kinds of English used in Continental Europe and especially the European Community: 'And as more and more magazines and newspapers view Europe as home territory, neologisms and borrowed words will undoubtedly emerge—as long as newspapers and magazines don't resort to bland Euro-speak' (*Journalist's Week*, 22 June 1990). See ESPERANTO, EURO-, -GLISH AND -LISH, -SPEAK. [EUROPE, VARIETY]. T.MCA.

**EXAGGERATION** [16c: from Latin *exaggeratio/exaggerationis* a heaping or piling up]. Presenting something as larger, greater, more important, or more awful than it is. See HYPERBOLE. [STYLE]. T.MCA.

**EXAMINING IN ENGLISH**. The formal testing of a student's command of English, usually in an educational institution or through a public system of evaluation and certification. Such testing dates from the mid-18c, when three necessary prior conditions had been fulfilled: (1) The standard language was increasingly widely taught in schools and had begun to be used as a vehicle for the testing of all school subjects. (2) A new educational tradition had developed, associated with the manufacturing and mercantile classes of Britain and America, an alternative to traditional Latin-medium or Latin-based education. (3) A network of institutions and administrators had begun to spread: for example, in Britain the Dissenting Academies and the Royal Society of Arts, which was founded in 1754 and conducted examinations in English before 1800.

**British examinations**. By the mid-19c, public examinations had become necessary for the recruitment of officials and others at home and abroad. In 1858, the report of a Civil Service Commission (set up to consider inefficiencies in the Crimean War and the problems of directly

governing India) called for recruitment 'by public competition and not by private patronage' and for the provision of tests by the universities of Oxford and Cambridge of 'the elements of a plain English education'. Two bodies were set up, the *Oxford Delegacy* and the *Cambridge Syndicate*, which remain central to the British tradition of examining by independent bodies. Their establishment lent weight to the existing external examinations of the *University of London*, administered for its own matriculating purposes. In 1903 the *Joint Matriculation Board* and in 1953 the *Associated Examining Board* were added, and the five boards became responsible for officially recognized school-leaving examinations in England. More directly government-sponsored bodies were set up for the same purpose in Ireland, Scotland, and Wales. By the end of the 19c a range of school examinations had been established in Britain and parts of the Empire. These have been developed and refined throughout the 20c, under various names and with various emphases.

**Commonwealth examinations.** Within the Commonwealth there has been a process of devolution from British control, Australia, Canada, New Zealand, and South Africa having long had their own systems. In territories where English has second-language status the picture is complex. In some areas, links with UK examining boards have been retained, sometimes alongside new indigenous systems. In India, there is a Council for the *Indian School Certificate Examination*, based on a grouping of English-medium schools and associated with the *Cambridge Overseas School Certificate*. A *West African Examinations Council* conducts school examinations in Ghana, Nigeria, Sierra Leone, and Gambia, in consultation with British boards (Cambridge and London) active in the area. London's influence continues to be strong for private candidates (adults seeking a second chance of education). An *East African Examinations Council* operates in Kenya, Uganda, Zambia, and Zimbabwe, associated with British boards (Cambridge and AEB). The Caribbean area has followed the same pattern, with the *Caribbean Examinations Council* established in consultation with British boards. Single-country examining authorities have been established, at first with British board sponsorship, in Hong Kong with London, and in Singapore and Malaysia with Cambridge. Smaller areas of UK influence, such as Malta, Cyprus, and the River Plate countries of South America, with their high level of second-language use, alternate between British or locally conducted school examinations

and British-based EFL examinations such as Cambridge.

**American examinations.** State control of examining, closely linked to the systematic grading of classes, is a feature of US education that can be traced to the influence of the Enlightenment on the founders of the Republic. Each of the 50 states has its own educational system, of which testing is an integral part. In addition, decisions in many states are made by local school districts, as a result of which few useful generalizations can be made about examining in English for the whole country. Tests used for college admission in many parts of the nation are largely machine-graded, written and scored by such private bodies as the *College Entrance Examination Board* (with the *Scholarly Aptitude Test* or *SAT*), and the *American College Testing Program* (with the *American College Test* or *ACT*). Some students completing a first degree take the *Graduate Record Examination (GRE)* offered by *Educational Testing Service (ETS)* of Princeton, New Jersey, used by most US universities as one factor in admissions to postgraduate study. There is controversy over these standardized, multiple-choice tests of aptitude and the interpretation of their scores, and they are often said to be culturally biased or easier for those already accustomed to them. Despite such criticisms, they continue to be widely used, as one of a number of factors that include course grades, recommendations from teachers, application essays, and sometimes interviews: testing is less important as a determinant of the future of US students than in some other English-speaking countries.

**Other countries.** Local arrangements for the achievement and diagnostic testing of English in non-English-speaking countries follow the interests, needs, and resources of each country, varying from sophisticated provision for high levels of performance in northern Europe to more uncertain initiatives elsewhere, often linked with grammar-translation and literature-based approaches. Some countries have experimented in the teaching and testing of their own languages as foreign languages on EFL lines (for example, Swedish and Spanish), and have benefited from the resulting cross-fertilization in terms of local English teaching. Within Europe, the Cambridge examinations have achieved particular significance.

**English as a native language.** The broad target in examinations of English as a first language is a performance that meets the needs both of practical effectiveness and of conformity with agreed rules of syntax, vocabulary, and orthography, at a level associated with completion of a process of general education: that is, completion of an

accredited school curriculum at 16, marked by a certificate that serves as a qualification for employment, vocational or other training, or higher education. The relevance of performance in public examinations to real-life social and communicative needs continues to be a matter of controversy, along with the general role and procedures of examining boards. Public examining has been criticized for institutionalizing an interlocking and educationally sterile system of teaching and testing, for the discouragement of cultural development through wider reading and writing, and for its tendency to concentrate on testable minutiae of vocabulary and usage. For testers, the problem has been one of reconciling the relative importance of the holistic and atomistic elements in a syllabus.

Directly analytical testing of orthography, vocabulary, and syntax has been generally abandoned in the later 20c, on the grounds that it does not predict effective communicative performance. The usual pattern of testing combines a form of global assessment (with a communicative or functional basis) and an objective mode based on reading comprehension. Attempts to maintain a constant standard, though procedurally successful because of the long experience of the boards and the paramount importance of consistency, are deeply affected by such wider issues as the level of tolerance of 'error' in examination scripts and linguistic factors in the teaching of general school subjects: the presentation of information in note form or in a subject-specific register, or in the formal prose associated with the humanities. Such factors have made for considerable uncertainty of aim and procedure in language testing throughout the English-speaking world, with an associated tendency to deflect problems by emphasizing either objectivity (in the narrow fields of usage and the comprehension of texts) or creativity (of a personal kind or in terms of literary appreciation).

**English as a second language.** One legacy of empire is the problem of variation between locally accepted but not mutually or internationally intelligible forms of English. Such local forms are often assisted by long association with a British-based, or British-developed, school examination structure that has not systematically addressed problems of variation. Second-language users have widely varying aspirations towards quasi-first-language status, with varied effects on linguistic conservatism, first-language influence, and the teaching styles favoured as appropriate and practicable in each area. There is little systematic knowledge of the elements of difference and little motivation to

build examination syllabuses on an agreed corpus of these; instead, the assessment of free composition by non-local examiners for a British board remains a standard though uncertain procedure. Organized examining has to date failed to take significantly into account such broad developments as archaism of vocabulary in India and Pakistan, syllable-timing in English as spoken in Africa, and the movement towards the 'legitimization' of Creoles and Black Englishes. Although the pattern of centralized non-local examining is especially British, the problem of integrating second-language pupils and examination candidates into general educational systems is shared by English-speaking countries as a whole, sometimes shading off into wider aspects of sociolinguistic development and sometimes into the more clear-cut area of EFL. Teaching shows the effects of this confusion, as do the availability and content of tests.

**English as a foreign language.** A number of factors emerged in the 1960s as the basis for improvement in the testing of English as an international language, with its built-in emphasis on efficient communication. The post-war, post-colonial demand for an equalizing lingua franca, serving the needs of an era of unprecedentedly heightened communication, had increased interest in examinations available internationally, with heavy increases in entries and a heightened sense of involvement among teachers. The Cambridge examinations in particular, introduced in 1913 as a small-scale extension of the board's British and overseas school examining, but greatly expanded since 1945, came under critical review, with special emphasis on problems of culture bias in content and assessment, the testing of oral performance, and the general validity and reliability of tests. The Syndicate's links with specialized teaching, through the British Council and newly established university schools of applied linguistics (notably Edinburgh), made possible a research programme that resulted in a remodelling (1975) of the Cambridge syllabus. In this, the relative weighting given to objective/analytical and holistic/impressionistic elements was computer-controlled in a five-paper examination covering reading, writing, listening, and speaking, with such features as task-based composition, active and specific testing (through conversion or transformation exercises) of the candidate's grasp of language patterns, a substantial but contained element of objective testing, and the exclusion of culture-based elements such as literature, translation, and Brito- or Eurocentric texts and situations. The immediate popularity of the new syllabus, available at two established levels (Certificate Proficiency in English and First Certificate English) showed its relevance to international needs and its predictive

accuracy, particularly at the lower level. Cambridge's position was further consolidated by the introduction of similarly designed elementary level tests from 1980, a further streamlining of the main CPE and FCE syllabus in 1984, and the taking over of responsibility for both the British Council's *English Language Testing Service* and the Royal College of Arts' range of examination schemes for EFL teachers. A number of other British and non-British examining bodies, of varying status and operational scope, also currently offer English language tests for the foreign learner. In the US, the ETS offers the *Test of English as a Foreign Language (TOEFL)*, to measure the English-language ability of foreign students seeking admission to American universities.

[AFRICA, AMERICAS, ASIA, EDUCATION, EUROPE, HISTORY, OCEANIA]. W.S.

**EXCLAMATION** [14c: through French from Latin *exclamatio/exclamationis* crying out]. (1) A sentence that conveys a strong emotion: *Please leave me alone!* (2) Also *exclamatory sentence*. A type of sentence, often verbless, that begins with *what* or *how* (followed by a noun phrase): *What courage! What a meal that was! How marvellous! How well they played!* See EXCLAMATION MARK/POINT, SENTENCE. [GRAMMAR]. S.G., T.MCA.

**EXCLAMATION MARK**, also AmE **exclamation point**. The punctuation mark (!). Its primary use is to show that a preceding word, phrase, or sentence is an exclamation or strong assertion: *Of course! No! I won't do it! Yes, you are!* It indicates various emotions conveyed in the substance of the statement, such as surprise, disbelief, or dismay (*You're joking! What a silly way to behave!*), wonder or admiration (*What a good idea! Aren't they beautiful!*), personal feeling (*I love you! I hate them!*), and pain or suffering (*Ouch! I'm so miserable!*). It also indicates an instruction or command (*Go away! Left turn!*). It is sometimes repeated in informal usage to express a specially strong exclamation (*What nonsense!*) or added to a question mark to indicate a mixture of questioning and surprise, anger, etc. (*Did you say the house was tidy?!*). It is also used in round brackets/parentheses, as a kind of aside, to denote surprise or reserve about, or dissent from, what is stated: *They told us about*

*the beauty(!) of the place*. See EXCLAMATION, PUNCTUATION. [WRITING]. R.E.A.

**EXISTENTIAL SENTENCE**. A sentence stating that something exists, usually consisting of *there*, the verb *be*, and an indefinite noun phrase: *There's a tavern in the town, There is hope for this mad world, There must be somebody we can ask*. Where more information follows (as in *There was an old woman who lived in a shoe, who had . . .*), *there* can be dispensed with (*An old woman lived in a shoe, who had . . .*). When *there* is used like this, as a prop subject, the newness of the information in the sentence is emphasized. That *there* is subject-like is shown by its use in question tags: *There's no problem, is there?* Existential *there*-sentences can also occur with some other verbs: *There came a big spider, and sat down beside her; There then began a time of great fear*. [GRAMMAR]. S.C.

**EXONORMATIVE**. See CENTRICITY, NORMATIVE.

**EXPLETIVE** [17c: from Latin *expletivus* serving to fill out, from *explere/expletum* to fill out]. (1) Originally, an expression used to fill out a line of verse or a sentence, without adding anything to the sense. (2) An interjected word, especially an oath or swearword. At the time of the Watergate hearings in the US in the 1970s, during the presidency of Richard Nixon, the phrase *expletive deleted* occurred frequently in the transcript of the White House tapes. The connection between original and derived meaning is caught in the *Longman Dictionary of Contemporary English* (1987), explaining the expletive use of *fucking* as an adjective in *I got my fucking foot caught in the fucking door*: it is 'used as an almost meaningless addition to speech'. Here, it is meaningless at the level of ideas but hardly at the level of emotion. See INFIX, SWEARING. [STYLE, USAGE]. R.F.I.

**EXPLICATION DE TEXTE** [French: textual explanation]. A term in literary theory for the close study and exposition of a text, paying attention to content, style, language, symbolism, and the relationships of part to whole. Compare CLOSE READING. [LITERATURE]. T.MCA.

**EXPRESSION** [15c: from Latin *expressio/expressionis*, a pressing out. Compare IMPRESSION, PRESS]. (1) The act, process, etc. of using language or some other medium of communication: *the expression of opinions; self-expression*. (2) An inclusive term for a word, phrase, form of words, idiom, usage, etc.: *archaic expressions in poetry*. [LANGUAGE]. T.MCA.

**EXTENSION**. See FIGURATIVE EXTENSION, SEMANTIC CHANGE.

**EYE DIALECT** [1925: first used in print by George P. Krapp, *The English Language in America*]. A term for how colloquial usage appears in print; spellings in which 'the convention violated is one of the eyes, not of the ear' (Krapp). Thus, spellings like *enuff* enough, *wimmin* women, *animulz* animals, indicate that those represented as using them are uneducated, youthful, rustic, or otherwise unlike the readership. In Krapp's definition, dialect writers use eye dialect not 'to indicate a genuine difference of pronunciation, but the spelling is merely a friendly nudge to the reader, a knowing look which establishes a sympathetic sense of superiority between the author and reader as contrasted with the humble speaker of dialect'. The term is sometimes extended to include both 'dialect' spellings and spellings based on pronunciation in a variety of English, as with *Kanajan* Canadian, *Murrican* American, *Strine* Australian. Many users, however, limit it to "spelling errors" that in fact reflect no distinctive phonological, lexical, or syntactic structure whatsoever' (Elizabeth C. Traugott & Mary L. Pratt, *Linguistics for Students of Literature*, 1980). Eye dialect is an important element in

humorous dictionaries and glossaries which poke fun at varieties of English: *Awreddy* already (*Eh, Goondu!*, Singapore, 1982), *Baked Necks* bacon and eggs (*Lets Stalk Strine*, Australia, 1965), *Fairy Nuff* fair enough (*Bristle with Pride*, Bristol, England, 1987), *pannyhos* pantihose (*More How to Speak Southern*, US, 1980), *yidownsay* you don't say (*Ah Big Yaws*, South Africa, 1973). See DIALECT, HOBSON-JOBSONISM, KING'S ENGLISH, SPELLING. [STYLE, VARIETY, WRITING].  
R.W.B.

**EYE RHYME.** In verse, the correspondence of written vowels and following consonants which may look as though they rhyme, but do not represent identical sounds, as in *move/love, speak/break*. Eye rhyme may be deliberate, but often results from a changed pronunciation in one of two words which once made a perfect rhyme, or rhyme in a non-standard variety of English, as in these lines by the Scottish general James Graham, Marquis of Montrose (1649): 'I'll tune thy elegies to trumpet *sounds*, / And write thy epitaph in blood and *wounds*.' In Scots, both italicized words have the same 'oo' sound. See RHYME. [LITERATURE].  
R.C., T.MCA.

# F

**F, f** [Called 'eff']. The 6th letter of the Roman alphabet as used for English. It originated in the Phoenician symbol *waw*, a vertical line forking at the top like *Y*, which was adapted by the Greeks into two letters: *F* (digamma: 'double gamma'), which represented the sound /w/, and *Y* (upsilon), which represented /u/. *Waw* was also the ancestor of *U, V, W*. *Digamma* was lost in classical Greek, which used  $\Phi$  (phi) first for aspirated /p/, later for /f/. The Etruscans, then the Romans, gave *F* the value it has today in English: the voiceless labio-dental fricative, which has *V* as its voiced equivalent. In Old English, however, *f* was used for both voiceless and voiced consonants. Formerly, *of* was not distinguished in spelling from *off*: the *f* was voiced when the syllable containing it was unstressed, and voiceless when stressed, until the two came to be distinguished (c.16c) in spelling and meaning as *off/of*, the latter retaining the sound /v/. In ScoE, *of* and *off* are often homophones, both pronounced with /f/.

**F/V alternation.** There is sometimes an alternation between *f* and *v* in grammatically or etymologically related words. For example, the following nouns have singular *-f(e)*, plural *-ves*: *calf, elf, half, knife, leaf, life, loaf, self, sheaf, shelf, thief, wife, wolf*. In some cases, the plural may be either *-fs* or *-ves*: *dwarfs/dwarves, hoofs/hooves*. So engrained is the tendency to *f/v* alternation that *handkerchiefs, roofs* are often pronounced with /v/. Verbs from such nouns have *f* or *v*, but do not vary when inflected: *to knife/knifed, to halve/halved*. Other examples of *v/f* alternation include *believe/belief, leave/left, strive/strife, five/fifth, twelve/twelfth*. The *f/v* distinction in *fox/vixen* arises from the different dialects from which the words have been taken.

**Double F.** (1) Except in *if, of* and some loanwords, *f* is doubled in syllable-final position

immediately after a single vowel letter that is pronounced short: *waffle, piffle, bailiff, cliff, scoff, stuff*. Single *f* occurs otherwise: *deaf, elf, beef, belief, dwarf, golf, loaf*. (2) There is doubling between vowels, especially to show the assimilation of the Latin prefixes *ad-, ob-, sub-*, as in *affair, offer, suffer*. An anomaly is single *f* in *afraid*, despite *ff* in the related *affray*.

**F, GH, and PH.** (1) In some common words, the digraph *gh* represents /f/: *cough, enough, laugh, rough, tough*. AmE does not make the BrE distinction between *draught/draft*, having *draft* for both. In BrE, a *draftsman* draws up the wording of documents and a *draughtsman* prepares technical drawings. See G. (2) The digraph *ph* represents /f/, generally in words of Greek origin: *photograph, philosophy*. See P. *F* has, however, varied historically with *ph* in some words: for example, with the revival of Greek learning in the 16c, *fantasy* began to be written *phantasy*, but in the 20c has reverted to *f*. Occasionally, words not derived from Greek have acquired *ph* in place of *f*: *nephew* was once written with both *f* and *v*. AmE *sulfur* retains the original Latin form, whereas BrE has *sulphur*; the AmE form is increasingly used internationally, as for example by pure and applied chemists. In commerce, a standard *ph* may be replaced by *f* in a trade name or for special effect, or both as with *totopost* and *freefone*. See ALPHABET, LETTER<sup>1</sup>, P, SPELLING. [WRITING]. C.U.

**FABER.** An English publishing company noted for its poetry, fiction, and drama. Faber & Gwyer was founded by Geoffrey Faber in 1925, with T. S. Eliot among the original working directors. Faber's list incorporated the books of The Scientific Press, a nursing publisher dating from 1892, of which he was briefly chairman. In 1929, the company was renamed Faber & Faber, and Eliot remained on the board until his death

## THE CAPITAL LETTER

in 1965. Virtually all his poetry, criticism, and plays appeared under the Faber imprint, as did his quarterly review *The Criterion*. He was largely responsible for Ezra Pound, James Joyce, W. H. Auden, Louis MacNeice, and Stephen Spender becoming Faber writers. Later poets include Edwin Muir, Philip Larkin, Seamus Heaney, Ted Hughes, and Sylvia Plath. Lawrence Durrell, encouraged by Eliot, published *The Alexandria Quartet* (1957–60) with Faber, which also publishes the Nobel Prize winner William Golding, whose novel *Lord of the Flies* (1954) has sold millions of copies worldwide. Works on the English language include: *The Story of English*, by Robert McCrum, William Cran, & Robert MacNeil (with BBC Publications, 1986: the book of the TV series: see entry); the UK editions of *The State of the Language* (1980, 1990), ed. Christopher Ricks & Leonard Michaels (collections of articles first published by the U. of California Press jointly with the San Francisco branch of the English-Speaking Union); and John Honey's *Does Accent Matter?* (1989). SEE ELIOT, ENGLISH-SPEAKING UNION, STORY OF ENGLISH. [EUROPE, LITERATURE, MEDIA]. T.MCA.

**FABLE** [13c: from Old French *fable*, Latin *fabula* discourse, tale, plot]. A story illustrating a moral principle usually made explicit at the close by the narrator or one of the characters. In most fables, the protagonists are talking birds and animals whose words and actions reflect aspects of human behaviour. Such tales are often told to or written for children, but usually so that adults can also enjoy them; sometimes, when used for satirical purposes, they only appear to be for children. The most famous collection is attributed to the Greek slave Aesop (6c BC), their translations giving rise to familiar phrases like *sour grapes* and *a dog in the manger*, and to common perceptions such as the cunning fox and the industrious ant. Comparable fables, often with a strong humorous element, were common in medieval literature, including the Reynard the Fox series, Chaucer's *Nun's Priest's Tale* (14c), about the cock Chauntecleer, and Robert Henryson's *Morall Fabillis of Esope* (15c). In the 17c, Jean de la Fontaine retold in French fables from many sources and created a new interest shown in John Gay's *Fables* (1727, 1738). Joel Chandler Harris (1848–1908) wrote the 'Uncle Remus' stories of Brer Rabbit and his companions, in the black dialect of the southern US. There has been a revival of fables in the 20c, including David Garnett's *Lady into Fox* (1922), *Fables* by T. F. Powys (1929), and James Thurber's *Fables for our Time* (1940). The outstanding work, however, is George Orwell's *Animal Farm* (1945), a satire on the Soviet Union

in the form of an animals' revolution in England. The fable form continues to be popular in children's literature, and a more modern related genre is the animated cartoon, especially in the US, with such characters as Tom and Jerry and Bugs Bunny. See BREWER'S DICTIONARY OF PHRASE AND FABLE. Compare ALLEGORY, LEGEND, MYTH, PARABLE. [LITERATURE]. R.C.

**FACTS ON FILE**. An American publishing company founded in 1940 and currently publishing from New York and Oxford (the British office being opened in 1984). The weekly *Facts on File World News Digest* was launched in 1941 and *Editorials on File*, a bimonthly selection of US newspaper editorials, was started in 1970. The company began to publish books in the 1970s, and titles on the English language include: *The American Literary Almanac: From 1608 to the Present* (1988), by Karen Rood; *American Literary Anecdotes* (1990), *British Literary Anecdotes* (1990), *World Literary Anecdotes* (1990), and *The Encyclopedia of Word and Phrase Origins* (1987), all by Robert Hendrickson; *The Facts on File Dictionary of 20th Century Allusions* (1990), by Sylvia Cole & Abraham H. Lass; *British English, A to Zed* (1988), by Norman W. Schur; *Last Lines: An Index to the Last Lines of Poetry* (1990), by Victoria Kline; *Kind Words: A Thesaurus of Euphemisms* (1990), by Judith S. Neaman & Carole G. Silver; *The Thesaurus of Slang* (1988), by Esther & Albert Lewin; and *The Dickson Baseball Dictionary* (1989), by Paul Dickson, covering many terms that have become a part of AmE general usage. The UK branch publishes the *Facts on File Visual Dictionary* (1988), by Jean-Claude Corbeil & Martin Manser (an 800-page illustrated thesaurus that provides terms relating to more than 3,000 depictable objects), *The Encyclopedia of Shakespeare* (1990) by Charles Boyce, and *The School Thesaurus* (1990) by Betty Kirkpatrick. [AMERICAS, EUROPE, MEDIA, REFERENCE]. T.MCA.

**FALKLAND ISLANDS** [1889: named by the British explorer John Strong after Viscount Falkland]. Also **Falklands**. A British dependency in the South Atlantic. Capital: Stanley. Population: c.1,800. Ethnicity: mostly British. Language: English, with a non-rhotic pronunciation. Argentina claims the islands under the name *Las Islas Malvinas*, from French *Les îles Malouines* (after Breton fishermen from Saint-Malo who once visited the area). See ARGENTINA, ENGLISH. [AMERICAS, NAME, VARIETY]. T.MCA.

**FALLACY** [14c, from Latin *fallacia* a trick, deceit, from *fallere/falsum* to trip (= cause to fall), deceive]. In general usage, a false and often deceitful idea, in logic, a line of reasoning (also

known as a *paralogism*) that may seem valid but is not. Fallacies of discourse were first described in Greek and Latin, and many therefore retain their classical names, either uniquely or alongside a vernacular label. They include: (1) *Argumentum ad baculum* [Latin: argument backed by a stick]. Resorting to threat in order to have a point accepted. (2) *Argumentum ad hominem* [Latin: argument directed at the person]. Often called *ad-hominem argument* or an *ad-hominem attack*. Seeking to disprove a point by attacking the people making that point, either in terms of their character or by referring to their personal circumstances as an explanation of why a position has been adopted. (3) *Argumentum ad ignorantiam* [Latin: argument directed at ignorance]. Asserting that a proposition is true because it has not been proved false, or false because it has not been proved true. (4) *Argumentum ad populum* [Latin: argument directed at the people]. An appeal to popular opinion, bias, and inclination. (5) *Argumentum ad verecundiam* [Latin: shameful argument]. Appealing to an authority in one field regarding something in another field in which that authority has no more standing than anyone or anything else. (6) *Ignorantia elenchi* [Latin, Greek: ignorance of the conclusion]. While seeking to prove one proposition inadvertently proving something else, and therefore not sticking to the point. (7) *Non sequitur* [Latin: it does not follow]. A statement in which the premisses of an argument do not lead to the conclusion provided. (8) *Post hoc ergo propter hoc* [Latin: after this therefore because of this]. Asserting that because A came before B, A caused B. See BEGGING THE QUESTION, EQUIVOCATION, ETYMOLOGICAL FALLACY, PATHETIC FALLACY, SYLLOGISM. [LANGUAGE, STYLE]. T.MCA.

**FALSE ANALOGY.** See ANALOGY.

**FALSETTO.** See PITCH.

**FANAKALO**, also **Fanagalo** [mid-20c: from Zulu, possibly *fana* resemble, appear, *ka* adverbial prefix, *lo* this, as in the phrase *khuluma fana kalo* speak in this way. Stress: 'fa-na-ka-LO', with Zulu /k/ resembling English /g/. Also formerly and pejoratively *Mine Kaffir*. A pidgin language of southern Africa, used especially as a lingua franca in the mines, where it has been taught to facilitate communication between fellow workers and employers. It has the basic sentence structure of English and vocabulary borrowed from especially black African languages (mostly Zulu), and from Afrikaans. It is strongly associated with discriminatory racial policies, is disliked by many Africans, and has been condemned by the National Union of Mineworkers as offensive and

inadequate to its purpose. See RACISM. [AFRICA, LANGUAGE]. W.B.

**FANTASY** [13c: from Old French *fantasie*, Latin *phantasia*, Greek *phantasia* how things seem, what is sensed, appearance, apparition, imagination]. Both a story based on strange and wonderful happenings (the antithesis of realistic fiction) and the capacity to imagine vivid and unusual themes and images (as well as the themes and images themselves). The word has had a varied development. By the late 16c, *phantasie* or *fantasie* had come to mean in English a mental image without objective reality, as when Horatio believes the Ghost of Hamlet's father to be only 'fantasy' (Shakespeare, *Hamlet*, 1. 1). During the Romantic Movement (18–19c), it was used to describe writing connected with dreams, hauntings, and the supernatural, often in contrast to the more healthy and positive faculty of *imagination*.

**Literature and fantasy.** From the middle of the 19c, the term has denoted a literary genre that includes *The King of the Golden River*, by John Ruskin (1851), *The Rose and the Ring*, by W. M. Thackeray (1855), *The Water Babies*, by Charles Kingsley (1863), *Phantastes*, by George MacDonald (1858), the 'Alice' stories of Lewis Carroll (1865, 1871), the tales and poems of Edward Lear, and Frank Baum's *The Wonderful Wizard of Oz* (1900). Most of these works were intended for children but also appealed to adults. In the 20c, the genre includes C. S. Lewis's 'Narnia' books and science fiction such as *Perelandra* (1943), J. R. R. Tolkien's *The Hobbit* (1937) and the trilogy *The Lord of the Rings* (1954–5), and Mervyn Peake's *Titus Groan* trilogy (1946–9). Science fiction often has an element of fantasy in it, and the sub-genre *science fantasy* has flourished throughout the 20c, including Edgar Rice Burroughs's *Martian Tales* (from 1912) and Frank Herbert's *Dune* series (from 1965). Attempts to define fantasy precisely have not been successful and the name has been loosely applied to many works. It is, however, generally agreed that a fantasy is set in a world remote from ordinary experience, some or all of its characters are different from any known creatures, the fantasy world has its own rules and logic and is usually well ordered within them, and any everyday characters who get into this world have to conform to the new way of life. Conversely, fantastic creatures may enter the familiar world, and when they do so their powers often prevail, as in Rudyard Kipling's *Puck of Pook's Hill* (1906).

**Literary dreams.** The dream is a popular vehicle for fantasy, but despite its successful use in the Alice books and *Oz*, some critics object to it as a

detraction from the verisimilitude which should accompany the fantasist's creation. Often characters reach the fantasy world through a magic entrance (the back of a wardrobe in the Narnia books) or a strange journey (the non-physical transference of Captain John Carter to 'the red planet' in the *Martian Tales*). In the new world, problems have to be overcome, and the characters return to their old life with a changed attitude. Fantasy may have a didactic purpose: a Christian message conveyed by C. S. Lewis, comparable to John Bunyan's *Pilgrim's Progress* (1678-84). Fantasy often conveys a sense of coming close to ultimate reality, with echoes of myths and legends or the evocative use of archetypal images such as mountain, cave, and sea. Death and rebirth are often symbolically encountered, along with the motifs of quest, rescue, and return: compare ARCHETYPE.

**The fantastic.** Even when fantasy carries a secondary message, it is different from *allegory*, which is more controlled and more directly corresponds with the familiar, from *ghost stories*, which show the supernatural impinging on the natural without creating a different world or world-view, from *science fiction* (as distinct from science fantasy), which is usually set in possible worlds, accessible through great but measurable distances of space or time, and from *utopias* and *dystopias*, which are often futuristic or based on a recognizably human community. The special name 'fantastic' has been given to stories which offer ambiguous interpretations between natural and supernatural happenings, such as *The Turn of the Screw* by Henry James (1898). Here, the new governess, who is the narrator, is uneasy about hints of a malign influence from a former governess and a manservant, both dead. Sitting by the lake, she sees a figure on the other side:

There was an alien object in view—a figure whose right of presence I instantly and passionately questioned. I recollect counting over perfectly the possibilities, reminding myself that nothing was more natural for instance than the appearance of one of the men about the place, or even of a messenger, a postman or a tradesman from the village. That reminder had as little effect on my practical certitude as I was conscious—still without even looking—of its having upon the character of the visitor. Nothing was more natural than that these things should be the other things they absolutely were not (ch. 6).

**The language of fantasy.** Fantasy must be logically developed, so that acceptance of an initial premiss allows the reader to enter fully into what follows. The narrative style should convey a credible story, even while normal expectations of narrative are being defeated. The use of familiar language to describe the unfamiliar requires skill in analogy and ingenuity in placing known features in new settings. Fantasy is marked by a

creative use of language. Strange creatures are given names like Carroll's *Jabberwock* and *Snark*, Lewis's *Sorns*, Burroughs's *Barsoomians*, and Frank Herbert's *Fremen*. Individuals receive exotic proper names like Peake's *Muzzlehatch*, Tolkien's *Gandalf*, and Burroughs's *Tars Tarkas*, *Jeddak of Thark*. Whole languages can be postulated, and specimens of them given, as Tolkien does with *Elvish* and other imaginary tongues. In the following excerpt, he blends Elvish names with a romantic medieval-cum-Biblical English:

Melian was a Maia, of the race of the Valar. She dwelt in the gardens of Lórien, and among all his people there were none more beautiful than Melian, nor more wise, nor more skilled in songs of enchantment . . . Elwë, lord of the Teleri, went often through the great woods to seek out Finwë his friend in the dwellings of the Noldor; and it chanced on a time that he came alone to the star-lit wood of Nan Elmoth, and there suddenly he heard the song of nightingales. Then an enchantment fell on him, and he stood still; and afar off beyond the voices of the *lómelindi* he heard the voice of Melian (*The Silmarillion*, 1977).

Fantasy adapts everyday language in two ways: (1) Through neologism, particularly in nonsense verse and the description of people, places, animals, objects, and customs. Lear's poems have given English *Pobble* and *Jumbles*, Tolkien's stories *hobbit* and *ent*. (2) Through the failure of language in the fantasy world. Alice passes through the 'wood where things have no names' and forgets her own. At the end of Lewis's *That Hideous Strength* (1945), the speech of some characters breaks down into incoherent sounds. Fantasy may also serve as a vehicle for commenting on language itself, as in Norton Juster's *The Phantom Tollbooth* (1961):

Above all the noise and tumult of the crowd could be heard the merchants' voices loudly advertising their products.

'Get your fresh-picked ifs, ands, and buts.'

'Hey-yaa, hey-yaa, nice ripe wheres and whens.'

'Step right up, step right up—fancy, best-quality words right here,' announced one man in a booming voice. 'Step right up—ah, what can I do for you, little boy? How about a nice bagful of pronouns—or maybe you'd like our special assortment of names?'

**Conclusion.** At a safe remove from everyday life, literary fantasy can be a means of airing and dealing with anxieties and taboos, exploring imaginative and spiritual areas of experience, and also a context in which to experiment freely with the limits of language.

See ALLEGORY, FABLE, GOTHIC, NONSENSE, NONSENSE VERSE, NOVEL, ONOMASTICS, ROMANCE, ROOT-CREATION, SCIENCE FICTION. [LITERATURE, STYLE]. R.C., T.MCA.

**FARCE** [14c: from French *farce* stuffing, from *farcir*, Latin *farciare*, to stuff]. (1) Comedy in

which the humour is often broad and unsubtle, designed to provoke continual laughter. In the 13c, the term referred to passages inserted into liturgy or liturgical drama (such as French in the Latin text of the Mass) and had a sense of the impromptu. Farce exaggerates such characteristics of comedy as coincidence, mistaken identity, embarrassment, and narrow escapes. Its often slapstick physical action and stock characterization help release anxiety and inhibition; its verbal humour is overt and transitory, and usually without wit. A farce may extend to a full-length play like *Charlie's Aunt* by Brandon Thomas (1892) or may be an ingredient in comedy proper, as with the farcical scenes in Shakespeare's *The Taming of the Shrew*. (2) By extension, absurdly futile proceedings; pretence or mockery: *This isn't a trial—It's a farce!* See HUMO(U)R. [LITERATURE, STYLE]. R.C.

**FAROESE**, also **Faeroese** [1850s]. The Germanic language of the Faroe/Faeroe Islands, a self-governing region of Denmark between Shetland and Iceland, first settled by the Norse in the 8c. It is similar to Icelandic and Norn, but whereas Norn gave way to Scots (17-18c), Faroese has survived, and acquired a written form in the 19c. Danish is taught on the islands as a second language. Despite their proximity, Faroese and English have had little impact on one other. See NORN, SCANDINAVIAN LANGUAGES. [EUROPE, LANGUAGE]. P.C.

**FATHERESE**. See MOTHERESE.

**FAUX AMI** [French: a false friend]. Also **false friend**. A term in language teaching for a word that has the same origin and general appearance as a word in another language, so that learners mistakenly assume that both have the same meanings and uses: English *deceive* to trick, French *décevoir* to disappoint. Such false friends are discussed by Philip Thody & Howard Evans in *Faux Amis and Key Words: A Dictionary-Guide to French Language, Culture and Society through Lookalikes and Confusables* (UK: Athlone, 1985; US: *Mistakable French*, Scribners), and Jacques Van Roey, Sylviane Granger, & Helen Swallow in *Dictionnaire des faux amis, français-anglais* (Louvain, 1989: Éditions Duculot). Compare CONFUSIBLE, DOUBLET. See QUEBEC ENGLISH. [EDUCATION, LANGUAGE]. T.MCA.

**FAX** [Late 20c: a clipping of (*tele*)*facsimile*, with *cs* respelled as *x*]. A device for the digital transmission in facsimile form of documents, photographs, etc., and any communication sent by this means. A fax machine encodes images from paper, sends them over telephone wires to other machines with *fax numbers* as addresses, and

these then decode the signals and restore them to paper: 'The firm's primary fax, a Group III machine, has 100 telephone numbers in memory, a 50-page automatic feeder and is constantly in use. "We can have a three-dimensional sketch or a plan detail on a client's or builder's desk within two hours," Koppstein points out. "It's not unusual to have a portfolio of incoming and outgoing faxes contained in four or five volumes—several thousand faxes"' (Martin Luray, 'Small-Business Fax', advertising section, *Newsweek*, 9 Dec. 1991). Faxing rapidly became during the 1980s a major international means of communication, primarily because the Japanese found it easier and more convenient to transmit sheets of signs in their traditional writing system than to recompose the text for other forms of electromagnetic transmission. See PHOTOCOPYING. [MEDIA, TECHNOLOGY]. T.MCA., M.L.

**FCE**. See FIRST CERTIFICATE IN ENGLISH.

**FEATURE** [14c: from French *faiture*, Latin *factura* making]. (1) In linguistics, a characteristic or component, often qualified by an adjective, as in *distinctive feature*, *semantic feature*. In phonology, a *distinctive feature* sets off one phoneme (distinctive sound) of a language from another: for example, the presence of the feature *voice* distinguishing /b/ from /p/ and /d/ from /t/. A *semantic feature* contributes an element of meaning to a word, such as the feature [female] in such words as *woman*, *mare* as opposed to [male] in *man*, *stallion*. (2) Also *feature film*. The main motion picture shown in a particular programme. (3) Also *feature article*. An article of general or specialist interest in a newspaper or other periodical, written by a *feature writer* and often edited by a *features editor* who looks after the *features pages*. (4) To make a feature of or give prominence to (something or someone), especially in the media or promoting a product: *The magazine features a different celebrity each week*. See ARTICLE<sup>2</sup>, SEMANTICS. [LANGUAGE, MEDIA]. T.MCA.

**FEEDBACK** [1910s]. (1) In biology, a response within a system (a cell, organism, or population) that has an effect on the continued activity or productivity of that system. (2) In information theory, the use by a monitor of part of the output of a process to control or modify the input. (3) In education, the monitoring of a person's or group's performance, in which progress or non-progress, etc., are noted and adjustments made appropriately in techniques and tactics. (4) In general usage, anything that feeds back into a system, such as the return of completed questionnaires in a survey which seeks opinions: *Our feedback suggests the original plan won't work*.

In educational terms, *positive feedback* is an increase in output that produces an increase in input (reinforcing a learner's ability and confidence) and *negative feedback* is an increase in output that produces a decrease in input (marking a lack of success and perhaps causing loss of morale). In engineering applications, however, positive feedback often leads to instability (such as the squeal when a microphone is too close to a loudspeaker it is driving and the amplification is too high), while negative feedback avoids this and produces stable and consistent systems. [EDUCATION, MEDIA, TECHNOLOGY]. M.L., T.MCA.

**FELCO.** See ARELS.

**FEMININE** [14c: from Old French *feminin* (Modern *féminin*), from Latin *femininus*, representing *genus femininum*, the translation of Greek *thēlukōn gēnos* the female kind]. A term relating to grammatical gender in nouns and related words. Words denoting female people and animals in such languages as French and Latin are usually feminine, but grammatical gender is not about sex: in the French phrase *la plume de ma tante*, the pen is as feminine as its owner. In English, the term is largely confined to personal pronouns (*she/her/herself/hers*), some nouns (*mare* in contrast to *stallion*), and some suffixes (*-ess* as in *hostess*). See GENDER, MASCULINE, SEXISM. [GRAMMAR]. S.C.

**FEMININE ENDING.** One or more unstressed syllables ending a line of verse. In rhymed verse, a line has a *feminine rhyme* if all sounds after the rhyming syllable are identical (*lending/bending*). A single extra syllable, as above, gives *double rhyme* and two extra syllables give *triple rhyme* (*garrison/caparison*). Double endings are generally used in English verse as occasional variants among *masculine endings*. The feminine ending can be used to suggest hesitancy, reflection, or deep feeling, as in the opening lines of Hamlet's best-known soliloquy:

To be, or not to be, that is the question,  
Whether tis nobler in the minde to suffer  
The slings and arrowes of outrageous fortune . . .  
(Shakespeare, *Hamlet*, 3. 1).

Such endings are more common in Italian and similar languages than in English. Compare MASCULINE ENDING. [LITERATURE]. R.C.

**FEMINISM** [1890s: from French *féminisme*, from Latin *femina* a woman, and *-ism(e)*]. A social philosophy concerned with the rights of women. Feminists generally consider women to be oppressed and in varying degrees alienated by a male-dominated society in which the use of language is anti-female. They argue that lan-

guage favours men by helping to shape a society in which women are rendered subordinate and often taught to keep silent; when they speak, men often do not listen to them properly. In a radical feminist view, if society cannot change to accommodate both sexes equally, women will do their best to create their own society and their own kinds of language. This idea is explored by Suzette Haden Elgin in *Native Tongue* (Daw, 1984), which creates a world in which severely oppressed women rebel through an underground movement to make their own language, *Laadan*. In it, a distinction is made between *am* (love for blood kin) and *ashon* (love for kin of the heart), and prefixes at the start of sentences signal whether they are statements, promises, warnings, etc., making the language more explicit and avoiding possibly painful misunderstandings. See CHAUVINISM, COMPANION, FORM OF ADDRESS, GENDER BIAS, -ISM, LITERARY CRITICISM, SEXISM. [LANGUAGE, STYLE]. L.S.W., M.E.W.

**FESTSCHRIFT** [1890s: from German *Festschrift* ('festival writing') a commemorative volume]. A collection of academic papers to mark a special anniversary, such as the 65th birthday of a scholar. In addition to essays, such volumes often contain a summary of the career and a list of the publications of the honoured person. Two festschriften in the field of English are *In Honour of Daniel Jones* (ed. David Abercrombie, 1964: 51 papers) and *Studies in Linguistics in Honor of R. I. McDavid* (ed. Lawrence Davis, 1972: 36 papers). [MEDIA]. R.H.

**FICTION** [14c: from Latin *factio/fictionis* a shaping, from *ingere/fictum* to fashion]. A general term for something created by the human mind. It has three aspects, each with an appropriate adjective: (1) (Both countable and uncountable). Not fact, but an invention of some kind, sometimes a fabrication or lie. The detective Sherlock Holmes was an invention of the writer Arthur Conan Doyle, and as such is *fictional*; no such person ever lived. (2) (Usually uncountable). Not fact, but still part of reality; imaginative narrative, often part of literature: *works of fiction* in contrast with *non-fiction*, especially in bookshops and libraries. Here the *fictional* Sherlock Holmes is a fact in the sense that a character with this name appears in certain stories and films, and can be discussed in much the same way as a historical person. (3) (Usually countable). A special kind of 'fact': a social and cultural construct, such as a *legal fiction* that helps in the administration of the law, *temporal fictions* such as the days of the week, and *geographical fictions* like the Equator. Such constructs are part of life; they are *fictive* or constructed, and include products of imaginative

storytelling. Fictively, Sherlock Holmes and the Equator are on a par, the one influencing crime writers, criminologists, and enthusiasts for the detective story, the other affecting geographers and sailors. The fictive generally subsumes both the fictional and the fictitious. Fictitious reports and fictional plots and characters are constantly being created in a language like English. At a certain level of discussion the language is itself fictive: something created by the human mind within a cultural system so as to serve certain social ends. Compare FANTASY, MYTH. See NARRATIVE, NOVEL, ONOMASTICS, POETRY, POPULAR FICTION, ROMANTIC FICTION, SCIENCE FICTION, SOCIAL REALISM, STORY, VERSE. [LANGUAGE, LITERATURE]. T.M.CA.

**FICTIONARY.** See CALL MY BLUFF.

**FIELDING, Henry** [1707–54]. English novelist and playwright, born in Somerset, and educated at Eton. He achieved early success in London as a comic dramatist. His most successful play, *Tom Thumb* (1730), was a burlesque of contemporary heroic tragedy. In 1736, he became manager of the New Theatre. His attacks on the royal family and Robert Walpole's government were a major reason for the passing of the 1737 Licensing Act, which imposed censorship of plays. Fielding turned to the practice of law, which he had studied for a time at Leiden, but was hampered by ill-health. The publication of Richardson's *Pamela* (1740–1) brought out a talent for parody in his *An Apology for the Life of Mrs Shamela Andrews* (1741). He continued to attack Richardson with *Joseph Andrews* (1742), his target the type of morality that equated virtue with a decorous marriage and paid excessive respect to outward forms of piety. *Tom Jones* (1749), which he described as 'a comic epic in prose', was disliked by the literary establishment, but gained a wide readership. Avoiding the epistolary style, he showed what could be done with continuous narrative, characters from many levels of society, and dialogue that included dialect: see DIALOGUE. The lowly hero Tom Jones, careless of conventional morality, introduced new frankness and breadth of vision to English letters. Fielding's legal career prospered; he became a magistrate and fought both the criminal underworld and the weaknesses of the legal system, using his legal experience in *Jonathan Wild* (1744). His last novel, *Amelia* (1752), showed signs of the failing health that caused his death on a visit to Lisbon. His *Journal of a Voyage to Lisbon* (1755) was published posthumously. See CENSORSHIP, NOVEL. [BIOGRAPHY, EUROPE, LITERATURE]. R.C.

**FIGURATIVE EXTENSION**, also **extension**. A process of semantic change in which a word

gains further senses figuratively, especially through metaphor or metonymy. For example, the reference of *crown* has extended from a usually royal head-dress to royalty itself, to (among others) a coin with this symbol on it, to the part of the head where a crown rests, to the top of a hill or other such place, to the crest of a bird, to a crown-like award or honour, to the enamel-covered part of a tooth above the gum, and to a standard size of printing paper. See FIGURATIVE LANGUAGE/USAGE, SEMANTIC CHANGE, SLANG. [HISTORY, LANGUAGE]. T.M.CA.

**FIGURATIVE LANGUAGE**, also **figurative usage** [14c: adjective from French *figuratif*, Latin *figurativus*, from *figura* a form, shape, device, or ornament: compare FIGURE OF SPEECH]. Language in which figures of speech such as metaphors and similes freely occur. In classical rhetoric and poetics there is an inherent contrast between *figurative* or ornamental usage on the one hand and *literal* or plain and conventional usage on the other; in this contrast, figures of speech are regarded as embellishments that deviate from the 'ordinary' uses of language. The 16c English rhetorician George Puttenham described the contrast as follows:

As figures be the instruments of ornament in euery language, so be they also in a sort abuses or rather trespasses in speech, because they passe the ordinary limits of common vtterance, and be occupied of purpose to deceiue the eare and also the minde, drawing it from plainnesse and simplicitie to a certain double-nesse, whereby our talk is the more guileful and abusing, for what else is your Metaphore but an inuersion of sence by transport; your allegorie but a duplicitie of meaning or dissimulation vnder covert and dark intendments? (*The Arte of Poesie*, 1589).

Puttenham implies here that there is a core of simple, literal language that can be distinguished from ornate, figurative language (which engages in a kind of unnatural double-dealing). There is, however, a paradox at the heart of the classical argument that Puttenham presents. The 18c Scottish rhetorician Hugh Blair touched on it when he wrote:

But, though Figures imply a deviation from what may be reckoned the most simple form of Speech, we are not thence to conclude, that they imply anything uncommon, or unnatural (*Lectures on Rhetoric and Belles Lettres*, 1784).

In this paradox, figurative language succeeds, somehow, in being both natural and unnatural at the same time.

**From deviant to natural.** The classical view was dominant at the end of the 19c, when the American rhetorician John F. Genung described figurative language as an 'intentional deviation from the plain and ordinary mode of speaking, for the sake of greater effect' (*Practical Elements*

of *Rhetoric*, 1893). In the late 20c however, a change of approach was under way: for example, while referring to 'an intentional deviation from the normal' (in the traditional way), the American critic Joseph T. Shipley observed: 'Figures are as old as language. They lie buried in many words of current use. They are the backbone of slang. They occur constantly in both prose and poetry' (*Dictionary of World Literary Terms*, 1970). Two recent dictionaries demonstrate more explicitly a shift in the perception of the term 'figure of speech' away from linguistic deviance towards stylistic creativity, defining it as: (1) 'a form of expression (e.g. a hyperbole or metaphor) used to convey meaning or heighten effect, often by comparing or identifying one thing with another that has a meaning or connotation familiar to the reader or listener' (UK: *Longman Dictionary of the English Language*, 1984); (2) 'An expression, such as a metaphor or hyperbole, in which a nonliteral and intensive sense of a word or words is used to create a forceful, dramatic, or illuminating image' (US: *American Heritage Dictionary*, 1985).

Deciding where the literal ends and the figurative begins is notoriously difficult. There is no irreducible core of 'literal' language from which 'figurative usage' diverges. Rather, there is an easy movement between the one pole and the other: for example, behind such an everyday word as *brand* (in the sense of 'product' or 'trademark') is a history of burning that includes what was done to animals and slaves to mark them as property. The modern use of *brand* as 'product' is in effect a literal usage, yet its origin in branding-irons and the like is distinctly metaphorical and figurative. Similarly, behind the various *fields* in which scholars work lie the patches of land where farmers have 'literally' worked for millennia, and such a phrase as *electromagnetic field*, however mundanely literal it may be for physicists, depends for its creation on a comparable figurative shift: Puttenham's 'inursion of sence by transport'.

**Defining figures of speech.** The precise definition of a figure of speech has proved to be as difficult as determining the limits of figurative usage. For centuries, rhetoricians have debated what each presumed figure refers to and how various figures relate to each other. As a result, *metaphor* in some approaches contains *metonymy*, in others does not, and *synecdoche* may or may not be a kind of metaphor or metonymy. As a result, in recent years attempts to arrange the figures hierarchically have been abandoned in favour of lists in which the main devices are presented each more or less in isolation, as stylistic equals, but perhaps with notes on celebrated doubts and

ambiguities about their precise natures and relationships. Classical rhetoric has tended to present figurative language as the concern primarily of poets, orators, critics, and language teachers, while conceding (usually in a brief aside) that everybody else uses it too and that the term therefore covers a universal practice in which sound, spelling, grammar, vocabulary, usage, and meaning are adapted to achieve special stylistic effects.

**Kinds of figurative language.** (1) Phonological figures include *alliteration*, *assonance*, and *onomatopoeia*. In his poem 'The Pied Piper of Hamelin' (1842), Robert Browning repeats sibilants, nasals, and liquids as he shows how the children respond to the piper: 'There was a rustling, that seemed like a bustling / Of merry crowds justling at pitching and hustling.' Something sinister has started. (2) Orthographic figures use visual forms created for effect: for example, *America* spelt *Amerika* (by left-wing radicals in the 1970s and as the name of a movie in the 1980s), to suggest a totalitarian state. (3) Syntactic figures may bring the non-standard into the standard language, as in US President Ronald Reagan's 'You ain't seen nothing yet' (1984), a non-standard double negative used to project a vigorous, folksy image. (4) Lexical figures extend the conventional so as to surprise or entertain, as when, instead of a phrase like *a year ago*, the Welsh poet Dylan Thomas wrote *a grief ago*, or when the Irish dramatist Oscar Wilde said at the New York Customs, 'I have nothing to declare but my genius.' When people say that 'you can't take' something 'literally', they are generally referring to usage that challenges everyday reality: for example, through exaggeration (the *hyperbole* in 'loads of money'), comparison (the *simile* 'like death warmed up'; the *metaphor* 'life is an uphill struggle'), physical and other association (the *metonymy* 'Crown property' for something owned by royalty), and a part for a whole (the *synecdoche* 'All hands on deck!').

Puttenham divided figures into those that please the ear and the mind (or both), but to be effective, figurative usage does not need to please. The spelling *Amerikkka* has sometimes been used, especially in graffiti, to suggest that the Ku Klux Klan has great influence over how the US is governed. The usage is both imaginative and striking, but to many Americans it is very far from pleasing. The aim of all such usage is to make an impact: pleasing, shocking, political, social, etc. The ends of figurative language are achieved through repetitions, juxtapositions, contrasts, and associations, by violating expectations, by evoking echoes of other people, places, times, and contexts, and through novel, provocative imagery. When such

usage succeeds, new expressions, concepts, and associations may be established in a language, as with *loads/tons of money*. When an expression succeeds so well that everyone adopts it, the result in due course is the opposite of what was first intended: a cliché from which the figurative power has drained away.

**FIGURE OF SPEECH** [1810s: a translation of Latin *figura orationis*, in turn a translation of the original Greek technical term *skhēma tēs lēxeōs*]. A rhetorical device that achieves a special effect by using words in distinctive ways, such as *alliteration*, in which the same sound, especially an initial consonant, is repeated, as with /f/ in *life's fitful fever*, and *hyperbole*, in which one engages, usually deliberately, in unrealistic exaggeration, as in the informal phrase *tons of money* ('a great deal of money'). Here, a word usually associated with weights and measures has been moved out of context to refer to money, with which it is not normally associated. Devices traditionally regarded as figures of speech include: *alliteration*,

*anachorism*, *anachronism*, *anticlimax*, *antithesis*, *antonomasia*, *apostrophe*<sup>2</sup>, *assonance*, *bathos*, *cacophemism*, *chiasmus*, *climax*, *dysphemism*, *euphemism*, *hendiadys*, *hypallage* (*transferred epithet*), *hyperbaton*, *hyperbole*, *irony*, *litotes*, *meiosis* (*understatement*), *metaphor*, *metonymy*, *onomatopoeia*, *oxymoron*, *paradox*, *personification* (*prosopopoeia*), *prolepsis*, *pun* (*paronomasia*), *simile*, *synecdoche*, *zeugma* (*syllipsis*) (for each of which there is a separate entry). See FIGURATIVE LANGUAGE/USAGE, INVERSION, PARALLELISM, PATHETIC FALLACY, PLAYING WITH WORDS/WORD-PLAY, POETIC DICTION, REPETITION, RHETORIC, SCHEME, STYLISTICS, TROPE. [LANGUAGE, STYLE]. T.M.C.A.

**FJI.** A country in Oceania, consisting of some 330 islands. Capital: Suva. Currency: dollar (100 cents). Economy: mixed. Population: 700,000 (1988), 900,000 (projection for 2000). Ethnicity: 50% Indian, 45% Melanesian, 5% Chinese, European, Polynesian, and mixed. Languages: Fijian and English (both official), the Pacific languages Rotuman, Gilbertese, Tongan, and the Indian languages Gujarati, Tamil, Telugu. Education: primary 100%, secondary 40%, tertiary 5%, literacy 86%. Fiji was a British colony from 1874 to independence in 1970. Originally wholly Melanesian, the population became multiethnic through colonialism, especially the importing of plantation labourers from the Pacific islands and India. There are long-standing tensions between ethnic Fijians and the Indian community. The ethnically and linguistically distinct Rotumans are from an island administered by Fiji.

English in Fiji ranges from low-prestige varieties (the basilect) to a high-prestige variety (the acrolect). The language of education is standard English on a BrE model. A stable pidgin English did not develop, although some early plantation labourers knew Melanesian Pidgin English and later labourers arrived speaking a stable variety of the same pidgin, learned in Queensland. A pidginized Fijian was used on plantations. Features of local English include: (1) The focus marker *ga* (*You ga, you ga tell it* It's you who tells it) and the politeness marker *mada* (*Wait mada*). (2) Use of *one* as an indefinite article, as in varieties of IndE: *Tonight I'm going to one party*. (3) Use of *us two* as the first-person dual inclusive (myself and one other): *I can't give you us two's money because us two poor*. (4) The use of *fella* as the third-person pronoun with human reference: *Fella put that fella's hand in front* He put his hand in front. (5) Local words such as Fijian *tanoa* a bowl for making kava, and Hindi *roti* Indian flat bread. Such features as *us two* and *fella* are similar to those in Melanesian Pidgin English and indigenous languages; others are shared not only with pidgin and creole English

but also with basilectal varieties of English as in Singapore, such as the use of *been* as a pre-verbal marker of past tense (*He been swear* He swore) and lack of copula (*That one nice house* That is a nice house). See ENGLISH, MELANESIA. [NAME, OCEANIA, VARIETY]. S.R., T.MCA.

**FILIPINISM** [1960s]. A linguistic usage specific to or typical of the Philippines, such as *Open the light* Switch on the light, *captain-ball* basketball team captain, and *viand* any dish eaten with rice. See -ISM, PHILIPPINE ENGLISH. [ASIA, VARIETY, WORD]. A.G.

**FILIPINO** [1890s: from Spanish, from *Las Islas Filipinas* the Philippine Islands]. (1) An inhabitant or citizen of the Philippines. The term is generic for all people in the Philippines, but *Filipina* is often used for women. (2) Relating to the Philippines: *Filipino languages*. (3) Also *Pilipino*. The co-official language (with English) of the Philippines, based on Tagalog. See AMERICAN LANGUAGES, HAWAII, PHILIPPINES, TAGALOG, TAGLISH. [ASIA, LANGUAGE, NAME]. T.MCA.

**FILIPINO ENGLISH.** See PHILIPPINE ENGLISH.

**FILIPINO LITERATURE IN ENGLISH.** The first notable work in English resulting from the intervention of the US in the Philippines in 1898 is Rudyard Kipling's poem 'The White Man's Burden'. Following the introduction of English-language education, however, Filipinos turned to literary expression in Kipling's language. Short stories appeared in college magazines from 1910 and the first novel in English, Zoilo M. Galang's *A Child of Sorrow*, was published in 1921. Since then, a considerable body of work in all literary genres has developed in a nation that regards itself as having the world's third largest English-speaking population. Creative writing in English perhaps suffered in the first 50 years from the language's association with material and social development, as opposed (in the minds of the intelligentsia at least) to Spanish as a cultural language. The effect can be seen in the functional quality of much English writing, artistry being subservient to social protest and bolstering national pride. This approach, championed by Salvador P. Lopez, was countered by another characteristic of Filipino writing in English: an 'art for art's sake' formalism developed by the poet José García Villa. Other traits are: a tendency to sentimentality and romance (with roots in Spanish and indigenous traditions), a concern for identity in the face of colonial discontinuities and the blending of East and West, a focus on rural life (people against nature, village childhood, the pull to the city), dramatized questions of social justice, and the 'war of the sexes'.

The social phenomena having greatest impact have been the migration of Filipino workers to America, especially during the Depression, and the period of martial law under the Marcos regime (1972-86), although there has also been a lasting interest in historical reconstructions of the close of the Spanish period and the transition to American rule. In one picture of the development of English-language literature, three decades of apprenticeship led to a boom after 1930. The short story was the most notable development and is still the most popular and achieved form, with influences from Sherwood Anderson, Hemingway, Steinbeck, and Dos Passos; significant early writers include Arturo Rotor, Manuel Arguilla, and Francisco Arcellana. Poetry was mainly lyric and following models of Spanish devotional literature and English Romanticism, and was boosted by the success of Villa. Although interrupted by the Japanese invasion, literary output has continued steadily, social realism and romance being gradually supplemented by modernist experiments, international models, and the use of more colloquial language. Leading names include Linda Ty Casper, N. V. M. Gonzalez, Nick Joaquin, Bienvenido Santos, Edilberto Tiempo. Poets of note are Gemino Abad, Cirilo Bautista, Ophelia Alcantara Dimalanta, and Edith Tiempo. Drama in English has been overshadowed by vernacular productions and the flourishing Filipino film industry, but names of note in the English theatre are Alberto Floretino, Esla Coscolluela, Wilfrido Maria Guerrero, and Nick Joaquin.

The breeding ground for writers in English has always been the tertiary colleges and major universities; indeed, most of the writers are also teachers. They often edit magazines that serve as literary outlets and act as critics of each other's work. This has led to debate about the problem of establishing a solid literary tradition free of coterie biases. In the context of recovering a national cultural identity, writing in English has always been under attack from those advocating the primacy of vernacular expression. They argue that English is not only the tongue of foreign colonialists, but also the vehicle of a local élite, prone to ivory-tower irrelevance. Vernacular writing has been supported by recent generations of social activists; since the decline of English with post-war decolonization and the development of Filipino as a national language, it has given them access to the average Filipino worker. In turn, supporters of English claim that it is their natural means of expression, that language and culture do not work on one-to-one exclusivity, and that, as an international language, English offers access to world literary tradition and a protection against insularity. See

FILIPINO, PHILIPPINE ENGLISH, PHILIPPINES. [ASIA, LITERATURE, VARIETY]. P.SH.

FILM. See MOTION PICTURE.

FINGER SPELLING. See SIGN LANGUAGE.

FINITE [15c: from Latin *finitus* ended, limited]. A term for any occurrence of a verb inflected for grammatical features such as person, number, and tense. Compare FINITE VERB, INFINITIVE, NON-FINITE VERB. [GRAMMAR]. T.MCA.

FINITE VERB. A form of the verb with a distinction in tense: *likes, like, liked* are finite verbs in *Justin likes strawberry ice cream, Anne and Robert like my story, and David liked his wife's cooking*. On the other hand, *like, liked* are non-finite in *Justin may like strawberry ice cream and David has always liked his wife's cooking*, since no tense contrast is possible in these sentences. Compare FINITE, INFINITIVE, NON-FINITE VERB. [GRAMMAR]. S.G.

FINNISH. See BORROWING, EUROPEAN LANGUAGES, SCANDINAVIAN LANGUAGES, URO-ALTAIC LANGUAGES.

FINNO-UGRIC LANGUAGES. See LANGUAGE, URO-ALTAIC LANGUAGES.

FIRST CERTIFICATE IN ENGLISH, short forms *FCE, First Certificate*. An EFL examination introduced by UCLES in 1939 (when it was called the *Lower Certificate*); the principal comprehensive test in English available internationally. See EXAMINING IN ENGLISH, UCLES. [EDUCATION]. W.S.

FIRST LANGUAGE, SECOND LANGUAGE, short forms *L1, L2*. Terms in applied linguistics and language teaching. The *first language* is the language in which learners are competent when starting a new language; the *second language* is another language that is being learned or has been learned to an adequate level. In many countries, a specific L2 is learned, usually at school, for national or international use. English is the second language for many purposes in such countries as India, Nigeria, and Singapore. An L1 may or may not be a learner's mother tongue, because a chronologically first language may not be the functionally first language of adulthood. Under certain conditions, such as migration, an original L2 may become a person's L1 or only language. See LANGUAGE TEACHING, MOTHER TONGUE, TEACHING ENGLISH. [EDUCATION, LANGUAGE]. P.C., T.MCA.

FIRST NAME. See PERSONAL NAME.

FIST HAND. See INDEX.

FIXED [17c in this sense]. Of a language: made uniform or standard, as in the definition of Latin as 'an Italic language spoken in ancient Rome, fixed in the 2nd or 1st century B.C., and established as the official language of the Roman Empire' (*Random House Dictionary*, 1987). The idea of 'fixing' or 'ascertaining' English was strong in the 18c, especially among such writers as Addison and Defoe. See ACADEMY, STANDARD. [USAGE]. T.MCA.

FIXED PHRASE. A phrase, often consisting of an adjective and a noun, which functions as a word, either with unique reference (*Red Ensign, Red Indian, Red Sea*) or as an idiom (*red herring, red tape*). The usual stress is level (*Réd Séa, réd tâpe*) as opposed to initial emphasis in compounds (*REDcap, REDcoat*). Fixed phrases are common in technical usage: *adaptive radiation, chemical differentiation, natural selection, solar nebula, spontaneous generation*. The dividing line between a widely used ordinary phrase and a fixed phrase is not easy to determine. There are degrees of fixedness, depending on frequency of occurrence and people's perception of the usage. Darwin's phrase *natural selection* did not become fixed in the language at large for many years, but for Darwin, it was probably fixed from the moment of coinage. The line between fixed phrases and compound words is also not easy to draw. Linguists disagree as to whether the following are fixed phrases or compounds: possessive eponyms (*Parkinson's Law, Tourette's syndrome*), words linked by preposition (*brother-in-law, actor-cum-manager*), and emphatic expressions (*brute of a man, fool of a boy, hell of a time*). Fixed phrases are often incorporated into compounds: *red letter* in *red-letter day* (a *réd-LEtter dây*), and ordinary phrases that have been incorporated into compound forms become fixed within them: *hot water* in a *hot-water system; quick action* in *quick-action glue*. See ADJECTIVE, HOLOPHRASE, PHRASE, TECHNOSPEAK. [GRAMMAR, WORD]. T.MCA.

FLAMING. See TECHNOLOGY.

FLANDERS. See FLEMISH.

FLAP, FLAPPED R. See R-SOUNDS.

FLASH. (1) An obsolete term for showy, vulgar usage defined in Dyche & Pardon's dictionary of 1735 as 'a Boast, Brag, or great Pretence Made by Spend-thrift, Quack, or Pretender to more Art or Knowledge than a Person has'; the cant of thieves, prostitutes, and vagabonds. See CANT,

ROMANI/ROMANY, SLANG. (2) Also *newsflash*, *news flash*. In journalism, a brief report sent by a wire service or announced on radio or television, that provides preliminary information about a story that has just 'broken'. For *flashback/flashforward*, see ANACHRONY. [MEDIA, STYLE].

T.MCA.

**FLAT** [13c: from Old Norse *flatr*, akin to Old English *flet*]. (1) (Of a sound, voice, or accent) lacking resonance and pitch variation; monotonous; not clear or ringing: 'Seemingly classless, with a flat, featureless accent and unimaginative style of dress, Mr. Major lacks flamboyance' (Barry James, on the British prime minister, *International Herald Tribune*, 28 Nov. 1990). (2) Of writing, unable to sustain interest; dull. See ACCENT, (A)ESTHETICS, NEW ENGLAND. [SPEECH, STYLE, WRITING].

T.MCA.

**FLEET STREET**. A street in London, running from Ludgate Circus to the Strand, and taking its name from the Fleet River; once known for its bookshops, more recently for its newspaper offices. The association of *the Street* (as it has been called) with journalism derives from the concentration of British mass-circulation newspapers and periodicals in the area at the turn of the 20c. By the 1920s, most national newspapers were located there. The name became a metonym for the Press, as in *Fleet Street is agog at the latest scandal*. The term has often implied a greater unity or consensus than existed, given the varied character of the British press. Since the departure of newspaper offices to other sites in London, beginning with *The Times* in 1986 and ending with *The Daily Mail* in 1989, the journalistic use of the name, though ongoing and widely used, has become anachronistic. Compare GRUB STREET. [MEDIA].

G.H.

**FLEMISH** [13c: from Middle Dutch *Vlaemsch* (Modern Flemish *Vlaams*)]. The Germanic language of Belgium, its standard form differing little from that of Dutch. It is often called a variety of Dutch, sometimes *Low Dutch* or *South Dutch*, or is described with Dutch as a variety of *Netherlandic*. With French, it is an official language of Belgium, spoken in the northern provinces. Flemish is closely associated with *Flanders*, an ancient region of Europe now divided among Belgium, the Netherlands, and France. In English, this name is associated with the trench battles of the First World War (*Flanders field*, *Flanders poppy*) and since medieval times with Flemish cloth and weaving (*Flanders flax*, *Flanders lace*). Contact between Flanders and Britain has been close, especially because its cloth industry once depended on English wool. Flemish weavers settled in England and

Scotland, sometimes with the surname *Fleming* (a native of Flanders). The Flanders link produced such loans as *cambric* a fine white linen or cotton (from Kamerijk or Cambrai, a town now in France), *dornick* a damask cloth (from Doornik or Tournai, a town in Belgium), and *spa* a place for taking the waters (from Spa, near Liège). The region was important in the development of printing: William Caxton lived there for many years, spoke Flemish, and in 1476 printed the first book in English at his press in Bruges: *The Recuyell of the Historyes of Troye*. See CAXTON, DUTCH, FRENCH, LOW GERMAN, SCOTS. [EUROPE, LANGUAGE, NAME].

T.MCA., N.E.O.

**FLESCH READABILITY FORMULA**, **The**, also **the Flesch Formula**, **the Flesch Reading Ease Test**. A technique for assessing the readability of texts, named after its American developer Rudolf Flesch (*The Art of Readable Writing*, Harper & Row, 1949), who based it on the tentative statistics (relating to estimates of decreasing sentence length since the 16c) of the literary critic L. A. Sherman (*Analytics of Literature*, Ginn & Co., Boston, 1893). The formula establishes first the average sentence length in words of any given text (which is then multiplied by 1.015) and the number of syllables per 100 words (which is multiplied by 0.846). The totals are added, then subtracted from 206.8 to give a score for reading ease on a scale from 0 (practically unreadable) to 100 (easy to read). A score of 60 is taken to be plain English: about 20 words per sentence and 1.5 syllables per word. The *Reader's Digest* scores 65, *Time Magazine* 52, the *Harvard Law Review* 32. The scores translate into US school grades as 60–70 (8th–9th grade), 50–60 (10th–12th grade), 0–30 (college graduate level). Most US states require insurance documents to score between 40 and 50. Compare FOG INDEX. See STYLE CHECKER. [STYLE, WRITING].

T.MCA.

**FLUENCY** [16c: from Latin *fluens/fluentis* flowing, and *-cy* as in *currency*]. Smooth, rapid, effortless use of language. The concept is widely used in foreign-language teaching, where to be fluent means to have assimilated all or most of the sound patterns and grammar, and an appreciable level of vocabulary, and to be able to put these patterns into easy, appropriate use in conversation. In first-language use, it implies the ability to speak smoothly and continuously, and sometimes volubly and glibly. In the context of language pathology, it is a theoretical norm whose achievement is the goal of people handicapped by disorders such as stuttering. Although the concept has a ready intuitive plausibility, it is difficult to measure precisely,

and there is controversy over how best to assess it in people learning a language. See COMMUNICATION, LANGUAGE PATHOLOGY. [LANGUAGE]. D.C.

**FLYTAAL**, also **fly taal**, **flaaitaal** [?1950s: from English slang *fly* cunning, smart, and Afrikaans *taal* language]. A versatile argot or street language among especially younger urban blacks in South Africa. It was originally based on Afrikaans and known as *tsotsi-taal* [1940s: from *tsotsi* thief, gangster], a term now disparaged because others besides *tsotsis* use the argot. It has increasingly shifted to using various African languages as its base, and includes a range of English loanwords. Its many names include *Town Talk* and in township slang *isicamto* and *isileng* [the latter from English *slang*]. It varies from area to area, as do the languages of its predominant loanwords and the inclinations of its speakers. Although formerly in-group slang, it is becoming more widely known and understood, and is appearing in dialogue in African literature and drama in English. Its vocabulary includes such former in-group words as: *sharp* good, right, *groove* enjoy, *dlas* house (from Zulu *idlala* temporary hut), and *dikota* marijuana/dagga (from Sotho *dikota* dry wood). Flytaal has many terms for money, clothing, and drugs, and many colourful modes of address, of which the most popular is *bra/bla* brother, often used as a title: *Bra Victor*. See SOUTH AFRICAN ENGLISH, TSOTSI-TAAL. [AFRICA, VARIETY]. J.B.

**FOG INDEX**, also **Gunning Fog Index**. An American technique for assessing the readability of texts, developed by Robert Gunning (*The Technique of Clear Writing*, 1968). For any text, a rating requires both average sentence length and percentage (calculated per 100 words) of 'foggy' words (that is, those with three or more syllables). For an average sentence length of 20 words and 10% 'fog', the rating is found by adding the 20 and 10 to get 30, then multiplying by 0.4, to get 12, a point on a scale in which 5 is very readable, 10 is becoming hard, 15 is difficult, and 20 very difficult. Such a check is part of the service provided by many computer style checkers. Compare FLESCH READABILITY FORMULA. See STYLE CHECKER. [STYLE, WRITING]. T.MCA.

**FOLIO** [16c: from the Latin ablative phrase *in folio* in a leaf, from *folium* leaf, used to refer to the format of a page]. (1) A piece of paper cut for use on its own, in a manuscript, or in a book. In this sense, a folio has two sides or pages: the upper or *recto*, and the *verso*. (2) A sheet of such paper folded to form two leaves: that is, four sides or pages. (3) The size of such a leaf, used to describe a format for manuscripts and especially

early printed books. (4) A manuscript or book made up in such a format. A folio of this kind often consists of three or four sheets folded as a group to make six or eight leaves (12 or 16 pages) in a *quire*. If the sheets are large, the resulting book is very large: the 'elephant folio' edition of John James Audubon's *Viviparous Quadrupeds of North America* (1845-8) is sometimes mounted on wheels for easier consultation. A typical folio is 18 to 24 inches (45 to 60 cm) high by a foot (30 cm) or more in width. (5) A leaf of paper or parchment (as a sheet of manuscript or copy) numbered on one side only and abbreviated *fol.*, *fo.*, *f.*: *You'll find his comments on folio 316a.* (6) A page number in a book. (7) In legal usage, a unit of measurement of the length of documents, determined by the number of words, 72 or 90 in Britain and 100 in the US. See BOOK, FORMAT. [TECHNOLOGY]. W.W.B., T.MCA.

**FOLK** [From Old English *folc*]. (1) 'People as the carriers of culture, esp. as representing the composite of social mores, customs, forms of behavior, etc., in a society: *The folk are the bearers of oral tradition*' (*Random House Dictionary*, 1987). In this sense, the term is strongly associated with 19c Romanticism, in which the assumed honesty and innocence of country folk is contrasted with the sophistication and even degeneracy of the city dweller; country dialects have often been favourably compared with urban dialects that arose with the Industrial Revolution: see DORIC. (2) Attributive: relating to or originating among the (common) people: *folk art, folk dance, folk medicine, folklore, folk-tale*. In the use by scholars of such terms as *folk belief, folk etymology*, and *folk linguistics* there is often a dismissive quality implying that 'folk' movements inherently operate at a lower and therefore less significant level than the traditions to which the scholars themselves belong. See FOLK ETYMOLOGY, ORAL TRADITION, POPULAR, ROMANTICISM, SAYING. [LANGUAGE]. T.MCA.

**FOLK ETYMOLOGY**, also **popular etymology**. A term in linguistics for 'folk' or 'popular' theories (that is, the thoughts of ordinary, non-academic people) about the origins, forms, and meanings of words, sometimes resulting in changes to the words in question: *plantar wart*, a wart on the sole of the foot (from Latin *planta*), reinterpreted as *planter's wart*. See ETYMOLOGY, FOLK, POPULAR, WORD ORIGINS. [HISTORY, LANGUAGE, WORD]. W.F.B.

**FONT**, also **fount** [16c: from French *fonte*, from *fondre* to found (as in *foundry*), referring to the making of cast type]. A printer's term: (1) Technically, a uniform size of typeface, the term being applied both to the design of the type as metal

or photographic image and to its form as received on a printed surface. (2) More loosely, a family of type, such as *Palatino*, *Bembo*, *Gill Sans*. Technically, a 9-point *Baskerville* is a different font from a 72-point *Baskerville*, but loosely the whole family of *Baskerville* type, regardless of size, is a font. Such a font can contain up to 275 *sorts* or individual characters, including accented letters, ligatured letters, abbreviations, etc. See DIACRITIC, POINT, TYPESETTING, TYPOGRAPHY. [TECHNOLOGY]. W.W.B.

**FOOLSCAP** [17c: from a watermark showing a fool's or jester's cap and bells]. (1) In Britain, a size of paper for writing, drawing, or printing, usually 17 × 13.5 inches (43 × 34 cm) when folded or cut. Abbreviated as *cap.*, *fcp.* (2) In the US, a type of inexpensive lined, yellow writing paper (legal-size: 8.5 × 14 inches, 22 × 36 cm), bound in tablet form. (3) Also *foolscap octavo*. A book size, 4.25 × 6.75 inches (11 × 17 cm) untrimmed. (4) Also *foolscap quarto*. An especially British book size, 6.75 × 8.5 inches (17 × 22 cm) untrimmed. See BOOK, FORMAT, PAPER. [TECHNOLOGY]. W.W.B., T.MCA.

**FOOT**. (1) In prosody, the traditional unit of metre, made up in English of strong and weak syllables in combinations such as *iamb* (weak/strong) and *dactyl* (strong/weak/strong). A line of verse usually consists of a series of the same kind of foot, but there are sometimes variations. Kinds of foot take their names from Greek prosody, the English pattern of stressed and unstressed syllables (*accentual metre*) replacing a classical pattern of long and short vowels (*quantitative metre*). The signs most commonly used to mark such syllables are the *macron* (ˉ) for strong or long syllables and the *breve* (˘) for weak or short syllables. Sometimes a *solidus* or *slash* (/) is used for strong and (×) for weak syllables, and sometimes there is only an acute accent for strong syllables. The commoner metrical feet in English are the *iamb* (◡ –) as in *support*, *restore*, the *trochee* (– ◡) as in *danger*, *labour*, the *dactyl* (– ◡ ◡) as in *catapult*, *memory*, the *anapaest/anapest* (◡ ◡ –) as in *amputee*, *put it up*, and the *spondee* (– –) as in *green light*, *big town*. A line of verse is named from its predominant foot and the number of feet within it: *iambic pentameter* five iambic feet per line; *dactylic hexameter* six dactyls per line. (2) In phonetics, a unit of speech that begins with a stressed syllable and continues to the next stressed syllable or the end of a tone group, whichever comes first. The sentence *Do not walk on the grass* contains three feet: //Do not / walk on the / grass//. Weak syllables are generally deemed to be trailing: that is, they follow a stressed syllable, so that *on the* is grouped with

*walk* in the foot / *walk on the*/. The exception is the case of one or more weak initial syllables, grouped rhythmically with a following stressed syllable: //at the shop on the / corner//. Some scholars suggest that such leading syllables follow an initial 'silent stress', a beat (×) that occurs before the utterance begins: //× at the / shop on the / corner//. As the examples show, foot division ignores grammatical boundaries. See AMPHIBRACH, ANAP(A)EST, DACTYL, IAMB(US), METRE/METER, PROSODY, RHYTHM, SCANSION, SPONDEE, STRESS, THESIS, TROCHEE. [LITERATURE, SPEECH]. R.C., G.K.

**FOOTERS**. See HEADERS AND FOOTERS.

**FOOTNOTE**. See NOTES AND REFERENCES.

**FOREIGNER TALK**. A term in linguistics and language teaching for the conventionalized and simplified kind of language used by many native speakers with foreigners who cannot speak their language, such as (with exaggerated pointing gestures) *Me help you, yes?* for *I am going to help you*; *is that all right?* It has a simple or non-existent morphology, more or less fixed word order, simple syntax, a small number of grammatical words, and little or no use of the copula: a complex sentence such as *I haven't seen the man you're talking about* could be reduced and simplified as *I no see man you say* or *That man you talk I not see*. Compare *BABY TALK*, *TEACHER TALK*. See *PIDGIN*, *TALK*. [EDUCATION, LANGUAGE, VARIETY]. S.R.

**FOREIGNISM** [1850s]. A foreign word or expression, as in the headline 'No more *Antagonismo*' (*Time*, 15 Aug. 1988). Foreign expressions in English (as opposed to *borrowings* or *loanwords* proper) are generally used for special effect, for 'local colour', or to demonstrate special knowledge. In print, they typically appear in italics and are usually glossed:

In the bazaars the shops were silently shuttered. In place of the turmoil of hawks, scooters and vans pedestrians shrouded in the *phiran*, the long woollen winter coat, wandered or lounged in good humoured idleness, clutching under their wraps the *kongri*, a basket containing an earthenware bowl full of hot charcoal to keep them warm ('Letter from Srinagar', *The Times*, 23 Jan. 1984).

Writers of fiction often dispense with italics, implying that in a given situation the unusual expressions are normal, whether or not the reader immediately understands them. A gloss may or may not be provided:

I am bawaji, the son of the son of and so on and so on of a bawaji; but as my bapajiji, my paternal grandmother . . . recently said to me: You are a bawaji,

Hormusji, . . . but you yourself do not know what it means to be a bawaji. You should be ashamed (Boman Desai, *The Memory of Elephants*, 1988).

There tends to be a gradation in English from less to more foreign. French expressions range from the integrated (but variously pronounced) *garage* through *elite/élite* and *coup d'état/état* to *fin de siècle* and *pâtisserie*. In such a spread, it is difficult to specify precisely where the 'properly' foreign begins: all the items are foreign, but some are more foreign than others, and more foreign for some than for others. Non-native words are used in English to a vast and unmeasurable extent. Many varieties of the language have everyday usages that in others would be foreignisms: Maori expressions in NZE, Hawaiian elements in AmE, and Gallicisms in the English of Quebec. Three works of reference that list foreignisms are: *A Dictionary of Foreign Words & Phrases in Current English*, by A. J. Bliss (1972), *Dictionary of Foreign Terms*, by C. O. Sylvester Mawson (revised by Charles Berlitz, 1975), and *Loanwords Dictionary*, by L. Urdang and F. Abate (1988). See ANACHORISM, BORROWING, HARD WORD, LOAN, LOANWORD, NATIVIZATION. [REFERENCE, STYLE, USAGE, WORD].

T.MCA.

**FOREIGN USER** [1970s]. A term in language teaching and applied linguistics for a non-native user of a language, in either or both speech and writing, as opposed to both *foreign learner* and *native speaker* and particularly in contrast to *native user*. It is common in discussions of English as a foreign language: 'What most learners really want is to be competent foreign users of the language, not cheap imitation native speakers' (John Shepherd, *EFL Gazette*, Oct. 1990). See NATIVE SPEAKER, NATIVE USER, TEFL. [EDUCATION].

T.MCA.

**FORENAME**. See PERSONAL NAME.

**FORM** [13c: from French *forme*, Latin *forma* mould, shape, beauty, translating Greek *eidos*]. (1) Shape and appearance, as in *the human form*, *water in such forms as snow and ice*, and *the novel as a literary form*. (2) A prescribed or customary way of doing things, often with a ritualistic aspect, such as the form of words used in taking an oath. (3) A structured document containing usually numbered requests for information followed by spaces in which the information can be provided, often requiring a dated signature at the end: *a tax form*, *an insurance claim form*. (4) A master document used as a model or guide in framing similar documents for actual use. (5) A conventional way of proceeding, behaving, saying things, etc.: *forms of address*. In Anglo-Saxon cultures, the idea of socially *good* and *bad form*

('It's bad form to do that, old chap') is widespread, and often related to distinctions of class, especially in the UK. (6) A grade or class of pupils in a British secondary school. (7) In philosophy, the structure, pattern, or nature of a thing; for Plato it was also an idea (an abstract entity), for Aristotle it was what places a thing in its species or kind. (8) In logic, the abstract relations of terms in a proposition, and of propositions in a syllogism. (9) In linguistics, an inflected variant of a word: *men* as the plural form of *man*; *see*, *sees*, *saw*, *seen*, *seeing* as the forms of the verb *see*. (10) In linguistics, a category such as 'noun' when analysed in terms of structure (singular *man*, plural *men*) and function (subject and object of sentence). Items that share characteristics belong to the same *form class*: the forms *happy* and *careful* belong to the adjective form class. Criteria of form are used to identify units and classes of units. Words such as *man* and *information* are identified as nouns by the formal criterion (among others) that they can be the main words in a phrase that functions as the subject of a sentence (*man* in *That man looks familiar*) or as the object of a preposition (*information* in *This is for your information only*). The criterion may be negative: nouns, unlike most adjectives, do not have comparative and superlative forms: there are adjective forms *happier* and *happiest* alongside *happy*, but no corresponding forms for *girl*. In contrast, notional or semantic criteria identify units and classes by meaning: a noun defined as the name of a person, thing, or place; a verb as a doing word. While such criteria may adequately characterize central members of a class, they are not comprehensive. The notional definition of a noun does not cover such words as *action*, *existence*, *happiness*, *temperature* that belong to the noun form class on formal criteria. See FORMAT, FORM OF ADDRESS, FORMULA, FUNCTION, IDEA, MODEL, MORPHOLOGY, PARADIGM, SYLLOGISM. [GRAMMAR, LANGUAGE, WRITING].

T.MCA., S.G.

**FORMAL** [14c: from Latin *formalis* relating to form]. A term concerned with: (1) Structure and order: *a formal education*, *a formal garden*, *formal logic*, *formal grammar*, *formal as opposed to semantic criteria*. (2) More or less elevated and stylized ceremonial: *a formal dinner*, *formal dress*, *formal and informal meetings*. (3) Style and usage of a relatively elevated and impersonal kind: *a highly formal writing style*; 'receive' *a more formal word than 'get'*. See FORM. [GRAMMAR, STYLE].

T.MCA., S.G.

**FORMAL LANGUAGE** (1) Language that is formal and ceremonial. (2) A language designed for use in situations in which natural language

is considered unsuitable, such as logic, mathematics, and computer programming. In such systems, the symbols and formulas stand in precise and unambiguous syntactic and semantic relation to specific referents or concepts. Compare ARTIFICIAL LANGUAGE, NATURAL LANGUAGE. [LANGUAGE]. T.MCA.

**FORMAT** [19c: from the Latin *formatus* shaped]. (1) The general appearance of a printed publication, including its type, paper, size, and binding. A broadsheet newspaper, a leather-bound octavo book, and a monthly magazine have very distinct formats. (2) An approximate indication of the size of a publication in terms of the number of times sheets of paper have been folded to make leaves: *folio, quarto, octavo, sixteenmo*, etc. (3) The style, plan, arrangement, presentation, etc., of a radio, television, or other programme. (4) The arrangement of data on magnetic tape, paper tape, drums, disks, etc., to comply with the input and output device of a computer. (5) To give a format to (something): *to format a book/diskette*. Compare **FORM**. See APPENDIX, BACK MATTER, BOOK, EDITING, EPILOG(UE), FRONT MATTER, GRAPHIC DESIGN, LANGUAGE TEACHING, LAYOUT, LINE, NEWSPAPER, PAGE, PAGINATION, PREFACE, PRELIM(INARIE)S, PROLOG(UE), SPACE, TEXT, TITLE, TYPOGRAPHY, WHITE SPACE. [TECHNOLOGY, WRITING]. W.W.B.

**FORMATIVE** [1870s as *formative element*]. (1) In philology, a derivational affix, especially one that determines part of speech or word class: *-ness* in *darkness*, forming a noun from an adjective. (2) In structural linguistics, a word-forming element: the prefix *un-* and suffix *-ly* in *unkindly*. (3) In generative grammar, a minimal unit of syntax: in *The dancers performed gracefully*, the formatives (joined by plus signs) are *the + dance + er + s perform + ed grace + full + ly*. Compare AFFIX, BASE, MORPHEME. [GRAMMAR, WORD]. T.MCA.

**FORM OF ADDRESS**. Any word, such as a name, title, or pronoun, that designates someone who is being addressed in speech or writing. Such forms of address may be built into the grammar of a language used (as with the French pronouns *vous* and *tu*), or may evolve as a range of titles, names, kinship terms, terms of endearment, and nicknames, all usually with an initial capital in English.

**Pronouns**. Some languages, such as Japanese, have elaborate systems of pronouns to mark the relationship between addresser and addressee. Some European languages have systems in which one pronoun (French *vous*, Spanish *Usted*) is used politely and formally among equals or by inferiors to superiors, and another

(French *tu*, Spanish *tú*), used informally and intimately among equals or by superiors to inferiors. In French, the verbs *tutoyer* (to call *tu*; to be on familiar terms with) and *vousvoyer* (to call *vous*; to be on formal terms with) derive from and refer to this system. General English once used pronouns in this way: in Shakespeare's *Tempest*, Prospero addresses his daughter Miranda with the intimate *th*-forms (*thou, thee, thy, thine*) and she addresses him with the respectful *y*-forms (*ye, you, your, yours*). In some circumstances, such as the wooing scene between Anne and Richard in *Richard III*, such pronouns are used to mark the changing relationships between speakers.

**A continuum of usage**. In addressing people, the two categories 'intimates/children/social inferiors' and 'acquaintances/elders/social superiors, etc.' are the poles of a continuum. At the intimately personal end, actual names may not be used at all; forms of address tend instead to be terms of endearment (*baby, darling, dear, dearie, honey, sweetie, sugar*) or expressions of derision (*dickhead, fishbreath, four-eyes, idiot, stupid*), usually hostile and dismissive, but sometimes affectionate. At the impersonal end, such forms of address as *sir* and titles (bare or with surname) may be used: *Excuse me, sir/Sir, Doctor (Kildare), do you have a moment, please?, Follow your orders, Captain (Bligh)*. All the forms of address discussed below occur at various points on this continuum.

**Names and titles**. With the loss of its *th*-forms as living pronouns (except in North of England and Northern Isles dialect) and the extension of the *y*-forms to all uses, English has come to rely primarily on forms of address to convey nuances of relationship. The broad rule for forms of address is that those who are intimates address each other with given names such as *George* and *Sue* (and are 'on first-name terms'), whereas those who are acquaintances use a title and family name such as *Mr Jones, Mrs/Ms/Miss Smith* (and are 'on last-name terms'). Strangers in more or less formal situations use titles only (*Sir, Madam*). This rule has, however, many refinements and exceptions. In Britain, in the public (that is, private) schools, socially prestigious clubs, the armed services, and other groups, it has been common for males to address each other by surname alone (*Good to see you, Brown!*, or, affectionately, *Brown, my dear chap, it's good to see you!*), but this practice appears to be on the wane. In casual situations, men of all classes and backgrounds may employ strong, even taboo expressions affectionately, with *you*, as in *Come on, you old rascal/bugger, have another drink*.

Use of someone's given name (such as *Elizabeth*) when the person is commonly addressed by a diminutive (*Bess*) often signals formality, and, especially with a child, the possibility of a scolding. Between the unadorned given name and a title with a family name, a number of other uses are intermediate in formality but also restricted to certain groups. In the American South, the title *Miz* is spoken with a woman's first name as a respectful, but semi-familiar, form of address. Scarlett O'Hara in Margaret Mitchell's *Gone with the Wind* (1936) would have been *Miz Scarlett* to servants and slaves as well as to the family doctor. The mother of US president Jimmy Carter, a Georgian, was affectionately called *Miz Lillian* by many journalists, and the matriarch of the 1980s television soap opera *Dallas*, set in Texas, is *Miz Ellie* (Ewing).

**Kinship usage.** Within families, kinship terms are often used: (1) Formally, *Father*, *Grandfather*, *Grandmother*, *Mother*. (2) Very formally, especially in the British upper classes, especially in the 19c, *Mama*, *Papa* (stress on second syllable) or the Latin *Mater*, *Pater* (with English pronunciations, 'may-ter, pay-ter'). (3) Informally, with variations according to region and class, *Da/Dad/Daddy*, *Gramps/Grandad/Granda/Grandpa*, *Gran/Grandma/Grannie*, *Ma/Mam/Mom/Momma/Mum/Mammy/Mommy/Mummy*, *Pa/Pop/Poppa*. *Father*, *mother*, *brother*, *sister* have been extended beyond the family for religious purposes and to express fellowship. Within the family, especially in AmE, *Sister* has the short form *Sis*, *Brother* the occasional *Bro*, *bud(dy)* (extended into familiar use, mainly between men), and *brer*. *Cousin* in the past had the short form *coz*, often used by Shakespeare. Beyond the first degree of kinship or the direct line of descent, it is common to combine kinship term and given name: *Aunt(ie) Mary*, *Uncle Louis*, and especially in AmE *Cousin Jean*.

**Nicknames.** Used on an often close informal level, nicknames may be diminutives of given names that are relatively stable over years, or may be temporary monickers bestowed, changed, and dropped as the bearer moves from one group to another. A young male may be sequentially and colourfully called *Sewage*, *Fingers*, *Scar*, *Sunshine*, *Jay Eff* (his initials), or a chubby young female, by a process of association, *Pear*, *Persia*, *Iran*, *Irene*, *Irenebus*, and *Bus* (examples from Morgan, O'Neill, & Harré, *Nicknames*, 1979). Nicknames may be neutral (*Bill*, *Joanie*), admiring (*Refrigerator*, for a heavily built American football player), or stigmatizing (*Stinky*), and show a more intimate or immediate and often emotive relationship between addresser and addressee than if the bearer's ordinary name is used.

**Titles with last names.** At a markedly more formal and respectful level is the use of a title with the last name. The traditional set of such titles includes *Mr/Mr.* for men, *Mrs/Mrs.* for married women, *Miss* for girls and unmarried women, and *Master* for boys. The full form *Mister* (a variant of *Master*) is currently almost never used with the last name, but is a term of address to a stranger (*Mister, can you help me?*), usually considered a 'low' equivalent of *sir* (*Excuse me, sir, can you help me?*). Its short form in BrE is either *Mr* or more traditionally *Mr.*; in AmE, it is usually the latter. The conventions for *Mrs/Mrs.* are the same. Both *Mrs/Mrs.* and *Miss* are abbreviations of *Mistress*, a form once common (compare Shakespeare's *Mistress Quickly*, in *Henry V*), surviving into the late 20c in parts of Scotland, Northern England, and Ireland, and in the West Indies. The forms of address for married and unmarried women have been subjected to reassessment in recent years, especially by feminists, who have objected to the use of titles which announce a woman's marital status but not a man's. The forms have also been awkward because a woman's marital status may not be known to someone who needs to use a title when addressing or mentioning her. As an alternative, the form *Ms* (pronounced 'miz' like the Southern US form, but otherwise unrelated to it) has been adopted in recent years, first in the US, then elsewhere.

**Professional titles.** Certain professional titles may replace those just mentioned. In the US, physicians of all kinds and dentists insist on *Dr.* instead of *Mr.*, while in Britain *Mr/Mr.* is preferred by surgeons and dentists. The same title may be used in the US with the surnames of most holders of doctoral degrees (Doctor of Philosophy, Doctor of Education, etc.) who are practising academics, though not with those of non-academics; in Britain, anyone holding such a degree can use the title or not. In Britain, the academic title *Professor* (abbreviation *Prof.*) is restricted to holders of a professorial chair, while in North America generally any holder of a professorial rank (assistant, associate, or full professor) can use it. Consequently, most university-level teachers in the US and Canada are addressed and referred to as professors, while few in Britain and the Commonwealth are so addressed. In the military, titles for ranks are regularly used as forms of address: *Captain Bligh, some of the men would like to see you*. Similarly, titles for the clergy may be used in addressing them: *Father Brown, here is a mystery for you; Sister Bernadette, have you seen anything interesting lately?* In American law, judges are addressed as *Judge Bean* and lawyers as *Counsellor*, without surname (*Excuse me, Counsellor*,

but . . .). In other branches of the US government, presidents, vice-presidents, senators, representatives (members of the House of Representatives, also called congressmen/women), governors, mayors, and assorted other office-holders are routinely addressed by their titles and surnames: *Senator/Mayor Smith, will you be running for office again?*

**Royalty and nobility.** In Britain, royal and noble titles have been in use since the Middle Ages, often involving complex conventions of address and precedence. A monarch is referred to as, for example, *King Edward* or *Queen Mary*, but is directly, formally, and traditionally addressed as *Your Majesty* (formerly also *Your Grace*); other royals are traditionally addressed as *Your Royal Highness*. At the present time, Queen Elizabeth and other royal ladies are addressed as *Ma'am*, male members of the royal household as *Sir*, without name. Members of the royal family are referred to as *His/Her Royal Highness*, often abbreviated to *H.R.H.*, especially in palace circles, without name (*H.R.H. would like . . .*). A lord is addressed either without name as *your lordship* (now restricted to use only by tradesmen or servants) or, in the case especially of a life peer in the House of Lords, as for example *Lord Bland*. The younger sons of dukes and marquesses are addressed as, for example, *Lord Henry*, distinguishing them by first name from relations with the same surname (*Lord Henry Barringby* from *Lord William Barringby*). A knight is addressed as, for example, *Sir Henry* (*Sherlock*). The wives of both lords and knights are addressed and referred to as *Lady Bland* (matching *Lord Bland*), and *Lady Sherlock* (matching *Sir Henry Sherlock*). The daughters of dukes, marquesses, and earls are addressed as *Lady Jane* (matching *Lord Henry*). When the highly formal *Your Majesty*, *Excellency*, *Holiness*, *Eminence*, etc., are used, the style is usually oblique: *Would Your Majesty care to honour us with a few words?*

**Bare titles.** Use of a title without any name spans the continuum of familiarity and respect, but is the only possibility between strangers. The titles normally so used are *Sir*, *Madam*/*Ma'am*, which tend, however, to be restricted to use in more up-market shops, restaurants, and hotels, and as salutations in business correspondence. In response, customers might use *Miss* to a (younger) woman waiting on them; there is no corresponding standard term for a male, the older use of *boy* in such circumstances in the US and parts of Africa and Asia being no longer generally acceptable. The British upper classes would say *waiter* or *waitress* (or *young woman*), but not *Miss*. Certain occupational terms may be used without a name: *What do you recommend,*

*Doctor?; Nurse, could you get me an aspirin?; Yes, Sergeant; Father, bless me for I have sinned; It's so good of you to come, Vicar; Preacher, you had them in the aisles this Sunday.*

Informally, especially among working-class (BrE), blue-collar (AmE) groups, casual forms of address are common: (1) Male to male, *bud(dy)* in the US (especially to a stranger); *cock* among Cockneys in London (to an equal, including a stranger so perceived); *guv* among Cockneys, short for *governor* (to a social superior, including a stranger so perceived); *mac* in Scotland and parts of North America (to an equal, especially a stranger so perceived); *mate* in Britain, Australia, and New Zealand (to an equal, including a stranger so perceived); *pal* in North America and Scotland (to an equal, especially a stranger so perceived). (2) Female and male to female, *ducks* (singular use, in England, especially among Cockneys, to an equal, including to a stranger so perceived, with a camp variant *duckie*); *hen* (in Scotland, especially in Glasgow); *honey* (especially in North America, including to strangers), and its variant *hinny* in the North of England; *love* (especially in England, including to a male and a stranger, virtually regardless of social position).

Between strangers who are social equals, there are no polite forms of address in general use. Certain forms are used in limited circumstances, such as *Ladies and gentlemen*, the traditional opening of a formal speech, with less formal variants such as *Dearly beloved* (by clergymen), *Friends*, or such a formula as *My fellow citizens/Rotarians. Sir and Madam* (especially BrE) and *Ma'am* (especially AmE) are widely used as titles of respect, even for acquaintances, particularly those of more advanced years than the speaker, including in some traditional groups by children to any adult. In formal circumstances, in corresponding or with an audience, there are set forms for addressing royalty, titled persons, government office-holders, clergy, and others whose rank or function is deemed more important than their persons. The rules governing such forms of address are provided in guides to etiquette. See TITLE. [NAME]. J.A., T.MCA.

**FORMULA** [16c: Latin, a fine form, small pattern, mould, rule, method, agreement, from *forma* shape, and *-ula*, a feminine diminutive suffix]. (1) A form or pattern of words prescribed by custom or authority, often with a ritualistic quality: the use of *dear* and a name or form of address to start a letter. (2) A convention or framework, such as the way in which the entries in this volume are shaped or *formulated*. (3) A form of words that reconciles differing points of view in an argument: *a peace formula*. (4) A repeatable phrase with a particular rhythm, such

as the Homeric epithet *boôpis Hērē* (translated as *ox-eyed Hera*), which identifies and characterizes a goddess and fits easily into a line of dactylic hexameter verse. (5) In science and mathematics, a group of symbols and figures that serves to condense a principle or general statement, especially in algebra and chemistry. The adjective is *formulaic*. See ABBREVIATION, BIOGRAPHY, BOILERPLATE, CONVENTION, DEFINITION, FORM. [LANGUAGE]. T.M.C.A.

**FORTIS.** See HARD AND SOFT, VOICE.

**FORUM.** See ENGLISH TEACHING FORUM.

**FOUL LANGUAGE.** Indecent or obscene words and phrases, such as four-letter words, such sexual slurs as *poofster* and *whore*, especially when used directly to refer to or address someone, and swearwords referring to hell and damnation, but not usually ethnic slurs or simple abuse. *Dickhead* is foul language, but *blockhead* and *nigger* are not. Someone *foul-mouthed* regularly uses foul language. See OBSCENITY, SWEARING. [STYLE, USAGE]. R.F.I.

**FOUNT.** See FONT.

**FOUR-LETTER WORD.** A word of four letters considered vulgar or obscene and referring to sex or excrement, such as (with varying degrees of offensive force) *arse*, *cock*, *crap*, *cunt*, *dick*, *fuck*, *piss*, *shit*, and probably *fart*. Such words are sometimes called 'Anglo-Saxon', although, of the above list, only *arse*, *cock*, and *shit* definitely derive from Old English. *Cunt*, *fart*, and *fuck* may, but firm evidence is lacking. *Dick* is a nickname for *Richard*, of uncertain age, while *crap* comes from Medieval Latin and *piss* from Old French. It is hard to trace the origins of such words because for long periods they have been banned from dictionaries. Although *fuck* appears in Florio's Italian-English dictionary (1598) and some taboo words were entered in 17-18c English dictionaries, they were usually not present in such works in the 19c and in the 20c before the 1960s. The phrase *four-letter* was first attested in print in 1923 and *four-letter word* in 1934. Such words are now usually entered in general dictionaries, with such labels or qualifications as 'usually considered obscene' or 'sometimes considered vulgar'. There are, in addition, some 'honorary' four-letter words, such as the five-letter but monosyllabic *prick*, *screw*. Learned words in the same area, such as *defecate*, *faeces*, *penis*, *urinate*, *vagina*, are not considered vulgar or obscene, but are euphemistic and/or technical. In English, there are no neutral terms for sex and excrement. Linguistic taboo makes four-letter words candidates for

semantic extension and transfer: a *prick* is a man whom the speaker dislikes; *Shit!* and *Fuck!* are interjections of disapproval or dismay. The form *fucking* often has an emphatic function in casual but 'coarse' conversation: *I got my fucking hand caught in the fucking machine!* Slurs used in referring to people's sexuality (such as four-letter *poof*, *dyke*) are often felt to be closer to ethnic slurs (such as four-letter *dago*, *kike*) than to typical 'four-letter words'. The meaning of the phrase can be wryly extended, as in 'Work is a four-letter word'. See SWEARING, TABOO. [STYLE, WORD]. R.F.I.

**FOWLER, H(enry) W(atson)** [1858-1933]. English schoolmaster, lexicographer, and commentator on usage, born at Tonbridge, Kent, and educated at Rugby School and Balliol College, Oxford. He taught classics and English literature at Sedburgh School, then in north-west Yorkshire, now in Cumbria (1882-99), where he was variously described as 'lacking humanity', 'a first-rate swimmer, skater, and climber', and 'a stickler for etiquette'. There followed a period in London as a freelance writer and journalist, during which he wrote a number of works under pseudonyms, including *More Popular Fallacies*, by Quillet (1904), *Si mihi—!* by Egomet (1907), and *Between Man and Boy* by Quilibet (1908). He moved to Guernsey to join his brother, Francis George Fowler, and there, in two separate granite cottages in the parish of St-Peter-in-the-Wood, the brothers worked singly or together on several projects. Their translation of the works of the Greek writer Lucian of Samosata was published in 1905, and a book about good and bad English was eventually given the title *The King's English*. Though untrained in lexicography ('we were plunging into the sea of lexicography without having been first taught to swim') and with no satisfactory models before them except *Chambers Twentieth Century Dictionary* (1901), the brothers went on to edit *The Concise Oxford Dictionary* (1911), one of the most successful of 20c dictionaries.

After a brief adventure in the armed forces in France in 1915-16 ('performing only such menial or unmilitary duties as dishwashing, coal-heaving, and portering'), they returned to England. F.G.F. died from tuberculosis in 1918 and H.W.F. carried on alone. First, he brought to completion a small dictionary derived from the *COD*. Known at the planning stage as 'The Shilling Dictionary' (referring to the price of pocket-sized dictionaries of the time), it was called *The Pocket Oxford Dictionary* when it appeared in 1924. The Fowlers declared at an early stage that the *COD* 'was found not to be easily squeezable' and they therefore adopted some unorthodox techniques in the pocket

version. Thus, under *accelerando* a list was provided of all the main musical directions (*crescendo*, *diminuendo*, *pianissimo*, etc.), and under *paper* a list of paper sizes (*royal*, *octavo*, *crown quarto*, *demy*, *elephant*, etc.). H.W.F., as a member of the Society for Pure English, contributed numerous papers to its publications, including essays on *will/shall*, subjunctives, preposition at end, the split infinitive, *alright*, and nouns of multitude. His most famous work, *A Dictionary of Modern English Usage*, was published in 1926. The last years of his life were spent on an unfinished and unpublished dictionary, *The Quarto Oxford Dictionary*, which was to have been a 1,500-page dictionary of current English.

Fowler was a gifted amateur scholar. In what he called his 'lotusland' (Guernsey) and later at Hinton St George in Somerset, he remained essentially unaware of the linguistic controversies sweeping through the universities of Europe and the New World. He did not read the learned journals and books in which scholars like Ferdinand de Saussure, Leonard Bloomfield, Edward Sapir, and Otto Jespersen were propounding the doctrine of descriptive linguistics. His models were the classical languages of Greece and Rome, modified to suit the facts of the English language as he saw them. The responses of writers and scholars to his work have varied, journalists tending towards praise and even adulation, academic linguists towards caution and even reproof. Among reviews of the 1965 edition of *MEU*: 'a classic among English dictionaries' (*British Book News*); 'this literary goldmine' (*Medical News*); 'Mention of the names of Defenders of English brings me to Fowler, whose *Modern English Usage* made him the greatest champion and paladin of them all' (*Teachers' World*); 'Fowler was no great grammarian, still less a linguist in the modern sense' (Randolph Quirk); 'this guide is neither complete nor very systematic' (Yngve Olsson); 'Fowler's attitude is not a possible one for a good mind in the 1960's' (Barbara Strang); 'Who is Fowler to tell us what to say?' (Anthony Burgess). See index. [BIOGRAPHY, EUROPE, REFERENCE, STYLE, USAGE]. RO.W.B.

**FRACTURED ENGLISH.** A facetious term for inadequate and amusing English as used by non-native speakers: *Teeth extracted by latest Methodists; Order your summers suit; Because is big rush we will execute customers in strict*

*rotation; a town that has four thousand years of past historical.* The amusement is prompted by incongruity, and may be innocent or disdainful. In Britain, specimens of fractured English often feature in the media, especially after the holiday season, with invitations to send in specimens. Raconteurs may report usages faithfully, embroider them, or invent examples of their own. The following widely quoted item appears to have been lovingly polished: *When a passenger of foot heave in sight, tootle the horn. Trumpet him melodiously at first, but if he still obstacles your passage then tootle him with vigor.* Not all such usage is treated as amusing; language professionals draw attention to it from time to time to express their concern about the quality of English as a lingua franca. In the 1980s, the now-defunct UK *Translators' Guild Newsletter* had a section entitled 'Pitfalls and Howlers', drawing attention light-heartedly (but with serious intent) to such occurrences as this extract from a letter canvassing legal business: 'You are kindly informed that we are of the sincere and reliable attorneys who are undertaking the international business of same career in cooperation with associates/clients overseas from one country to another throughout the world.' Increasingly, however, non-idiomatic usage is quoted in the media without comment, as in: "'We laugh when we hear all this," he said, "because we have no hostile intentions to do all this danger against him"' (*International Herald Tribune*, 13 Jan. 1986). See BROKEN ENGLISH. [STYLE, VARIETY].

T.MCA.

**FRAMEWORK PROJECT, The.** See ENGLISH-SPEAKING UNION.

**FRAMIS.** See DOUBLE TALK.

**FRANCIZATION** [Late 20c: from French *francisation*. Used with or without an initial capital]. Sometimes **Francicization**, with the verb *francicize*. A term in Canada for the conversion of texts and terminology (especially English) into French, and in Quebec for the conversion of the language of business and administration from English into French. See CANADA, QUEBEC. [AMERICAS, LANGUAGES]. T.MCA.

**FRANGLAIS** [1960s: a blend of *français* and *anglais*]. (1) An often pejorative term for French that contains many loans from English; it covers both the use of vogue words in the media and commerce and code-mixing and code-switching among bilinguals, especially in Canada. It was popularized by the French writer René Etiemble in *Parlez-vous franglais?* (1964), in which he condemned the spread of Anglo-Saxon culture and language since the Second World War. AmE

rather than BrE was the target of Etienne's criticism; imported US terms like *call-girl*, *coke*, *drugstore*, and *strip-tease* were seen as marks of Americanization. Etienne's critique combines linguistic purism with a distaste for anything *yanqui* (*capitalisme yanqui*, *cancer yanqui*, *civilisation cocalcoolique*) and hostility to Europe's becoming a *protectorat yanqui*. His views have been widely discussed, and among the solutions offered are the Gallicization of Anglicisms and the more extensive use of native resources, including those of French outside France. Orthographic adaptation could turn the patently English *meeting*, *ticket*, *rocket* into a Gallicized *méttingue*, *tiquet*, *roquette*, and loan translation could turn *surfing*, *flashback*, *script-girl* into *rase-rouleaux*, *retour en arrière*, and *secrétaire de plateau*. In Quebec, *franglais* belongs in a continuum of terms: *français*, *franglais*, *Frenghish*, *English*. (2) (Facetious). A hybrid medium developed by the English humorist Miles Kington in *Parlez-Vous Franglais?* (1981), which exaggerates the 'schoolboy' French of Britons abroad: 'Si vous êtes un first-time reader de Franglais, welcome! Franglais est comparativement painless et ne donne pas un hangover. En quantités judicieuses, il est mind-blowing. Ayez fun.' See ANGLIKAANS, CAMFRANGLAIS, FRENCH, SPANGLISH. [AMERICAS, EUROPE, LANGUAGE, VARIETY]. J.M.G., T.MCA.

**FREE.** See BOUND AND FREE, FREE VARIATION, FREE VERSE.

**FREEDOM OF THE PRESS.** The freedom of authors, journalists, and others to write what they wish and publishers and printers to produce and distribute it, within the limits of the laws of libel and defamation. Whereas the freedom of the press in the US is guaranteed by the First Amendment to the Constitution, the British press has never enjoyed such a right. Initially, in the time of the first printers in English, William Caxton and Wynkyn de Worde (15-16c), the press in England was unfettered, since it did not play a political or religious role, as was the case in the Reformation controversies on the Continent, but during the reign of Henry VIII strong repressive measures were taken against reformist works and unauthorized translations of the Bible. Penalties for unlicensed publication were severely physical in the 17c, and included cropping the ears (the epithet 'crop-ears' being especially associated with the opponents of Charles I), slitting the nose, and branding on both cheeks with the initials *S* and *L* for *seditionis libeller*.

The stringent censorship imposed during the Civil War provoked Milton's *Areopagitica* (1644), a rhetorical plea for the freedom of the

press which was deliberately issued unlicensed and unregistered: see **POLEMIC**. Since the lapsing of the Licensing Act in 1695, freedom of the Press has existed first in England, then in Britain at large (at any rate in principle), with the exception of censorship imposed on stage plays and in time of war. Stamp duty was, however, used as a vehicle of repression during the early 18c. Swift noted in 1712: 'All Grub Street is ruined by the Stamp Act.' Originally set up at one penny, the stamp duty was raised successively through the nervous years of the French Revolution, since newspapers were regarded as vehicles of turbulence. It was abolished in 1855. Marx's observation that 'The first freedom of the press consists in its not being a trade' emphasizes the point that certain economic constraints invariably curtail or compromise the freedom of the press. Partly because English-language newspapers have had a tradition of championing libertarian causes, they are often viewed with suspicion by governments and may therefore on occasion and in certain places operate under some degree of censorship and suppression. See **CENSORSHIP**, **NEWSPAPER**, **PRESS**. [MEDIA]. G.H.

**FREE VARIATION.** In linguistics, a relationship between the members of a pair of phonemes, words, etc., in which either can occur in the same position without causing a change of meaning: the initial vowels /i/ and /ε/ are in free variation in the pronunciation of *economics* ('eek-' or 'eck-') as are *up* and *down* in the phrasal verbs *slow up*, *slow down*. [LANGUAGE]. T.MCA.

**FREE VERSE** [20c: a loan translation of French *vers libre*]. Verse written without a regular metrical pattern, regarded as verse because of its rhythm and the use of such devices as imagery and concentrated language. *Vers libre* was developed by the late-19c French Symbolist poets J. Laforgue, A. Rimbaud, S. Mallarmé, and P. Verlaine, who influenced British and American poets of the next generation, especially those associated with the Imagist movement, such as T. E. Hulme, Richard Aldington, Hilda Doolittle, and Ezra Pound, who found other precedents in irregular forms of earlier English poetry, the King James Bible, and Japanese *haiku*. It became the dominant form of 20c poetry, as in D. H. Lawrence:

And can a man his own quietus make with a bare bodkin?

With daggers, bodkins, bullets, man can make a bruise or break of exit for his life;

but is that a quietus, O tell me, is it quietus?

(*The Ship of Death*, 1929)

In sacrificing the discipline of traditional metre,

free verse gains a freedom of expression congenial to modern poets. The lines are divided by sense instead of metre, are usually variable in length, and without rhyme. A few poets, such as Walt Whitman, have combined free verse with rhyme, alliteration, and lines of equal length:

Wild, wild the storm, and the sea high running,  
Steady the roar of the gale, with incessant under-  
tone muttering,  
Shouts of demoniac laughter fitfully piercing and  
pealing

(‘Patrolling Barnegat’, 1881)

Although free verse can accommodate good and even great poetry, it risks becoming formless and hard to distinguish from prose cut into lines. See DICKENS, ENGLISH LITERATURE, VERSE. [LITERATURE]. R.C.

**FRENCH** [Known to its speakers as *français*]. A Romance language of Western Europe, the official language of France and an official language of Belgium (with Flemish) and Switzerland (with German, Italian, and Romansh); spoken in Luxembourg, Andorra, Aosta in Italy, and the Channel Islands; during the 11–13c widely spoken in the British Isles. In the Americas, French is an official language of Canada (with English), the official language of the French island department of St Pierre and Miquelon (off Newfoundland), the French Caribbean island departments of Guadeloupe and Martinique, of French Guyana, and of Haiti, and is spoken in St Lucia, and Trinidad and Tobago. It is spoken in the US in Maine and Louisiana and among immigrants from Quebec in Florida. In Africa, it is the official language of Benin, Burkina Faso (Upper Volta), Burundi, Chad, Côte d’Ivoire, Gabon, Mali, Niger, Rwanda, Senegal, and Zaïre, and is widely used in Algeria, Egypt, Morocco, and Tunisia. In the Indian Ocean, it is the official language of the Comoros Islands, the Malagasy Republic, and the French island of Réunion, and is spoken in Mauritius. In Asia, it is spoken in Lebanon, and, to a lesser extent, in Cambodia, Laos, Vietnam, and the Indian territory of Pondicherry. In the Pacific, it is the official language of the French island of New Caledonia and is spoken in Tahiti, Vanuatu, and other islands. There are French pidgins and creoles in Africa, the Caribbean, and the Indian and Pacific oceans.

**Origins and nature.** Historically, the language is divided into Old, Middle, and Modern. Old French (OF) more or less coincides with Old English (OE) and early Middle English (ME). Middle French (MF) stretches from the 14c to c.1600. Geographically, French is traditionally divided into two areas: Northern French or the *Langue d’Oil*, and Southern French or the *Langue d’Oc* (also *Occitan*). *Oil* (from Latin *ille*

that) and *oc* (from Latin *hoc* this) are the words for *yes* in OF and Old Occitan. The northern tongue was influenced by Frankish, the Germanic language of the Franks, who gave their name to both France and French. The southern tongue is related to Catalan. Occitan (including *Provençal*) was a major medieval language, but declined after the annexation of the South by Paris and survives as a range of dialects, despite the efforts and literary success of the Provençal poet Frédéric Mistral (Nobel Prize, 1904). In medieval Europe, the northern language enjoyed great prestige, while in the 17–19c Modern French was a language of international standing, especially in diplomacy and culture. In 1637, the Académie française was founded with a view to fixing the standard language and keeping *le bon français* (‘good French’, based on court usage and ‘the best writers’) as pure as possible. The French Revolution in the late 18c promoted French as the language of national unity, the speaking of Basque, Breton, Alsatian, Flemish, and Corsican, etc., being considered unpatriotic. The Jacobin ideal of one standard national language was pursued by the founders of the modern educational system in the 19c, extended to French colonies around the world, and has continued into the 20c.

**Protective laws, activities, and groups.** In 1539, in the Ordinance of Villers-Cotterêts, King Francis I ordered the replacement of Latin by French as the language of law. In 1637, the Académie française was founded: see ACADEMY. In 1789, the Revolution linked the language to national unity and patriotism. In 1794, the Abbé Grégoire presented a report to the National Convention on the need and means to extirpate the patois and make standard French universal. In 1937, the *Office de la langue française* was formed by such linguists as A. Dauzat and F. Brunot. It disappeared after the German invasion, but was partially restored in 1957 as the *Office du vocabulaire français*, especially under pressure from Canadian francophones. In 1953, the *Défense de la langue française* was formed under the auspices of the Académie française. In 1964, René Etiemble published *Parlez-vous français?* (Paris: Gallimard): see FRANGLAIS. In 1966, the *Haut Comité pour la défense et l’expansion de la langue française* was formed, directly responsible to the Prime Minister of the Republic. In 1967, the *Association pour le bon usage du français dans l’administration* was formed, to regulate government language. In 1975, the Bas-Lauriol law was passed on the use of French only in advertising and commerce: in 1982, a government circular extended constraints to foreign exporters of goods destined for France. In 1977, *Loi 101/Bill 101* was passed in Quebec, Canada, making

French the sole official language of the province, limiting access to English-medium schools, and banning public signs in other languages. In 1983, in France, a decree was passed requiring the use in teaching and research of terms made official by specialist committees. In 1984, the French *Haut Comité* was replaced by the *Commissariat général de la langue française*, to assist private groups and members of the public in the pursuit of violations of the Bas-Lauriol law.

**Links with English.** The *Chanson de Roland*, an epic poem about the Emperor Charlemagne's army in Spain in the 8c, was the first major literary link between Britain and France. The poem was sung by the Normans at the Battle of Hastings (1066) and the oldest surviving copy was discovered in Oxford in 1834. The first grammar of French was written in England, John Palsgrave's *Lesclarcissement de la Langue Françoyse* (1530). Borrowing in both directions has been continuous from the earliest times: French *bateau* from OE *bat*, Modern English *navy* from OF *navie*. The two languages came into close association in the mid-11c, especially through the Norman Conquest, after which Norman French was the socially and politically dominant language of England and a considerable influence in Wales, Scotland, and Ireland. By the time French died out as a British language, it had greatly altered and enriched English, and the fashion of borrowing from it continues to this day. Numerous conflicts, from the 14c Hundred Years War to the 18-19c colonial and revolutionary wars, did not prevent a mutual social and intellectual interest, accounting for Gallomania in Britain and Anglomania in France.

Because of its geographical position and cultural prestige, France has exported many words to its neighbours; of these, English has absorbed the highest proportion. As a result, hundreds of words have the same spellings in both languages, which also share a battery of Latin affixes. Before the Renaissance, prolonged contact with French had prepared English for an increased Latinization, just as French was itself re-Latinized. There is therefore a common Neo-Latin technical vocabulary: French *homicide* (12c) antedates English *homicide* (14c), but English *suicide* is recorded earlier (1651) than French *suicide* (1739), and *insecticide* is recorded as almost simultaneous in both (French 1859, English 1866). However, the Latinization has gone further in English than re-Latinization in French: *pedestrian* and *tepid* are closer to Latin than *piéton* and *tiède*, and such words as *abduct*, *connubial*, *equanimity*, *fulcrum*, *impervious*, *odium*, and *victor* do not occur in French. On the other hand, many words borrowed into French

from other Romance languages (especially Italian) have entered English in a more or less French form: *artisan*, *caprice*, *frigate*, *orange*, *picturesque*, *stance*, *tirade*.

**French in English.** Medieval loans from French have given English much of the look of a Romance language. The movement of French words into English was eased by cognates already present in OE. Thus, the OE verb *ceosan* accounted for the easy borrowing of *choose*. Similarly, OE *munt*, *nefa*, *prud*, *rice*, *warian* paved the way for *mount*, *nephew*, *proud*, *rich*, *beware* from OF. In English, Germanic and Romance cognates come together: the OF verb *spell* is related to the OE noun *spell*, OF *arm* the weapon extends OE *arm* the limb, and the late OE *arrow* is shot by an OF *archer* in a Norman French *garden* near an OE *yard*.

*A hybrid vocabulary.* The ancient closeness of the two languages has had peculiar effects: a young English *hare* is a French *leveret*, a young English *swan* a French *cygnet*, and a small English *axe* is a French *hatchet*. An OE stem can be used with a French suffix (*eatable*, *hindrance*) or vice versa (*faithful*, *gentleness*). The English *stool*, originally a chair (OE *stol*), gave way to the Norman French *chair*, and was demoted in size and usage. The animals tended by the Saxon peasantry retained English names like *calf* and *sheep*, while their meat when eaten in the Norman castles became French *veal* and *mutton*. Because of the long presence of the language in England, many French fossils survive in the strata of English: for example, an *s* lost by French is preserved in *bastard*, *beast*, *cost*, *custom*, *escape*, *establish*, (*e*)*state*, *false*, *honest*, *hostage*, *interest*, *master*, *paste*, *priest*, *scout*, *tempest*. In addition, because of the French connection, English is sometimes a twofold language in which people can *answer* or *respond* and *begin* or *commence* to seek *freedom* or *liberty*. Such pairs are near-synonyms, sometimes expressing stylistic differences like *kingdom/realm*, *sight/vision*, and *snake/serpent*. Others still are further apart in meaning, such as *ask/demand*, *bit/morsel*, *heel/talon*, and *illegible/unreadable*: see BISOCIATION, FAUX AMI.

*Calques and doublets.* French loan translations often lie beneath English expressions, as in  *flea-market/marché aux puces*, *ivory tower/tour d'ivoire*, and *third world/tiers monde*. Romance word structure is still noticeable in *centre of gravity*, *chief of state*, and *point of view*. The word order is French in such forms as *Governor-General*, *poet laureate*, and *treasure trove*. Some idiomatic calques go back to OF (*to bear ill will* to *porter male volonté*) while others are from Modern French, such as *in the last analysis* (*en dernière analyse*) and *it goes without saying* (*ça*

*va sans dire*). English contains many doublets of French provenance: *constrain/constriction*, *custom/costume*, *frail/fragile*, *loyal/legal*, *marvel/miracle*, *poison/potion*, *sever/separate*, *straight/strict*. In some cases, one of the elements does not exist in French (here the second of each pair): *allow/allocate*, *count/compute*, *croissant/crescent*, *esteem/estimate*, *poor/pauper*, *royal/regal*, *sure/secure*. In other cases, the same word may have been borrowed more than once, with different meanings and forms: *catch/chase*, *chieftain/captain*, *corpse/corps*, *forge/fabricate*, *hostel/hospital/hotel*, *pocket/poke/pouch*, *ticket/etiquette*, *vanguard/avant-garde*.

**English in French.** Borrowing from English into French has been widespread for two centuries. However, when such borrowing takes place, special usages can develop. Thus, the role of a word may become specialized, a French *meeting* being political rather than general and an English *reunion* being for people who have not met for a long time (not general, like French *réunion*). Expressions may even swap roles, such as *savoir-faire* in English and *know-how* in French.

**Loanwords.** Waves of English words have been borrowed since the 18c, especially in: politics (*congrès*, *majorité*, *meeting*, *politicien*, *sinécure*, *vote*), horse-racing (*derby*, *outsider*, *steeplechase*, *sweepstake*, *turf*), sport (*baseball*, *basketball*, *football*, *goal*, *tennis*), railways (*bogie*, *condensateur*, *terminus*, *trolley*, *viaduc*, *wagon*), aviation (*cockpit*, *crash*, *jet*, *steward*), medicine (*catgut*, *pace-maker*, *scanner*), and social life (*bestseller*, *gangster*, *hot dog*, *leader*, *sandwich*, *strip-tease*, *western*). On occasion, English words can be Gallicized by adapting their forms and changing pronunciation and orthography: *bowlingrin* bowling green, *contredanse* country dance, *paquebot*, packet boat, and *redingote* riding-coat. Borrowing of additional senses for existing French words also occurs: *environnement* (in the ecological sense), 'conviction *viscérale*', 'retourner une lettre', 'délivrer une carte d'identité', 'engagement naval'. *Réaliser* and *ignorer* are now often used with their English meanings. Canadian French is especially open to such influences: 'la ligne est engagée'. Pseudo-Anglicisms have also arisen: *recordman* record-holder, *shake-hand* handshake, *tennisman* tennis player, and such forms in *-ing* as *footing* (recently replaced by *jogging*), and *lifting* (face-lift). French *dancing*, *parking*, *smoking* are reduced forms of *dancing hall*, *parking place*, *smoking jacket*, like *cargo*, *steeple*, *surf* (from cargo vessel, steeplechase, and surf-riding).

**Loan translations.** Calques conceal the English origin of certain French words: *cessez-le-feu* ceasefire, *franc-maçon* freemason, *gratte-ciel* skyscraper, *lavage de cerveau* brainwashing,

*libre-service* self-service, *lune de miel* honeymoon, *prêt-à-porter* ready-to-wear, and *soucoupe volante* flying saucer. However, native coinages expressing resistance to Anglicisms include *baladeur* Walkman, *cadreur* cameraman, *logiciel* software, *ordinateur* computer, and *rentrée* comeback. French *lift* was replaced by *ascenseur*, but only after the production of *liftier* liftman. The spread of the *-ing* suffix, however, has prevented *doping*, *kidnapping*, and *parking* from replacement by *dopage*, *kidnappage*, and *parcage*, and only in Quebec has *weekend* been overshadowed by *fin de semaine*. Loan translations also involve whole idiomatic expressions (such as *donner le feu vert* give the green light), especially in Canadian French (such as *manquer le bateau* miss the boat). As such, they can affect syntax (infuriating purists), as when adjectives are placed before rather than after nouns (such as *l'actuel gouvernement*, *les éventuels problèmes*, *les possibles objections*), and the passive voice is used with an unexpected verb (such as *Il est supposé savoir*, 'He is supposed to know', rather than *Il est censé savoir*).

**A homecoming.** Some argue that ancient exports coming back with a new sense should be welcomed into the language. This has already been the case for *budget*, *challenge*, *confort*, *intercourse*, *interview*, *nurse*, *partenaire*, *scout*, *sport*, and *toast*. Some words have come back with spellings unchanged since OF: *barge*, *label*, *maintenance*, *nuisance*, *partition*, *record*, *suspense*, and *train*. *Champion* has always existed in French, but its currently frequent use in connection with sports dates from the 19c. *Missile*, a 14c French borrowing from Latin, returned from English in 1960. This phenomenon is especially common in Canadian French, in which English *bargain*, *beverage*, *car*, and *county* account for the preservation of *barguigner*, *brevage*, *char*, and *comté*. *Information* is more often used in Modern French because the traditional *renseignements* is not internationally understood.

**The Anglo-Latinization of French.** Few speakers of French are aware that *faisabilité* and *indésirable* come from *feasibility* and *undesirable* because these words are felt to be the normal derivatives of *faisable* and *désirable*. *Deforestation* and *reforestation* look so French that few complain about their use instead of *deboisement* and *reboisement*. *Sentimental* was first used in French by the translator of Sterne's *A Sentimental Journey through France and Italy* (1768). It sounded as French as *international*, coined in 1780 by Jeremy Bentham. 'Société *permissive*' is easily associated by French-speakers with *permission*. Words coined in English from Latin in the 19c were absorbed into French

(*exhaustif, sélectif, sélection, viaduc*) and the process continues. Thus, *crédible*, in competition with *croyable* as a recent loanword (1965), easily crept in because of its closeness to *crédibilité*. Until c.1950, French *forum* referred only to Rome, but now has the English meaning 'meeting-place for discussion, especially on television'. In such ways, French, the Trojan horse through which Latin entered the citadel of English, is being Latinized in its turn through English.

See ACADEMY, AFRICA, AFRICAN LANGUAGES, AMERICAN LANGUAGES, ANGLOPHONE, ARABIC, BEACH LA MAR, BISLAMA, BORROWING, BRETON, BRITTANY, CAJUN, CAMEROON, CAMFRANGLAIS, CANADA, CANADIAN ENGLISH, CANADIAN LANGUAGES, CANADIAN PLACE-NAMES, CARIBBEAN, CARIBBEAN LANGUAGES, CELTIC LANGUAGES, CHANNEL ISLANDS, CREOLE, DIALECT IN AMERICA, DICTATION, DOMINICA, DOUBLET, ENGLISH, FRANGLAIS, GAMBIA, GRENADA, HISTORY OF ENGLISH, KWEYOL, LAW FRENCH, LINGUISTIC TYPOLOGY, MAURITIUS, MIDDLE ENGLISH, NEWFOUNDLAND, NEW ORLEANS, NORMAN, NORMAN FRENCH, PALE, PASSY, PATOIS, PIDGIN, QUEBEC, ROMANCE LANGUAGES, SAINT LUCIA, TRINIDAD AND TOBAGO, VANUATU. **FREQUENCY COUNT.** An attempt to discover the number of occurrences of particular units in particular contexts of language use, principally words in texts. Such counts have usually been undertaken to provide a statistical basis for word lists used in the teaching of subjects like shorthand and English as a foreign language. During the 20c there have been several large-scale frequency counts for English, particularly in the US under the inspiration of the psychologist Edward L. Thorndike, as in *The Teacher's Word Book* (1921). This was a list of 10,000 words that American children could expect to meet in their general reading. His list was derived from 41 different textual sources which provided 4m running words: 3m from the Bible and the English classics, 0.5m from letters, 0.3m from elementary school readers, 90,000 from newspapers, and 50,000 from general reading. The list was widely acclaimed as a breakthrough in the study and control of vocabulary and inspired many imitators and developers. It was considered a valuable objective measure of the appropriateness of vocabulary in schoolbooks and a basis for the construction of achievement tests in reading, spelling, and vocabulary. Although not so intended, it was also used as a basis for EFL word lists. One such list influenced by Thorndike was Michael West's *General Service List of English Words* (1953), which helped a generation of EFL lexicographers to develop

the notion of a basic 'defining vocabulary'. The classic counts of the first half of the 20c were done with little or no mechanical assistance. More recently, the use of computers has made the gathering, analysis, and processing of data less laborious and time-consuming and has enlarged the body of texts (the corpus) which can be sampled in this way. Thus, the *Brown/Lancaster/Oslo/Bergen* corpus (started in 1967) has been used to confirm hunches about the predominance of certain features of writing, grammar, and semantics in particular varieties of English, and the Birmingham *COBUILD* corpus (started in 1980) has provided lexicographers with new information about collocation, grammar, and meaning on which to base their decisions on how to structure dictionary entries. See COBUILD, CORPUS, FREQUENCY OF OCCURRENCE, VOCABULARY CONTROL. [EDUCATION, LANGUAGE, REFERENCE, WORD]. R.H., T.MCA.

Sinclair, John M. (ed.). 1987. *Looking Up: An Account of the COBUILD Project in Lexical Computing*. London & Glasgow: Collins.

**FREQUENCY OF OCCURRENCE.** The number of times or the regularity with which something happens. Linguists and language teachers often take account of the frequency of occurrence of linguistic items and features. Geographic, socio-economic, and ethnic varieties of a language generally differ in the frequency with which choices are made rather than in the presence or absence of an item or feature: for example, the use of negative *too* in spoken Welsh English, as in *She won't do it, too* (as opposed to *either*). The same applies to stylistic variation in spoken and written language (ellipsis and contraction are, for example, more frequent in speech), such registers as legal language (which makes frequent use of compounds such as *hereinafter* and *thereof*), and religious language (with its use of *thou*-pronouns and corresponding verb forms), and in contrasts along the continuum from the most formal to the most casual (the choice of *furthermore* and *moreover* as opposed to *also* and *too*).

Language change commonly arises from the dominance of one variable over others and can often be observed through *frequency counts*. The characteristics of a genre, author, or work may be identified through the relative frequency of vocabulary items or grammatical features; this

has been used to identify the disputed authorship of works and disputed passages in statements to the police. Information about frequency is commonly taken into account in selecting entries for dictionaries and ordering definitions within entries, as well as in grading material for learners of a language. Sociolinguists usually draw their evidence for relative frequencies from analyses of observed or elicited speech, sometimes incorporating the results in statements of probability. Some linguists have collected large corpora of written or spoken samples of a language, their frequency lists and studies of data made easier by computational processing. Recent experiments have obtained evidence of the perception of relative frequencies by eliciting judgements from native speakers: for example, of the relative frequencies of the subjunctive (*We urge that he give his reasons*), the *should*-construction (*We urge that he should give his reasons*), and the indicative (*We urge that he gives his reasons*). See CORPUS, FREQUENCY COUNT, VOCABULARY CONTROL. [EDUCATION, LANGUAGE]. S.G.

**FREQUENTATIVE.** See ITERATIVE.

**FREUDIAN SLIP** [1950s: after Sigmund Freud, the founder of psychoanalysis]. A term known technically in psychoanalysis as *parapraxis*: an unintentional mistake, usually in speech, that is held to reveal an unconscious (especially sexual) inclination or motivation: She *What would you like: bread and butter or cake?* He *Bed and butter*. In general use, the term often refers to any unintentional verbal slip. Compare SLIP OF THE TONGUE. [STYLE]. T.MCA.

**FRICATIVE** [19c: from Latin *fricare*/*fricatum* to rub]. In phonetics, a vocal sound made by bringing active and passive articulators close together, so that noise is generated as the air-stream passes through the gap. The /f/ in *fee* is made by bringing the active lower lip close to the passive upper front teeth, and is a labio-dental fricative consonant. The /f/ and /v/ in *five* are the same kind of fricative; the first voiceless, the second voiced. Compare AFFRICATE. See CONSONANT. [SPEECH]. G.K.

**FRIES, Charles C(arpenter)** [1887–1967]. American grammarian and lexicographer, born in Reading, Pennsylvania, and educated at Bucknell U., where he was appointed to the faculty in 1911 to teach rhetoric and Greek. In 1914, he shifted from classics to English, and he gained his Ph.D. in 1922 with a study of *shall* and *will* in Renaissance English. He joined the English department at the U. of Michigan in 1921 and worked there until his retirement in 1958. He

became editor-in-chief in 1928 of the *Early Modern English Dictionary*, and was an adviser to the Random House *American College Dictionary* (1948). Fries sought to describe English as it was rather than as it ought to be. In *American English Grammar* (1940), he investigated social-class differences through the study of letters written to a government agency. In defining the scope of this enquiry, he declared 'that there can be no "correctness" apart from usage'. A second descriptive work, *The Structure of English* (1952), drew on recorded telephone conversations; his innovative approach in that volume emphasized 'signals of structural meaning' that could be isolated and described from the stream of speech rather than from the 'ideas' expressed. A conviction that English should be described and learned through speech rather than writing shaped *Teaching and Learning English as a Second Language* (1945) and *Foundations of English Teaching* (1961). The methods he developed at the *English Language Institute*, which he founded at Michigan in 1941, influenced ESL teaching around the world and his conception of *pattern practice* shaped ESL teaching for a generation. He was senior author of the *Fries American English Series* (1952–6), among other ESL textbooks. After retirement, he turned his attention to reading instruction for native speakers and published *Linguistics and Reading* (1963) and *A Basic Reading Series Developed upon Linguistic Principles* (1963–5). See index. [AMERICAS, BIOGRAPHY, EDUCATION, LANGUAGE, REFERENCE]. R.W.B.

**FRISIAN.** A Germanic language spoken in coastal regions and islands in the north of The Netherlands and in neighbouring western Germany to the Danish border; the most closely related of the Continental languages to English. Some scholars have supposed the existence of an *Anglo-Frisian* language during the migratory period before the Anglo-Saxon tribes reached Britain in the 5c. The languages share common phonological features, such as: the initial consonant in English *cheese*, *church*, *chaff*, Frisian *tsiis*, *tsjerke*, *tsjef* (compare Dutch *kaas*, *kerk*, *kaf*, German *Käse*, *Kirche*, *Kaff*); a front vowel in English *sleep*, *sheep*, Frisian *slepie*, *skiep* (compare Dutch *slapen*, *schaap*, German *schlafen*, *Schaf*); the loss of *n* in words such as English *goose*, *us*, Frisian *goes*, *ús* (compare Dutch *gans*, *ons*, German *Gans*, *uns*). The main variety is *Modern West Frisian*, spoken by some 400,000 people in and around The Netherlands province of Friesland. Since the 19c, Frisian has revived as a literary language. A movement seeking independence from the influence of the province of Holland has enhanced the legal status of Frisian and promoted its use alongside Dutch, especially

in schools, where it was illegal until 1937. The *Frisian Academy* (founded in 1938) sponsors scholarly publications on Frisian history and culture, including a definitive historical dictionary. See CRAIGIE, DUTCH, GERMAN, INGVAENIC, LOW GERMAN. Compare NORWEGIAN, SCOTS. [EUROPE, LANGUAGE]. N.E.O.

**FRONT MATTER** [1900s AmE]. Also **preliminaries**, **prelims**. A collective term for parts of a book or other publication that appear before the main text, such as the title page, copyright page, dedication, contents, preface, a list of abbreviations or illustrations, and the like. See BACK MATTER, FORMAT, TITLE PAGE. [MEDIA, TECHNOLOGY]. T.M.C.A.

**FRUITY** [17c]. (1) Like fruit; rich in flavour; excessively sweet; cloying and syrupy. (2) Of a usually male voice or accent: rich and deep, often ingratiating, with careful articulation and well-rounded vowels: 'Some minutes later a fruity voice caressed his ear. Albert Peasemarch's mentor, Coggs, had advised making the telephone-answering voice as fruity as possible in the tradition of the great butlers of the past' (P. G. Wodehouse, *Cocktail Time*, 1958). Compare PLUMMY. See (A)ESTHETICS. [SPEECH]. T.M.C.A.

**FRYE, Northrop** [1912–91]. Canadian literary critic and clergyman, born in Sherbrooke, Quebec, and educated in Monckton (New Brunswick), at Victoria College in the U. of Toronto, at Emmanuel College (part of Toronto Theological College), and at Merton College, Oxford. He was ordained into the United Church of Canada but never held a church appointment. In 1939, he took up a post as lecturer in the Department of English at Victoria College, where he remained until retirement, with excursions to teach at Berkeley, Columbia, Cornell, Harvard, Oxford, and Princeton. His final appointment at Toronto was University Professor, a title reserved for professors of particular distinction. Frye's publications include: *Fearful Symmetry* (1947: a study of William Blake), *Anatomy of Criticism: Four Essays* (1957), *A Natural Perspective* (1965), *The Critical Path* (1971), *The Great Code: The Bible and Literature* (1982), *The Myth of Deliverance* (1983), and *Words With Power* (1990). Frye is noted for an approach to the theory of literature that emphasized modes (fictional and thematic), symbols (as motifs, signs, images, archetypes, and monads), myths (with apocalyptic, demonic, and analogical imagery, including the equations spring with comedy, summer with romance, autumn with tragedy, and winter with irony and satire). Inspired by Blake's view that the Bible was 'the Great Code of Art', Frye argued

that the Old and New Testaments are the basis on which the literature of Western civilization rests, and that without a knowledge of how this came about Western literature cannot be fully understood. See index. [AMERICAS, LITERATURE].

T.M.C.A.

**FULL STOP**. See PERIOD, POINT, PUNCTUATION.

**FUNCTION** [16c: through French from Latin *functio/functionis* performance]. (1) The role or activity appropriate to a person or thing; the contribution of an element in a system to the operation of that system as a whole. (2) In linguistics, the relation between linguistic units in a hierarchy: the adjective *large* functions as a modifier of the noun *house* in the noun phrase *that large house*, and in turn the noun phrase *that large house* functions as subject in the sentence *That large house belongs to Jill's parents*. In this sense, function contrasts with *form*. In a functional or relational grammar, the concept of function plays a dominant role. Extralinguistic aspects of language are also known as functions: in social contexts, relationships in different situations; in discourse, relationships in conversation; in pragmatics, the rules underlying the use of language in specific situations. Compare FORM. [GRAMMAR, LANGUAGE]. S.G., T.M.C.A.

**FUNCTIONAL GRAMMAR**. See HALLIDAY.

**FUNCTIONAL LITERACY**. A term initially defined for UNESCO by William S. Gray (*The Teaching of Reading and Writing*, 1956, p. 21) as the training of adults to 'meet independently the reading and writing demands placed on them'. Currently, the phrase describes those approaches to literacy which stress the acquisition of appropriate verbal, cognitive, and computational skills to accomplish practical ends in culturally specific settings. Although also labelled *survival literacy* and *reductionist literacy* because of its emphasis on minimal levels of competency and the preparation of workers for jobs, functional literacy is defended by proponents as a way to help people negotiate successfully in their societies. The notion of literacy as a utilitarian tool arose in 1942 when the US Army had to defer 433,000 draftees because they could not understand 'the kinds of written instruction . . . needed for carrying out basic military functions or tasks'. In 1947, the US Bureau of the Census began defining literacy quantitatively, describing anyone with less than five years' schooling as *functionally illiterate*. With the passing of the Adult Education Act of 1966, 12 years of education became the literacy standard in the US, while in Britain, the right-to-read movements of the 1970s characterized functional literacy as the ability to: (1)

read well enough to perform job activities successfully, and (2) understand printed messages. Over the decades, as societies have developed both technical innovations and new language formats and tasks, the definition of functional literacy has been modified to meet the changed demands. See ILLITERACY, LITERACY. [EDUCATION, WRITING]. R.W.B.

**FUNCTIONAL SENTENCE PERSPECTIVE.** See DISCOURSE ANALYSIS.

**FUNCTIONAL SHIFT.** See CONVERSION.

**FUNK & WAGNALLS.** An American publishing company based in New York City, incorporated by Isaac Kaufman Funk and Adam Willis Wagnalls in 1890. The company published inexpensive editions of standard works of reference and such books of general interest as *Hoyt's Cyclopaedia of Practical Quotations*, *The Standard Encyclopedia*, *The Standard Bible Dictionary*, and *The Jewish Encyclopedia* (12 volumes). Their *Standard Dictionary of the English Language* (1893) was advertised on an unprecedented scale with full-page advertisements in 200 newspapers published on the same day in 32 states at a cost of \$45,000. This expenditure alerted other publishers to the lucrative prospects of dictionary production. After Funk's death, the company continued to produce works of reference and acquired the US rights to the dictionaries of the British publisher Cassell. It was subsequently consolidated with Thomas Y. Crowell, which in turn became part of Harper & Row. In 1988, the firm was sold to Field Publications of Chicago. Its reference books are now sold mainly through direct-mail marketing and through grocery stores in one-book-a-week instalments. [AMERICAS, MEDIA]. R.W.B.

**FUNK, Isaac Kaufman** [1839-1912]. American editor, lexicographer, publisher, and spelling reformer. After studying for the Lutheran ministry in Springfield, Ohio, and working for 11 years (1861-72) as a pastor in Indiana, Ohio, and New York, he became editor of *The Christian Radical* in Pittsburgh, Pennsylvania. In 1876, he set up a printing house in New York City in which he was joined by his former schoolmate Adam Willis Wagnalls in 1877. In 1890, he began work on *The Standard Dictionary of the English Language* (1893). Assembling and directing a team of more than 740 editors, specialists, and readers, he sought to produce a dictionary which would provide essential information thoroughly and simply. In it, he placed current meanings first, obsolete and archaic meanings second, and etymologies last. Giving attention to pro-

nunciation, he represented each entry twice, once in a familiar key, then in a more precise one. He advocated spelling reform and was a member of the Simplified Spelling Board. On his death, his brother Benjamin Franklin Funk and later his nephew Charles Earle Funk continued his work by overseeing the production of the *Standard Dictionary* series and its abridgements, school, and pocket editions. See index. [AMERICAS, BIOGRAPHY, REFERENCE, WRITING]. R.W.B.

**FURNIVALL, Frederick James** [1825-1910]. English lexicographer, editor, and social reformer, born at Egham, Surrey, and educated at private schools in Surrey, at U. College London, and at Cambridge, then read law at Lincoln's Inn, London. He founded seven literary societies, including the *Early English Text Society* (1864) and the *Chaucer Society* (1868), and edited many medieval and Elizabethan texts and reprints, including Chaucer's *Canterbury Tales*. From 1853 till his death, he was secretary to the *Philological Society*. On the death in 1861 of Herbert Coleridge, he took over the editorship of the Society's dictionary (which became the *Oxford English Dictionary*), and continued the work of assembling its collection of quotations, with the help of many voluntary excerptors. He also set up the scheme of voluntary sub-editors to undertake preliminary analyses of the material, but his many activities gradually intervened and by 1874 work on the dictionary had lapsed. On the revival of the project under James Murray in 1879, Furnivall continued as a copious contributor to its store of quotations. See index. [BIOGRAPHY, EUROPE, REFERENCE]. A.J.A.

**FUSIONAL** [16c: from Latin *fusio/fusionis* a pouring, usually of molten metals]. In linguistics, a term denoting a language in which the grammatical units within a word (its morphemes) tend to be fused together, as in Latin *feminarum* of women, in which the ending *-arum* fuses the notions *possession*, *plural*, *feminine*. Many languages have some fusion: English *geese* ('goose' and *plural* together), *sat* ('sit' and *past* together), but in a language such as Latin this process predominates. See LINGUISTIC TYPOLOGY. [LANGUAGE]. J.M.A.

**FUTHARK, FUTHORC, etc.** See ALPHABET, RUNE.

**FUTURE** [14c: from French *futur*, Latin *futurus* about to be (a participle of *esse* to be)]. A tense contrasting with the present and the past. Traditionally, the *simple future* tense is *will* or *shall* followed by the infinitive: *will follow*. The *future continuous* or *future progressive* adds *be* followed by *-ing* participle: *will be following*. The *future*

*perfect* adds *have* followed by the *-ed* participle: *will have followed*. The *future perfect continuous* combines the latter two: *will have been following*. Future time is also expressed by: *be going to* as in *Naomi is going to help Eliot*; the present progressive as in *I am playing next week*; the simple present as in *We leave for Paris tomorrow*;

the use of *be to* as in *She is to be the next president of the company*; the use of *be about to* as in *It is about to rain*; the modal verb *can* as in *I can see you on Tuesday morning*; the phrase *be sure to* as in *They are sure to help us*; such verbs as *intend* and *plan* as in *I intend to vote for you*. See TENSE, VERB. [GRAMMAR]. S.G.

# G

**G, g** [Called 'gee']. The 7th letter of the Roman alphabet as used for English. It primarily represents the voiced velar stop and was invented by the early Romans by adding a cross-bar to *C*, which represented the voiceless velar stop. In pre-Conquest England, a small *g* with a different shape from the Continental letter was used. This Insular *g* developed into *ȝ*, known as *yogh*. After the Norman Conquest (1066), both forms were used in English, *g* as it is today, *ȝ* either for the sound *y*, /j/, or for both a voiced and voiceless velar fricative. By the close of the Middle Ages, *yogh* was replaced by the digraph *gh*, as in *night* and *tough*: see *GH* (below).

**Hard and soft G.** In English, both *g* and *c* have inherited palatalized ('soft') values from the Romance languages, as in *cease*, *gem*, as opposed to the velar ('hard') values in *case*, *gun*. However, while the varied uses of *c* in English mostly derive from the Romance languages, many variations in the use of *g* are peculiar to English. It has three values: (1) The hard voiced velar stop: *got*, *gut*, *glut*, *grit*, *Gwen*, *argue*, *tug*. (2) The soft voiced palato-alveolar affricate /dʒ/, usually before *e*, *i*, *y* (*gem*, *gist*, *gymnast*, *rage*, *bilge*, *urge*). Especially in words of Germanic origin hard *g* can however also precede *e*, *i*, *y* (*begin*, *get*, *gig*), and very occasionally soft *g* precedes *a* or *o* (*gaol*, *margarine*, *mortgagor*). Rhyming words beginning with the sound of soft *g* are then commonly spelt unambiguously with *j* (*get/jet*, *gig/jig*), but *gill* remains ambiguous, having soft *g* when meaning 'liquid measure' and hard *g* for 'breathing organ of a fish' and Northern English 'stream'. (3) Some loans from French have kept the voiced palato-alveolar fricative value /ʒ/, as in *bourgeois*; this may be heard in *beige*, *genre*, *prestige*, *régime*, *rouge* and in some words ending in *-age* (*barrage*, *camouflage*, *fuselage*, *mirage*), including the AmE pronunciation of *garage*, with second-syllable stress.

**Hard/soft variation.** (1) One value of *g* may be replaced by another in derivatives, soft becoming hard in *allege/allegation*, *purge/purgative*, and hard becoming soft in *litigate/litigious* (but note *renege/renegeade*, in which the *g* is always hard). The hard initial *g* of traditional BrE *gynaecology*, AmE *gynecology* is pronounced soft medially in *androgynous* and *misogyny*. (2) The hard-soft alternatives for *g* lead to uncertainty in its pronunciation in a number of words of classical origin: *hegemony* ('hedge-' or 'hegg-?'), *analogous* (hard as in *analogue* or soft as in *analogy?*), *pedagogical*, *longevity*, *longitude*.

**Double G.** (1) Normally hard as in *dagger* but exceptionally soft in *exaggerate* and BrE *suggest*. (2) Like many other consonants in monosyllabic words, *g* is doubled after an initial vowel (*egg*) but not after an initial consonant (*bag*, *leg*, *dig*, *fog*, *hug*), unless a suffix beginning with a vowel is added (*baggy*, *legged*, *digger*, *foggiest*, *hugging*). (3) Medial *g* in disyllables is commonly double after a short vowel: *haggis*, *trigger*, *nugget*. (4) The Latin prefixes *ad-* and *sub-* typically assimilate with roots beginning with *g*, causing *g* to double (*aggression*, *suggest*). AmE typically splits *gg* in *suggest*, speaking first hard *g*, then soft *g* ('sug-jest').

**DG.** The digraph *dg* is commonly a reinforced soft *g* (contrast *bad/bag/badge*, *bud/bug/budge*), but in unstressed final syllables the spelling of soft *g* has been uncertain: both *selvage/selvedge* are written today, and historically *colledge/knowledge*, *cabbach/spinach* could be spelt alike. The vowel preceding *g* in unstressed final syllables can vary as in *village*, *college*, *vestige*.

**GH.** The digraph *gh* causes difficulty. It is commonly a relic of a velar or palatal fricative that is preserved as a velar fricative /x/ in Scots, as in *bricht nicht* (bright night). (1) It is normally silent after *u* as in *taught*, *drought*, *naughty*,

## THE CAPITAL LETTER

EARLY FORMS			CURRENT FORMS		
Phoenician	Greek	Etruscan	Roman (Latin)	roman	italic
			<b>G</b>	<b>G</b>	<b>G</b>

## THE SMALL LETTER

EARLY FORMS			CURRENT FORMS		
Roman cursive	Roman uncial	Carolingian minuscule	roman	italic	
<b>Ɔ</b>	<b>Ɑ</b>	<b>g</b>	<b>g</b>	<b>g</b>	<b>g</b>

*thought, though, through, thorough, bough, drought*, and after *i* as in *straight, weight, height, high, light, night*. (2) It is pronounced /f/ in a few words such as *cough, enough, laugh, rough, tough*. (3) In the following place-names in England, each *gh* is different: *Slough* (rhymes with *how*), *Keighley* ('Keethley'), *Loughborough* ('Luff-'). (4) In *hiccough*, the *gh* was substituted for *p* (*hiccup*) in the mistaken belief that the word derived from *cough*. (5) It has disappeared in AmE *draft, plow* (formerly also used in BrE) and in *dry, fly, sly*, although preserved in the related nouns *drought, flight, sleight*. (6) It sometimes alternates with *ch* in related words: *straight/stretch, taught/teach*. (7) Occasionally, *gh* has been inserted by analogy with rhyming words even where no fricative had previously been pronounced: in *delight* (from Old French *delit*), by analogy with *light*, and in *haughty* from French *haut*, perhaps by analogy with *high* and *naughty*. (8) In loans from Italian, hard *g* is indicated by *gh* before *e* and *i*: *ghetto, spaghetti, Malpighian*; the form *dinghy* is similarly distinguished from *dingy*, with its soft *g*. (9) William Caxton's Dutch printers may have introduced Dutch *gh* in *ghastly* and *ghost*. (10) The *gh* in *ghoul* and *yoghurt* transliterates special Arabic and Turkish consonants respectively.

**GU.** (1) The French and Spanish practice of using *gu* to indicate hard *g* before *e* and *i* (*guerilla, morgue, disguise, guy*) spread to some words of Germanic origin (*guess, guest, guilt*). The *u* in *fatigue*, however, no longer occurs in *indefatigable*. (2) BrE follows French in spelling Greek-derived final *-ogue* (*analogue, catalogue*), while AmE often removes the *-ue* (*analog, catalog*). (3) The *gu* in *guarantee, guard* was originally pronounced /gw/ in French, but as the *u* fell silent, it was dropped from the French spellings *garantie, garde* although preserved in English. The cognates *warranty, ward* derived from a different French dialect, and have kept the *w* in both sound and spelling. (4) The ambiguous sound value of *gu* is seen in its different pronunciations in *guide, languid*, (contrast *languor*, often pronounced with a /w/), *ambiguity*, and especially word-finally, as in *ague* versus *plague*. (5) The form *tongue* is an isolated anomaly.

**NG.** (1) Commonly a velar nasal, as in *thing*. It occurs almost only after short vowels: *sang, length, sing, song, sung*. In such disyllabic base words as *anger, finger*, hard *g* is normally heard after the nasal ('angger', 'finger'). *Finger/singer* do not rhyme in most accents, but may do in the accents of parts of Midland and Northern England (both like *finger*) and in Scots (both like *singer*). (2) The possibility of soft *g* in the digraph *ng* may give quite different pronunciations to

parallel spellings: contrast *hanged/changed, singer/ginger*.

**Silent G.** In addition to silent *gh*, the letter *g* is silent: (1) Initially before *n* (*gnarl, gnash, gnat, gnaw*) and in (usually German or Greek) loans: *gneiss, gnome, gnostic*. (2) After a vowel before final *m*, in Greek forms (*diaphragm, paradigm, phlegm*), although the *g* is pronounced in derivatives (*paradigmatic, phlegmatic*). (3) Before final *n* in such Latinate forms as *assign, benign, design, malign, impugn*. This *g* effectively indicates a preceding long vowel (contrast *sign/sin*) and is sounded in some derivatives: *malignant, signal*. In such cases as *align, campaign*, the *g* has come from French, and is present in *deign*, though absent in cognate *disdain*. In *foreign, sovereign*, it has no etymological basis. In some French loans, *gn* is pronounced as *n* with a following *y*: *Armagnac* ('Armanyc'), *cognac, poignant, soigné*.

**Other features.** (1) There is variation between soft *g* and *j* in such names as *Geoffrey/Jeffrey, Gillian/Jillian, Sergeant/Sarjent, Jelly*, although cognate with *gelatine*, has become fixed with *j*. *Jest* and *jester* are etymologically related to *gesture* and *gesticulate*. The *jib* or projecting arm of a crane probably derives from *gibbet*, and *gibe* and *gybe* are often written *jibe*. The BrE alternatives *gaol/jail* exist for historical reasons: *gaol* from Norman French, *jail* from Central French. (2) Some words ending in *dge* in standard English (such as *bridge, ridge*) have Scots and Northern English variants in hard *g* (*brig, rig*). See ALPHABET, LETTER<sup>1</sup>, HARD AND SOFT, SPELLING. [WRITING]. C.U.

**GAEL** [16c: from Scottish Gaelic *Gaidheal*, from Old Irish *Gaidel, Goidel*]. A person who speaks the Gaelic language: 'The Gael around him threw / His graceful plaid of varied hue' (Walter Scott, *Lady of the Lake*, 1810). See CELT. [EUROPE, NAME]. T.MCA.

**GAELDOM** [1860s: perhaps modelled on *Gaidhealtachd*]. The land, culture, and community of the Gaels: 'a Gael whose mind was nurtured in Gaeldom' (D. Corkery, *Hidden Ireland*, 1925); 'Scottish Gaeldom's great annual Festival [the Mod]' (*Economist*, 19 Oct. 1963). Compare GAELTACHT, IRISHRY. [EUROPE, NAME]. T.MCA.

**GAELIC** [16c: first used of the language in Scotland and its speakers]. (1) Of the Celts of Scotland, Ireland, and the Isle of Man, their languages, customs, etc.: *Gaelic coffee, a Gaelic phrase book*. (2) The English name for the Celtic language of Ireland (*Gaeilge*), Scotland (*Gaidhlig*), and the Isle of Man (*Gaelg, Gailck*); commonly pronounced 'Gay-lik' in Ireland, 'Gallick'

in Scotland, where it is often referred to, especially by its speakers, as *the Gaelic* (*Does she have the Gaelic? Does she speak Gaelic?*). In Ireland it is generally known as *Irish*, and formerly in Scotland was referred to as both *Erse* and *Irish*: 'It is affirmed that the Gaelick (call it Erse or call it Irish) has been written in the Highlands and Hebrides for many centuries' (Boswell, letter to Johnson, 1775). Gaelic was the principal language of Ireland before and after Norse settlement in the late 8c and remained so until the 18c, after which it went into decline under pressure from English. It was taken to Scotland in the 3-5c and was the foremost language of the kingdom during the early Middle Ages. It dominated the Highlands and Western Isles until the late 18c, after which it also went into decline under pressure from English. It is the national language of the Irish Republic (co-official with English), spoken by some 100,000 and read by some 300,000 people; in Scotland it has some 80,000 speakers, mainly in the Hebrides and Glasgow. It died out as a natural language on the Isle of Man with the last native speaker, Ned Maddrell, in 1974, but revivalists sustain a version of it in an orthography distinct from the Irish and Scottish varieties. Gaelic was spoken widely in Canada and parts of the US in the 18-19c, but is now limited to a community of perhaps 5,000 in Nova Scotia, mainly on Cape Breton Island. See AUSTRALIAN LANGUAGES, BORROWING, CANADIAN ENGLISH, CELTIC LANGUAGES, ERSE, HIBERNO-ENGLISH, HIGHLAND ENGLISH, IRISH, IRISH ENGLISH, ISLE OF MAN, MACARONIC, SCOTTISH GAELIC, SHELTA, VOWEL HARMONY. [EUROPE, LANGUAGE]. T.MCA.

**GAELICISM** [1890s]. The way of life or special interests of the Gaels; a custom or usage, including a Gaelic expression in English: *banshee* from Irish *bean sídhe* a fairy woman; *loch* in ScoE, a lake. See BORROWING, CELTICISM, GAEL, GAELIC, -ISM. [EUROPE, VARIETY, WORD]. T.MCA.

**GAELTACHT** [1920s: from Gaelic *Gaidhealtachd*, a form also sometimes used in English, especially in Scotland]. An area in Ireland or Scotland where the Gaelic language is spoken: 'He who dwells in the Gaeltacht learns to relish the neat turn of phrase, the proverbial allusion, and the apt retort' (A. de Blácam, *Gaelic Literature Surveyed*, 1929). In Scotland, the term refers to one region; in Ireland, it is generally used for any one of several regions. See GAEL, GAELIC. [EUROPE, NAME]. T.MCA.

**GAGE CANADIAN DICTIONARY.** See CANADIAN DICTIONARIES IN ENGLISH.

**GAIRAIGO** [1980s: from Japanese, from *gai* outside, *rai* come, *go* language]. Words or expressions of foreign, especially European, origin in the Japanese language, borrowed from the 16c onwards, such as *tabako* tobacco (from Portuguese), *kōhī* coffee (from Dutch). The reopening of Japan to the West during the 19c led to the absorption of an unprecedented number of foreign terms, mainly from German, French, and English. Attempts to exclude such words followed growing resistance to imported culture during the 1930s, but since 1945 thousands of terms have entered the language, mainly from English. Borrowing from different European languages can have etymologically complex outcomes: *karuta* a type of playing-card (from Portuguese *carta*), *karute* a medical record (from German *Karte*), *arakaruto à la carte* (from French), and *kādo* identity, credit, greetings (etc.) card (from English *card*). Japanese use such terms freely in everyday conversation and writing, not always aware from which languages or expressions they derive. Non-Japanese may also fail to recognize loanwords because of adaptations in pronunciation, meaning, and/or form.

**Writing, pronunciation, and meaning.** Foreign words are readily taken into the written language by means of the phonetic script *katakana*. As its signs represent native syllables (such as *sa* and *ke*), transliteration almost invariably produces phonetic change. Most final consonants come to be followed by a vowel, and consonant clusters are often broken up: *erekutoronikkusu* electronics, *kurisumasu* Christmas, *purutoniumu* plutonium. Sounds that do not exist in Japanese are converted to the nearest Japanese syllables (*rajio* radio, *takushi* taxi, *chīmu* team, *tsuna* tuna, *rabu* love, *basu* bus, bath), or are represented by special *katakana* combinations created to allow foreign words to be expressed in a form closer to their original pronunciation. The endings *-ar* and *-er*, and final schwa are usually expressed as long *a*, as in *hanbāgā* hamburger. Loanwords may undergo semantic as well as phonetic change, as with *manshon* high-class block of flats (from *mansion*), *konpanion* a female guide or hostess (from *companion*), *sumāto* slim (from *smart*), *baīkingu* buffet meal, *smorgasbord* (from *Viking*), *mōningusābisu* a set breakfast (from *morning* and *service*).

**Abbreviation and combination.** (1) Clippings are common: *terebi* television, *apāto* apartment building, *pāto* part-time work, *engējiringu* engagement ring, *masukomi* mass communication, *wāpuro* word processor: see ACRONYM. (2) Foreign words often combine with Japanese words: *haburashi* toothbrush (from Japanese *ha* tooth, English *brush*), *kuropan* black bread (from

Japanese for 'black' and Portuguese for 'bread'). (3) Words from different foreign languages can also come together: *rōrupan* bread roll (from English *roll* and Portuguese for 'bread'). (4) Two or more words from English are sometimes combined in new ways: *pureigaido* ('play guide') ticket agency, *bakkumirā* ('back mirror') rear-view mirror. Such usages are known in Japanese as *wasei eigo* ('made-in-Japan English').

**Functions and developments.** (1) Foreign loanwords generally have a narrower range of meaning than the words from which they derive and their Japanese counterparts: for example, indicating Western style in *hoteru* hotel, *tikappu* teacup. (2) Some loans are euphemisms, such as *shirubā* silver, used in certain expressions relating to old age. (3) New or imported goods or concepts are often described using loanwords from English: *fuirumu* roll of film, *purabashī* privacy. (4) In general, *gairaigo* words have a modern, Western, and sophisticated image, sometimes competing with native equivalents: *depāto* (department store) has almost replaced the corresponding Japanese word. (5) English is tending to replace the combination of Chinese-derived root words as the main resource for describing new concepts and things: compare the older Chinese-derived *denwa* ('electric talk') for *telephone* and the more recent *terehon kādo* telephone card. (6) Many loans have endured for decades or centuries; others, such as *hai kara* ('high collar': meaning 'fashionable' in the Meiji era), have given way to new terms. (7) Loans are used especially in the media and to describe Western science, technology, ideas, arts, fashion, food, sports, leisure activities, and life-style. See JAPAN. [ASIA, LANGUAGE, WORD]. G.S.K.

**GALLICISM** [17c: from Latin *Gallicus* Gaulish, French, and *-ism*. Used with or without an initial capital]. A French word or phrase occurring in another language, such as *ancien régime*, *boutique*, *chanteuse*, *faux ami*, *a certain je ne sais quoi* in English. See FOREIGNISM, FRENCH, -ISM, QUEBEC. [STYLE, VARIETY, WORD]. T.M.CA.

**GALLEY** Also **galley proof** [13c: from Latin *galea*, Greek *galata* a long, low sea-going vessel. The printer's use may have arisen from a comparison between a tray of type and a ship packed with oarsmen, or such a tray may have resembled those used in a ship's galley (kitchen), also derived from *galata*]. A printer's proof. Traditionally, a proof is 'pulled' from lead type set in a *galley tray* and printed in long single-column sheets. Usually, up to three octavo pages' worth of text is printed on one *galley slip*. Gallies are the first set of proofs to be read by a proof-reader and/or author. With computer typesetting, printed matter may come in galley form or be

set immediately as pages. See PROOF-READING. [TECHNOLOGY]. W.W.B.

**GAMBIA**, sometimes **the Gambia**. Official title *Republic of (the) Gambia*. A country in West Africa and member of the Commonwealth. Capital: Banjul. Currency: the dalasi (100 butut). Population: 822,000 (1988), 1.4m (projection for 2000). Ethnicity: Mandinka, Fula, Wolof, Jola, Serahuli. Religion: 85% Muslim, 14% Christian. Languages: English (official), Arabic (especially in Quranic schools), the English-based creole *Aku*, and such indigenous languages as Fula, Mandinka, and Wolof. Education: primary 73%, secondary 21%, tertiary 1%, literacy 26%. Gambia became a British colony in 1807 and gained its independence in 1965. It occupies the banks of the Gambia River and, except for its short coast, is surrounded by Senegal, whose official language is French. In 1982, Gambia and Senegal formed the *Confederation of Senegambia*, bringing English, French, and the local languages into a relationship similar to that of Cameroon. See AFRICAN ENGLISH, CAMEROON, ENGLISH, KRIO, WEST AFRICAN ENGLISH, WEST AFRICAN PIDGIN. [AFRICA, NAME, VARIETY].

T.M.CA.

**GANDHI, Mohandas Karamchand** [1869–1948]. Also **Mahatma Gandhi** (from Sanskrit *mahātmā* great soul), **Bapu** and **Bapuji** (from Hindi *bāpū* father, and *-ji* a suffix of respect and affection), and **Gandhiji**. Indian lawyer, politician, and religious leader, noted for his role in bringing the British Raj to an end and for his philosophy of non-violence (Sanskrit: *ahimsā*). After completing high school in Gujarat, he went to London in 1888 to study law and was called to the bar at Lincoln's Inn in 1891. As a lawyer in Natal in South Africa he organized a movement of passive resistance to the government to improve the lot of Indians living and working there. He returned to India in 1915 and entered politics in 1919, initiating a policy of non-violent resistance to British rule for which he adopted the yogic name *satyāgraha* (Sanskrit: insistence on truth). In 1924, he was elected president of the Indian National Congress, and until independence in 1947 led the opposition to the British in India. He was assassinated in 1948 by Nathuram Godse, a right-wing Hindu extremist.

Gandhi wrote extensively in Gujarati (his mother tongue), Hindi, and English; his autobiography *The Story of My Experiments with Truth* (1927–9) is widely regarded as a classic of its kind. He was the founder and editor of the weekly *Indian Opinion* (1903) in South Africa, and later wrote for *Young India* and other periodicals. He had strong opinions on the language issue in India, believing in instruction in and

through the mother tongue, the use of Hindustani as a pan-Indian link language, and the use of two national scripts, Perso-Arabic and Devanagari. These positions did not receive much support, however, and were abandoned when the Constitution of India recognized Hindi in the Devanagari script as the official language and English as the associate official language. Gandhi regarded the educational system imposed by the British as 'unjust' and 'defective', because 'real education is impossible through a foreign medium' (an often quoted statement, source unknown). His comment on English in India in the 1920s was:

English is today studied because of its commercial and so-called political values. Our boys think, and rightly in the present circumstances, that without English they can not get Government services. Girls are taught English as a passport to marriage—I know husbands who are sorry that their wives can not talk to them and their friends in English. I know families in which English is being made the mother tongue. Hundreds of youths believe that, without a knowledge of English, freedom for India is practically impossible. . . . All these are signs for me of our slavery and degradation. It is intolerable to me that the vernaculars should be crushed and starved as they have been. . . . I do not want my home to be walled in on all sides and my windows to be stuffed. I want the cultures of all the lands to be blown about my house as freely as possible. But I refuse to be blown off my feet by any. . . . I would have our young men and young women with literary tastes to learn as much English and other world languages as they like, and expect them to give the benefits of their learning to India and to the world. But I would not have a single Indian to forget, neglect or be ashamed of his mother tongue, or to feel that he or she can not think or express the best thoughts in his or her own vernacular (*Young India*, 1919–22, pp. 482–4).

Further references by Gandhi to English are: 'English Learning' (in *Young India* 1: 6, 1921) and 'Evil Wrought by the English Medium' (in *The Modern Review*, Sept. 1925). See index. [ASIA, BIOGRAPHY]. B.B.K.

**GATHERING.** See **QUIRE**.

**GEECHEE** [19c: probably originally referring to a community along the *Ogeechee* River in Georgia, USA]. A name for Gullah, especially as spoken in Georgia: 'Among the negroes living on the Ogeechee River a patois, developed in ante bellum days, has persisted. . . . [T]he "Geechee" negro speaks in a sort of staccato and always seems excited when talking' (*National Geographic Magazine*, Sept. 1926). See **GULLAH**. [AMERICAS, VARIETY]. T.MCA.

**GEISEL, Theodor Seuss** [1904–91]. Pen name *Dr Seuss*. American writer of children's books. He was educated in Springfield, Massachusetts, where his father was a part-time zoo-keeper,

then at Dartmouth College, New Hampshire, and the U. of Oxford, England. After a spell as an advertising copywriter, he began writing for children, bringing out his first book, *And to Think That I Saw It on Mulberry Street*, in 1937. His style differed sharply from the relatively bland and realistic readers of the period: 'If I start with a two-headed animal, I must never waver from that concept. There must be two hats in the closet, two toothbrushes in the bathroom and two sets of spectacles on the night table' (as quoted in *Time*, 7 Oct. 1991). In the 1950s, Geisel began to bring out a long and highly successful series of slender readers that employed the repetition of word types and groups, the use of non-sense words, and surreal drawings as aids in learning to read. His nearly 50 books, which have sold in hundreds of millions of copies, include *The Cat in the Hat*, *Fox in Socks*, *The Foot Book*, *How the Grinch Stole Christmas*, *The Lorax*, and *Yertle the Turtle*. The following extract is from *Green Eggs and Ham* (1960), where Sam-I-am is persistently pressing the 'hero' to try these culinary delights:

Would you? Could you?  
In a car?  
Eat them! Eat them!  
Here they are.

I would not,  
could not, in a car.  
You may like them.  
You will see.  
You may like them  
in a tree!

I would not, could not in a tree.  
Not in a car! You let me be.  
I do not like them in a box.  
I do not like them with a fox.  
I do not like them in a house.  
I do not like them with a mouse.  
I do not like them here or there.  
I do not like them anywhere.  
I do not like green eggs and ham.  
I do not like them, Sam-I-am.

Henry Allen of the *Washington Post* (Sept. 1991) noted that the children in a Californian school once ate green eggs and ham *en masse* in honour of Dr Seuss's birthday, and asked, apropos of such well-established Seussian names as *the Grinch* and *the Lorax*: 'Has anyone since Lewis Carroll brought more evocative new words into the language?' See index. [AMERICA, EDUCATION, WORD]. T.MCA.

**GEMINATION** [16c: from Latin *geminatio/geminationis* twinning]. (1) Doubling, duplicating, pairing, repeating, twinning. (2) In phonetics, the 'doubling' of a consonant sound (in effect, holding it for roughly twice the usual length), as in Italian, in which it is indicated in

writing by double letters (*Anna, espresso*). Gemination does not occur in present-day standard international English, but did occur in Old English: contrast *bidden* pronounced like 'bidden' and *biddan*, whose /d/ elements were like those in 'bid Den'. Speakers of languages in which gemination occurs may be tempted to carry it over into English because it has so many words spelt with double consonant letters. It is a feature in IndE, among speakers whose first languages are Dravidian. See DRAVIDIAN ENGLISH, INDIAN ENGLISH<sup>1</sup>, OLD ENGLISH<sup>1</sup>. [SPEECH]. T.MCA.

**GENAM.** See GENERAL AMERICAN.

**GENDER** [14c: from Old French *genre* (Modern French *genre*), from Latin *genus/generis*, translating Greek *génos* kind]. A grammatical distinction, in which such parts of speech as nouns, adjectives, and determiners are marked as masculine and feminine (as in French and Spanish), or masculine, feminine, and neuter (as in German, Latin, and Greek). In such languages, these parts of speech when being used together must agree in gender: the feminine endings in the Latin phrases *illae feminae bonae* (nominative: those good women), masculine endings in *illi viri boni* (nominative: those good men) and neuter endings in *illa oppida bona* (nominative: those good towns). Distinctions in grammatical gender match some but not all natural gender distinctions and extend them to many items which have no natural gender: French *une pierre*, a stone (feminine). There can sometimes be considerable discrepancies between grammatical and natural gender: German *das Mädchen* (the girl) and *das Kind* (the child) are both neuter.

In English, grammatical distinctions of gender are mainly confined to the third-person singular pronouns, *personal*, *reflexive*, and *possessive* (*she/her/hers/herself* versus *he/him/his/himself*). The term non-personal, rather than neuter, is usually preferred for *it/its/itself*. A contrast of personal and non-personal is also found with the relative pronouns *who/whom* versus *which*. *She/her* is widely used to refer to a ship or other means of transport (*She runs well before the wind*), to a country (*England will never forget those who gave up their lives for her*), and sometimes to machines (*She sounds rough; maybe the engine needs tuning*). A baby or young child (especially when the sex is not known) is sometimes referred to as *it*: 'You don't have to hit a child to abuse it' (charity advertisement). Plural *they/them* is genderless, being used for people and things. Its use with singular reference for people (*Ask anybody and they'll tell you*), a historically well-established usage which operates against the strict rules of concord, is common,

especially in spoken language, but arouses controversy and is considered a solecism by purists.

Some natural-gender distinctions between pairs of nouns show a derivational relationship (*bride/bridegroom, hero/heroine*), but most have no morphological connection (*father/mother, uncle/aunt, mare/stallion*). Some feminine endings are criticized as pejorative and sexist, especially by feminists: *authoress, poetess, usherette, stewardess* appear to be more disliked than *actress, waitress*. In recent years, conscious attempts have been made to use the unmarked or masculine term for both sexes: with little difficulty in such statements as *Emily Dickinson is a great poet*, more controversially in *She's a waiter/steward*. Such awkward usages are often avoided by neutral or unisex terms like *flight attendant*. There seems as yet to be no move to abolish such titles as *princess, duchess, countess*. Where terms exist that include *-man* (as in *chairman*), non-sexist alternatives like *chairperson, chair* are controversial and unstable, especially in the UK, although they are making some headway in the US. See COMMON, FEMININE, GENDER BIAS, MASCULINE, NEUTER, NOUN, PROPER. [GRAMMAR]. S.C.

**GENDER BIAS.** A term in sociology and women's studies for bias associated with sexual roles in society and gender terms in language. It extends the grammatical term *gender* to cover language-related differences in the behaviour of women and men and in perceptions of that behaviour. Such perceptions are expressed through casual stereotyping, as in: 'Well, she's supposed to be back by now but she's probably stopped off somewhere to gossip. You know how women are.' There are many such generalizations: for example, that the tone of women's voices is or should be *soft* and *feminine*, while men's tones are or should be *deep* and *masculine*; that in female gatherings (*hen parties*), voices are *shrill* or *cackling*; that women's intonation is often (like that of children) *whining* or *nagging*. In contrast, many men are said to sound *gruff*, speak *roughly*, and have *hard*, even *harsh* voices, and at times *bark out* commands.

**Views of gender and language.** Women and men have been stereotyped as using language in the following ways, among others: (1) Women tend to use such words as *adorable, cute, lovely, sweet* in describing people and objects and such vocatives as *my dear, darling, sweetie*. (2) Men tend to be more direct, less inclined to show their feelings, and more likely 'to call a spade a spade'. Tradition also requires them to be laconic: *men of few words; the strong, silent type*. (3) Women have often engaged in an 'overflow' of adjectives and adverbs, found in an extreme form in the

usage of society women between the world wars: *My dear, it's just too simply wonderful to see you!* (4) Women are often eager to talk about feelings and emotions in a way thought of as 'gushing', while many men are almost tongue-tied in such matters. (5) Women frequently use *so, such, quite*: as intensifiers (*It's been so nice to see you again, and such a pleasure to meet the children—I'm really quite thrilled*), or as qualifiers (*Well, he's so, you know, so helpful, and it's such a shame he can't be here—I'm well, quite upset about it*). (6) Women are considered to be more polite, using phrases such as *could you please*, and more concerned about 'correct' and 'proper' grammar and pronunciation. (7) In conversations, women are said to be by turn insecure and hedging (as shown by tags such as *do you?* or *isn't it?*, and qualifiers such as *I think*) and overbearing, talking and interrupting more than men do. (8) Women's 'delicate sensibilities', especially in the middle classes, have traditionally kept them from using obscene or blasphemous language, and restricted its use by men in their presence. (9) Women are more likely to use polite euphemisms for topics such as death and sex. (10) Men typically talk about 'important', 'worldly' topics such as politics, sports, and war, whereas women's talk is 'trivial' and usually 'gossip'.

**A masculine norm.** There appears to be some basis in fact for some of these assumptions, but sorting out fact from unsupported stereotype is complex and much work remains to be done in this area. Overall, such stereotypes associated with women's speech tend to be viewed negatively even by many women. This generally negative judgement of women's styles of speech appears to be linked to lower social status in relation to men, but it is a circular question whether lower status leads to negative opinions or certain speech characteristics lead to lower status. For example, although behaviour such as a high rate of tag questions such as *isn't it?* may be more typical of women than men, it is also common among lower-status men speaking to higher-status men. Indeed, much language that is currently characterized as female may be more general, and may represent the language that any lower-status person might use in the circumstances.

One problem in assessing gender-linked speech patterns is that men's speech is typically taken as the norm against which women's speech is measured; alternatively, women's speech is ignored. For example, the filters on older traditional spectrographs, used to analyse physical properties of speech such as pitch, were based on male voice ranges; consequently, women's average higher-pitched voices (a result of generally smaller vocal cords) could not be clearly

displayed and were not studied by most researchers. Related to gender-linked speech patterns is a variety of speech sometimes used for identification and communication by some homosexual men. It is characterized in part by higher pitch, elongation of words, increased nasality, and specialized vocabulary, such as *queen* (any male homosexual, or one considered 'flamboyant' or 'effeminate') and *butch* (stereotypically or exaggeratedly masculine in appearance or behaviour), and the use of female pronouns to refer to men.

**Social factors.** Many factors affect language patterns, including topic, socio-economic class, degree of familiarity of the speakers, age, status, ethnicity, and degree of identification with mainstream social values. Both women and men often behave differently in same-sex and mixed-sex groups. In the latter, men tend to interrupt women (men with higher status doing it more often), have more turns at speaking, and speak more when taking those turns. In same-sex groups, participation is more balanced; in situations such as formal, male-dominated business conversations, it is closely related to rank and status. In addition, some speech and gender stereotypes are partly true: men do appear to use 'strong' words such as *damn* and *shit* more often and more publicly. Women, however, may also use them, especially with other women, and especially younger women in North America and Britain. Women may also express strong emotions with 'weaker' words (such as minced oaths as *darn* for *damn* and *shoot* for *shit*), whereas men may use stronger words with less apparent emotion.

Recent studies suggest that in many situations, women seem to be more concerned than men about using educated language as a means of social mobility. The fact that so many teachers of especially younger children are women may also make their role as 'language correctors' more salient. This factor varies greatly with location, social class, and level of education: for example, many more British working-class men than women seem to use non-standard language as a badge of identity. Sometimes stereotyped behaviour appears to be gender-linked in terms of frequency, but other interpretations of its significance are possible: for example, tag questions such as *isn't it?* may indicate hesitancy, insecurity, or deference, but could also encourage conversation, in a non-aggressive way inviting the listener to respond. Such a strategy might be linked to women's greater use of minimal responses, such as *mmhm*, which indicate active listening, encouragement, or agreement. Both strategies can be characterized by hostile men as 'nagging' or 'pushing', if they are interpreted as

inappropriate insertions in their conversation turn. Men's typically louder voices, less frequent uses of minimal responses, and greater use of obscenities can be seen as means of manipulating and dominating conversations. See FEMINISM, GENDER, GENERIC PRONOUN, INCLUSIVE LANGUAGE, SEXISM. [STYLE]. L.S.W., M.E.W.

**GENDERLECT** [1970s: a blend of *gender* and (*dia*)*lect*]. A term in sociolinguistics for a way of speaking taken to be characteristic of only one sex: 'Linguist Robin Lakoff has suggested that because their social roles are so different, men's and women's speech are almost different dialects ("genderlects")' (Mary Brown Parlee, 'Conversational Politics', *Psychology Today*, 1979). See GENDER, GENDER BIAS, LECT. [LANGUAGE, SPEECH, STYLE]. T.M.CA.

**GENERAL AMERICAN** [1924: introduced by George P. Krapp in *The English Language in America*]. Short forms *GA*, *GenAm*. A term sometimes employed to refer to 'a form of U.S. speech without marked dialectal or regional characteristics' (*OED Supplement*) but one 'no longer in technical use' (*The Random House Dictionary of the English Language*, 1987). It was denounced by Hans Kurath in his review of Krapp's book, but has continued to be used in some scholarly and many popular treatments of AmE, often subtractively to refer to whatever is left once various 'regions' have been described: usually New England, New York, and Southern. Although there may have been some justification before 1945 for presuming uniformity elsewhere in the US, the term began to diminish in popularity once the complexity of AmE began to be understood. In revising Mencken's *The American Language*, Raven I. McDavid accounted for Mencken's use of the term by noting: 'In the last thirty years research for the L[inguistic] A[tlas] has shown that the so-called "General American" area is really made up of two major dialects' (1967). Some scholars outside the US continue to use the term, specifically to refer to a norm of pronunciation: for example, J. C. Wells, in both *Accents of English: Beyond the British Isles* (1982, p. 470) and the *Longman Pronunciation Dictionary* (1990). Robert Burchfield, editor of the definition in the *OED Supplement*, has declared that the kind of AmE taught to foreigners is a 'clinically analysed form of speech . . . not spoken by the majority of Americans' (1985). The history of the term is discussed by William R. Van Riper, 'General American: An Ambiguity' (1973), in *Dialect and Language Variation*, ed. Harold B. Allen & Michael D. Linn (Orlando: Academic Press, 1986). See AMERICAN ENGLISH, AMERICAN ENGLISH AND BRITISH ENGLISH, KRAPP, NETWORK STANDARD. Compare

GENERAL AMERICAN ENGLISH, GENERAL BRITISH, GENERAL CANADIAN. [AMERICAS, SPEECH, VARIETY] R.W.B.

**GENERAL AMERICAN ENGLISH**. A term for the standard English of the US, usually intended to include pronunciation, grammar, and vocabulary: 'The educational system in the Philippines uses General American English as the norm' (regional seminar report by Philippines linguists, 1981). Compare GENERAL AMERICAN. [AMERICAS, VARIETY]. T.M.CA.

**GENERAL ANALYSIS**. See CLAUSE ANALYSIS.

**GENERAL AUSTRALIAN**. A term, especially in linguistics, for the pronunciation used by most Australians. See AUSTRALIAN ENGLISH. [OCEANIA, SPEECH, VARIETY]. W.S.R.

**GENERAL BRITISH**. An occasional term in linguistics and language teaching for RP as the accent that represents BrE, used especially to contrast with *General American*: 'The British English form [in this dictionary] is that which has been called *Received Pronunciation* or *General British*' (*Oxford Advanced Learner's Dictionary of Current English*, 1974). See BRITISH ENGLISH, GENERAL AMERICAN, RECEIVED PRONUNCIATION. [EUROPE, SPEECH, VARIETY]. T.M.CA.

**GENERAL CANADIAN**. A term, especially in linguistics, for the usage of a majority of Canadians (pronunciation, grammar, and vocabulary), especially from Ontario to the Pacific, traditionally considered one of four major dialects of Canada but increasingly regarded as a class-based urban dialect used for broadcasting and as an educational norm. See DIALECT IN CANADA. Compare GENERAL AMERICAN. [AMERICAS, VARIETY]. T.M.CA.

**GENERAL ENGLISH**. (1) A non-technical term for English when the language at large is contrasted with a usage, variety, dialect, or register: *That's Cockney; it isn't general English*. (2) A semi-technical term for a course in English, usually as a mother tongue or in an English-medium school, within a framework of general education, usually teaching listening, speaking, reading, and writing. (3) In linguistics, a range of English that includes the standard but contrasts with specific accents and dialects. The British phonetician John C. Wells contrasts *General English* (capitalized) and *traditional-dialect* (lower case): 'Within General English . . . there are non-standard varieties in which one says *I couldn't see no one* and *Peter done it* rather than the standard *I couldn't see anyone* and *Peter did it*' (*Accents of English*, volume 1, 1982). (4) Also

*English for General Purposes.* A term in language teaching for a broadly based, usually long-term EFL or ESL course, in contrast to *English for Specific Purposes* (Business English, English for Medical Purposes, etc.). The assumption often underlies such courses that the learner should be offered 'the whole of' English. Compare ESP (ENGLISH FOR SPECIFIC PURPOSES), STANDARD ENGLISH, STANDARD GENERAL ENGLISH. [EDUCATION, VARIETY]. T.MCA., P.S.

**GENERAL INDIAN ENGLISH.** See INDIAN ENGLISH<sup>1</sup>.

**GENERALIZATION** [17c]. A process of semantic change that widens the meaning of a word, phrase, or lexeme. In Middle English, *pigeon* meant a young bird, especially a young dove, but from the late 15c has come to refer especially to the whole family Columbidae. *Dove* is now generally used for a smaller variety of pigeon. Such shifts in meaning are usually slow and tendential rather than rapid and absolute. Early usages continue indefinitely alongside later changes that have become dominant, as was true of *pigeon* and *dove* in the 16c. In the process of change, terms may acquire further meanings within a set of words: the pigeon is not a symbol of peace and no one \**dove-holes* information. See COMPUTER USAGE, SEMANTIC CHANGE, SLANG. [HISTORY, LANGUAGE, WORD]. T.MCA.

**GENERAL NEW ZEALAND.** A term, especially in linguistics, for the pronunciation used by most New Zealanders. See NEW ZEALAND ENGLISH. [OCEANIA, SPEECH, VARIETY]. T.MCA.

**GENERAL SERVICE LIST**, short form *GSL*. Full title *A General Service of English Words with semantic frequencies and a supplementary word-list for the writing of popular science and technology*. A word list compiled and edited by Michael West for use by ELT teachers and writers, published in 1953 by Longmans, Green & Co., and based on earlier work done by West and others as a result of the Carnegie conference on vocabulary selection held in New York in 1934, whose purpose was the selection of vocabulary as a stage in the teaching of English. It incorporated material from *A Semantic Count of English Words* by Irving Lorge and Edward L. Thorndike (1938). The *GSL* greatly influenced the choice of vocabulary for EFL course materials, graded readers, and dictionaries until the mid-1970s. An entry lists a word with its part of speech, its frequency position in a count of 5m running words, and the percentages of its major sense divisions in that count: for example, *game* N., 638, fun and games 9%, with the idea of competition 38%, a particular contest 23%,

games as an athletic contest 8%, and sundries. See FREQUENCY COUNT, PALMER, THORNDIKE, VOCABULARY CONTROL, WEST. [EDUCATION, EUROPE, WORD]. T.MCA.

**GENERATIVE** [16c: from Latin *generativus* producing one's kind]. A term borrowed in the 1960s from mathematics into linguistics by Noam Chomsky. If a grammar is generative, it accounts for or specifies the membership of the set of grammatical sentences in the language concerned by defining the precise rules for membership of the set. The use of the verb *generate* in this sense (*The grammar will generate the following set of sentences*) is distinct from its general sense 'produce'. See GENERATIVE GRAMMAR. [GRAMMAR]. S.G.

**GENERATIVE GRAMMAR.** A grammar which precisely specifies the membership of the set of all the grammatical sentences in the language in question and therefore excludes all the ungrammatical sentences. It takes the form of a set of rules that specifies the structure, interpretation, and pronunciation of sentences that native speakers of the language are considered to accept as belonging to the language; it is therefore regarded as representing native speakers' competence in or knowledge of their language. A recent account of the development of generative grammar, both transformational and non-transformational, from the early 1960s to the late 1980s, is: Geoffrey Horrocks, *Generative Grammar*, Longman, 1987. See CHOMSKY, COMPETENCE AND PERFORMANCE, GENERATIVE, GRAMMATICALITY, TRANSFORMATIONAL-GENERATIVE GRAMMAR. [GRAMMAR]. S.G., T.MCA.

**GENERIC** [17c: from Latin *genus/generis*, translating Greek *génos* a kind]. (1) Belonging to or designating a genus (as opposed to a species) or a class, group, or kind. In semantics, a *generic term* includes other terms that belong in the same class: for example, *officer* includes *colonel*, *major*, *captain*, and *flower* includes *hyacinth*, *rose*, *tulip*: compare HYPONYM. In law, a trademark ceases to be protected when it comes to be more widely used for, and understood as, a type rather than a brand: for example, the proprietary names *Hoover* for type of vacuum cleaner and *Xerox* for equipment that makes xerographic copies are, despite being trademarks, widely used for vacuum cleaners in general and xerographic copies of all kinds. When so used, especially as verbs, they are written without an initial capital (*to Hoover*; *a Xerox*, *to Xerox*). In such uses the terms are in effect generic. When this happens, the mark is referred to as generic or *a generic*. (2) In grammar, a word is generic if it applies to both men and

women. *He* has traditionally been considered a *generic pronoun*, but feminists among others object to both the classification and the usage. See BINOMIAL NOMENCLATURE, GENERIC PRONOUN, SEXISM, TRADEMARK. [LANGUAGE].

T.MCA.

**GENERIC PRONOUN**, also **common-gender pronoun**, **epicene pronoun**. A personal pronoun that includes both masculine and feminine, such as *u* in Persian (which translates *he* and *she*) and *they* in English, which does not distinguish gender. English does not have a singular equivalent for *u*, but the *he*-group of pronouns has traditionally been called generic, along with such words as *man* and *mankind*: 'Words importing the masculine gender shall be deemed and taken to include females' (from an Act of Parliament, London, 1850). The use of generic *he* is, however, often ambiguous, because it tends to identify masculine gender with the universally human and in the process appears to exclude or marginalize women. For these reasons, it has been challenged in recent years, especially by feminists. Generic *he* continues in use, but efforts have been made, with varying degrees of success, to circumvent it. These include (1) The use of *he or she*, which serves in limited contexts but becomes awkward in longer texts. (2) The use of composite *s/he*, which cannot be spoken, and composite *he/she* and *she/he*, in effect compound pronouns. (3) The use of *she* alone, often to make a sociopolitical point. (4) The reversal *she and he*, for similar reasons. (5) Generic *she* in texts and contexts where women are in the majority, such as books about teaching and secretarial work. (6) The use of *he and she* and *she and he* alternately, which may become forced in longer texts. (7) General *you* and *one*, which may alter the message. In AmE, the tradition of *one . . . he* (*When one does this, he finds . . .*), as opposed to BrE *one . . . one* (*When one does this, one finds . . .*) returns the user to the problem of generic *he*. (8) Plurals rather than singulars wherever possible: *the doctor . . . he* changed to *doctors . . . they*. This appears to be a widespread strategy to avoid the problem. (9) Rephrasing sentences so as to avoid pronouns completely, especially by using the agentless passive.

**Singular they**. The *they*-pronoun group is increasingly used in such singular constructions as: 'Anyone who wants to write non-sexist English will need to have their wits about them. They will need to be thick-skinned, too, for if they write sentences like my first one, they will hear criticism from those people who are upset by the use of the plural pronoun *them* with a singular pronoun like *anyone*' (Jenny Cheshire, 'A Question of Masculine Bias', *English Today*

1, Jan. 1985). The use of *they*-pronouns, as in *Everyone should bring their coats*, dates from the 16c, is widespread, is increasingly acceptable in informal BrE and AmE, and is increasingly common with 'dual gender' nouns such as *speaker*, *subscriber*. Singular usage occasionally includes *themselves*, a form that dates from the 15c but has always been rare: 'I think somebody should immediately address themselves to this problem' (A. Thomas Ellis, *The Times*, 9 Sept. 1987). If singular *they* continues to gain acceptance, *themselves* may also become common, much as *yourself* became common with singular *you* in the 17c.

**Artificial pronouns**. In recent years, attempts to replace generic *he* have led to the invention of inclusive third-person pronouns. As members of a syntactic system, pronouns are normally slow to change; the last great adaptation was the 17c replacement of the *thou*-group with singular *you*. The coining of such new pronouns has met with responses varying from sober consideration through wry amusement to open ridicule. The first such pronoun appears to have been *thon*, created by Charles Converse of Erie in 1884, who described it as a contraction of *that one* and appears not to have been aware that demonstrative *thon* (that one over there) has long been used in Scots and Northern English. In *On Writing Well*, William Zinsser may have spoken for many when he commented: 'I very much doubt that thon wants that word in thons language or that thon would use it thonsel. This is not how the language changes' (1980). Coinages (some serious, some tongue-in-cheek) include *co* (by the writer Mary Orován), *e/ir* (by school organizers in Broward County, Florida), *et* (by Aline Hoffman of Sarnia, Ontario), *han* (by the business writer Audrie Stratford in King's Lynn, England), *hey* (by Ronald Gill of Derby, England), *hesh/hirm/hizer* (by Professor Robert Longwell, U. of North Carolina), *hir* (in a 1979 supervisors' guide for the American Management Association), *jhe* (by Professor Milton R. Stern, U. of Michigan), *mef* (by George Wardell of Reading, England), *na* (by the writer June Arnold), *per* (abbreviating *person*, by the writer Marge Pierce), *ws/wself* (by Dr John B. Sykes, editor, *Concise Oxford Dictionary, 7th edition*), and *ze/zon* (by Don Manley, Oxford). See GENDER BIAS, SEXISM. [GRAMMAR, STYLE, USAGE].

T.MCA.

**GENERIC TERM**. See **GENERIC**.

**GENITIVE CASE** [14c: from Latin *casus genitivus* the possessing case, from *gignere/genitum* to beget, produce]. A term marking possession and analogous relationships in the case system of Latin and other inflected languages. In the phrase *dies irae* days of wrath, *irae* is the genitive

of *ira* wrath, anger. The term has been carried over into English grammar, but is not so common as *possessive*. See DOUBLE GENITIVE, GROUP POSSESSIVE/GENITIVE, SAXON GENITIVE. [GRAMMAR]. T.MCA.

**GENRE** [18c: from French *genre*, from Latin *genus/generis* kind, race: compare GENDER]. A term in literature and the arts for a particular type of performance, such as the novel or symphonic music. The genres of English literature derive from classical Greek theory, which divided literary works into three genres: *poetic*, *epic*, *dramatic*. Each of these divisions possessed a different narrative voice: in lyric poetry, the narrator is alone; in epic, narrator and characters speak; in drama, the characters alone speak. From the Renaissance to the Romantic period (16-19c), the classical genres and sub-genres (usually known as *kinds*) were regarded in principle as fixed and virtually part of the natural order of things, with boundaries which should not be crossed. In practice, however, the Elizabethan dramatists frequently crossed them, mixing *comedy* with *tragedy* and high styles with low in one and the same play, as Shakespeare did in *Hamlet*. Although the neo-classical critics of the late 17c and the 18c wished to impose classical strictness, their view came to be regarded as prescriptive and restrictive. The growth of the *novel* in particular (an entirely non-classical genre, as the name implies) challenged assumptions about the immutability of types. The freer thinking of the Romantics and changes in knowledge about the physical world encouraged an awareness that such systems of classification were arbitrary and subject to change.

By the mid-20c, the concept of genre was largely out of favour among critics, because of the emphasis of the New Critics on the individual text. More recently, however, there has been a revival of genre theory, in which no single approach has been dominant. The early Formalists, such as V. Shklovsky (*Art as Device*, 1917) and O. Brik (*Rhythm and Syntax*, 1927), stressed the difference between poetry and narrative: in poetry, the opposition between poetical and practical language; in narrative, the presence of *fabula* (the basic story) and *syuzhet* (the formal devices of construction). The work of such linguists as Ferdinand de Saussure in Switzerland and Roman Jakobson (born in Russia) partly prepared the way for the French critic Roland Barthes and the Structuralists, for whom genre is a set of conventions representing the shared expectations of writer and reader, and changing from one period to another. Among individuals, the Canadian critic Northrop Frye (*Anatomy of Criticism*, 1957) has suggested that the categories *comedy*, *romance*, *tragedy*, *satire* correspond to

archetypal human responses. Another approach, categorizing texts through a combination of *outer form* (such as metre, structure) and *inner form* (such as tone, attitude) was made by the former member of the Prague School, René Wellek (with A. Warren, *Theory of Literature*, 1949).

At the present time, literary scholars generally regard genre as something imposed, not inherent. It is convenient for analysis but has neither primal truth nor formal sanction. Like grammar, genre is held to be more descriptive than prescriptive. Though probably deficient in some respects, a description is likely to aid attempts to talk and write intelligently about literature. The integrity of a text demands respect, but family resemblances among texts justify grouping them together. In academic syllabuses, the teaching of genre courses in addition to, or instead of, period courses is common. The classical division (adapted as *poetry*, *fiction*, and *drama*) is often used, but there are new classifications such as *utopias* and *women's writing*, which usually adopt existing genres like the novel but have created new categories by dealing with subjects not generally found in earlier periods. Sub-genres such as *lyric*, *Bildungsroman*, and *farce* are established terms of literary criticism. As further divisions emerge, it may be salutary to remember the categories of Polonius: 'tragedy, comedy, history, pastoral, pastoral-comical, historical-pastoral, tragical-historical, tragical-comical-historical-pastoral, scene indivisible or poem unlimited' (*Hamlet*, 2. 2). Traditional ideas about genre have affected literary language. The dominance of a genre in a period has led to the belief that the diction used in it is the 'right' or 'highest' form of literary expression. This has tended to inhibit experiment and to develop such narrow concepts as poetic diction. In the 20c, freedom to use all types of language in any genre has prevailed. Poetry in particular has accommodated colloquial words and idioms that would once have been considered ugly and unfitting, and many dramatists have tried to come as close as possible to the reproduction of actual conversation in their dialogue.

[LITERATURE, MEDIA]. R.C.

**GENTEEL.** See AMERICAN LITERATURE.

**GENTEELISM** [1900s: from *genteel*, from French *gentil* well-born, and *-ism*]. A semi-technical term for both genteel behaviour in using language and a word or phrase used for genteel reasons: 'By *genteelism* is here to be understood the substituting, for the ordinary natural word that first suggests itself to the mind, of a synonym that is thought to be less soiled by the lips of the common herd, less familiar, less plebeian, less vulgar, less improper' (H. Fowler, *Modern English Usage*, 1926). Such a substitution is *tummy* for *belly*. Genteelisms are generally euphemisms used for evasive 'polite' purposes, such as *bathroom*, *lavatory*, *powder room*, *restroom*, *toilet* for a place for urinating, defecating, and washing. See EUPHEMISM, -ISM, MINCED OATH, NICE-NELLYISM, POLITE. [STYLE, WORD]. T.MCA.

**GEOGRAPHY AND GEOPOLITICS OF ENGLISH.** The term *geography* refers to both the study of the planet and its major features. It came into English in the 16c, from Latin and ultimately Greek, at the time when European navigators were beginning to explore Africa and the New World. In the course of the long commercial and colonial diaspora that followed, a small number of Western European languages came to dominate vast areas of the world, two results of which were the major place of European terminology in international geographical studies and the spread of European-style place-names across the world. The Dutch, English, French, Portuguese, and Spanish languages were particularly prominent, along with classical Greek and Latin as used by scholars. Greek has provided such widely used names for geographical features as (in their English forms) *Antarctic*, *Antipodes*, *Arctic*, *Asia*, *Atlantic*, *Europe*, *ocean*, and *geography* itself, and Latin has provided terms for geographic concepts, such as *continent*, *Equator*, and *Tropic of Cancer*, and the universal naming suffix *-ia*, as found in *Albania*, *Kirghizia*, *Mongolia*, *Yugoslavia*, and *Zambia*. Work relating to geography, cartography, topography, toponymy, and oceanography undertaken in English absorbed names from many languages when the Royal Navy and other expeditionary groups were engaged in international surveying and mapping. At the same time, English-speaking settlers took names wholesale from the British Isles and put them to work in their new homes: for example, English *York* in American *New York*, and Scottish *Dunedin* (Celtic for *Edinburgh*) applied to a city in New Zealand. In addition, complex geographical labels have been synthesized in various

ways: for example, *the Gulf of Carpentaria* (Australia), is a term that both Latinizes the name *Carpenter* and embodies a formula 'the X of Y'. This formula was already used in such names as *the Bay of Biscay* and *the Isle of Mull*. Similarly, the phrase *Chesapeake Bay* spells an American Indian word in an English way and also applies the formula 'Y X', already used for *Galway Bay* and *Morecambe Bay*. Circumstance and convention have frozen such forms; there are, normally, no such alternative usages as \**Carpentaria Gulf* or \**the Bay of Chesapeake*.

Because of the European diaspora, English occupies in the late 20c a geopolitical position unique among languages past or present. The relationships between users of English and of other languages (always delicate, often explosive, sometimes tragic) include associations with: (1) Other languages in Europe, such as for centuries Welsh and Gaelic in Britain and more recently, with the development of Brussels as the administrative centre of the European Community, French and Flemish in Belgium. (2) Other European languages elsewhere, such as French in Canada and Spanish in the US. (3) Indigenous languages elsewhere, such as Aboriginal languages in Australia, Arabic in North Africa and West Asia, Bantu languages in Sub-Saharan Africa, Hindi-Urdu in the Indian subcontinent, Maori in New Zealand, and Tagalog in the Philippines. Relationships have been particularly acute where English has threatened the existence of another language, as with Gaelic in Ireland and Scotland and Algonkian or Hawaiian in the US, or has influenced its structures and vocabulary, as with (to a greater or less extent and in different ways) the languages of north-western Europe, and Korean and Japanese in East Asia. At the same time, relationships among the speech communities of World English add to the complexity: (1) Among dialect speakers within one country, as in England. (2) Among unilingual, bilingual, and multilingual users, as in Canada. (3) Between native and foreign users, as in the flux of international trade and travel. (4) In terms of the 'cultural cringe' of ex-colony towards mother country, as with Australia and New Zealand towards England or Britain. (5) Between creoles and standard forms, as in West Africa, the Caribbean, and Melanesia. (6) In the relationship between actual or potential national standards and an actual or potential international or supranational standard. Compare HISTORY OF ENGLISH. See ENGLISH. T.MCA.

**GEORDIE** [Late 18c: a diminutive of *George* favoured in the North of England and in Scotland, used as a nickname for miners, sailors, coal-boats in and from north-east England, and for Scots in Australia and New Zealand. In this instance, it is widely considered to derive from the name of George Stephenson, the Newcastle engineer who built the first successful steam locomotive in 1814, invented a miners' safety lamp in 1815, and became manager of the Stockton to Darlington Railway (the world's first public railway line) in 1821]. (1) A native of the North-East of England and around the city of Newcastle upon Tyne (Tyneside), an area often referred to informally as Geordieland. (2) The variety of working-class speech in that area, deriving ultimately from Northumbrian, one of the three divisions of Old English, and in many ways closer to Scots than to Yorkshire dialect. (3) The term is often loosely applied to all people in the North-East of England and their speech. This can sometimes cause offence to non-Tynesiders, such as the people of Wearside and Middlesbrough.

**Pronunciation.** (1) Geordie is non-rhotic and the only urban accent of England in which initial *h* is not dropped. (2) The glottal stop occurs with /p, t, k/ in syllable-final position and sometimes initially before a weak vowel, as in *caper*, *city*, *local*. Phoneticians disagree as to whether the glottal stop precedes or follows the consonant. (3) There is a clear /l/ in all positions. (4) The uvular *r*, known as the *Durham* or *Northumberland Burr*, was once common but is now in decline, having been widely regarded and treated as a speech defect. The pronunciation of *r* is now generally dental, alveolar, or post-alveolar, but the burr has left a legacy in broad Geordie, in which certain vowels are pronounced as if still followed by the burr: *cure* as 'kyooah', *nurse* as 'noahss'. (5) Commonly, there is an /az/ vowel in such words as *all*, *talk*, *walk*, *war*. Geordie *walk* sounds to non-Geordies like 'waak', and *work* like 'walk'. A joke recounts how a man went to his doctor because of a painful knee.

The doctor bandaged it and asked: 'Do you think you can walk now?' The man replied: 'Work? I can hardly walk!' (6) There is an /o/ or /oə/ in such words as *don't*, *goat*, *know*, *told*. (7) The vowel in such words as *down*, *town* ranges from the /u/ of Scots *doun*, *toun* to its RP value. (8) The closing vowel in words like *bonny* and *happy* is /i/ ('bonnee', 'happee'). (9) There is often a low rising tone in statements, making them seem tentative or like questions to non-Geordies.

**Syntax, vocabulary, and usage.** (1) A traditional *Aa* where standard English has *I* (*Aa doan't know*), comparable to *Ah* in Scots. (2) A traditional but now sporadic use of negative *-na* rather than *not* or *-n't*, as in *Aa canna bide yon chap I can't stand that chap*, comparable to Scots and Ulster Scots *-nae/-na/-ny*. (3) The form *diven't* is a traditional alternative to *don't*: *I diven't do nothin'* 'I don't do anything'. (4) Common forms of address include *bonny lad* (to a man or boy), *bonny lass* (to a woman or girl), *hinny* (honey: to a woman, girl, man, or boy): *How there, bonny lass?* 'How are you, dear?' (5) Geordie shares many words with Scots and ScoE: *bairn* child, *bonny* fine, good-looking (used of women and men), *canny* steady and cautious (but with a local nuance of good, kind, and gentle). See DIALECT IN ENGLAND, L-SOUNDS, NORTHERN ENGLISH, NORTHUMBRIA, SCOTS, YORKSHIRE. [EUROPE, VARIETY]. T.MCA.

**GERMAN** [Called by its speakers *Deutsch*: see DUTCH]. A Germanic language of Western Europe, the official language of Germany and Austria, and an official language of Switzerland (with French and Italian) and Luxembourg (with French). It is also spoken by communities in Belgium, Denmark, France, Hungary, Italy, Liechtenstein, Poland, Romania, and the Soviet Union, is widely used as a second language in Turkey and Yugoslavia, and is spoken in enclaves in North and South America, Africa, and Australia. With nearly 100m speakers, it ranks tenth among languages in world terms and first in Western Europe in numbers of native speakers. Because of close genetic links, German and English share many features, as seen in the sentence: *Für rund 95 (fünfundneunzig) bis 100 (hundert) Millionen Menschen ist Deutsch heute Muttersprache* (For around five and ninety to hundred million people is German today mother-speech: 'Today German is the mother tongue of about 95 to a 100m people'). The difference in word order is great, but a close match can be made with *für/for*, *rund/around*, *fünf/five*, *neunzig/ninety*, *hundert/hundred*, *Mensch/man*, *ist/is*, *Mutter/mother*, *Sprache/*

speech (with *million* as a shared Romance borrowing). German is structurally more complex than English, having inflectional endings for number, case, gender, person, tense, etc., and in this it resembles Old English more closely than Modern English. In its orthography, German gives an initial capital letter to its nouns, a practice common in English until the mid-18c.

**Varieties.** Historically, German has been an amalgam of dialects slow to develop a standard language. The continuum ranges from the geographically 'low' German dialect of Westphalia in the north-west (mutually intelligible with Dutch), through those of Lower and Upper Saxony, the Rhineland, and Franconia, to the 'upper' German varieties spoken in Bavaria, Switzerland, and Austria. The term *Plattdeutsch* (sometimes translated as 'Low German') is used for the 'broad' dialects in the north and west. *Schwyzertütsch* is the common spoken German in Switzerland, a dialect more than most others in diglossic contrast with the written and printed language. The linguistic distinction between *Niederdeutsch* (Lower German) and *Oberdeutsch* (Upper German) covers the same continuum. It is usually traced to the Second Sound Shift in the 8c, in which the Southern dialects became phonologically distinct from the Northern, producing such South/North contrasts as *machen/maken* (make) and *Schiff/skip* (ship). Confusingly, the geographical term *Hochdeutsch* or High German is applied to the result of this sound change, so that the term can refer both to all the Upper German (that is, geographically 'highland' and Southern) dialects and to an idealized standard German language which is 'high' in the social sense.

Even then, however, the division into Lower and Upper/High German is not the whole story, as dialectologists and language historians generally recognize an intermediate variety: *Mitteldeutsch* (Central or Middle German) stretching from Cologne to Frankfurt and Leipzig. Observers can draw attention either to such Low/High contrasts as *Junge/Bub* a boy, and *Sonnabend/Samstag* Saturday, or such Low/Middle/Upper contrasts as *ik/ich/i* the pronoun I, and *Männeken/Männchen/Mandl* a little man. The contribution of the Central and Southern dialects to a common *Schriftsprache* (written or literary language) is often acknowledged, as is the fact that more recently a supra-regional *Umgangssprache* (colloquial semi-standard) has served to level out differences.

Tensions persist, however, between unifying and separatist tendencies. More than in English, orthographic conventions have been standardized, largely because of the influential *Duden* spelling dictionary (*Vollständiges ortho-*

*graphisches Wörterbuch der deutschen Sprache*, Konrad Duden, 1880; *Duden*, vol. 1, *Die Rechtschreibung*, 19th edition, Bibliographisches Institut Mannheim, 1986). Local differences in pronunciation occur at all social levels and are often deliberately asserted to establish people's backgrounds. A single, supranational norm for pronunciation does not exist in German-speaking countries any more than in English-speaking countries, although 19c *Bühnendeutsch* (stage German) and 20c media and social mobility have promoted compromises between Lower/North and Upper/South German speech forms. While 'all German-language countries have problems or dilemmas concerning nationhood or ethnicity' (Michael G. Clyne, *Language and Society in the German-Speaking Countries*, Cambridge: University Press, 1984, p. xi), distinct varieties have emerged in East and West Germany (prior to reunification in 1990), Austria, and Switzerland, especially in vocabulary, which have been partly codified in 'national' dictionaries.

Historically, (High) German is divided into Old High German from AD 750, Middle High German from 1150, Early New High German from 1350, and New High German from 1650. The description and discussion of the language is further complicated by two factors: (1) The data of traditional dialectology as presented in such handbooks as the *DTV-Atlas* (1978) are often more than 50 years old. (2) Recent sociolinguistic studies are too limited or local to allow generalizations. In addition, there is a long-established equivocal relationship with loanwords (*Fremdwörter*: foreign words). Since the late 17c, these have often been resented and deliberately replaced with vernacular equivalents by purist grammarians: *Anschrift* for *Adresse*, *Bücherei* for *Bibliothek*, *Mundart* for *Dialekt*, *Stelldichein* for *Rendezvous*.

**German in English.** Over the centuries, many German words have found their way into English: for example, Low German *brake*, *dote*, *tackle* and High German *blitz*, *dachshund*, *kindergarten*: see **BORROWING**. Cultural acquisitions have been significant in such fields as food (*frankfurter*, *hamburger*, *hock*, *pretzel*, *sauerkraut*), mineralogy (*cobalt*, *feldspar*, *gneiss*, *quartz*), music (*glockenspiel*, *leitmotiv*, *waltz*), philosophy (*weltanschauung*, *zeitgeist*), and politics (*diktat*, *realpolitik*). Two powerful sources of borrowing in AmE have been such German settlers as the Pennsylvania Dutch (that is, *Deutsch*) and Yiddish-speaking Jewish immigrants.

**English in German.** Contacts between English and German have been on the increase since

the early 18c, promoted by literary translation, diplomatic links, trade relations, language teaching, and the media. Loans have entered German from such fields as literature (*sentimental*, *Bal-lade*), sport (*boxen*, *Rally*), politics (*Hearing*; *Hochverrat*, from 'high treason'), and technology (*Lokomotive*, from locomotive engine; *Pipeline*). Resistance is no longer as vociferous as during the time of the *Sprachgesellschaften* (17c language societies) and the anti-foreigner propaganda of the Nazis in the 1930s. English usages are adopted and adapted as: loan-words (*babysitten* babysit), loan translations (*Beiprodukt* by-product), blends of loanword and loan translation (*Teamarbeit* team work), semantic transfer (*Schau* from 'show', in the sense of theatrical event), and loan creation (*Öffentlichkeitsarbeit*, 'work for the public', loosely based on 'public relations'). Most borrowing is at word level, but occasionally idioms or syntactic constructions are transferred, as in *grünes Licht geben* give the green light, *Ich fliege Lufthansa* I fly Lufthansa. The influence of English is strong in advertising (*High Life*, *Image*) and information science (*Compiler*, *Feedback*). In general, AmE has a greater influence than BrE.

**GERMANIC LANGUAGES.** A group of related languages including English, Dutch, Frisian, German, the Scandinavian languages (Danish, Faroese, Icelandic, Norwegian, Swedish), and a number of derived languages (Yiddish from German, Afrikaans from Dutch) as well as the extinct Burgundian, Gothic, Norn, and Vandal. In spite of a scholarly tradition going back at least to Jacob Grimm in the early 19c, some basic questions regarding these languages still await convincing answers: At what point in history and in what ways did a common *Proto-Germanic* break away from Indo-European? Do the various Germanic languages form a dialect continuum? How can they best be classified into regional and typological groups? On these issues, linguistic speculation needs the support of more cultural and historical data. What is certain, however, is the common heritage of, and mutual contact between, the Germanic languages, as shown in the table.

English	Dutch	German	Swedish
<i>one</i>	<i>een</i>	<i>eins</i>	<i>en</i>
<i>two</i>	<i>twee</i>	<i>zwei</i>	<i>två</i>
<i>three</i>	<i>drie</i>	<i>drei</i>	<i>tre</i>

**GERUND** [16c: from Latin *gerundium*, adapted from *gerendum*, the verbal noun of *gerere* to carry on, engage in]. A traditional term for a verbal noun, in English a word ending in *-ing*: *visiting* in *They appreciate my visiting their parents regularly*. Like a noun, it can be introduced by the genitive *my* (compare *my visit to their parents*), but like a verb it takes the direct object *their parents* (compare *I visit their parents*). In contrast, *visiting* is a noun derived from a verb in the less usual and more formal construction *They appreciate my visiting of their parents*. In the alternative common construction known as the *fused participle*, the *-ing* word is preceded by a non-genitive form: *They appreciate the neighbours visiting their parents regularly*. Some object to the non-genitive usage and avoid it, particularly in formal style, at least for names and pronouns, preferring *They appreciate Bill's visiting their parents* to *They appreciate Bill visiting their parents* and *They appreciate my visiting their parents* to *They appreciate me visiting their parents*. Some grammarians of English use the term *participle* to include the gerund. See VERBAL NOUN. [GRAMMAR]. S.G.

**GESTURE** [14c: from Latin *gestura* a way of acting or bearing oneself, from *se gerere* [gestum to bear or deport oneself, behave]. A bodily movement, especially of the hands and arms, which conveys a meaning, such as the use of two fingers to convey 'V for victory' (in one

orientation) or in British usage an insult (in a different orientation). Such movements are almost always learned features of behaviour, but some are acquired at such an early age that they are often considered instinctive and universal, such as nodding or waving. The meanings and precise forms of such gestures are, however, subject to cultural variation: vertical nodding can mean *yes* in English but a similar movement of the head means *no* in Greek, and sideways nodding (similar to but not identical with shaking the head) can mean agreement in India. Gestures are a normal feature of communication, are relatively few in number, and are used to express a fairly constrained range of meanings. They should be distinguished from the more systematic and comprehensive use of hand movements in deaf sign language. See BODY LANGUAGE, COMMUNICATION, KINESICS, PARALANGUAGE, PROXEMICS, RHETORIC, SIGN LANGUAGE. [LANGUAGE]. D.C.

**GHANA.** Official title: *Republic of Ghana*. A country in West Africa and member of the Commonwealth. Capital: Accra. Currency: the cedi (100 pesewas). Population: 14m (1988), 20.2m (projection for 2000). Ethnicity: Akan, Mossi-Dagomba, Ewe, Ga-Adangme. Religions: 40% Protestant, 36% traditional, 13% Muslim, 11% Catholic. Languages: English (official), West African Pidgin English, and indigenous languages such as Ashanti, Ewe, Fanti, and Ga. Education: primary 74%, secondary 39%, tertiary 2%, literacy 54%. The region was under British influence from 1874, and present-day Ghana comprises the former British colonies of *the Gold Coast* and *Ashanti*, the protectorate of *the Northern Territories*, and the United Nations trusteeship of *British Togoland*. There is a cline of usage from English-based pidgin to the standard West African English of the media and such newspapers as the *Daily Graphic*, the *Ghanaian Times*, the *People's Evening News*, and *The Pioneer*. Ghanaian writers in English include C. Ama Ata Aidoo, Joseph W. Abruquah, Aye Kwei Armah, Kofi Awoonor, and J. Benibengor Blay.

Ghana has probably had more intimate and longer contact with English-speaking expatriates than any other West African country. The English established their first fort at Cormantine in 1631 and had four forts by 1670. English seamen and merchants and their local wives appear to have formed a nucleus of English-speakers in Ghana more than a century before the settlements in Liberia and Sierra Leone. Ghanaians have always prided themselves on the quality of their English. As Kofi Sey suggests: 'The linguist may be able to isolate features of Ghanaian English and

describe them. But once these are made known to him, the educated Ghanaian would strive to avoid them altogether. The surest way to kill Ghanaian English, if it really exists, is to discover it and make it known' (*Ghanaian English: An Exploratory Survey*, London: Macmillan, 1973, p. 10). Localisms include: (1) Words and phrases found in other parts of anglophone West Africa: *balance* change (as in *The balance you gave me is not correct*), *chop box* food box (as in *Put the yam in the chop box*), *themselves* each other (as in *Those two really love themselves*). (2) Distinctive local usage, such as *an airtight* a metal box, *a cover shoulder* a kind of blouse, *enskin* to enthrone (a chief), *an outdoor* a christening ceremony. (3) Uncountable nouns often used countably: *equipments*, *furnitures*. (4) Hybrids of English and local words: *kente cloth*, *donna drum*, *bodom bead*. See ENGLISH, WEST AFRICAN ENGLISH, WEST AFRICAN PIDGIN ENGLISH. [AFRICA, NAME, VARIETY]. C.L.N., L.T.

**GHOST WORD** [1880s]. An item, especially in handwriting or print, that is taken to be a word but is not: 'We should jealously guard against all chances of giving any undeserved record of words which had never any real existence, being mere coinages due to the blunders of printers or scribes, or to the perfervid imaginations of ignorant or blundering editors' (W. W. Skeat, *Transactions of the Philological Society*, 1885-7). A classic 20c ghost word was described in 1976 by the US lexicographer Allen Walker Read: *Dord*, listed as a synonym of *density* in Webster's *Second International Dictionary* (1934). This error arose from misinterpreting 'D or d', used to show that *density* could be abbreviated as either *D* or *d*. The mistake was put right in the next edition, by which time, however, *Dord* had begun to haunt other dictionaries. Compare CORRUPT, MUMPSIMUS. [REFERENCE, WORD]. T.M.CA.

**GIBRALTAR** [From Arabic *Jebel Tariq* Tariq's Mountain]. Also **the Rock of Gibraltar** or informally **the Rock**. A British colony and military base, a rugged peninsula on the south-west coast of Spain where Atlantic and Mediterranean meet as *the Strait(s) of Gibraltar*. Population: c.20,000. Ethnicity: c.14,000 Gibraltarians (of mixed southern European, North African, and British background), c.6,000 British (mainly Service personnel). Languages: English (official), Spanish widely spoken. The territory was ceded by Spain to Britain in 1713, and became a colony in 1830. A Legislative Council was established in 1950, becoming a *House of Assembly* in 1969. Spain disputes right of possession, but Gibraltarians generally regard themselves as British. The local English is

non-rhotic. Standard English with an RP accent is the prestigious norm, while the speech of manual workers is influenced by Spanish, including a parasitic vowel before a word-initial cluster beginning with /s/, such as 'espoon' for *spoon* and 'estreet' for *street*. See ENGLISH, IBERIAN LANGUAGES. Compare MALTA. [EUROPE, NAME, VARIETY]. T.MCA.

**GIFT OF THE GAB** [18c: probably from Scots *gob/gab*, slang for mouth, from Gaelic *gob* mouth]. An informal expression for effortless fluency that may include boasting and self-advertisement, often associated with the Celts and taken to be an asset for politicians, sales representatives, and confidence tricksters. Compare BLARNEY. [STYLE]. T.MCA.

**GIFT OF TONGUES.** See GLOSSOLALIA.

**GIVEN NAME.** See PERSONAL NAME.

**GLASGOW** [From Cumbric *glas* green, and probably *cau* hollow]. The largest city in Scotland and third largest in the UK, and centre of a large conurbation (population in 1986: 725,000). An important medieval burgh and cathedral city, its university founded in 1451, Glasgow from the 17c rapidly became Scotland's leading commercial and industrial centre, often referred to in the 19c and early 20c as the second city of the Empire. The Industrial Revolution brought a huge influx of immigrants from the Highlands and from Ireland. This has resulted in a large Roman Catholic minority and a Protestant/Catholic sectarian divide resembling that of Belfast. The decline of its heavy industries after the First World War has left high levels of unemployment. Though the slums for which the city was once notorious have since 1946 been largely cleared, the peripheral housing estates replacing them are mostly bleak and devoid of amenities. Throughout the 20c an artistic and literary centre, Glasgow was European City of Culture in 1990.

Like that of other Scottish regions, Glasgow speech is a continuum from the local accent of ScoE to the working-class vernacular. In origin a dialect of West Central Scots, Glasgow vernacular has been modified by the mixing of population since the early 19c, resulting in particular in the introduction of several features from Ireland. Like other urban Scots dialects, it has suffered some erosion of traditional vocabulary. Partly as a result of this, working-class speech, known variously as *Glasgow English*, *Glasgow Scots*, *Glaswegian*, *Glesca*, *Glasgow*, *Gutter Glasgow*, has since the 19c been the archetypical stigmatized Scots speech, commonly described as 'debased',

'hopelessly corrupt', or 'the language of the gutter'. In addition to the more or less localized features below, Glaswegian shares stigmatized features of working-class Scots generally, such as glottal-stop realizations of non-initial voiceless stops, use of past participles of verbs for past tenses and conversely, and multiple negation: see GUTTER SCOTS. For features shared with Edinburgh and other Central Scots dialects, see EDINBURGH.

**Pronunciation.** The first three items are well-known shibboleths. (1) Some speakers merge /ɛr/ *air* with /ɛr/ *err*, as in *Merry Mary*, *ferr* fair. (2) Some speakers realize voiced *th* as /r/, as in *ra* for *the* (*ra polis* the police, *ramorra* tomorrow), *brurra* brother, *murra* mother. (3) In such words as *want*, *water*, *wash* the vowel is /a/, so that *patter* and *water* rhyme. (4) The words *away*, *two*, *who*, *whose*, *where* have an 'aw' sound: *awaw*, *twaw*, *whaw*, *whause*, *whaur*. (5) The /u/ of *blue*, *room* has a front, lowered realization, sometimes unrounded. (6) Unstressed final /ʌ/ appears in such words as *barra* barrow, *fella* fellow, *Glesca* Glasgow, *morra* morrow, *awfa* awful, *yisfa* useful. (7) As in Edinburgh, the enclitic negative is *-nae*, *-ny*, as in *canna* can't, *dinna* don't, whereas other dialects have *-na*. (8) /d/ is lost after /l/ and /n/: *caul* cold, *staun* stand, *roon* round, *grun* ground, *win* wind. (9) The form *wan* one, and the adding of a /t/ to *once* and *twice* may be from Ireland. (10) Except in shibboleths like *It's a brow bricht munelicht nicht* traditional Scots forms in /x/ are rare, although the usual ScoE velar fricative prevails in such words as *clarsach*, *loch*, *pibroch*. (11) Intonation is characterized by a predominant pattern of a markedly lowered pitch on the final prominence of the tone group, followed by a low rise, and in this position the final stressed vowel may be prolonged:

ahm thaht depehhhhndint  
hingoanti ma vovwwwulz  
hingoanti ma maaammi

(Tom Leonard, 'Tea Time', *Intimate Voices*, Newcastle: Galloping Dog Press, 1984)

**Grammar.** Well-known Glaswegianisms, some of which are spreading or have spread to Edinburgh, are: (1) *See* as a topic-defining word, as in *See me*, *see ma man*, *see kippers*, *we hate them*. (2) Of Ulster origin, plural-marked forms of the second-person plural pronoun: *youse*, *yese*, *yiz* you, also *youse-yins* you ones. (3) A stressed form *Ah'm ur* I am, *Ah'm ur gaun* I am going, *Naw*, *Ah'm urnae* No, I am not. (4) Certain reinforcing sentence tags: *Ye're drunk*, *so ye ur*; *Ah'm right fed up*, *so Ah am/so Ah'm ur*; *Ah felt terrible*, *so Ah did*; *Ah didnae touch nuthin*, *neither Ah did*. (5) Other tags: *annat*, as in *Aw thae* (all

those) *punter* *wi the wings an haloes annat* (and that); terminal *but*, as in *Ah dinnae waant it but*.

**Vocabulary.** (1) Localisms include: traditional *dog* to play truant, *dunny* a basement, *ginger* a soft drink of any kind, *sherrickin* a public dressing down, *stank* a grating over a drain, *wallie close* the tiled entrance hall of a better-class tenement, *tummle yir wulkies* to tumble somersaults; more recent slang usages *bam*, *bampot*, *bamstick* idiot, *boggin*, *bowfin* smelly, *hairry/herry* and *hingoot* (hang-out) a girl (disparaging), *heidbanger/heidcase* a lunatic, *lumber* a pick-up, a boy/girlfriend, *brassie/riddie* a red face, a cause of shame, *malky* a weapon. (2) Glasgow Scots is also receptive to slang expressions of wider currency like *chib* a weapon, *nooky* sexual intercourse, *stocious* drunk.

**Written dialect.** From the 1960s writings in and about Glaswegian have included, as well as caricature by stage comics and by authors of joke and cartoon collections, much poetry, drama, and prose fiction that treats the variety seriously and with concern or indignation at its status. Part of this writing, in poetry or prose, consists of representations of local speech, some of this in an ostentatiously untraditional 'phonetic' and quasi-illiterate orthography, intended to emphasize the demotic character of the speech. An exaggerated variant of this orthography has been favoured by or for the comedians Stanley Baxter and Billy Connolly. Both variants sometimes run words together to achieve an exotic or comically grotesque effect. In Scottish writing, this style, which apparently originated c.1960, is all but unique to Glasgow. Some specimens:

Another interesting word heard in the discotheque is *jiwanni*. To a young lady a gentleman will make the request—*Jiwanni dance?* Should she find that he is over-anxious to ply her with refreshments she will regard him with suspicion and inquire—*Jiwamiget mebevid?* *Jiwanni* in certain circumstances changes to—*Jiwanna*, used generally in conjunction with the word *beltoanramooth* (Stanley Baxter, *Parliamo Glasgow*, 1982).

[*Jiwanni* Do you want to, *Jiwamiget* Do you want to get, *mebevid* me bevid (me drunk: from *bevy*, a clipping of *beverage*), *Jiwanna beltoanramooth* Do you want a belt (blow) on the mouth]

ach sun  
jiss keepyir chin up  
dizny day gonabootlika hawf shut knife  
inaw jiss cozzy a burd.

(Tom Leonard, from 'The Miracle of the Burd and the Fishes', *Poems*, 1973, Dublin: O'Brien)

[Ah, son. / Just keep your chin up. / Doesn't do going about like a half-shut knife. / And all just because of a bird (girl)]

'Heh,' goes Tommy, 'Ah'm gaun orr therr tae see about this. Wullie must be daft ur sumhin, shoutin at that f'lla. E'll get is heid done fur im.'—'Aye,' I says.

'Moan. Mibbe wull kin stoap im daein enihin stupit' (Alex Hamilton, from 'Gallus, did you say?', in *Three Glasgow Writers*, 1977, Glasgow: Molendinar Press).

[*gaun* going, *orr therr* over there, *sumhin* something, *f'lla* fellow, *heid* head, *fur* for, *moan* come on, *wull kin* we'll can (= double modal, we will be able to), *stoap* stop, *daein* doing, *enihin* anything]

Michael Munro's glossary *The Patter* (1985) and its sequel *The Patter Another Blast* (1988) are two out of several recent popular, half-comic works purporting to describe present-day Glasgow speech. A scholarly monograph is Caroline Macafee's *Glasgow* (in the *Varieties of English around the World* series: John Benjamins, 1983), with cassette accompaniment. See DIALECT IN SCOTLAND, EDINBURGH, GUTTER SCOTS, MORNINGSIDE AND KELVINSIDE, SCOTS, SCOTTISH ENGLISH. [EUROPE, VARIETY]. A.J.A.

**GLIDE.** In phonetics, such approximant sounds as the /w/ of *wet* and the /j/ of *yet*, which have no steady state even when pronounced in isolation. Whereas it is easy to say [s] and [m] and prolong them without a following vowel, [j, w] require a following vowel to glide into, such as schwa [wə, jə]. If they are artificially prolonged, they become vowels similar to the [u:] of *move* and the [i:] of *leave* respectively. The approximant *r* can also be regarded as a glide. Although they are vocalic, glides behave in a syllable as though they are consonants: the glides in *yak*, *wake*, *rake* belong to the syllable margin as do the consonants in *bake*, *sake*, *take*. In view of their intermediate status, glides are sometimes known as *semi-vowels*, sometimes as *semi-consonants*. See APPROXIMANT, CONSONANT, R-SOUNDS, SYLLABLE, VOWEL. [SPEECH]. G.K.

**-GLISH AND -LISH** [1970s]. Elements extracted from the word *English* and used to form blends with the names of other languages, so as to describe (often facetiously) the mixing of elements of English and the language in question: 'In an effort to stem the tide of "Arabliish", Cairo's prestigious Language Centre has attempted to devise Arabic equivalents for expressions and terms which do not exist in the Koran' (*Johannesburg Star*, Aug. 1984). Since the 1970s, the formation and use of such words have been widespread; they include *Chinglish* for Chinese and English, *Gerlish* and *Deutschlish* for German and English, *Italglish/Italish* for Italian and English, and *Russlish* for Russian and English. See ANGLIKAANS, CAMFRANGLAIS, CODE-MIXING AND CODE-SWITCHING, ENGLISHES, EUR-OLISH, FRANGLAIS, HINDLISH/HINGLISH, INTERLANGUAGE, JAPANESE PIDGIN ENGLISH, KOREA, SINGLISH, SPANGLISH, TAGLISH, YINGLISH. [VARIETY]. T.MCA.

**GLOSS** [13c: from Latin *glossa*, Greek *glōssa*/*glōtta* the tongue, a difficult word (needing explanation)]. (1) A note made in a margin or between lines, usually a word or phrase, explaining or translating a difficult word in a manuscript or other text. Such glosses have played an important role in the history of lexicography. Old English marginal or interlinear glosses of hard Latin words were collected in more or less alphabetical lists, known as *glossae collectae* (collected glosses) then *glossaria* (glossaries). These were ancestors of the first Latin-English dictionaries and ultimately of all English dictionaries. (2) Any definition, explanation, or interpretation of a word or phrase, especially if it is unusual or foreign. There is no etymological link between either of the above senses and *gloss* [of Germanic origin] meaning a surface lustre or glaze. However, casual usage may have brought the two together, especially in adding the negative sense of something superficial, deceptive, and perhaps artful, as in *glossing over someone's faults*, or in the phrase *not to put too fine a gloss on something* (not to interpret it too closely). If one *glosses* something, one adds a gloss or interpretation that may be accurate but could be deliberately misleading. Context usually serves to distinguish the possibilities. See GLOSSARY, LEMMA, LEXICOGRAPHY, RUBRIC. [REFERENCE, WORD]. T.M.C.A.

**GLOSSARY** [14c: from Latin *glossarium* a collection of glosses]. An alphabetic list of terms and explanations, often of a specialized or technical nature (*a glossary of computer terms*) or linked with a particular text (*a glossary of Indian words*, in a novel). Glossaries typically appear as appendices: a *Glossary of Selected Terms in Teaching English as a Foreign Language* (Geoffrey Broughton *et al.*, 1980). Here, the gloss of the term *aspect* begins: 'With time and mood, one of the grammatical categories of the verb'. None of the other senses of the word *aspect* (as in *several aspects of her character*) need be represented for the purpose of this work. A typical text-linked glossary is *How to Speak EastEnders: A Brief Glossary of Cockney Expressions* (Lionheart Television, 1988), prepared to acquaint US television viewers with usage in the British soap opera *EastEnders*. Here, the expression *knocked Ethel into a cocked hat* has the gloss 'upset, hurt, or worried Ethel'. See GLOSS, LEXICOGRAPHY. [REFERENCE]. R.F.I.

**GLOSSOLALIA** [19c: from Greek *glōssa* tongue, *lalia* talking]. Also **the gift of tongues**, **speaking in tongues**. A rapid, fluent burst of speech, usually unintelligible and delivered in a state of religious excitement. Such behaviour has been conceived as a sign of grace among early

Christians, 13c Catholic friars, 18c Protestant Camisards, 17-18c French Catholic Jansenists, and 20c Pentecostalist Protestants. All have taken Acts 2: 3-4 of the New Testament, referring to events at the time of Pentecost, as their justification: 'And there appeared vnto them clouen tongues, like as of fire, and it sate vpon each of them. And they were all filled with the holy Ghost, and began to speake with other tongues, as the spirit gaue them vterance' (Authorized Version, 1611). The apostle Paul claimed the ability (1 Corinthians 14: 14-19), but favoured brief, intelligible utterance to long, unintelligible outbursts. Glossolalia has been interpreted as both divine and satanic communication. In the West in recent centuries it has generally been seen as eccentric and dangerous, but in some evangelical movements the sounds are taken to be authentic. Psychologists have sought to account for them as the product of charlatanry, neurosis, psychosis, epilepsy, and hypnotic suggestion. There is no consensus. Compare COPROLALIA, ECHOLALIA. [LANGUAGE].

T.M.C.A.

**-GLOT** [From Attic Greek *glōttós* tongued: see GLOSS]. A combining form with the meaning 'having a language', as in *monoglot* having (only) one language (mono- or unilingual), and *polyglot* having many languages (multilingual). See DIGLOSSIA, LINGUAL, MONOGLOT, POLYGLOT. [SPEECH]. T.M.C.A.

**GLOTTAL** [1840s: see GLOTTIS]. In anatomy, relating to the glottis; in phonetics, articulated at the glottis. See GLOTTALIC, GLOTTAL STOP, GLOTTIS. [SPEECH]. T.M.C.A.

**GLOTTALIC**. [20c: from *glottal* and *-ic* as in *italic*]. In phonetics, an air-stream mechanism that uses the glottis. If the glottis is closed and the larynx raised, air will be forced out, producing *ejective* sounds. If the glottis is loosely closed (that is, in the position for *voice*), and the larynx is lowered, air will be sucked in, producing *implosive* sounds. Glottalic consonants are found in some African and Amerindian languages. Ejectives, which sound like plosives with glottal stops, occur occasionally in English for humorous purposes: for example, to mimic speech with relatively unaspirated stops, such as /t, p/ in *t'erribly t'erribly p'osh RP*. See GLOTTIS. [SPEECH]. G.K.

**GLOTTAL STOP**. In phonetics, a stop sound made by bringing the vocal cords tightly together, blocking off the air-stream, then releasing them suddenly. It occurs widely in the world's languages, including: (1) As an Arabic consonant, represented in script by the letter *alif*

(and also by the sign *hamza*), and in Roman transliteration by the lenis symbol ' (or the apotrophe): 'akala ate. (2) Comparably, as a consonant in Hawaiian: *a'o* to teach. (3) As a sharp 'attack' to an opening vowel in such languages as English and German, used by default when there is no consonant at the beginning of a syllable, as in forcefully saying *Anne, come here!* (4) In England and parts of Northern Ireland, as an accompaniment to the voiceless stops /p, t, k, tʃ/ in a stressed syllable. (5) Widely in BrE as an optional 'catch' between adjacent vowels, as in *co-opt, re-educate*. (6) As a substitute for postvocalic /t/ in such accents as Cockney and Glasgow, in words like *better, butter*, a process known technically as *T-glottaling*. In all but the last of the above functions, the glottal stop is socially neutral, but in the sixth it is stigmatized. Because many users of English know the term only in this sense, the concept of the glottal stop has long been associated in the English-speaking world with slovenly, substandard speech. In its stigmatized use, it has been shown orthographically by means of an apostrophe (Glasgow, *be'ur bu'ur better butter*), in the 1950s by the Glasgow writer Cliff Hanley as a double colon (*be::er bu::er*), and in 1980 by the London writers Robert Barltrop and Jim Wolveridge by an exclamation mark (*be!er bu!er*). The IPA symbol is ʔ. See COCKNEY, GLASGOW, GLOTTAL, GLOTTIS. [SPEECH, STYLE]. G.K., T.MCA.

**GLOTTIS** [16c: through Latin from Greek *glōttis*]. In anatomy and phonetics, the space in the larynx between the vocal cords or folds. See GLOTTAL, GLOTTALIC, GLOTTAL STOP, LARYNX, VOCAL C(H)ORDS/FOLDS. [SPEECH]. G.K.

**GOBBLEDYGOOK**, also **gobbledegook** [1944: promoted by Maury Maverick, but probably an older slang term that echoes the sound of a turkeycock and combines *gob* mouth, *gobble* eat greedily, and *gook* a (foreign) speaker of gibberish: compare Scots *bubbyjock* turkeycock]. A pejorative and facetious term for pretentious and opaque jargon; inflated language. Maverick put it as follows: 'Just before Pearl Harbor, I got my baptism under "gobbledygook" . . . its definition: talk or writing which is long, pompous, vague, involved, usually with Latinized words' (*New York Times Magazine*, 21 May 1944). In Britain in 1979, Plain English Campaign was founded with the public shredding in London of official forms and a rampage along Downing Street by someone dressed as a monster called *the Gobbledygook*. In 1980, the National Consumer Council in the UK published a review of official forms under the title *Gobbledegook*. In 1986, the cover cartoon of *English Today* 5 showed a knight with *Plain English* on his shield

facing a bloated dragon with *gobbledygook* written across its belly, over the caption 'Plain English Campaign'. PEC adopted the cartoon as a kind of logo. For examples of the kind of pretentious and opaque usage often classed as *gobbledygook*, see BAFFLEGAB, BUREAUCRATESE, DOUBLESPEAK, OBFUSCATION, OBSCURANTISM. For further general discussion, see JARGON, PLAIN, PLAIN ENGLISH CAMPAIGN. [STYLE]. T.MCA.

**GODZONE** [mid-19c: a clipping of *God's Own Country*, a term applied by British settlers to various territories]. An informal term for especially New Zealand and sometimes Australia: 'On warm summer evenings, when it is packed with Polynesians and the shops are livid with neon, it seems more like Asia than Godzone' (a comment on Karangahape Road, in *Auckland, their Auckland*, Lansdowne Press, 1983). [NAME, OCEANIA]. T.MCA.

**GOLDEN BULL AWARDS**. See PLAIN ENGLISH.

**GONGORISM**. See EUPHUISM.

**GOOD ENGLISH**. An informal term for English regarded as all or any of the following: well-spoken, well-written, well-constructed, fluent, effective, a mark of good breeding and social standing, a mark of good education. W. Nelson Francis observed in 1967: 'An expression like *I ain't got no time for youse* may be most effective in the situation in which it is used, and hence "good English" in the [sense of good communication]. But most people, including those who naturally speak this way, will call it "bad English" because grammatical features like *ain't, youse*, and the double negative construction belong to a variety of English commonly used by people with little education and low social and economic status' (*The English Language: An Introduction*). The term appears from time to time in the title of usage guides, in the sense of *good usage*: for example, Godfrey Howard's *A Guide to Good English in the 1980s* (London: Pelham Books, 1985). See BAD ENGLISH, STANDARD ENGLISH, WELL-SPOKEN. [USAGE, VARIETY]. T.MCA.

**GOOD USAGE**. See GOOD ENGLISH, USAGE, USAGE GUIDANCE AND CRITICISM.

**GOOD WRITING**. See EFFECTIVE WRITING.

**GORDIMER, Nadine** [b. 1923]. South African writer, born in Springs, Transvaal, and educated at a convent school until ten years old, after which, because of a heart ailment, she worked

at home with tutors. She attended the U. of Witwatersrand for a year, but could not take a degree because she lacked formal entry qualifications. Gordimer began writing as a child, published her first short story at the age of 15, and her first novel, *The Lying Days*, in 1953. In addition to short stories in *The New Yorker*, other periodicals, and collected editions, her work includes the novels *A World of Strangers* (1958), *Occasion for Loving* (1963), *The Late Bourgeois World* (1966), *A Guest of Honour* (1970), *The Conservationist* (1974), *Burger's Daughter* (1979), *July's People* (1981), and *A Sport of Nature* (1987), and a study of black South African writers entitled *The Black Interpreters* (1973). She has been an outspoken opponent of apartheid concerned, among other things, with relationships between the races, the position and attitudes of white middle-class liberals like herself, and the future of South Africa. Gordimer won the UK's Booker Prize for *The Conservationist* in 1974 and the Nobel Prize for Literature in 1991: 'Her great achievement has been to give the world a reckoning of the terrible cost of racism to her country that goes beyond what journalism can relate' (*Time*, 14 Oct. 1991). See SOUTH AFRICAN LITERATURE IN ENGLISH. [AFRICA, BIOGRAPHY, LITERATURE]. T.MCA.

**GOTHIC** [17c: from Latin *Gothicus*]. (1) The extinct language of the Goths, the only documented member of the Eastern (or Gothic) branch of the Germanic language family. A small community of speakers survived in the Crimea until the 16c. It is known almost entirely from fragments of the 4c Gospels by Ulfilas, Bishop of the West Goths, who created an alphabet for it from Greek and runic. The Gothic for *Thy will be done, in heaven as on earth* (Matthew 6: 10) is *Wairþái wilja þeins, swē in himina jah ana airþái* (May-it-happen the-will of-thine, as in heaven and on earth). (2) A type of fiction popular in the late 18c. When Horace Walpole wrote *The Castle of Otranto: A Gothic Story* (1764) he used the word to mean 'medieval' and placed a story of mystery and fear in a pseudo-medieval setting. The Gothic novel is characterized by sinister happenings and a sense of doom, sometimes supernatural, sometimes the product of wickedness. Its language is usually inflated and melodramatic. Gothic novels include Ann Radcliffe's *The Mysteries of Udolpho* (1794), Matthew Lewis's *The Monk* (1796), and Charles Maturin's *Melmoth the Wanderer* (1829). Jane Austen satirized the style in *Northanger Abbey* (1818). Writers who have used Gothic elements include Mary Shelley, Charles Dickens, Edgar Allan Poe, William Faulkner, and Iris Murdoch, and lineal descendants of the genre include the horror story and horror film.

(3) Also *gothic script*, *gothic black letter*, *black letter*. A family of heavy-script typefaces, whose three forms are based on medieval scripts: *Rotunda*, a rounded form used chiefly in the 15c; *Textura*, a regular type in England until the end of the 16c, currently used in newspaper titles and for pseudo-medieval purposes; *Bastarda*, a pointed version used for German. See FANTASY, GERMANIC LANGUAGES, ROMAN, ROMANTICISM, TEXT. [EUROPE, HISTORY, LANGUAGE, LITERATURE, TECHNOLOGY]. W.F.B., R.C., W.W.B.

**GOVERNMENT** [14c: from Old French *gouverner*, Latin *gubernare*, translating Greek *kubernân* to steer or direct]. The way in which the use of one word requires another word to take a particular form, especially in highly inflected languages. In Latin, prepositions govern nouns: *ad* is followed by an accusative of movement (*ad villam* towards the villa), *in* by either an accusative of movement (*in villam* into the villa) or an ablative of location (*in villa* in the villa). Though the concept is not strictly applicable to a mildly inflected language like English, prepositions require object pronouns where they exist: *of me* (not *\*of I*), *to them* (not *\*to they*), *for us* (not *\*for we*). The term is usually contrasted with *agreement* or *concord*, a condition in which two words interact. Some grammarians extend the term to the way in which some verbs require a particular preposition before a following noun phrase, as in 'We insist on seeing you tomorrow' and 'I will not compromise with them on a matter like this.' [GRAMMAR]. S.C.

**GOWERS, (Sir) Ernest (Arthur)** [1880-1966]. English civil servant and writer on usage, born in London, and educated at Rugby and Clare College, Cambridge, where he studied classics. He entered the Civil Service in 1903 and rose to become chairman of the Board of Inland Revenue. On his retirement in 1930, he was chairman of numerous official bodies and committees of inquiry. At the invitation of the Treasury (concerned at the obscure or convoluted style of many civil servants), he wrote *Plain Words: A Guide to the Use of English* (1948) and *The ABC of Plain Words* (1951). These were combined, with revisions, in *The Complete Plain Words* (1954). The books show his insistence on clarity, precision, and directness as essential for expository writing. Gowers's reputation as a sensible and sensitive authority on usage and style led to his being invited to revise Fowler's *Modern English Usage* (2nd edition, 1965). He received many public honours. See index. [BIOGRAPHY, EUROPE, REFERENCE, STYLE]. S.G.

**GRADABLE.** See ADJECTIVE, ADVERB, ANTONYM.

**GRADED READER.** See READER.

**GRAFFITI** [1850s: from Italian plural of *graffito* incised inscription, design, from *graffiare* to scratch, perhaps influenced by Latin \**graphire* to write, from *graphium* stylus, from Greek *grafeion* stylus, pencil: compare GRAPHIC]. (1) With a plural verb: markings and scribbles such as initials, slogans, kinds of verse, drawings alone or with captions, etc., often obscene, sometimes political, that are written especially in public places such as toilets, on walls, etc., using pen, pencil, sprayed paint, and the like. (2) With a singular verb: such markings as a whole or as a kind of genre or style of self-expression. The occasional singular *graffito* also has the archaeological sense of a drawing or piece of writing scratched on a wall. See LAMPOON, READ. [STYLE, WRITING]. T.MCA.

**GRAMMAR** [14c: from Anglo-Norman *grammere* and Old French *gramaire* (Modern *grammaire*), from a probable \**gramadie*, from Latin *grammatica*, a clipping of *ars grammatica*, a translation of Greek *grammatikḗ tékhnē* the craft of letters, ultimately from *gramma* a letter. The Anglo-Norman variant *gramarie* had the senses grammar, occult learning, and magic. The Old French variant *gramoire* meant a book of magic (Modern *grimoire*). A Middle English variant *glomery* occurs in the phrase *Master of Glomery*, the title of an official of the U. of Cambridge who looked after its grammar school. A pupil there was a *glomerel* a little grammarian. The Scots variant *glamour* was first used in general English by Walter Scott in the 19c. It once meant a magic spell (*cast a glamour over someone*) and now means great but perhaps illusory charm. In 1789, Robert Burns wrote: 'Ye gipsy gang that deal in glamor, / And you deep read in hell's black grammar' (*Captain Grose's Peregrinations*)].

(1) The systematic study and description of a language, a group of languages, or language in general in terms of either syntax and morphology alone or these together with aspects of phonology, orthography, semantics, pragmatics, and word-formation: *universal grammar*, *comparative Indo-European grammar*, *Spanish grammar*, *the grammar of American English*. The study of the grammar of a language may be restricted to the standard variety or cover the standard and aspects of other varieties. Grammars of English have tended to deal mainly with either standard BrE or standard AmE, but in recent years have increasingly covered both main varieties, sometimes with notes on other varieties.

(2) A set of rules and examples dealing with the syntax and morphology of a standard language, usually intended as an aid to the learning and teaching of that language. A distinction is often drawn between *descriptive grammar*, which attempts to present an accurate description of the rules for actual usage, and *prescriptive grammar*, which prescribes certain rules for usage and often proscribes others. In practice, a *grammar book* or *grammar* may contain both kinds of rules. Prescriptive grammar is evaluative, distinguishing between *good grammar* (correct, approved usage) and *bad grammar* (incorrect, disapproved usage). A grammar may overtly or covertly downgrade regional and social dialects (implying that they either do not have 'proper' grammar or have no grammar at all). Such books have often been part of the equipment of formal education in Western countries and have tended to reflect (and endorse) middle-class values. As a result, reminders to offenders have often been couched in such terms as: *Mind your grammar—no double negatives!*

A distinction is often made between a *reference grammar* (intended, like a dictionary, for individual reference) and a *pedagogical grammar* (intended chiefly for class use under the guidance of a teacher). Reference grammars are structured primarily on linguistic principles, and are likely to have copious cross-references and an extensive index. Their contents are arranged primarily on linguistic principles, each topic being treated as comprehensively as possible for the size of the book. In pedagogical grammars, the material is presented and graded for ease of absorption in the learning of the language and/or learning about the language. They are divided into sections that can be assimilated within a normal class period by the students for whom the textbook is intended. They may also contain exercises, vocabulary lists, written dialogues, and reading passages.

(3) In linguistics, a term for the syntactic and morphological system which every unimpaired person acquires from infancy when learning a language: *a native-speaker's grammar*. In this sense, grammar is part of a Janus-faced psychological and neurological process: each person learns and uses a private system which blends into a social consensus. All speakers of a language like English 'know' this grammar in the sense that they use it to produce more or less viable utterances. Their knowledge is implicit, however, and it is not usually easy to think about and report on it. Formal education may help in some areas (especially in relation to literacy) and higher education in language studies may extend this ability, but the use of this natural grammar does not depend on the acquisition of descriptive or prescriptive grammar. English, for example,

was used for a thousand years before the first rudimentary grammar books were written, and no grammar book (however large) is ever fully comprehensive.

**Classical grammar.** The analytical study of language began in the second half of the first millennium BC in both Greece and India. In Greece, it began as the study of the written language, whereas in India it was concerned as much with the transmission of recited Sanskrit as with its written forms. The present-day study of grammar descends from the Greek tradition, in which it was linked with logic and rhetoric. Both Plato and Aristotle took a close interest in language and, among other things, helped provide the foundation for the discussion of the parts of speech. Grammar was first developed as a formal system, however, by Greek scholars in Alexandria (Egypt). The foremost of these was Dionysius Thrax, author of *Hē grammátikē tékhnē* (The Art of Letters: c.100 BC), a brief discussion in 25 sections on the nature of letters, syllables, words (according to form, function, and meaning), and sentences.

When Thrax wrote his treatise, students of reading and writing learned their letters in a strict order, aided by mnemonic hexameter verses. The letters were crucial for all learning, because each was simultaneously letter, number, and musical note. After their alpha-betas, students were taught syllables of increasing length, then simpler and more complex word forms, then specimen texts. In the texts of the period, there were no spaces between words, punctuation was meagre, and reading depended on a capacity to see patterns in the unbroken lines. Once this skill was acquired, an appreciation of the arrangement (*súntaxis*) of words was necessary, as well as their complex inflections, so as to see what was happening in a text. For this, the guidance in Thrax's treatise was crucial. It was in fact the prototype for grammars of all European and many other languages.

Thrax defined grammar as technical knowledge of the language of poets and writers. His interest did not extend to other kinds of Greek, to any other language, to language as a general phenomenon, or to spoken language except insofar as it might help in learning to write. It was the job of the *grammatikós* to use brush and papyrus, to copy and to edit, and, if fortunate and able enough, to analyse and improve the texts of such works as the epics of Homer. Writing was a mystery to the population at large, which associated scrolls with knowledge and power. As a result, in classical and medieval times, grammarians were sometimes taken to be sorcerers, but the craft was so laborious that the sorcerers' apprentices were often frustrated by

it. Ancient attitudes to grammar still survive: many people are in awe of it, know little about it, tend to fear or dislike it, often find it baffling and boring if exposed to it at school, and yet a minority is fascinated by it: a field in which precise scholarship and nit-picking pedantry have coexisted for centuries.

The Roman scholar Marcus Terentius Varro was a contemporary of Thrax's. Where the Alexandrian was brief, the Roman was copious, producing 25 volumes of *De lingua latina* (On the Latin Language). Of these, only Books 5–10 survive. Varro had studied the Greek debates on language, especially as to whether it was by nature regular or chaotic. See ANALOGY AND ANOMALY. He concluded that it is both regular and irregular, with a tilt towards the regular. He was the first comparative grammarian, looking at Latin and Greek side by side and, although he focused on writing, moved the discussion beyond it. Grammarians such as Varro converted the technical terms of Greek into Latin, and adapted Greek-based rules to serve their own tongue. A great advantage in describing Latin more or less in terms of Greek was the similarity of the two languages: both are highly inflected, with complex verb and noun structures. See PART OF SPEECH.

**Medieval and Renaissance grammar.** In the 4c, Aelius Donatus taught in Rome and wrote an elementary text known as the *Ars grammatica* (Art of Letters), the title a translation of Thrax's. He was the teacher of St Jerome, who translated the Bible into Latin, and was so influential that for a thousand years his name was given not only to a basic grammar book, but to any textbook or lesson. In Old French and Middle English, all of these were *donets*. In the 6c, a native of Mauretania, Priscianus Caesariensis (Priscian), taught in Constantinople and wrote the *Institutiones grammaticae* (Grammatical Foundations), the only complete surviving grammar of Latin. The texts of Donatus and Priscian became the basis of medieval grammatical studies, Priscian's texts being integrated into the framework of Scholastic philosophy in the 13c and 14c. It is a testimony to his importance that around 1,000 manuscripts of parts or all of his *Institutiones* survive. Just as Thrax focused on Greek, so medieval grammarians such as Peter Helias (12c) and Petrus Hispanus (13c) focused on Latin. However, as the Middle Ages gave way to the Renaissance, as printing spread, and as new nation-states became more conscious of their languages, grammarians in the mould of Varro began in the 16–17c to write descriptions of their own mother tongues by comparing them with the grammatical descriptions of Latin.

The first grammar of a modern European language described Spanish: Antonio de Nebrija's *Gramática de la lengua castellana* (Grammar of the Castilian language, 1492). The first grammar of French was written in England: John Palsgrave's *Lesclarissement de la Langue Françoise* (1530). An early grammar in one language but about another was in English: Richard Percival's *Bibliotheca Hispanica, Containing a Grammar, with a Dictionarie in Spanish, English, and Latine* (1591). Like their predecessors, the creators of such works focused on the usage of the 'best' writers, establishing a tradition which lasted until the 19c and which still exerts considerable influence. Just as Thrax did not look beyond Greek and the medieval grammarians did not look beyond Latin, so the early modern grammarians hardly looked beyond a level of usage heavily influenced by Greek and Latin. On those occasions when they did so, they saw what seemed to be a barbarous mass of material that seemed to lack all grammatical order.

**Early grammars of English.** Most of the writers of grammars of English have been teachers, but some early grammars were written by men in other walks of life: in 1634, the playwright Ben Jonson wrote his *English Grammar*; in 1762, the Bishop of London, Robert Lowth, brought out *A Short Introduction to English Grammar*; in 1761 and 1762, the scientist Joseph Priestley, better known for discovering oxygen, published two grammars and a number of essays on language. James Harris, whose grammar appeared in 1751, was an amateur philosopher and a Member of Parliament. The American lawyer Lindley Murray grew rich outfitting the British troops who captured New York during the American Revolution, then retired to England and wrote a best-selling English grammar in 1795. In 1784, his compatriot Noah Webster turned to spelling, grammar, and lexicography as a last resort after failing to thrive as a lawyer or a teacher. Before 1800, at least 272 grammars of English were published and there have been countless since. From the 17c to the 19c, the vast majority of these works contained little more than Thrax's basic formula: lists of the letters and syllables of English, with comments on their pronunciation; definitions of the parts of speech illustrating their inflections; some elementary syntax, usually taught through the presentation of imprecise examples; and a section on punctuation and versification. Some grammarians have been speculative and philosophical in nature, in the late medieval tradition: James Harris in *Hermes* (1751) took language as something to be discussed and analysed rather than outlined for rote learning. Few attempted an exhaustive description of English. Gould Brown, in his

encyclopedic *Grammar of English Grammars* (1851), refers to almost every extant treatise on English grammar, well-known or obscure, establishing himself as the grammarian's grammarian.

**Latin and English.** In the main, the aims of the grammarians were pragmatic and educational rather than philosophic: to introduce foreigners to English, to teach students their own language, or to prepare them for Latin. The early textbooks were influenced by the Latin grammar of William Lily (1540), grandfather of the dramatist John Lyly. Lily declined English nouns as if they were Latin. Just as a noun in Latin has a nominative (*dominus*), vocative (*domine*), genitive (*domini*), etc., so he had in English a nominative (*master*), vocative (*O master*), genitive (*of a master*), etc. Sometimes, even its indeclinable adjectives had their cases: nominative singular masculine *wise* and accusative feminine plural *wise*, etc. See CASE<sup>1</sup>, DECLENSION. For centuries, English remained in the shadow of Latin and Greek as a school subject and as a vehicle of learning. Samuel Johnson shared the common 18c opinion that English was a copious and disorderly tongue which had only recently come under the sway of grammar. His own grammar fills 13 double-column folio pages in his two-volume dictionary. Of these pages, however, he devotes only 11 lines to syntax, explaining: 'Our language has so little inflection, or variety of terminations, that its construction neither requires nor admits many rules.' In his *Rudiments of English Grammar*, Joseph Priestley attributes this 'paucity of our inflections of words' to the barbarism of the Anglo-Saxons, from whom the language was inherited, 'the severity of whose climate, and difficulty of subsistence, left them little leisure for polishing, or indeed using, their language' (1761, p. v).

**The rules of good English.** So close-mouthed were the ancestors of English that, according to Johnson, the modern form of the language inherited only four syntactic rules: the verb agrees with its subject; adjectives and pronouns are invariable in form; the possessive noun is the genitive case; transitive verbs and prepositions take objects in the 'oblique' case. Priestley added four others: on pronoun agreement; on the concord of collective nouns (which may take a singular or plural verb); on ellipsis (most notably, deletion of the relative pronoun *that*); and on word order (adjectives precede nouns; subjects precede verbs, and objects follow verbs). It would not have been easy for anyone to learn English from such a grammatical basis, even when expanded to 21 rules of syntax in Lindley Murray's *English Grammar* (7th US edition, 1837). Most 18c and 19c grammarians were prescriptive in their

approach, presenting grammar as the art or science of correct speech and writing. Although many paid homage to the dictum of the Roman poet Horace that usage is the norm by which correctness is judged, few believed that the speech and writing of masses or élite should constitute standard English. For them, instruction in correct English consisted largely in having students memorize and recite definitions and rules. Many texts were arranged as dialogues or catechisms to facilitate this task. More advanced texts allowed students to parse a sentence whose topic was morally uplifting. Examples from Murray include: *I learn; Thou art improved; The tutor is admonishing Charles*. Roswell C. Smith, in his *English Grammar on the Productive System* (1843), emphasized the practical in his examples: *The business will be regulated; John is living within his income; He taught me grammar*.

**The unpopularity of grammar.** The grammarians' attitude toward language, combined with the mechanical instruction in grammar required by the texts, made the subject feared and despised by pupils and teachers alike. The 19c American commentator Richard Grant White, still smarting from a punishment he had received from his tutor many years previously for not knowing his grammar lesson, called grammar rules medieval. He preferred to criticize usage and particularly opposed the coining of new words. When grammar became a required subject in many US schools in the mid-19c, teachers objected that they knew no more about the subject than the students did. Since then, grammar has cycled in and out of favour in educational circles. In the early 1900s, progressive US educational groups called for an end to grammar instruction because it did not contribute to facility in writing. In Britain, the Newbolt Report (1921), which strongly favoured the teaching of English, advised against instruction in the science of language, because it interfered with the appreciation of literary art. In recent years, a conservative 'back-to-basics' movement in education, coinciding with a Conservative government, has encouraged a restoration of grammar drill as a way of solving the language problems of the schools in both the US and the UK.

Whether grammar has been in or out of favour, grammarians early on developed a negative image, both personally and professionally. Johnson called Harris a prig. Lowth was described as melancholy, and Lindley Murray was accused by his detractors of committing the errors he warned against. Although most dictionaries (with the exception of the *OED*) ignore this development, *grammarian* has come to mean

someone whose concern for correctness in language is excessive or pedantic. According to Chambers' *Cyclopaedia* (1727-41, 1779-86), the formerly honourable title of *grammarian* had become a term of reproach: 'a person wholly attentive to the minutiae of language, industriously employed about words, and phrases; and incapable of perceiving the beauties, the delicacy, finesse, extent, &c of a sentiment'. Nowadays, not all students of grammar wish to be identified as grammarians. Serious academics who have produced comprehensive grammars of English, such as Otto Jespersen, formerly philologists, are now generally referred to as *linguists*.

**Scholarly grammars of English in the twentieth century.** There have been a number of 20c scholarly grammars of English characterized by a decidedly descriptive approach and a focus on syntax. The two largest works, both reference grammars, are by foreign speakers of the language. The Dutch grammarian Hendrik Poutsma published *A Grammar of Late Modern English* in five volumes at intervals (with revised versions of the first part) between 1904 and 1929. His grammar is historical (drawing on quotations from earlier periods) and comparative (contrasting the grammars of English and Dutch). The Danish grammarian Otto Jespersen produced his most important work, the seven-volume *Modern English Grammar on Historical Principles*, between 1909 and 1949. As the title indicates, Jespersen's grammar is also historical. This work continues to be consulted for its range of data and insights into grammatical phenomena.

The American structural linguist Charles C. Fries published two works on English grammar that influenced the teaching of English in schools in the US and elsewhere: *American English Grammar* (1940) and *The Structure of English* (1952). In 1972 and 1985, two large reference grammars were published by a team associated with the Survey of English Usage: the British scholars Randolph Quirk, Sidney Greenbaum, Geoffrey Leech, and the Swedish scholar Jan Svartvik: *A Grammar of Contemporary English* (1972) and *A Comprehensive Grammar of the English Language* (1985). Like the works of Fries, these are strictly synchronic. They take account of stylistic variation and the differences between BrE and AmE. Their derivatives are used in the teaching of English in universities and colleges throughout the world: *A University Grammar of English*, by Quirk and Greenbaum (1973), *A Communicative Grammar of English*, by Leech and Svartvik (1975), and *A Student's Grammar of the English Language*, by Greenbaum and Quirk (1990). In the last three decades there has been a noticeable increase in research

publications (monographs and scholarly papers) on English grammar, stimulated by a ferment of ideas from competing theoretical approaches, the availability of several large corpora of English (now in computerized form, concordanced, and often grammatically coded), and the growth of importance of English as an international language. See ANALOGY AND ANOMALY, CASE, DESCRIPTIVE AND PRESCRIPTIVE GRAMMAR, PART OF SPEECH, PUNCTUATION. [GRAMMAR].

### The grammar theme

A-C. ABLATIVE ABSOLUTE, ABLATIVE CASE, ABLAUT, ABSOLUTE, ABSOLUTE CLAUSE, ABSTRACT AND CONCRETE, ACCEPTABILITY, ACCIDENCE, ACCUSATIVE CASE, ADJECTIVE, ADJECTIVE/ADJECTIVE CLAUSE, ADJUNCT, ADNOMINAL, ADVERB, ADVERBIAL, ADVERBIAL CLAUSE, ADVERBIAL PARTICLE, AELFRIC, AFFIRMATIVE, AGENT, AGENTLESS PASSIVE, AGRAMMATISM, AGREEMENT, ANALOGY, ANALOGY AND ANOMALY, ANAPHORA, ANIMATE NOUN, ANTECEDENT, ANTICIPATORY IT, AORIST, APODOSIS, APOSTROPHE<sup>1</sup>, APPPOSITION, APPOSITIVE CLAUSE, ARTICLE<sup>1</sup>, ASPECT, ATTRIBUTIVE, AUXILIARY VERB, BARE INFINITIVE, BLOOMFIELD, CASE<sup>1</sup>, CASE GRAMMAR, CATAPHORA, CATENATIVE, CAUSATIVE VERB, CHOMSKY, CLASSICAL ENDING, CLAUSE, CLAUSE ANALYSIS, CLEFT SENTENCE, COBBETT, COGNATE OBJECT, COLLECTIVE NOUN, COLLOCATION, COMMON NOUN, COMPARATIVE DEGREE, COMPARATIVE SENTENCE, COMPARISON (DEGREE OF), COMPLEMENT, COMPLEX PREPOSITION, COMPLEX SENTENCE, COMPOUND-COMPLEX SENTENCE, COMPOUND PREPOSITION, COMPOUND SENTENCE, COMPREHENSIVE GRAMMAR OF THE ENGLISH LANGUAGE, COMPUTATIONAL LINGUISTICS, CONCESSION, CONCORD, CONCRETE NOUN, CONDITION, CONJUGATION, CONJUNCT, CONJUNCTION, CONNECTIVE, CONSTITUENT, CONTINUOUS, CONTRACTION, COORDINATE CLAUSE, COORDINATION, COORDINATOR, COPULA, COPULAR VERB, CORRELATIVE, COUNTABLE AND UNCOUNTABLE, CURME.

D-H. DANGLING PARTICIPLE, DATIVE CASE, DECLARATIVE, DECLENSION, DEEP STRUCTURE, DEFINING RELATIVE CLAUSE, DEFINITE ARTICLE, DEGREE, DEIXIS, DEMONSTRATIVE, DEMONSTRATIVE PRONOUN, DEPENDENT CLAUSE, DESCRIPTIVE AND PRESCRIPTIVE GRAMMAR, DESCRIPTIVISM AND PRESCRIPTIVISM, DETERMINER, DEVIANT, DIRECT AND INDIRECT SPEECH, DIRECT OBJECT, DISJUNCT, DITRANSITIVE, DOUBLE ACCUSATIVE, DOUBLE GENITIVE, DOUBLE NEGATIVE, DOUBLE PASSIVE, DUAL, DUMMY, DYNAMIC VERB, ECHO QUESTION, ELLIPSIS, EMBEDDING, EMPHASIS, EXCLAMATION, EXISTENTIAL SENTENCE, FEMININE, FINITE VERB, FIXED PHRASE, FORM, FORMAL, FORMALIVE, FOWLER, FUNCTION, FUTURE, GENDER, GENERAL ANALYSIS, GENERATIVE, GENERATIVE GRAMMAR, GENERIC, GENERIC PRONOUN, GENITIVE CASE, GERUND, GOVERNMENT, GRAMMAR, GRAMMAR CHECKER, GRAMMAR-TRANSLATION METHOD, GRAMMATICAL CATEGORY, GRAMMATICALITY, GRAMMATICAL WORD, GROUP POSSESSIVE/GENITIVE, HALLIDAY, HANGING PARTICIPLE, HELPING VERB, HOLOPHRASE, HONORIFIC.

I-O. IMPERATIVE, INCEPTIVE, INCHOATIVE, INDEFINITE ARTICLE, INDICATIVE, INDIRECT OBJECT, INDIRECT SPEECH, INFINITIVE, INFIX, INFLECTED, INFLECTION/

INFLEXION, INFORMAL, INSTRUMENTAL, INTENSIFIER, INTERJECTION, INTERROGATIVE, INTRANSITIVE, INVERSION, IRREGULAR, IRREGULAR VERB, ITERATIVE, JESPERSEN, JONSON, LATIN<sup>1</sup>, LINKING VERB, LOCATIVE, LOGIC, LONDON-LUND CORPUS, LOWTH, MAIN CLAUSE, MASCULINE, MASS NOUN, METANALYSIS, MILTON, MISRELATED PARTICIPLE, MODAL AUXILIARY, MODALITY, MODAL VERB, MODE, MODEL, MODIFICATION, MONOTRANSITIVE, MOOD, MORPHEME, MORPHOLOGY, MULTIPLE NEGATION, NAME, NEGATION, NEUTER, NOMINAL, NOMINALIZATION, NOMINATIVE ABSOLUTE, NOMINATIVE CASE, NON-COUNT NOUN, NON-DEFINING RELATIVE CLAUSE, NON-FINITE VERB, NON-RESTRICTIVE RELATIVE CLAUSE, NOUN, NOUN CLAUSE, NOUN-INCORPORATION, NUMBER<sup>2</sup>, OBJECT, ONIONS, ONOMASTICS, ORTHOEPY, ORTHOGRAPHY.

P-Q. PARADIGM, PARADIGMATIC AND SYNTAGMATIC, PARATAXIS, PARENTHESIS, PARSING, PARTICIPLE, PARTICLE, PARTITIVE, PART OF SPEECH, PASSIVE (VOICE), PASSIVIZATION, PAST, PAST PARTICIPLE, PEDAGOGICAL GRAMMAR, PERFECT, PERFORMATIVE VERB, PERIODIC SENTENCE, PERIPHRAISIS, PERSON, PERSONAL PRONOUN, PHILOLOGY, PHRASAL VERB, PHRASE, PHRASE WORD, PLUPERFECT, PLURAL, POLARITY, POP GRAMMARIAN, POSITIVE, POSITIVE DEGREE, POSSESSION, POSSESSIVE APOSTROPHE, POSSESSIVE CASE, POSSESSIVE PRONOUN, POST-DETERMINER, POST-MODIFICATION, POSTPOSITION, PRE-DETERMINER, PREDICATE, PREDICATIVE ADJECTIVE, PRE-MODIFICATION, PREPOSITION, PREPOSITIONAL ADVERB, PREPOSITIONAL VERB, PRESCRIPTIVE GRAMMAR, PRESCRIPTIVISM, PRESENT, PRESENT PARTICIPLE, PREREIT(E), PRINCIPAL CLAUSE, PROGRESSIVE/CONTINUOUS, PROLEPSIS, PRONOUN, PROP, PROPER ADJECTIVE, PROPER NOUN, PROSCRIPTIVE, PROTASIS AND APODOSIS, PSEUDO-CLEFT SENTENCE, QUALIFY, QUANTIFIER, QUESTION, QUESTION TAG, QUIRK.

R-Z. RECIPROCAL PRONOUN, REDUPLICATION, REDUPLICATIVE, REFLEXIVE, REFLEXIVE PRONOUN, REGULAR, REGULAR VERB, RELATIVE CLAUSE, RELATIVE PRONOUN, RESTRICTIVE AND NON-RESTRICTIVE MODIFICATION, RESTRICTIVE AND NON-RESTRICTIVE RELATIVE CLAUSE, RULE, SAXON GENITIVE, SENTENCE, SENTENCE ADVERB, SENTENCE ADVERBIAL, SENTENCE FRAGMENT, SENTENCE STRESS, SENTENCE WORD, SIMPLE FUTURE, SIMPLE PAST, SIMPLE PRESENT, SIMPLE SENTENCE, SINGULAR, SPLIT INFINITIVE, STATIVE VERB, STEM, STEM FORMALIVE, STRONG VERB, STRUCTURE, STRUCTURE DEPENDENCE, SUBJECT, SUBJUNCTIVE, SUBORDINATE CLAUSE, SUBORDINATION, SUBORDINATOR, SUBSTANTIVE, SUFFIX, SUPERLATIVE (DEGREE), SUPERORDINATE CLAUSE, SUPPLETION, SURVEY OF ENGLISH USAGE, SWEET, SYNTAGMATIC, SYNTAX, TAG, TAG QUESTION, TENSE<sup>1</sup>, THEMATIC VOWEL, THEME, THREE-PART VERB, TOPIC, TRANSFORMATIONAL-GENERATIVE GRAMMAR, TRANSITIVE AND INTRANSITIVE, TWO-PART VERB, UNATTACHED PARTICIPLE, UNCOUNTABLE NOUN, UNDERSTOOD, USAGE, UTTERANCE, VERB, VERBAL, VERBAL NOUN, VERBLESS SENTENCE, VERB OF INCOMPLETE PREDICATION, VERB PHRASE, VOCATIVE, VOICE, WEAK VERB, WHITNEY, WH-QUESTION, WH-SOUND, WORD, WORD CLASS, WORD-FORMATION, WORD ORDER, Y-, YES-NO QUESTION.

See also the grammar sections of entries for major varieties of English, such as CANADIAN ENGLISH.

**GRAMMAR CHECKER.** A computer program used in word processing to verify the grammatical correctness of what has been written. Such programs enforce such simple rules as number agreement between noun and verb and some of the overall requirements of sentence structure, such as that prepositions must have objects. A complete check on the entire grammar of English is not currently feasible. Grammar checkers are sometimes used in classrooms to help teach composition as well as by people writing letters and memoranda. Compare SPELLING CHECKER, STYLE CHECKER. [GRAMMAR, TECHNOLOGY]. M.L.

**GRAMMAR-TRANSLATION METHOD.** See LANGUAGE TEACHING.

**GRAMMATICAL CATEGORY.** In linguistics, a class of units such as *noun, verb, prepositional phrase, finite clause* and features such as *case, countability, gender, number*. These may in turn be subcategorized into kinds of noun, case, etc. Since nouns may be subclassified in various ways that do not coincide, they are said to be cross-classified in such pairs as *countable/uncountable, common/proper, animate/inanimate*. Grammatical units such as subject and object, which refer to functional relationships between the parts of a sentence or clause, are often termed *functional categories*. See PART OF SPEECH. [GRAMMAR]. S.G.

**GRAMMATICALITY** [1960s]. In linguistics, conformity to the rules of a language as formulated by a grammar based on a theory of language description. The concept became prominent with the rise of generative grammar in the 1960s, whose primary aim has been the construction of rules that would distinguish between the *grammatical* or *well-formed* sentences and the *ungrammatical, deviant, or ill-formed* sentences of a language. It is asserted that for most sentences the distinction is clear to the native speaker. For those where it is not clear, grammaticality will be determined by whether the sentences can be included under the rules distinguishing between the clearly grammatical and the clearly ungrammatical. If the rules of a grammar cannot be formulated so as to limit the number of possible coordinated phrases or clauses, the grammar will contain sentences that are unacceptable because of excess coordination: *If you eat without washing your hands, and if you drink too quickly, and if you go to bed late, and if you rise late, and if . . .*

Consequently, grammaticality has been differentiated from *acceptability*, which is based on the judgements by native speakers as to

whether they would use a sentence or would consider it correct if they met it. Judgements about what is acceptable may reflect views that a sentence is nonsensical, implausible, illogical, stylistically inappropriate, or socially objectionable. Many linguists believe that they can filter out such considerations in their investigations of the facts of language. Many also believe that they can rely on their own introspection to provide samples of clearly grammatical and clearly ungrammatical sentences that would be adequate for compiling and testing the rules. Others consider that the examination of large quantities of data stored and organized by means of computers can yield additional and more reliable information on what constructions are possible and which are central or peripheral to the language. A sensitive issue regarding grammaticality is variability within a language, for example the extent to which sentences are grammatical for one regional or social variety but not another, or indeed for one idiolect rather than another. Non-standard varieties of a language have their own grammars, which will resemble to a greater or less extent the grammar of the standard varieties, so that a sentence may be grammatical in one non-standard variety but ungrammatical in a standard variety, and vice versa. Some sociolinguists believe that linguists should have as their objective the compilation of *multilectal* grammar: a grammar that would take into account all variation within a given language. See ACCEPTABILITY. [GRAMMAR]. S.G.

**GRAMMATICAL WORD.** See WORD.

**GRAMMATOLOGY** [Late 20c: from Greek *grámma/grámmatos* letter, and *logia* study]. A branch of linguistics that studies the nature of writing and writing systems. Compare GRAPH-OLGY. [LANGUAGE, WRITING]. T.MCA.

**GRAPH.** (1) [1870s: short for *graphic formula*: see GRAPHIC]. A diagram that represents or displays a system of relations among two or more things by means of lines, dots, or bars. A common variety has an *X* or horizontal axis and a *Y* or vertical axis, and is used to display statistical information. A *line graph* displays the relationship of two sets of variables by means of a curve of distribution. A *bar graph* or *histogram* shows such relationships by means of adjacent columns of information that rise above or fall below the *X* axis or extrude horizontally from the *Y* axis. (2) [1930s: from Greek *graphé* writing]. A written or printed symbol for an idea, sound, or linguistic expression: see DIGRAPH, GRAPHEME. (3) Also *graf*. In journalism, an informal short form of *paragraph*. [TECHNOLOGY, WRITING]. T.MCA.

**GRAPHEME** [1930s: from Greek *graphḗ* writing, and *-eme* as in *phoneme*]. In linguistics, a minimal unit in a writing system, consisting of one or more symbols serving to represent a *phoneme*. Each grapheme is realized in writing or print by its *graphs*, such as the different ways of writing and printing an *a* or a *t*. An individual graph, when compared with another graph or representing a grapheme, is called an *allograph*. See *-EME*, *GRAPH*. Compare *MORPHEME*, *PHONEME*. [LANGUAGE, WRITING]. T.MCA.

**GRAPHIC** [17c: from Latin *graphicus* relating to painting or drawing, Greek *graphikós* able to paint or draw, from *gráphein* to write]. (1) In linguistics, relating to writing, as in the *graphic medium* (writing as a vehicle of language). (2) In mathematics, relating to diagrams and graphs, and especially to the determination of values or the solution of problems by means of measurement on diagrams and graphs. (3) Giving a clear, effective, and vivid mental picture: a *graphic description*. (4) Relating to the *graphic arts* (writing, lettering, printing, engraving, painting, drawing, etc.): *graphic design*. (5) A product of the graphic arts, such as a drawing or print; a device drawn, written, or printed on a surface. See *CARTOON*, *GRAPH*, *GRAPHIC DESIGN*. [MEDIA, WRITING]. T.MCA.

**GRAPHIC DESIGN**, also **graphics**. The visual effect of the layout of such artefacts as books, periodicals, pages, posters, leaflets, letterheads, and other graphics; the art of producing graphic layouts. See *LAYOUT*, *SPACE*. [MEDIA, TECHNOLOGY, WRITING]. T.MCA.

**GRAPHIC MEDIUM**. See *GRAPHIC*, *MEDIUM*.

**GRAPHIC NOVEL**. See *COMIC*.

**GRAPHICS**. See *GRAPHIC DESIGN*.

**GRAPHOLOGY** [1870s]. (1) The study and interpretation of handwriting so as to make observations on the character and abilities of the writer of a particular specimen. (2) A branch of linguistics that studies writing and print as systems of signs, and parallels *phonology* as the study of speech. Compare *GRAMMATOLOGY*, *PHONOLOGY*. See *LEVEL OF LANGUAGE*, *MEDIUM*. [LANGUAGE, WRITING]. T.MCA.

**GRAVE ACCENT** [From Latin *accentus gravis* a heavy tune. Pronounced 'grahv']. A diacritical mark over a letter as in French *è: première, siècle*. It is not usually retained when a word containing it is borrowed into English (*fin de siècle, première*), usually because it is not available on a keyboard or in type. Grave accents are, however,

sometimes applied to English words to mark such distinctions as the pronounced *e* of the second item of the pairs *aged/agèd, learned/learnèd*. In Shakespearian verse, the pronunciation of a normally silent *e* in *-ed* may be shown by a grave. The spelling is normal and unaccented in the prose of Lady Macbeth's *Out, damned spot!* (*Macbeth*, 5. 1), but Hamlet's verse shows the contrast between elision in *damn'd defeat* (*Hamlet*, 2. 2) and pronunciation in *smiling damnèd villain!* (1. 5). See *ACCENT*, *D*, *DIACRITIC*, *LEARNED*. [WRITING]. C.U.

**GREAT AUSTRALIAN ADJECTIVE**, also **Australian adjective**. An Australian name for the expletive *bloody*, although it is also widely used in BrE and NZE: 'I had once the curiosity to count the number of times that a bullock driver used this word in the course of a quarter of an hour, and found that he did so twenty-five times. I gave him eight hours in the day to sleep, and six to be silent, thus leaving ten hours for conversation. I supposed that he had commenced at twenty and continued till seventy years of age... and found that in the course of that time he must have pronounced this disgusting word no less than 18,200,000 times' (A. Marjoribanks, *Travels in New South Wales*, 1847); 'The sunburnt — stockman stood / And, in a dismal — mood, / Apostrophised his — cuddy; / "The — nag's no — good, / He couldn't earn his — food, / A regular — brumby"' (opening lines of '—: the Great Australian Adjective', W. T. Goodge, *Hits, Skits and Jingles*, 1899); 'Shootin' kanga-bloody-roos At Tumba-bloody-rumba' (W. N. Scott, *Complete Book of Australian Folk Lore*, 1976). See *GREAT AUSTRALIAN SLANGUAGE*, *INFIX*, *TMESIS*. [OCEANIA, STYLE]. T.MCA.

**GREAT AUSTRALIAN SLANGUAGE** [1890s]. Also **Australian slanguage**, sometimes **slangwide**. Slang seen as pervading AusE; colloquial Australian: 'And our undiluted English / Is a fad to which we cling, / But the great Australian slanguage / Is a truly awful thing' (W. T. Goodge, *Hits, Skits and Jingles*, 1899); 'Actually, Australian slanguage is well stocked with words and phrases to describe those who are a bit slow off the mental mark' (*Weekend Australian*, 27 Aug. 1983). Compare *GREAT AUSTRALIAN ADJECTIVE*. See *SLANGUAGE*. [OCEANIA, STYLE]. T.MCA.

**GREAT BRITAIN** [16c: *Great* in the sense 'large', in contrast formerly with *Less Britain*, or *Brittany*]. A union of two kingdoms of Western Europe, occupying the island of Britain, and comprising England and Wales, and Scotland. Together with Northern Ireland, these constitute

the United Kingdom of Great Britain and Northern Ireland. See BRITAIN, BRITANNIA, ENGLAND, NORTHERN IRELAND, SCOTLAND, UNITED KINGDOM, WALES. [EUROPE, NAME]. T.M.C.A.

**GREAT VOWEL SHIFT.** A sound change that began c.1400 and ended c.1600, changing late Middle English long, stressed monophthongs from something like the sounds of mainland European languages to those that they now have: for example, Middle English *fine* had an *i* like Italian *fino*. Words that entered English after the completion of the shift have often retained the original sound, as in *police*: compare *polite*, which entered earlier. In terms of articulation, the Middle English front vowels raised and fronted and the back vowels raised and backed; vowels already at the top became diphthongs with *ah* as the first element and the old vowel as the second, as in *fine* (see diagram). The shift marked a major change in the transition to Early Modern English, and is one reason why works of Geoffrey Chaucer and his contemporaries sound so unlike present-day English. Chaucer's *a* in *fame* sounded much like the *a* in present-day *father*, his *e* in *see* like the *a* in *same*, the *i* in *fine* like the *ee* in *fee*, the *o* in *so* like the *aw* in *saw*, the *o* in *to* like the *oe* in *toe*, and the *ou* or *ow* in *crowd* like the *u* in *crude*. See E, EARLY MODERN ENGLISH, LATIN<sup>1</sup>, VOWEL SHIFT. Compare GRIMM'S LAW, VERNER'S LAW. [HISTORY, SPEECH]. W.F.B.

**GREEK** [Before 10c: from the Old English plural *Grecās*, Latin *Graeci*]. A language of south-eastern Europe, a classical language of the Western world, and a member of the Indo-European language family. It is commonly divided into *Ancient* or *Classical Greek* (often thought of as a dead language) and *Modern Greek*, the language of Greece, Cyprus (with Turkish), enclaves in the Soviet Union and the eastern Mediterranean, and Greek and Cypriot immigrants in Australia, Britain, Canada, and the US. Greek has one of the longest unbroken linguistic traditions in the world, divided by scholars into six phases over c.3,500 years: (1) *Mycenaean*

*Greek* (14–12c BC) the language of Mycenae and Linear B writing. (2) *Archaic* or *Pre-classical Greek* (11–8c BC) the language of the Homeric epics, Hesiod, and the early lyric poets. (3) *Classical Greek* (7–5c BC), with several forms: Attic in Athens, Doric in the Peloponnese, Ionic in the Ionian islands and parts of Asia Minor, and Aeolic in Asia Minor, Thessaly, and Boeotia. (4) *Hellenistic Greek* (4c BC–4c AD), also known as *koinē*, the 'common language', a widely-used tongue of the Mediterranean and West Asia, a result of colonial settlement and the campaigns of Alexander the Great, one form of which was *New Testament Greek*, the language of the Gospels and St Paul. (5) *Byzantine* or *Romaic Greek* (5c–15c), the language of the Eastern Roman or Byzantine Empire. (6) *Modern Greek*, divided into *Demotic* or *Demotiki* (popular) and *Katharévoussa* (purified, a classicized language of education). Since the early 1980s, a homogenizing Standard Modern Greek has developed, based on the usage of moderately educated people in the large urban centres of Greece.

**Greek in English.** The influence of classical Greek on English has been largely indirect, through Latin and French, and largely lexical and conceptual, with some orthographic and other effects. For speakers of English, Greek has been traditionally perceived as remote, esoteric, and yet worth a certain respect: compare the idiom *It's Greek to me* (I can't understand it) and the saying *The Greeks had a word for it* (expressing a traditional view of the richness of the language). Greek word-forming patterns, words, and word elements were adopted and adapted into Latin over c.1,500 years, and passed through Latin into many European and other languages, being used in the main for scholarly and technical purposes. The flow into English was at first limited and largely religious, such as Old English *cirice* and its descendant *church* (from *kūriakōn dōma* the Lord's house). The significant influx was in the late Middle Ages and the Renaissance, as with *catalogue* 1460, *rhetorical* 1476, *stratagem* 1489, *psalmodize* 1513, *analytical* 1525.

**Greek in Latin dress.** The spelling of Greek words in English has been shaped by the orthographies of Latin and French: Greek *kaligraphia* becomes Latin *calligraphia*, French *calligraphie*, English *calligraphy*. Occasionally, however, a more Greek look survives: *kalidoscope*, not \**calidoscope*, *kinetic*, not \**cinetic*. Synonymous variants sometimes occur: *ceratin*, *keratin*, both from *keras* horn. Contrasts occur when a *k* survives in some usages but not in others: *ceratosaurus* horned lizard, *keratogenous* producing horny tissue; *cinematography* making moving pictures, *kinematograph* (obsolete) a film

projector. Although most Greek personal and place-names have a Latinate look in English (*Achilles, Hercules; Athens, Crete*), they can, for literary and other purposes, take forms closer to the classical (*Akhilleus, Herakles*) or the modern (*Athinai, Kriti*). The use of *ph* as a marker of Greek words in Latin survives in English because it was favoured by French writers, the *ph* representing the Greek letter phi. English *philosophy* and French *philosophie* contrast with Italian *filosofia* and Spanish *filosofía*, which did not keep the Latinism: see F, p. English *neuralgia, neurosis* are closer to Greek than both French *névralgie, névrose* and Italian *nevralgia, nevrosi*, which have been influenced by the pronunciation of Modern Greek.

**Hybridized Greek.** Because it has been filtered into English through Neo-Latin, the Greek contribution has been liable to hybridization. However, because some loans (*diuretic, deontology, dogmatism*) are fairly close to their originals, and other forms are virtually identical with them (*diphtheria, dogma, drama*), the effects of Latinization and the easy creation of hybrids have tended to be overlooked. The words *rhetorical* and *analytical* are largely Greek, but they end with the suffix *-al*, an adaptation of Latin *-alis*. Scholars have tended to minimize such adaptations, because Latin and Greek were equally classical, sometimes discussing Greek as if it were a self-contained and pure source of technical vocabulary for English. Henry Bradley put it as follows:

So well adapted is the structure of the Greek language for the formation of scientific terms, that when a word is wanted to denote some conception peculiar to modern science, the most convenient way of obtaining it usually is to frame a new Greek compound or derivative, such as Aristotle himself might have framed if he had found it useful to express the meaning (*The Making of English*, 1904).

This is only partly true. A new formation is likely to be more Neo-Latin than classical Greek. It was circumstance rather than inherent worth that made Greek a prime source of terms for European academic discourse. Other classical languages, such as Arabic and Sanskrit, are comparably extensive in systems of word-formation exploited in their own scholarly traditions, but have had little impact on English because no such channels as Latin and French were open to them. Elsewhere, however, they have had a comparable impact. The word-creating capacity of Greek, while prodigious, is not unique; nor has it usually had a direct channel into the Western European languages. As a result, even the most rigorous scientific terminologies are hybrid, such as the names of the geological eras, created in English as an ad-hoc system unlikely to have been Aristotle's choice.

**Part-Greek terminology.** The names of the major eras of geology are Greek, labelled according to position in time: *Pal(aeozoic* of old life, *Mesozoic* of middle life, *Cenozoic* of recent life. However, most of the terms for the periods into which the Paleozoic and Mesozoic divide are Latinate and none refers to time. Three refer to rocks in Wales (*Cambrian, Ordovician, Silurian*), one each to rocks in England (*Devonian*), Russia (*Permian*), Germany (*Triassic*), and France (*Jurassic*), and two to physical features (*Carboniferous* to coal, *Cretaceous* to chalk). The divisions of the Cenozoic, however, return to Greek and to time, marking vague degrees of recentness by turning the *cen(o)-* of *Cenozoic* into *-(o)cene*: *Paleocene* ancient recent, *Eocene* dawn recent, *Oligocene* few recent, *Miocene* less recent, *Pliocene* more recent, *Pleistocene* most recent, *Holocene* entirely recent. The mix of Greek, Latin, and English is marked in such subsidiary formations as *Early Prepalaeozoic, Infrecambrian, Eocambrian, Upper Silurian, Permo-Triassic*. Such a system, constructed to serve the ends of geology, is typical of how Greek is used in Modern English.

**Dog-Greek?** The subsystem of *-cene* terms did not endear its creator, the 19c Scottish geologist Sir Charles Lyell, to the English usage critic Henry Fowler, who makes the following comment under the entry *barbarism*: 'A man of science might be expected to do on his great occasion what the ordinary man cannot do every day, ask the philologist's help; that the famous *eocene-pleistocene* names were made by "a good classical scholar" shows that word-formation is a matter for the specialist' (*Modern English Usage*, ed. Ernest Gowers, 1965). More in sympathy with the needs and practices of scientists and engineers, the English philologist Simeon Potter noted that electricians have abstracted from *electron* a new noun-forming suffix *-tron*, for terms like *dynatron, kenotron, phanotron, magnetron, thyatron*. He observed: 'I once heard an unkind critic allude disparagingly to these neologisms as dog-Greek. To a lover of the language of Sophocles and Plato these recent coinages may indeed appear to be Greek debased. More appropriately, perhaps, they might be termed lion-Greek or chameleon-Greek. They are Neo-Hellenic in the genuine Renaissance tradition' (*Our Language*, 1950/66). Such flexible Greek is fully integrated into the vocabulary and word-formation of English: alone though Frenchified in *biosphere*, with Latin and again Frenchified in *bio-degradable*, and increasingly at ease with the vernacular in such forms as *bio-feedback* and *megabucks*.

**GREEK ALPHABET.** See ALPHABET.

**GREEK E.** See EPSILON.

**GREEK LITERATURE.** Literature in Greek, both the surviving writings of archaic and classical Greece, and the entire body of writings from Homer to the present day. The Greeks were the first Europeans to use an alphabet, to theorize about language, and to frame language categories such as *ónoma* (name/noun) and *phrásis* (way of speaking, group of words). Most of the literary genres of the Western world were invented or formalized by the Greeks and many of the names they used have passed with only minor adaptation to many successor languages. Key literary words in English that are of Greek provenance (drawn variously from classical, Alexandrian, and Byzantine sources) include *anachronism*, *anthology*, *archetype*, *biography*, *catharsis*, *comedy*, *criticism*, *elegy*, *epic*, *euphemism*, *hubris*, *irony*, *lyric*, *metaphor*, *mythology*, *poesy*, *poetics*, *rhetoric*, *sarcasm*, *symbolism*, *tragedy*. Much of the matter of Greek literature emerged from the beliefs and rituals of pre-literate times, was classed as *múthos* (story) and *poiēsis* (making), and was analysed into three types: the *épos* (epic) of Homer and Hesiod; the *elegeiā* (flute song) and *lira* (lyre song) of such poets as Sappho and Pindar; and the *drāma* (action) of such playwrights as Aeschylus and Aristophanes. All such works have served for centuries as Europe's literary templates. See ANAGORISIS, CATHARSIS, COMEDY, DRAMA, ELEGY, EPIC, GENRE, HAMARTIA, HUBRIS, LATIN LITERATURE, LITERARY CRITICISM, LYRIC, MIMESIS, ODE, PASTORAL, POETICS, POETRY, TRAGEDY, TRAGICOMEDY. [EUROPE, LITERATURE]. T.M.C.A.

**GREENGROCCER'S APOSTROPHE.** See APOSTROPHE<sup>1</sup>.

**GRENADA.** A country of the Caribbean, and member of the Commonwealth. Capital: Saint George's. Currency: the East Caribbean dollar. Head of state: the British monarch, represented by a governor-general. Population: 102,000 (1988), 124,000 (projection for 2000). Languages: English (official), English Creole, French Creole. Education: primary c.100%, secondary

35%, tertiary 10%, literacy 98%. Columbus visited the island in 1498, in the mid-17c French settlers from Martinique ousted the Caribs, and the island was ceded to Britain in 1783. It was administered as part of the Windward Islands in 1833, became a colony in 1877 and independent in 1974, and was invaded by the US and some nearby nations in 1983 to remove a Marxist government. See CARIBBEAN, ENGLISH. [AMERICAS, NAME, VARIETY]. T.M.C.A.

**GRIMM'S LAW.** The first Germanic sound shift, a statement of the relationship between certain consonants in Germanic languages and their originals in Indo-European (IE), first described in 1818 by the Danish philologist Rasmus Rask (1787-1832) and set out in detail in 1822 by the German philologist Jacob Grimm (1785-1863). Greatly simplified, Grimm's Law states the regular changes in IE labials /p, b, f/, velars /k, g, h/, and dentals /t, d, θ/, as they developed in Germanic. Because English has words borrowed from Latin and Greek that retain the original IE sound, as well as words descended from Germanic that have the changed sound, it provides 'before and after' illustrations (see table).

	Sound shift	'Before'	'After'
Labials	p > f	ped(al)	foot
	b > p	lab(ial)	lip
	f > b	fund(ament)	bott(om)
Velars	k > h	can(ine)	hound
	g > k	genu(flect)	knee
	h > g	host(ile)	guest
Dentals	t > th	tri(ple)	three
	d > t	duo	two
	th > d	thyr(oid)	door

In general, Grimm's Law holds that unvoiced IE stops became Germanic unvoiced continuants, that voiced IE stops became Germanic unvoiced stops, and that unvoiced IE continuants became Germanic voiced stops (see diagram). In the triangles, the change from IE to Germanic

runs clockwise, the derivation of Germanic from IE anti-clockwise. See INDO-EUROPEAN LANGUAGES. Compare VERNER'S LAW, GREAT VOWEL SHIFT. [HISTORY, SPEECH]. W.F.B.

**GRINGO** [1840s: from Spanish 'foreign language, foreigner', probably from *griego* Greek: compare the English expression *It's all Greek to me*. Feminine: *gringa*. The alternative explanation, that the term derives from the first syllables of the song 'Green grow the Lilacs', popular during the US-Mexican War (1846-8), though attractive, appears to have no foundation]. A usually pejorative and dismissive ethnic name in Spain and especially Latin America for a foreigner, especially of American or sometimes British background. See ETHNIC NAME. [AMERICAS, NAME]. T.MCA.

**GROUP POSSESSIVE**, also **group genitive**. Terms for those occasions when the possessive apostrophe ('s) is added to a phrase rather than to the noun to which it logically relates: *The King of Thailand's visit* (not \**The king's of Thailand visit*) or *the girl next door's bicycle*. See APOSTROPHE<sup>1</sup>, POSSESSION, SAXON GENITIVE. [GRAMMAR]. S.C.

**GRUB STREET**. A street in London (renamed *Milton Street* in 1830), long associated with people who write for a living. The name now refers not to a location but to literary hack work, as professional writers often take on any kind of work in order to make ends meet. The sense of uninspired, hackneyed, commercial writing grew out of the association of name and place and was strong in the 17-18c. The poet Pope, who probably had a part in the short-lived satirical weekly *The Grub Street Journal* (1730-37), wrote:

Not with less glory mighty Dulnes crowned  
Shall take through Grub Street her triumphant  
    road;

And her Parnassus glancing o'er at once,  
Behold an hundred sons, and each a dunce.

(*The Dunciad*, 1728, iii. 135)

Johnson defined the term with self-irony as: 'Originally the name of a street in Moorfields much inhabited by writers of small histories, dictionaries, and temporary poems; whence any mean production is called *grubstreet*' (*Dictionary*, 1755). The expression is used in literary circles to denigrate and deplore commercialism. See FLEET STREET, FREEDOM OF THE PRESS, HACK. [LITERATURE, MEDIA]. G.H., T.MCA.

**GUIDE** [17c]. A book for beginners or those seeking help or reassurance; a manual or work of reference presented as if it were a person leading others through difficult country: *The Oxford*

*Guide to the English Language* (1984); *The Cambridge Guide to Literature in English* (1988); *The Bloomsbury Good Word Guide* (1988). The term *guidebook* is commoner in general statements (*We need a guidebook*), while *guide* is commoner in the titles of such books. Compare COMPANION, MANUAL. See USAGE GUIDANCE AND CRITICISM. [REFERENCE]. T.MCA.

**GUIDEWORD**. See CATCHWORD.

**GUJARATI**, also **Gujerati**. An Indo-Aryan language of India, spoken by c.20m people in Gujarat, Bombay, and elsewhere in India, and by Gujaratis in Britain, East and South Africa, and elsewhere in the world. It is the state language of Gujarat, is one of the 15 major languages of India, and is written in modified Devanagari script, and its literary tradition dates from the 12c. See AFRICAN LANGUAGES, BRITISH LANGUAGES, EUROPEAN LANGUAGES, FIJI, GANDHI, INDIAN ENGLISH<sup>1</sup>, INDIAN LANGUAGES. [ASIA, LANGUAGE]. Y.K.

**GULLAH** [Early 18c: speculatively linked with both the *Gola* of Liberia and the territory of *Angola*]. The name of a member of a black community in the Sea Islands and coastal marshes of South Carolina, Georgia, and north-eastern Florida, and of the English-based creole spoken by that community (also known as *Sea Island Creole*). Gullah is usually kept hidden from outsiders. It developed on 18c rice plantations after British colonists and their African slaves arrived in Charleston from Barbados in 1670, in an encounter among African languages such as Ewe, Hausa, Ibo, Mende, Twi, and Yoruba, the English of overseers from England, Ireland, and Scotland, and the maritime pidgin used in some West African forts and aboard slavers' ships. It shares many features with other Atlantic creoles, and is characterized by: (1) Distinctive words for tense and aspect: *He bin come* He came, He had come; *He go come* He will come, He would come; *He duh come* He is coming, He was coming; *He done come* He has come, He had come. *He come* may mean 'He came', 'He has come', 'He comes', but not 'He will come'. (2) Pronouns more inclusive than in general English: *He see um* He or she saw him/her/it; also *He see she* He saw her, and *He see we* He or she saw us. A pronoun usually has the same form whether subject or possessive: *He ain see he brother* He hasn't seen his brother, He didn't see his brother. (3) Subordinate clauses introduced by *say* (*Uh tell you say he done come* I told you that he has/had come), and by *fu* (*Uh tell um fu come* I told him/her to come). Both particles can be left out: *Uh tell you he done come*; *Uh tell um come*. There

is a continuum between Gullah and local varieties of AmE: for example, from *He duh come* and *He duh comin* through *He comin* to *He's comin*. English words of African origin that may have come wholly or partly through Gullah include *goober* peanut (compare Kimbundu *nguba*), and *juke* bawdy and disorderly (compare Bambara *dzugu*, wicked), as in *juke house* brothel or cheap roadhouse, and *jukebox*. See AFRO-SEMINOLE, AMERICAN BLACK ENGLISH, ATLANTIC CREOLES, BAJAN, DIALECT IN AMERICA, GEECHEE, PIDGIN, TURNER (L.), WEST AFRICAN PIDGIN ENGLISH. [AFRICA, AMERICAS, VARIETY]. S.S.M.

**GUNNING FOG INDEX.** See FOG INDEX.

**GUTTER** [13c, from Norman French *goutiere*, equivalent to French *goutte* a drop (of water); compare SLOPPY]. (1) A channel for carrying off liquid such as rainwater on roofs or in streets. Because the gutters of streets are often foul, and beggars, derelicts, street urchins, and others have often been associated with them (*begging in the gutters*; *lying drunk in a gutter*; *a dirty little guttersnipe*), the term has come to be used, especially attributively, for kinds of language or things associated with language that belong or in someone's opinion ought to belong in the gutter: 'Each book I have written has brought a few letters and a certain percentage of reviews asking if it is really necessary for me to use so much "gutter" language' (Tabitha King, *Maledicta*, 1988-9). See GUTTER SCOTS, NEWSPAPER, YELLOW PRESS. [STYLE]. T.M.C.A.

**GUTTER JOURNALISM/PRESS.** See YELLOW PRESS.

**GUTTER SCOTS.** A pejorative term for urban working-class speech in Scotland. Sometimes *Scots* is replaced by a local name, such as *Gutter Glasgow*. It is identified by at least the following features, several of which are not confined to Scotland. (1) *The glottal stop*, realizing /t/ and less regularly /p, k/ as glottal plosives after vowels and /l, n, r/: *better, bottle, try to, quarter, tryin' to, shelter, keeping, working*. (2) Disyllabic forms with an intrusive vowel: 'girrul' *girl*, 'wurrul' *world*, 'fillum' *film*. (3) 'H-' for *th-* in 'hink' *think*, 'hing' *thing*, 'sumhn' *something*, 'nuhn' *nothing*, 'everyhn' *everything*. (4) A realization of *thr-* as 'hr-': 'hree' for *three*, 'hred' for *thread*. (5) Generalizing past participle forms as past tenses and vice versa: *Ah never done that*; *Ah seen im comin*; *Ah gien im aw Ah had* I gave him all I had; *Ah've swam further'n that*. (6) Other irregularities in verb morphology: *Ah seed im comin*; *Ah've brung ye some sangwidges*. (7) Multiple negation: *Ah dinna(e) waant nane* I don't want any. (8) *Never* used to negate one event: *Ah*

*nivver done nothin* I didn't do that. (9) Double auxiliary *have*: *Ye'd've saw im if ye'd've came/If ye'd a came*. (10) *Here* as an exclamation of surprise: *And here! the shoap wis open efter aw*. (11) Repetition of reporting say: *He says tae me e says, 'Ah'm no comin'; Ah says tae him Ah says: 'Jis shut up!'* (12) Minced oaths as exclamations of surprise: *Jings Jesus, Crivvens Christ, Help ma Boab* (Help my Bob) Help me God. See EDINBURGH, GLASGOW, GLOTTAL STOP, SCOTS. [EUROPE, VARIETY]. A.J.A.

**GUTTURAL** [16c: from French *guttural*, Latin *gutturalis* throaty]. A general term for sounds made in or near the throat, such as the velar fricative in German *Achtung* and ScoE *loch*, the uvular *r* in Parisian French *derrière*, and the pharyngeal Arabic sounds known as 'ayn and ghayn. The term is imprecise and little used by phoneticians. It is often used loosely when describing English spoken with a 'throaty' foreign accent: "'I had some criticisms of my own education,'" he said in his slow guttural, uncompromised by 50 years of living and working in the USA' (referring to Bruno Bettelheim, *Observer*, 6 Sept. 1987). See ACCENT, ARABIC, BURR, PHARYNX, UVULA, VELUM. [SPEECH, STYLE]. G.K., T.M.C.A.

**GUYANA.** Official title: *Co-operative Republic of Guyana*. A country of the Caribbean coast of South America and member of the Commonwealth. Capital: Georgetown. Currency: the dollar. Economy: sugar, rice, bauxite, timber. Population: 820,000 (1988), 920,000 (projection for 2000). Ethnicity: 51% East Indian, 43% African, 4% Amerindian, 2% Chinese and Caucasian. Religions: 57% Christian, 33% Hindu, 9% Muslim. Languages: English (official), English Creole, Bhojpuri, Hindi, Urdu, Amerindian languages. Education: primary 90%, secondary 60%, tertiary 4%, literacy 96%. The region was sighted by Columbus 1498 and settled by the Dutch in the 16c. The Dutch colonies of Essequibo, Demerara, and Berbice were ceded to the British in 1815, and consolidated as *British Guiana* in 1831, with independence in 1966. The term *Guyanese English* is used, in opposition to *Creolese* or *Guyanese Creole English*, to refer to educated local usage. Its vocabulary contains items from Dutch (*paal* boundary mark, *stelling* wharf), Amerindian (*warishi* basket for heavy loads, *mashramani* celebration after cooperative work), and Indian languages (*sardar* field supervisor on a plantation, *dhan* rice paddy). See CARIBBEAN, CARIBBEAN BROADCASTING, CARIBBEAN DICTIONARIES, CARIBBEAN ENGLISH, CARIBBEAN ENGLISH CREOLE, CREOLESE, CARIBBEAN PRESS, ENGLISH, SURINAM(E). [AMERICAS, NAME, VARIETY]. T.M.C.A., L.D.C.

# H

**H, h** [Generally called 'aitch', and sometimes 'haitch' in IrE and AusE]. The 8th letter of the Roman alphabet as used for English. It derives from the Phoenician consonant *heth*, ancestor of the Greek letter *eta* (H). The Romans adopted *eta* to represent the aspirate sound /h/.

**Sound Value.** In English, *h* represents a voiceless glottal fricative at the beginning of syllables before a vowel: *hat, behind, abhor, mishap*.

**Silent H.** (1) In syllable-final position, in exclamations such as *ah, eh, oh* and in such loans (usually Hebrew and West or South Asian) as *chutzpah, Jehovah, Messiah, Sara(h), howdah, veranda(h)*. (2) In words of Greek origin, after *r*: *catarrh, h(a)emorrhage, rhapsody, rhinoceros, rhododendron*. *Rhyme* (also *rime*) is so spelt by analogy with *rhythm*. (3) In *Thames, thyme*, and sometimes *Anthony*. (4) By elision after a stressed syllable (*annihilate, shepherd, Chatham*), and after *ex-* even at the onset of a stressed syllable (*exhaust, exhibit, exhort*). (5) In speech, commonly elided in *he, him, his, her* in unstressed positions, especially following a consonant: *What did 'e do; Tell us 'er name*. This elision affected the spelling and pronunciation of the Middle English pronoun *hit*, resulting in Modern English *it*. (6) After *c* in words of Greek and Italian origin, but indicating that the *c* is pronounced /k/: *archangel, archive, chemist, monarch, stomach, technical, chiaroscuro, scherzo*: and by analogy *ache*, modern spelling for earlier *ake*. (7) In words of Celtic origin, *ch* is generally pronounced /k/ (*clarsach, loch*), but in ScoE and often in IrE is a velar fricative /x/. English in England may have silent *h* in Irish names such as *Callaghan*, though in IrE and ScoE the *g* is generally silent. See *c*.

**French H.** Words derived from French vary in their use of *h*. Sometimes *h* has never been established in English: for example, *able* from Latin

*habilis*, French *habile*. Sometimes *h* reached English, but has never been pronounced: *heir, honest, honour, hour*. Sometimes a silent French *h* has come to be pronounced in standard English: *horrible, hospital, host, hotel, human, humour, humble*. In some words *h* was introduced in English as in *hermit, hostage* (compare French *ermite, otage*), eventually coming to be pronounced. The *h* of *herb* is pronounced in standard BrE, but not in standard AmE.

**Initial H.** The uncertainty of initial *h* is shown in the controversy over the use of *an* before some words of French origin: *an heroic attempt* and *an historic occasion* as opposed to *a heroic attempt* and *a historic occasion*. Although it is now generally conventional to say *a hotel*, the form *an hotel* was once widespread and still occurs in England. In such cases, the *h* may or may not be pronounced in BrE (*an heroic attempt* or *an 'eroic attempt*) and is pronounced in AmE. This use of *an* before *h* is widely regarded as pretentious (especially when the *h* is pronounced), and has always been limited to words in which the first syllable is unstressed: no \**an hopeless case* or \**an hot day*.

**H-dropping.** Also *aitch-dropping*. In England and Wales there are several *h*-less accents, such as Cockney and Brummie, where the pronunciations *an 'orrible 'appening* and *an 'opeless case* are normal. In written dialogue associated with such accents, unpronounced *h* is represented, as here, by an apostrophe.

**Digraphs.** (1) *H* following some consonants may represent special joint values, as in the digraphs *ch, gh, ph, sh, th, wh*. See *c, g, p, s, t, w*. (2) This use of *h* was first established in Latin, which used *ch, ph*, and *th* for the Greek letters *chi, phi*, and *theta*. The digraphs *ch, sh* developed in English after the Norman Conquest. *Wh* arose analogic-

ally by reversing Old English *hw*. *Gh* was introduced to represent the Old English palatal or velar fricative previously often spelt ȝ (yogh), itself going back to an old English *h*-form (old English *liht* becoming *liȝt* then *light*), and *th* was substituted for the Old English letters ð (eth) and þ (thorn): see ETH, THORN, YOGH. (3) *H* can be used in such digraphs because its usual value does not normally occur after consonants, except across syllable boundaries (see below).

**Other features.** (1) In some circumstances, ambiguity can arise regarding what may or may not be a digraph. Syllable boundaries may be unclear, so that the separate values of *sh* in *mishap* may be read together as in *bishop*. Uncertainty over syllable boundaries has influenced the spelling in *threshold* (contrast *withhold*). (2) The suffix *-ham* in place-names in England is often ambiguous in terms of pronunciation, the *h* being sometimes assimilated into a digraph (as in *Grantham*), sometimes not (as in *Clapham*). The spelling provides no guidance in such words. (3) In some languages, *h* can indicate aspiration of a preceding consonant (*bhakti*, *jodhpur*, *khaki*), but this use usually appears unmotivated to monolingual English speakers, who ignore it, especially in Indian usage (*bharat natyam*, *dharma*, *Jhabvala*, *Madhukar*) and often take aspirated *t* to be the conventional *th* digraph (*hatha yoga*, *Marathi*). See AITCH, ALPHABET, ASPIRATE, LETTER<sup>1</sup>, SPELLING. [WRITING]. C.U.

**HACK** [17c: a clipping of *hackney* hired horse, hireling, prostitute: see HACKNEYED]. Someone who writes low-grade material for money, especially according to a formula; a literary or journalistic drudge. In the early 18c the term was associated with writing for book-sellers, and prompted the phrases *Grub Street hack*, *hack writer*, and *hack work*. The practice started in the 16c, when demand for plays outstripped supply and collaborative writing became common. Journalists currently use the term with self-mocking affection: *There were several hacks at the meeting*. See FORMULA, GRUB STREET. [MEDIA, WRITING]. G.H.

**HACKER** [16c: from *hack* to cut with heavy blows and a jagged effect]. (1) Someone or something that hacks or does things badly; formerly, by extension, someone who mangles words and meanings. (2) [1970s]. An informal term for an obsessive computer programmer who is constantly trying new things (tinkering or *hacking*), including seeking access to private systems (as an *electronic eavesdropper*) and planting destructive routines (*viruses*) in other people's programs. In the 1980s, for this reason, the term developed pejorative connotations. It is, however, used positively in both the title and the text of *The New*

*Hacker's Dictionary* (ed. Eric S. Raymond: MIT Press, 1991). This work discusses the jargon and slang of computer enthusiasts (which it sometimes refers to as *hackish*), with entries from *abend* (an 'abnormal end' in which a software program 'crashes') through *kluge up* ('to lash together a quick hack to perform a task') to *zork mid* ('the canonical unit of currency in hacker-written games'). [MEDIA, TECHNOLOGY].

T.MCA., M.L.

**HACKNEYED** [18c: from *hackney* a hired horse or person, a drudge, a hired carriage (*hackney cab/carriage/coach*), from Old French *haquenée* an ambling horse of middle quality, considered especially suitable for women: compare HACK]. (1) Originally, of a horse or person: kept for hire as needed, and by implication not worth very much. (2) Used so often and indiscriminately as to have lost all freshness and interest, said especially of writing and expressions grown stale through overuse. See CLICHÉ, COPYBOOK, METAPHOR, STOCK, TRITE. [STYLE]. T.MCA.

**HALF RHYME** [19c]. Also **imperfect rhyme**, **near rhyme**, **oblique rhyme**, **off rhyme**, **slant rhyme**. Rhyme that does not meet the criterion of identity in stressed vowels and following sounds; the vowels may be different but followed by identical consonants (*wall/soul*, *made/ride*), or rhyming vowels may be followed by different consonants (*bake/mail*, *mock/long*). There may also be differences in vowels and consonants, but the sounds must be related enough to give a semblance of rhyme (*bit/bed*; *push/huge*). Half rhyme has been used by such 20c poets as Wilfrid Owen, W. B. Yeats, and W. H. Auden. Owen's 'Strange Meeting' begins:

It seemed that out of battle I escaped  
Down some profound long tunnel, long since scooped  
Through granites which titanic wars had groined.  
Yet also there encumbered sleepers groined,  
Too fast in thought or death to be bestirred.  
Then, as I probed them, one sprang up, and stared  
With piteous recognition in fixed eyes,  
Lifting distressful hands as if to bless.

Half rhyme can alleviate the comparative paucity of full rhymes in English. Poets have found it useful for common and important words for which the available rhymes have become predictable and hackneyed. It allows a wider choice, as in D. G. Rossetti's *The White Ship*:

And when to the chase his court would crowd,  
The poor flung ploughshares on his road,  
And shrieked, 'Our cry is from King to God!'

Some 20c poets have used forms of half rhyme which only lightly echo each other, with a result not readily distinguished from free verse, as in Dylan Thomas's:

The force that through the green fuse drives the flower

Drives my green age; that blasts the roots of trees  
Is my destroyer.

And I am dumb to tell the crooked rose  
My youth is bent by the same wintry fever.

By partly satisfying and partly frustrating  
expectation, half rhyme can have a vivid effect.  
BLANK VERSE, RHYME, VERSE. [LITERATURE]. R.C.

**HALLIDAY, Michael A. K.** [b.1925]. English linguist and grammarian, born in Leeds, Yorkshire, into an academic family; his father, Wilfred J. Halliday (1889-1975), after retiring as a headmaster, played a major part in compiling material for the North of England in Harold Orton's Survey of English Dialects. The younger Halliday studied Chinese language and literature at the U. of London and linguistics at graduate level, first in Peking and Canton, then at Cambridge (Ph.D. 1955, published as *The Language of the Chinese 'Secret History of the Mongols'*, 1959). In 1963, he was named to lead the *Communication Research Centre* at the U. of London, directing two influential projects: a description of scientific English, and a study of children's language that led eventually to the *Breakthrough to Literacy*, his method of teaching children to read. In 1965 he became Professor of General Linguistics at London, in 1970 Professor of Linguistics at the U. of Illinois in Chicago, and in 1976 Professor in the Department of Linguistics at the U. of Sydney, where he remained until retirement in 1987. In 1981 he gained the NCTE's Russell Award and in 1986 held the Lee Kuan Yew Distinguished Professorship at the U. of Singapore.

Halliday's contributions to the study of English have been varied. For the past quarter-century he has set the agenda for applications of linguistics, as proposed with Peter Strevens and Angus McIntosh in *The Linguistic Sciences and Language Teaching* (1964). His interests include first- and second-language acquisition, poetics, artificial intelligence, linguistic disorders, discourse analysis, text linguistics, semiotics, speech, and English grammar. In the last of these fields, contributions include *Intonation and Grammar in British English* (1967), *Cohesion in English* (1976, with Ruqaiya Hasan), and *An Introduction to Functional Grammar* (1985). The theory he espouses, currently known as *systemic grammar* and *systemic linguistics*, has an orientation towards applications. 'The value of a theory', he has declared, 'lies in the use that can be made of it.' The approach emphasizes the functions of language in use, particularly the ways in which social setting, mode of expression, and register influence selections from a language's *systems*: 'Meaning is a product of the relationship between the system and its environment.'

In his work on English texts, Halliday has asserted the unity of syntax and lexicon in a *lexicogrammar*, collapsing the usual distinction between grammar and dictionary. Meanings are expressed through three interrelated functions: the *ideational*, the *interpersonal*, and the *textual*. Messages combine an organization of *content* deployed according to the *expressive* and *receptive* needs of speaker/authors and listener/readers within conventions of discourse organization. Language users make a series of choices drawn from the meaning potential of their language as they express themselves; it is the task of the linguist to describe those choices as they are shaped by individual minds and social context. Many collections of Halliday's papers (sometimes including contributions by others) have been published. They include: *Halliday: System and Function in Language* (Oxford, 1976), *Language as Social Semiotic* (Arnold, 1978), *Readings in Systemic Linguistics* (Batsford, 1981), *The Semiotics of Culture and Language* (Pinter, 1984), *New Developments in Systemic Linguistics* (Pinter, 1987), and *Current Ideas in Systemic Practice and Theory* (Pinter, 1991). An analysis of his work has been prepared in the form of a thematic glossary with extended citations: *Terms in Systemic Linguistics: A Guide to Halliday* (St Martin's Press, 1980). At his retirement, he was presented with a two-volume festschrift: *Language Topics: Essays in Honour of Michael Halliday* (John Benjamins, 1987). See index. [AMERICAS, ASIA, BIOGRAPHY, EDUCATION, EUROPE, GRAMMAR, LANGUAGE, OCEANIA]. R.W.B.

**HAMARTIA** [1890s: from Greek *hamartia* fault, failure]. In traditional and especially classical drama, the *tragic flaw* that causes the death of the hero, such as Hamlet's indecision and Othello's jealousy. See POETICS, TRAGEDY. [LITERATURE]. T.MCA.

**HAMITO-SEMITIC LANGUAGES**, also **Afro-Asiatic languages**, **Afrasian languages**, **Semitic-Hamitic languages**. A family of languages found throughout much of northern Africa and western Asia, whose parent language appears to have been spoken c.8,000-10,000 years ago in the present-day Sahara. It includes the *Hamitic language* group, containing such northern African languages as Amharic, Berber, and Hausa, and the *Semitic language* group, containing such West Asian languages as Arabic, Aramaic, and Hebrew. See AFRICAN LANGUAGES, ARABIC, ARAMAIC, ASIAN LANGUAGES, HEBREW, LANGUAGE FAMILY. [AFRICA, ASIA, LANGUAGE]. T.MCA.

**HAND** [From Old English]. (1) One of two organs of touching and holding, especially in primates. The opposability of thumb and fingers

has been crucial in the emergence of *Homo sapiens* as a 'tool-using animal', including the development of writing. The hand has two basic functions: *prehensile* (gripping) and *non-prehensile*, with two grips, the *power grip* (as used with a club or sword) and the *precision grip* (as used to throw a ball or write with a pen or pencil). Non-prehensile functions include pushing, tapping, and typing. The term *handedness* refers to whether a person is predominantly *right-handed* (the majority of the human race, for whom most tools are designed), *left-handed*, or *ambidextrous* (a word whose origin in Latin proposes that both hands are 'right' hands). In many cultures, the right hand and right-hand side are associated with 'righteousness', 'dexterity' (Latin *dexter* right hand), white magic, handling food, and cleanliness, while the left hand and left-hand side are associated with evil, black magic, and sinister things (Latin *sinister* the left hand), with clumsiness or *gaucheness* (French *gauche* left), and with uncleanness, including toilet hygiene. The BrE dialect term *cack-handed* for 'left-handed' derives from *cack* excrement. Because of the prestige of the right hand, left-handed people in many cultures have been required or persuaded to write, however clumsily, with the right rather than the left hand. (2) Ability and style in handwriting: *She writes a beautiful hand.* (3) In grammar, the term *hand* occurs in two common figurative phrases associated with balancing statements: 'The Americans, *on the one hand*, want to develop the area, but the British, *on the other (hand)*, want to leave it undisturbed.' See CALLIGRAPHY, LONGHAND, MANUAL, MEDIUM, SHORTHAND, SIGN LANGUAGE, [WRITING].

**HANLEY, Miles Lawrence** [1893–1954]. American phonetician, born in Xenia, Ohio, and educated at Wittenberg College, Ohio State U., and Harvard (MA, 1927). From 1927, he amassed huge collections of written and recorded materials on the pronunciation of English (14–20c) which continue to provide data for researchers. Some of this material appeared in *Index to Rimes in American and English Poetry 1500–1900* (1959). He helped compile the *Linguistic Atlas of New England* (1934–40), helped prepare the *Linguistic Atlas of the United States and Canada* (1930–), served as phonetic adviser for

*Webster's New International Dictionary* (2nd edition, 1934), chaired the Committee on Pronunciation for the Thorndike-Century dictionaries (1934–46), and edited the synonyms and antonyms for the *American College Dictionary* and the *Thorndike-Barnhart Dictionary* (1944–8). [AMERICAS, BIOGRAPHY, REFERENCE, SPEECH].

R.W.B.

**HAPA-HAOLE.** See HAWAII PIDGIN ENGLISH.

**HARD AND SOFT.** (1) Qualities of the letters *c* and *g* that depend on whether they are pronounced like *k* or *s* in the case of *c* or like the *g* in *get* or the *j* in *jet* in the case of *g*. When hard, *c* and *g* are pronounced as velar stops, as in *cap/gap*; when soft, *c* is pronounced as a sibilant, *g* as an affricate, as in *cell/gell*. (2) Popular terms used to describe voice quality, a *hard* voice being forceful and likely to be reinforced by stop consonants (*Damn well tell him to come back tomorrow!*), a *soft* voice being gentle, perhaps kind and compassionate, and likely to be reinforced by sibilants, affricates, fricatives, and liquids (*Hush now; just leave it all to me*). Male voices are often stereotyped as 'hard' and 'rough', female voices as 'soft' and 'gentle'. (3) In phonetics, in the description of consonants, *hard* is an older term for *fortis* (articulated with considerable muscular tension or force of breath or plosion, as with the voiceless consonants of English, such as /p, t, k, s/) and *soft* for *lenis* (articulated with little tension, as with the voiced consonants, such as /b, d, g, z/). See (A)ESTHETICS, C, COMPUTING, G, GENDER BIAS, HARD COPY AND SOFT COPY, HYPHEN, PALATE, SEXISM, SPELLING, VOICE. [SPEECH, STYLE, WRITING]

T.MCA.

**HARD COPY AND SOFT COPY** [Late 20c: compare *hardware* and *software*]. Contrasting terms in computing and word processing: *hard copy* data in permanent form, printed out on paper by a printer attached to a computer; *soft copy* impermanent data displayed on a screen. Before the advent of computing, *hard copy* was copy ready for printing. See COMPUTING, COPY. [TECHNOLOGY].

T.MCA.

**HARD HYPHEN.** See HYPHEN.

**HARD PALATE.** See PALATE, SPEECH.

**HARD WORD** [17c]. A semi-technical term for a difficult word of foreign origin: *azimuth, hierophant, munificence, perigee, Vedanta*. Early English dictionaries especially in the 17c, that explained such exotic words by means of everyday words came to be known as *hard-word dictionaries*. See BIG WORD, CAWDREY, DICTIONARY, LONG WORD. [REFERENCE, WORD].

T.MCA.

**HARDY, Thomas** [1840–1928]. English novelist and poet, born at Higher Bockhampton, Dorset, where his father was a stonemason and small builder, and educated in Dorchester and articled to a local architect. In 1862, he moved to London and worked with the fashionable architect Arthur Blomfield, but because of poor health he returned to Dorset in 1867. Continuing to work in architecture, he also began to write and published *Desperate Remedies* (1871), a novel in the sensational manner popular at the time. With *Under the Greenwood Tree* (1872), he found his *métier*, and thereafter his best work dealt with rural life. He created the imaginary world of ‘Wessex’, based on Dorset and the surrounding counties, in which many of his locations are identifiable. He published 14 novels, including *The Mayor of Casterbridge* (1886), *Tess of the D’Urbervilles* (1891), and *Jude the Obscure* (1896), which was attacked for its attitudes to marriage and orthodox religion. Its reception was partly responsible for Hardy’s decision to abandon novels and devote himself to poetry, which he had also been writing for many years. Several volumes of poetry appeared in the 20c, including a long verse-drama *The Dynasts*, set in the Napoleonic period. He received the Order of Merit in 1910.

More than simply a ‘regional’ writer, Hardy presented the life of the rural world in which he had grown up and preserved the image of a vanished way of life. He was concerned with relationships between men and women, with the frustrations of love and ambition, and the apparent chances and coincidences which shape people’s lives. His style is uneven. He could write clear, strong prose and verse which convey the basic emotions and help to make him one of the few truly tragic English novelists. He could also become turgid and pretentious, too fond of abstruse words and elaborate phrases. Yet his power of description, the richness of his vocabulary, and the range of his allusions and imagery pervade his work. A major achievement is the use of dialect. He could capture the tones of Dorset speech, without the elaborately deviant spellings which make the Dorset poems of William Barnes difficult to read, but conveying the distinctive sounds as well as the words and grammar:

‘Tis not to married couples but to single sleepers that a ghost shows himself when a’do come. One has been seen lately, too. A very strange one.’

‘No—don’t talk about it if ’tis agreeable of ye not to!’ ‘Twill make my skin crawl when I think of it in bed alone. But you will—ah, you will, I know, Timothy: and I shall dream all night o’! A very strange one? What sort of a spirit did ye mean when ye said a very strange one, Timothy?—no, no—don’t tell me.’

‘I don’t half believe in spirits myself. But I think it ghostly enough—what I was told. ’Twas a little boy that zid it’ (from *The Return of the Native*, 1878).

Hardy used dialect for both tragic and comic episodes and varied its intensity to suggest the status of the characters and the degree of their relationship. He valued and defended the dignity of Dorset usage, which he saw not as a deviation from the national standard, but as a survival of the ancient speech of Saxon Wessex. See index. [BIOGRAPHY, EUROPE, LITERATURE, STYLE]. R.C.

**HARSH.** A pejorative non-technical term for accents and voice qualities regarded as grating on the ear. In the English-speaking world, such languages as Arabic and German as well as some accents of ScoE, northern England, and Northern Ireland have been described as harsh, principally because of sounds made at the back of the mouth, such as glottal stops, uvular *r*, and the velar fricative /x/ in German *Nacht* and Scottish *loch*. See ACCENT, (A)ESTHETICS, BURR, GUTTURAL, NEW ENGLAND, R-SOUNDS, VOICE QUALITY. [SPEECH, STYLE]. T.M.CA.

**HART’S RULES.** See HOUSE STYLE, OXFORD UNIVERSITY PRESS.

**HAUSA.** See AFRICAN ENGLISH, AFRICAN LANGUAGES, CAMEROON, LINGUA FRANCA, NIGERIA.

**HAWAII.** An archipelago in the Pacific, since 1959 the 50th state of the United States. Capital Honolulu. Population: 0.96m (1980) (82% in or around Honolulu): Caucasian, Filipino, Japanese, Hawaiian, and other, no ethnic group forming a majority. The first people to reach the islands were Polynesian, over 1,000 years ago. The first European to visit the islands was the British explorer Captain James Cook in 1778, who named them the *Sandwich Islands*, after the Earl of Sandwich. The islanders were organized in a hierarchy of *alii* (nobles), *kahuna* (priests), and people, and were not united until 1810, when King Kamehameha I brought all the islands under his rule and encouraged trade with the US and elsewhere. The *alii* rejected their own system of religion and taboos c.1819, American Christian missionaries arrived in 1820, there was a brief British occupation in 1843, the monarchy was overthrown in 1893, and the islands were annexed by the US in 1898. Present-day Hawaii depends mainly on food production and tourism. A plantation system for sugar cane and pineapples was established in the 19c. Its expansion added to the native labour force thousands of workers from China, Korea, the Philippines, Japan, and elsewhere. By the start of the 20c, ethnic Hawaiians, through epidemic diseases and the increase in immigrants, accounted for

less than 20% of the population. In the late 20c, there are fewer than 10,000 full-blooded Hawaiians, although there are many part-Hawaiians. Most ethnic Hawaiians now speak English or Hawaii Creole English rather than Hawaiian, though there are attempts to revive the language. Other languages spoken on the islands include Chinese, Japanese, Filipino, Korean, Portuguese, Samoan, and Spanish. English has been the language of education for well over a century and is the administrative and general language of the state. See HAWAIIAN, HAWAIIAN ENGLISH, HAWAII CREOLE ENGLISH, HAWAII PIDGIN ENGLISH, JAPANESE PIDGIN ENGLISH, POLYNESIA, UNITED STATES. [AMERICAS, NAME, OCEANIA]. T.M.C.A., S.R.

**HAWAIIAN.** (1) Relating to Hawaii. (2) Someone of indigenous Hawaiian background. (3) A native or resident of the US state of Hawaii, regardless of ethnic background. (4) A Pacific language belonging to the Malayo-Polynesian family and cognate with Samoan and Maori. It has eight consonants, /h, k, l, m, n, p, w/ and the glottal stop, and ten vowels /a, e, i, o, u/ (each long and short). Hawaiian words end in vowels (*lei, kahuna*), consonants are separated by vowels (*Kalakaua, Lapakahi*), and many words have no consonants at all (*aia* there, *oiatio* truly) or more vowels than consonants (*heiau* temple). Among the differences between Hawaiian and some other Polynesian languages are: /k/ for /t/ (*kapu* for *tabu*), /l/ for /r/ (*kalo* for *taro*), a glottal stop where some have /k/, marked in technical writing by a reverse inverted apostrophe (‘) and in general usage by an ordinary apostrophe (’) (*mu‘umu‘u* or *mu‘umu‘u* for *mukumuku* shapeless, a loose-fitting woman’s dress). The glottal stop is phonemic and therefore contrastive: *ka‘u* mine, *kau* yours. The sound written as *l* may have been close to /r/. When missionary printers standardized the language in Roman after 1820, they voted six to two in favour of *l*; when the personal name of King Kamehameha II was set in type, he preferred *Liholiho* to *Rihoriho*. Repeating a word base usually has a special meaning: *lau* leaf, *lau-lau* a bundle of food baked in leaves; *pai* slap, *paipai* to drive fish by slapping the water. Borrowings into Hawaiian have generally been adapted to its phonology: *hokela* hotel, *kelepona* telephone, *kula* school, *nupepa* newspaper, *pipi* beef, *puke* book, and such Biblical names as *Apikaila* Abigail, *Kaniela* Daniel, *Malia* Maria, *Kamaki* Thomas. Borrowings from Hawaiian into English are common locally but few in the general language: *a‘a* and *pahoehoe* lava which cools rough and smooth respectively, *ukelele/ukulele* a jumping flea whose name was given to an adaptation of the Portuguese guitar. See BORROWING, DIALECT IN AMERICA, GLOTTAL

STOP, HAWAII, HAWAIIAN ENGLISH, MALAYO-POLYNESIAN LANGUAGES, MAORI. [AMERICAS, LANGUAGE, NAME, OCEANIA]. T.M.C.A.

**HAWAIIAN ENGLISH.** The English language as used in Hawaii. The distinctive features of Hawaiian AmE include words of indigenous origin, their combination with imported words, informal and slang expressions often incorporating elements of Hawaii English Pidgin/Creole, and unique expressions used in giving directions. Widely used words from Hawaiian include: *aloha* love, sympathy (a common form of greeting and farewell), *haole* originally any foreigner, now a Caucasian, *heiau* a traditional temple, *hula* a kind of dance (formerly usually sacred, now mainly performed for tourists), *kane* a man, *kapu* taboo, keep out, *lanai* a porch or patio, *lei* a garland of flowers, seeds, or shells (especially as a token of welcome), *mahalo* thank you, *mahimahi* a dolphin, *mahope* by and by, *pau* finished, *poi* a thick edible taro paste, *pupus* hors d’œuvres, *wahine* a girl, woman, wife, *wikiwiki* hurry up. Hybrid usages include: *the Ala Moana Center*, *an aloha party*, *Kalakaua Avenue*, *a lei-seller*, *the Kilauea Crater*, *the Kodak Hula Show*, *kukui nuts*, *the Waianae Coast*, *Waikiki Bar-B-Que House*, *the Waimea Arboretum*.

Hawaiian English mixes elements of AmE slang and informal usage with elements of Hawaiian, Hawaii English Pidgin/Creole, and other languages, as in: *ala-alas* balls (testicles), *brah* brother, *buddahead* (pejorative) someone from Japan or of Japanese background, *to cockroach* to steal or sneak away with something, *da kine* that kind (*Wheah da kine?* Where’s the whatsit?), *FOB* Fresh off the Boat, *haolefied* becoming like a haole, *JOJ* Just off the Jet, *kapakahi* mixed up (all from Douglas Simonson, *Pidgin to da Max*, Honolulu, 1981). Traditional terms of direction relate to geography, not points of the compass, as with *mauka* towards the mountains, *makai* towards the sea. On Oahu, these are combined with the names of two locations on the southern shore, *Ewa beach* and *Waikiki/Diamond Head*, as in: ‘Go *ewa* one block, turn *makai* at the traffic light, go two blocks *Diamond Head*, and you’ll find the place on the *mauka* side of the street’ (‘Which Way Oahu?’, *National Geographic*, Nov. 1979); ‘The *ewa* bound lanes of the H-1 Freeway airport viaduct were closed for hours’ (*Honolulu Advertiser*, 27 Mar. 1990). Hawaiian journalists use localisms fairly freely, often with glosses: ‘For 1,500 years, a member of the Mookini family has been the *kahuna*—priest—at an enormous *heiau*—temple—at *Upolu Point* in *Kohala* at the northern tip of the *Big Island*. For 1,500 years, no one in that unbroken *kahuna* line has spoken

publicly about the family's sacred trust. Now Momi Mookini Lum, current kahuna nui of Mookini Luakini, has broken the silence' (*Honolulu Advertiser*, 4 May 1982). See AMERICAN ENGLISH, HAWAII, HAWAII CREOLE ENGLISH, HAWAII PIDGIN ENGLISH, MAORI ENGLISH, TESD. [AMERICAS, OCEANIA, VARIETY]. T.MCA.

**HAWAIIAN PIDGIN.** See HAWAII PIDGIN ENGLISH.

**HAWAII CREOLE ENGLISH**, also **Hawai English Creole**. An English-based creole that developed for communication among a mixed population on plantations in Hawaii, a continuum from a low-status basilect to a high-status acrolect that has de-creolized. It retains features from the pidgin stage, such as the use of *bambai* (by and by; compare Tok Pisin *baimbai*) to mark future and hypothetical events: *Mai fada dem wen kam ova hia; bambai de wen mov tu Kawai* My father and the others came over here; then they moved to Kauai. The use of *wen* to mark the simple past is a more recent form taken from *went*. There is another, older form *bin* from *been* (compare Tok Pisin *bin*), as in *A bin go see mai fada* I went to see my father. Currently, many speakers use the English past tense auxiliary *had*. The use of *dem* (them) to mark plurals, as in *Stan-dem* Stan and the others, is found in other English-based creoles: for example, Jamaican Creole *Jan dem* John and the others. See CREOLE, HAWAII, HAWAIIAN ENGLISH, HAWAII PIDGIN ENGLISH. [AMERICAS, OCEANIA, VARIETY]. S.R.

**HAWAII PIDGIN ENGLISH**, also informally **Pidgin**. Although the term *Hawaiian pidgin* has been widely used to refer to the English-based pidgin and creole varieties used in Hawaii, some people of ethnic Hawaiian descent have objected to it because it suggests that Hawaiian rather than English was pidginized. The term *Hawai Pidgin English* is now generally preferred among scholars and teachers. It may have been a pidginized version of Hawaiian re-lexified with English words and used by the Chinese plantation labourers who took over the cultivation of taro from native Hawaiians. This pidgin was originally known as *olelo pa'i'ai* (pounded but undiluted taro language) and is partially related to one of the earliest forms of English in the islands, *Maritime Pidgin Hawaiian*, which was used between Hawaiians and sailors and traders of various backgrounds, but principally from the US. During the development of a plantation economy in the later 19c, Hawaiians and English-speaking plantation owners communicated in so-called *hapa-haole* (half-foreign), probably foreigner talk rather than a pidgin. The crucial

years for formation were 1890 to 1910, when most Chinese, Portuguese, and Japanese arrived. The initial pidgin was unstable and varied considerably, depending on the native language of the speaker. It became stable after the turn of the century, when pidgin-speaking immigrants married and brought up children using it as their primary language. At this stage, it was creolized and is now called *Hawaii Creole English*. See HAWAII, HAWAIIAN ENGLISH, HAWAII CREOLE ENGLISH, PIDGIN. [AMERICAS, OCEANIA, VARIETY].

S.R.

**HAZLITT, William** [1778-1830]. English essayist, critic, and journalist. Born in Maidstone, Kent, he grew up mainly in Shropshire. He attended a Unitarian training college, at first planning to become a clergyman like his father, but went to London to become a writer. There he met Coleridge and through him other writers. Hazlitt wrote and lectured on art, politics, and society, and was for a time a parliamentary reporter. His greatest influence was in dramatic and literary criticism. His publications include *Characters of Shakespeare's Plays* (1817), *Lectures on the English Poets* (1818), *A View of the English Stage* (1818), *Lectures on the English Comic Writers* (1819), and *The Spirit of the Age* (1825). He shared and promulgated the great Romantic enthusiasm for Shakespeare. Hazlitt was able to separate personal beliefs from literary judgement: for example, he disliked Scott's conservatism but admired him as a writer. He was one of the first to make a career of criticism, combining subjective personal judgements with a wide perspective of English literary history down to his own time. [BIOGRAPHY, EUROPE, LITERATURE]. R.C.

**HEAD.** See HEADING, RUNNING HEAD.

**HEADERS AND FOOTERS** [Late 20c]. Terms in word processing that identify information (codes, article titles, page numbers, persons' names) at the *head* (top) and *foot* (bottom) of a page. A *running header/footer* is text printed at the head or foot of every page. Compare RUNNING HEAD. [TECHNOLOGY, WRITING]. T.MCA.

**HEADING** [13c]. Also **head**. Words at the head (beginning) of a text, serving as a title for a page, section of a page, chapter, section of a chapter, article, section of an article, etc. A heading placed under another heading is a *subheading* or *subhead*. Compare CAPTION, HEADLINE, HEADWORD, MASTHEAD, RUBRIC, TITLE. [MEDIA, WRITING]. T.MCA.

**HEADLINE** [17c: probably from the headline on a sailing ship, a rope which held a sail tight

to a spar or ran along the upper edge of a flag to strengthen it: compare MASTHEAD]. A heading, usually in large, heavy type, at the top of an article in a newspaper, magazine, or other publication, indicating the subject of the article.

**Origin and development.** At first, the *headline* was a printer's term for the top line of any page of print. In early journalism, it was not usually set apart from the rest of the copy by any typographical convention, but in the earliest surviving news pamphlet, issued by Richard Faques on the Battle of Flodden (1513), a rudimentary headline is separated from the main copy, being set above the woodcut depicting the battle. It runs: *In whiche batayle the Scottishe Kynge was slayne*. Although there are instances of headlines in the 17-18c, there was no continuous practice of headlining and many momentous events were not given this form of emphasis. Initially, headlines stayed within the boundaries of print columns. They were set out in 'steps' down the page, each set in different type and devoted to a different aspect of the story. In 1865, the *New York Herald* covered the assassination of President Lincoln with 17 such steps. The technique was used in Britain by Edward Levy Lawson, when he revived the *Daily Telegraph* in the 1860s, and by W. T. Stead, when he became editor of the *Pall Mall Gazette* in 1881. Present-day headlines (set across columns, brief, and often sensational) were an American innovation in the late 19c, part of the yellow journalism of the 'circulation war' between Joseph Pulitzer and William Randolph Hearst. By 1900, *banner headlines* (set in capitals) and *streamer headlines* (set in lower case) had been introduced.

**Headlines.** Constraints on space affect the language of headlines, sometimes known (in its more extreme forms) as *headlines*. It has developed from more or less conventional syntax to increasingly brief, generalized, powerful, and cryptic units. Particularly in the banner headlines of the tabloid press, the vocabulary has tended to consist of short, emotive, and suggestive words, often metaphors of violence, such as *axe, clash, cut, hit, oust, slam, slate*, and 'broad-spectrum' words such as *ban, bid, boost, call, curb, link, probe, riddle, scare, swoop, vow*. Since early headlines were set in steps or decks down the page, there was little constraint on vocabulary and it was possible for complex sentences to be broken up, as in this 17c instance:

Two Great  
Battailes  
Very Lately Fought  
The one betwene Count Mansfield and Don  
Cordua the Spanish Generall,  
since his arrival in Brabant wherein Don Cordua was  
defeated,

And the Duke of Brunswicke behaved himself most valiantly, having three horses slaine under him.

(*Weekly News*, 2 Sept. 1622)

Words of 'high' register were once often on display, as in this series reporting Napoleon's defeat at the Battle of Leipzig:

Most Glorious News.  
Bonaparte in Full Retreat, Cutting His Way  
Towards The Rhine—  
A Series of Sanginary Battles.  
Despatches From Lord Wellington.  
Bonaparte's Utter Discomfiture.

(*Morning Post*, 1813)

Such victories often unleash patriotic and emotive language, as in the following reference to the Relief of Mafeking, during the Boer War:

SHALL THEIR GLORY FADE?  
HISTORY'S MOST HEROIC DEFENCE ENDS IN  
TRIUMPH  
THE BOERS' LAST GRIP LOOSENED  
MAFEKING AND BADEN-POWELL'S  
GALLANT BAND SET FREE.

(*Daily Express*, 19 May 1900)

**Layout and punctuation.** Although, by and large, banner headlines continue to be popular, styles vary and many newspapers have sedate, largely lower-case styles: the *International Herald Tribune*, with initial capitals on main parts of speech (*For a Day, Pro Football Goes Global in Tokyo and London*); the *Independent*, with an opening initial capital, apart from proper names (*Sex abuse dispute children go home*). Punctuation, once the same as for prose, has been exploited in special conventions, notably among the tabloids: the exclamation mark used to generate interest (*MR K! DON'T BE SO BLOODY RUDE!*); the question mark implying speculation or doubt (*ELECTION PACT?*); both creating a visual shout (*Dogs! Doncha hate 'em?!*). The comma is increasingly used for *and*: *PETROL, BUTTER PRICE HIKE; POUND'S FALL, PM TO ACT*. Conventional punctuation marks may be ignored: *I'm innocent says blast jet woman* (*Observer*, 6 Apr. 1986). Within a headline, quotes mark a statement or allegation from which the newspaper distances itself: *Union opposed to 'liquor police'* (*Montreal Gazette*, 14 Apr. 1983).

**Style and syntax.** Whereas the quality press tends to be relatively sober and restrained, using 'high' register and less immediately emotive words (*Uzbekistan Shocked by the Socialist Heroes Who Lived Like Lords: IHT*, 8 Oct. 1988), the tabloids prefer 'low', colloquial, often pejorative usage (*The Floozy, Fatso and the Fall Guy: Daily Mirror*, 8 Feb. 1989). Present-day usage tends to string terms together in concentrated (often opaque) sequences: *Fodor, Ex-Violin Prodigy, Starts Paying the Piper (IHT, 7 Aug. 1989); Gov't to up taxes on urban farm land (Japan Times,*

19 May 1987); *Fox on up up up* (*Observer*, 14 Aug. 1988). Such strings often entail heavy pre-modification (*Deadlock over Anglo-Irish EEC cash bid: Independent*, 9 Oct. 1986) and the completely pre-modified *STRIKE BAN SHOCK PROBE*. Abbreviations are common: *Gandhi Assails U.S. on Pakistani N-Arms* (*IHT*, 13 Sept. 1986).

**Ambiguity and other effects.** Dense headlines often demands a second reading, because of strange combinations and unintended sense relations: *Payphone revamp plan to cost BT £23 million* (*Guardian*, 11 Mar. 1987); *Blue jean robbery victim legs it after trouser thieves* (*Montreal Gazette*, 30 Nov. 1982). Some headlines are ambiguous until the text has been read: *SLAVE ENDANGERED TREASURE, SAY DAM CRITICS* (*Montreal Gazette*, 25 Aug. 1982) refers not to a bondsman but to the Slave River in Alberta, a stretch of which is regarded as a treasure. The ambiguity can at times be funny: *WOMEN'S BODY SEEKS MEMBER* (*Montreal Gazette*, 30 July 1981); *Bill banning promotion of homosexuality founders* (*Independent*, 9 May 1987). Two possible readings can also serve to embarrass a newspaper: *AMNESTY CHAMPIONS TORTURED GIRL* (*Observer*, 13 Oct. 1985). Word-play is common (*Basquing in glory: Independent*, 11 June 1988, about holidays in the Basque Country); *SAVAGE DEFENCE* (*Guardian*, 20 Feb. 1986), with the text 'Obstetrician Wendy Savage yesterday attacked male colleagues' intolerance of differing childbirth methods.' Allusions and word-play are also common (*US poaches our eggheads: Observer*, 19 July 1987), as well as mixed metaphors (*Labour's last-ditch stand will go off with a bang: Independent*, 29 Nov. 1986). Occasionally, newspapers parody themselves with such attention-grabbers as *Sex-change bishop in mercy dash to Palace* (headline of article on headlines, *Observer*, 24 Mar. 1985). Relevant publications include: Harold Evans, *Newspaper Headlines* (Rinehart & Winston, 1973) and Heinrich Straumann, *Newspaper Headlines* (Allen & Unwin, 1935). See ACRONYM, ALLUSION, AMBIGUITY, HEADING, JOURNALESE, TIMESPEAK. [MEDIA, STYLE]. G.H., T.M.CA.

**HEADLINESE.** See HEADLINE.

**HEADWORD** [1810s]. A main or key word set at the beginning of a line, list, or paragraph, sometimes used in contrast to *subword*, a word listed under it or included after it. The term is commonly used for the title of an article in a dictionary, also called a *main entry* (contrasting with a *sub-entry*). Headwords in works of reference function as both markers for finding articles and the topics of the articles themselves. In

a dictionary, a headword with more than one spelling (*aeon*, *eon*) or form (*give*, *gives*, *giving*, *gave*, *given*) gets its primary article at the main spelling (*aeon*) or base form (*give*); other spellings or forms (*eon*, *gave*) may head secondary articles with cross-references to the primary article. A single spelling may represent more than one homonymous headword, so that articles may be distinguished by superscript numbers: <sup>1</sup>*bear* n., <sup>2</sup>*bear* v., or *bear*<sup>1</sup> n., *bear*<sup>2</sup> v. Conversely, a single polysemous headword may have more than one sense: <sup>2</sup>*bear* v. 1: carry, 2: give birth to. Furthermore, a headword may introduce an article giving information about other words and phrases containing it; thus, the article about *give* may include *giver* as a sub-entry. Because dictionaries vary in what they consider headwords, a phrasal verb such as *give up* is a headword in some dictionaries but a sub-entry at *give* in others, while a compound such as *blackbird* may be a headword, a sub-entry at *black*, or a sub-entry at *bird*, or both. See CANONICAL FORM, ENTRY, HEADING, KEY WORD, LEMMA. [REFERENCE, WORD]. R.F.I., T.M.CA.

**HEAVY.** (1) A general term implying weight or excess (*heavy emphasis*, *heavy irony*) and dullness (*a heavy style*). (2) A semi-technical term for a stressed syllable in English and a syllable with a long vowel in Latin: *one heavy and two light syllables*. (3) An informal pejorative term for accents and voice qualities: 'Whether this was due to a foul-up in translation, a bad phone connection or the heavy accent of the translator is not known' (*Washington Post* editorial, Nov. 1985). Such heaviness may relate to low pitch, unfamiliar sounds, and voice quality, especially if foreign. Compare HARD AND SOFT, HARSH. (4) In the plural, an informal term in BrE for serious broadsheet newspapers: *the Sunday heavies*. See (A)ESTHETICS. [LITERATURE, MEDIA, SPEECH, STYLE] T.M.CA.

**HEBRAISM** [16c: from Greek *Hebraïsmós*]. An expression or construction typical of the Hebrew language, found in another language: in English *behemoth*, *cherub*, *leviathan*, *shibboleth* are Hebraisms. See HEBREW, -ISM, JEWISH ENGLISH. [ASIA, STYLE, VARIETY, WORD]. T.M.CA., S.S.

**HEBREW** [Before 10c: Old English *Ebrēas*, Middle English *Ebreu*, *Hebreu*, from Latin *Hebraeus*, Greek *Hebraïos*, Aramaic 'Ibhraj]. The Semitic language of the ancient Israelites and modern Israel, closely related to Aramaic and Phoenician, more distantly to Arabic. Hebrew is one of the oldest living languages, best known as the language of the Hebrew or Jewish Bible. In Biblical times, it was called *yehudit* (Jewish) and in post-Biblical rabbinic literature *lashon*

*kodesh* (Holy Tongue). Scholars divide it historically into four phases: *Biblical Hebrew* (c.12c BC-c. AD 70), *Mishnaic Hebrew* (c. AD 70-500), *Medieval Hebrew* (6-13c), and *Modern Hebrew* (from the late 19c). The fourth phase is known to its speakers as *ivrit*, a revived form developed chiefly in Palestine by European Jewish settlers, especially after 1880. It became the predominant language of the state of Israel after 1948 and with Arabic is one of its official languages. It is often referred to as *Israeli Hebrew*. The alphabet consists of 22 letters, all consonants. Hebrew is written from right to left with or without vowel signs above and below the consonants. Currently, it has about 4m speakers, most of whom live in Israel.

**Hebrew in English.** (1) Because of the influence of Bible translations, there have been words and names of Hebrew origin in English since Anglo-Saxon times. They include *amen*, *babel*, *behemoth*, *camel*, *cherub*, *gehenna*, *leviathan*, *manna*, *rabbi*, *Sabbath*, *shekel*, *shibboleth*. (2) A number of religious and cultural terms were introduced during the Renaissance through the works of scholars, such as *Cabbala* 1521, *Talmud* 1532, *Sanhedrin* 1588, *Mishnah* 1610, *mezuzah* 1650. (3) Since the 19c, Yiddish has been an indirect source of Hebraisms, by and large colloquialisms such as *kosher* ritually fit, all right, satisfactory, legitimate, *mazuma* money, cash, *shamus* a policeman, detective, *chutzpah* impudence, gall, *goy* a gentile, *megillah* a long story. (4) During the 20c, terms from Modern Hebrew, used mainly by English-speaking Jews, include *kibbutz* a collective Israeli farming community, *hora* a Romanian and Israeli round dance, *moshav* a cooperative Israeli farming community, *sabra* a native-born Israeli, *aliya* Jewish immigration to Israel, *Knesset* the Israeli parliament.

**English in Hebrew.** The lexical and semantic influence of English on Israeli Hebrew has been considerable. During British rule in Palestine (1917-48), English was an official language. Following the establishment of Israel in 1948, the influence of English on Hebrew continued through American Jewish immigration, various English-language periodicals (notably the *Jerusalem Post*), and English-language motion pictures and television programmes (though most are subtitled in Hebrew). Generally, BrE is the dominant influence, as with *karavan* (a light mobile home) not AmE *trailer*, and *tships* (chips) not *french fries*, but AmE is becoming increasingly popular and includes such colloquialisms as *okey* OK, *hay* Hi, and *bay-bay* bye-bye. See ARAMAIC, BIBLE, HAMITO-SEMITIC LANGUAGES, ISRAEL, JEWISH ENGLISH, JEWISH LANGUAGES, S(C)HWA. [ASIA, LANGUAGE]. s.s.

**HEBRIDEAN ENGLISH.** See HIGHLAND ENGLISH.

**HEINEMANN.** A British publishing company founded by William Heinemann in London in 1890. He commissioned translations of foreign literature (including Zola, Maupassant, and Ibsen) and Constance Garnett's translations of Tolstoy, Turgenev, and Dostoevsky, on which Virginia Woolf observed: '[Her] translations were a crucial influence on the novel, for after reading *Crime and Punishment* and *The Idiot*, how could any young novelist believe in characters as the Victorians painted them?' (*Nation*, 1 Dec. 1923). Heinemann established an *International Library* series with translations from Norwegian, Russian, French, German, Spanish, and Italian authors, and a 15-volume study of foreign-language literature that included Arabic, Bohemian, Chinese, Hungarian, Japanese, and Sanskrit. The company introduced a British readership to the works of the American writers Henry James, Upton Sinclair, Jack London, and Stephen Crane, while maintaining a list of such British authors as Stevenson, Conrad, Wells, Galsworthy, Somerset Maugham, Kipling, and Lawrence. In 1912, Heinemann collaborated with the US publisher James Loeb in producing the *Loeb Classical Library* of Greek and Latin texts with parallel translations.

Despite difficulties for some years after Heinemann's death in 1920, the firm added to its list such authors as J. B. Priestley, Graham Greene, Noël Coward, John Steinbeck, the Australian novelist Henry Handel Richardson, and the Indian poet Sarojini Naidu. After the Second World War, the *New Windmill* series of reprints of older and modern classics was published, many adapted for children; by 1986, more than 300 titles had been published, with sales of over 20m copies to schools in Britain and abroad. The series introduced children to such writers as Doris Lessing, George Orwell, Henry James, H. G. Wells, and Ernest Hemingway. The *African Writers* and *Caribbean Writers* series published works in English by authors in developing nations, including such writers as Chinua Achebe and Ngugi wa Thiong'o, helping to maintain a tradition of written English where political changes might have threatened its survival. Heinemann has also published Anthony Powell (including the 12 volumes of the *Music of Time* sequence, 1951-75), Paul Scott (*The Raj Quartet*, 1966-75), Anthony Burgess, whose *A Clockwork Orange* (1962) introduced the futuristic Anglo-Russian vernacular called *Nadsat*, and Douglas Adams, whose *Hitch Hiker's Guide to the Galaxy: A Trilogy in Four Parts* (1979) has also had versions on radio and television. After several changes in ownership, Heinemann was

taken over in 1985 by the Octopus Group, which merged with Reed International in 1987. See AFRICAN LITERATURE IN ENGLISH, BRITISH PUBLISHING. [EUROPE, MEDIA]. T.MCA.

**HELPING VERB** [19c]. An informal term for auxiliary verb, the class of verbs (such as *be*, *have*, *do*, *may*, *will*) that may combine with a following main verb to form a verb phrase, such as *is watching*, *has eaten*, *may have been playing*. See VERB. [GRAMMAR]. S.G.

**HEMPL, George** [1859–1921]. American philologist, born in Whitewater, Wisconsin, and educated at the U. of Michigan. After serving as a high-school principal in Michigan and Indiana and a lecturer in German at Johns Hopkins U., he spent several years at Berlin, Göttingen, Strasbourg, and Tübingen before receiving his Ph.D. at Jena (1889). Influenced by Eduard Sievers and Ernst Haeckel, he developed a scientific approach to language study. On his return to the US, he taught at Michigan (1889–1906), where in 1897 he became Professor of English Philology and General Linguistics. From 1907 until his death he was Professor of Germanic Philology at Stanford. Hempel's main interests were the etymology, meaning, usage, and pronunciation of early and modern English words. Many of his 150 scholarly works deal with the development of English sounds and phonological change, including *Old English Phonology* (1892) and *Chaucer's Pronunciation* (1893). As phonological editor for the Lippincott foreign-language dictionaries and the Hinds, Noble, and Eldredge Uniform International Dictionaries, he influenced the pronunciation of English learned by scholars throughout Europe by choosing his own rhotic pronunciation, an implicit statement that this was standard AmE rather than the non-rhotic pronunciation of Boston, New York, or Charleston. An advocate of spelling reform and a member of the *Simplified Spelling Board*, he used phonetic spelling in his correspondence and eliminated an unsounded final *e* from his own surname. Among the first researchers into AmE dialects, he collected a vast amount of material on vocabulary, usage, and pronunciation. He was president of the Modern Language Association (1903), the American Philological Association (1904), and the American Dialect Society (1901–5). [AMERICAS, BIOGRAPHY, LANGUAGE, SPEECH, WRITING]. R.W.B.

**HENDIADYS** [16c: from Latin *hendiadys*, Greek *hèn dià duoîn* one through two. Stress: 'hen-DIE-a-diss']. A term in rhetoric for equal words joined by *and*, instead of one word with a modifier (*nice and warm* rather than *nicely warm*), and similar words joined by *and* where

one might have been enough, usually for emphasis, sometimes for phonaesthetic effect (*gloom and doom*). [STYLE]. T.MCA.

**HEPTARCHY** [16c: from Latin *heptarchia*, from Greek *heptà* seven, *arkhein* to rule]. The seven kingdoms into which Anglo-Saxon England was apparently divided, 7–9c: the Angle kingdoms of Northumbria, Mercia, and East Anglia, the Saxon kingdoms of Essex, Sussex, and Wessex, and the Jute kingdom of Kent. See MERCIA, NORTHUMBRIA, WESSEX. [EUROPE, HISTORY]. T.MCA.

**HERITAGE LANGUAGE** [Late 20c]. In Canada, a language other than English and French officially recognized as culturally important to a national minority, whether it is indigenous (such as *Ojibwa* or *Inuktitut*) or immigrant (such as *Italian* or *Ukrainian*): 'The Modern Language Centre of the Ontario Institute for Studies in Education (OISE) is a major Research and Development Centre concerned with the theory and practice of second and heritage language learning and teaching' (advertisement, *TESL Canada Journal*, Nov. 1990). Compare COMMUNITY LANGUAGE. [AMERICAS, LANGUAGE]. T.MCA.

**HETEROGRAPH**. See HETERONYM, SPELLING.

**HETERONYM** [1880s: from Greek *heterónomos* other-named]. Also **heterograph**. A word that is spelt the same as another, but has a different meaning and often pronunciation. There are seven heteronyms in the following passage: 'Heteronyms must incense foreign learners! I can't imagine a number feeling than if they spent hours learning a common English word, a minute little word, then found a second meaning and pronunciation! Surely agape could not be a foreigner's emotion as he or she becomes frustrated with our supply textured English words, which, we must admit, can be garbage and refuse to be defined' (opening to 'Heteronyms', David Bergeron, *English Today* 24, Oct. 1990). A heteronym that is spelt the same as another word and has a different pronunciation is a *heterophone* (such as *bow* meaning 'knot' and *bow* meaning 'front of ship', and *number* meaning 'numeral', as opposed to *number* meaning 'more numb'). See HOMONYM, -ONYM, SPELLING. [WORD, WRITING]. T.MCA.

**HETEROPHONE**. See HETERONYM. Compare HOMOPHONE.

**HIBERNIA** [Probably a Latinization of *Iverna*, from Old Celtic \**Iveriu*, influenced by *hibernus* winter: compare EIRE]. A formal name for

Ireland. The adjective *Hibernian* is commoner: *the Ancient Order of Hibernians*, a Catholic men's association dedicated to preserving Irish traditions. [EUROPE, NAME]. T.MCA.

**HIBERNIANISM, HIBERNICISM.** See IRISHISM.

**HIBERNO-** [1820s: from Latin *Hibernia* Ireland]. A combining form meaning *Irish*, as in *Hiberno-Celtic*, referring to the Celts of Ireland, and *Hiberno-English*, a form of IrE. See HIBERNIA. [EUROPE, NAME]. T.MCA.

**HIBERNO-ENGLISH.** A variety of English in Ireland, used mainly by less educated speakers whose ancestral tongue was Irish Gaelic. It is strongest in and around the Gaeltachts (Irish-speaking regions) and in rural areas. It preserves certain Gaelic features in pronunciation, syntax, and vocabulary while at the same time many of its speakers approximate to the Anglo-Irish or Ulster Scots norms of the area in which they live.

**Pronunciation.** (1) Such words as *cat* and *garden* sound like 'kyat' and 'gyarden': initial /k/ and /g/ with a following semi-vowel /j/. (2) Such names as *Hugh* and *Hughes* sound as if they began with a 'ky'. (3) Such words as *true*, *drew* sound like 'threw' and 'dhrew': dental rather than alveolar realizations of /t, d/. (4) In such words as *pine*, *time*, *come*, the opening consonant is aspirated, the /t/ in *time* sounding like a cross between *t* and the *th* in *three*: aspiration of syllable-initial /p, t, k/. (5) Some Gaelic rhythms include the use of an unstressed initial word in questions: *An' do you like it?*; *An' was it nice?* The unstressed word is usually *and*, but *well* and *sure* also occur. In Gaelic, questions normally begin with an unstressed element, which in the present tense is *an*: *An maith leat é?* Do you like it?

**Grammar.** Gaelic influence may be found in: (1) A preference for nominal structures: *Give her the full of it* Fill it; *He has a long finger on him* He steals. (2) Constructions with preposition and pronoun together: *His back's at him* He has a backache; *She stole my book on me* She stole my book; *I let a squeal out of me* I squealed. (3) Using *it* to foreground words and phrases: *It's a lovely girl she is now*; *It wasn't to make trouble I went*. (4) Foregrounding emphatic pronouns: *It's meself was the brave runner*, *It was himself I wanted*. (5) Differentiating singular and plural *you*: *You're dead bate, child*; *Yiz is dead bate, childer* You are dead beat (child/children). (6) Using forms of *be* to distinguish aspect: *She's a great wee help about the place*; *She biz a brave help when she comes*; *She doesn't be working all the time*. (7) Using *after* and *-ing* to indicate a

recently performed action: *I'm after doing it this very minute*. (8) Using *a-* and *-ing* as a passive: *Where were you? You were a-looking* (being looked for) *this last hour and more*. (9) Using *and*, noun phrase, and *-ing* to show that two actions happen at the same time: *I went in and me trembling*; *In he walks and him whistling*. (10) Using traditional idioms: *She's as light on her foot as a cat at milking*; *There's a truth in the last drop in the bottle*. (11) Referring to God and religion: *In the name of God, did I rare an eejit?* (did I rear an idiot?). (12) Tending not to use *yes* and *no* in answering questions. Irish has no words for *yes/no* and many Irish people therefore tend to answer, for example, *Will you go?*—*I will*; *Is it yours?*—*It is not*. (13) Favouring emphatic forms such as *at all at all*, often rhythmic equivalents of Gaelic forms, such as *I'm not tired at all at all* (from *Nil mé tuirseach ar chor ar bith*). The emphatic *at all at all* also occurs in Highland English and the Canadian Atlantic provinces.

**Vocabulary.** Nouns retained from Irish often relate to food (*boxty* a potato dish, from *bac-staidh* mashed potato) and the supernatural (*banshee* a fairy woman, from *bean sidhe* a woman fairy). Others are: *kitter* a left-handed or clumsy person (from *citeóg*), *mass* respect (from *meas*), as in *I've no mass in them things now*, *smig chin* (from *smeig*), as in *It was a blow to the smig that felled him*. Gaelic influence on meanings can be seen in words such as *destroy* and *drenched*. These have the semantic ranges of their Gaelic equivalents *mill* to injure, spoil (*He has the child destroyed with presents*) and *báite* drenched, drowned, very wet (*You're drowned child. Get all off you. There's not a dry inch to your clothes*). See HIGHLAND ENGLISH, IRISH ENGLISH, NEW-FOUNDLAND ENGLISH. [EUROPE, VARIETY]. L.T.

**HIGH AND LOW LANGUAGES.** See CLASSICAL LANGUAGE, DIGLOSSIA, LECT.

**HIGHLAND ENGLISH.** The English language as used in areas of the Scottish Highlands where Gaelic was spoken until the late 19c or later, and the Hebrides or Western Isles, where many still have Gaelic as their mother tongue. The varieties of these two areas have also been distinguished as *Highland English* and *Hebridean English* (sometimes *Island English*). Since the late 17c, the majority of the inhabitants of the Highlands and Islands have learned standard English by the book, mostly from Gaelic-speaking Highland or Hebridean teachers, only some of whom had studied in Inverness or the Lowlands. The consequent influence of Gaelic is widespread, but most strongly marked among the bilingual speakers of the Isles. It varies in detail with the underlying Gaelic dialect and is also variously

influenced from Lowland Scots. Some features, of grammar especially, from the Gaelic substrate are shared with Hiberno-English.

**Pronunciation.** (1) Corresponding to the opposition between voiced and voiceless stops in English, Gaelic opposes voiceless unaspirated to voiceless aspirated stops, and lacks voiced consonants opposed to /s/ and /ʃ/. This has led to 'reversal of voicing', as in 'chust' for *just*, 'pleashure' for *pleasure*, 'whateffer' for *whatever*, 'pring' for *bring*, and more rarely the converse, as in 'baratice' for *paradise*. These usages are shibboleths of Gaelic-influenced speech. (2) 'Pre-aspiration' of voiceless stops is widespread: the insertion of an /h/ before certain consonants, as in 'wee<sup>h</sup>k' for *week*, 'ha<sup>h</sup>pen' for *happen*, 'about<sup>h</sup>t' for *about*. (3) The same consonants are aspirated word-initially: 'p<sup>h</sup>ig' for *pig*, 't<sup>h</sup>ake' for *take*, 'k<sup>h</sup>eeep' for *keep*. (4) In the Hebrides, /l/ is commonly clear. (5) Many speakers pronounce vowels long that are short in ScoE generally: for example, in *bad*, *father*, *parlour*, *psalm*, *brainy*, *make*, *table*, *equal*, *heat*, *leak*, *weak*, *boat*. (6) As in the Lowlands and Ireland, some speakers realize such words as *film* and *worm* with epenthetic vowels: 'fillum' and 'wurrum'.

**Grammar.** The following features are characteristic: (1) Cleft sentences and other constructions with thematic fronting: *Isn't it her that's the smart one?* *Isn't she smart?*; *It's led astray you are by the keeping of bad company*; *From Liverpool he was writing*. (2) Simple verb tenses instead of perfect forms: *I'm a widow for ten years now*; *All my life I never went to the mainland*. (3) Progressive constructions: *Don't be learning bad English to the bairn*; *We were having plenty vegetables that year*; *If you can be waiting till the morning, our sale will be starting then*. (4) Distinctive modal usages in conditional and temporal clauses, including 'double would': *Try and get here before the rain will come*; *It's a poor crop we'll be having if there won't be more rain in it*; *If she would know about it, she would be over straight away*. (5) The formula *to be after doing* (something), replacing the regular perfect or past: *I'm after taking the bus* I have just taken the bus; *That's me just after cleaning it up* I've just this minute cleaned it up. (6) *Doesn't* in all persons and numbers: *I doesn't know*; *They doesn't bother*. (7) Non-reflexive use of *-self*: *It's glad I am to be seeing yourself*; *I'll tell himself you are here*; *Herself will not be too pleased at that*. (8) Sentence-initial *sure*: *Sure, it'll spoil the taste of it*. (9) Double plurals, especially where the plural is irregular: *Many peoples are coming every year*; *Three womens did the work*. (10) Singular forms for normally plural words: *She had a trouser on*; *He cut it with the scissor*. (11) Anticipatory pronoun constructions, especially in questions:

*Who is he, the man? Did you see him, the minister?* (12) Elliptical sentence responses replacing or supplementing *yes* and *no*: *Did Iain give you the letter?*—*He did*; *Is Morag coming?*—*She is not*; *Did you get the job finished?*—*Ay, we did/so we did*.

**Vocabulary and idiom.** In general, vocabulary is the same as in ScoE at large, and most people use such vernacular Scots words as *bairn* child, *brae* slope, *greet* weep, *oot* out, the negatives *no* (*He's no in*) and *-na* (*I canna say*), and *ay* yes. Many Gaelic words are freely used by Gaelic-speakers and some by non-Gaelic-speakers: *ath-air* father, *baile* village, *balach* lad, *bodach* old man, *bothan* shebeen, *caileag* young girl, *cailleach* old woman, wife, *duine bochd* poor fellow, *ropach* messy, *srùbag* a drink. Gaelic terms of address, vocatives, and salutations are common among Gaelic-speakers: *m'èudail*, *mo ghraid*, my dear, *A Chaluim Calum!*, *A Mhammi Mummy!*, *beannachd leat/leibh* goodbye, *oidhche mhath* good night, *tapadh leat* thank you; *slàinte*, *slàinte mhath*, *slàinte mhòr* health, good health, big health (all three known and used throughout Scotland as toasts). English and Gaelic may be casually mixed: *Geordie m'èudail, come oot till ye see the ronngs* (stars); *I have the cadal-eunain* (pins and needles) *in my fingers*. The preposition on features in a number of idioms: *The minister has a terrible cold on him*; *That beast has a wild look on it*; *They're putting on him that he stole the sheep*; *It's on himself the stairn* (confidence) *is*.

**Literary usage.** In Lowland Scottish literature, a suspect tradition that dates from the mid-15c features such Highland shibboleths as the use of *she* and *her nain sell* (her own self) instead of the pronoun *I*: 'Her nainsell has eaten the town bread at the Cross o' Glasgow, and py her troth she'll fight for Bailie Sharvie at the Clachan of Aberfoil' (Walter Scott, *Rob Roy*, 1817, ch. 28). [Translation: I have eaten the town bread at Glasgow Cross and by my troth I'll fight for Bailie Jarvie at the Clachan of Aberfoyle.] Other representations display genuine Highland features, sometimes profusely, as in: 'I don't know what you'll get that you'll be foreffer in Iain Beag's shop. . . . The folk that will be gathering there on nights iss not the company I would be choosing for a son of mine' (Fionn MacColla, *The Albannach*, 1932; Reprographia, 1971). Compare HIBERNO-ENGLISH, ISLE OF MAN, WELSH ENGLISH. See GAELIC, SCOTTISH ENGLISH, SCOTTISH GAELIC. [EUROPE, VARIETY].

A.J.A.

**HILLBILLY**, also **hill-billy**, formerly **hilly-billy** [1890s]. A generally condescending and offensive, but occasionally humorous term for a white

person from a mountainous and rural ('backwoods') area in the south-eastern US. It is sometimes used in relation to varieties of English spoken by the mountain people of the Southeast. The term *hillbilly music* is sometimes used for the style more commonly known as *country and western (music)*. See APPALACHIAN ENGLISH, DIALECT IN AMERICA, SOUTHERN ENGLISH. [AMERICAS, NAME]. T.M.C.A.

**HILL SOUTHERN.** See SOUTHERN ENGLISH.

**HINDI.** An Indo-Aryan language, spoken by over 250m people in India and by Indians in Britain, Canada, Fiji, Guyana, South Africa, Surinam, Trinidad, the US, and elsewhere. Hindi is the official language of India, with English as associate official language, the state language of Bihar, Haryana, Himachal Pradesh, Madhya Pradesh, Rajasthan, and Uttar Pradesh, and one of India's 15 major languages. It is written in a modified form of the Devanagari script, and its literary tradition dates from medieval times. Hindi proper has three stylistic varieties: a Sanskritized variety used in higher law courts, administration, legislation, journalism, literature, philosophy, and religion; a Persianized variety used in lower law courts, in certain genres of literature, and in films; an Anglicized variety in day-to-day administration, on college campuses, and in scientific and technical registers. See BORROWING, BRITISH LANGUAGES, COCKNEY, CODE-MIXING AND CODE SWITCHING, FIJI, GUYANA, HINDI-URDU, HINDLISH/HINGLISH, INDIA, INDIAN ENGLISH<sup>1</sup>, INDIAN LANGUAGES, MOTION PICTURE, SOUTH AFRICA, SOUTH AFRICAN INDIAN ENGLISH, SOUTH AFRICAN LANGUAGES, SURINAM(E), TRINIDAD AND TOBAGO. [ASIA, LANGUAGE]. Y.K.

**HINDI-URDU.** A composite name that emphasizes the common linguistic features of Hindi and Urdu, languages that have the same general pronunciation, grammar, and vocabulary, but differ in their script, Hindi being written in Devanagari, Urdu in Perso-Arabic. They differ largely because of politics and religion in the Indian subcontinent: Hindi generally favoured by Hindus, Urdu by Muslims. Hindi is the official language of India, Urdu the national language of Pakistan. Both have been extensively influenced by other languages, but whereas Hindi looks especially to Sanskrit for its technical vocabulary and literary conventions, Urdu looks especially to Persian and Arabic. Both have borrowed extensively from English. See HINDI, HINDUSTANI, INDIA, INDIAN LANGUAGES, URDU. [ASIA, LANGUAGE]. Y.K.

**HINDLISH**, also **Hinglish** [Later 20c: blends of *Hindi* and *English*]. Informal terms for a mixture

of Hindi and English that includes such hybrid expressions as *city kotwali* (city police station) and *relgari* (railway train), and complete sentences such as *Māi āp ko batātī hūm, he is a very trusting person* I tell you, he is a very trusting person. See CODE-MIXING AND CODE-SWITCHING, -GLISH AND -LISH, HINDI, INDIAN ENGLISH<sup>1</sup>. [ASIA, VARIETY]. B.B.K.

**HINDUSTANI.** A demotic form of Hindi-Urdu that exhibits strong English influence. Although M. K. Gandhi advocated its adoption as the national language of India, and the Indian National Congress adopted it as the symbol of national unity in 1925, it never became a language of literature, academia, or journalism. After independence in 1947, it lost its status to Hindi in India and Urdu in Pakistan. See AMERICAN ENGLISH AND BRITISH ENGLISH, HINDI-URDU. [ASIA, LANGUAGE]. Y.K.

**HIRI MOTU.** An indigenous pidgin and lingua franca of Papua New Guinea, and a co-official language with Tok Pisin and English. It is based on the Austronesian language Motu, originally spoken around the Port Moresby area (now the National Capital District). A greatly reduced variety of Motu was employed on trading expeditions (*hiri*) along the Papuan Gulf. The language is used by some 10% of the people, mainly in Papua. It was once called *Police Motu*, because of its association with the colonial police force; it seems likely, however, that the lingua franca of this multilingual force was pidgin English and that a restructured and simplified Motu was used for dealing with the local people. See PAPUA NEW GUINEA/NIUGINI, TOK PISIN. [LANGUAGE, OCEANIA]. S.R.

**HISPANIC** [16c: from Latin *Hispanicus* Spanish. The first sense has an initial capital; the second may or may not]. (1) Associated with the languages and traditions of Spain and the Spanish-speaking countries of the world: *Hispanic civilization*. (2) A person of Spanish-language background in the US, long established in such states of the Southwest as New Mexico and Arizona, or of Cuban, Mexican, Puerto Rican, or other Caribbean or Latin American origin (*local Hispanics*); of anything associated with such a person (*hispanic cuisine*). See CHICANO, LATINO, SPANGLISH, TEX-MEX. [AMERICAS, NAME]. J.A.M., T.M.C.A.

**HISTORICAL LINGUISTICS**, also **diachronic linguistics**. The branch of linguistics that deals with changes in language through time. Like philology, from whose later forms it is virtually indistinguishable, it studies language records,

but may also include methods of synchronic linguistics in its approach to sounds, forms, meanings, or the social motivation of language change. See DIACHRONIC AND SYNCHRONIC, PHILOLOGY. [HISTORY, LANGUAGE]. W.F.B.

**HISTORICAL SEMANTICS** [20c]. In linguistics, the study of changes in meaning with the passage of time. See SEMANTIC CHANGE. [HISTORY, LANGUAGE]. T.MCA.

**HISTORY OF ENGLISH.** The history of a language can be an *internal history* (of linguistic categories such as sounds, structure, and vocabulary) and an *external history* (of geographical and social spread, attitudes toward the language, study of its features, and attempts at its regulation). Such a dual approach is useful so long as it does not ignore changes that overlap these categories, as when English borrowed heavily from French, in which attitudes (an external factor) influenced vocabulary (an internal feature). Internal linguistic change is often in the direction of greater diversity. Thus, a sound change may result not in one new sound pattern but in several: the *r* in *far*, which all speakers of English once pronounced, is now missing in some but not all varieties. Among those who pronounce this *r*, it may be trilled, tapped, retroflex, or some other variety; among those who do not, it may or may not reappear before a vowel, as in the phrase *far away*. Though linguistic change tends toward greater diversity, the change is generally regular. As a result, it is possible to state which geographical and social groups delete the historical *r* and in what linguistic contexts, beginning with the fact that none deletes it when it comes first, as in *raft*. See RHOTIC AND NON-RHOTIC.

**Prehistory.** Almost all knowledge of English before c.600 is hypothetical, a reconstruction based on later documents in English and on earlier documents in related languages. Scholars agree, however, that the ultimate origins of English, save for a few borrowed words, lie in Indo-European (IE), a postulated ancient language of uncertain location. It may have been spoken in north-eastern Europe or near the Black Sea between c.3000 and c.2000 BC and can now only be reconstructed from its descendants. The incremental changes that produced the obviously related English *daughter*, German *Tochter*, Armenian *dusht*, Greek *thugatēr*, and Sanskrit *duhitār* (etc.) from a common original are still at work; thus, the English spelling *daughter* masks a variety of pronunciations including *DAWuh* and *DAHdur*, in which only the initial sound remains the same. Some IE words have undergone changes so profound that the common origin is almost impossible to discern: English

*father*, Armenian *hayr*, Greek *patēr*, and Old Irish *athir* do not look or sound as though they derive from the same original form. Similar divergence characterizes the structures and vocabulary of the languages descended from IE. See GERMANIC LANGUAGES, INDO-EUROPEAN LANGUAGES.

IE ceased to exist sometime soon after 2000 BC, having diversified into a number of increasingly distinct offspring as a result of migration and natural linguistic changes. One of these offspring is known to scholars as *Primitive Germanic*, which like the original IE has left no written records. It differed from the other languages descended from IE in certain sounds, features of structure (such as a simplified verb system including some verbs with a past tense like English *-d*), and a vocabulary that included some words not inherited from IE. The modern English sentence *Weapons grated against the ship* has only one word that is common to other languages derived from IE, *the* (related to Greek *tō*). However, it is distinctively Germanic in the remaining words (for which there appear to be no IE sources), in the *th* of *the*, and in the *-d* suffix of the verb. The Germanic-speaking peoples appear to have moved from the IE homeland to what is now Scandinavia and northern Germany, from which they later spread in several migrations, leaving a northern branch behind, creating a small eastern branch that included Gothic, and a much larger western branch, which was the source of German, Dutch, and English, among others.

**Old English.** Several migrating tribes from northern Germany reached Britain in the early 5c speaking the mutually intelligible dialects which in their new home are now called *Old English* (OE) or *Anglo-Saxon*. The first written form of the language was runic letters, replaced during the conversion to Christianity of the Anglo-Saxons after 597 by the Latin alphabet, which was adapted to serve OE, making use of some runic letters and some letter shapes used by Irish scribes. Although OE was used as a literary medium and was the language of the *Anglo-Saxon Chronicle*, it did not seriously rival Latin as an administrative or intellectual medium, and within a century of the Norman Conquest of 1066 it was dead. Like other early IE languages, it distinguished three grammatical persons, not only in the plural (as in modern English *we*, *you*, *they*) but in the singular (as in Early Modern English *I*, *thou*, *she/he/it*). It also distinguished three genders and five cases, categories that extended to the article, adjective, and noun. OE showed the effects of Grimm's Law in its consonants, such as *p* > *f*, IE *\*peku*-property (as in Latin *pecus*) becoming OE *feoh*,

and *t > th*, IE \**trei* three (as in Latin *tri-*) becoming OE *þri*. A few items of OE vocabulary reflect its contact before the incursions into Britain with non-Germanic languages such as Latin (OE *mīl* mile, from Latin *millia* thousand), and later with Celtic and Norse, especially in place-names. Christianity brought further Latin influence both as a source (OE *nōn*, Latin *nona* the ninth [hour]) and as a model (OE *þrīnes*, Latin *trinitas* trinity). However, OE vocabulary expanded chiefly through compounding (OE *dægēs-ēage* day's eye, daisy) and derivation (OE *hālgian* hallow, *hælan* heal, from *hālig* holy, from *hāl* hale, whole (whence also *hælp* health)). There were also changes of meaning, as when OE *þrēat*, meaning 'throng', came to mean 'pressure', then *threat*. See ALFRED, NORSE, OLD ENGLISH<sup>1</sup>.

**Middle English.** Many linguistic changes occurred in late OE, and in Middle English (ME) almost every feature of OE changed radically, so that though late ME such as Chaucer's usage remains intelligible now 600 years later, little or nothing of OE could have been intelligible to Chaucer only 300 years after the Norman Conquest. In structure, the elaborate system of cases, genders, and numbers vanished from the adjective and article, dwindled in the noun, and remained only in the personal pronouns. The form of verbs was less changed, though increasing numbers of 'strong' verbs like Modern English *drive* (past tense *drove*) joined the larger group of 'weak' verbs, like *climb* (past tense *climbed*); Chaucer has the strong past *clomb*. The modals *shall* and *will* (and their past tenses *should* and *would*) developed a use, almost unknown in OE, as expressions of the future.

ME dialects are more numerous than OE dialects, and unregulated spelling often reflects the variations: in the late 14c, *church* appears in the North of England and in Scotland as *kirk(e)* or *kyrk(e)*, in the South-East as *cherch(e)* and *chirch(e)*, in the South-West as *church(e)*, and in the Midlands as a mixture of these forms plus *chyrch(e)*. There were more works of literature, especially in the East Midland dialect, first largely through translation from Latin and French. A variety of ME flourished as almost a separate language (at least in political terms) in Scotland. Also known as Middle Scots, it was dominant over Gaelic at the court of the kings of Scots and had a literature that included both epic and lyric poetry. In addition, varieties of ME and Norman French were being spoken in Wales and Ireland: see INGLIS, OLD ENGLISH<sup>2</sup>, SCOTS, YOLA.

The most striking internal development is vocabulary. Some personal pronouns changed, the feminine from OE *hē* to *she*, the plural from OE *hīe* to *they*, with eventually *them* and *their*.

More far-reaching, however, were the borrowings, mostly from French, that transformed English from an almost wholly Germanic language to a language of mixed Germanic-Romance composition. Chaucer makes more or less use of the new vocabulary as his verse and his subject require, so that in 'Bitwixen hem was maad anon the bond / That highte matrimoigne or mariage' (*Knight's Tale*, c.1390), the first line contains only words directly inherited from OE, while the second includes two synonymous borrowings from French. See BISOCIATION, CHAUCER, MIDDLE ENGLISH.

**Early Modern English.** From the Renaissance onwards, as the structure of the standard language stabilizes, comments about it become more frequent and external factors and influences become more marked and more important. In 1490, Caxton observed the changes in English since he was born, and its variation in the several parts of England. He felt unsure about the correct literary mixture of old native words and their new borrowed and scholarly counterparts, and his spelling was inconsistent. His own introduction of printing to England (1476), however, did much to spread the new features of English. Renaissance exploration added new words to the vocabulary. *Hurricano* appears in Shakespeare, but only in his last plays; the form shows that it came by way of Spanish, not directly from its West Indian origin, the Amerindian language Taino. Developments in the arts and sciences produced a huge influx of words, such as *sonnet* (from Italian via French) and *sextant* (from Neo-Latin). Exploration also enhanced the stature of English by establishing the language in new nations from Africa to the Americas. The Reformation provided a further impulse for translation, notable not only in the sequence of English Bible translations from Tyndale (1526) to the Authorized Version (1611), but also in the translation of Greek and Roman classics such as North's Plutarch (1579) and the translation of the masterpieces of the Continental Renaissance such as Hoby's *Machiavelli* (1561).

With the accession of the Tudors to the English throne (1485), the increase of national pride promoted greater confidence in the vernacular for original writing, often expressed with an exuberance of literary style, especially in the Elizabethan age. The range of the language was further enlarged when James VI King of Scots became James I of England in 1603. This event not only made possible the development of a standard language, especially in writing and print, throughout Britain and Ireland and later in North America and colonies elsewhere, but brought the King's English and the King's Scots

together in one monarch. The outstanding symbol of this realignment into one variety of educated usage was the publication in 1611 of the Authorized Version of the Bible; see BIBLE. The forms of Renaissance English show the effects of the Great Vowel Shift, though it was still incomplete. The development of some features of structure, such as *-s* for *-th* (*hears* instead of *heareth*), led for a time to competition: Shakespeare used both, while the King James Bible used only *-th*. The preface to Johnson's *Dictionary of the English Language* (1755) and the American Declaration of Independence (1776) scarcely used the *-th* form, and both reveal that most other main features of Modern English structure were in place wherever English was used by the late 18c. However, pronunciation continued to change and diversify in the speech of all social classes and regional groups: Pope rhymed *tea* with *obey*, Johnson could find no certain authority for the sound of *sea*, and *break* still remains one of the few words with the old pronunciation of *-ea*. The increasing uniformity of spelling, however, has tended to mask this diversity. See BIBLE, BORROWING, CAXTON, DICTIONARY, EARLY MODERN ENGLISH, GRAMMAR, SHAKESPEARE.

**(Late) Modern English.** In the 18c, the diaspora of English gained momentum. Not only was the language used almost everywhere in Britain and Ireland, to the increasing detriment of the Celtic languages, but the Crown gained Canada and India in competition with the French and supplanted the Dutch in colonizing Australia. In Britain and Ireland there had always been many subjects of the Crown for whom English was not the first or preferred language. Now, as English spread across the globe, large numbers began to use it as a second or learned it as a foreign language. In turn, English gained new vocabulary from languages throughout the world: words like Nahuatl *tomato*, Eskimo *kayak*, Hindi *chintz*, now so thoroughly assimilated that they retain no echoes of their exotic origins: see BORROWING. With increasing scope and variety came increasing attempts at regulation. In 1664, a committee of the recently formed Royal Society of London sought to propound a set of rules for English, and in 1712 Swift proposed an Academy comparable to the Académie française, 'for *ascertaining* and *fixing* our Language for ever'. Neither attempt succeeded. The English of Swift's day lacked the kind of reference books from which he had learned his Latin: the few grammars were sketchy and the dictionaries listed only the 'hard words' created by Renaissance borrowing and invention. In 1721, Bailey's dictionary made an attempt at comprehensiveness, and Johnson's dictionary in 1755 laid the

foundation of modern lexicography, though it recorded little but the literary vocabulary, and none from its own day. In 1762 appeared Lowth's grammar, which set the tradition of concentration on 'errors' in usage, agreeing with Swift's opinions while finding fault with his grammar. See DICTIONARY, GRAMMAR.

The growth of natural science after 1800 produced numberless new theories and products, along with knowledge of new substances, processes, and ailments, all nameless. Many received names composed by analogy with their formulas (*carbon monoxide*); others were named for their discoverer (*Hansen's Disease*), by acronym (*AIDS*), or by classical borrowing (*rabies*, Latin for rage). The language of newer fields like computer science often gives technical meaning to familiar words: *Apple Mac*, *dumb terminal*, *mouse*. Among the new sciences was linguistics, the objective study of language. Emboldened by the achievements of philology in the first quarter of the 19c, scholars set aside such impressionistic views of language as Addison's that English was distinctively 'modest, thoughtful and sincere'. They also gave up culturally biased attempts to link Hebrew to Latin and Greek, and took account in their studies of non-Western languages such as Sanskrit. The publication of *The Oxford English Dictionary* under the leadership of J. A. H. Murray (1888-1933, with Supplements 1972-86, 2nd edition 1989) is a monument of late 19c linguistic science.

Close acquaintance with indigenous peoples of America, Africa, and Australia, and the two world wars of the 20c, confronted Europeans and Americans with languages wholly unrelated to theirs, forcing further reassessment of long-held views and diverting language study from the historical approach to the descriptive. Challenged by the growing mass of data, scholars turned to the theories underlying their work, especially influenced after 1957 by the theories of the American linguist Noam Chomsky. Parallel with growth in linguistic science has been the spread of electronic media, which has not resulted, as some had hoped or feared, in the extinction of variety. Mass education has likewise had little influence on internal developments in English. The citizens of English-speaking countries now number c.300m, while elsewhere at least another 400m use it or have learned it as a second language, and perhaps 1,000m others learn it as a foreign language. The Germanic dialects that migrated in the 5c to Britain have expanded into a 20c global common language. Compare GEOGRAPHY AND GEOPOLITICS OF ENGLISH. See ENGLISH, STANDARD ENGLISH. ### A chronology of English

A selection of dates associated with the history and spread of the English language from Roman times to 1990.

**55 BC** Roman military expedition to Britain by Julius Caesar.

**AD 43** Roman invasion of Britain under the Emperor Claudius, beginning 400 years of control over much of the island.

**150** From around this date, with Roman permission, small numbers of settlers arrive from the coastlands of Germany, speaking dialects ancestral to English.

**297** First mention of the Picts of Caledonia, tribes beyond Roman control, well to the north of Hadrian's Wall.

**410** The Goths sack Rome.

**436** The end of a period of gradual Roman withdrawal. Britons south of the Wall are attacked by the Picts and by Scots from Ireland. Angles, Saxons, and other Germanic settlers come first as mercenaries to help the Britons, then take over more and more territory.

**449** The traditional date for the beginning of the Anglo-Saxon settlements.

**450-80** The first surviving Old English inscriptions, in runic letters.

**495** The Saxon kingdom of Wessex established.

**500** The kingdom of Dalriada established in Argyll by Scots from Ireland.

**527** The Saxon kingdoms of Essex and Middlesex established.

**550** The Angle kingdoms of Mercia, East Anglia, and Northumbria established.

**557** At the Battle of Deorham, the West Saxons drive a wedge between the Britons of Wales and Cornwall.

**597** Aethelberht, king of Kent, welcomes Augustine and the conversion of the Anglo-Saxons to Christianity begins.

**613** At the Battle of Chester, the Angles of Northumbria drive a wedge between the Britons of Wales and Cumbria.

**638** Edwin of Northumbria takes Lothian from the Britons.

- 700** The first manuscript records of Old English from about this time.
- 792** Scandinavians begin to raid and settle in Britain, Ireland, and France. In 793, they sack the monastery of Lindisfarne, the centre of Northumbrian scholarship.
- 795** The Danes settle in parts of Ireland.
- 815** Egbert of Wessex defeats the south-western Britons of Cornwall and incorporates Cornwall into his kingdom.
- 828** Egbert of Wessex is hailed as *bretwalda* (lord of Britain), overlord of the Seven Kingdoms of the Angles and Saxons (the Heptarchy). England begins to emerge.

1989 The publication of the 2nd edition of *The Oxford English Dictionary*, blending the first edition and its supplements.

**HOBSON-JOBSON**, full title: *Hobson-Jobson, a glossary study of colloquial Anglo-Indian words and phrases and of kindred terms, etymological, historical, geographical and discursive*. A 1,020-page encyclopedic dictionary compiled by Henry Yule and A. C. Burnell, first published in 1886. A 2nd edition, edited by William Crooke, appeared in 1903 and was reissued in 1968 and 1985 by Routledge & Kegan Paul. It provides ethnographic, historical, and etymological information and discusses processes by which English was being indigenized in South Asia, including phonetic change (*apil* an appeal, *rasid* a receipt), semantic shift (*boy* a bearer, waiter), and hybridization (*brandy pani* brandy and water). In a foreword to the 1985 reprint, Anthony Burgess describes it as 'a reminder of how the tongues of India have modified the language of an invader'. See **ANGLO-INDIAN**, **HOBSON-JOBSONISM**. [ASIA, REFERENCE]. B.B.K.

**HOBSON-JOBSONISM** [1930s: from *Hobson-Jobson*, a 19c Anglo-Indian adaptation of the Shia Muslim cry *Yā Hasan! Yā Husain!*, used to mourn the deaths of Muhammad's grandsons]. The alteration of a foreign expression to fit the speech and spelling patterns of a borrowing language, usually English: for example, *Hobson-Jobson*, whose early versions include *Hosseen Gosseen* (1698) and *Hassan Hassan* (1773). Two comparable adaptations of Asian words are *Sir Roger Dowler* for the 18c Indian prince Siraj-ud-Dawlah and *juggernaut* for Sanskrit *Jagannātha* (Lord of the World, an epithet of the god Krishna). The term is rare, but the process common and ancient. It began in English with Celtic names: the town *Bathgate* in Scotland is from Cumbric words close to Welsh *baedd coed* (boar wood); Shakespeare in *Henry V* Saxonized *Llewelyn* to 'Fluellen'; in Ireland, the name *Baile na Dtulach* (Gaelic: town of the little hills) is Anglicized as *Ballynadolly*. In the 17c, *Hochheimer*, the name of a German wine, became *hockamore*, then *hock*. Settlers in North America changed Algonquian *paw-cohiccora* to *pohickery* then *hickory*, *arahkun* to *raccoon*, *tamahaak* to *tomahawk*. At the turn of the 20c, Spanish *juzgado*, a tribunal, became *hoosegow*, an AmE slang term for a jail. The concept is sometimes called the *law of Hobson-Jobson*. See **ANGLICIZE**, **ASSIMILATION**, **CANADIAN**

**PLACE-NAMES**, **EYE DIALECT**, **HOMONYM**, **-ISM**. [ASIA, NAME, STYLE, WORD]. T.MCA.

**HOLOFERNES** [16c: from the names of a Biblical general and the theologian *Tubal Holofernes* in Rabelais' *Gargantua*, 1534]. The schoolmaster in Shakespeare's *Love's Labour's Lost* (1590s), often invoked as a symbol of pretentious learning: 'Constant reading of Greek and Latin bred a race of Holofernes pedants who preferred the Latin or Greek term to the English term' (Harold Whitehall, in L. F. Dean *et al.* (eds.), *The Play of Language*, 1971). In the following passage (5. 1), the curate Nathaniel and the pedant Holofernes amiably swap Latinisms:

**NATHANIEL**. I did converse this quondam day with a companion of the kings, who is intituled, nominated, or called, *Don Adriano de Armatho*.

**PEDANT**. *Noui hominum tanquam te*, His humour is loftie, his discourse peremptorie: his tongue fyled, his eye ambitious, his gate maiestical, and his generall behaviour vaine, ridiculous, & thrasonicall. He is too picked, to spruce, too affected, to od as it were, too peregrinat as I may call it.

**NATHANIEL**. A most singular and choyce Epithat.

**PEDANT**. He draweth out the thred of his verbosity, finer then the staple of his argument. I abhorre such phanaticall phantasims.

Compare **AUREATE DICTION**, **EUPHUISM**, **INKHORN TERM/INKHORNISM**, **LYLY**, **MULCASTER**, **PEDANT**. [LITERATURE, STYLE]. T.MCA.

**HOLOPHRASE** [19c: from Greek *hólos* whole, *phrásis* speech]. (1) A word functioning as a phrase or sentence: the imperative *Go!*; the drinking expression *Cheers!* (2) An idiomatic expression: *How do you do?*; *raining cats and dogs*. (3) A fixed phrase, a phrase word, or a sentence word: *natural selection*, *ungetatable*, *never-say-die-ism*, *happy-go-lucky (attitudes)*. (4) A term in the study of child language acquisition for a short utterance that does not lend itself to syntactic analysis: *mama*, *allgone*, *doggie*. Such holophrastic utterances are typical of the first stage of language acquisition, and make sense only in the immediate situation: *doggie* as *Look at the doggie* or *That's a doggie* or *Bring me a doggie*. Compare **BINOMIAL**, **FIXED PHRASE**, **IDIOM**. [GRAMMAR, WORD]. S.G., T.MCA.

**HOME** [17c in these senses]. (1) Back to one's own country: 'A letter which was brought home by the last Indian fleet' (Samuel Purchas, *Pilgrimage*, 1614); 'Vauxhall car workers were shouting "Yankees go home!"' (*Guardian*, 9 June 1973). (2) The 'mother country' of an empire, especially England or Britain: 'The persons who sued for it will make application home for another [charter]' (1762: in B. Pierce, *History of Harvard*, 1833). The habit of referring to the UK as 'home' has persisted into the later 20c

among older people in various places, as in these South African citations: 'My father called Britain "home" and my mother who had never seen it did likewise. But their children do not do so any more and their children's children have never done so' (A. Paton, *Towards the Mountain*, 1980); 'On one occasion X overplayed the English side to the point of saying she was planning a trip "home" in such a way as to suggest a girlhood spent in the British Isles. Her husband . . . asked with mock surprise, "Do you mean Rustenburg? Or Graaff-Reinet?"' (F. G. Butler, *Bursting World*, 1983). The usage has been tenacious in Australia and New Zealand, but is dying out: 'The only really happy person on the deck . . . is a middle-aged Australian. . . . He has been saving for years for his trip Home. He wept when we . . . saw the green Cornish folds beyond, and wept again for the Isle of Wight and the Dover cliffs' (G. Johnston, *Clean Straw for Nothing*, 1969). See HOME COUNTIES, MOTHER COUNTRY, OLD COUNTRY. [AFRICA, ASIA, EUROPE, NAME, OCEANIA]. T.MCA., J.B., W.S.R.

**HOME COUNTIES.** The region around London, consisting of Buckinghamshire, southern Bedfordshire, eastern Berkshire, Essex, Hertfordshire, Kent, Middlesex, Surrey, and Sussex. The speech in its towns is dominated by that of London; many who live there commute daily to work in the capital. New towns built since 1945, such as Basildon, Harlow, and Slough, are heavily populated by former Londoners, with a resulting spread of Cockney-like accents. In many places, however, such as Kent and Sussex, local rhotic accents continue. The attributive use of the phrase (as in *a Home Counties accent*) relates only to RP and its speakers, the middle and upper classes: 'Ascot, Henley, Sunningdale, Glydebourne and Wimbledon. The names are a roll call of the major sporting and cultural events in the summer calendar of the rich. They are all part of the regional identity. The Home Counties are not just a place. They are a way of life' ('Life in the Cocktail Belt', *The Geographical Magazine*, Oct. 1984); 'The Malaysian language contains many English words, but with the vowels changed, so that it sounds as if learned from the pre-war Home Counties. A taxi is a "teksi" and a club, "kelab" (pronounced "clab")' (Simon Hoggart, 'A Bit of Empire Blooms', *Observer*, 30 Dec. 1990). See COCKNEY, LONDON. [EUROPE, NAME]. T.MCA.

**HOME LANGUAGE**, also **language of the home**. A technical term for the language of the family as opposed to the *medium of instruction* in school: 'Persons who maintain or adopt English as their home language are 10 to 20 times

more likely to leave Quebec for the other provinces than are persons whose home language is French' (Réjean Lachapelle, 'The Position of French Improves', *Language and Society* 32, Fall 1990). Educational organizers in English-speaking countries have tended to assume that the languages of school and home are the same, but this is not necessarily so, especially in areas of high immigration and those in which everyday usage differs from the standard. See MOTHER TONGUE, TESD. [EDUCATION, LANGUAGE]. P.C.

**HOMOTELEUTON** [16c: from Latin *homoteleuton*, Greek *homoiotéleuton* having the same ending. Stress: 'ho-me-o-tel-YOU-ton']. Also **homoioteleuton**. (1) In rhetoric, the opposite of alliteration, in which several words in a series have the same closing sounds, as in *illustrious and industrious, ethical and practical*. (2) In writing and typesetting, an error in transcribing a text, in which a section is left out because two phrases, clauses, or sentences near each other end with the same word or phrase, causing the copyist or setter to think there is only one. [STYLE, WRITING]. T.MCA.

**HOMERIC SIMILE**, also **epic simile**. An elaborate simile of between two and 20 lines in length, freely used in the epics of Homer. In English, the narrative verse of Milton, Pope, and Arnold has been noted for its use. Typically, such a simile is framed by the formula (*just*) *as . . . so*:

But as a troop of pedlars, from Cabool,  
Cross underneath the Indian Caucasus,  
That vast sky-neighbouring mountain of milk snow;  
Crossing so high, that, as they mount, they pass  
Long flocks of travelling birds dead on the snow,  
Choked by the air, and scarce can they themselves  
Slake their parch'd throats with sugar'd mulberries—  
In single file they move, and stop their breath,  
For fear they should dislodge the o'erhanging snows—  
So the pale Persians held their breath with fear  
(Matthew Arnold, *Sohrab and Rustum*, 1853; italics added)

Such similes have traditionally been associated with high or grand style. See SIMILE. [LITERATURE, STYLE]. T.MCA.

**HOME SERVICE.** See BRITISH BROADCASTING.

**HOMILY** [16c: from Old French *omelie*, Latin *homilia*, Greek *homilia* a conversation, sermon. Adjective *homiletic*]. A story or lecture on a religious or moral theme. Two *Books of Homilies* (1547, 1563) were issued by the Church of England to ensure orthodox preaching and to promulgate 'godly and wholesome Doctrines, and necessary for these times'. See AELFRIC, SERMON. [LITERATURE, MEDIA]. R.C.

**HOMOGRAPH** [1800s: from Greek-derived *homo-* same, *-graph* something written, on the analogy of *homonymy*]. A kind of homonym: one of two or more words that are identical in spelling but different in origin, meaning, and pronunciation, such as *entrance* (noun: stress on first syllable) a door, gate, etc., and *entrance* (verb: stress on second syllable) to put in a trance; *lead* (verb: rhyming with 'deed') to take, conduct, guide, etc., and *lead* (noun: rhyming with 'dead') a metal. See **HOMONYM**. [LANGUAGE, WORD, WRITING]. T.M.C.A., R.E.A.

**HOMONYM** [17c: from Latin *homonymum*, Greek *homōnumon* (a word) having the same name]. One of two or more words that are identical in sound or spelling but different in meaning. There are three kinds: those that sound and look alike (*bank*<sup>1</sup> a slope, *bank*<sup>2</sup> a place for money, and *bank*<sup>3</sup>, a bench or row of switches); *homophones*, that sound alike but do not look alike (*coarse*, *course*); and *homographs*, that look alike but do not sound alike (the verb *lead* /li:d/, the metal *lead* /led/). The occurrence of homographs is largely a matter of chance, although a tendency to assimilate the unfamiliar to the familiar is also a factor, as with *compound* (an enclosure, originally Malay *kampong*), and *pigeon* (as in 'not my pigeon', a variant of *pidgin*). Dictionaries distinguish homographs by means of superscript numbers preceding or following them, largely on the basis of etymology. The degree of separation in dictionaries usually depends on the extent to which variation in etymology is taken into account: for example, *bank* (slope) and *bank* (a place for money) are ultimately related, but have had sufficiently divergent routes on their way to English to warrant separate treatment. There are over 3,000 homographs in the *Concise Oxford Dictionary* (8th edition, 1990). James B. Hobbs, in *Homophones and Homographs: An American Dictionary* (McFarland, 1986), lists 600. See **AMBIGUITY**, **CONFUSIBLE**, **HETERONYM**, **HOBSONISM**, **HOMOGRAPH**, **HOMOPHONE**, **JANUS WORD**, **POLYSEMY**, **SEMANTICS**, **SPELLING**. [LANGUAGE, SPEECH, WORD, WRITING]. T.M.C.A., R.E.A.

**HOMOPHONE** [17c: from Greek-derived *homo-* same, *phonē* sound]. One of two or more words that are identical in sound but different in spelling and meaning: *beer/bier*, *there/their/they're*. The occurrence of homophones is largely a matter of historical chance, in which words with distinct meanings come to coincide phonologically: *byre* a cowshed, *buyer* one who buys. Homophones are sometimes the basis of conscious word-play, as in Thomas Hood's 'His death, which happen'd in his berth, / At forty-odd befell: / They went and told the sexton,

and / The sexton toll'd the bell' ('Faithless Sally Brown', 1826). Words may be homophones in one variety of English but not another: *father/farther* and *for/four* are homophonous in RP, but not in AmE and ScoE; *wails/Wales* are general homophones; *wails/Wales/whales* are homophones for many, but not in IrE and ScoE. *Whether/whither* are homophones in Scotland, but not *whether/weather*, which are homophones in England. *The Dictionary of British and American Homophones* (Stephen N. Williams, Brookside, 1987) lists some 12,000 homophones. *Homophones and Homographs: An American Dictionary* (James B. Hobbs, McFarland, 1986) lists some 3,600 homophones. See **HETEROPHONE**, **HOMONYM**, **HOWLER**, **PHONE**, **PUN**. [LANGUAGE, SPEECH, WORD]. T.M.C.A., R.E.A.

**HOMORGANIC** [1850s: from Greek-derived *homo-* same, and *organic*]. A term in phonetics for two or more speech sounds that have the same place of articulation: for example, the bilabial consonants /p, b/, which are formed by using both lips. [SPEECH]. T.M.C.A.

**HONDURAS**. See **BAY ISLANDS**, **BELIZE**, **CENTRAL AMERICA**.

**HONG KONG**, also **Hongkong**. A British colony in East Asia. Currency: the dollar (100 cents). Economy: trade, finance. Population: 5.4m (1984). Ethnicity: 98% Chinese, 2% British and others. Languages: English, Cantonese (both official: the latter spoken by over 80% of the people), and other Chinese dialects. In 1842, by the Treaty of Nanking, Hong Kong Island was ceded to Britain; in 1898, the mainland New Territories were leased to Britain for 99 years. The colony was occupied by Japan in the Second World War. Under the Sino-British Declaration of 1974, Hong Kong will be restored to China in 1997, when the lease expires. English is important in Hong Kong for written and printed communication, as a lingua franca between Chinese and non-Chinese, and in international trade, but is not widely used as a spoken medium. Most primary education is in Cantonese, and secondary education is provided in *Anglo-Chinese schools* (in which English is the medium of instruction except for Chinese subjects) and *Chinese middle schools* (in which Cantonese is the medium except for English subjects). There are two universities, one English-medium, one Chinese-medium, and other mostly English-medium tertiary institutions. Of some 40 daily newspapers, two are in English: the *South China Morning Post* (circulation 101,000) and the *Hongkong Standard* (60,000), with a combined readership of c.400,000 (80% Chinese).

Hong Kong usage includes: (1) Words and phrases from Chinese: *dim sum* snacks served in Chinese restaurants, *fung shui* ('wind-water') geomancy used in deciding the sites, orientation, and design of buildings, *gwello* ('ghost person') a European man, *gweipor* a European woman, *hong* a large usually long-established non-Chinese trading company, *mafoo* a stable hand, *pak choi* Chinese cabbage, *taipan* the head of a hong. (2) Loan translations from Chinese: *dragon boat* a long canoe-like boat raced at festivals, *snakehead* a smuggler of illegal immigrants. (3) Terms from other languages: *amah* (Portuguese) a maid, *godown* (Malay) a warehouse, *nallah* (Hindi) a watercourse, *shroff* (Arabic through Persian and Anglo-Indian English) a cashier in a government office. (4) Such abbreviations as *Exco* Executive Council, *Legco* Legislative Council, *HKCEE* Hong Kong Certificate of Education Examination, and *IIs* ('eye-eyes') illegal immigrants (often also called *illegals*). (5) Local uses of general words: *short week* a work schedule in which one works on Saturday morning only every second week, *triad* a secret criminal society. See CHINA, EAST ASIAN ENGLISH, ENGLISH, MACAO. [ASIA, NAME, VARIETY]. T.MCA, J.P., H.W.

Taylor, Andrew. 1989. 'Hong Kong's English Newspapers', *English Today* 20. Cambridge: University Press.

### HONG KONG EXAMINATIONS AUTHORITY. See EXAMINING IN ENGLISH.

**HONORIFIC** [17c: from Latin *honorificus* giving honour]. A particle, inflection, word, or phrase used to show respect for a person addressed or discussed, and perhaps also to mark the subordinate role or status of a speaker. The ancient contrast *you/thou*, in which singular *you* was used honorifically, died out in 17c standard English. Similar contrasts can be found in other languages: French *vous/tu*, Persian *shoma/to*, Spanish *usted/tu*. The honorific vocatives *sir*, *maddam*, *miss* were common in conversation until the mid-20c, but are not now widely used: 'Were it not for imagination, Sir, a man would be as happy in the arms of a chambermaid as of a Duchess' (Samuel Johnson, 1778). *Sir* and *miss* are common when children address teachers. See FORM OF ADDRESS. [GRAMMAR, NAME, STYLE]. T.MCA.

**HORNBY, A(lbert) S(idney)** [1898–1978]. English grammarian and EFL teacher, born in Chester, and educated at U. College London. From

1923, he taught English in Tokyo, where he worked with Harold E. Palmer at the Institute for Research in English Teaching. After Palmer's departure in 1936, he became editor of the *IRET Bulletin*. In 1937, with E. V. Gatenby and H. Wakefield, he began work on a novel dictionary for foreign learners that would provide lexical, syntactic, and idiomatic information. It was completed in 1940 and published in 1942 in Tokyo by Kaitakusha, as *The Idiomatic and Syntactic English Dictionary*. When Hornby left Japan in 1939 he joined the British Council and after the war became editor of *English Language Teaching*. In 1948, the dictionary was reissued by Oxford University Press as *A Learner's Dictionary of Current English*. In 1963, its revision was retitled *The Advanced Learner's Dictionary of Current English*, the greatest commercial success in ELT publishing. Hornby also published *A Guide to Patterns and Usage in English* (1954). See index. [ASIA, BIOGRAPHY, EDUCATION, EUROPE]. P.C.

**HOUSE** [17c in such senses]. (1) A place of business (*a variety of mercantile houses, Shellmex House*); a commercial company (*the House of Fraser*). (2) A printing or publishing company (*a printing house, a publishing house*). (3) Used attributively: *a house journal, house magazine, house organ*, names for a periodical issued to employees and associates of such a house. See HOUSE STYLE. (4) A theatre (*playhouse*) or cinema (formerly especially BrE *picture house*, AmE *movie house*) or more commonly its audience (*playing to a full house*) or a performance in such a place (*first house, second house*). See THEATRE/THEATER. [LITERATURE, MEDIA]. T.MCA.

**HOUSE STYLE**. A term for rules adopted to bring uniformity and consistency to printed material coming from one source, such as a government department, publishing house, newspaper, professional association, or commercial company. Such organizations usually find it necessary to have a policy for points of style and usage that arise in writing and printing, and occasionally in speaking. These include often delicate choices relating to: (1) Spelling variants: *inquire* or *enquire*, *judgement* or *judgment*, *matins* or *mattins*, *publicize* or *publicise*. (2) The spelling and pronunciation of foreign names: *Beijing* or *Peking*, *Marseilles* or *Marseille*, *Moslem* or *Muslim*. (3) Style in abbreviations, capitalization, etc.: *B.B.C.* or *BBC*; *the Company* or *the company*. (4) Contentious general usages: *the Arabian Gulf*, *the Persian Gulf*, or *the Gulf*; *Holland* or *The Netherlands*; *chair*, *chairman*, *chairperson*. (5) Contentious grammatical issues: *the management is/are; anyone . . . he or anyone . . . they*. (6) Use

of double and single quotation marks: *He said*, 'Tell us about it' or *He said*, "Tell us about it." (7) Hyphenation or non-hyphenation: *dining room* or *dining-room*; *make-up* or *makeup*. (8) Compounding: *news letter* or *news-letter* or *newsletter*. (9) Inclusive language: *businessman* or *businesswoman*, or *businessperson*; generic *he* or *she* or *(s)he* or *he or she* or *she or he* or singular *they*.

In such matters, independent writers may find individual solutions on a longer- or shorter-term basis. Few such writers, however, are fully consistent in what they do and are often willing to alter their usages in relation to the expectations of publishers and markets or to have them altered by editors. This means that the evidence of usage in printed material is not necessarily that of the authors, especially in such areas as spelling and pronunciation. Published material associated with an organization, especially in the media, almost always becomes subject to standardization, so as to create a consistent and even authoritative image. Rules are formulated so that people know where they are, creating in effect 'localized' versions of a standard language (established, as it were, by small-scale 'academies'). If writers do not for any reason follow the rules, editors, sub-editors/copy-editors, printers, and proof-readers usually make the necessary changes (but even so some writers succeed in going their own way). Such rules make up a *house style*, often organized in a *style sheet*, *style guide*, or *style manual* for distribution and easy consultation. Such sheets, guides, and manuals usually become more consistent and detailed as time passes. They are usually available only within an organization, but may sometimes be more widely distributed or even published as commercial titles. This was the case with Ernest Gowers's *The Complete Plain Words* (1954), compiled for the benefit of British civil servants, and Keith Waterhouse's *Waterhouse on Newspaper Style* (1989), based on the house handbook for *Daily Mirror* journalists.

**Great Britain.** One of the most influential house styles in the UK is that of Oxford University Press, made publicly available in 1904 in the first published edition of *Hart's Rules* (see below), and in 1905 in the *Authors' and Printers' Dictionary*, ed. F. Howard Collins. The original material in the dictionary was not compiled systematically in the manner of an ordinary dictionary, but was accumulated over the years as an extended card index. Collins relied to a great extent on the *OED*, but often broke new ground where no previous guidance existed: for example, as to when to use initial capitals for words such as *Bible*, *Act of Parliament*, *New Year's Day*, *Squire*. Many of the rules that he formulated

have since become widely accepted in BrE. 'Collins', as the handbook became known, influenced the house style of *The Times* and other newspapers, as well as publishing houses and learned societies. The 11th edition of the dictionary (1973) was extensively revised and rewritten, and published in 1981 as *The Oxford Dictionary for Writers and Editors* (ODWE, 448 pp.), ed. R. E. Allen, D. J. Edmonds, and J. B. Sykes. As a guide to usage, it is offered in conjunction with *Hart's Rules*, a work first compiled by Horace Hart in 1893, primarily for printers. The Press made the 15th edition available to the public in 1904, and the 39th was published in 1983 (182 pp.), revised and extended so as to complement ODWE. In 1986, the Press published a third work, *The Oxford Spelling Dictionary* (299 pp.), compiled by R. E. Allen, which also gives word divisions. Whereas the dictionaries provide information on individual items (*focused* not *focussed*, *tumour* not *tumor*), *Hart's Rules* has three sections: Rules for Setting English, Spellings, and Rules for Setting Foreign Languages.

**The United States.** American style manuals tend to be more detailed and to cover more topics than their British counterparts. The most influential is *The Chicago Manual of Style* (U. of Chicago Press, 13th edition, 1982, 738 pp.). It covers book formats, manuscript preparation and copy-editing, proofs, rights and permissions, design and typography, composition, printing, binding, general points of style, punctuation, numbers, illustrations and captions, tables, documentation styles, bibliographic forms, note forms, and indexes. Many publishing houses and university presses use it as their principal reference. Based on the *Chicago Manual*, Kate L. Turabian's *Manual for Writers of Term Papers, Theses, and Dissertations* (U. of Chicago Press, 5th edition, ed. Bonnie Birtwhistle Honigsblum, 1987) is a shortened, specialized 300-page version. Academic associations publish manuals geared to various disciplines, whose styles (especially for documentation and citation) may vary greatly. In the humanities, *The MLA Style Manual* by Walter S. Achtert and Joseph Gibaldi (Modern Language Association of America, 1985, 271 pp.) is comprehensive and influential. It gives guidance in all matters of manuscript preparation and publication. The citation and documentation style it recommends (parenthetical documentation in the text keyed to a final list of references) has become the norm, replacing footnotes. A version for students is the *MLA Handbook for Writers of Research Papers* (MLA, 2nd edition, 1984, 221 pp.).

Comparable works for other disciplines are the *Publication Manual of the American Psychological Association* (American Psychological

Association, 3rd edition, 1983, 208 pp.) and the *CBE Style Manual* (by the Committee on Form and Style of the Council of Biology Editors, American Institute of Biological Sciences, 3rd edition 1972, 297 pp.). Short and specialized house styles are defined by most journals: for example, the 'LSA Style Sheet for Publications of the Linguistic Society' is printed annually in the directory issue of the *LSA Bulletin*, and a 'Style Sheet for Glossaries' presents the house style for dictionary format of *American Speech* (volume 45, 1970, pp. 141-51), the journal of the American Dialect Society. Most major newspapers have house styles, some of which are generally available and influential. *The New York Times Style Book for Writers and Editors* (ed. Lewis Jordan, McGraw-Hill, 1962, 124 pp.) and *The Washington Post Deskbook on Style* (ed. Thomas W. Lippman, McGraw-Hill, 2nd edition 1989, 249 pp.) are typical. Similar are works of news services, such as *The UPI Stylebook* (ed. Bobby Ray Miller, United Press International, 1977, 200 pp.) and *The Associated Press Stylebook and Libel Manual* (ed. Christopher W. French, Addison-Wesley, 1987, 341 pp.). These works are primarily alphabetical lists of problems with recommendations (comparable to *ODWE*, above), but may include general information on matters of special concern in reportage. A guide for US government publications, the *United States Government Printing Office Style Manual* (US GPO, 1984, 479 pp.), began in 1894 and is now in its 28th version. In addition to matters of general style, it gives attention to legal records, the *Congressional Record*, and other specialized government publications. It also includes information on the printed form of major foreign languages. A small supplement is devoted to *Word Division* (US GPO, 1987, 142 pp.).

M.L.A., J.A., T.M.C.A., R.E.A.

**HOWLER** [mid-19c: something that causes people to howl with laughter or pain]. An informal term for a mistake in the use of language that is likely to cause hilarity, such as confusion between homographs (*Tibetan llamas* rather than *lamas*), between similar words (*a virago of lies* rather than *farrago*), and between

idioms (*If this is your first visit to our country, you are welcome to it*, where *you're welcome* was intended), and the misformation of sentences (*a specialist in women and other diseases*, said of a physician specializing in gynecology). Compare CATACHRESIS, CONFUSIBLE, FRACTURED ENGLISH, MISTAKE, SOLEICISM. [STYLE]. T.M.C.A.

**HUBRIS** [1880s: from Greek *hubris* insolence, arrogance]. Sometimes *hybris*. The overweening self-confidence and ambition that leads in tragic drama to the ruin of its possessor. See POETICS, TRAGEDY. [LITERATURE]. T.M.C.A.

**HUMOUR** BrE, **humor** AmE [14c: through French from Latin *humor* moisture, body fluid, temperament]. Originally a mental disposition or temperament, fossilized in such forms as *good-humoured* and *ill-humoured*, humour is currently a disposition towards pleasantry, often realized in the enjoyment of anecdotes, jokes, puns, repartee, riddles, wisecracks, and witticisms. Not all humour is verbal, and by no means everything that is humorous is also witty, though humour and wit are customarily neighbours, humour relating to situations and wit to the sayings the situations evoke. Oscar Wilde's play *The Importance of Being Earnest* (1895) is humorous in its basic situation: Jack Worthing, the central figure, is a foundling, discovered in a handbag left in a cloakroom at Victoria Station in London. It is witty in the comments made by the characters: for example, Lady Bracknell, Jack's prospective mother-in-law, tells him that she cannot allow her only daughter to 'marry into a cloakroom and form an alliance with a parcel'. Some expressions of humour appear to be primordial and universal, a visceral drollery transcending languages, independent of cultures, exacting sympathy with elementary human fears, aspirations, placations, aversions. This wordless humour is often presented graphically, as in cartoons, but, as language becomes its mediator, humour becomes increasingly culture-dependent. The joke usually presupposes a social bond, joker and audience drawing freely on a stock of common knowledge involving a shared history, a familiar pattern of daily life, topical events, and popular assumptions and attitudes. Within this general societal humour there exist institutional types, associated with certain professions (the law, the Church) or social subgroups (children, the old, the family).

**The linguistics of humour.** What is called a *sense of humour*, as if it were a skill like ability in mathematics or music, is a complex effect of people's experience as members of a culture, a nation, and various kinds of community. It might more appropriately be called a 'sense for humour': an ability to judge the acceptability of

humour in certain situations, and a willingness to regard the capacity to laugh and to evoke laughter as legitimate behaviour. In social terms, there are times when people are free to make jokes, times when they need to make jokes, and times when joking is inhibited or disallowed. In this respect, the study of humour and humorous language belongs in the branches of linguistics called *pragmatics* and *discourse analysis*. When humour is considered in its social setting, it seems clear that many jokes derive their force from the joker's readiness to challenge authority and institutional constraints, as in courtroom humour. There is the story of learned counsel who, by a slip of the tongue, refers to one of the defendants in a case as having been *drunk as a judge*. 'I believe the expression is *drunk as a lord*,' the presiding judge corrects him, upon which counsel, in gravely courteous acknowledgement, says, 'I am obliged to your lordship.' Here, the joke plays with the language of the English law court, in which 'learned counsel' (a lawyer) refers by convention to the judge as *m'lud* (my lord) or *your lordship*, and corrections or explanations are always acknowledged with the formal *I'm obliged*. The propriety of form, however, masks an improper motive: to subvert the dignity and authority of the judge, to whom learned counsel should defer in spirit as well as in words. In such ways, humour is often subversive.

**The universal and the particular.** The relationship between humour and society is obvious enough to prompt a common assumption, that particular societies, or nations, have symptomatic styles and preferences in humour. The assumption is challenged, however, by the fact that many jokes traverse the world and travel through time, as general comments on human nature and human thought, only modified in their presentation by local details of custom and setting. An ancient Roman joke tells how a man is accidentally knocked down in the street by a porter carrying a trunk. 'Look out!' says the porter. 'Why?' asks the victim, 'Is there another trunk coming?' This joke is an archetype with many subsequent realizations: for instance, in the slapstick film routines of workmen carrying planks that strike the same victim twice (one end at a time), or in the joke about the pedestrian run over by a motorist who stops, puts his vehicle into reverse, and runs over the unfortunate a second time. 'Does it hurt?' the motorist enquires, solicitously. 'Only when I laugh,' replies the sufferer. At one time this latter joke (a specimen of the so-called *sick jokes* that began to be popular in the late 1940s) was commonly quoted as a typical example of German humour; now, though it continues in circulation, with variations in the telling and sometimes with

elaborations that transform it into a *shaggy dog story*, it is no longer attributed to any national background.

There are two arguable cases. One asserts that humour is the peculiar product of the society in which it occurs, or (a lesser form of the same case) of the language in which it is expressed. The other maintains that humour is a property basic to human nature in all societies, and that local forms are only the product of transient fashions, time-bound pre-occupations, or shifts in social attitudes. If American humour is for many people very different from British humour, it may well be because Americans have been concerned with different social facts, and hence with the projection of a different social image. Nations in their humour tend to present themselves as they would wish others to see them; and if they mock themselves, contriving their own *ethnic jokes*, they mock themselves as they would prefer to be mocked.

**Old and Middle English.** As there are stereotypes of national humour with some support in cultural fact, so there are widely accepted if not wholly reliable notions about humour in former ages. England before the Norman Conquest, for example, is nobody's idea of a country full of wags and wisecrackers, though riddles existed and there is at least one sardonic joke in the epic of *Beowulf*, where a sea dragon is pierced by a warrior's arrow, and 'after that he didn't swim so well' (as the poet slyly comments). Medieval humour is commonly perceived as folkly, robust, and 'Chaucerian': that is, much concerned with fornication, fraud, farting, booze, and bumfun. This view of Chaucer, based on tales like those of the Miller and the Reeve, or characters like those of the Host and the Wife of Bath, ignores the subtle laughter, the allusiveness, the parodic wit to be found elsewhere in *The Canterbury Tales* and in his other works. It represents, however, one constituent of a dual stereotype: in historical terms, humour is either 'popular', grounded in homely (not to say vulgar) situations and personalities, or 'intellectual', relying on the humorist's power of pointed appeal to an audience primed with the appropriate cultural and literary knowledge, listeners and readers who are socially adept and reasonably well acquainted with the skills of language and rhetoric. The stereotype might not bear close examination, but it persists in the common perception of 'broad' as opposed to 'sophisticated' humour.

**The Elizabethans.** The drama of the late 16c, with its puns and backchat, fosters the notion of an age in which humour is 'intellectual' and linguistic. 'To see this age!' says Viola in Shakespeare's *Twelfth Night*, 'A sentence is but a chervil [= kid, soft leather] glove to a good wit: how

quickly the wrong side may be turned outward! But while kid-glove badinage was undoubtedly a staple feature of the stage play, the drama reflected 'humour' in a more philosophical sense, the medieval 'humours' of character and temperament that in their more eccentric manifestations became the object of laughter. Elizabethan taste also ran to vulgar, knock-about, prat-falling humour. Bottoms, bawds, and beer mugs were as common as paronomasia and polysemy; if we moderns are inclined to stress the linguistic character in Elizabethan humour, it is perhaps because we regard that age as a time of peculiar triumph for the English language. Besides, while writings of one kind or another may reflect popular humour, they are by their very nature, as writing, disposed to give prominence to the calculations of wit, to a humour that is premeditated, educated, intellectualized.

**The Augustans.** Such is the case with the humour of the 18c, apparently given over (to judge by leading writers of the time) to political satire, social and moral commentary, urbane formulations, aphorisms, and epigrams: the verbal evidence of strong powers of mind. We have only oblique and fleeting reflections of what must have been a vigorous existence of tavern humour, street talk, and the racy jargon of villains and vagabonds. If challenged to invent an 18c joke, the modern reader would probably attempt some dapper, mordant witticism, pointedly framed, expressing a social or moral or political ideology. This is an incomplete and stereotyped view of the humour of the period. If there is a compendium of 18c humour in a literary source, it is Sterne's *Tristram Shandy* (1760-7), which wanders across every species and level of joke, from low to high to satirical to sentimental to crazy. Much 18c humour turns, no doubt, on assumptions about 'good sense', reasonable conduct, morality, and sociability, but there is also a vein of untrammelled fantasy which Sterne in particular exploits.

**The Victorians.** Humour in its social and historical manifestations is by turns dangerous and domesticated; dangerous when it appears to attack a political and institutional status quo, domesticated when it settles down to chuckling over the mores of an approved social order or the harmless oddities of stock figures and types: policemen, clergymen, urchins, schoolchildren, tramps, drunks, professors, artists, eccentrics. In the 19c, humour in England becomes deeply domesticated, and there is no better illustration of this than the history of the magazine *Punch*, which began life as a politically radical, anti-monarchist journal with strong proletarian sympathies, but within two decades became a

representative of the affluent middle class smirking indulgently at its own foibles, at its own establishment and its servants, at the oddities of the poor, and at the strange ways of foreigners. *Punch* represents a whimsical, smiling cosiness that generally pervades 19c literary humour: for example, in the essays of Charles Lamb and the novels of Dickens (though there are times when Dickens's humour borders on the dangerous). Even the mordant verbal humour of the Irish writer Oscar Wilde (1854-1900) could be tolerated and applauded by his British middle-class audiences, for as long as they could feel secure in their own values.

A province of this cosy, assured humour is the work of academic wits and parodists like Lewis Carroll. Carroll's work acquires its peculiar and enduring flavour from a surreal imagination, the sophistications of logic and reasoning (philosophers still use him as a source of playful illustrations), and, in keeping with the Victorian domestication of humour, an affectionately observant attitude to children, his primary audience. Children were also the intended auditors of Edward Lear, an artist of ability and an entertaining travel writer who is best known, however, for the collections of nonsense verse that may be said to have originated a strain of comic invention still evident in Anglo-American humour. (The humorous writings of Spike Milligan and the radio scripts of the company known as *The Goons* in the 1950s are recent developments of the 'queery-Leary' style.)

Humorists in North America in the late 19c and early 20c inherited and developed the Victorian tradition of domesticity, parody, and fantasy. The American Bret Harte and the Canadian Stephen Leacock were both fervent admirers of Dickens. Harte's jovially parodic *Condensed Novels* (1867), a brilliant spoof of Victorian fiction, set the pattern for the more elaborate exercise of Leacock's *Nonsense Novels* (1911). As a humorist with a reflective, moralizing bent, Leacock is a comic-aesthetic forerunner of both James Thurber and Garrison Keillor, whose *Lake Wobegon Days* (1986) echoes Leacock's *Sunshine Sketches of a Little Town* (1912).

**Popular and subversive humour.** Popular or working-class humour in 19c Britain was fostered by the pantomime, whose great star was Joe Grimaldi (1770-1837), and later by the music hall and the individual performer who combined the talents of clown, mimic, fool (in the Elizabethan sense), and ballad-singer. These personalities were the precursors of the stand-up comedians and club comedians of the 20c, and of the great comedians of the 'silent' film era,

Charlie Chaplin and Buster Keaton. Such performers have been in many cases the custodians of the counter-tradition of dangerous (irreverent, aggressive, satirical) humour, though their work is governed by the prudent perception of what pleases an immediate audience.

**The media.** The cult of the comic personality has been greatly promoted by the emergence of new forms of stage: radio, motion pictures, television. These media are notorious for their voracious consumption of performance material. Whereas a 19c music-hall idol could use the same routines for years, the media comedian must continually discard old material and evolve new routines generally produced by scriptwriters, who are generally highly competent but more or less anonymous journeymen, some however achieving popular distinction as literary artists in their own right. One instance is the American humorist S. J. Perelman (1904–79). In his day, he supplied comic material to the Marx brothers, who depended on film, but whose humour included, in wild diversity, elements that would have been recognizable to Chaucer, the Elizabethan clowns, Laurence Sterne, Victorian wits and parodists, double-talking music-hall comedians, and stand-up comics with their quickfire jokes and patter.

**Conclusion.** The history of humour is a parade of opposing tendencies: the popular as against the learned, the spoken as against the written, performing as against creating, dangerous as against domesticated. The further contrast of 'occupational' and 'incidental' might be added, because many examples of parodic or playful humour have been the by-products of writers engaged in serious literature scholarship: for example, T. S. Eliot's *Old Possum's Book of Practical Cats* (1939). Traditions in humour and humorous writing have, like other literary traditions, become many-stranded, as an attempt to tell the story of American humour would demonstrate. An account that included the predominantly 19c humorists Josh Billings (Henry Wheeler Shaw), Petroleum V. Nasby (David Ross Locke), Artemus Ward (Charles Farrar Browne), Mark Twain (Samuel Langhorne Clemens), Bret Harte, and Joel Chandler Harris (1848–1908), and the predominantly 20c figures O. Henry (William Sidney Porter), Damon Runyan, S. J. Perelman, Robert Benchley, James Thurber, and E. B. White, would have to consider traditions of anecdote, folk-tale, dialect, dialogue, monologue, rustic wisecracks, urban wisecracks, slow, simple cunning and sudden cleverness, political engagement, regional pride, and metropolitan insouciance: all the European modes of humour translated and complicated in

a New World setting. Every humorist and every joke somehow manage to embody both the history and geography of laughter.

**HUNGARIAN.** See BORROWING, EUROPEAN LANGUAGES.

**HUNT, (James Henry) Leigh** [1784–1859]. English essayist and pioneer journalist, born Southgate, Middlesex, and educated at Christ's Hospital. In 1808, with his brother John, he began *The Examiner*, which became the principal defender of the younger Romantic poets, who were being attacked in other journals. It took a radical line in politics and in 1813 the brothers were fined and imprisoned for a libel on the Prince Regent. Hunt edited several other journals, in which he published work by Byron, Shelley, Keats, and Hazlitt. His *Critical Essays on the Performers of the London Theatres* (1808) are valued by theatrical historians. [BIOGRAPHY, EUROPE, LITERATURE, MEDIA]. R.C.

**HYBRID** [16c: from Latin *hybrida* offspring of tame sow and wild boar, Roman father and foreign mother, freeman and slave]. Also **hybrid word**. A word whose elements come from more than one language: *television* (from Greek *tele-*, Latin *vision*), *jollification* (from English *jolly*,

Latin *-ification*). Attitudes to hybrids have been influenced by views on propriety and aesthetics. Traditionally, they have been considered barbarisms; purists have assumed that just as Latin, Greek, French, and English are distinct languages, so elements from these languages within English should be distinct. Fowler's *Modern English Usage* (ed. Gowers, 1965) accepted that in English there are 'thousands of hybrid words, of which the vast majority are unobjectionable. All such words as *plainness* or *paganish* or *sympathizer* are hybrids technically, but not for practical purposes. The same is true of those like *readable*, *breakage*, *fishery*, *disbelieve*, in which an English word has received one of the foreign elements that have become living prefixes or suffixes.' Fowler, however, listed some 'words that may be accused of being misformed', through hybridization or bizarre combination, including: *amoral*, *automation*, *bi-weekly*, *bureaucracy*, *coastal*, *coloration*, *dandiactal*, *flotation*, *funniment*, *gullible*, *impedance*, *pacifist*, *speedometer*. He described them as an 'ill-favoured list, of which all readers will condemn some, and some all'. Some have not survived; others are now part of the language. Hybridization has grown steadily in the 20c, with such words as *genocide*, *hydrofoil*, *hypermarket*, *megastar*, *microwave*, *photo-journalism*, *Rototiller*, *Strip-a-gram*, *volcanology*. It is particularly common where English is used alongside other languages. See AFRICAN ENGLISH, BARBARISM, COMBINING FORM, INDIAN ENGLISH<sup>1</sup>, SPELLING, SPELLING REFORM, THEMATIC VOWEL. [WORD]. T.MCA.

**HYMN** [Before 11c: from Latin *hymnus*, Greek *hymnos* a song in praise of a god or hero]. A poem on a sacred subject, usually Christian and intended for choral singing. Hymns were used in Christian worship from an early date in both Greek and Latin. Vernacular hymns were composed in Old and Middle English, but were not used liturgically. The Reformation, however, encouraged vernacular congregational singing. In England, metrical versions of the Psalms of the Old Testament of the Bible (*metrical psalms*) were generally used until the flowering of hymnology in the 18c, in which Charles Wesley and Isaac Watts were prominent. The Church of England, at first wary of hymns, gradually welcomed them. Leading Victorian hymnologists included John Henry Newman and John Keble. Popular evangelism in the later 19c included the US evangelists D. L. Moody and Ira D. Sankey and the foundation of the Salvation Army in Britain in 1878, resulting in vigorous hymns that often used militant language and imagery:

Soldiers of the Cross arise!  
Gird you with your armour bright:

Mighty are your enemies,  
Hard the battle ye must fight.  
(W. W. How, 1823-97)

The writer of hymns is constrained by requirements of doctrine and traditional language. A lack of fresh rhymes for the basic words of faith can lead to predictable repetitions, as in:

Pleasant are thy courts above  
In the land of light and love;  
Pleasant are thy courts below  
In this land of sin and woe:  
O, my spirit longs and faints  
For the converse of thy saints.  
(H. F. Lyte, 1793-1847)

They also lead to half rhyme and eye rhyme, as in:

Praise to thy eternal merit,  
Father, Son and Holy Spirit.  
(J. Cosin, 1594-1672)

Come, ye thankful people, come,  
Raise the song of harvest-home.  
(H. Alford, 1810-71)

Many metrical forms have been used, but the need for what can be easily sung limits their range. Poems not originally intended for singing have been adapted from such poets as Herrick, Blake, Wordsworth, Tennyson, Kipling, and Clough. Poems set to music as hymns include Blake's 'Jerusalem', Tennyson's 'Strong Son of God, immortal love', and Clough's 'Say not the struggle naught availeth'. Hymn writing in the 20c often uses colloquial rather than formal language, as in:

He's back in the land of the living,  
The man we decided to kill,  
He's standing among us, forgiving  
Our guilt of Good-Friday hill.  
He calls us to share in his rising,  
To abandon the grave of our past;  
He offers us present and future,  
A world that is open and vast.  
(Fred Kaan, b.1929)

See BIBLE, PSALM, QUATRAIN. [LITERATURE]. R.C.

**HYPALLAGE** [16c: through Latin, from Greek *hupallagē* exchange. Stress: 'high-PA-ladgy']. (1) Also **transferred epithet**. In rhetoric, an adjective or participle (an *epithet*) that qualifies not the appropriate noun but one associated with it: *What you need is a hot cup of tea* (that is, a cup of hot tea); *The prisoner was in the condemned cell* (the prisoner was condemned, not the cell). Such expressions as a *sleepless night*, *the forgetful snow* are hypallages, in that they shift the sleeping and forgetting from a person to something inanimate. See PERSONIFICATION. (2) The reversal of the expected syntactic or semantic relation between two words: *her beauty's face for her face's beauty*. [STYLE]. T.MCA.

**HYPERBATON** [16c: through Latin from Greek *hyperbaton* stepping over. Stress: 'high-PER-ba-ton']. In rhetoric, the inversion of the usual or logical order of words, usually for emphasis, as in *This I really have to see*. It is common in traditional verse ('High on a throne of royal state . . . Satan exalted sat': Milton, *Paradise Lost*, 1667), in colloquial usage (*Fred his name is*), and in ironical comment, especially in AmE under the influence of Yiddish (*For this I came so far?*). Compare HYSTERON PROTERON, INVERSION. [STYLE]. T.MCA.

**HYPERBOLE** [16c: through Latin from Greek *hyperbolé* flung too far. Stress: 'high-PER-bo-ly']. A rhetorical term for exaggeration or overstatement, usually deliberate and not meant to be taken (too) literally: 'At Nineveh alone—the greatest archeological discovery of all time—were found fifty thousand tablets' (R. E. Friedman, *Who Wrote the Bible?*, 1988); 'Old Celtic myths have been springing up around these hills and lakes since the very start of time' (Tom Davies, 'Home & Garden', *Times Saturday Review*, 18 Aug. 1990). Everyday idioms are often hyperbolic: *a flood of tears, loads of room, tons of money, waiting for ages, as old as the hills, having the time of one's life*. Their purpose is effect and emphasis, but frequency of use diminishes their impact. See EXAGGERATION. [STYLE]. T.MCA.

**HYPERCORRECTION**. (1) Over-correction resulting in usages that may be regarded as amusing, deplorable, and/or tokens of the insecurity that prompted it. In New York City, highly stigmatized pronunciations (represented in print as, for example, *Toity-Toid Street* for Thirty-Third Street) are popularly associated with Brooklyn (although they are widespread throughout the working class). Speakers who want to dissociate themselves from this accent often 'correct' all forms which contain *oi*, so that *toilet* becomes 'terlet' and *boil* becomes 'berl'. Having become aware of the stereotype, which suggests that *oi* is always an incorrect pronunciation of *er*, they try to eliminate it wherever it occurs. In cases like *terlet*, the resulting form is not only hypercorrect but non-existent in the speech they are trying to emulate. Such hypercorrections have often themselves become stereotypes and shibboleths. (2) A term used by some sociolinguists for instances in which speakers adopt forms closer to the standard than those they normally use. These forms are hypercorrect for such speakers, but exist normally in the speech of others: in New York City, the use of /r/ after vowels (as in *car, hurt*) has become the prestige norm and the working class tends to use /r/ more when speaking carefully, to such a

degree that they exceed the usage of the middle class. [EDUCATION, LANGUAGE]. S.R.

**HYPERMEDIA**. See HYPERTEXT.

**HYPERONYM**. See GENERIC, HYPONYM, SEMANTICS.

**HYPERTEXT** [1960s]. A term in computing for text made up of short units (typically a paragraph, or 24-line screen) between which the reader may jump using links assigned in advance. Unlike a book, in which the pages are in sequence, hypertext allows any of a number of pages to follow the one being read, and in any desired order. A hypertext system, such as *Apple Hypercard*, contains a great many *frames*, each of which normally contains one screenful of information. In each frame are several *buttons* or *arrows* which the reader can activate, and which call up another frame, in the same way as a cross-reference in ordinary text. Hypertext derives from an idea put forward in 1945 by the US computer designer Vannevar Bush; the term was coined by the US entrepreneur Ted Nelson. Brown U. in Providence, Rhode Island, has pioneered the use of hypertext in teaching, using its IRIS system, which includes pictures as well as text, in courses as diverse as English literature, anthropology, and cell biology. Such systems, which may include sound recordings, are known as *hypermedia*, and may include links between different sources and types of sources of information, such as continuous texts, dictionaries, and maps and illustrations of various kinds. See MULTIMEDIA, THEMATIC ORDER. [EDUCATION, MEDIA, TECHNOLOGY]. M.L., T.MCA.

**HYPHEN** [16c: from Late Latin *hyphen*, Greek *huphén* together, from *hupo-* under, *hen* one]. The punctuation mark (-), which has two main functions in present-day English: as a *link hyphen* (or *hard hyphen* in printing terminology), joining whole words or elements of words into longer words and compounds (*house-plant, Anglo-French*); as a *break hyphen* (or *soft hyphen*), marking the division of a word at the end of a line, especially in print (*divi-sion, liter-ature*).

**The link hyphen**. The use of the hyphen to mark compound words has existed in English since the 16c, and from an earlier date in various forms in words such as *to-day* and *with-out*. It has always been variable and unpredictable. In recent use, it appears to be diminishing in some circumstances: for example, when the elements of a compound are monosyllabic (*birdsong, eardrum, playgroup; lambswool*, formerly *lamb's wool*), in longer formations where the elements are regarded as closely associated (*businesswoman, nationwide*); where the two elements

are regarded as having equal semantic weight, with the first acting as a modifier, forming a spaced pair (*road sign, snow goose*); and in prefixed forms such as *coordinate* and *reuse*. The absence of the hyphen in such cases is well established in AmE, and is becoming more common in BrE. The hyphen continues in BrE and AmE in both routine and occasional couplings when the elements seem to retain a stronger individual identity, and in ad-hoc formations: *boiler-room, filling-station*. In the second of these, *filling* is a noun ('a station for filling') and not a participle ('a station that fills'), which the absence of a hyphen might imply. Usage, however, is rarely consistent or completely logical in this regard. A hyphen is often retained to avoid awkward collisions of letters, as in *breast-stroke, co-worker, and radio-isotope*, but usage varies even in these cases, often in keeping the elements of compounds separate (*breast stroke, radio isotope*), and occasionally merging them (*breaststroke, radioisotope*).

The link hyphen also has a role in punctuation: (1) To establish such syntactic links as *truck-driver, labour-saving, and brown-eyed*. In the phrases *hard-covered books* and *French-speaking visitors*, the reference is to 'books with hard covers' and 'visitors who speak French'; here, hyphenation prevents misunderstanding and parallels the stress patterns of speech: *hård-covered bóoks* and *Frénch-speaking péople* as opposed to *hard cóvered bóoks* and *French spéaking péople*. (2) To form expressions with a phrasal base, such as *drink-affected* (affected by drink), *weed-infested* (infested with weeds), and *panic-stricken* (stricken by panic). (3) To avoid ambiguity in *twenty-odd people* (compare *twenty odd people*). (4) To connect the elements of associated words used attributively as in *a well-known woman* and *Christmas-tree lights*, but not predicatively as in *the woman is well known* and *the lights on the Christmas tree*. (5) Connecting nouns in apposition that form a single concept, such as *city-state* (a city that is also a state) and *player-manager* (a manager who is also a player), and in units such as *passenger-mile* (a mile travelled by one passenger: a statistical usage). (6) Connecting elements to form words in cases such as *re-enact* (where the collision of the first and second *e* might be awkward), *re-form* (meaning 'to form again' as opposed to *reform*), and some prefixed words such as those in *anti-, non-, over-, and past-*. Usage varies in this regard, especially as between BrE and AmE. In AmE, solid forms such as *reenact* and *nonstandard* are common. In general terms, a great deal depends on how established and recognizable a formation is: when the second element begins with a capital letter, a hyphen is usual, as in *anti-Darwinian*. There are no hard-and-fast rules.

**The break hyphen.** The hyphen is used to divide a word at the end of a line, especially in print when words are spaced out to fill lines with justified margins. In handwritten texts, typed or word-processed material, and unjustified print, word-breaks can usually be avoided. In print, it has traditionally been a matter of pride with printers and publishers to ensure a careful division of words when line-breaks occur, taking account of the appearance and structure of the word. There are two basic approaches, *phonetic* (in terms of syllable structure) and *morphological* (in terms of word structure). Broadly, AmE favours a phonetic approach (preferring *triumphant* to *triumph-ant*), while BrE has usually given greater weight to a morphological approach, although preferences are widely varied (*vegetable, vege-table, ve-ge-table*). Newspapers in all English-speaking countries tend to produce word divisions that reflect neither criterion (such as *bat-hroom, se-arched, da-ily*), usually because the line-breaks in their computer typesetting programs are based on fairly crude principles such as division between two consonants. The traditional aim of word division at line-breaks is to distract the reader as little as possible: 'a brutish word-break is a frontal attack on the sensibilities of the ordinary reader' (Ronald McIntosh, *Hyphenation*, 1990). See COMPOUND WORD, DI(A)ERESIS, OBLIQUE, PHRASE WORD, PUNCTUATION, SENTENCE WORD, SYLLABICATION/SYLLABIFICATION. [STYLE, USAGE, WRITING]. R.E.A.

**HYPONYM** [1960s: on the model of *homonym, synonym*, using the Greek prefix *hypo-* under]. Also **subordinate term**. A word, phrase, or lexeme of narrower or more specific meaning that comes 'under' another of wider or more general meaning: for example, *rose* under *flower* ('a rose is a kind of flower', 'flowers include roses and tulips'). In this relationship, the word *flower* is a *hyperonym, generic term, or superordinate term*. Many hyponyms belong in groups, such as *carpet, chair, desk, table, rug, stool*, all of which are *co-hyponyms* of the hyperonym *furniture* ('a carpet is an item of furniture'). Hyponymic relations are often imprecise, unstable, and multi-dimensional, depending on both context and how relationships are analysed. The same word may be a hyponym of several superordinates: *axe* as 'kind of tool' and 'kind of weapon'; *weapon* also a hyponym of *tool* ('a weapon is a kind of tool'). *Battle-axe* is 'a kind of axe' and 'a kind of weapon', but is unlikely to appear under *axe* in the sense of 'a kind of tool'. *Rug* is in some contexts a synonym of *carpet* ('The cat sat on the rug/carpet'), in others a hyponym of *carpet* ('a rug is a kind of carpet'). See -ONYM, SEMANTICS, SENSE. [LANGUAGE, WORD]. T.MCA.

**HYPOTAXIS** [19c: through Latin from Greek *hypótaxis* under-arrangement]. A traditional term for *subordination*. See SUBORDINATION. Compare PARATAXIS. [GRAMMAR]. T.MCA.

**HYSTERON PROTERON** [16c: through Latin from Greek *hústeron próteron* the later first: that

is, the cart before the horse]. (1) In rhetoric, a reversal of the expected order of words: *raining cats and dogs* changed for effect to 'raining dogs and cats'. (2) In logic, a fallacy in which the proposition to be proved is assumed as a premiss, or the conclusion comes before the premisses. Compare HYPERBATON, INVERSION. [LANGUAGE, STYLE]. T.MCA.

# I

**I, i** [Called 'eye']. The 9th letter of the Roman alphabet as used for English. It originated in the Phoenician symbol *yod* (representing the sound of *y* in *yes*) which was adapted in Greek to a vertical line for the vowel called *iota*. This was adopted by the Romans as *I* with both long and short Latin vowel values, and also for the consonant value of *y*. In medieval times, a superscript dot was added to distinguish minuscule *i* in manuscript from adjacent vertical strokes in such letters as *u*, *m*, *n*. The variant form *j* emerged at this time and subsequently became a separate letter.

**Sound values.** It is difficult to fix a precise primary value for *i* in English. There is free variation between different values of *i* in the first syllable of words such as *digest*, *finance*, *minority*, *tribunal*. Elsewhere, there is a regular shift between related words: *child/children*, *five/fifth*, *crime/criminal*, *finish/final(ity)*, *social/society*, *admire/admirable*. Variation in sound is overlaid by two uncertainties in spelling: except word-initially, both *i* and *y* can represent the same sound, even as alternatives: *gipsy/gypsy*, *siphon/syphon*, *laniard/lanyard*, *drier/dryer*. Many spellings are available for the one sound in the final syllables of *souvenir*, *Kashmir* (contrast *cashmere*), *cavalier*, *weir*, *musketeer*, *sincere*, *appear*. The result is a varied distribution of values, as follows:

**Short I.** (1) In most monosyllabic words before pronounced word-final consonants: *ill*, *in*, *is*; *bid*, *big*, *bit*; *which*, *sing*, *dish*, *with*; *fifth*, *milk*, *kiln*, *film*, *filth*, *wind* (noun), *link*, *hint*, *plinth*, *lisp*, *list*. However, long *i* occurs in this position in *pint*, *ninth* and *child*, *mild*, *wild* (but not *build*, *gild*, *guild*) and in *bind*, *find*, *kind*, *wind* (verb), etc. Short *i* occurs in *give*, *to live*, but long *i* in *dive*, *five*, *alive*. Similarly, short *i* occurs in *river*, *liver*, but long *i* in *diver*, *fiver*. (2) In most polysyllables before a doubled consonant (*bitter*, *bitty*, *cirrus*,

*irrigate*, *immigrant*) and commonly before single consonants (*city*, *finish*, *spirit*, *river*, *consider*, *imitate*, *iridescent*, *limit*, *litigation*, *magnificent*, *ridiculous*). (3) Occasionally before a consonant and word-final *e* (*give*, *live*, *active*, *heroine*, *imagine*, *definite*), although *i* is normally long in this environment. (4) The sound of short *i* is often spelt with *y*, especially to represent the Greek letter upsilon, as in *myth*, *symbol*. Other vowel letters may also have this value: *e* in *pretty* and Greek-derived words such as *acme*, *catastrophe*; *o* in the plural *women*; *u* in *busy*, *business*. Certain unstressed vowels vary in pronunciation between short *i* and other values, especially schwa: *a* as in *furnace*, *cottage*, *e* as in *began*, *despair*, *hated*, *college*, *u* as in *lettuce*, *minute* (noun). (5) In RP, a modified short *i* occurs before single *r*, when *ir* is not directly followed by another vowel: *sir*, *stir*, *bird*, *girl*, *squirm*, *first*, *birth*, *circle*, *virtue*. The same modification occurs with the short values of *e*, *u*, *y*, producing the homophones *birth/berth*, *fir/fur*. (6) The letter *i* does not occur word-finally in traditional English spelling, its sound being represented by *y*, but such a short *i* or a lengthened variant (depending partly on accent) is found in some recent formations and loans: *taxi*, *safari*, *spaghetti*. A length distinction between this value and short *i* may be heard in *taxiing*, a distinction some speakers also make between the two vowels of *city*.

**Long I.** (1) Monosyllables and disyllables before one or sometimes two consonants preceding word-final *e*: *ice*, *tribe*, *wife*, *like*, *pile*, *time*, *fine*, *ripe*, *mire*, *kite*, *strive*, *size*; *idle*, *rifle*, *isle*, *title*, *mitre*. (2) In disyllabic verbs ending in a stressed Latin root, whose corresponding nouns often have short *i*: *ascribe/ascription*, *collide/collision*, *decide/decision*, *invite/invitation*, *provide/provision*, *reside/residence*. (3) In monosyllables before: *-gh* (*high*, *sigh*, *fight*, *plight*, *height*,

## THE CAPITAL LETTER

EARLY FORMS			CURRENT FORMS		
Phoenician	Greek	Etruscan	Roman (Latin)	roman	italic

𐤀    Ϟ |    |    |    I    I

## THE SMALL LETTER

EARLY FORMS			CURRENT FORMS	
Roman cursive	Roman uncial	Carolingian minuscule	roman	italic

|    |    i    i

*sleight*, but not otherwise after *e*: (*weigh, sleigh, eight, freight*); *-ld* (*child, mild, wild*, but not *build, g(u)ild*); *-nd* (*bind, blind, find, grind, hind, kind, rind, wind* (verb)); and in a single case each *-nt* (*pint*), *-nth* (*ninth*), and *-st* (*Christ*). Note also *whilst*. In monosyllabic and disyllabic roots, a following silent consonant sometimes signals the long value: *-g* (*align, benign, consign*), *-b* (*climb*), *-c* (*indict*), *-s* (*island, viscount*). (4) In many polysyllables with initial stressed syllables: *library, iron, island, item, final, libel, license, private, ivy, tidy* (but contrast *privy, city*). (5) The long value is not always stable: sometimes it remains in derivatives while losing stress (*final/finality, irony/ironic, library/librarian, virus/virology*), elsewhere becoming short while stress is retained (*arthritis/arthritis, bronchitis/bronchitic*, BrE *private/privacy*). (6) In initial stressed syllables directly followed by another vowel: *client, dial, diamond, diet, friar, ion, science, triangle, triumph*. The long *i* is kept when the stress shifts in derivatives: *science/scientific, triangle/triangular, triumph/triumphant*. (7) In some unstressed suffixes of Latin origin, such as *-ide* (*cyanide, sodium chloride*) and *-ite* (*Israelite, finite*, but optionally short in *plebiscite*). In other suffixes, usage varies. Long *i* occurs in *-ile* in BrE but generally not in AmE, which has a schwa or a syllabic consonant: *fertile, hostile, missile, volatile*. Long *i* occurs in such animal-related adjectives as *aquiline, bovine, equine*, but short *i* commonly in such general adjectives as *feminine, genuine, masculine* (although long *i* can also occur, especially in ScoE). Latin endings in *i* usually have long value (*alibi, fungi, termini*) as do Greek letter names (*pi, phi, psi, chi/khi*). (8) A unique spelling is *choir*, changed from *quire* to reflect its derivation from *chorus*.

**Continental I.** This is the 'ee' value of Middle English *i* before the Great Vowel Shift. It is found in recent loans from the Romance languages (*pizza, police, fatigue, routine, souvenir, mosquito*) and elsewhere (*bikini, kiwi, ski*). Japanese Romaji spellings also accord *i* this value: *Hirohito, Mitsubishi*. In final position in French loans, the *i* may be followed by a silent letter: *debris, esprit*. The spelling of this vowel sound in earlier French loans has been Anglicized as *ea* and *ee*: *league, esteem, canteen*. This value also occurs in native English words and older loans with the medial digraph *ie*: *field, fiend, frieze, grief, mien, piece, priest, shriek, siege*. A following *r* modifies this value in RP, but otherwise *bier, pierce, cashier* belong in this category. Occasionally the *ee* value of the *ie* may be shortened in speech to short *i*: *mischief*. The *ie* in *sieve* always has short value, and the *e* value in *friend* is exceptional.

**Unstressed I.** In unstressed position, *i* is commonly reduced to schwa, though in some accents, notably RP, tending towards its short value: *sordid, plaintiff, porridge, vestige, nostril, denim, raisin, tapir, premiss, limit, satirist, admiral, admiration*.

**Silent I.** (1) In the second written syllable of *business* and, for some people, in *medicine*. (2) Before another vowel in the unstressed syllables of *cushion, fashion, parishioner*, and commonly in *parliament*.

**Variations.** (1) The letters *i, y* were interchangeable in Middle English and remain so in several pairs of alternatives: short value (*gipsy/gypsy, lichgate/lychgate, pigmy/pygmy, sillabub/syllabub, silvan/sylvan*); long value (*cider/cyder, cipher/cypher, dike/dyke, siphon/syphon*); contrasting *ie* and *y* (*bogie/bog(e)y, caddie/caddy, pixie/pixy*). BrE *tyre* contrasts with AmE *tire*. However, these alternatives are distinct from such homophones as *calix/calyx, chili/chilly, die/dye*. (2) There is standard variation between *y* and *i* when a suffix is added to a word that ends in *y*: *happy, happier, happiest, happily, happiness; pity, pitying, pities, pitied, pitiable, pitiful*. However, *busy* keeps *y* in *business*, to distinguish it from *business*. Sometimes there are alternative forms (*drier/dryer*), or there is no *i* form (*slyness* only), or no *y* form (*gaily, daily*). The verbs *lay, pay, say* change *y* to *i* in their past tense only: *laid, paid, said*. The verbs *try, deny*, adopt *i* in *trial, denial*. (3) The digraph *ie* has the value of long *i* in open monosyllables: *die, lie, tie*. Nouns and verbs whose base form ends in *y* with the value of long *i* inflect with *ie* when followed by *s* and *d*: *try/tries, simplify/simplified*. (4) *I* replaces *e* when suffixes are added to base words ending in *-ce*: *face/facial, finance/financial, space/spacious* (but note *spatial*). For alternative spellings such as *despatch/dispatch, enquire/inquire* see under *E*. (5) Some Latin singulars ending in *-us* substitute *-i* in the plural (*fungus/fungi, radius/radii, terminus/termini*). This is sometimes optional (*cactuses, cacti*) and may include controversial usages such as *syllabuses, syllabi* (there being no justification in Greek or Latin for the form *syllabi*). Some Latin singulars ending in *-is* may change to plural *-es*: *axis/axes, basis/bases, oasis/oases*.

**Other functions.** (1) A following *i* may soften (that is, palatalize) the letters *c* and *g*: *electric/electricity, rigour/rigid*. (2) When a vowel letter follows, *i* may soften a preceding consonant, but lose its own sound value: for example, *c* sounding like *sh* in *racial, electrician, conscience, suspicion, conscious*. Similar palatalization occurs with *d* (*soldier*), *s* (*vision*), *ss* (*mission*), *t* (*nation*). (3) In a similar position, *i* is silent after (soft) *g*:

*contagion, contagious, region, religion.* (4) In the system of English personal pronouns, the capitalized letter *I*, spoken with a long value, represents the first person singular. To represent distinctive pronunciations, however, such as in Scots and Southern AmE, the form changes to *Ah*. See ALPHABET, HARD AND SOFT, J, LETTER<sup>1</sup>, SPELLING. [WRITING]. C.U.

**IAMB**, also **iambus** [16c and 1830s: from Latin *iambus*, Greek *iambos* lame: that is, a weak step before a strong step. *Iamb* is pronounced 'I am' (stressing the first vowel, and with or without a closing /b/)]. A metrical foot of two syllables, short then long in quantitative metre, as in Latin, unstressed then stressed in accentual metre, as in English *begin* and *support*. The following lines of Gray's 'Elegy written in a Country Church-Yard' (1751) are in regular *iambic pentameter* (five iambs to the line):

∪   -   ∪   -   ∪   -   ∪   -   ∪   -   ∪   -   ∪   -  
 /The cur/few tolls / the knell / of par/ting day.  
 /The low/ing herd / wind slowly o'er / the lea.

The iamb is the most frequently used foot in English verse, in lines of various lengths, and is widely believed to fit the natural rhythm of the language. See FOOT, METRE/METER, SCANSION. [LITERATURE]. R.C.

**IATEFL**, short for *International Association of Teachers of English as a Foreign Language*, and pronounced 'Eye-a-teffle'. An association for teachers of English as a foreign or second language, founded in 1967 in London by William R. Lee, its chairman 1967–84. Its original name *Association of Teachers of English as a Foreign Language (ATEFL)* was changed in 1971. In 1989, it had 11 branches worldwide, 26 affiliated organizations (20 outside the UK), and a membership of 2,028 (60% outside the UK). The association is identified with the British tradition in EFL/ESL, and most of its members teach in such EFL countries as Germany, Italy, or Spain or such ESL countries as India, Nigeria, and Singapore. The association holds an annual conference and publishes the *IATEFL Newsletter*. With the British Council it sponsors the *English Language Teaching Journal (ELT Journal)*. In 1990, a collection of articles from the journal was published as *Currents of Change in English Language Teaching*, ed. Richard Rossner & Rod Bolitho. Compare TESOL. See TEFL, TESL. [EDUCATION, EUROPE, MEDIA]. P.S., T.MCA.

**IBERIAN LANGUAGES.** The languages of the Iberian peninsula, consisting of: (1) The Romance languages *Castilian Spanish, Catalan* in north-western Spain and Andorra, *Gallego* in Galicia, and *Portuguese* in Portugal. (2) *Basque*

in Spain, a language apparently unrelated to any other in Europe, spoken along the eastern Bay of Biscay and in the western Pyrenees, as well as in neighbouring France. (3) *English*, used in Gibraltar since 1713, in recent decades among expatriate Britons in resorts for the retired along the Mediterranean littoral, and in the Douro valley of Portugal, among the long-established British families that make port wine. (4) *Arabic*, was widespread during the Middle Ages. See ARABIC, BORROWING, ENGLISH, EUROPEAN LANGUAGES, GIBRALTAR, PORTUGUESE, SPANISH. [EUROPE, LANGUAGE]. T.MCA.

**IBO.** See IGBO.

**ICELANDIC** [17c]. The Germanic language of Iceland. Old Icelandic embodies records of early Scandinavian literature, and some of its sagas refer to events in England and to early Scandinavian links with Britain. Modern Icelandic has two alphabetic letters, *thorn* [þ] and *eth* [ð], borrowed from Old English. A strong purist tradition attempts to exclude foreign influence, but the influence of English is increasing, especially on television. See BORROWING, CRAIGIE, ETH, SAGA, SCANDINAVIAN LANGUAGES, THORN. [EUROPE, LANGUAGE]. P.C.

**ICON** [16c: through Latin from Greek *eikōn* likeness, image]. Also **ikon**. (1) A picture or image, especially a saint painted on a wooden panel and venerated in Orthodox Christianity. If something is *iconic*, it represents something else in a conventionalized way, as with features on a map (roads, bridges, etc.) or onomatopoeic words (as for example the words *kersplat* and *kapow* in US comic books, standing for the impact of a fall and a blow). *Iconography* is: the study of imagery in the visual arts; symbolic representation through images; or a group or system of iconic representations. (2) An archetypal image: 'It is hopeless to retreat from the problem of racism to [Margaret] Mitchell's personal and Scarlett's fictional struggles against the role of the "icon" the "Southern Lady", a figure utterly entangled with the practice of slavery' (Patricia Storce, *The New York Review of Books*, 19 Dec. 1991). (3) A person regarded as embodying a certain quality, style, or attitude in a distinctive, often charismatic way: 'When Spike Lee, America's hottest black film director, decided to make a film about Malcolm X, the country's most controversial black icon, Hollywood sensed a blockbuster' (John Cassidy, *The Sunday Times*, 11 Aug. 1991). (4) A stylized symbol, especially in computing: a small image on a screen representing a function or an option, such as a paintbrush (representing and permitting a painting-like activity on screen) or a wastebasket

(representing and permitting the erasure of material). Commonly, a program is started, a file obtained, etc., by pointing an arrow-like cursor at one icon in a menu-like group, generally using a hand-held mouse to move the cursor and activate the icon. Compare ARCHETYPE, IMAGE, SIGN, SYMBOL. See SEMIOTICS. T.MCA.

**ICTUS** [18c: Latin, a beat or stroke]. In prosody, the name for stress on a syllable in a line of verse (sometimes marked with an acute accent), and for the stressed syllable itself. The ictus usually coincides with normal speech stress, but pronunciation may be wrenched for effect, as with *missionary* in the 19c lines attributed to Bishop Samuel Wilberforce and less violently in *navy* in those of W. S. Gilbert:

If I were a cassowary  
On the plains of Timbuctoo,  
I would eat a missionary  
Cassock, bands and hymn-book too.

And I copied all the letters in a hand so free  
That now I am the ruler of the Queen's Navy.  
(W. S. Gilbert, *H.M.S. Pinafore*, 1878)

Historical changes in stress may cause ictus and ordinary pronunciation to conflict for a later generation, sometimes with an effect on rhyme, as at the ends of lines 2 and 4 in John Donne's 'The Funerall' (c.1605):

For 'tis my outward Soule,  
Viceroy to that, which unto heaven being gone,  
Will leave this to controule,  
And keep these limbes, Her Provinces, from  
dissolution.

Donne's *dissolution* had five syllables, with a stress on the last. See ACCENT, METRE/METER, RHYTHM, STRESS, THESIS. [LITERATURE]. R.C.

**IDEA** [15c: through Latin from Greek *idéa* sight, shape, form, model. Cognate with Latin *videre* to see, Sanskrit *vēda* vision, knowledge]. Something present in or perceptible to the mind. The Greeks took the concept of something seen and applied it metaphorically to something 'seen' with the mind's eye: that is, an *image*, as in *imagination*. In the philosophy of Plato (5/4c BC), the Ideas or Forms are perfect, abstract essences that lie 'behind' everyday existence; only they are real, and their reflections in this world are imperfect shadows. Generally, in current usage, an idea is less mystical and more immediate: an original thought or mental characterization with the potential of making things happen: for example, the conception of a wheel before the making of the first actual wheel. Compare ARCHETYPE, FORM, IMAGE. [LANGUAGE]. T.MCA.

**IDEOGRAM**. See WRITING.

**IDIOLECT** [1940s: from Greek *idios* personal, and *-lect* as in *dialect*]. In linguistics, the language special to an individual, sometimes described as a 'personal dialect'. See DIALECT, ENGLISH, LECT. [LANGUAGE]. T.MCA.

**IDIOM** [16c: from Latin *idioma*, Greek *idiōma* specific property, special phrasing, from *idios* one's own, personal, private]. Also (archaic) **idiotism**. (1) The speech proper to, or typical of, a people or place; a dialect or local language; the unique quality or 'genius' of a language: *classics in the Tuscan idiom*. (2) An expression unique to a language, especially one whose sense is not predictable from the meanings and arrangement of its elements, such as *kick the bucket* a slang term meaning 'to die', which has nothing obviously to do with kicking or buckets. In linguistics, the term *idiomaticity* refers to the nature of idioms and the degree to which a usage can be regarded as idiomatic. Some expressions are more holophrastic and unanalysable than others: for example, *to take steps* is literal and non-idiomatic in *The baby took her first steps*, is figurative, grammatically open, and semi-idiomatic in *They took some steps to put the matter right*, and is fully idiomatic and grammatically closed in *She took steps to see that was done*. These examples demonstrate a continuum of meaning and use that is true for many usages. No such continuum exists, however, between *He kicked the bucket out of the way* and *He kicked the bucket last night* (meaning 'He died last night'). Such idioms are particularly rigid: for example, they cannot usually be passivized (no \**The bucket was kicked*) or otherwise adapted (no \**bucket-kicking* as a synonym for *death*).

**Creative adaptations**. Although idioms are normally simply slotted into speech and writing, they are occasionally subject to creative word-play. The phrase *on the other hand*, a convention in the presentation of contrasting information (*on the one hand, . . . on the other hand*), is radically adapted in the following statement, from an article about animals:

A female needs an area which will provide enough food and denning sites for raising kittens, even in a year when food is in short supply. On the other paw, a male has a very much larger home range, which usually overlaps with those of several females ('Just like Lions', *BBC Wild Life*, Jan. 1989).

The phrase *the tip of the iceberg* is similarly adapted in:

The Senate committee is also investigating charges that the Mafia had infiltrated the tribal bingo games in 12 of the 90 Indian reservations in America and skimmed \$700,000 a year of the bingo profits. But this was just the tip of the teepee. Chief MacDonald managed to reduce the accumulated wealth of the Navajo nation from \$100 million to a current pool of around \$18

million ('Big Mac in heap big trouble', *Sunday Telegraph*, 12 Feb. 1989).

**Spliced idioms.** It is not unusual for even fluent speakers in the heat of conversation to blend or splice two idioms or collocations whose forms and meanings are similar. The following specimens were collected in the late 1980s: 'That seems an interesting step to go down' (splicing *step to take* and *road to go down*); 'He stuck his ground' (splicing *stuck to his guns* and *stood his ground*); 'Language plays a decisive factor here' (blending *is a decisive factor* and *plays a decisive role*); 'Bush did lance the bubble of damaging speculation' (blending *lance the boil* and *burst the bubble*).

**IDIOTISM.** See IDIOM.

**IDYLL**, also *idyl* [16c: from Latin *idyllium*, Greek *eidúllion* a little form. Pronounced both 'EYE-dil' and 'iddle']. (1) A work in verse or prose that describes pastoral scenes or events, usually simple, charming, and depicting happy people in beautiful rustic surroundings. (2) A time of great ('idyllic') pleasure, especially in the country or away from everyday life, often including a romantic affair. See PASTORAL. [LITERATURE].

T.MCA.

**IELTS**, full form *International English Language Testing System*. Also the *IELTS test*. A test of proficiency in English developed in the late 1980s for non-native speakers who wish to study at institutions of higher learning in English-speaking countries. In the UK, it replaces the *ELTS (English Language Testing Service)* of the British Council and is administered by UCLES; in Australia, it replaces the Government's *SST (Short Selection Test)* and is

administered by the IDP (International Development Program of Australian Universities and Colleges). The test is scored in bands from 1 to 9, candidates receiving a result for each of the four skills (listening, speaking, reading, writing), averaged out to produce a final score. In most cases, a pass mark is 6 or 6.5. There are four modules, three academic (A for Physical Sciences and Technology, B for Medical and Life Sciences, C for Arts and Social Sciences) and a less demanding General Training or GT Module (highest band 6) for candidates seeking to enter secondary education or non-formal courses. See BRITISH COUNCIL, EXAMINING IN ENGLISH, UCLES. [EDUCATION, EUROPE, OCEANIA].

**I-LECT.** See RASTA TALK.

**ILLITERACY** [17c: from Latin *illitteratus* unlettered]. The inability to read or write, or the actual or perceived state of being uneducated or insufficiently educated. Social judgement is so powerfully built into the term *illiterate* that scholars now generally use more neutral terms, such as *non-literate* (for societies and individuals for whom literacy is not a relevant issue) and *pre-literate* (for societies and conditions before literacy emerged or was encountered and adopted). Formerly, the term *illiterate* was used to describe someone without book learning or a liberal education (especially in classical Latin and Greek), even though such a person could read in a vernacular language or handle accounts and correspondence. Expressing this view in his *Letters* (no. 152, 1748), Lord Chesterfield wrote: 'The word *illiterate*, in its common acceptation, means a man who is ignorant of those two languages', that is Latin and Greek. However, the word also carried the connotation of 'unpolished', 'ignorant', or 'inferior', as in 'the disadvantage of an illiterate education' (Edward Gibbon, *The Decline and Fall of the Roman Empire*, volume 2, 1781, p. 75).

**Attitudes.** As schooling moved away from the classical languages, the term came to mean inability to sign one's name (generally on a marriage or a census document) or to read a simple passage. Attitudes have been inconsistent: while works like Wordsworth's 'The Solitary Reaper' (1807) and Mark Twain's *The Adventures of Huckleberry Finn* (1885) have idealized the unlettered in comparison to the dishonest, weak-willed scholar, others have asserted: 'There is no manner of Competition between a Man of Liberal Education and an Illiterate' (Sir Richard Steele, *Tatler* 200, c.1710). The term *illiterate* has been widely used pejoratively for usage which,

though literate, has not measured up to the standards or expectations of the person commenting. *Semi-literate* is similarly employed: 'an illiterate style', 'a semi-literate letter'. Because of the prestige of literacy and its influence on patterns of speech, some observers have attacked 'illiterate speech', and on occasion writers of guides to 'good' English have employed such phrases to persuade readers away from certain usages: 'The first principle of illiterate speech—emphasis by repetition—is evident not only in grammatical patterns but also in phraseology; the basement-level speaker frequently iterates an idea and then immediately reiterates the very same idea in slightly different words. He is not quite sure you will understand him until he has said a thing at least twice' (Norman Lewis, *Better English*, 1956).

**Statistics.** In recent years, the term has been used to describe the condition of people unable to cope with printed materials relevant to their needs (*functional illiteracy*) and people unacquainted with the canon and conventions of an educated populace (*cultural illiteracy*). Precise descriptions and accurate estimates of illiteracy of any kind in English-speaking countries are difficult to obtain because of a growing trend to differentiate between total or near illiteracy and functional illiteracy. Although UNESCO figures in 1983 indicated near-zero illiteracy in Western Europe and North America, levels are generally agreed to be much higher, owing to the under-representation of poor, minority, and immigrant groups in estimates. In the US, estimates have varied (depending on the criterion used) between 10% and 20% of the population (c.30m people). The 1981 Canadian census found that 22% or c.4m people over the age of 15 were 'functionally illiterate' and a fifth of these 'completely illiterate'. In Australia in the late 1970s, the figure was around 14%, or over 1m, and in the UK the most commonly cited figure in the 1980s was 3.5% or 2m, although a 10% estimate has also more recently been made. It is unlikely that any of these figures can be taken at face value, but they suggest perceptions of the problem.

**Changing levels.** Although illiteracy is not new, social changes have altered its significance. In the 1950s, the inability to read or write was not in itself detrimental to achievement, but in an increasingly technological society illiteracy usually limits employment and advancement. David Crystal has pointed out that, in the developed countries, it is becoming more rather than less difficult for 'illiterate' or 'semi-literate' people to achieve an acceptable standard of literacy:

A democratic society and a free press presuppose high general literacy levels. There are now more diverse and complex kinds of matter to read, and people are obliged

to read more if they want to get on. People who had achieved a basic literacy are thus in real danger of being classed as illiterate, as they fail to cope with the modern everyday demands of such areas as the media, business, bureaucracy, and the law. As a result of literate society continually 'raising the ante', therefore, the illiteracy figures rise, and the gap between the more and the less developed countries becomes ever wider ('Literacy 2000', *English Today*, Oct. 1986).

The inability to read and write not only prevents people from functioning fully within their communities, but also exerts an influence on national priorities and the use of human and material resources. See LITERACY, READING. [EDUCATION, WRITING].

R. W. B., T. MCA.

**ILLOCUTION(ARY).** See LOCUTION, SPEECH ACT.

**IMAGE** [12c: through Old French from Latin *imago/imaginis* likeness, statue, picture, idea, phantom, shadow: cognate with *imitate*]. (1) A likeness, in the form of a statue, drawing, painting, or photograph, or as seen in water, a mirror, or a polished surface. (2) The area of a printing plate that is reproduced on paper, etc. (3) Also *master image*. In photo-typesetting, the original representation from which a typeset character is reproduced. (4) A mental representation of something; an idea or conception. (5) In the media, advertising, politics, and the like, 'a body of impressions, feelings, or opinions regarding a company (*corporate image*) or other entity as held by its public' (Richard Weiner, *Webster's New World Dictionary of Media and Communications*, 1990). In this sense, a lack of fit is often cynically assumed to exist between public face and private reality, due to misperception or misrepresentation. Consultants may be employed to provide a corporation with a fresh image: 'BT has been working with Wolff Olins, the leading corporate image-makers, for nearly two years, and asserts that a new image was needed to enable the company to be recognised as a "major global player". . . . The company's 92,000 public payphones will get new decals and its 90 shops will have to be changed, right down to the yellow door handles. More than 50,000 employees are likely to need new uniforms or "image clothing"' (Mark Skipworth on British Telecom, *Sunday Times*, 6 Jan. 1991). (6) In rhetoric and literary criticism, a figure of speech such as metaphor or simile: 'Marauders, bullies, thieves and plunderers ready to abuse those rules are never in short supply. In Churchill's vivid image, they move constantly through our common household, trying the doors to see whether they are locked' (E. M. Yoder, *International Herald Tribune*, 5 Sept. 1990). Such figures are collectively referred to as *imagery*; they may be single or

composite, and are often extended through several complex sentences:

The English language is like a river—a mighty Amazon among rivers, springing from many sources and drawing nourishment from many tributaries. By the 8th century the main stream could be discerned in the Old English spoken by Anglo-Saxons. When we speak of *man*, *woman*, and *child*, of *bread* and *meat* we are using their tongue. The powerful tributary that came in from France after the Norman Conquest gave us *male*, *female*, and *infant*, and a host of other words including *crust* and *beef*. Latin, Old Norse, German, Arabic and many other languages all added their contributions. Downstream, the river broadened as it was joined by tributaries carrying the languages of science, technology, economics, sport, and other specialised areas of life. In recent years these streams have contributed words and phrases such as *quasar* and *quango*, *black hole* and *biodegradable*, *hang-gliding* and *hard-wired*. As the river flowed on, it branched into a delta, with channels carrying the varieties of Australia, New Zealand, India, South Africa, the Caribbean, Canada, the United States and others, along with the mother tongue down to the sea of world English (Robert Ilson, preface, *Reader's Digest Great Illustrated Dictionary*, 1984).

See ANALOGY, ARCHETYPE, CONCEIT, DEVICE, FIGURATIVE LANGUAGE/USAGE, FORM, ICON, IDEA, IMAGINATION, LOGO, METAPHOR, POETRY, ROMANCE, ROMANTICISM, SHAKESPEARE, SIMILE, TIMESPEAK. [MEDIA, STYLE, TECHNOLOGY].

T.MCA.

**IMAGERY.** See IMAGE.

**IMAGINATION** [14c: from Latin *imaginatio/imaginatio* forming images in the mind, fancy, fantasy]. The act or process of thinking in images and visions, often resulting in or expressed through art, literature, and figurative usage. The effects of imagination can be both positive and negative: 'Men may dyen of ymaginacion / So depe may impression be take' (Chaucer, *The Miller's Tale*, c.1386); 'The Imagination is one of the highest prerogatives of man. By this faculty he unites, independently of the will, former images and ideas, and thus creates brilliant and novel results' (Charles Darwin, *The Descent of Man*, 1871). See FANTASY, IMAGE, ROMANCE. [LITERATURE, STYLE].

T.MCA.

**IMPERATIVE** [16c: from Latin *imperativus* expressing a command, translating Greek *prostaktikē*]. The mood of the verb used to express commands ('Go away'), requests ('Please sit down'), warnings ('Look out!'), offers ('Have another piece'), and entreaties ('Help me'). Sentences with an imperative as their main verb require the person(s) addressed to carry out some action. Hence, the subject of an imperative sentence is typically the second-person pronoun *you*, which is however normally omitted, as in

'Go away', but appears in the emphatic 'You do as you're told!' First- and third-person imperatives refer to the doer of the action or the requirement to perform the action less directly: 'Let's go now'; 'Someone close the window'. See MOOD. [GRAMMAR].

S.G.

**IMPERFECT RHYME.** See HALF RHYME.

**IMPERIAL** [14c: from *imperialis* relating to empire]. (1) Relating to empire: *His Imperial Majesty*. See IMPERIALISM. (2) A size of printing or drawing paper, 22 × 30 inches (56 × 76 cm) in Britain, 23 × 33 inches (58 × 84 cm) in the US and Canada. (3) A book size made from this paper. See BOOK, PAPER. [TECHNOLOGY].

T.MCA.

**IMPERIALISM** [1850s]. A term relating to empires and their institutions and trappings. *Imperialism* and *imperialist* can be used neutrally, to refer to any empire or imperial institution. In the 19c, they were often used positively, with regard especially to the achievements and interests of the European mercantile empires. Currently, the terms are generally perceived as negative, under the influence primarily of Marxist critics of empire, bourgeoisie, and capitalism, and have been used to refer not only to overt empires such as that of Britain, but also to countries seen as more covertly (but equally nefariously) imperial, such as the US. However, in places where people have sought to get rid of foreign domination, both words have become little more than easy terms of abuse.

**Imperial English.** The domination and exploitation that are inherent in any empire often come to be associated with the imperial language, as with Latin in the Roman and English in the British Empire. Because of the complex social and emotional relationships within an empire, there is often a love/hate relationship between subject peoples and the élite that rules them and therefore also between those peoples and the language of their servitude. This is especially so where some local people receive preference because of their usefulness and loyalty, are privileged by visits to the 'mother country', and provide their children with education in schools whose medium is the imperial language. As a result, even after the immediate pressures of empire have gone, post-colonial societies find that they can live neither with nor without the imperial language.

**Post-imperial English.** In India, the Philippines, and many other countries, decades after independence English continues to dominate politics, education, technology, law, and business, evokes memories of colonialism, and imposes various strains on societies often divided on ethnic

grounds as well as between a majority and an élite that has inherited many of the attributes and trappings of the erstwhile imperialists. Some Indians accuse Britain of ensuring that nearly 50 years after independence Indians must use English rather than an indigenous language to talk to other Indians. Philippine historians often accuse turn-of-the-century American military authorities of imposing English in order to keep Filipinos from communicating effectively in their own languages. Resentment against English-speaking political and economic élites easily translates into resentment against the language of post-imperial power. Class sentiments are therefore often displaced into linguistic attitudes. Political leaders may sometimes feel the advantage of easy access to a leading world language, but equally often are likely to envy such countries as Japan, Taiwan, and South Korea, whose economic success is associated with, if not actually attributed to, their linguistic nationalism. Intellectuals in post-colonial societies often see ex-imperial languages as preventing the intellectualization of vernaculars, such as Norman French in England first stunted then altered English. In a replay of the struggle of English to become a language of scholarship in a Latin-dominated world, national languages such as Malay and Filipino are deliberately being intellectualized by nationalist linguists and writers through expansions in words, styles, and domains (often drawing on the resources of English for this purpose, as English drew on Latin). In this struggle, the major field of combat is the school: for example, in the Philippines, the medium of instruction was predominantly English until 1974, when a Bilingual Education Policy (slightly revised in 1987) mandated the use of Filipino for some subjects, as well as local vernaculars at lower levels. By the late 1980s, leading universities were successfully expanding the number of subjects taught in Filipino.

**Competitors with English.** In some countries, English offers an escape route from ethnic conflicts: as a 'neutral' language in such countries as India, Nigeria, and the Philippines, it is said to be more widely acceptable than local alternatives. Nationalists argue, however, that there are often local languages that unify populations at least as well, and often in less psychologically damaging ways. An example is Filipino, despite resistance from northern Ilocanos and southern Cebuanos; it is now more widely spoken than English, Ilocano, or Cebuano. The success of the national varieties of Malay in Malaysia and Indonesia is also a case in point. Although English remains crucial to international trade and technology, Japanese currently outranks it in economic importance in Asia, despite the use

of Japanese as a short-lived imperial language during the Second World War. With Taiwan's expanding foreign investments, Mandarin Chinese has assumed increasing importance. The possibility of the Pacific Rim becoming 'the centre of the world' in the 21c might dislodge English as a second language from some of its post-colonial Asian strongholds, in favour of Japanese and Chinese (while it remains nonetheless the leading second language of the Chinese and Japanese themselves).

**Cultural hegemony.** It takes time for patterns of dominance to change, and it is not easy to assess the extent of the intellectual, social, and cultural hegemony exerted by a language like English. If the use of sexist or non-sexist expressions can indeed modify attitudes and behaviour towards women, one might then conclude that the use of a whole alien language can modify the attitudes and behaviour of an entire people: in 1973, at a conference in Nairobi on teaching literature, the Kenyan scholar Micere Mugo spoke of how reading the description of Gagool in Rider Haggard's *King Solomon's Mines* made her feel terrified of all old African women. Some non-native users of English advocate linguistic *détente*: watchful collaboration with a language only lately weaned, if weaned at all, from imperialism. They see the benefits of such collaboration in terms of a great good that is emerging from great ill, as English becomes the world's primary language. Other post-colonial observers, however, recall that to sup with the Devil one needs a long spoon. They warn against the linguistic unconscious of English, and that history's gift to the ex-colonial world may prove to be a Trojan horse. The Kikuyu writer Ngugi wa Thiong'o has described the predicament as follows:

The oppressed and the exploited of the earth maintain their defiance: liberty from theft. But the biggest weapon wielded and actually daily unleashed by imperialism against the collective defiance is the cultural bomb. The effect of the cultural bomb is to annihilate a people's belief in their names, in their languages, in their environment, in their heritage of struggle, in their unity, in their capacities and ultimately in themselves. It makes them see their past as one wasteland of non-achievement and it makes them want to distance themselves from that wasteland. It makes them want to identify with that which is furthest removed from themselves; for instance, with other people's languages rather than their own (*Decolonising the Mind*, 1986).

RACISM, SOYINKA, STREVENS. [AFRICA, AMERICAS, ASIA, EUROPE, HISTORY]. I.R.C., T.MCA.

**IMPLICATION** [15c: from Latin *implicatio/implicationis* an interweaving]. (1) The act, process, or result of implying (indicating indirectly that something can or should be understood in a particular way). This can be done by such means as tone of voice, facial expression, or what one chooses to emphasize or omit. (2) In logic, the relation between two propositions or classes of propositions, so that one can be deduced from the other: the implication of the statements *All men are mortal* and *Socrates is a man* is that Socrates is mortal. See IMPLICATURE, LANGUAGE UNIVERSALS, LOGIC. [LANGUAGE]. T.MCA.

**IMPLICATURE** [20c]. A term in logic for potential inference that is not logically entailed by what is said: A, asked about B's intelligence, says *He dresses well*. The inference is that B is not intelligent. See IMPLICATION, INFERENCE, LOGIC, PRAGMATICS, SEMANTICS. [LANGUAGE]. T.MCA.

**IMPRESSION** [14c in first use, 16c in these senses: from Latin *impressio/impressionis* pressing on]. (1) The process or result of printing from type, plates, engraved blocks, etc. (2) A printed copy produced in such a way. (3) One of a number of printings of a book or other item made from the same type, etc., without alteration: *A best-seller in its twentieth impression in one year*. Compare COPY, EDITION, IMPRINT. [MEDIA, TECHNOLOGY]. T.MCA.

**IMPRINT** [14c: from French *empreinte*, from *empreinter*, Latin *imprimere/impressum* to press on (something)]. (1) A mark made by pressure. (2) In bibliography, the name of a book's publisher shown on its title page or elsewhere, usually with place and year of publication; such information in a bibliographic entry. (3) The printer's name and address as displayed on any printed matter. (4) In publishing, the name by which certain books are identified, as being published by a company or a subdivision of a company: for example, *Penguin (Books)* as the name for most books published by the company of the same name, but *Pelican (Books)* as the name for a list of scholarly works put out by the same company. The names of associated imprints are often similar, as with *Penguin*, *Pelican*, *Puffin (Books)*. Compare COLOPHON, IMPRESSION. [MEDIA, TECHNOLOGY]. T.MCA.

**INCEPTIVE**, also **inchoative** [17c, 16c: from Latin *inceptivus* and *inchoativus* starting]. An aspect of the verb in some languages, indicating the beginning of an action, and corresponding to *be about to* in English: *They're about to leave*,

*so don't go away*. An inceptive or inchoative verb indicates that something is beginning: *darken* to grow dark, *thicken* to become thick. Here, *-en* is an inceptive or inchoative suffix. Compare CAUSATIVE VERB. [GRAMMAR]. S.G.

**INCHOATIVE**. See INCEPTIVE.

**INCLUSIVE LANGUAGE**, also **inclusive usage** [1980s]. Semi-technical terms for a use of language that includes rather than excludes particular groups, such as women and minorities: for example, the use of *humankind* or *people* rather than *mankind* or *men* when the whole human race is being discussed; the use of *Britain* rather than *England* when the entire UK is intended. See BIBLE, GENERIC PRONOUN, SEXISM. [STYLE]. T.MCA.

**INCUNABLE**, also **incunabulum** [19c: from the Latin plural *incunabula* swaddling clothes, beginnings, from *cunae* cradle]. A technical term for a book printed before 1501. See BOOK, LIBRARY OF CONGRESS. [TECHNOLOGY]. W.W.B.

**INDEFINITE ARTICLE**. In English grammar, the term for *a* and *an* when used to introduce a noun phrase: *a cup of coffee* or *an angry reply*. *A* occurs before consonant sounds (*a garden, a human, a use*) and *an* before vowel sounds (*an orange, an hour, an uncle, an MP, an SOS*). *An* is sometimes used before certain words beginning with an *h*, such as *an hotel, an historian*, particularly if the *h* is not pronounced. Some, however, pronounce the *h*, giving rise to controversy and being regarded by some others as slightly pretentious or precious. See ARTICLE<sup>1</sup>, H. [GRAMMAR]. S.G.

**INDENTING** [18c: from *indent* to form a recess, a back-formation of *indented* having notches like teeth, from Latin *dens/dentis* tooth]. Also **indentation**, **indention**. The practice of setting a line of text further from the left margin than other lines, especially to start a paragraph. A poem or other block of text, especially a quotation, may also be indented so as to make it stand out from the surrounding text. Indenting is common in dictionaries and indexes, where it usually reverses the practice for text, effectively indenting every line except that of the headword. The space left by indenting is an indent(at)ion. See PARAGRAPH. [TECHNOLOGY, WRITING]. T.MCA.

**INDEX** [14c: from Latin *index/indicis* a pointer, guide. The plural is *indexes* for the linguistic senses, *indices* for the mathematical senses]. (1) A usually alphabetical list of words, names, topics, or other items, usually with the numbers of the pages of the book or books in which the

items are mentioned. Indexes vary considerably in the amount of detail they include, and can be divided into separate lists of subjects, persons, places, etc., according to the requirements of the work in question. They are usually either part of the back matter of a book or in a special volume associated with a set of books. In research work, filing systems, and lexicography, *index cards* are often used to store information in a *card index*.

(2) Any similar sequence of material in alphabetical or numerical order. (3) In computing, a value that identifies and locates an element in an array of data, or a table that contains such values. (4) Also *fist hand*. In printing, a sign in the shape of a hand with the forefinger (*index finger*) extended, used to point to a note, caption. (5) A sign, token, indicator: *Their clothes are an index of how rich they are*. (6) A list of publications or other material forbidden or restricted by a religion or political group (from the *Index Librorum Prohibitorum* Index of Prohibited Books, a list of books that Roman Catholics are forbidden to read, unless expurgated or with permission). (7) In mathematics, a number or formula expressing a property or ratio: *a cranial index, an index of intelligence*. (8) Also *index number*. In statistics, a quantity whose variation over a period of time measures change in an activity, process, etc. (9) Also *exponent*. In algebra, a number placed over and after another, showing the power to which it is to be raised, as in  $2^{10}$  (two to the power ten). See CONCORDANCE, FOG INDEX, INDEXING LANGUAGE, KEYWORD, LIST, SEMIOTICS, SIGN, THESAURUS. [REFERENCE, TECHNOLOGY]. T.MCA.

**INDEXING LANGUAGE.** A restricted language with precisely defined terms for specifying meaning, used to make subject indexes to articles and books, etc., especially by computer. The compilation of large indexes depends on controlled registers from which the index terms are picked. Because ordinary English contains words with similar or overlapping meanings, different indexers may select different words for the same idea: for example, one using *track* where another uses *path*, forcing users to look in both places and work out any differences. Large indexing services recommend only specified terms and phrases in a vocabulary that defines the concepts to be used and the distinctions to be made among them. *MeSH* (Medical Subject Headings), a service run by the National Library of Medicine in Bethesda, Maryland, recommends that indexers avoid the generic term *vertebrate* and index the specific animal. Other terms may be indicated as *entry vocabulary*, with appropriate references to the standardized vocabulary, such as *cancer USE neoplasm*. The

index terms may also be arranged in a hierarchical structure to facilitate study of the term list. Indexing vocabularies are sometimes published as thesauri, such as *MeSH*, *ERIC* (Education Resources Information Clearinghouse), and *Inspec thesaurus* (for engineering). See CROSS-REFERENCE, INDEX, RESTRICTED LANGUAGE, THESAURUS. [LANGUAGE, TECHNOLOGY]. M.L.

**INDIA** [Through Latin from Greek *India*, from *Indós* the Indus, from Persian *hind*, Old Persian *hindu*, cognate with Sanskrit *sindhu*. These variants demonstrate the common origin of the terms *India*, *Sind* (a province of Pakistan), and *Hindu*. Old English used Latin *India*, but Middle English used French-derived *Ind* and *Inde*, words sometimes used in later poetry. The return to *India* in the 16c was part of the Latinization of English and may also reflect Spanish and Portuguese influence: see INDIAN, INDIES]. (1) Also *Hindustan*. A name originally restricted to the plain of the Ganges and the peninsula to the south. (2) Also *the subcontinent (of India)*. The South Asian land mass bounded to the north-west by Iran and Afghanistan, to the north by Tibet, and to the north-east by China and Burma. It covers the six mainland states of Bangladesh, Bhutan, India, Nepal, Pakistan, and Sikkim, and two island states of Sri Lanka and the Maldives. (3) Also *British India, undivided India*. Sometimes known institutionally as *the British Raj* (the British Realm). That part of the subcontinent once controlled by the British, made up of areas directly governed, such as the Bombay Presidency, and many indirectly controlled princely states, such as Gwalior and Jaipur. The name *undivided India* is retrospective, prompted by Partition in 1947. (4) Also officially *Bharat*, after a legendary Indo-Aryan people. Sometimes unofficially *Hindust(h)an*. The Republic of India, a South Asian nation and member of the Commonwealth. Capital: New Delhi. Currency: the rupee (100 paise). Economy: mixed. Population: 813m (1988), 1,003m (projection for 2000). Ethnicity: 72% Indo-Aryan, 25% Dravidian, 2% Mongoloid, 1% others. Religions: 84% Hindu, 11% Muslim, 2% Christian, 2% Sikh, 1% Buddhist. Languages: Hindi (official), English (associate official), 15 national or major languages (including Hindi and English), and many ethnic languages. Proportion of population using major regional languages: 35% Hindi, 7% Bengali, 7% Marathi, 7% Telugu, 6% Tamil, 5% Gujarati, 5% Urdu, 4% Oriya, 3% Kannada, 3% Malayalam, 3% Punjabi, 1% Assamese, 1% Kashmiri. Education: primary 85%, secondary 35%, tertiary 10%, literacy 43%. The Republic was formed by the partition of British India into India and Pakistan in 1947. (5) Sometimes *the Indias*. From

the 16c to the 18c, a name for the Americas and other places distant from Europe. The belief of Christopher Columbus in 1492 that he had reached India by a new western sea route was soon disproved, but the term lingered, as in the book title *A treatyse of the newe India, with other new founde landes and Ilandes* (Richard Eden, 1553). Unlike such names as *New England* and *New York*, however, the title *New India* did not endure.

SEE ANGLO-INDIAN, ARYAN, ASIA, BANGLADESH, BENGALI, CLASSICAL LANGUAGE, ENGLISH, GANDHI, GUJARATI/GUJERATI, HOBSON-JOBSON, INDIAN, INDIAN ENGLISH<sup>1</sup>, INDIAN ENGLISH LITERATURE, INDIANISM, INDIAN LANGUAGES, INDIES, INDO-ANGLIAN, INDO-EUROPEAN LANGUAGES, INDO-GERMANIC, INDONESIA, KANNADA, MALAY-ALAM, MOTION PICTURE, NEHRU, NEPAL, PAKISTAN, PALI, PANJABI/PUNJABI, SANSKRIT, SCRIPTURE, SOUTH ASIAN ENGLISH, SRI LANKA, TAMIL, TELUGU/TELEGU, TESL, WEST INDIES. [AMERICAS, ASIA, NAME]. T.M.CA.

**INDIAN** [From Latin *India* and *-an*]. (1) (A native or citizen) of India: *Indian customs; an Anglo-Indian accent; the Indian and Pakistani communities in London; Indians, Nepalis, and Pakistanis*. (2) (A member) of the indigenous peoples of the Americas: *an Indian reservation, the Sioux and Cherokee Indians*. From this sense, certain idioms have entered the language, such as *Indian corn, Indian file, Indian giver, Indian summer*, and some classicized place-names have emerged, such as *Indiana, Indianapolis*. This sense arose from a misunderstanding by Christopher Columbus and other 15-16c explorers of the western hemisphere, who believed that by sailing west they would reach India. When Columbus made landfall in 1492, he called the Caribs living on the island he named Hispaniola *Indios* (Indians). The usage persisted, with such adaptations as *North/South American Indian, Red Indian, Amerindian, West Indian*. In AmE, it has been synecopated to *Injun* (as in *Injun country* and the phrase *honest Injun*, meaning 'really, truly'). See ABORIGINES, EAST INDIAN, WEST INDIAN. [AMERICAS, ASIA, NAME]. T.M.CA.

**INDIAN BROADCASTING**. See SOUTH ASIAN BROADCASTING.

**INDIAN ENGLISH<sup>1</sup>**, short forms *IndE, IE*. Formerly also **Indo-English**. The English language as used in India. The term is widely used but is a subject of controversy; some scholars argue that it labels an established variety with an incipient or actual standard, others that the kinds of English used in India are too varied, both socially and geographically, and often too deviant or too limited, to be lumped together as

one variety. They also argue that no detailed description has been made of the supposed variety and that the term is therefore misleading and ought not to be used. However, the length of time that English has been in India, its importance, and its range, rather than militating against such a term, make the term essential for an adequate discussion of the place of the language in Indian life and its sociolinguistic context. An estimated 30m people (4% of the population) regularly use English, making India the third largest English-speaking country in the world. Beyond this number is a further, unquantifiably large range of people with greater or less knowledge of the language and competence in its use. English is the associate official language of India, the state language of Manipur (1.5m), Meghalaya (1.33m), Nagaland (0.8m), and Tripura (2m), and the official language of eight Union territories (at the time of writing): the Andaman and Nicobar Islands; Arunachal Pradesh; Chandigarh; Dadra and Nagar Haveli; Delhi; Lakshadwip; Mizoram; and Pondicherry. It is one of the languages of the *three language formula* proposed in the 1960s for educational purposes: state language, Hindi, and English. It is used in the legal system, pan-Indian and regional administration, the armed forces, national business, and the media. English and Hindi are the *link languages* in a complex multilingual society, in which English is both a *library language* and a *literary language*. The *National Academy of Letters/Sahitya Akademi* recognizes Indian English literature as a national literature.

**History**. The first speaker of English to visit India may have been an ambassador of Alfred the Great. The Anglo-Saxon Chronicle states that in AD 884, Alfred sent an envoy to India with gifts for the tomb of St Thomas. His name appears in one later record as Swithelm, in another as Sigellinus. After this, there was little if any contact until the 16c, when European commercial and colonial expansion began. In 1600, English traders established the East India Company, and in 1614 James VI wrote to the Emperor Jehangir, accrediting Sir Thomas Roe as ambassador to the Moghul court:

James, by the Grace of Almighty God, the Creator of Heauen and Earth, King of Great Britaine, France and Ireland . . . To the high and mightie Monarch the Great Mogor, King of the Orientall Indies, of Chandahar, of Chismer and Corazon . . . Greeting. We hauing notice of your great fauour toward Vs and Our Subjects, by Your Great *Firma* to all Your Capitaines of Riuers and Offices of Your Customes, for the entertainment of Our louing Subjects the English Nation with all kind respect, at what time soeuer they shall arriue at any of the Ports within Your Dominions, and that they may haue quiet Trade and Commerce without any kind of hinderance or molestation.

The use of English dates from the trading 'factories' started by the Company: Surat (1612), Madras (1639-40), Bombay (1674), Calcutta (1690). European traders at that time used a form of Portuguese, current since Portugal had acquired Goa in 1510. Missionaries were important in the diffusion of English in the 18c: schools such as St Mary's Charity Schools were started in Madras (1715), Bombay (1719), and Calcutta (1720-31). By the 1830s, an influential group of Indians was impressed with Western thought and culture, and its scientific advances, and wished to encourage the learning of English as a means through which Indians could gain a knowledge of such things. The Hindu social reformer Raja Rammohan Roy (1772-1833) wanted European gentlemen of 'talents and education to instruct the natives of India in mathematics, natural philosophy, chemistry, anatomy, and other useful sciences, which the natives of Europe have carried to a degree of perfection that has raised them above the inhabitants of other parts of the world'. In a long official controversy over the medium of education for Indians, the *Anglicists* supported the *transplant theory* and the *Orientalists* the *nativist theory*. Thomas B. Macaulay, a member of the Supreme Council of India, settled the question in favour of English in an official Minute (1835):

To sum up what I have said, I think it clear that we are not fettered by the Act of Parliament of 1813; that we are not fettered by any pledge expressed or implied; that we are free to employ our funds as we choose; that we ought to employ them in teaching what is best worth knowing; that English is better worth knowing than Sanscrit or Arabic; that the natives are desirous to be taught English, and are not desirous to be taught Sanscrit or Arabic; that neither as the languages of law, nor as the languages of religion, have the Sanscrit and Arabic any peculiar claim to our engagement; that it is possible to make natives of this country thoroughly good English scholars; and that to this end our efforts ought to be directed. . . . We must at present do our best to form a class who may be interpreters between us and the millions who we govern; a class of persons, Indian in blood and colour, but English in taste, in opinions, in morals, and in intellect. To that class we may leave it to refine the vernacular dialects of the country, to enrich those dialects with terms of science borrowed from the Western nomenclature, and to render them by degrees fit vehicles for conveying knowledge to the great mass of the population.

In 1857, the first three western-style universities were established at Bombay, Calcutta, and Madras. Allahabad and Punjab (the latter now in Lahore, Pakistan) were added by the end of the 19c. By 1928, English was accepted as the language of the élite, and after independence in 1947, its diffusion increased. However, because IndE is essentially a contact language, convergence with Indian languages and socio-

cultural patterns have resulted in many processes of Indianization.

**Variation.** There are three major variables for IndE: proficiency in terms of acquisition; regional or mother tongue; and ethnic background. In IndE there is a cline from educated IndE (the acrolect) to pidginized varieties (basilects) known by such names as *Boxwalla(h) English*, *Butler English*, *Bearer English* or *kitchen English*, and *Babu English*. The regional and mother-tongue varieties are often defined with reference to the first language of the speaker (*Bengali English*, *Gujarati English*, *Tamil English*, etc.) or in terms of a larger language family (*Indo-Aryan English*, *Dravidian English*). In this sense, there are as many Indian Englishes as there are languages in India. There are, however, shared characteristics which identify IndE speakers across language-specific varieties. One variety, *Anglo-Indian English*, is distinctive, because it emerged among the offspring of British servicemen and lower-caste Indian women, and is sustained among other things by a nationwide system of long-established English-medium private schools known as *Anglo-Indian schools*. Generally, however, when IndE is discussed, the term refers to the variety at the upper end of the spectrum, which has national currency and intelligibility and increasingly provides a standard for the media, education, and pan-Indian communication. In grammar and spelling, standard BrE continues to have influence.

**Pronunciation.** (1) IndE is rhotic, /r/ being pronounced in all positions. (2) It tends to be syllable-timed, weak vowels being pronounced as full vowels in such words as *photography* and *student*. Word stress is used primarily for emphasis and suffixes are stressed, as in *readiness*. Distinctive stress patterns occur in different areas: *available* is often stressed in the north on the antepenultimate, in the south on the first syllable. (3) The alveolar consonants /t, d/ are retroflex. (4) The fricatives /θ, ð/ are aspirated /t, d/, so that *three* of those sounds like 'tree of d'ose'; /f/ is often pronounced as aspirated /p/, as in 'p'hood' for *food*. (5) In such words as *old*, *low* the vowel is generally /o/. (6) Among northern (Indo-Aryan) speakers, consonant clusters such as /sk, sl, sp/ do not occur in initial position, but have an epenthetic vowel, as in 'iskool' for *school* in the Punjab and 'səkool' in Kashmir. (7) The distinction between /v/ and /w/ is generally neutralized to /w/: 'wine' for both *wine* and *vine*. (8) Among southern (Dravidian) speakers, non-low initial vowels are preceded by the glides /j/ (as in 'yell, yem, yen' for the names of the letters *l, m, n*) and /w/ (as in 'wold' for *old* and 'wopen' for *open*). (9) South Indians tend to geminate voiceless intervocalic

obstruents, as in 'Americ-a'. Because gemination is common in Dravidian languages, double consonants in written English are often geminated: 'sum-mer' for *summer* and 'sil-lee' for *silly*. (10) Distinct kinds of pronunciation serve as shibboleths of different kinds of IndE: Bengalis using /b/ for /v/, making *bowel* and *vowel* homophones; Gujaratis using /dʒ/ for /z/, so that *zed* and *zero* become 'jed' and 'jero'; speakers of Malayalam making *temple* and *tumble* near-homophones.

A large number of IndE speakers, sometimes referred to as speakers of *General Indian English* (GIE), have a 17-vowel system (11 monophthongs and 6 diphthongs): /i:/ as in *bead*, /ɪ/ as in *this*, /e:/ as in *game*, /ɛ/ as in *send*, /æ/ as in *mat*, /ɑ:/ as in *charge*, /ɒ/ as in *shot*, /o:/ as in *no*, /ʊ/ as in *book*, /u:/ as in *tool*, and /ə/ as in *bus*; /ai/ as in *five*, /ɔi/ as in *boy*, /aʊ/ as in *cow*, /ɪə/ as in *here*, /eə/ as in *there*, and /ʊə/ as in *poor*. See Bansal (1990, below).

**Grammar.** There is great variety in syntax, from native-speaker fluency (the acrolect) to a weak command of many constructions (the basilect). The following represents a widespread middle level (the mesolect): (1) Interrogative constructions without subject/auxiliary inversion: *What you would like to buy?* (2) Definite article often used as if the conventions have been reversed: *It is the nature's way*; *Office is closed today*. (3) *One* used rather than the indefinite article: *He gave me one book*. (4) Stative verbs given progressive forms: *Lila is having two books*; *You must be knowing my cousin-brother Mohan*. (5) Reduplication used for emphasis and to indicate a distributive meaning: *I bought some small small things*; *Why you don't give them one one piece of cake?* (6) *Yes* and *no* as question tags: *He is coming, yes?*; *She was helping you, no?* (7) *Isn't it?* as a generalized question tag: *They are coming tomorrow, isn't it?* (8) Reflexive pronouns and *only* used for emphasis: *It was God's order itself* It was God's own order, *They live like that only* That is how they live. (9) Present perfect rather than simple past: *I have bought the book yesterday*.

**Vocabulary: loans.** Loanwords and loan translations from other languages have been common since the 17c, often moving into the language outside India: (1) Words from Portuguese (*almirah*, *ayah*, *caste*, *peon*) and from local languages through Portuguese (*bamboo*, *betel*, *coir*, *copra*, *curry*, *mango*). (2) Words from indigenous languages, such as Hindi and Bengali. Some are earlier and more Anglicized in their spelling: *anna*, *bungalow*, *cheeta*, *chintz*, *chit/chitty*, *dacoit*, *dak bungalow*, *jodhpurs*, *juggernaut*, *mulligatawny*, *pice*, *pukka*, *pundit*, *rupee*, *sahib*, *tus-sore*. Some are later and less orthographically

Anglicized: *achcha* all right (used in agreement and often repeated: *Achcha achcha, I will go*), *basmati* a kind of rice, *chapatti* a flat, pancake-like piece of unleavened bread, *crore* a unit of 10m or 100 lakhs (*crores of rupees*), *goonda* a ruffian, petty criminal, *jawan* a soldier in the present-day Indian Army, *lakh* a unit of 100,000 (*lakhs of rupees*), *lathi* a lead-weighted stick carried by policemen, *masala* spices, *paisa* a coin, 100th of a rupee, *panchayat* a village council, *samo(o)sa* an envelope of fried dough filled with vegetables or meat, *Sri/Shri/Shree* Mr, *Srimati/Shrimati/Shreemati* Mrs. (3) Words from Arabic and Persian through north Indian languages, used especially during the British Raj: *dewan* chief minister of a princely state, *darbar* court of a prince or governor, *mogul* a Muslim prince (and in the general language an important person, as in *movie mogul*), *sepo*y a soldier in the British Indian Army, *shroff* a banker, money-changer, *vakeel/vakil* a lawyer, *zamindar* a landlord. (4) Words taken directly from Sanskrit, usually with religious and philosophical associations, some well known, some restricted to such contexts as yoga: *ahimsa* non-violence, *ananda* spiritual bliss, *chakra* a mystical centre of energy in the body, *guru* a (spiritual) teacher (and in the general language a quasi-revered guide, as in *management guru*), *nirvana* release from the wheel of rebirth, *rajas* a state of passion, *samadhi* spiritual integration and enlightenment, *sattwa/sattva* a state of purity, *tamas* a state of heaviness and ignorance, *yoga* a system of self-development, *yogi* one who engages in yoga. (5) Calques from local languages: *dining-leaf* a banana leaf used to serve food, *cousin brother* a male cousin, *cousin sister* a female cousin, *co-brother-in-law* one who is also a brother-in-law.

#### **Vocabulary: hybrids, adaptations, and idioms.**

The great variety of mixed and adapted usages exists both as part of English and as a consequence of widespread code-mixing between English and especially Hindi: (1) Hybrid usages, one component from English, one from a local language, often Hindi: *brahminhood* the condition of being a brahmin, *coconut paysam* a dish made of coconut, *goonda ordinance* an ordinance against goondas, *grameen bank* a village bank, *kaccha road* a dirt road, *lathi charge* (noun) a charge using lathis, *lathicharge* (verb) to charge with lathis, *pan/paan shop* a shop that sells betel nut and lime for chewing, wrapped in a pepper leaf, *policewala* a policeman, *swadeshi cloth* home-made cloth, *tiffin box* a lunch-box. (2) Local senses and developments of general English words: *batch-mate* a classmate or fellow student, *body-bath* an ordinary bath, *by-two coffee*

(in the south) a restaurant order by two customers asking for half a cup of coffee each, *communal* used with reference to Hindus and Muslims (as in *communal riots*), *condole* to offer condolences to someone, *England-returned* used of one who has been to England, for educational purposes, a *been-to*, *Eve-teasing* teasing or harassing young women, *Foreign-returned* used of someone who has been abroad for educational purposes, *four-twenty* a cheat or swindler (from the number of a section of the Indian Penal Code), *head-bath* washing one's hair, *interdine* to eat with a member of another religion or caste, *intermarriage* a marriage involving persons from different religions or castes, *issueless* childless, *military hotel* (in the south) a restaurant where non-vegetarian food is served, *out of station* not in (one's) town or place of work, *outstation* (*cheque*) a cheque issued by a non-local bank, *prepone* the opposite of postpone, *ration shop* a shop where rationed items are available, *under-trial* a person being tried in a court of law. (3) Words more or less archaic in BrE and AmE, but used in IndE, such as *dicky* (the boot/trunk of a car), *needful* ('Please do the needful, Sri Patel'), *stepney* a spare wheel or tyre, and *thrice* ('I was seeing him thrice last week'). (4) The many idiomatic expressions include: *to sit on someone's neck* to watch that person carefully, and *to stand on someone's head* to supervise that person carefully; *Do one thing, Sri Gupta* There is one thing you could do, Mr Gupta; *He was doing this thing that thing, wasting my time* He was doing all sorts of things, wasting my time.

**Usage.** It is not easy to separate the use of English in India from the general multilingual flux. In addition to code-mixing and code-switching, other languages are constantly drawn into English discourse and English into the discourse of other languages, especially Hindi. In the English-language press, hybrid headlines are common: *JNU karamcharis begin dharna* (*The Statesman*, New Delhi, 12 May 1981), *Marathwada band over pandal fire* (*The Indian Express*, New Delhi, 9 May 1981), and *55 Jhuggis gutted* (*The Hindustan Times*, New Delhi, 3 May 1981). Matrimonial advertisements in the English-language press are equally distinctive: 'Wanted well-settled bridegroom for a Kerala fair graduate Baradwaja gotram, Astasastram girl . . . subset no bar. Send horoscope and details'; 'Matrimonial proposals invited from educated, smart, well settled, Gujarati bachelors for good looking, decent, Gujarati Modh Ghanchi Bania girl (25), B.A., doing her M.A. and serving'; 'Tall, beautiful, Convent educated girl between 18 and 21 Non Bharadwaj Vadama Brahmin required for well placed Air Force pilot

from a well-to-do and respectable family. Write with horoscope and particulars.'

**Texts.** The following excerpts demonstrate something of the variety to be found in IndE prose:

Thus the world's knowledge about India today is obtained overwhelmingly at one remove from people belonging to the Westernized and urban upper middle-class, who have become the heirs of British rule. For nimbleness of wit, plausibility, argumentative skill, and gift of the gab they are not surpassed by many people on the face of the earth. But in the very nature of things they are unqualified to give a full or fair view of what is taking place in the country. For one thing, they have their trusteeship of the people of India, which I look upon as their exploitation, to justify. This makes them prone to misrepresent and even to lie. But it would be a mistake to think that as a class they deceive intentionally. They are so completely imitative of the West, so dependent on current literature written in English, mostly by foreigners, for their knowledge of their own country, so ignorant about the original sources of knowledge, and so formed by their urban upbringing that the whole traditional and rural India remains outside their ken (Nirad C. Chaudhuri, Introduction, *The Continent of Circe*, 1965).

Mr G. D. Somani, president of the Bombay unit of the Sarvadaliya Goraksha Maha-Abhiyan Samiti, has urged the Government of India to 'amend the Constitution, if necessary' for a total ban on the slaughter of cows, bullocks and calves. He wanted the Centre to promulgate an ordinance, if it was not found possible to impose such a ban through legislation before November 20, 'Gopashtami Day'. . . . Mr. Somani stated that the issue must be regarded as a national cause and not a communal one. He asserted that a total ban on cow slaughter would not involve any heavy economic burden (staff reporter, *Times of India*, Bombay, 26 Oct. 1966).

Even among us the regional, ethnic, economic variations are so many that a graduate in the English medium from Gauhati cannot be understood by or understand one from Gujarat or Gorakhpur, Kamrup and Kerala and Kashmir are further apart today than when a smaller and conformist elite held sway just a quarter of a century ago. So spoken English is having its quietus administered by the bare bodkin of change. Written English is following suit. Let us then advert on Written English (V. Siddharthachary, 'English Teaching in India,' *The Hindu*, Madras, 7 Aug. 1984).

'Bhai phor how long Gorement is elect?'

'Ujually phor phie years.'

'Whyphore ujually?'

'Becoss in some times, it is not so ujually.'

'What that means?'

'Bhai according to Constitution, when one is elect M.P. or MLA, seat is rejever phor phie years, but nowadays all oph sudden MP or MLA sitting in one seat is getting tired.'

'Muss to be pheeling phie year hitch.'

'What that is?'

'Pheeling like to scratch.'

(from *Psst*, a satirical column in *The Current*, Bombay, in the 1960s, which regularly ended with

the slogan *Boycott British Language*. This example from a 1967 issue)

**INDIAN ENGLISH<sup>2</sup>**. The English language as used by American Indians (Native Americans), especially in the US: 'It can be of social importance to a Native American to be competent in the variety of Indian English spoken in his community' (Dell H. Hymes, foreword to Ferguson & Heath (eds.), *Language in the USA*, 1981). See AMERICAN LANGUAGES, AMERINDIAN PIDGIN ENGLISH, DIALECT IN AMERICA, RED ENGLISH. [AMERICAS, VARIETY]. T.MCA.

**INDIAN ENGLISH LITERATURE**, short form *IEL*. Also, but now less common, **Indo-English writing**, **Indo-Anglian writing**. Literature in English written in India. The term *Anglo-Indian literature*, on the other hand, refers to the works of non-Indian, especially British writers, whose writing has India as a central theme, as with Rudyard Kipling's *Plain Tales from the Hills* (1888), *The Jungle Book* (1894), and *Kim* (1901), E. M. Forster's *A Passage to India* (1922-4), John Masters's *Bhowani Junction* (1954) and *The Venus of Konpara* (1960), and Paul Scott's *The Raj Quartet* (1966-75). IEL is established 'not only as an academic discipline in the universities but as one of our own literatures recognized by the Central Sahitya Akademi [National Academy of Letters] which has honoured our writers

in English like those in the regional languages' (C. D. Narasimhaiah, 1987, below).

The first extant works by Indians in English are Cavell Venkata Boriah's *Account of the Jains* (1809) and Rammohan Roy's translations of four of the Upanishads (1816-20). Early attempts in creative writing include the work of two Bengali writers, Kashiprasad Ghosh's *The Shair and Other Poems* (1830) and Lal Behari Day's novel *Govinda Samanta: Bengali Peasant Life* (1874). Indianization has taken place not only in the themes of this growing body of writing, but also in its innovations of style and discourse, as in Mulk Raj Anand's *Untouchable* (1935) and *Coolie* (1936), Raja Rao's *Kanthapura* (1938), and G. V. Desani's *All About H. Hatterr* (1948). Political writing and journalism in IndE have played a vital role in India's national awakening and struggle for independence; writers in this area include Rammohan Roy (1772-1833), Mohandas K. Gandhi (1869-1948), Bal Gangadhar Tilak (1856-1920), and Jawaharlal Nehru (1889-1964). Although the literature has particularly and rather unexpectedly flowered since independence from Britain in 1947, controversy continues regarding the loyalty and identity of IndE writers.

The following is a representative list of writers: (1) Poets: Keki N. Daruwalla (b.1937), Kamala Das (b.1934), Toru Dutt (1859-77), Nissim Ezekiel (b.1924), Aurobindo Ghosh (1872-1950), Manmohan Ghosh (1869-1924), Arun Kolatkar (b.1933), Shiv K. Kumar (b.1937), Jayanta Mahapatra (b.1928), Sarojini Naidu (1879-1949), Pritish Nandy (b.1947), R. Parthasarathy (b.1934), and A. K. Ramanujan (b.1929). (2) Novelists, with representative works: Mulk Raj Anand (b.1905), *Across the Black Waters* 1940, *Lament on the Death of a Master of Arts* 1967; Bhabani Bhattacharya (1906-88), *So Many Hungers* 1947, *Who Rides a Tiger* 1954; Anita Desai (b.1937), *Cry, the Peacock* 1963, *Voices in the City* 1965; Manohar Malgonkar (b.1913), *A Bend in the Ganges* 1964; Kamala Markandaya (b.1924), *Nectar in a Sieve* 1954, *A Handful of Rice* 1966; R. K. Narayan (b.1906), *Swami and Friends* 1935, *The Bachelor of Arts* 1937, *The English Teacher* 1945, *Waiting for the Mahatma* 1955, *The Man-Eater of Malgudi* 1962; Raja Rao (b.1909), *The Serpent and the Rope* 1960; Nayantara Sahgal (b.1927), *Storm in Chandigarh* 1969, *Rich Like Us* 1985; Khushwant Singh (b.1915), *Train to Pakistan* 1956. (3) Critics, with representative works: Nirad C. Chaudhuri (b.1897), *The Autobiography of an Unknown Indian* 1951, *A Passage to England* 1960, *Continent of Circe* 1965; V. K. Gokak (b.1909), *English in India: Its Present and Future* 1964; K. R. S. Iyengar (b.1908), *Indian Writing in English* 1985;

C. D. Narasimhaiah (b.1921), *The Swan and the Eagle*, 1987.

IEL demonstrates the acculturation and nativization of English into Indian sociocultural and linguistic contexts; the Judeo-Christian tradition, the sociocultural contexts of Britain, and British literary traditions provide only a remote backdrop for IndE writers. Their credo was first articulated by the publisher and metaphysical novelist Raja Rao:

[T]he telling has not been easy. One has to convey in a language that is not one's own the spirit that is one's own. One has to convey the various shades and omissions of a certain thought-movement that looks maltreated in an alien language. I use the word 'alien,' yet English is not really an alien language to us. It is the language of our intellectual make-up—like Sanskrit or Persian was before—but not of our emotional make-up. We are all instinctively bilingual, many of us writing in our own language and in English. We cannot write like the English. We should not. We cannot write only as Indians. We have grown to look at the large world as part of us. Our method of expression therefore has to be a dialect which will some day prove to be as distinctive and colorful as the Irish or the American. Time alone will justify it (preface, *Kanthapura*, 1938).

Suleri, Sara. 1991. *The Rhetoric of English India*. Chicago: University Press.

Walsh, William. 1990. *Indian Literature in English*. London & New York: Longman.

**INDIANISM** [17c]. (1) An especially linguistic usage or custom peculiar to or common in India and IndE: *isn't it?* as a generalized question tag (*You are liking it here, isn't it?*); repeating a word for emphasis (*It was a small small box; Put put; Take take*). (2) Work on behalf of or enthusiasm for either India and Indians, or American Indians. -ISM. [ASIA, STYLE, VARIETY, WORD]. T.MCA.

**INDIAN LANGUAGES**. (1) The languages of the subcontinent of India or of the Republic of India. (2) Also *American Indian languages*. The languages of the indigenous peoples of the Americas, often referred to as (*American*) *Indians*: see AMERICAN LANGUAGES.

**Indigenous languages**. The languages of the Indian subcontinent are spoken by well over 1,000m people, in Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan, Sikkim, and Sri Lanka. Diaspora varieties of many of these languages are spoken in Africa, the Caribbean, Europe, North America, and South-East Asia. In

genetic terms, they fall into four groups: *Indo-Aryan*, a subgroup of the Indo-Iranian branch of the Indo-European language family; the *Dravidian language family*; the Munda branch of the *Austro-Asiatic* language family; and the Tibeto-Burman branch of the *Sino-Tibetan* language family.

*The Indo-Aryan languages*. With Iranian and Greek, the Indo-Aryan languages have the longest unbroken traditions in the Indo-European language family. Their earliest speakers originated outside India, probably migrating from the north-west into the Indo-Gangetic plain in the late second millennium BC. The longest-established language is *Sanskrit*, the medium of the Vedas (the primary scriptures of Hinduism, probably composed c.1500–600 BC). A more cultivated form (7c BC onward) is known as classical Sanskrit. Indian literatures and grammatical traditions derive most of their conventions from the genres of Sanskrit and from Panini's Sanskrit grammar (c.350–250 BC). *Pali*, the classical language of Buddhism, emerged in the second half of the first millennium BC. Various ancient vernacular languages, related to Sanskrit and known as the *Prakrits* and *Apabhramśās* (c.600 BC–AD 1000), developed into such major languages as Assamese, Bengali, Gujarati, Hindi, Hindustani, Marathi, Nepali, Oriya, Panjabi, Sindhi, Sinhala, and Urdu, and such minor languages (often called dialects) as Awadhi, Bhojpuri, Braj, Magadhi, Maithili, Rajasthani, and Konkani. There are some 638m speakers of Indo-Aryan languages. It is difficult to decide the precise number of languages and dialects because there is often controversy over what constitutes a language: for example, the status of Punjabi and Rajasthani *vis-à-vis* Hindi. One non-Indian language, Romani, is Indo-Aryan in origin.

*The Dravidian languages*. The Dravidian group is located mainly in the peninsula and consists of four major languages, Tamil, Telugu, Kannada, and Malayalam, and several dialects or minor languages such as Toda, Kota, Kodagu, and Kui. The records of Tamil are of an age with those of the Indo-Aryan languages. A lone Dravidian dialect, Brahui, is located in the north, in Pakistan. There are some 110m speakers of Dravidian languages, all of which have been and continue to be heavily influenced by Sanskrit and other Indo-Aryan languages and have influenced them in turn.

*Others*. (1) The Munda languages are spoken by over 5m Adivasis (aboriginal people) in Andhra Pradesh, Bengal, Bihar, Madhya Pradesh, and Orissa. The best-known and most widely spoken language of this group is Santhali. (2) The

Tibeto-Burman languages are spoken by communities in the north-east and along the northern border of India. The best-known are Garo, Khasi, and Naga.

**Immigrant languages.** Five major exotic languages have been present for centuries in India, two Asian and three European. The Asian languages are Arabic and Persian, established through invasion, trade, and the influence of Islam, particularly during the Moghul Empire. The three European languages are English, French, and Portuguese, established during the European colonial diaspora (15c onward): English through the East India Company and the British Raj and spreading everywhere; French in the enclaves of Pondicherry and Chandernagore; Portuguese in the enclaves of Goa, Daman, and Diu. Dutch for a time had an influence in Sri Lanka. Of these languages, Persian and English have had the strongest impact, but only English has been constitutionally acknowledged (although its status as an Indian language remains controversial). It has been a language of empire and of resistance to empire, notably in the writings of Mohandas K. Gandhi and Jawaharlal Nehru.

[ASIA, LANGUAGE].  
Y.K., T.MCA.

**INDIAN PRESS, The.** The press of the Republic of India operates in over 92 languages: 14,531 newspapers and periodicals, comprising 929 dailies, 4,225 weeklies, and 9,299 others. Numerically, the state of Maharashtra (capital Bombay) has the largest number (2,057), followed by Uttar Pradesh (1,832), and Delhi (1,745). The English-language press has a major role, taking second place after Hindi (assessment of 1984), with 3,689 newspapers, the largest numbers being published from Delhi (1,065), Maharashtra (736), and West Bengal (392). The leading English dailies are: the *Times of India*, the *Statesman*, the *Hindu*, and the *Hindustan Times*. Other significant periodicals and magazines in English are: *India Today* (Delhi), *Sunday* (Calcutta), and *The Illustrated Weekly of India* (Bombay). Of the seven daily newspapers that

have been in existence for over a century, four are published in English: the *Times of India*, Bombay (1850), the *Pioneer*, Lucknow (1865), the *Mail*, Madras (1867), and *Amrita Bazar Patrika*, Calcutta (1868). Freedom of the press is watched over by the Press Council, established by Act of Parliament in 1965. The first English newspaper in India was published in 1780: the *Bengal Gazette* or *Calcutta General Advertiser*, a weekly owned and edited by an Englishman, James Augustus Hicky. The first Indian-owned English newspaper, also called the *Bengal Gazette*, was started by Gangadhar Bhat-tacharjee (1816). Two types of vernacular newspaper emerged in the 19c: those started by missionaries and those started by Indians. The Serempore mission founded the *Bengali Dig Darshan* (1818) and *Samchar Darpan* (1819), both monthlies, the missionaries cutting type for Indian languages. Rammohan Roy, considered the father of Indian journalism, started short-lived journals in English, Bengali, and Persian: *Brahman Sambād* (1821), *Sambād Kaumudi* (1821), and *Mirāt-ul-Ākhbār* (1821) to counter the work of the missionaries. His action irritated the government and resulted in the Vernacular Press Act (1823), curtailing press freedom. Three English-language magazines helped initiate a pan-Indian political dialogue and demand for social change: G. A. Natesan's *Indian Review*, Ramanand Chatterjee's *Modern Review*, and Tej Bahadur Sapru's *Twentieth Century*. See NEWSPAPER, PRESS. [ASIA, MEDIA].  
B.B.K.

**INDIAN PUBLISHING.** India is the third largest publisher of books in the world as well as in the English language. In terms of output, publishers in Hindi and English occupy the top position. During 1986-7, the export of publications of all kinds was worth Rupees 26 crores or c.\$15m. Publishing houses number c.15,000, some 75% of whom are small; c.45% of titles are in English. Production and distribution are, however, often poor and print-runs low. The government has its own distribution network and the promotion and advertising of books is entrusted to its *National Book Trust* (established in 1957) and *Children's Book Trust*, agencies that do not yet operate strongly. In 1972, the Central Government in New Delhi established the *Raja Rammohan Roy Educational Resources Centre* with the aim of encouraging writing and the production of university-level teaching materials. It also publishes under the Indo-American, Indo-British, and Indo-Soviet textbook collaboration programmes, and has been designated as the national agency for the operation of the International Standard Book Numbering (ISBN) system. India is a member of the Bern Convention (1948) and the Universal Copyright Convention

(1952); the Copyright Act was amended in 1984 to check the widespread piracy of books. Paperback publication started in the 1960s: Penguin has an active publishing unit in New Delhi, and Hindi Pocket Books (New Delhi) has over 1,500 titles in English, Hindi, Urdu, and Punjabi. Text-books have long been the most profitable sector, but in recent years comic books have become popular, including *Amar Chitra Katha* (India Book House) and *The Indrajal Comic* (Times of India). Indigenous English publishing faces competition from multinational companies such as Macmillan, Tata McGraw Hill, Prentice-Hall, and Oxford University Press. In order to support and encourage small publishing houses, the establishing of a Book Finance Corporation has been recommended. See *Directory of Publishers and Booksellers in India*, Delhi, 1986. See PUBLISHING. [ASIA, MEDIA]. B.B.K.

**INDIAN RECOMMENDED PRONUNCIATION**, also **Educated Indian English**. Short forms *IRP*, *EIE*. A standardizing model of pronunciation for teachers and students of English in India, described in *Indian and British English: A Handbook of Usage and Pronunciation* (Paroo Nihilani, R. K. Tongue, & Priya Hosali, Oxford University Press, India, 1979). In 1960, V. K. Gokak, Director of the Central Institute of English, in his presidential address to the 11th English Teachers' Conference in Delhi, urged an analysis of the speech of educated speakers of English, with a view to developing a norm for teaching. The IRP model develops this suggestion. It proposes a rhotic variety with the following vowels: /i:/ as in *seat*, /ɪ/ as in *sit*, /e:/ as in *say*, /e/ as in *cottage*, /ɛ:/ as in *set*, /æ/ as in *sad*, /ɑ:/ as in *part*, /ɒ/ as in *cot*, /ɔ:/ as in *caught*, /ʊ/ as in *foot*, /u:/ as in *food*, /ə/ as in *bird* and the first syllable of *about*, /o:/ as in *coat*, /aɪ/ as in *kite*, /aʊ/ as in *house*, /ɔɪ/ as in *toil*, /ɪə/ as in *here*, /eə/ as in *air*, and /ʊə/ as in *poor*. The consonant /r/ is pronounced in all positions: *run*, *train*, *part*, *bird*, *here*, *air*, *poor*. For the sake of national and international intelligibility, the authors recommend that a distinction should be made clearly between /v/ and /w/ (so that *wine* and *vine* do not become homophones) and provide detailed advice on rhythm, stress, and intonation, urging that the tendency in IndE towards syllable-timing be resisted. A pronouncing dictionary of 2,000 words seeks to do for IndE what Daniel Jones's *English-Pronouncing Dictionary* did for RP. See INDIAN ENGLISH<sup>1</sup>, PRONUNCIATION MODEL. [ASIA, SPEECH, VARIETY]. T.M.C.A.

**INDICATIVE** [16c: through French from Latin *indicativus* stating, a translation of Greek *horistikḗ*]. A term for the grammatical mood in

which statements are expressed: the sentence *I saw her yesterday* is in the indicative (mood). The indicative is the most common mood in English, and is used for both statements (*She knew him*) and questions (*She knew him?*). However, these may imply meanings typically associated with the imperative (where both *I should like to borrow your pen* and *Can I borrow your pen?* are indirect requests) and the subjunctive (a wish in *God should bless you in all your works* or after expressions of request, necessity, and the like, as in *It is imperative that she answers our letter immediately*, where the subjunctive is an alternative). See DECLARATIVE, MOOD. [GRAMMAR].

S.G.

**INDIES** [16c: plural of *Indie* or *Indy*: see INDIA]. Formerly a name for both the mainland and islands of South and South-East Asia (in the 19c restricted to islands referred to as *the East Indies*) and for the Americas (in the 19c restricted to the islands of the Caribbean referred to as *the West Indies*). See EAST INDIES, INDIA, WEST INDIES. [AMERICAS, ASIA, NAME]. T.M.C.A.

**INDIGENIZATION** [1950s: from Latin *indigena* someone born in a place, and *-ization*]. In sociolinguistics, a process of change by which a transplanted variety of a language becomes established and in various ways different from the parent variety, as with English in Ireland. This happens partly through different internal changes in the parent and transplanted varieties and partly through contact between the transplanted variety and the new environment. English in North America and Australia adopted new terms for unfamiliar flora and fauna as well as cultural items from indigenous languages: AmE *hickory*, *tomahawk*; AusE *kangaroo*, *boomerang*. Indigenization can also occur when a population acquires the language of another (usually dominant) group, often under colonialism, as also in Ireland. If the local élite begins to use the colonial language, it may transfer features and sometimes norms from local languages to the colonial language, as with English in India, Singapore, and the Philippines. See LANGUAGE CHANGE, NATIVIZATION. [LANGUAGE]. S.R.

**INDIRECT OBJECT**. With verbs that can be followed by two objects, the indirect object typically comes immediately after the verb: *Audrey* in 'I've sent *Audrey* a present'; *his son* in 'He bought *his son* a ball'. It is typically animate and the recipient of the direct object. The same idea is often expressed by repositioning the recipient with a *to* or *for*: 'I've sent a present *to Audrey*'; 'He bought a ball *for his son*'. Grammarians differ about whether the noun in the prepositional phrases should be labelled indirect

object. Occasionally, an indirect object is inanimate: 'Give the kitchen a coat of paint.' In such cases, usually idiomatic uses of common verbs, the same idea cannot usually be re-expressed with *to* or *for* (never \**Give a coat of paint to the kitchen*). See DIRECT OBJECT, DI-TRANSITIVE, DOUBLE ACCUSATIVE. [GRAMMAR].

S.C.

**INDIRECT SPEECH.** See DIRECT AND INDIRECT SPEECH.

**INDO-** [From Greek *Indós* the River Indus]. A combining form for: (1) The River Indus: *the Indo-Gangetic plain*. (2) *India* and *Indian*: *Indo-Aryan, the Indo-European languages*. [ASIA, NAME]. T.MCA.

**INDO-ANGLIAN** [Perhaps late 19c; certainly 1930s: from *Indo-* and *Anglian*, and probably a playful reversal of *Anglo-Indian*]. An obsolescent term for Indian writing in English: *Anthology of Indo-Anglian Verse* (A. R. Chida, 1935); 'Authors such as R. K. Narayan, Dom Moraes, Balachandra Rajan (now called "Indo-Anglians") find their public in the West, rather than inside India itself' (*Times Literary Supplement*, 10 Aug. 1962). Compare ANGLO-INDIAN. See INDIAN ENGLISH LITERATURE. [ASIA, NAME]. T.MCA.

**INDO-ARYAN.** See INDIAN LANGUAGES, INDO-EUROPEAN LANGUAGES.

**INDO-ARYAN ENGLISH** [c.1960s]. A term in linguistics for English as used in India, Pakistan, and Nepal by speakers of Indo-Aryan languages such as Assamese, Bengali, Gujarati, Hindi, Marathi, Nepali, Oriya, Panjabi, and Urdu. Among its characteristics is an initial epenthetic vowel in words beginning with a consonant cluster ('iskul' for *school*, 'isteshan' for *station*) or such a vowel used as a means of simplifying such a cluster ('sekul' for *school*, 'sateshan' for *station*). In Assamese and Bengali English, /s/ is used for both /s/ and /ʃ/, in the Hindi area both /dʒ/ and /z/ are used for /dʒ/, and in Oriya English /ɹ/ is used for both /r/ and /i/ (so that *sit/seat* are homophones). Compare DRAVIDIAN ENGLISH. See EPENTHESIS, INDIAN ENGLISH<sup>1</sup>, INDIAN LANGUAGES. [ASIA, VARIETY].

B.B.K.

**INDO-BRITISH.** A term for matters concerning India and Britain, placing Indian interests first and avoiding the equivocal implications of *Anglo-Indian*, as in *Indian Words in English: A Study in Indo-British Cultural and Linguistic Relations* (G. S. Rao, 1954). See INDO-. [ASIA, EUROPE, NAME]. T.MCA.

**INDO-ENGLISH** [1890s]. An obsolete term for various kinds of English used in India. In 1891, Hugo Schuchardt used the German plural form, later translated as *Indo-Englises*, as a cover term for the varieties *Butler English* in Madras, *Pidgin English* in Bombay, *Boxwall(l)a(h) English* among itinerant pedlars in northern India, *chee-chee* or *chi-chi English* among Eurasians, and *Baboo* (now *Babu*) *English* in Bengal (see *Beiträge zur Kenntnis des englischen Kreolisch III: Das Indo-Englische*, in *Englisch Studien* 15, 1891, translated by Glenn G. Gilbert as *Pidgins and Creole Languages: Selected Essays*: Cambridge University Press, 1980). In 1964, the Indian educationist and writer V. K. Gokak wrote: 'What I would call "Indo-English" literature consists of translations by Indians from Indian literature into English' (*English in India: Its Present and Future*, Bombay). Since then, the term has occasionally been used, like *Indo-Anglian*, for what is now generally called *Indian English literature*. See BABU ENGLISH, BOXWALLA(H) ENGLISH, BUTLER ENGLISH, CHEE-CHEE ENGLISH, INDIAN ENGLISH<sup>1</sup>, INDIAN ENGLISH LITERATURE, INDO-, INDO-ANGLIAN. Compare ANGLO-ENGLISH. [ASIA, VARIETY]. B.B.K.

**INDO-EUROPEAN LANGUAGES, The.** The language family, or family of families, of which English is a member, along with other European languages such as French, German, Russian, and Spanish, and Asian languages such as Bengali, Gujarati, Hindi, and Persian, as well as the classical languages Greek, Latin, Pali, and Sanskrit. It constitutes the most extensively spoken group of languages in the world. The view that similarities among certain languages of Europe and Asia resulted from a common origin had attracted scholars for several centuries before the British scholar Sir William Jones suggested in 1786 that Sanskrit, Latin, and Greek shared features derived from 'some common source which, perhaps, no longer exists'. He guessed that the Germanic and even the Celtic languages had the same source. Within a century, the implications of Jones's suggestion had been studied in great detail and his postulated 'common source' is now called *Proto-Indo-European (PIE)* or simply *Indo-European (IE)*.

**Proto-Indo-European.** PIE is considered to have vanished soon after 2000 BC without leaving written records. Many details, especially its sound pattern, remain the subject of debate, and new theories of the date and place of the original 'Indo-Europeans' and the nature of their diaspora continue to be proposed. Their assumed homeland is a place where words shared by IE languages would have had a use. The word for *fish* was common to them but not the word for

*sea*, so the territory of the Indo-Europeans appears to have had bodies of water but not a coastline. They had horses and goats, and grain but not grapes. Such evidence seems to point to an area in the northern part of eastern Europe. The era of IE is usually dated from c.3000 BC until shortly after 2000 BC. Again, the evidence is chiefly archeological and linguistic, and the conclusions inferential: for example, horses and goats did not appear in the assumed homeland much before 3000 BC. The breakup of the community of original speakers of PIE can be dated from the earliest records in IE languages. Thus, elements of Mycenaean Greek are preserved on tablets from 1600 to 1200 BC, so IE had given way to its successors by then, and probably a good deal earlier. Some recent theories push these dates earlier still, holding that archeological evidence for the gradual spread of farming from Greece across Europe and into Britain points to an IE origin in Anatolia (now eastern Turkey) as early as 6000 BC.

**Features of Proto-Indo-European.** Like all historical reconstructions, PIE is hypothetical, designed to explain the features of the IE languages which can be studied in written records or in their living spoken form. The forms of PIE words are known only indirectly from its reflection in the earliest written records in IE languages. So Sanskrit *āsmi*, Latin *sum*, Greek *eimi*, and Old English *eom* can best be explained by assuming a PIE form like *\*es-*, with a suffix related to modern English *me*: *\*esme*. The sum of such reconstructions is a language with many stop consonants, several similar to those of modern English, but also another set with a following aspirate: *bh*, *dh*, *gh*, *gwh*. IE had several varieties of the nasals *m* and *n*, the liquids *l* and *r*, and the glides *w*, *y*, and schwa. But it had only one unstopped consonant, *s*. The vowels were *a*, *e*, *i*, *o*, *u* in long and short forms. As reconstructed, PIE words take forms like *\*bhrāter* brother, *\*yeug-* to yoke, *\*wed-* wet, leading to English *water*, Latin *unda* (source of English *undulate*), Greek *hūdōr* (source of English *hydrant*), and Russian *voda* (borrowed into English in its diminutive form *vodka*).

PIE verbs are thought to have followed an inflectional pattern similar to that of English *sing*, *sang*, *sung*, varying the vowel to indicate tense. Verbs also took an inflection to indicate person, number, and mood. All the major parts of speech were highly inflected, for three genders (masculine, feminine, and neuter), and for eight cases that defined the function of the word in the sentence much as the modern English *s* defines the difference between *The cat is John* and *The cat is John's*. Such inflections were chiefly suffixes, rarely prefixes, but both kinds of affix

were used for word-formation. Compound words similar to modern English *Whitehouse* and *Longfellow* were common.

**Indo-European culture.** Language is a record of culture. Reconstructed IE records a polytheistic people with a northern farmer's awareness of annual cycles, names for the chief celestial bodies and phenomena, names too for the earth and its varieties, wet and wild. Trees, notably the birch and fruit trees, and the animals that lurked in them, such as wolf and beaver, occupied the IE landscape; fish swam in their inland waters, while above them flew several kinds of birds from sparrows to eagles. In the clearings were domestic animals, and the Indo-Europeans knew lice at close range. The family was a vital group, from father and mother to son and daughter, and their home was the village. A patriarchal society seems to be reflected in the prominence of names for male relatives. Weaving and pottery created products for home use, for barter, and for the socially important exchange of gifts that IE languages record in the words for *give* and *take*. It is probably as much this cohesive agricultural social structure as conquest that enabled the Indo-Europeans to spread out of their homeland into regions from Britain to India, although the ancient mythologies and stories of India, the Hittites, and Greece suggest a stratified society of priests, warriors, artisans, and farmers, in which warfare was common and honourable.

**The Indo-European language families.** PIE gave rise to several 'families', related by common descent from one or other early offshoot. These are often classified as *satem* or *centum* languages (according to the development of the IE word for *hundred* with a *k* sound as in Latin *centum* or an *s* sound as in Sanskrit *satem*). It was once thought that the *centum* group (including English and Latin) was western and the *satem* group (including Sanskrit) was eastern, but Tocharian, deciphered in this century, is the easternmost IE language, and it is a *centum* language. Three IE families are no longer represented among living languages: Venetic in Italy, Tocharian in Central Asia, and Anatolian in what is now eastern Turkey (once represented by Hittite). Not all members of the surviving families, moreover, are still living: Latin and Old English are dead languages. The ongoing IE language families are:

*The satem languages.* (1) Indo-Iranian, including modern Persian and such Indic languages as Bengali, Gujarati, and Hindi. (2) Thracophrygian, perhaps represented by modern Armenian. (3) Illyrian, perhaps represented by modern Albanian. (4) Balto-Slavonic, including modern Bulgarian, Lithuanian, Polish, Russian, and Serbo-Croat.

*The centum languages.* (1) Celtic, including modern Breton, Irish Gaelic, Scottish Gaelic, and Welsh. (2) Germanic, including Danish, Dutch, English, German, and Swedish. (3) Hellenic, including modern Greek. (4) Italic, including Latin and its Romance descendants, such as French, Provençal, Italian, Spanish, Portuguese, Catalan, and Romanian. The Germanic family stems from an unrecorded offshoot of IE known as *Primitive Germanic*. The Germanic languages fall into three groups: (1) East Germanic, represented only by Gothic, which ceased to be spoken in the 16c. (2) North Germanic, represented by the Scandinavian languages. (3) West Germanic, represented by modern German, Yiddish, Dutch, Frisian, Afrikaans, and English.

By no means all early IE languages left written records. The Slavonic languages can be traced no further back than the 10c; the earliest records of Albanian are from the 15c. There is no record at all of Germanic before it subdivided into eastern, western, and northern groups; the earliest records, runic inscriptions from the 3c or 4c, are Scandinavian.

**A double heritage.** The contemporary English language has a native grammar and vocabulary that stem directly from its Germanic heritage, and a borrowed vocabulary from other, mainly IE, languages, notably Latin, its offshoots, and Greek. This double vocabulary provides alternatives like *brotherly* from Germanic and *fraternal* from Latin, with nuances of difference: see BISOCIATION. Literary style often exploits the duality: though Milton is considered a Latinate writer, the second line in his couplet 'But O, as to embrace me she inclined, / I waked, she fled, and day brought back my night' is composed only of Germanic words, contrasting with the borrowed 'embrace' and 'inclined' in the previous line.

**The Indo-European diaspora.** The terms *Indo-European* and the older *Indo-Germanic* and *Indo-Celtic* aptly described (at the time they were coined) the spread of the language families from India in the east to Britain and Iceland in the west. Exploration, migration, and colonialism have, however, taken the diaspora further afield: the Western IE languages English, Spanish, French, and Portuguese are now major languages not just of Europe but of the Americas, Africa, and even Asia, where English is the associate official language of India, and English and Spanish are used in the Philippines. Smaller populations speaking IE languages are everywhere, and IE languages such as French and English often serve as languages of accommodation between speakers of other languages. Because of such developments, the term *Indo-European* is

still historically, philologically, and taxonomically sound, but it has lost its geographical rationale.

**INDO-EUROPEAN ROOTS.** The hypothetical forms and meanings of Indo-European (IE) words reconstructed by comparative philologists through comparison of living languages, the surviving records of their older forms, and dead languages. IE roots are usually printed with an asterisk (\*) to show that they are unrecorded; many are also printed with a following hyphen (-) to indicate that an inflectional or derivational suffix follows. The form and meaning listed with a hypothetical root are those that plausibly explain the recorded forms and meanings; they are not primarily assertions about the details of the IE original, but statements about the relationship of extant words in IE languages that descended from it.

An IE root for *to fasten* appears to have had the forms \**pag-* or \**pak-*. It is the origin of Latin *pax* and hence of English *pacify*, *pacific*, and by way of French *paix*, of *peace* and *appease*. The sense development from \**pak-* appears to arise from the figurative specialization 'fastening together (by means of treaty)'. From the same IE root came Latin *palus* (stake fastened in the ground), whence English *pole*, as well as *pale*, *impale*, and *palisade* through French, and *pawl* through Dutch. Three stakes fastened in the ground made an instrument of torture probably

called *\*tripalium* in Latin, from which comes French *travailler* (to work hard) and modern English *travail* and (from Middle English times when a trip was no pleasure) *travel*. One form of the root *\*pag-* was the nasalized *\*pang-*, which gave rise not only to the Latin source of modern English *impinge* and *impact* but also to Old English *fang* (that which is fastened upon: plunder). In Middle English, the meaning of *fang* was specialized to the plunder of an animal, its prey; in Modern English it has become the tooth by which an animal fastens onto its prey.

Latin also had the descendant of *\*pag-* in *pagus* (staked-out boundary); a dweller within such a boundary was a *paganus*, a villager or rustic. The figurative sense gives us *pagan* directly from the Latin; the literal sense remains in *peasant*, from the same word by way of French. From *pagus* Latin also had *pagina* (little fastening), a frame onto which vines were fastened, and from those vines comes *propagate* by generalization, and *propaganda* (those things which are to be propagated) by metaphor; hence also a *page*, in which the columns of written text are like vines on a trellis. These examples illustrate some of the known outcomes of the IE root *\*pag-* or *\*pak-* in modern English. The reconstruction of the root takes into account not only these forms and meanings but such others as Greek *pégnumi* (to fasten or congeal: compare *pectin*). The examples trace the outcomes from their source; the reconstruction traces the source back from its outcomes. Such roots are listed and discussed in detail in the books listed below. See ETYMOLOGY, ROOT. [ASIA, EUROPE, HISTORY, LANGUAGE, WORD]. W.F.B.

Shipley, Joseph. 1984. *The Origins of English Words: A Discursive Dictionary of Indo-European Roots*. Baltimore: Johns Hopkins University Press.

Skeat, Walter W. 1879-82. *An Etymological Dictionary of the English Language*. Oxford & New York: Clarendon Press.

Watkins, Calvert. 1985. *The American Heritage Dictionary of Indo-European Roots*. Boston: Houghton Mifflin.

**INDO-GERMANIC**, also **Indogermanic**. An obsolete term succeeded by *Indo-European*. See ARYAN, INDO-EUROPEAN LANGUAGES. [ASIA, EUROPE, HISTORY, NAME]. W.F.B.

**INDONESIA**. Formal title: Bahasa *Republik Indonesia*, English *Republic of Indonesia*. A country in South-East Asia, whose main island areas are Sumat(e)ra, Java/Jawa, Kalimantan (two-thirds of Borneo), Sulawesi, and Irian Jaya (the western half of New Guinea). Capital: Jakarta. Currency: the rupiah (100 sen). Economy: mixed. Population: 172.9m (1988), 213.9m (projection for 2000). Ethnicity: largely of Malay origin, including 45% Javanese, 14%

Sundanese, 8% coastal Malays, 8% Balinese, Batak, Dayak, Madurese, Moluccan, etc., and 2% Chinese. Religions: 87% Muslim, 9% Christian, 2% Hindu, 1% other. Languages: Bahasa Indonesia/Indonesian, a form of Malay (the official and link language); Javanese, English, and Dutch widely spoken; many local languages, including Madurese and Sundanese; some Chinese. Education: primary 98%, secondary 39%, tertiary 7%, literacy 74%. Hinduism and Buddhism were once common, and Islam was introduced by Persian and Gujarati traders in the 14-15c. The Portuguese were the first Europeans to set up trading posts in the region, in the 16c, and were followed by the Dutch and English in the early 17c. When the Dutch had driven out the English, they set up the *Dutch East Indies*, which they controlled until the islands' independence in 1945-50. There were only two breaks in this long period of Dutch colonialism: during the Napoleonic era, when first the French then the British briefly occupied the islands, and the Second World War, when the Japanese held them (1942-5). On declaring their independence in 1945, the Indonesians rejected Dutch and made English the first foreign language of the new country. Since then, English has been the primary language of international relations and national development, especially in enriching Indonesian Malay. Around 80% of books imported since independence have been in English and thousands of private language schools offer EFL courses. English, especially AmE, has high status; its influence through books, magazines, films, tourism, and pop music is pervasive, and many educated people use it among themselves. In adding new words to Bahasa Indonesia, there appears to be a preference for English loans rather than Malay coinages: for example, *efisien* (efficient) rather than *berdayaguna*. Typical of the many words borrowed from English and other European sources into Bahasa are *antena*, *baterai*, *biskuit*, *dokter*, *ekclair* (éclair), *helikopter*, *interkom*, *kabin*, *karamel*, *kompass*, *mesin* (machine), *mesin-jet* (jet engine), *pelikan*, *pilot*, *radio*, and *stetoskop*. See EAST INDIES, MALAY, MALAYO-POLYNESIAN LANGUAGES, RELC, SOUTH-EAST ASIAN ENGLISH, SPELLING REFORM. [ASIA, NAME, VARIETY]. T.MCA.

**INDUCTION**. See LOGIC.

**INFERENCE** [16c: from Latin *inferentia* a bringing-in, a reasoned conclusion]. Also **deduction**. In general terms, the process or result of drawing a conclusion. In logic, the process or result of deriving a conclusion from a set of premisses, including a conclusion that is probable in relation to the premisses. From the statements *All men are mortal* and *Socrates is a man*,

one infers or deduces that Socrates is mortal. See LOGIC. [LANGUAGE]. T.MCA.

**INFINITIVE** [15c: from Latin *infinitivus* unlimited]. The non-finite verb that has the uninflected form of the verb: *be, say, dig, make*. The term may be used alone (the *bare infinitive*: *I made him tell the truth*) or preceded by *to* (the *to-infinitive*: *I asked him to tell the truth*). The bare infinitive is commonly used after a modal auxiliary verb (*be* after the modal *may* in *We may be late*) and after the auxiliary *do* (*I did answer your letter, They don't know the difference*). It is also found in the complementation of a small number of main verbs such as *have, let, make, see* and *hear* (*I had Tom paint the fence; The soldiers let us pass; They heard us leave*). In some instances, either type of infinitive may be used: *Steven helped Susan (to) teach the children good manners; What Sidney did was (to) help Justin with his homework*. The *to-infinitive* has a wider distribution as the verb in an infinitive construction: (1) It may be subject (*To meet you was a great pleasure*), though a variant with postponed subject is more usual (*It was a great pleasure to meet you*). (2) It may be the object in various types of verb complementation: *I hope to see Judith and Percy soon; I asked John and Joyce to come to my party; Jeffrey and Rosalind want me to be there*. (3) It may be introduced by a *wh*-word: *Anton and Stella asked me what to advise their elder son*. (4) It may function in various semantic classes of adverbial: *To set the alarm, press four digits; He grew up to be a fine man; To be frank, the meeting was boring*. See BARE INFINITIVE, SPLIT INFINITIVE, USAGE (CONTOVERSIES). [GRAMMAR]. S.G.

**INFIX** [1880s: from Latin *infixus*, from *infigere/infixum* to fasten in]. An element inserted into the body of a word so as to change its meaning or function: for example, in the Californian language Yurok, *-ge-* forms plurals (*sepolah* field, *segepolah* fields). There is no strict equivalent in English, but the following have been cited as kinds of infixation: (1) A recurring nonsense syllable in secret languages such as Turkey Irish (once used in and around New York City), in which *ab* comes before a spoken vowel, so that the sentence *Can you see me?* becomes *Caban yaboo sabee mabee?* (2) The opening up of polysyllables to make room for expletives: *absoblooming-lutely, kanga-bloody-roo*. See AFFIX, GREAT AUSTRALIAN ADJECTIVE. [GRAMMAR, WORD]. T.MCA.

**INFLATED LANGUAGE** [Probably 17c, from which period *inflated* has been used to describe language, rhetoric, style, etc.]. A pejorative term for speech or writing that uses far more words

than necessary; bombastic, pretentious, and turgid language. See BOMBAST, DOUBLESPEAK, GOBBLEDYGOOK, JARGON. [STYLE]. T.MCA.

**INFLECTED** [14c: from Latin *inflectere/inflexum* to bend, alter, modify]. A term in linguistics for a language in which a word takes various forms, most commonly by alteration of an ending, to show its grammatical role: Greek *ho lukos* the wolf (nominative case and subject of the sentence), *ton lukon* the wolf (accusative case and object of the sentence). Languages vary in their degree of inflection. The Indo-European languages were originally highly inflected, as shown by the forms of nouns, verbs, and adjectives in Greek and Latin. See CASE<sup>1</sup>, INFLECTION, LINGUISTIC TYPOLOGY. [GRAMMAR, LANGUAGE]. J.M.A.

**INFLECTION**, also especially BrE **inflexion** [16c: from Latin *inflectere/inflexum* to bend in, curve, modulate]. A grammatical form of a word. Some languages make more use of inflections than others: Latin is highly inflected for nouns, adjectives, pronouns, and verbs, whereas French is highly inflected for verbs but less so for other parts of speech. Generally, verbs inflect for *mood, tense, person, number*, while nouns and adjectives inflect for *number and gender*. Such inflections may involve affixes, sound and spelling changes (including stress shifts), suppletion, or a mixture of these. In English, there are relatively few inflections. Verbs inflect through suffixation (*look/looks/looking/looked*), but some irregular verbs have past forms that depart from the norm (*see/sees/seeing/saw/seen; swim/swims/swimming/swam/swum; put/puts/putting/put*). The verb *be* has eight forms: *am, are, be, been, being, is, was, were*. Nouns inflect for plurality and possession (*worker/workers/worker's/workers'*) and some adjectives inflect for their comparatives and superlatives (*big/bigger/biggest*). Seven pronouns have distinct object forms: *me, us, her, him, them, thee, whom*. See ACCIDENCE, CASE<sup>1</sup>, ENDING, INFLECTED, STRONG VERB, WEAK VERB. [GRAMMAR]. S.C.

**INFORMAL** [16c: see FORMAL]. A term in linguistics for a situation or a use of language that is common, non-official, familiar, casual, and often colloquial, and contrasts in these senses with *formal*. Whereas *Would you be so good as to help me?* is highly formal, *Lend us a hand, would you?* is highly informal. [GRAMMAR]. S.G.

**INFORMATION** [14c: from Old French *informacion*, from Latin *informatio/informationis* an outline, idea, from *informare/informatum* to give a form to, describe]. (1) Originally, moulding the

mind or character through instruction in knowledge of the kind that creates a preferred ideological 'shape'. (2) In general usage, a kind of knowledge obtained through direct experience, through study, by asking questions, or by consulting a *source of information*, such as a book, timetable, or teletext. (3) In information theory, the measure of probability that a particular message will occur. (4) In computing, data in a useful form, usually as output from a computer but also at any stage of processing: input, output, storage, transmission.

**Matter, energy, and information.** Whether brief and unimportant or complex and significant, information is a commodity. It can be: passed on or held back; bought, sold, or given freely; allowed to disappear or stored in various ways for future use. The provision and storage of information take many forms, pre-eminent among them natural language. Stores of information, whatever form they take, can be as important as material and energy resources. Some theorists consider that nature is more than matter and energy: 'To the powerful theories of chemistry and physics must be added a late arrival: the theory of information. Nature must be interpreted as matter, energy, and information' (Jeremy Campbell, *Grammatical Man*, 1982, p. 16). In this broad sense, information is a 'code' shared by matter, energy, genes, living systems, and both natural and artificial forms of language.

**Information and its synonyms.** It is not easy to distinguish such related terms as *data*, *information*, *knowledge*, *wisdom*, but the different qualities of understanding can, for limited practical purposes, be listed in a hierarchy from *data* at the lowest point, through *information*, to *knowledge*, to *wisdom* at the top. Such a hierarchy occurs in the lines of T. S. Eliot: 'Where is the Life we have lost in living? / Where is the wisdom we have lost in knowledge? / Where is the knowledge we have lost in information?' (Choruses from 'The Rock', 1934). *Data* are a collection of more or less isolated facts, such as daily temperatures. *Information* is data with a shape and a potential use, or is conclusions drawn from data, such as the average yearly temperature in London. *Knowledge* is applied and heightened information, such as an expert's awareness of the difference between summer and winter temperatures in London, of the average temperature difference between London and Madrid, and any consequences to be drawn from such information. *Wisdom* is still more general and valuable, such as the ability to draw conclusions about the nature of weather and why people respond to it the way they do. Computers are so good at processing data that they encourage relatively

low-level descriptions of the world. However, work in artificial intelligence tries to improve on this, seeking to upgrade data to the level of information or even knowledge.

**Bits and bytes.** In terms of information theory and computer technology, the unit of information and smallest unit of its storage is the *bit* (binary digit), a coinage of the US statistician John Tukey. A sequence of random choices of 0 and 1 (such as 101100101 . . .) contains one bit per symbol. 8 bits make a *byte* (and to continue the association, 4 bits are a *nibble*). Computer memories are measured in multiples of bytes: *megabyte* 1m bytes; *gigabyte* 1,000m bytes; *terabyte* 1,000,000m bytes. One bit provides a choice between two possibilities. Two bits provide a choice among four: 00, 01, 10, or 11. Similarly,  $n$  bits provide  $2^n$  choices: 3 bits have 8 choices, 4 bits 16, and so on. Since there are 88 characters on a standard typewriter keyboard (44, with the shift key giving 88 possibilities), a minimum of 7 bits is required to store one character, since the next power of two above 88 is  $2^7$ , or 128. For computer convenience, each character normally fills an entire 8-bit byte, wasting one bit. Just as characters can be made up of bits (8 bits each), so words, pictures, and sounds can be made up of characters. An average word is about 6 bytes (five characters plus the space after it), and a typical novel contains between 500,000 and 1,000,000 bytes. To record a voice takes between 1,000 and 20,000 bytes per second (depending on the quality sought), and a low-quality picture (TV resolution, black and white) is about 30,000 bytes. A high-quality picture needs about 1,000,000 bytes, although usually it can be compressed, by removing any redundancy, to not more than a tenth of that.

**Information theory.** Information scientists consider that the degree of information in a text is measured by the difficulty of guessing what comes next. The least information is conveyed when the next elements are highly predictable, the most when there is uncertainty. A predictable sequence such as *aaaa . . .* contains no information, because the listener knows what is coming next. However, such a varied sequence as *aaaa-zaaaz* is contrastive and contains a small amount of information, but if continued without variation also becomes predictable. Such a structure as *aazbaazbb* is more interesting because it carries more information in its contrasts and patterns. The mathematics of information are described by *information theory* (invented by the US mathematician Claude Shannon at Bell Laboratories). Shannon's experiments included covering up the last part of a message and asking people to guess the next letter. Information theory measures the capacities of communication

channels and memories, and the amount of information required to convey certain kinds of messages. It relates the bandwidth or frequency range of a communications channel to the number of bits per second it can transmit. A typical telephone channel transmits frequencies between 300 and 3,300 hertz (cycles per second), and has a bandwidth of 3,000 hertz. Its ability to transmit information is limited by this bandwidth and by the signal-to-noise ratio (that is, the ratio of the loudest signals transmitted to the level of background noise), and is typically about 10,000 bits per second. By contrast a modern computer network operates at bandwidths of many megahertz and may transmit 50 megabits per second. Information theory describes the ways in which to represent either digital information on telephone channels designed to transmit sound, or the reverse: techniques for handling voice signals on digital channels. It also deals with suitable methods of coding for error correction. It explains how to introduce redundancy into messages so that they can be corrected if garbled without having to retransmit the entire message. See REDUNDANCY.

**Information processing.** The term information processing describes data processing (the processing of numbers) and the processing of texts, sounds, and images. It is a major industry which includes much of the work done with computers and communications. Computers, which began as cryptographic machines, now dominate both writing and printing. Similarly, branching out from their use in calculating artillery firing tables during the Second World War, they perform virtually all complex numerical calculations in developed countries, in particular those that make possible modern banking and credit systems. Their ability to manipulate data has made possible inventory control in businesses and reservation systems for airlines of a very high level of complexity.

**Information retrieval.** There are two aspects to information retrieval: the finding of information, especially by searching computer files, and the theory and practice of doing so. The files may belong to an individual or an organization or be a major commercial service, such as Mead Data Center's *LEXIS* system, which stores US legal decisions. There are two kinds of retrieval: (1) *Document retrieval*, in which the response to a query is a citation to a document or the document in which the information can be found. (2) *Fact retrieval*, in which the response is the provision of the specific answer to the query rather than a text containing the answer. The first is common, the second not yet practical. The major issue in computerized information retrieval is not mechanical manipulation of text,

but deciding which items to retrieve. Popular techniques include: (1) *Manual indexing*, in which people read material and assign terms from an *indexing language* to it. Queries are then phrased in terms of that language. (2) *Free-text search*, in which the computer looks for the words as written by the original author. (3) *Statistical or probabilistic retrieval*, in which the computer looks for the words believed (on the basis of the mathematical processing of the original words) to reflect the content of the query. (4) *Artificial intelligence techniques*, in which the computer attempts to translate both the query and the document into some kind of higher-level representation and then match these. This may involve parsing the sentences and attempting to match the structures with formal representations. Knowing that a meal has a cook, some food, and somebody who eats it, a computer might realize that *John ate Bill's omelette* does not necessarily mean that John stole Bill's food.

Retrieval systems are evaluated by measuring *recall* (the fraction of relevant material found by the search), and *precision* (the fraction of the material which is found that the user wanted to see). A search which operates at 80% recall has found four-fifths of what the user wanted. If it has 25% precision, every relevant document has been joined by three that are irrelevant. The ideal search would be 100% recall (everything important found) and 100% precision (everything found is important). Reality is more like 20-50% recall and 50-80% precision. Retrieval systems may be designed either for use by expert librarians, who then perform searches for the actual questioners, or for inquirers themselves. Typical queries involve Boolean operators, such as *and* (as in searching for 'Horowitz *and* language', to find items both written by Horowitz and dealing with language) and *or* (as in searching for 'Navajo *or* Hopi', to find items dealing with either group). In general, manual indexing picks up major concepts in documents, but requires the searcher to know the indexing language. Free-text search finds specific textual phrases or peripherally mentioned subjects. Retrieval systems are widely used in libraries, where on-line services such as Dialog Information Services in the US make available most major abstracting and indexing services together with current newspapers, standard reference works (*Books in Print*, encyclopedias, etc.), and some scholarly books. Extensions to retrieval systems are being studied, both to increase their scope of content and to boost the number of researchers using these systems directly rather than through library personnel. The original post-war goal of the US science administrator Vannevar Bush was to give each scholar a 'memex' desk-sized unit containing an entire library and all his and his

colleagues' notes on it, accessible by keystroke ('As We May Think,' *Atlantic Monthly*, 1945). This unit is still being sought.

**Information technology.** There are two aspects to the term *information technology*: (1) The general term for the equipment used to store and process information: computers, copying machines, printing machines, communications gear, and other devices. (2) The general business of using and developing that equipment, including both hardware and software. Innovation and the immediate widespread dissemination of new devices and processes appear to be a built-in feature of the industry. Recent introductions include the *facsimile transmission machine* or *fax* and the *Winchester disk drive* (so named because the first of these had two 30-megabyte spindles which reminded the builders of the Winchester .30/.30 repeating rifle).

**Conclusion.** An increasing part of a modern economy is devoted to information: whenever people watch television rather than play a game or bake a cake, they substitute data for tangible objects. Information for the use of the average person is overwhelmingly either *language* (radio, audiotapes, books, periodicals) or *images* (television, cinema, videotapes, pictures in books and periodicals). An important property of such information is that it is cheap to copy. Unlike a traditional business where one- to two-thirds of the cost of an object relates to materials, hardly any of the cost of an information business is materials, most of the investment being concentrated on producing the first copy. This makes for economies of scale, as a result of which domination of this economy by the advanced countries is even more extreme than their domination of traditional industries concerned with matter and energy. This dominance includes the languages in which most information is conveyed. Since English is the foremost of the languages of the technology and the key language of computer science, the *information explosion* or *information revolution* seems set to ensure it an increasingly significant role. See MESSAGE, PROPAGANDA, REDUNDANCY, TELECOMMUNICATIONS. [LANGUAGE, MEDIA, TECHNOLOGY]. M.L., T.MCA.

**INFORMATION EXPLOSION.** See COMMUNICATIVE SHIFT, INFORMATION.

**INGLIS** [From 14c: from Old English *Englisc*. Pronounced /'ɪŋlɪz/ and /'ɪŋlɪz/. The word for *English* in northern Middle English and Older Scots, used from the 14c by writers of Older Scots as the name of their language, which they saw as the same as the language of England. In the late 15c, such writers began using the

national name *Scottis* (pronounced /'skɒtɪs/ and /skɒtɪs/) for the language of Lowland Scotland and both terms continued in use as more or less free alternatives, *Inglis* predominating. Sometimes, however, 16c Scottish writers used *Inglis* for the language of England alone:

Lyke as in Latyn beyn Grew termys sum,  
So me behufyt quhilum, or than be dum,  
Sum bastard Latyn, Franch or Inglys oys,  
Quhar scant was Scottys.

(Gavin Douglas, Prologue to Book I, *Aeneid*, 1513)

[Just as in Latin there are some Greek terms,  
So it behoved me at times, rather than be dumb,  
Some bastard Latin, French or English to use,  
Where Scots was scant].

The term *Scottis* was opposed to *Sotheroun* or *Suddroun* (Southern: the English of England), a less ambiguous term than *Inglis*. Only from the early 18c was the present-day terminology consistently applied, *Scots* for the vernacular of the Scottish Lowlands and *English* for the language of England and the standard variety being imported into Scotland. See SCOTS, SOUTHRON. [EUROPE, HISTORY, LANGUAGES]. A.J.A.

**INGVAEONIC**, also **Ingweonic** [1930s: from Latin *Ingaeuones* a tribal name recorded by the Roman historian Tacitus, perhaps meaning 'people of (the god) \*Ingwaz' and linked with the origins of *English*]. The hypothetical language from which coastal West Germanic descended. Anglo-Frisian, the equally hypothetical ancestor of Old English, has been called an Ingvaeonic dialect. Compare LOW GERMAN. [EUROPE, HISTORY, LANGUAGE, NAME]. T.MCA.

**INITIAL**, also **initial letter**, **point** [17c: from Latin *initialis* first, from *initium* beginning]. (1) The first letter of a word, usually capitalized in a proper name: the *L* of *London*, the *G*, *B*, *S* of *George Bernard Shaw*. Since at least the Middle Ages, Europeans have signed documents with or been referred to by their initials alone: Queen Elizabeth the Second in the form *EIIR* (Latin: *Elisabetha Secunda Regina*). The practice of using initials or points in handwriting and print has encouraged the growth of such abbreviations as symbols, formulas, initialisms, and acronyms: for example, *a* stands, among others, for *acre* and *are* (units of land measurement); *e.g.* stands for Latin *exempli gratia* for the sake of an example; *BBC* for *British Broadcasting Corporation*; *NATO* for *North Atlantic Treaty Organization*. (2) The large ornamental letter at the start of a page or chapter, especially in an illuminated manuscript. See ACRONYM, FORMULA, INITIALESE, INITIALISM, INITIAL RHYME,

LETTER<sup>1</sup>, PERSONAL NAME, POINT, PUNCTUATION.  
[NAME, WORD, WRITING]. T.MCA.

**INITIALESE** [20c]. An informal, sometimes pejorative term for a style that uses initials to economize in space, effort, and expense. It assumes familiarity on the part of readers or listeners and is common in classified advertisements, in which time names and stock phrases are reduced to letters with or without points: *tel* telephone; *Mon, Sept.*; *ono/o.n.o.* or nearest offer. The codes used in the personal ads of the *New York Review of Books* are: *B* Black, *Bi* Bisexual, *D* Divorced, *F* Female, *G* Gay, *J* Jewish, *JNR* Jewish no religion, *M* Male/Married, *NYC* New York City, *S* Single, *S/D* Single/Divorced, *W* White. To avoid ambiguity, *Ms* are kept separate, as in *MWM* Married White Male. See AGGLOMERESE, -ESE, INITIAL. [STYLE, WORD]. T.MCA.

**INITIALISM** [19c]. Also **initial word**. An abbreviation that consists of the initial letters of a series of words, pronounced in sequence: *BBC* for *British Broadcasting Corporation*, pronounced 'bee-bee-see'. A letter group such as *NATO*, pronounced as a word ('nay-toe') is commonly referred to as an *acronym*. Both initialisms and acronyms have word-like qualities and take affixes (*pro-BBC*, *non-NATO*, *ex-IBMer*); they are sometimes referred to jointly as *letter words* or *letter names*, and the acronym is regarded by some lexicologists as a kind of initialism. The pronunciation of initialisms is usually straightforward, but writing sometimes poses problems: formerly, points were the norm (*B.B.C.*), but currently an unpointed style prevails in data processing and in the Armed Services and increasingly in commerce, advertising, and publishers' house styles. Institutions often have preferences: *International Association of Physical Oceanography* is *I.A.P.O.* (pointed initialism), but *Global Geological and Geophysical Ocean Floor Analysis and Research* is *GOFAR* (unpointed acronym). Idiosyncratic usage is common: the *International Herald Tribune* prints *U.S.* for *United States* alongside *EC* for *European Community*. Although most names are upper case, there are such exceptions as the *Initial Teaching Alphabet* (or *initial teaching alphabet*), officially abbreviated as *i.t.a.* and *ita*. Sequences of letters created for other reasons are occasionally interpreted as initialisms: for example, the letters *SOS* were adopted as an international distress signal because they were easy to transmit in Morse code; they are, however, often said to stand for 'save our souls'.

See ABBREVIATION, ACRONYM/PROTOGRAM, INITIAL, LETTER WORD. [WORD]. T.MCA.

**INITIAL RHYME**. See ALLITERATION.

**INITIAL TEACHING ALPHABET**, short forms *i.t.a.*, *ita*, *I.T.A.*, *ITA*. A controversial adaptation of the Roman alphabet (sometimes called an *augmented Roman alphabet*) intended as an aid for children and adults learning to read and write English. It was devised in England in 1959 by Sir James Pitman, based on the *phonotypy* of his grandfather, Sir Isaac Pitman, and on the *Nue Spelling* of the Simplified Spelling Society. It has 44 lower-case letters, each with one sound value: see extract. The additional letters are adaptations of forms already occurring in traditional orthography (t.o.), such as the digraphs *au*, *ng*, *th*. When the function of a capital is needed, an *i.t.a.* letter is written or printed larger. When learners become proficient in reading *i.t.a.* they are expected to transfer easily to t.o. Teachers who use it see this transfer as a progression and not a process of relearning. The alphabet was adopted on an experimental basis by some schools in the UK in 1960 and the US in 1963, and Pitman set up *i.t.a.* foundations in both countries to administer its use. The British foundation closed from lack of funds, its work taken up in 1978 by the *Initial Teaching Alphabet Federation*, a group of experienced and enthusiastic teachers.

ne initial teching alfabet is not an attempt at spelling reform ov the igitish lagwæ], but an initial learnig medium tw assist in the akwisiþion ov literacy skills. It can be used wih infants or adults and users hw hav previously fald. It braks the learnig proses dwn into stæjes, cæþig wih the difficultis ov spelling wen confidens has ben aþeved wih a consistent orthograpy. It mæks for fast ræding wih æds comprehension.

The alphabet was tested for the U. of London by the researcher John Downing, whose report was favourable. His publications on the subject include *The Initial Teaching Alphabet* (Cassell, 1964), *The i.t.a. reading experiment* (Evans, 1964), *Evaluating the Initial Teaching Alphabet* (Cassell, 1967), *Reading and Reasoning* (Chambers, 1979). In 1975, the Bullock Report noted: 'It would appear that the best way to learn to read in traditional orthography is to learn to read in the initial teaching alphabet.' However, despite such conclusions and much initial interest, the mother-tongue English-teaching profession has since the 1970s massively ignored the alphabet, despite an increasing awareness of literacy problems in the English-using world. It

continues, however, to be used on a modest scale in Australia, Canada, Malta, Nigeria, South Africa, Spain, the UK, and the US. Its advocates argue that it gives learners confidence and satisfaction, largely because of its consistency. Its opponents among spelling reformers consider it an unsatisfactory compromise through which the irregularities of t.o. are not removed but postponed. Its mainstream opponents see it as alien and confusing in appearance, expensive in terms of printing reading materials, uncertain in the ease with which transfer to t.o. occurs, and inconvenient in relation to the parallel process of teaching people to write. See BULLOCK REPORT, PITMAN (J.), READING, SIMPLIFIED SPELLING SOCIETY, SPELLING REFORM. [WRITING]. T.MCA.

**INKHORN TERM**, also **inkhornism**, **inkpot term** [16c: from *inkhorn*, *inkpot* containers for ink]. Archaic: an obscure and ostentatious word usually derived from Latin or Greek, so called because such words were used more in writing than in speech. Thomas Wilson observed in 1553:

Among all other lessons this should first be learned, that wee never affect any straunge ynkehorne termes, but to speake as is commonly received: neither seeking to be over fine nor yet living over-carelesse, using our speeche as most men doe, and ordering our wittes as the fewest have done. Some seeke so far for outlandish English, that they forget altogether their mothers language (*Art of Rhetorique*).

Among his examples of inkhornisms are: *revoluting*; *ingent affabilitie*; *ingenious capacity*; *magnifical dexteritie*; *dominical superioritie*; *splendidious*. See ARCHAISM, AUREATE DICTION, HOLOFERNES, -ISM, PUTTENHAM, WILSON. [STYLE, WORD, WRITING]. T.MCA.

**INNIS, Harold Adams** [1894–1952]. Canadian economist and communications theorist, born in Otterville, Ontario, and educated at McMaster U., Hamilton, Ontario, and the U. of Chicago. He was head of the Department of Political Economy at the U. of Toronto from 1937 until his death. His early writing generally dealt with the importance of cod, lumber, railways, and fur to the Canadian economy, but later he studied the effects of systems of communication on culture and politics, publishing *The Bias of Communication* (1951) and *Empire and Communications* (1950). Innis felt that periods of shift such as from one medium to another (from oral to written, or manuscript to type) were likely to liberate thinkers from the mindset promoted by the dominant medium. His work influenced Marshall McLuhan. See index. [AMERICAS, BIOGRAPHY, MEDIA]. M.F.

**INNUENDO** [17c: from the ablative *innuendo* ('by nodding towards') of Latin *innuendum*, from *innuere* to nod. The term was first used to introduce a legal aside, in which a person was identified (usually as guilty) or a statement was explained (usually as defamatory). Plural *-does*, *-dos*]. A hint or oblique remark, often malicious. In Shakespeare's *Julius Caesar* (3, 2), Mark Antony speaks to the crowd after Caesar's death, adding such ironic innuendoes as 'For Brutus is an Honourable man, / So are they all; all Honourable men', and slowly turns the crowd against Caesar's killers. [STYLE]. T.MCA.

**INSTITUTE OF LINGUISTS**. A British organization set up in 1910 to promote the learning of languages, including English, for commercial and industrial purposes. The Institute provides examinations in English at five levels, from low basic to high professional. See EXAMINING IN ENGLISH. [EDUCATION, EUROPE, MEDIA]. W.S.

**INSTRUMENTAL** [13c: through French from Latin *instrumentum* a tool or means]. In some inflected languages, such as Russian, the case that expresses *by means of*; more generally, the concept expressed by such an inflection. The commonest English equivalent is a *with*-phrase: 'He fixed it *with a hammer*.' This may contrast with a *by*-phrase: 'The work was done *by several people*.' However, to do something *by hand* is instrumental. Instrumental and agentive occur together in: 'He was hit *with a chair by a drunk man*.' See CASE<sup>1</sup>, OLD ENGLISH<sup>1</sup>. [GRAMMAR]. S.C.

**INSULT**. See ABUSE, DEROGATORY, ETHNIC NAME, MALEDICTA, PEJORATIVE, SLUR, SWEARING.

**INTENSIFIER** [19c]. A word that has a heightening effect (*very in very large*) or a lowering effect (*slightly in slightly fat*) on the meaning of the word that it modifies. Words that can be modified in this way are said to be *gradable*. Intensifying adjectives modify nouns (*great in a great fool*). Intensifying adverbs mainly modify verbs (*greatly in greatly admire*), gradable adjectives (*extremely in extremely foolish*), and other adverbs (*somewhat in somewhat slowly*). Some intensifiers go with certain gradable words: *entirely* with *agree*, *deeply* with *worried*, *highly* with *intelligent*. See COLLOCATION, IDIOM. [GRAMMAR]. S.G.

**INTERFERENCE** [1880s in first sense, 1950s in the second]. (1) In broadcasting and telecommunications, disturbance in the transmission or reception of one set of signals, caused by the intrusion of another set of signals; signals

or radiation that cause such disturbance; the unwanted sounds they produce. (2) In linguistics and language teaching, the effect of one language on another, producing 'instances of deviation from the norms of either language' (Uriel Weinreich, *Languages in Contact*, 1953). Interference occurs naturally in the speech of bi- and multilingual people and the efforts of learners of foreign languages. It affects all levels of language: accent, pronunciation, syntax, morphology, vocabulary, and idiom. Although it is natural, especially when speakers are tired, tense, excited, or distracted, it is often disapproved of in unilingual societies as a display of inadequate skill on the part of a foreign learner. See ERROR, ERROR ANALYSIS, INTERFERENCE VARIETY, INTERLANGUAGE, MISTAKE. [EDUCATION, LANGUAGE, TECHNOLOGY]. T.M.C.A.

**INTERFERENCE VARIETY.** In sociolinguistics, a variety of a language such as English that has been affected by close contact for a long period of time with one or more other languages, as in India (influenced for example by Hindi and Tamil), Africa (influenced by Yoruba and Swahili), and Singapore (influenced by Chinese and Malay). See CONTACT VARIETY, INTERFERENCE. [LANGUAGE, VARIETY]. B.B.K.

**INTERFIX** [1950s]. An element used to unite words and bases: the thematic vowels *-i-* in *agriculture*, *-o-* in *biography*, and *-a-* in *Strip-a-gram* are interfixed vowels; the middle words in *editor-in-chief*, *writer-cum-publisher*, *Rent-a-Car*, and *Sun 'n Sand* are interfixed words; *-ma-* and *-ummy-* in *whatchamacallit* and *thingamabob/thingummybob* are interfixed syllables. Such elements generally fit into the rhythm of the language as weak vowels and syllabic consonants. In late 20c English, thematic vowels proper sometimes overlap with such other interfixable elements as the indefinite article and the agentive suffix *-er*, as in: *megalith*, *megaton*, *aquaphobic*, *Linguaphone*, *Funarama*, *SelectaVision*, *Select-a-game*, *Post-a-Book*, *Porta-phone*, *Rent-a-car*, *Strip-a-gram*, *Pakamac*, *Comutacar*. Such coinages are often stunt words created as commercial names. In pronunciation, the *a*-element in all of these items is a schwa, but in many cases the function of the *a* is unclear: in *SelectaVision* it could be thematic like the *-e-* in *television*, a reduction of *-or* in *selector*, an indefinite article (*Select a vision*), or a mix of these. The range of such usages is large: (1) Like *-a-* in *megalith*: *Beat-A-Bug*, *Cup-a-Soup*, *gorillagram*, *Prism-aflex*, *Relax-a-Dial*, *Rent-a-tux*. (2) Like *-e-* in *telephone*: *cinplex*, *Procretech*, *telecom*. (3) Like *-i-* in *carnivore*: *agri-biz*, *Chemi-Garded*, *Digipulse*, *flexitime*, *Healthitone*, *Multivite*, *Nutri-Time*, *VisiCalc*. (4) Like *-o-* in *cardiogram*:

*biotech*, *Dento-Med*, *Film-O-Sonic*, *Fotopost*, *Frig-O-Seal*, *FructoFin*, *Thermoshell*, *Tomorrow-vision*. (5) Like *-u-* in *acupuncture*: *Accu-Vision*, *CompuSex*, *Execu-Travel*, *Dentu Cream*. (6) Like *-y-* in *bathyscaphe*: *polywater*, *Skinnyvision*. See BLEND, COMBINING FORM, THEMATIC VOWEL. [STYLE, WORD]. T.M.C.A.

**INTERIOR MONOLOGUE/MONOLOG.** See MONOLOGUE/MONOLOG, STREAM OF CONSCIOUSNESS.

**INTERJECTION** [15c: through French from Latin *interiectio/interiectionis* something thrown in]. A part of speech and a term often used in dictionaries for marginal items functioning alone and not as conventional elements of sentence structure. They are sometimes emotive and situational: *oops*, expressing surprise, often at something mildly embarrassing, *yuk/yuck*, usually with a grimace and expressing disgust, *ow*, *ouch*, expressing pain, *wow*, expressing admiration and wonder, sometimes mixed with surprise. They sometimes use sounds outside the normal range of a language: for example, the sounds represented as *ugh*, *whew*, *tut-tut/tsk-tsk*. The spelling of *ugh* has produced a variant of the original, pronounced 'ugg'. Such greetings as *Hello*, *Hi*, *Goodbye* and such exclamations as *Cheers*, *Hurray*, *Well* are also interjections. See PART OF SPEECH. [GRAMMAR]. S.C.

**INTERLANGUAGE** [1920s]. (1) A language created for international communication, such as *Esperanto*, or used as a lingua franca in a particular region, such as Hausa and Pidgin English in West Africa. (2) In linguistics, a language intermediate between two or more other languages, generally used as a trade jargon, such as *Hindlish* in India and *Taglish/Mix-Mix* in the Philippines. (3) In language teaching and applied linguistics, the transitional system of a learner of a foreign language at any stage between beginner and advanced. See ARTIFICIAL LANGUAGE, CODE-MIXING AND CODE-SWITCHING, ERROR ANALYSIS, -GLISH AND -LISH, LANGUAGE LEARNING, PIDGIN. [EDUCATION, LANGUAGE]. T.M.C.A.

**INTERLOCUTOR** [16c: from the verb *interloqui/interlocutus* to speak between]. Someone who takes part in a conversation or a dialogue, or speaks to, banters with, or questions other people. *Interlocution* is a rare term for both conversation and alternate reading or speaking, as in making religious responses or reading alternate verses of the psalms. See LOCATION. [SPEECH]. T.M.C.A.

**INTERNAL RHYME.** The use of rhyming words within a line of verse. The inner word may rhyme with the end of the line, as in W. S.

Gilbert's 'Then a sentimental *passion* of a vegetable *fashion*' (*Patience*, 1881), in which the effect is of two short lines written as one. However, internal rhyme may be independent of end rhyme, as in Swinburne's 'Sister, my sister, O *fleet sweet swallow*'. Medieval Latin *leonine verse* (composed in hexameters or elegiac couplets) employs internal rhyme, the word that precedes the caesura rhyming with the last word of the same line, as in, 'The fair breeze *blew*, the white foam *flew*' (Coleridge, 'The Ancient Mariner', 1798). See RHYME. [LITERATURE]. R.C.

**INTERNATIONAL ASSOCIATION OF TEACHERS OF ENGLISH AS A FOREIGN LANGUAGE.** See IATEFL.

**INTERNATIONAL CORPUS OF ENGLISH.** See SURVEY OF ENGLISH USAGE.

**INTERNATIONAL ENGLISH** [Late 20c: with or without a capital *i*]. The English language, usually in its standard form, either when used, taught, and studied as a *lingua franca* throughout the world, or when taken as a whole and used in contrast with *American English*, *British English*, *South African English*, etc., as in *International English: A Guide to Varieties of Standard English*, title of a work by Peter Trudgill and Jean Hannah (London: Edward Arnold, 1982) that reviews both standard and non-standard varieties worldwide. See ENGLISH, INTERNATIONAL LANGUAGE, STANDARD INTERNATIONAL ENGLISH, TEL, WORLD ENGLISH. [GEOGRAPHY, VARIETY]. T.MCA.

**INTERNATIONAL ENGLISH LANGUAGE TESTING SYSTEM.** See IELTS.

**INTERNATIONAL HERALD TRIBUNE.** An English-language daily newspaper with an American background and house style, its head office in Paris, and 'The Global Newspaper' as its main slogan. It was founded in 1887 by James Gordon Bennett Jr. as the European edition of the *New York Herald*. Bennett pioneered the use of cables and radio to send news and, in Europe, the use of Linotype and colour comic strips. After his death and several changes of ownership, the newspaper became the European edition of the *New York Herald Tribune*, and when that paper closed in 1966 after a printers' strike it was maintained under its present name by the Whitney Communications Corporation, with the *Washington Post* and *New York Times* as co-owners and main sources of material. These newspapers became the sole owners in 1991. The 'Trib' is put together in Paris, printed by facsimile in Paris, London, Zurich, Hong Kong, Singapore, The Hague, Marseille, New York,

Rome, Tokyo, and Frankfurt, and sold through retail outlets and by postal subscription. Sales in 1964 were 52,578, in 1985 160,000, and the target for 2000 is over 200,000. Compare EUROPEAN (THE). See NEWSPAPER. [MEDIA]. T.MCA.

**INTERNATIONAL LANGUAGE** [Late 19c]. Sometimes **international auxiliary language**. A language, natural or artificial, that is used for general communication among the nations of the world: 'In the four centuries since the time of Shakespeare, English has changed from a relatively unimportant European language with perhaps four million speakers into an international language used in every continent by approximately eight hundred million people' (Loreto Todd & Ian Hancock, *International English Usage*, 1986); 'The success of English in its function as an international auxiliary language has often been regarded as a measure of its adequacy for the job' (Manfred Görlach, 'Varietas Delectat', in Nixon & Honey, *An Historic Tongue*, 1988). Compare LINGUA FRANCA, WORLD LANGUAGE. See BASIC ENGLISH, BROKEN ENGLISH, ESPERANTO, INTERNATIONAL ENGLISH, WORLD ENGLISH. [LANGUAGE]. T.MCA.

**INTERNATIONAL LINGUISTIC ASSOCIATION**, short form *ILA*. An American association formerly known as the *Linguistic Circle of New York*, founded 1943 by refugee linguists from the Société de Linguistique de Paris. It publishes the journal *Word*. [AMERICAS, LANGUAGE, MEDIA]. J.A.

**INTERNATIONAL PHONETIC ALPHABET**, short form *IPA*. An alphabet developed by the *International Phonetic Association* to provide suitable symbols for the sounds of any language. The symbols are based on the Roman alphabet, with further symbols created by inverting or reversing Roman letters or taken from the Greek alphabet. Such symbols are designed to harmonize as far as possible with standard Roman symbols, so as to fit as unobtrusively as possible into a line of print. The main characters are supplemented when necessary by diacritics. The first version of the alphabet was developed in the late 19c by A. E. Ellis, Paul Passy, Henry Sweet, and Daniel Jones from a concept proposed by Otto Jespersen. It has been revised from time to time, most recently in 1989 (see accompanying charts). The IPA is sufficiently rich to label the phonemes of any language and to handle the contrasts between them, but its wide range of exotic symbols and diacritics makes it difficult and expensive for printers and publishers to work with. As a result, modifications are sometimes made for convenience and economy, for example in ELT learners' dictionaries. Phoneme symbols are

CONSONANTS

	Bilabial		Labiodental		Dental		Alveolar		Postalveolar		Retroflex		Palatal		Velar		Uvular		Pharyngeal		Glottal	
Plosive	p	b					t	d	ʈ	ɖ	c	ɟ	k	g	q	ɢ			ʕ		ʔ	
Nasal	m	ɱ					n		ɳ	ɲ	ɲ	ŋ	ŋ	ɴ								
Trill							r								ʀ							
Tap or Flap							ɾ		ɽ													
Fricative	ɸ	β	f	v	θ	ð	s	z	ʃ	ʒ	ʂ	ʐ	x	χ	χ	ʁ	ħ	ʕ	ħ	ʕ		
Lateral fricative							ɬ	ɮ														
Approximant			ʋ				ɹ		ɻ	j	ɰ	ɰ										
Lateral approximant							l		ɭ	ʎ	ʎ											
Ejective stop	pʼ						tʼ		ʈʼ	cʼ	kʼ	qʼ										
Implosive	ɓ	ɗ					ɗ	ɗ			ɠ	ɠ	ɠ	ɠ								

Where symbols appear in pairs, the one to the right represents a voiced consonant. Shaded areas denote articulations judged impossible.

used in phonemic transcription, either to provide a principled method of transliterating non-Roman alphabets (such as Russian, Arabic, Chinese), or to provide an alphabet for a previously unwritten language. The large number of diacritics makes it possible to mark minute shades of sound as required for a narrow phonetic transcription. The alphabet has not had the success that its designers hoped for, in such areas as the teaching of languages (especially English) and spelling reform. It is less used in North America than elsewhere, but is widely used as a pronunciation aid for EFL and ESL, especially by British publishers and increasingly in British dictionaries of English. The pronunciation in the 2nd edition of the *OED* (1989) replaces an earlier respelling system with IPA symbols. The IPA and other phonetic symbols are described in detail in *Phonetic Symbol Guide*, Geoffrey K. Pullum & William A. Ladusaw (U. of Chicago Press, 1986). See ALPHABET, ENGLISH PRONOUNCING DICTIONARY, INTERNATIONAL PHONETIC ASSOCIATION, LANGUAGE TEACHING, LEARNER'S DICTIONARY, PHONETIC TRANSCRIPTION, RESPELLING. [SPEECH, WRITING].

G.K., T.MCA.

**INTERNATIONAL PHONETIC ASSOCIATION**, short form *IPA*. An association that seeks to promote the science of phonetics and its practical applications. It was founded in 1886 in

VOWELS

Where symbols appear in pairs, the one to the right represents a rounded vowel.

France under the English name *The Phonetic Teachers' Association*, by a group of language teachers who used phonetic theory and transcription in their work. The journal *Dhi Fonètik Tücer* started in France in the same year, edited by Paul Passy and printed in English in a phonetic script; its name was changed in 1889 to *Le Maître phonétique*. At first, the Association was concerned mainly with phonetics applied to teaching English, but interest expanded with the membership to the phonetic study of all languages. It acquired its present name in 1897. Although the Association played an important part in the European movement for the reform

of language teaching in the late 19c, it is now best known for its regularly revised alphabet. In addition to such occasional publications as *Differences between Spoken and Written Language* (Daniel Jones, 1948) and *The Principles of the International Phonetic Association* (Daniel Jones, 1949), which includes sample transcriptions of a large number of languages, the Association publishes *The Journal of the IPA*, which evolved from *Le Maître phonétique*. The current address of the Association is the Department of Linguistics & Phonetics, U. of Leeds, Leeds LS2 9JT, UK. See INTERNATIONAL PHONETIC ALPHABET, JONES (D.), LANGUAGE TEACHING, PASSY, PHONETICS. [MEDIA, SPEECH].

G.K., T.MCA.

**INTERNATIONAL SCIENTIFIC VOCABULARY** [1961: as used by Philip Gove, editor, *Webster's Third New International Dictionary*, 1961]. A term for the classically derived vocabulary of science common to such languages as English, French, and Spanish. In *Webster's Third*, the letters ISV mark words 'when their language of origin is not positively ascertainable but they are known to be current in at least one language other than English. . . . Some ISV words (like *haploid*) have been created by taking a word with a rather general and simple meaning from one of the languages of antiquity, usually Latin and Greek, and conferring upon it a very specific and complicated meaning for the purposes of modern scientific discourse.' Typically, an ISV word is a compound or a derivative which 'gets only its raw materials, so to speak, from antiquity'. Compare CLASSICAL/LEARNED COMPOUND, COMBINING FORM. [REFERENCE, WORD].

T.MCA.

**INTERROGATION MARK/POINT.** See QUESTION MARK.

**INTERROGATIVE** [16c: from Latin *interrogativus* questioning]. The grammatical structure through which questions are asked, and a term used in the classification of sentence types, in contrast with *declarative*, *imperative*, etc. It is often used interchangeably with *question*, but some grammarians keep interrogative as a category of form and question as a category of meaning, while others do the reverse. The sentence *Can I borrow your pen?* is interrogative in form, but is a directive in meaning, requesting the listener to lend the pen. See QUESTION. [GRAMMAR].

S.C.

**INTERTEXTUALITY** [mid-19c]. In literary criticism, the relationship between texts. The term is associated in particular with the French structuralist Julia Kristeva (b.1941), who regards

every text as an *intertext* in a succession of texts already existing or yet to be written. They may be connected by citation or allusion: for example, T. S. Eliot begins 'The Journey of the Magi' (1927) with an extract from a sermon by Lancelot Andrewes (1555-1626). The relationship among texts may be through formal features, as in the succession of poets practising the sonnet, or the dominance of the heroic couplet from the late 17c to the end of the 18c. A writer may criticize and change the effect of an earlier text: for example, William Golding's *Lord of the Flies* (1954) 'subverts' the optimistic tone of R. M. Ballantyne's *The Coral Island* (1857), and makes use of the same or similar names for main characters. The following are contrastive excerpts:

*The Coral Island.* 'Now, then, Ralph and Peterkin,' said Jack, as we mingled with the crowd, 'it seems to me that the object we came here for having been satisfactorily accomplished, we have nothing more to do but get ready for sea as fast as we can, and hurrah for dear old England!'

'That's my idea precisely,' said Peterkin, endeavouring to wink, but he had wept so much of late, poor fellow, that he found it difficult; 'however, I'm not going away till I see these fellows burn their gods.'

Peterkin had his wish, for, a few minutes afterwards, fire was put to the pile, the roaring flames ascended, and, amid the acclamations of the assembled thousands, the false gods of Mango were reduced to ashes.

*Lord of the Flies.* Piggy wilted. Ralph took the conch from him and looked round the circle of boys.

'We've got to have special people for looking after the fire. Any day there may be a ship out there'—he waved his arm at the taut wire of the horizon—'and if we have a signal going they'll come and take us off. And another thing. We ought to have more rules. Where the conch is, that's a meeting. The same up here as down there.'

They assented. Piggy opened his mouth to speak, caught Jack's eye and shut it again. Jack held out his hands for the conch and stood up, holding the delicate thing carefully in his sooty hands.

'I agree with Ralph. We've got to have rules and obey them. After all, we're not savages. We're English; and the English are the best at everything. So we've got to do the right things.'

Some 20c writers have been overt with their intertextual references, as when Joyce imitates a succession of styles in English in the 'Oxen of the Sun' episode in *Ulysses* (1922). Christine Brooke-Rose's experimental novel *Thru* (1975) is rich in allusion to earlier works and presents a continual challenge of recognition to the reader. Some writers allude intertextually to their own work: Hardy introduces characters from *Far from the Madding Crowd* (1874) into *The Mayor of Casterbridge* (1886). In *The Sea, The Sea*

(1978), a novel that has many echoes of Shakespeare's *The Tempest*, Iris Murdoch has the narrator imagine a character who is an actress playing Honor Klein from her earlier novel *A Severed Head* (1961). These are specific and conscious references; intertextuality assumes that, as well as making its own unique reference, every text contains latent semiotic links with others. Compare ALLUSION, QUOTATION. See PASTICHE, TEXT. [LITERATURE, WRITING]. R.C.

**INTERVOCALIC** [19c]. A term in phonetics indicating that a consonant occurs between vowels: intervocalic /r/ in *merry* and /t/ in *butter*. See R, VOWEL. [SPEECH]. T.MCA.

**INTONATION** [17c: from Latin *intonatio/intonationis* putting tone into (something), as in chanting plainsong, uttering musical notes, and modulating the voice]. The tone pattern of speech, produced by varying vocal pitch. Type and style of intonation are closely linked to patterns of rhythm and stress and cannot easily be described separately from them. See PROSODY, RHYTHM, STRESS, TONE. [SPEECH]. G.K.

**INTRANSITIVE.** See TRANSITIVE AND INTRANSITIVE.

**INTRUSIVE L.** See SOMERSET.

**INTRUSIVE R.** In some accents of English, including RP, an /r/ pronounced between the vowels /ɔ, ɑ, ə/ and a following vowel when there is no r in the spelling, as in *Australia/r* and *New Zealand, the India/r Office, draw/r/ing room*. Homophonic effects sometimes occur, as in *law and order/lore and order*. Occasionally, comment on the intrusion is humorous; in Britain, *Laura Norder* is a friend of the police and an advocate of strong government. The /r/ is in phonological terms an inherent feature of the accent in question, but because it sometimes has an orthographic form (as in *czar of Russia*) and sometimes does not (as in *Shah of Persia*), it has been widely stigmatized in the latter case as a sound that should not be there and that makes no sense. The /r/ is accepted in the first of these phrases but often rejected as non-standard in the second. However, its use continues regardless of approval or disapproval, and generally goes unnoticed among those speakers who do it. See LINKING R, RHOTIC AND NON-RHOTIC. [SPEECH, STYLE]. G.K., T.MCA.

**INUIT**, also **InnuIt** [18c: from the Inuktitut word *inuit* people, plural of *inuk* person]. The name of a Native people of Canada, widely known as *Eskimo*. This name comes from Algonquian and means 'raw-meat eater'; the Inuit consider it

pejorative, and their own name is now standard in Canada. Recent Canadian style guides recommend *Inuk* singular, *Inuit* plural. The language of the Inuit, *Inuktitut*, is often also called *Inuit*. See AMERICAN LANGUAGES, CANADIAN LANGUAGES, CANADIAN PLACE-NAMES. [AMERICAS, NAME]. M.F.

**INVERSION** [16c: from Latin *inversio/inversionis* turning round]. Also *anastrophe* [16c: from Greek, turning back]. (1) Turning something round, as for example in English, when forming certain kinds of questions from statements, such as *Are you coming?* from *You are coming*, by inverting the order of *you are*. (2) In rhetoric, speech in which the normal word order of statements is turned round, usually for emphasis or to mark priority and eminence: 'To the Most High and Mightiest Prince, James by the grace of God King of Great Britaine, France and Ireland, Defender of the Faith, &c. the Translators of the Bible wish grace, Mercie, and Peace through Iesus Christ our Lord' (dedication, the Authorized Version of the Bible, 1611). Fowler's *Modern English Usage* (ed. Gowers, 1965) states that such inversion has 'an essential place in the language', but adds that 'abuse of it ranks as one of the most repellent vices of modern writing'. Journalistic uses of inversion that are often regarded as vices include inverting verb and subject in reporting clauses that come before quoted statements: for example, *Says Darren Beagle, chief programmer at Megabux Inc., 'This is the breakthrough we've all been waiting for.'* See CHIASMUS, HYPERBATON, HYSTERON PROTERON, QUESTION, WORD ORDER. [GRAMMAR, STYLE, WRITING]. T.MCA.

**IOTA** [17c: through Latin from Greek *iōta*, from Semitic: compare Hebrew *yōdh* yod. A doublet of *jot*. Both words are commonly used to signify something small and trivial: *not an iota of proof; not a jot or tittle*. The 9th and smallest letter of the Greek alphabet: upper case I, lower case *i*. The term *iotaicism* refers to considerable or excessive use of the letter *i* or any sound that *i* or *y* represents, as in *an itsy-bitsy, teenie-weenie bikini*. See ALPHABET, I, J, LETTER<sup>1</sup>. [SPEECH, WRITING]. T.MCA.

**IPA, I.P.A.** See INTERNATIONAL PHONETIC ALPHABET, INTERNATIONAL PHONETIC ASSOCIATION.

**IRAQ.** See ARABIC, ENGLISH.

**IRELAND** [Before 10c: from Old English *Ireland, Yraland*, from Gaelic *Eire*, English *-land*]. An island of Western Europe, often referred to as 'an island of the British Isles'

(*Longman Larousse*, 1968). However, many Irish people, especially in the Republic, consider this description inappropriate and offensive. In their view, Ireland is not, or should not be, in any sense 'British'. In the six counties of Northern Ireland, which is part of the UK, the term *British Isles* is generally accepted in Protestant communities, unless *British* is taken to be synonymous with *English*. The island was never invaded by the Romans, and after the decline of the Roman Empire became a centre of Christian culture that used both Gaelic and Latin. Irish clerics went as missionaries to the European mainland, where they were often known, and commemorated in place-names, as *Scoti* (Scots). Until the 8c, this name referred only to Irish people and settlers from Ireland in what later became Scotland. The long period of cultural, scholarly, and religious influence was brought to an end by two waves of Germanic invasion and settlement: the Norse (9-11c) and the Anglo-Normans (12c onward).

In 1171, Henry II of England declared himself Lord of Ireland, and in 1542 Henry VIII took the title King of Ireland, giving Irish chieftains such English titles as *Earl of Tyrone*. In 1603, the first British king, James VI of Scots and I of England, was declared King of Ireland, but Ireland was not formally joined to England and Scotland (as part of the UK) until 1803. Hostility between natives and early settlers was compounded after the Reformation by the enmity of Catholic and Protestant, especially when English and then Scottish Protestant settlers were 'planted' in Ireland as loyal supporters of the Crown, amid a largely resentful Celtic and Catholic majority. The history of Ireland from the 17c is dominated by a series of revolts against the *Protestant Ascendancy* imposed from London and the fight first for home rule then for outright independence. The struggle for Irish autonomy culminated in the Easter Rising (Dublin, 1916) and the partition of the island (1920), establishing the Catholic-dominated *Irish Free State* (1921), which became *the Irish Republic* (1949), and the Protestant-dominated six counties of *Northern Ireland*, part of the UK. In this province, also known loosely as *Ulster*, often violent hostility continues between loyalist Protestants who wish to sustain the British link and nationalist Catholics who seek a united Ireland. The Republic is 95% Catholic by religion and has two official languages, Irish Gaelic and English. Northern Ireland has since the 18c had a Protestant majority; currently, the population appears to be moving towards comparable numbers.

**IRISH** [Before 10c: from Old English *Irisc*, from *Iras* the people of Ireland]. (1) The adjective for Ireland, its people, languages, and traditions: *Irish Gaelic*, *the Irish language*, *the Irish Question*, *Irish whiskey*. Its nuances are varied, ranging from the sublime (*Irish patriot*) through such humorous and mischievous 'institutions' as the *Irish bull* and *Irish joke*, to facetious phrases like *Irish confetti* stones and bricks thrown as weapons, *an Irish hurricane* a flat calm with drizzling rain, *an Irish rise* a reduction in pay. Such expressions are sometimes deliberately used in Britain to express anti-Irish feeling. If something seems unusual, fey, or illogical, a common comment is: *That's a bit Irish*. (2) The Irish people: 'Other people have a nationality. The Irish and the Jews have a psychosis' (Brendan Behan, in *Richard's Cork Leg*, 1973). (3) Irish Gaelic: *In Connemara they speak Irish*. (4) The English language in Ireland: 'The Irish of the peasants, which is nothing but English Hibernicised' (*Westminster Review* 21, 1834). (5) Until the late 18c, the Scots, especially if Gaelic-speaking: 'We oft finde the Scots called Irishes, like as we yet term commonly our Highlandmen, in regard they speak the Irish language' (Spotiswoode, *History of the Church of Scotland*, 1655).

**Irish and English.** The relationship between the English and Irish languages is at least eight centuries old. In that period, the fortunes of both have waxed and waned, and the contacts have been complicated by conquest, rebellion, religion, ethnicity, immigration, emigration, politics, and education. As English has advanced and Irish retreated, it has been said both that English 'murdered' Irish and that Irish 'committed suicide' in the face of English. It is certainly true that the main reasons for the replacement of Irish by English are social and political rather than linguistic. They include: (1) The large-scale settlements begun in the 16c by the Tudors and reinforced by the Stuarts and

Cromwell in the 17c. (2) The penal laws of the 18c which reduced the native population to subsistence level and ensured that Irish was no longer the first language for those who hoped to improve their political or social position. (3) The introduction of National Schools in 1831, where English was the sole medium of instruction. (4) The years of famine in the mid-19c, which resulted in mass emigration and a belief that land and language were blighted.

**The heyday of Irish.** When in the 12c the Normans invaded Ireland, they found a secure language with strong and distinctive traditions. Speakers of Irish had Gaelicized not only the earlier people of the island and other Celtic settlers, but also later Pictish, Anglo-Saxon, and Norse settlers. The French, Flemish, Welsh, and English languages went to Ireland with the Normans and became in due course subject to pressure from Irish. Only within the eastern coastal region known as the Pale (see entry) did English maintain a fragile grip. Medieval statutes show both the power of Irish and a wish to protect English against it: in 1285, a letter sponsored by the Bishop of Kildare and sent to the king suggested that Irish-speaking clerics should not be promoted because of their wish to maintain their language, and in 1366, the Statutes of Kilkenny (written in French) enjoined the English to use English names, customs, and language. However, Irish encroached even at the highest levels: in the 14c, the Earls of Ormond and Desmond spoke Irish and the latter, although Lord Chief Justice, wrote Irish poetry.

**The conquest of Ireland.** In the 16c, the English defeated the Gaelic order in Ireland; land was confiscated and plantation schemes brought in large numbers of English and later Scottish settlers. From 1600, English grew in strength and by 1800 was regularly used by up to 50% of the population. However, such was the growth in population that on the eve of the famines of 1846-8 there were probably more Irish-speakers in absolute terms than at any previous time. What began with Tudor pronouncements became more and more part of the social tissue of the island. As the 19c famines and mass emigrations proceeded, English consolidated its position. The Catholic Church became more reconciled to it and wary of Protestant proselytism through Irish, a process started by Elizabeth. Political leaders such as Daniel O'Connell were more concerned with emancipation than language and a school system was established, managed by the Catholic clergy, that excluded Irish from the curriculum. The steady decline of Irish was abetted by a general,

pragmatic desire to acquire English. By the mid-19c, few Irish monolinguals were left and bilingualism had become a way-station on the road to English alone.

**The Gaelic League.** The founding of the Gaelic League in 1893 marked the start of the strongest wave of revivalist sentiment, which has endured in all its vicissitudes. Irish revivalism, an example of linguistic nationalism, arrived only when the language was already in grave peril. Its leaders were such Dublin intellectuals as Douglas Hyde and Eoin MacNeill, whose Irish was acquired rather than native. The movement largely failed to engage the support of the dwindling group of native speakers in the rural and impoverished *Gaeltacht*: an Irish-speaking area in the west that was idealized, romanticized, and kept at a safe remove. In addition, Irish was often linked with the strength of Catholicism, an association which permitted English to be depicted as the secular medium of a foreign culture, despite the fact that the Catholic Church promoted English even in Irish-speaking parishes.

**Irish since independence.** The Gaelic League had considerable success in fighting for Irish in schools and university but did not alter the language habits of the general population. When the Irish Free State was set up in 1921, Irish became a government responsibility. It was declared the national language, but accompanying the rhetoric was a serious and sometimes pessimistic concern for its fate. The government was often (and continues to be) accused of paying only lip service to revival. It entrusted the task to the schools and it is therefore in education that the most important action has taken place over the last 70 years, such as compulsory Irish classes and making the gaining of an overall secondary school leaving certificate dependent on passing Irish (a rule no longer in effect). However, these efforts have not reversed the long decline: Ireland is now an overwhelmingly English-speaking country in which only 1-2% use Irish regularly and, even in the *Gaeltacht*, many parents bring up their children in English. Given the strong social currents of English in everyday life, it is hard to see what more the schools could have done than apply a thin wash of Irish across the land.

**Conclusion.** Despite its decline, Irish has a special claim on the Irish. For some, it has symbolic value, like a flag; for others, it is the key to an ancient heritage. It is unlikely, however, that the language will ever again be a vernacular. Such recent trends as a growing demand in urban areas for Irish-medium education, though welcome to those concerned for Gaelic, are unlikely to make much difference. As in the Highlands and Islands of Scotland, the process of language

shift has always been a symptom and a consequence of a larger contest between unequal forces. Actions on behalf of language are unlikely to succeed unless they are allied with a comprehensive unpicking and re-weaving of the forces affecting all social life in these countries, but the desire for such a development is not widespread. See **BORROWING**, **CELTIC LANGUAGES**, **ERSE**, **GAELIC**, **HIBERNO-ENGLISH**, **SCOTTISH GAELIC**, **SHELTA**. [**EUROPE**, **LANGUAGES**, **NAME**].

J.E., T.MCA.

**IRISH BROADCASTING.** Public service radio broadcasting began in the Republic of Ireland in 1926 in Dublin, with a second station in Cork in 1927 and a high-powered transmitter in 1933 in Athlone broadcasting nationwide. In 1938, these combined to become *Radio Eireann*. The television service was inaugurated in 1961 as *Telefís Eireann*. Following the Broadcasting Amendment Act of 1966, the corporate name *Radio Telefís Eireann (RTE)* was adopted. The norm for broadcasting in English has been educated Dublin speech, a variety close to RP but rhotic and with more varied intonation patterns. Developments include colour TV in 1971-3, an Irish-language radio service based in Galway in 1972, a second TV channel *RTE2* (subsequently *Network 2*) in 1988, and a second radio service, *Radio 2*, mainly for younger listeners, in 1979. RTE income is from licence fee and advertising. About 50% of all programmes are home-produced, often competing with programmes from the BBC and ITV in Britain. Home-produced programmes (current affairs, sport, light entertainment) command the highest figures. Following a period in the 1970s and 1980s when pirate stations were popular, an Independent Radio and Television Commission (IRTC) authorized the setting up of 24 independent radio stations. The Dublin-based Capital Radio and Century Radio went on the air in 1989, while RTE with Radio Luxembourg established a commercial long-wave radio channel, Radio Tara, broadcasting to Ireland and Britain. Mainstream British broadcasting can be picked up in Ireland. [**EUROPE**, **MEDIA**]. L.T.

**IRISH BULL** [18c: origin uncertain; perhaps from Old French *boul* deceit]. A statement containing or seeming to contain a contradictory proposition: *Childlessness is hereditary in their family*. The word *Irish* was not always prefaced to such apparent inconsistencies and paradoxes, but the practice was well established when Maria Edgeworth wrote her *Essay on Irish bulls* (1802). See **BULL**, **IRISH JOKE**. [**EUROPE**, **STYLE**]. L.T.

**IRISH ENGLISH**, short form *IrE*. The English language as used in Ireland. Scholars currently employ three terms to describe this variety: *Anglo-Irish*, *Hiberno-English*, and *Irish English*. *Anglo-Irish* is the oldest and has long been associated with the English language in Ireland, English people in Ireland, and British politics in Ireland, as a result of which it can be ambiguous and Irish people often dislike its use as a generic term. *Hiberno-English* avoids this difficulty and identifies English in Ireland with the people of Ireland, not with outsiders. The term *Irish English*, although to some ears whimsical and paradoxical, is less academic and opaque, is not likely to be misinterpreted, and fits into the set *American English*, *British English*, *Indian English*, etc. It is used here as the generic term for all kinds of English in Ireland.

**The Germanic settlements.** It is not certain when, how, or in what forms English was first heard and used in Ireland. Trading links have existed between Ireland and Britain for at least two millennia, but nothing is known about the contact languages used after the Old English dialects were established in Britain. Following the Viking invasions in the 9c, Danish and Norse settlements were established in the east and south of the island. In this way, Germanic dialects began to affect Irish Gaelic, especially in commerce, dress, and seafaring. In 1155, the English Pope, Adrian IV, granted Henry II of England permission to invade Ireland and bring about religious reforms. The subsequent invasion, launched from Wales, was a military success. The Treaty of Windsor suggests that, by 1175, half of Ireland was under Anglo-Norman control, and by 1250, almost three-quarters of the island had been divided into shires. The leaders of the invasion spoke French but the soldiers were Flemish, Welsh, and from south-west England. English was their *lingua franca* and became established in all large settlements, especially in an area around Dublin known as *the (English) Pale* and in the Baronies of Forth and Bargo in Wexford.

**Gaelicization.** Like the Vikings, the Anglo-Normans were absorbed into the Celtic way of life, slowly relinquishing their language and customs. Laws, such as the Statutes of Kilkenny (1366), tried to ensure that they would continue to speak English and use English-style surnames, but such laws were increasingly ignored, so that by 1500 Irish Gaelic had virtually replaced English even in the towns. The Reformation in England in the 16c reinforced the solidarity between the settlers (who remained Catholic) and their co-religionists, the Irish, further weakening the role of English in the island. The English of the Anglo-Norman settlers and their descendants

came to be called *Yola* (a variant of *old*: see entry) and the settlers themselves became known as the *Old English* (see entry).

**Language shift.** The main forms of present-day IrE can be traced to the second wave of settlers. From the middle of the 16c, large numbers of English and Scottish *planters* settled in Ireland, creating communities (*plantations*) that preserved a separate identity from the native population, from whom they were marked out by language, religion, and culture. By the beginning of the 17c, Irish was still the most widely used language, but within 250 years a massive shift had occurred. The 1900 census records 21,000 monoglot speakers of Irish in the country (5% of the population). Today, the figure is zero, but some 100,000 people speak Irish as one of their mother tongues, the younger bilinguals showing English influence in their Irish, for example saying *Bhi siad uilig ólta* They were all drunk (*ól* drink; *ólta* drunk, used of liquids, not people) where older speakers would use the idiom *Bhi siad uilig ar meisce* (*ar meisce* intoxicated).

**Kinds of Irish English.** There are no dialect differences corresponding exactly with any county or other regional boundary in Ireland, but because of the different types of plantation, it is possible to distinguish three varieties of IrE: (1) *Anglo-Irish*, a middle- and working-class variety spoken over most of Ireland and deriving from the English of the 17c planters from England, modified by contacts with Irish, Ulster Scots, and Hiberno-English. (2) *Ulster Scots*, a variety of Lowland Scots spoken mainly in Antrim, Donegal, and Down, influencing all forms of northern speech. (3) *Hiberno-English*, the mainly working-class variety used by communities whose ancestral language was Gaelic. Because of their long association, the three varieties tend to influence and shade into each other in various complex ways.

**Models of pronunciation.** In pronunciation, three main models are followed: (1) *Received Pronunciation*. Two small groups of people have RP accents: men educated in England, especially in the public (private) schools, and some individuals in the media. (2) *Received Irish Pronunciation*. A rhotic accent and the prestige pronunciation of Radio Telefís Éireann (Irish Radio and Television). It is closer to RP than other varieties of Irish speech and is favoured by middle-class speakers of Anglo-Irish. (3) *Received Ulster Pronunciation*. In Northern Ireland, many broadcasters speak standard English with a regional accent and are more influential as models than speakers of RP.

**Bilingual signs.** Since the Irish Republic is officially bilingual, English appears widely with

Irish on public buildings and signs, and on official forms and documents, as in the following pairs on notice-boards at Dublin Airport: *Shops/Siopaí*, *Bar/Beár*, *Snacks/Sólaisti*, *Post Office/Oifig an Phoist*, *Telephones/Telefóin*, *Information/Fiasrúcháin*. Both languages appear on most road signs, the English below and capitalized, the Irish above in smaller traditional letters, as with: *Cill Fhionnúrach* over *Kilfenora*, *An Carn* over *Carran*, *Baile Uí Bheacháin* over *Ballyvaghan*, and *Lios Dúin Bhearna* over *Lisdoonvarna*. In many instances, the English names are Anglicizations of traditional Irish names, and the two correspond closely; in others they are quite different, as with *Baile átha Cliath* (pronounced 'bla-clee') over *Dublin*.

**IRISH GAELIC.** See CELTIC LANGUAGES, GAELIC, IRISH.

**IRISHISM** [18c: from *Irish* and *-ism* as in *Scotticism*]. Also, though rare, **Iricism**, **Hibernianism**, **Hibernicism**, **Irishry**. An Irish usage, custom, or peculiarity, and especially a form of language regarded as quintessentially Irish, including shibboleths and stereotypes such as the exclamations *begorrah* and *bejabbers*, and such expressions as *a broth of a boy* and *the top of the morning to you*, well known in Britain, North America, and Australia, but used by Irish people only when consciously speaking 'stage Irish' for

amusement or as a parody. Phonological, syntactic, and lexical Irishisms occur in: *Divil the bit of a shtick could I find for to bate the baisht with I couldn't find a stick to beat the animal with; Will you be after havin a cup of tea?—I will, to be sure; Wasn't it herself broke the delph into smitherreens?* Rhetorical Irishisms are often plays on words (*He's teetotally obsnorious*), malapropisms (*That man's a confederate liar, so he is*), or Irish bulls (*Nuns run in that family*). See IRISH BULL, IRISH ENGLISH, IRISH JOKE, -ISM, JOYCE. [EUROPE, STYLE, VARIETY, WORD]. L.T., T.MCA.

**IRISH JOKE.** A type of ethnic joke supposedly characterizing the habits and mentality of the Irish. Its target is often 'Irish logic', by which is meant a capacity to jump huge gaps or engage in creative paradox that is simultaneously foolish and wise: 'How d'you get to Killaloe?' enquires a traveller in a well-known two-liner. 'Ah now,' says Pat, 'I wouldn't be startin' from here.' See ETHNIC JOKE, IRISH BULL, IRISHISM. [EUROPE, STYLE]. W.N.

**IRISH LITERATURE.** See ANGLO-IRISH LITERATURE.

**IRISHMAN/WOMAN.** See -MAN/WOMAN.

**IRISH PLACE-NAMES.** The place-names of Ireland reflect linguistic and cultural contacts over 2,000 years. They include Gaelic (the majority), Scandinavian, Norman, and Anglo-Scottish influences during the Plantations, and are often hybrid or Anglicized in form.

**Gaelic.** (1) Settlements such as *baile* a town, *graig* a village: *Ballynadolly* in Antrim (from *Baile na Drlalach* town of the little hills), *Graigeen* in Limerick (*graig* and *in*, a diminutive: little village). (2) Toponyms such as *clár*, *magh*, *réidh* a plain, which occur either on their own as in (*County*) *Clare* and *Moy* in County Tyrone, or in combinations such as *Macosquin* in Derry (*Magh Cosgrain* Cosgrain's plain), *Readoty* in Waterford (*Réidh Dóighte* burnt plain). *Coill* (a wood) occurs in *Kerrykyle* in Limerick (*Ceithre Choill* four woods). *Gleann* (a glen) appears in *Glenamaddy* in Galway (from *Gleann na Madaidhe* glen of the dogs). *Inis* and *oileán* (an island) occur in *Inishfree* in Donegal (*Inis Fraoch* heather island), *Illauinfadda* in Galway (*Oileán Fada* long island). *Tobar* (a well) appears in *Toberbilly* in Antrim (*Tobar Bile* well of the old tree). (3) Battles marked by such names as *Ballynarooga* in Limerick (*Baile na Ruaige* town of the rout), *Drumar* or *Drom Áir* in Monaghan (*drum* a ridge, *ár* slaughter), *Meenagorp* in Tyrone (*Mín na gCorp* mountaintop of the corpses: possibly as the outcome of an epidemic rather than a battle).

Names associated with Christianity include: *Knock* in Mayo (from *cnoc* a hill); *Donaghmore* (*Domhnach mór* great church); *Monasteranenagh* in Limerick (*Mainistear an Aonaigh* Monastery of the Fair); and one of Belfast's best-known streets, *Shankill* (*Seanchill* old church). Other names are pre-Christian, such as *Sheetrim* in Armagh (*Sídh Dhruim* fairy ridge), *Lough Gilgagancan* in Donegal (*Loch Giolla gan Ceann* lake of the man without a head), *Boheraphuca* in Offaly (*Bóthar an Phúca* road of the Pooka, a supernatural being, cognate with Shakespeare's Puck).

**Norse and Norman French.** Viking names, found mainly around the coast, include those in *ford* a ford, as in *Longford*, *Waterford*, *Wexford*, *vig* a bay, as in *Wicklow*, *ey* an island, as in *Dalkey* (thorn island). *Leixlip* on the River Liffey was *Hlaxa Hlaup* (salmon leap). Relics of the Anglo-Norman invasion are few but include the Gaelicized *buirgéis* (a borough) in such names as *Borris* in Carlow and *Borrisnafarney* in Tipperary (*Buirgéis Fearná* borough of the alder trees). *Pomeroy* from a Norman family name (said to be from 'Pommes des Rois', king's apples). Influences from French can be seen in *Charleville* in Cork (named after King Charles II), *Jerpoint Abbey* in Kilkenny (from *Jeripont* Jeremiah's bridge), and *Powerscourt* in Wicklow.

**The Plantations.** Some names, introduced under the Tudors and the Stuarts, are English (*Greencastle* in Antrim, *Jamestown* in Leitrim, *Newcastle* in Tipperary), while others are Scottish (*Portmarnock* in Dublin, *Portstewart* in Derry, *Stewartstown* in Tyrone). Sometimes such place-names are associated with people (*Mountjoy* in Tyrone, *Nutt's Corner* in Antrim); occasionally, as in *Londonderry*, they are blends, here *London* with *doire* (oak-grove). Loyalists favour the London connection, while nationalists insist on Derry alone. Often, as with *Blackrock* in Dublin, names have been direct translations from Irish, here *Carraig Dhubh* (rock black). A number of hybrid Gaelic and English forms occur, including: *Ardmore Point* in Wicklow; *Glenshane Pass* in Derry; *Maguiresbridge* in Fermagh; *the Mountains of Mourne* in Down. See PLACE-NAME. [EUROPE, NAME]. L.T.

**IRISH PRESS.** There are seven daily and two Sunday newspapers in the Republic, three dailies and two Sundays in Northern Ireland, and more than a hundred provincial newspapers. British newspapers are also widely read. The oldest newspaper in Ireland, *The Belfast Newsletter*, was started in 1757, has a daily circulation of over 44,000, and serves the Unionist community. *The Irish News*, also in Belfast, was started in 1855, has a daily circulation of over 42,000, and

appeals mainly to Nationalists. The newspapers in Eire are read by all sections of the community. The main dailies are *The Cork Examiner* (established 1841, circulation over 58,000), *The Irish Times* (1859: 89,000), and *The Irish Press* (1931: 83,000). Magazines fall into the categories business (*Irish Business*, *Business Ulster*), general interest (*Ireland's Own*, *Ulster Tatler*), religion (*Caritas*, *The Church of Ireland Gazette*, *The Irish Catholic*), women (*Image*, *Women's Way*), and tourism (*Ireland of the Welcomes*). See NEWSPAPER, PRESS. [EUROPE, MEDIA]. L.T.

**IRISH PUBLISHING.** Although publishing in Ireland dates from the 16c in English and Irish, there has never been a strong tradition. The home market is small and foreign interest is limited, but since the 1950s there has been considerable expansion, with some 70 companies, including two in Northern Ireland, many operating as cottage industries. The main publishers are Dolmen Press (Port Laoise), Gill & Macmillan (Dublin), Mercier Press (Cork), Wolfhound Press (Dublin), Appletree Press (Belfast), and Blackstaff Press (Belfast). Publications include history, poetry, songs, fiction, and children's books, in both Irish and English. The need to exploit new technology to secure speedier production and larger readerships, especially outside Ireland, is appreciated, and was addressed in the 1988 report *Developing Publishing in Ireland* by the English consultancy firm Charles Pick. Its main recommendations were greater internationalization, changes in packaging, and possible amalgamations. Following this report, state agencies have been changing the system of funding to publishers and encouraging the sale of rights abroad. See PUBLISHING. [EUROPE, MEDIA]. L.T.

**IRISHRY** [14c]. Archaic: (1) A term for the Celtic people of Ireland, as contrasted with the *Englishry*, the English settlers: 'They that refuse to be under lawes are termed the Irishry, and commonly the Wilde Irish' (Philemon Holland, *Camden's Britain*, 1610). (2) A term for Irish character or nationality, or an Irishism. Compare ENGLISHRY, WELSHRY, WILD IRISH. [EUROPE, NAME]. T.M.CA.

**IRONY** [16c: from Latin *ironia*, Greek *eirōneia* pretence, from *eirōn* a dissembler]. Also sometimes **antiphrasis** [16c: through Latin from Greek *antiphrasis* anti-speech. Stress: 'an-TI-phra-sis']. (1) In rhetoric, words with an implication opposite to their usual meaning. Ironic comment may be humorous or mildly sarcastic, as for example when, at a difficult moment, an act of kindness makes things worse, and someone says, 'Well, that's a *lot* better, isn't it?' Expressions *heavy*

*with irony* are often used to drive a point home: 'I'm really looking forward to seeing him, *I don't think*'; 'You're pleased to see me? *Pull the other leg/one (it's got bells on)*.' In such usages, irony slides into *sarcasm*. (2) In general usage, incongruity between what is expected and what happens, and an outcome that displays such incongruity. The sentence adverb *ironically* is often used to draw attention to it: '*Ironically*, his kindness only made things worse.' In many instances, *ironically* serves virtually as a synonym of *paradoxically*. (3) Wry awareness of life's incongruity and irrationality. Irony as social comment is widely taken to work best without a fanfare.

Three kinds of irony have been recognized since antiquity: (1) *Socratic irony*, a mask of innocence and ignorance adopted to win an argument. Among the stock characters in early Greek comedy were two deceivers, the *eirōn*, a weak but wily underdog, who usually tricked the *alazōn*, a bombastic and stupid vagabond. In Plato's dialogues, Socrates often plays the *eirōn*, pretending ignorance and asking seemingly foolish questions so as to move a debate in the direction he wants. (2) *Dramatic or tragic irony*, a double vision of what is happening in a play or a real-life situation. In Greek tragedy, the characters were blind to fateful circumstances of which the audience was all too well aware, producing a privileged and often poignant appreciation of the plot. (3) *Linguistic irony*, a duality of meaning, now the classic form of irony. Building on the idea of dramatic irony, the Romans concluded that language often carries a double message, a second often mocking or sardonic meaning running contrary to the first. Such duality was labelled 'the Drie Mock' by the Elizabethan rhetorician George Puttenham (*The Arte of Poesie*, 1589).

In modern times, two further conceptions have been added: (1) *Structural irony*, a quality that is built into texts, in which the observations of a naïve narrator point up the deeper implications of a situation. In the stories of the English humorist P. G. Wodehouse (1917 onward), Bertie Wooster reports verbatim the smooth, deflating comments of his butler Jeeves without any indication that he has understood or even noticed what Jeeves 'really' says. (2) *Romantic irony*, in which writers conspire with readers to share the double vision of what is happening in the plot of a novel, film, etc. By the 17c and 18c, a refined ironic style was established in European writing, as when Henry Fielding interrupted the action in his novels to address his readers directly and comment on events. When engaging in this game, writers combine creative egotism with a suave and knowing self-mockery. By the 19c,

critics had become adept at detecting and dissecting irony in literature and in life. The Danish philosopher Kierkegaard raised irony to the cosmic level when he proposed in 1841 that it was a way of viewing all existence, and some writers and critics have since implied that God is the greatest ironist of all. The phrase *irony of fate* suggests that, like drama, life treats people as if wryly mocking them, delivering at a strategic moment the opposite to what is deserved or at first seemed likely. See BIERCE, CYNIC, FIGURATIVE LANGUAGE/USAGE, SARCASM. [STYLE].

T.MCA.

**IRREGULAR** [14c]. A term for linguistic forms that are exceptional in that they cannot be predicted by general rules: *children* as the plural of *child*, because it is not formed, as most noun plurals are, by adding *-s*. See REGULAR, RULE. [GRAMMAR]. S.G.

**IRREGULAR VERB.** A verb that does not follow the general rules for verb forms. Verbs in English are irregular if they do not have a normal *-ed* form like *talked*, *walked*. The *-ed* form has two functions: past and past participle. In some irregular verbs, these functions are served by different forms. Contrast *He talked for a long time* and *He has talked for a long time* with *He spoke for a long time* and *He has spoken for a long time*. There are other kinds of irregularity: *shut* serves as base form and *-ed* form. Since for all verbs (regular and irregular) the *-s* and *-ing* forms are constructed from the base by regular rules, it is only necessary to cite the base, past, and *-ed* forms to characterize irregular verbs. These three are termed the *principal parts* of the verb and are always given in the order: base, past, *-ed* participle. Many irregular verbs exhibit changes in the middle vowel for one or both of the last two principal parts (*sing*, *sang*, *sung*) and have an *-en* inflection for the *-ed* participle (*speak*, *spoke*, *spoken*).

**Forms of BE.** The verb *be* is highly irregular, with eight forms: base *be*; present *am* (first-person singular), *is* (the *-s* form for third-person singular), *are* (second-person singular and all plurals); past *was* (first- and third-person singular) and *were* (second-person singular and all plurals); *-ing* form *being*; *-ed* participle *been*. The *-s* forms of *have*, *do*, *say* are irregular (*has*, *does*, *says*), though the irregularity in pronunciation is obscured by the spelling of *does*, *says*.

**Modal verbs.** The modal auxiliaries have a defective paradigm since they only have the base forms and irregularly constructed past forms (*can*, *could*; *may*, *might*). *Must* is further exceptional in having only the base form.

**Irregular verbs in English.** The accompanying table gives the principal parts for most irregular verbs, including common alternatives and differences between BrE and AmE. Generally, the alternatives are possible in both varieties, but the form labelled BrE or AmE is found especially in that variety.

Base	Past	<i>-ed</i> participle
awake	awoke, awaked	awoken, awaked
beat	beat	beaten, beat
become	became	become
bend	bent	bent
bet	bet, betted (BrE)	bet, betted (BrE)
bind	bound	bound
bite	bite	bitten, bit
bleed	bled	bled
blow	blew	blown
break	broke	broken
bring	brought	brought
build	built	built
burn	burnt (BrE), burned	burnt (BrE), burned
buy	bought	bought
catch	caught	caught
come	came	come
cost	cost	cost
creep	crept	crept
cut	cut	cut
deal	dealt	dealt
dig	dug	dug
do	did	done
draw	drew	drawn
dream	dreamt (BrE), dreamed	dreamt (BrE), dreamed
drink	drank	drunk
drive	drove	driven
eat	ate	eaten
feed	fed	fed
feel	felt	felt
fight	fought	fought
find	found	found
fit	fitted, fit (AmE)	fitted, fit (AmE)
flee	fled	fled
fly	flew	flown
forget	forgot	forgotten, forgot (AmE)
forgive	forgave	forgiven
freeze	froze	frozen
get	got	got, gotten (AmE)
give	gave	given
go	gone	went
grow	grew	grown
hang	hung	hung, hanged
have	had	had
hear	heard	heard
hide	hid	hidden, hid
hit	hit	hit
hold	held	held
hurt	hurt	hurt
keep	kept	kept
know	knew	known
lead	led	led
learn	learnt (BrE), learned	learnt (BrE), learned
leave	left	left
lend	lent	lent

Base	Past	-ed participle
let	let	let
lie	lay	lain
light	lit, lighted	lit, lighted
lose	lost	lost
make	made	made
mean	meant	meant
met	met	met
mistake	mistook	mistaken
	put	put
read	read	read
rid	rid, rided	rid, rided
ride	rode	ridden
ring	rang, rung (AmE)	rung
say	said	said
see	saw	seen
sell	sold	sold
send	send	sent
set	set	set
shoot	shot	shot
show	showed	shown
shut	shut	shut
sing	sang, sung (AmE)	sung
sink	sank, sunk (AmE)	sunk
sit	sat	sat
sleep	slept	slept
smell	smelt (BrE), smelled	smelt (BrE), smelled
speak	spoke	spoken
spend	spent	spent
stand	stood	stood
steal	stole	stolen
stick	stuck	stuck
strike	struck	struck
swear	swore	sworn
swim	swam, swum (AmE)	swum
take	took	taken
teach	taught	taught
tear	tore	torn
tell	told	told
think	thought	thought
throw	threw	thrown
understand	understood	understood
upset	upset	upset
wake	woke, waked	woken, waken
wear	wore	worn
win	won	won
write	wrote	written

All new verbs in English are regular, as in *glitz*, *glitzed*, *glitzed*. Some irregular verbs also have regular forms: *sew*, *sewed*, *sewn* but also the regular *sew*, *sewed*, *sewed*. There are also some differences in irregular verbs between BrE and AmE: both *dived* and *dove* are found in AmE as pasts of *dive*, but only *dived* occurs in BrE. *Gotten* is used in AmE as an -ed participle in certain senses of the verb: *We've gotten more than we can use*, but not *We've got to do a lot better*. See CURME, STRONG VERB, T, VERB, WEAK VERB. [GRAMMAR]. S.G.

**ISLE OF MAN** [Before 10c: from Old Irish *Manu* and associated with the Irish sea god *Manannan*. Adjective *Manx*]. An island in the Irish Sea. Capital: Douglas. Population: 64,679 (1981). The island was ruled by the Welsh during the 6-9c, then by the Norse until Magnus King of Norway ceded it and the Hebrides to Alexander II of Scotland in 1266. Granted to the Earls of Derby in 1406, it passed to the Dukes of Atholl in 1736, and was purchased from them by the British government partly in 1765, wholly in 1832. The island has its own parliament, the *Court of Tynwald*, comprising the governor, the Legislative Council, and the elected *House of Keys*. Near the centre of the island is a circular artificial mound called *Tynwald Hill* where the acts of the Manx Parliament are proclaimed. Acts of the British Parliament do not generally apply to the Isle of Man, which has a high degree of autonomy.

**Manx Gaelic** (also *Manx*). This Celtic language is closely related to Irish and Scottish Gaelic. It was probably introduced in the 4c by Irish settlers and may have replaced an earlier language similar in structure to Welsh. In the 10-13c, Manx was influenced by Norse, especially in its lexicon, but continued to be the main language of the island until the end of the 18c, when English began to assume a dominant role. Ned Maddrell, the last surviving speaker of Manx, died in 1974. In his later years, he was curator of the preserved Manx village of Cregneish, and with some others was encouraged by members of the *Manx Society* to remember the language, much of which was then recorded. The Society has sought to sustain Manx as the second language of the island. The form now in use tends to be that of its classical literary period, the 18c, Anglicisms being replaced by coinages from Manx roots. It tends to be influenced in the spoken form by Irish Gaelic, since islanders can receive the Irish-language programmes of Radio Telefis Eireann. Texts in Manx, which has its own orthography, continue to be written and to be published by Yn Chesaght Ghailckagh, Douglas.

**Manx English**. Welsh and Scandinavian influence gave way in the later Middle Ages to a distinctive Manx dialect of English that has close links, especially in the south of the island, with varieties in Lancashire and shows substratum influence from Manx, modified over the centuries by the influence of Scottish and Irish Gaelic and of Welsh. The distinctive speech of the rural north is probably an older form. Although the Norse ruled the island until the 13c, their linguistic influence is limited to place-names such as *Jurby* and *Kirk Michael* and a few words such as *birk* (birch, as in Scots) and *slake*

(to put out one's tongue). Manx English is non-rhotic, has /æ/ in both *glass* and *gas*, distinguishes between *wh* and *w* as in *which witch*, tends to replace /ŋ/ by /n/ in *-ing* words, and often has a glottal plosive for /t/ (especially before syllabic *n* as in *beaten, touting*). Syntactic influence from Gaelic is found in the use of such preposition and pronoun constructions as *They returned with money at them* and *put a sight on her* (visit her). The Gaelic influence is stronger in vocabulary and includes words associated with farming (*collagh* a stallion), food (*braghtan* bread and butter), the home (*chiollagh* hearth), and folk traditions (*crosh caoirn* a cross made from twigs or rushes and placed over a door). Until about 20 years ago, there was no general realization that some local words were from Manx roots. A recent surge in nationalism and in the use of revived Manx has made people more aware of the nature of the expressions they use. See CELTIC LANGUAGES, GAELIC, MANX. Compare CHANNEL ISLANDS, CORNISH, HIBERNO-ENGLISH, HIGHLAND ENGLISH. [EUROPE, NAME, VARIETY].

L.T., S.E.

**-ISM** [From French *-isme*, Latin *-ismus*, Greek *-ismós*]. A noun-forming suffix, three of whose uses relate to language: (1) Forming words for concepts, activities, and conditions: *agrammatism, behavio(ur)ism, biculturalism, bilingualism, criticism, descriptivism, feminism, journalism, literary criticism, multiculturalism, multilingualism, nativism, obscurantism, plagiarism, prescriptivism, racism, romanticism, sexism, structuralism, symbolism*. (2) Forming linguistic and stylistic terms: *anachorism, anachronism, aphorism, archaism, atticism, barbarism, Burgessism, cacophemism, classicism, colloquialism, dysphemism, euphemism, euphuism, genteelism, initialism, localism, malapropism, mannerism, neologism, nice-nellyism, provincialism, purism, regionalism, Saxonism, solecism, spoonerism, syllogism, truism, verbalism, vernacularism, vulgarism, witticism*. (3) Forming words that identify usages as belonging to particular varieties of English: *Americanism, Anglicism, Australianism, Briticism/Britishism, Canadianism, Caribbeanism, Englishism, foreignism, Gaelicism, Gallicism, Indianism, Irishism, Latinism, New Zealandism, Scotticism, Yiddishism*. All the terms listed above have their own entries.

The three categories make up a continuum. Although *élitism* is usually an uncountable noun meaning 'a sense of (and desire to maintain) special status', it might be used countably: *an élitism* an élitist usage. Currently, *regionalism* means both 'a regional usage' and 'the inclination to think in terms of a region rather than a larger or smaller area'. A regionalism could be a usage

within a variety of Language X which might also be a borrowing from Language Y: Quebec English *professor* (a secondary-school teacher) is both a regionalism of CanE and a Gallicism. The suffix is widely used with considerable freedom and flexibility to label such regional or local usage, such as a *Newfoundlandism* or a *New-Yorkism*, and for nonce purposes, as in: (1) Robin White's *Men and Angels* (1961), where Sarojini Chellappa says: 'Cannot there be some verb to mean what we are doing? If one makes something, one is making. Why, if one is naked, cannot one be making?'—'I hereby authorize a Sarojinism,' I said, 'a new word for the English language: the verb intransitive, to make. *Nake, naked, nade.*' (2) Simon Hoggart's 'Bushism of the week', in the *Observer* magazine during 1989, referring to the usage of US President George Bush. When asked to comment on the fall of the Berlin Wall, Bush is reported to have said: 'I wouldn't want to say this kind of development makes things to be moving too quickly at all . . . so I'm not going to hypothecate that it may—anything goes too fast' (17 Dec. 1989). [COMPARE -ESE, -SPEAK. See POLITICALLY CORRECT. [STYLE, WORD].

T.MCA.

**ISOGLOSS** [1890s: through German from Greek *isos* equal, *glōssa* tongue]. (1) In dialect geography, an area within which a feature is used predominantly or exclusively. Such a feature (phonological, morphological, syntactic, semantic, lexical, or other) usually contrasts with some similar feature in adjoining areas. Thus, some native speakers of English pronounce /r/ after a vowel, as in *barn, hard, car*, while others do not: in the US this postvocalic /r/ is normally present in the Chicago area but absent in the Boston area. Such distinct areas are isoglosses. (2) More commonly, the line on a dialect map which bounds the area of a certain usage. In England, an isogloss that stretches from the mouth of the Severn to Portsmouth separates the area of initial spoken /v/ from that of /f/, as in *vinger/finger, Vriday/Friday*, the *v*-forms being south-west of the line. Hans Kurath's *A Word Geography of the Eastern United States* (1949, fig. 2, p. 90) presents a series of isoglosses designating areas of the Atlantic states from New England to South Carolina and (fig. 5a, p. 93) a 'bundle' of isoglosses stretching across Pennsylvania, showing the strong boundary between North and Midland dialect features. No two isoglosses coincide exactly; there is always a transition area of partial overlapping. See DIALECTOLOGY. [LANGUAGE].

F.G.C.

**ISOLATING.** See ANALYTIC, LINGUISTIC TYPOLOGY.

**ISRAEL.** A country of West Asia. Capital: Jerusalem. Currency: shekel, plural *shkalim* (100 agorot). Economy: mixed. Population: 4.29m (1988), 5m (projection for 2000). Ethnicity: 83% Jewish, 16% Arab, 1% other. Religions: 83% Jewish, 13% Muslim, 2% Christian, 2% Druze. Languages: Hebrew, Arabic (both official), English widely used, and Yiddish, Russian, and other languages also used. Education: primary 95%, secondary 76%, tertiary 34%, literacy 88%. In 1922, after the collapse of the Ottoman (Turkish) Empire, the League of Nations gave Britain a mandate to govern Palestine and establish a Jewish national home there. In 1948, the British Mandate ended, and in the same year the state of Israel was created. English was used officially and for other purposes in Palestine during the Mandate, and its position, though no longer administrative, was to a great extent sustained in Israel by the settlement of many English-speaking Jews, especially from the US. See HEBREW, JEWISH ENGLISH, JEWISH LANGUAGES, YIDDISH. [ASIA, NAME, VARIETY]. T.M.C.A.

**ita.** See INITIAL TEACHING ALPHABET.

**ITALESE.** See CANADIAN ENGLISH.

**ITALIAN** [Called by its speakers *italiano*]. A Romance language, the official language of Italy and an official language of Switzerland, also spoken by Italian communities in Argentina, Australia, Britain, Canada, the US, Venezuela, and elsewhere. The term refers to both the standard and literary language in contrast to the many dialects and the entire complex of standard language and dialects, some of which are mutually unintelligible. In addition, some regional varieties, such as Friulian and Sardinian, are regarded as more or less distinct languages. Standard Italian is based on the medieval Tuscan dialect.

**Italian in English.** The influence of Italian on English is almost entirely lexical and has continued over many centuries. Since medieval times, Italian has had a strong influence on French, as a result of which many borrowings into English have had a distinctly Gallic aspect, as with *battalion* (16c: from *bataillon*, from *bataglione*), *caprice* (17c: from *caprice*, from *capriccio* the skip of a goat, a sudden sharp movement), *charlatan* (16c: from *charlatan*, from *ciarlatano*, from *ciarlare* to chatter), *frigate* (16c: from *frégate*, from *fregata*), *picturesque* (17c: from *pittoresque*, from *pittresco*, with assimilation to *picture*), *tirade* (c.1800, from *tirade*, from *tirata* volley, from *tirare* to pull, fire a shot). Direct borrowings fall into four broad categories: (1) Terms from the centuries-old pan-European tradition of using Italian to discuss and describe music: for example, *adagio*, *alto*,

*andante*, *arpeggio*, *bel canto*, *cello*, *coloratura*, *con brio*, *concerto*, *contralto*, *crescendo*, *diminuendo*, *divertimento*, *fortissimo*, *libretto*, *mezzo-soprano*, *pianoforte*, *pizzicato*, *scherzo*, *solo*, *sonata*. (2) Comparable literary, architectural, artistic, and cultural terms, such as *canto*, *conversazione*, *cupola*, *extravaganza*, *fresco*, *intaglio*, *novella*, *palazzo*, *stanza*, *tarentella*. (3) Internationalized culinary terms, such as *lasagne*, *minestrone*, *mozzarella*, *pasta*, *pizza*, *ravioli*, *spaghetti*, *tagliatelle*, *vermicelli*. (4) A variety of social words, including *alfresco*, *bimbo*, *bordello*, *bravo*, *condottiere*, *confetti*, *fiasco*, *ghetto*, *gigolo*, *graffiti*, *imbroglio*, *mafia*, *piazza*, *regatta*. Some loans have adapted spellings, as with *macaroni* (Italian *maccheroni*, earlier *macaroni*), *seraglio* (Italian *sceraglio*, ultimately from Persian). In addition, some words have moved to a greater or less extent from their original area of application into wider use, as with *crescendo*, *extravaganza*, *piano*, *solo*. Italian singular/plural inflections usually apply among terms restricted to musical, cultural, and culinary registers (*concerto/concerti*, *scherzo/scherzi*), but English inflections apply in general use (*concerto/concertos*, *scherzo/scherzos*).

**English in Italian.** The influence of English on Italian is essentially lexical and relatively recent. Noticeable in the 1930s, it has accelerated greatly since the 1960s, encouraged not only by the growing international use and prestige of English, but also by the adoption after the Second World War of English (to replace French) as the first foreign language in schools. Recent borrowings, often described as contributions to *Itagliano* (highly Anglicized Italian), include: *baby*, *boom*, *boy*, *budget*, *cartoon*, *catering*, *ceiling*, *club*, *control system*, *deadline*, *dee-jay*, *designer*, *egghead*, *fifty-fifty*, *flash*, *girl*, *happiness*, *identikit*, *killer*, *lady*, *leader*, *life-saver*, *market*, *partner*, *shop*, *shopping*, *show*, *spray*, *staff*, *standard*, *stop*, *style*, *target*, *trekking*, *trend*. The assimilation and use of many borrowings resemble the processes by which English is absorbed into French, including: (1) The adaptation of words to fit the gender and inflectional systems: *un bluff* a bluff, *bluffare* to bluff; *uno snob* a snob, *snobbare* to snub; *handicappati* the handicapped. Compounds may be reversed to conform to Italian norms, *a pocket radio* becoming *un radio-pocket*. (2) The restriction and adaptation of senses: *un flirt* an affair; *look* used only as a noun; *un mister* a sports coach. (3) The clipping of compounds: *un full* a full hand (of cards); *un night* a night club.

**ITALIC** [16c: from Latin *Italicus* Italian]. Also **italic script**, **italic type**, **italics**. A slightly slanted letter form based on a style of handwriting favoured by Italian humanists; introduced into European printing in 1501 by the Venetian printer Aldo Manuzio (Aldus Manutius). Originally a separate typeface, italic has long been combined with roman as a marker for certain kinds of information in a text. In 16c English, it was often used for names and titles ('Aristotle wrote *De Caelo*'). Currently, it serves to highlight and emphasize titles, foreignisms, and words and phrases, and helps provide textual contrasts. Major quoted titles (books, plays, operas, films, musical compositions) are generally in italic (*The Wind in the Willows*, *King Lear*, *The Mikado*, *Gone with the Wind*, *William Tell*), but minor titles (poems in collections, articles in periodicals, or papers in scholarly works) are more commonly roman within quotation marks ('Ode to a Grecian Urn', 'Tense and aspect in Irish English'). The names in legal cases are also italicized: *Griffin v. Jones*. Italics are often used to mark exotic and unusual words in a text: 'Time to sit and think is a *sine qua non*', 'Japanese columnists remind women readers of *gaman*, the tradition that they must endure their problems.' Similarly, words are italicized so as to draw the reader's attention to them: '*castor*. A beaver hat', 'Ruskin called this attitude to nature *the pathetic fallacy*.' Italics highlight words which the writer wishes to emphasize, partially or fully: "'Hel-lo!" said my aunt as I appeared' (H. G. Wells, *Tono Bungay*, 1908, Book 2, ch. 2); 'He won't; not that he's afraid; oh, no! he *won't*. Ha! ha!' (Charles Dickens, *The Pickwick Papers*, ch. 11). In addition, phrases and sentences used as examples of usage in dictionaries are usually italicized to contrast with definitions in roman, and similar uses occur in textbooks. Sometimes entire texts are set in italic, sometimes sections of texts (such as introductions, summaries, and lead-ins), sometimes italic and roman alternate contrastively: paragraphs in italic with commentary in roman, or vice versa; a letter read in a novel or a character's thoughts in italic while the mainstream is in roman. When manuscripts and typescripts are

being prepared for publication and being proof-read, single underlining is generally used to mark words and phrases to be italicized in print. See FOREIGNISM, PRINT, ROMAN. [TECHNOLOGY, WRITING].

W.W.B., T.MCA.

**ITANGLIANO** [1970s: a blend in Italian of *italiano* and *anglo*, on the analogy of *franglais*]. A non-technical term for Italian that contains many English expressions, apparently first used by Giacomo Elliot in the Italian-language publication *Parliamo Itangliano* (Milan, 1977). Elliot commented on 400 words and phrases (such as *know-how*, *management*, and *moonlighting*) used both in the export business and in business in Italy itself. The influx of English has been discussed in the media, including such serious journals of current affairs as *Europeo*, in articles with titles like 'Scusi, lei parla Itangliano?' (Excuse me, do you speak Itangliano?). The application of Italian phonology to English words can produce distinctive effects, such as the pronunciation of *puzzle* (noun) as 'pootzlay'. See ITALIAN. Compare ANGLIKAANS, CANADIAN ENGLISH (ITALESE), FRANGLAIS, -GLISH AND -LISH. [EUROPE, VARIETY]. T.MCA.

**ITERATIVE** [15c: from Latin *iterativus* happening again and again, from *iterum* again]. Also **frequentative**. Terms used to denote repetition and habituation in language. In Persian, iteration is expressed by the particle *hei*: *Khandidand* They laughed, *Hei khandidand* They kept on laughing. The English translation is also iterative, using the verb and particle *keep on*. There is only one iterative word element in English, the suffix *-le* in such verbs as *sparkle* to spark again and again, *suckle* to cause to suck again and again. In some *-le* words, the base may have little or no meaning but the iterative quality remains: *dazzle*, *drizzle*, *tingle*, *tinkle*. [GRAMMAR, WORD]. T.MCA.

**-ITIS** [Probably 20c: from the Greek feminine ending *-itis*, as in *nósos arthritis* disease of the joints]. An informal suffix used humorously and pejoratively to suggest that certain behaviour is a disease: *exaggeritis* a habit of grossly exaggerating things, *smalltownitis* behaviour typical of a small town, such as minding your neighbour's business. It often forms nonce and stunt words associated with language: *telephonitis* using telephones too much. Compare -ESE. [STYLE]. T.MCA.

**IYARIC**. See RASTA TALK.

# J

**J, j** [Called 'jay', rhyming with *say*, to match the pronunciation of *K*. In ScOE, often rhymes with *high*, to match the pronunciation of *I*]. The 10th letter of the Roman alphabet as used for English. Around the 13c, it developed as a graphic variant of *i*, including use as the last element of a Roman numeral, *ijj* three, *vijj* eight. Its status was uncertain for centuries. Lists published as recently as the early 19c did not always have *i* and *j* as separate letters of the alphabet. In print, the distinction was being made fairly consistently in lower case by 1630, though not in the first editions of Shakespeare. Introduced around 1600, upper-case *J* was not generally distinguished from *I* for another 200 years. See IOTA.

**Sound value and distribution.** (1) The standard value of *j* in English is the voiced palato-alveolar affricate /dʒ/, whose voiceless equivalent is spelt *ch*: contrast *jeep/cheap*, *Jews/choose*. *J*, *dg*, and soft *g* compete to represent this sound, as in *judge* and *gem*. *J* is not normally used at the end of a word or a stressed syllable. In this position, *ge* and *dge* are the rule, as in *rage* and *dodge*. The only exceptions are a small number of loan-words, such as *hajj/hadj* (pilgrimage) from Arabic and *raj* (rule, government) from Hindi. (2) There is a strong tendency for *d* followed by an *i*-glide (in words like *grandeur*, *Indian*, *soldier*, *endure*) to move to the value of *j*, prompting such non-standard spellings as 'Injun' for *Indian* and 'sojer' for *soldier*. (3) *J* occurs most often word-initially before *a*, *o*, *u*, a position in which *g* normally has its hard value: *jab/gab*, *job/gob*, *jut/gut*. (4) *J* does not normally feature in words of Old English origin, the digraph *dg* representing the sound medially and finally (*cudgel*, *bridge*), but some *j*-words (*ajar*, *jowl*) may be of Germanic origin.

**Non-English influences.** (1) French has given English many words with initial *j*: *jail*, *jaundice*, *jaw*, *jay*, *jealous*, *jeopardy*, *jet*, *jewel*, *join*, *jolly*,

*journal*, *journey*, *joy*, *juice*, *jury*, *just*. (2) French *g* has been changed to *j* in *jelly*, *Jeffrey*, *jest* and possibly in *jib*, *jig*. The form *judge* (French *juger*) is an orthographic hybrid: initial French *j* and vernacular *dg* (marking a preceding short vowel). (3) Latin has contributed such words with initial *j* as *joke*, *joyful*, *jubilant*, *junior*, *juvenile*. (4) Other words with initial *j* tend to be exotic (*jackal*, *jaguar*, *jasmine*, *jerboa*, *ju-jitsu*, *jungle*), or recent, often AmE coinages (*jab*, *jam*, *jazz*, *jeep*, *jinx*, *jive*, and, with medial *j*, *banjo*, *hijack*). (5) Many proper names begin with *j*: *Jack*, *James*, *Jane*, *Janet*, *Jean*, *Jeffrey*, *Jim*, *Joan*, *John*, *Joseph*, *Julia*; as do the months *January*, *June*, *July*. (6) Medial *j* occurs commonly in Latin roots after a prefix (*adjacent*, *conjunction*, *prejudice*, *reject*, *subjugate*) and such other Latin words as *majesty*, *major*, *pejorative*. (7) Final *j* is rare, occurring only in such exotic forms as *raj* and *hajj/hadj*. (8) Since *j* differs in value in different languages, non-English values often occur in loans. The fricative of Modern French occurs in more recent loans (*bijou*) and in names (*Jean-Jacques*). German and some Slavonic languages pronounce *j* as a *y*-sound (*Jung*, *Janáček*). In Spanish *j* represents the voiceless velar fricative /x/ (*Jerez*, *Juan*), which may be represented by *h* in English (*marihuana*) or fall silent. (9) Currently, *glj* alternate in *gibel/jibe* and in the cognates *jelly/gelatine* and *jib/gibbet*, as well as in the personal names *Jeffrey/Geoffrey*, *Jillian/Gillian*. See ALPHABET, G, I, IOTA, LETTER<sup>1</sup>, SPELLING. [WRITING]. C.U.

**JACOBAN** [18c: from Latin *Iacobaeus*, from *Iacobus* James]. A term for the reign of King James I of England (1603-25), excluding the earlier years of his reign as James VI King of Scots (1567-1625), when Elizabeth I was on the throne of England, and often taken to refer to the early 17c in the British Isles (*Jacobean*

*drama*), and for a person of the period. During his reign the Pilgrim Fathers sailed to North America, the East India Company began to trade in India, the Authorized Version of the Bible was published, and Shakespeare wrote his last plays. The blend *Jacobethan*, coined in 1933 by the English poet John Betjeman, is sometimes used to cover shared aspects of both the Elizabethan and Jacobean periods: *Jacobethan prose*. **JAMAICA.** A Caribbean country and member of the Commonwealth. Capital: Kingston. Currency: the dollar (100 cents). Economy: agriculture, bauxite, tourism. Population: 2.26m (1988), 2.8m (projection for 2000). Ethnicity: 76% African, 15% mixed, 3% Caucasian, 3% East Indian, 2% Chinese. Languages: English, Creole. Education: primary 95%, secondary 58%, tertiary 6%, literacy 94%. The island was originally inhabited by Arawaks (c.7-10C), was visited by Columbus in 1494, and was colonized in 1509 by the Spanish, who in 1640 began to take African slaves there to work on the sugar plantations. The British occupied the island in 1655 and acquired it formally in 1670. Jamaica became independent in 1962. See ANTILLES, BAILEY (B.), BRATHWAITE, BRITISH BLACK ENGLISH, CARIBBEAN, CARIBBEAN ENGLISH, CARIBBEAN ENGLISH CREOLE, CARIBBEAN LANGUAGES, CARIBBEAN LITERATURE IN ENGLISH, CASSIDY, CAYMAN ISLANDS, DICTIONARY OF JAMAICAN ENGLISH, DUB, ENGLISH, JAMAICAN CREOLE, JAMAICAN ENGLISH, NATION LANGUAGE, RASTA TALK, REGGAE. [AMERICAS, NAME, VARIETY]. T.MCA.

**JAMAICAN CREOLE**, also **Jamaican English Creole**, **Jamaican Creole English**, **Jamaican**. The general and technical term for the English-based Creole vernacular of Jamaica. It has the most extensive and longest-standing literature and the widest media and artistic use of the varieties of Caribbean English Creole, and is the most fully studied. The wide appeal of Jamaican music, dub poetry, and Rastafarian religion has spread the vernacular throughout the Caribbean region as a widely heard (though frequently ill-understood) form of folk speech. Its influence is noteworthy in the UK, where it dominates other varieties of West Indian vernacular and has been a major factor in the evolution of British Black English. In the US, Jamaican immigrant communities have also retained linguistic characteristics related to continued use of the language.

Jamaican Creole is relatively well researched, particularly because of the presence in Jamaica

since 1948 of a campus of the U. of the West Indies. Detailed studies of phonology, grammar, lexicon, and social usage have been undertaken, including F. G. Cassidy, *Jamaica Talk: Three Hundred Years of the English language in Jamaica* (London: Macmillan, 1961) and G. Akers, *Phonological Variation in the Jamaican Continuum* (Ann Arbor: Karoma, 1981). Within Jamaica, consensus has evolved on its artistic value and on its distinctness from English, but despite this its use continues to be stigmatized and many literate Jamaicans do not value it. It is commonly viewed as an obstacle to education, an opinion actively countered by many who urge that the obstacle lies in failing to develop strategies for teaching English in the Creole environment. Because of the complex pattern of varieties between the English and Creole, Jamaica is often cited as a classic example of a *post-creole continuum* (see entry).

For those who have a command of both English and Creole, the one complements the other, English being more usual in formal public activity. Most of the population, however, use intermediate forms (mesolects). In radio and television, Jamaican is an established medium for advertisement, popular entertainment, and programmes with public participation. The news, however, is generally read in English. The use of Creole in newspapers is minimal, tending to be restricted to special columns. The *Dictionary of Jamaican English* (1967, 1980) has contributed to the stabilization of spelling in the press as well as to the readiness with which Creole is used by Jamaican writers. See BAJAN, CARIBBEAN CREOLE, CREOLE, JAMAICA, JAMAICAN ENGLISH, NATION LANGUAGE. [AMERICAS, VARIETY] L.D.C.

**JAMAICAN ENGLISH**, short form *JamE*. The English language as used in Jamaica. The term is used primarily to refer to the formal speech of educated Jamaicans, but has also been used to refer to Jamaican Creole in authoritative scholarly works, such as the *Dictionary of Jamaican English* (1967, 1980). It is the preferred variety of standard English within Jamaica and functions as the formal language of the society. See CARIBBEAN ENGLISH, JAMAICA, JAMAICAN CREOLE. [AMERICAS, VARIETY]. L.D.C.

**JAMIESON, John** [1759-1838]. Scottish lexicographer, born in Glasgow, and educated at the U. of Glasgow and U. of Edinburgh. A minister of the Secession Church and author of religious and antiquarian works, Jamieson also compiled *An Etymological Dictionary of the Scottish Language*, in two quarto volumes (1808), with a *Supplement* in two further volumes

(1825). See SCOTTISH DICTIONARIES, and index. [EUROPE, REFERENCE, VARIETY]. A.J.A.

**JANGLISH.** See JAPAN, JAPLISH.

**JANUS WORD** [20c: from Latin *Janus*, the god who faces both ways, and *word* as in *nonce word*]. A semi-technical term for a word with contradictory senses: *cleave* to split sharply (*cleave a skull*), to cling or stay close (*cleave together*). These usages arise from the convergence of distinct words: Old English *cleofan* and *cleofian* both developed into the single present-day form *cleave*. Sometimes, Janus words arise from diverging senses of the same word: *sanction* to approve (*sanction payment*), a punitive ban (*trade sanctions*). The Latin noun *sanctio* referred to a religious decree. See COPY, HOMONYM, POLYSEMY. [WORD]. T.MCA.

**JAPAN** [16c: Japan has been known to its people since the 7c as *Nippon* or *Nihon*, from Chinese-derived pronunciations of two characters meaning 'sun' and 'origin' (whence the epithet *Land of the Rising Sun*). Other Chinese readings of these characters gave rise to the form used by the 13c Venetian traveller Marco Polo, *Jipangu*, from which *Japan* appears to derive]. An island nation of East Asia. Capital: Tokyo. Currency: the yen. Economy: mixed. Population: 123.4m (1990), 130.8m (projection for 2000). Ethnicity: Japanese, with small Korean, Chinese, and Ainu minorities. Religion: Shintoist and Buddhist; less than 1% Christian. Language: Japanese (*Nippongo* or *Nihongo*). Education: primary and lower secondary 100%, upper secondary 95%, higher 35%, literacy 99%. Japan has borrowed culturally and linguistically from China (especially 6–9c), Western Europe (from the 16c), and the US (especially since 1945). The first contacts with European countries were with Portuguese merchants and Spanish Jesuit missionaries in the 16c; trade with The Netherlands and England was established in the early 17c. As a reaction against missionary activity, Japan discontinued contacts with all European nations except the Dutch until the 1850s, when US naval ships under Commander Matthew C. Perry forced a reopening to international commerce that led, after the Meiji Restoration of 1868, to rapid Westernization.

**The Japanese language.** Japanese shows some similarities to Korean and the Altaic languages. Although structurally and phonetically unrelated to Chinese, its writing uses borrowed Chinese characters, and a substantial portion of its vocabulary derives from their adapted Chinese readings (as with *Nihon*, above). Modern Japanese vocabulary contains native words (*wago*), words of classical Chinese origin (*kango*), and

mainly Western loanwords (*gairaigo*). Each type conforms to a pattern of open syllables, except syllabic /n/. Japanese is a syllable-timed language with a pitch accent. There are regional varieties, but standard Japanese (based on the Tokyo dialect) is understood throughout the country. Official research on the language is conducted by the *Kokuritsu Kokugo Kenkyujo* (The National Language Research Institute, established 1948), a department of the Ministry of Education, and language reforms are under the direction of the *Kokugo Shingikai* (National Language Council, established 1934). New compound words and recently adopted loans are listed and defined in the comprehensive annually updated lexicon *Gendai Yōgō no Kiso Chishiki* (Basic Information on Current Usage) and in large directories of general information, such as *Imidas*, whose name combines *imi* (meaning) and *dasu* (to take out) as well as being an acronym of the English title *Innovative Multi-information Dictionary Annual Series*. There are many dictionaries of loanwords, with headwords in katakana and explanations in Japanese, including the *Zukai Gairaigo Jiten* (Illustrated Loanword Dictionary, 3rd edition, Kadokawa, 1988, c.16,000 words) and *Katakana-go no Jiten* (Dictionary of Katakana Words, 1st edition, Shogakukan, 1990, c.20,000 words). Partly because of the emphasis on English/Japanese translation and reading comprehension in English-language education, one-way English-to-Japanese dictionaries are the best-selling type of dictionary in Japan. They include *Lighthouse* (Kenkyusha, 1st edition 1984) and *Progressive* (Shogakukan, 2nd edition 1990).

**Writing.** Japanese writing uses Chinese characters (*kanji*) and two native syllabic scripts (the *kana*: *hiragana* and *katakana*) derived from them. *Hiragana* is a cursive script used for writing grammatical elements and some native words, and is the main medium for young children's books. *Katakana*, a more angular script, is used principally for onomatopoeic native words and transcriptions of foreign words and names, including borrowings. Roman letters (*romaji*) are used for English and other European words in their original form, for loan material written as initials, for initials in foreign names, for Japanese words and names that may be read by non-Japanese (such as some company and product names), as a classifying device in some libraries, and for seating in some theatres and transport systems. *Hebon*, the standard system for Romanizing Japanese words, is named after the US physician and missionary J. C. Hepburn, who used it in the 1880s in his Japanese-English dictionary. It represents consonants according to English orthography, whereas official *kunrei*

spellings are influenced by positions in the Japanese syllabary: compare *ta chi tsu te to* (Hepburn) with *ta ti tu te to* (kunrei). Long vowels are represented, for example, by *ā* in Hepburn, *â* in kunrei, or sometimes informally as, for example, *ah* or *aa*. Numbers are written in Chinese or Arabic symbols. Japanese scientific, technical, and official writing runs horizontally from left to right, whereas books, magazines, and newspapers generally run vertically, from top to bottom, and open from the right. Words in Roman script within vertical Japanese text are written on their side. Japanese English-language company names such as *National*, *Sharp*, *Citizen*, *Brother* are written in romaji and/or in katakana; Japanese-language company names are sometimes written in Roman letters, and Roman abbreviations of names from either language are common: *JAL* (*Japanese Air Lines*), *NEC* (*Nippon Electric Company*), *NHK* (*Nihon Hōsō Kyōkai*). Western-style shops, cafés, apartment blocks, and office buildings often have foreign names, such as the *Sunshine City* commercial building in Tokyo.

**English in Japan.** English has played an important role in the modernization of Japan, especially through the reading and translation of Western works. Calls by some radicals after the Meiji Restoration for English to be adopted as the national language, in order to promote Japan's development, were unsuccessful. During the 1920–30s, the EFL specialists H. E. Palmer and A. S. Hornby worked in Japan, the first as adviser to the Ministry of Education, with a special interest in oral methods and graded vocabulary lists, the second as one of the team which created *The Idiomatic and Syntactic English Dictionary*, first published in Tokyo (Kaitakusha, 1942), a work that evolved into the *Oxford Advanced Learner's Dictionary of Current English*. The majority of Japanese do not use English in everyday life, but recognize it as an important medium of international communication, especially for business and research. English as used by speakers of Japanese is characterized by the transfer of features from Japanese phonology, grammar, vocabulary, and discourse conventions: for example, difficulty in distinguishing between and pronouncing /l/ and /r/ (the nearest Japanese sound being between the two); the use of *yes* to express simple agreement with a statement or question; 'go to shopping' for *go shopping*; 'silent' used to translate *shizuka* (which has a wider meaning of 'silent, quiet, or peaceful'); the transfer to English of loan expressions from other foreign languages, as in 'I have an *arbeits*' (from the loan *arubaito* a part-time job, from German *Arbeit* work). For

most Japanese, however, the term *Japanese English* is used, not to refer to the English spoken by Japanese, but as a translation of *wasei eigo* ('Made-in-Japan English'), a term referring to local expressions drawn from English but used in uniquely Japanese ways, such as *imējiappu* ('image up') meaning 'improving one's image': see GAIRAIGO.

**English in the media.** (1) *Newspapers and magazines.* Japan has four major English-language daily newspapers: the *Japan Times* (established 1897: 1990 circulation 75,000), the *Daily Yomiuri* (1955: circ. 55,000), the *Maimichi Daily News* (1922: 46,000), and the *Asahi Evening News* (1951: 33,000). All but the first are sister publications of Japanese-language newspapers. Magazines in English about Japan include the *Tokyo Journal* and *The Japan Quarterly*; the quarterly journal *Japan Echo* publishes English-language articles on Japan abridged and translated from Japanese-language journals. The *International Herald Tribune* and the *Asian Wall Street Journal* have presses in Tokyo, and the periodicals *Newsweek* and *Scientific American* have Japanese editions. (2) *Publishing.* Japanese publishers such as Tuttle, the Japan Times, and Kodansha International specialize in books on Japan in English; the latter has a 9-volume *Encyclopaedia of Japan* (1983). Large bookstores such as Kinokuniya and Maruzen stock a wide range of English-language books, and there are specialist English-language bookshops in main cities. Japanese scholars may publish some of their work in Japan or overseas in English. (3) *Motion pictures.* Foreign films are popular, and are shown under a katakanized or translated name, with their original soundtracks and Japanese subtitles. (4) *Television.* Imported feature films, serial dramas, and documentaries are usually dubbed in Japanese, but may have the original soundtrack also available on some radios and special 'bilingual' TV sets. Some daily, locally produced news programmes have an English-language translation which can be received on bilingual sets. Satellite TV is the major source of foreign TV broadcasts with their original soundtrack. (5) *Radio.* The Far East Network of the American Forces Radio broadcasts in English 24 hours a day, and can be received near US bases. Some local FM stations in the Tokyo area broadcast only in English. Radio transmissions in English are received from overseas: for example, from the Soviet Union on medium- and short-wave radio, and the BBC World Service and Voice of America on short-wave. (6) *Travel and tourism.* Announcements on airport buses, domestic flights, and *shinkansen* (bullet trains), and some sightseeing commentaries, are in Japanese and English, and

place-names on railway platforms usually have Roman transcriptions.

**Learning English.** Some private kindergartens and elementary schools provide English instruction. Regular study normally begins in the first year of lower secondary school, and continues at least till graduation from upper secondary school. Traditional methods of language study, such as reading comprehension and grammar-translation, may be supplemented by oral work in the language laboratory and sometimes with native speakers, including those employed on the *JET (Japan English Teachers)* programme. Knowledge of English vocabulary and grammar is one of the important factors for selection of candidates to higher education, as the national examination for university entrance, and many individual entrance examinations, include an English language paper. The most popular non-compulsory private English-language examinations are those set by *STEP (Society for Testing English Proficiency)*, authorized by the Ministry of Education and known in Japanese as *eigo kentei* or, for short, *eiken*. Some private universities and branches of US universities in Japan have English-medium courses. Tokyo and Osaka have public universities that specialize in foreign studies, and some technical colleges specialize in English-language instruction. There are also many language schools. The educational channel of Japanese TV broadcasts regular foreign-language-learning series, including English, and there is daily English-language instruction on the radio, teaching mainly colloquial AmE. Organizations for language teachers include the *Japan Association of Language Teachers (JALT)*, which publishes *The Language Teacher* (monthly) and the *JALT Journal* (twice yearly), and the *Japanese Association of College English Teachers (JACET)*.

**English in Japanese.** (1) *Loans.* English words are sometimes included in their original form within Japanese texts (for example, in advertisements and in some scientific writing), but are normally transcribed phonetically by katakana. This custom has assisted the entry into Japanese of loanwords (*gairaigo*) from English and other languages. There are over 1,000 such words in general use, and many thousands of scientific and technical borrowings: the *Kadogawa Gairaigo Jiten* (1969) defines some 25,000 such terms. For examples, see *GAIRAIGO*. (2) *Commerce and advertising.* Many modern Japanese products have English names written in their original form, often with katakana transcription, or only in katakana, and English words and phrases are often used in advertising to draw attention to the product, and give it an attractive, fashionable image.

**Decorative English.** English is ubiquitous as decoration on Western-style personal items such as clothes, fashion accessories, toiletries, and stationery. Goods for young people commonly feature popular characters such as Mickey Mouse, Alice in Wonderland, Snoopy, Beatrix Potter animals, and the local 'Kitty', often with related language, or bear English proverbs and inspirational mottos, such as *Let's sing a song with me!* Goods may be decorated with clippings or reproductions (not always accurate) from an English text, where the overall theme is appropriate but not the content, such as planting instructions accompanying a floral design. Decorative English is intended to be seen rather than read, the visual appeal of the foreign words taking precedence over their accuracy and appropriateness. The cosmopolitan form of the Roman script conveys a mood as much as a message, but the content may also embrace themes of youth, health, vitality, joy, and freedom (*for someone who seeks a long relationship with things nice*, on pocket tissues), or of romantic fantasy (*It's a romantic note book painted with a cute little cellophanetape*, on a notebook; *This case packs my dream and eyeglasses*, on a spectacles case; *tenderness was completed a pastel*, on a pencil box). English composed by Japanese for Japanese is often a literal translation of Japanese thoughts and expressions, ranging from the clearly recognizable (*enjoy superb combination of almond and chocolate*, on a chocolate wrapping) to the obscure (*Soft in one*, hair conditioner; *ReSpice Enjoy fashion life. Nice to Heart and Just Impression and The New York City Theatre District is where you can and us, anyone*, on casual bags). The decorative use of scripts is a cultural tradition in Japan. Since the Second World War, the English language has become strongly associated with American culture, and its use as part of the design of Western-style goods perhaps serves to reinforce their role as symbols of modernity and sophistication.

**Japanese in English.** Borrowing from Japanese into English began in the 16c; since then, there has been a small but steady flow of words related to Japanese life and culture, such as *bonze* 16c, *sake*, *shogun* 17c, *mikado*, *shinto* 18c, *geisha*, *jinricksha* 19c, *aikido*, *bonsai*, *origami*, *pachinko* 20c. Areas of special interest include: (1) The arts: *bonsai*, *haiku*, *ikebana*, *kabuki*, *kakemono*, *koto*, *Noh*, *origami*, *sumi-e*, *ukiyo-e*. (2) The martial arts: *aikido*, *bushido*, *judo*, *ju-jitsu* (*jiujitsu*, *jujutsu*), *kendo*, *sumo*. (3) Cuisine: *miso*, *nori*, *sashimi*, *satsuma*, *soba*, *sushi*, *tempura*, *tofu*. (4) Commerce: *zaibatsu*, *yen*. (5) Religion: *koan*, *shinto*, *zazen*, *zen*. (6) People: *geisha*, *issei*, *mikado*, *ninja*, *nisei*, *samurai*, *sansei*, *shogun*, *yakuza*. (7) Furnishings, clothes, etc.: *fusuma*,

*futon, kimono, obi, shoji, tatami.* (8) Entertainment: *enka, go, karaoke, nintendo, pachinko.* (9) Language: *hiragana, kanji, katakana, kunrei.* (10) Words taken from English, used in a special way in Japanese, and returned to English with their Japanese sense: *homestay* (from *hōmosutei*, from *home* and *stay*), *nighter* (from *naitā*, from *night* and *-er*), *salaryman* (from *sararīman*, from *salary* and *man*), and *wapuro* (abbreviating *word processor*). Such words have entered English in an adaptation of their Hepburn spellings, with long vowels not indicated by macrons: for example, *judo*, not *jūdō*. Early borrowings from Japanese, before systems of Romanization were established, particularly show modifications in spelling: for example, *soy* from *shōyu*, *tycoon* from *taikun*.

See ACRONYM/PROTOGRAM, AMERICAN LANGUAGES, BORROWING, CHINA, DECORATIVE ENGLISH, DIALECT IN AMERICA, EAST ASIAN ENGLISH, GAIRAIGO, JAPANESE PIDGIN ENGLISH, JAPLISH, KOREA, LIBRARY OF CONGRESS, LINGUISTIC TYPOLOGY, TELEPHONE, VOCABULARY. [ASIA, LANGUAGE, VARIETY]. G.S.K.

**JAPANESE ENGLISH.** See GAIRAIGO, JAPAN.

**JAPANESE PIDGIN ENGLISH.** An informal term applied, often pejoratively, to several varieties of English associated with Japan and the Japanese. They include: (1) A pidgin spoken from the early 20c by Japanese immigrants to Hawaii, and distinct from the other pidgins and creoles used in the islands. (2) Also *Bamboo English*. A pidgin used after World War II between some Japanese and the US occupation forces. American military involvement in other parts of East Asia later caused much of this pidgin to spread to other countries: for example, in Korea, the Philippines, Thailand, and during the Vietnam War, *mama-san* (Japanese: matron, especially one in charge of a geisha house, from *mama* mother, *san* honorific title) has been used to refer to any bar hostess, and *ichiban* (most, number one) means 'the best'. A humorous text in what was called *Korean Bamboo English* survives from the Korean War, apparently written by a US soldier. It blends elements of Japanese (and to a lesser extent Korean) with army slang, was published by Grant Webster in *American Speech* (1960), and begins:

Taksan years ago, skoshi Cinderella-san lived in hootchie with sisters, . . . ketchee no fun, hava-no social life. Always washee-washee, scrubee-scrubee, make chop-chop. One day Cinderella-san sisters ketchee post cardo from Seoul. Post cardo speakee so: one prince-san have big blowout, taksan kimchi, taksan beeru . . . Cindy-san sisters taksan excited, make Cinderella-san police up clothes.

(3) Also, loosely, *Japlish, Janglish, Japanized English*. The current use of some thousands of English words in daily speech in Japan, intended for use by Japanese among Japanese, and not for any attempt to communicate more easily with foreigners. Many of these are 'made in Japan' terms (*wasei eigo*), and are not transparent, phonologically or semantically, to native speakers of English: for example, *dokutā sutoppu* (doctor stop), a physician's prohibition on certain activities, such as smoking. The title of a recent best-selling novel, *Bājin Rodo* (Virgin Road), refers to the aisle a bride walks down in a church. The number of English-based vocabulary items has been steadily increasing since World War II. See GAIRAIGO, JAPAN, JAPLISH, LINGUA, PIDGIN. [ASIA, VARIETY]. J.S., T.M.CA.

**JAPLISH** [1950s: a blend of *Jap(anese)* and (*Engl*ish)]. Also **Japalish** [perhaps to avoid the pejorative implication of *Jap* as an ethnic slur] and **Janglish** [playing on *jangle* discordant sound]. Informal terms, often wry, sometimes pejorative, for any mixture of Japanese and English. They may refer to Japanese spoken or written with an admixture of English or to English that shows Japanese influence: 'A great many Japanese speak English nowadays (or at least "Japlish", as the American colony calls it)' (*Harper's Magazine*, Jan. 1963); 'Japanese sometimes sounds like Japlish: *masukomi* for mass communications, *terebi* for television' (*Time*, 22 July 1966). See -GLISH AND -LISH, JAPAN, JAPANESE PIDGIN ENGLISH. [ASIA, VARIETY]. T.M.CA.

**JARGON** [14c: from late Middle English forms *iargo(u)n, gargoun, girgoun* the twittering and chattering of birds, meaningless talk, gibberish, from Old French *jargoun, gargon, gergon*. Probably originally echoic]. An often pejorative general term for outlandish language of various kinds, such as speech perceived as gibberish or mumbo jumbo, slang, a pidgin language, or, most commonly, the specialized language of a trade, profession, or other group. The term is often associated with law, medicine, and the sciences: *technical jargon, scientific jargon*. To non-members of professional, occupational, and other groups, their usage is filled with terms and syntax that are not typical of general English and may therefore impede understanding among lay people, but to members of such a group, the usage is familiar and generally serves its purpose well. Because of ease and familiarity, however, they may use technical expressions and styles outside the group, either unthinkingly, because it seems best fitted for the topic in question, or on occasion to impress and even oppress.

**Jargon as verbal shorthand.** For those who understand it, jargon is a kind of shorthand that

makes long explanations unnecessary. When used by the members of a profession or group, it can be an efficient and effective language. For physicians, the surgical removal of a gall bladder is a *cholecystectomy*. For lawyers, an *involuntary conversion* is loss or destruction of property through theft, accident, or condemnation, and *estoppel* means that a party is prevented by his or her own acts from claiming a right that would cause injury or loss to another party. Studies of surgeons have found that the jargon used during surgery improves the communication of factual information with brevity and clarity, and the legal profession has spent many years arriving at the strict definition of legal terms that inevitably entails jargon. In comparable ways, such new professions as the computer sciences have evolved a jargon which communicates technical ideas among members of the group, including such expressions as *dynamic random access memory*, *read only memory*, *core dump*, and *cache buffer*.

**Jargon as group identification.** Ability to understand and use the jargon of a group is a badge of identification: one belongs, and those who cannot use the jargon of the group do not, even if they possess other skills necessary for membership. In a sense, the ability to use the jargon indicates that the user is conforming to the norms of the group, as well as accepting and understanding the basic ideas, principles, and practices of the group. In addition, using jargon can lend an air of authority and prestige to those who use it, especially if the jargon is associated with a profession that enjoys a high social position. Its use identifies the user as (probably) a member of that profession and transfers (at least some of) the group prestige to the individual using the jargon.

**The temptations of jargon.** While jargon can and does have a legitimate function, it is probably more known for its abuse by people who use it to confuse, confound, needlessly complicate subject matter, and lend an air of importance and sophistication to their message and themselves. While doctors may easily understand *bilateral periorbital haematoma* a black eye, *agrypnia insomnia*, *cephalalgia* a headache, and *emesis* vomiting, patients rarely if ever understand such terms. Jargon also allows the speaker to make fairly simple ideas appear complicated, if not profound. It may sound more impressive to write that 'The argillaceous character of the formation is very prominent in some localities, although it is usually subsidiary to the arenaceous phase', rather than 'At some places the formation included considerable clay, but generally it is made up chiefly of sand.' The biologist writing that 'Although solitary under normal

prevailing circumstances, raccoons may congregate simultaneously in certain situations of artificially enhanced nutrient resource availability' may have thought that jargon was more impressive than saying 'Raccoons live alone, but if you put some food out they will gather around it in a group.' Generally, when people use jargon not to communicate but to impress their audiences with their importance or the importance or complexity of their subject matter, or use it to announce membership in a group, communication suffers and the jargon can quickly degenerate into something close to the twittering of birds.

**JENNINGS, Paul (Francis)** [1918-90]. English humorist, born in Leamington Spa, Warwickshire, and educated at King Henry VII School, Coventry. While still in the Army during the Second World War, he began freelance writing for *Punch* and *The Spectator*, was a scriptwriter at the Central Office of Information (1946-7), an advertising copywriter (1947-9), and a columnist on *The Observer* (1949-66), after which he became an independent writer. Jennings's appeal resides in a gift for amiable fantasy and shrewd word-play, discerning the oddness, even lunacy, lurking under the commonplaces of middle-class English life. His humorous works include: *Oddly Enough* (1951), *Even Oddlier* (1952), *Oddly Bodlikins* (1953), *Next to Oddliness* (1955), *Model Oddlies* (1956), *Gladly Oddly* (1957), *Idly Oddly* (1959), *I Said Oddly, Diddle I?* (1961), *Oddies of Oddlies* (1963), *Oddly Ad Lib* (1965), *I Was Joking, of Course* (1968), *Just a Few Lines* (1969), *It's An Odd Thing, But . . .* (1971), *Britain As She*

*Is Visit* (1976), *The Book of Nonsense* (1977), *Golden Oddlies* (1983). By the early 1960s, his work had become sufficiently 'classic' for an anthology, *The Jenguin Pennings*, to be issued (1963). Other works include the novel *And Now For Something Exactly the Same* (1977), children's books (such as *The Great Jelly of London*, 1965), books about trains (such as *My Favourite Railway Stories*, 1982) and rural life (*East Anglia*, 1986). His prose is full of literary echoes and allusions, his light verse adroitly inventive. Jennings teased rather than satirized, in the English tradition of the kindly, comic observer, agreeably secure in his insecurity: 'I'm a perfectly ordinary, normal motorist. Never had a neurosis in my life. Happily married, fine kids, reasonable job. Car two-and-a-half years old and sound as a bell. But the more I drive these days the harder it is not to believe I am being followed. And preceded. Always by the same two men; the Man Behind and the Man in Front' ('Man in the Middle', from *I must have imagined it*, 1977). See SAXONISM. [BIOGRAPHY, EUROPE, STYLE]. W.N.

**JERSEY.** See CHANNEL ISLANDS, LATIN<sup>1</sup>.

**JESPERSEN, (Jens) Otto (Harry)** [1860-1943]. Danish linguist and authority on language teaching and the grammar of English. Born at Randers, Jutland, he was educated at Frederiksborg School, Zealand, and at the U. of Copenhagen, where he began to study law but changed to languages, taking a degree in French, English, and Latin in 1887. To finance his studies he worked part-time as a parliamentary shorthand reporter. During a postgraduate year (1887-8), he went first to England, where he attended Henry Sweet's lectures on phonetics at Oxford and met James Murray and other scholars, then Germany, where he met the philologists Karl Brugmann and Eduard Sievers, then spent the spring of 1888 in Paris, discussing phonetics and language teaching with Paul Passy, after which, at the summer semester at the U. of Berlin, he attended Julius Zupitza's seminar on Chaucer and Julius Hoffory's lectures on Beowulf. Back in Copenhagen, he obtained a D.Phil. in 1891, and in 1893 was appointed Professor of English, a position which he held until his retirement in 1925.

While still an undergraduate, Jespersen made contact with some of the leaders of the Reform Movement of language teaching; he translated Felix Franke's book about the Movement's principles into Danish (1884) and wrote in Danish a grammar of English using the then revolutionary method of giving phonetic transcription (1885). He helped to form a Scandinavian society for language-teaching reform, named *Quousque*

*Tandem* [Latin: just how long], in 1886. In 1901, he published a book on language teaching, *Sprogundervisning* (revised edition, 1935), translated into English as *How to Teach a Foreign Language* (1904). In collaboration with a university colleague, he produced a set of school textbooks of English based on the ideas of the Reform Movement.

When Paul Passy in 1886 formed the organization that later became the International Phonetic Association, he was joined by Jespersen, who participated in the creation of the IPA system of notation. Jespersen later supplied phonetic transcriptions of the entries in Brynildsen's *English and Dano-Norwegian Dictionary* (1902-7), which was the century's first pronouncing dictionary. His main contribution to phonetics is a compendium originally published in Danish but issued in German in 1904, *Lehrbuch der Phonetik*, with its companion volume *Phonetische Grundfragen*. A book on the phonetics of Danish came in 1906 and one on the phonetics of English in 1912; the latter, originally written in Danish, was issued in an English translation in 1950.

Jespersen's publications on linguistics and grammatical theory are numerous, including: *Language* (1922); *The Philosophy of Grammar* (1924); *Mankind, Nation and Individual* (1925); *Analytic Syntax* (1937). His system of analysis of English grammar is explained briefly in *Essentials of English Grammar* (1933) and at greater length in his main work, *A Modern Grammar on Historical Principles* (seven volumes, 1909-49, the last completed by an assistant, Niels Haislund). Jespersen's theory has in part been superseded, but the mass of material that he collected and systematized retains its value. Volume I contains original views on the history of English sounds, including his account of the Great Vowel Shift (Jespersen's own term). His views on the general development of English are set out in *Growth and Structure of the English Language* (1905).

A vein of idealism pervades Jespersen's work. Language teaching to him was a means of bringing nations closer together. With the same object in mind he became actively involved in efforts to develop an international auxiliary language. In 1907, he helped create a reformed Esperanto called Ido, and in 1928 developed his own auxiliary language, Novial, in which he sought to apply a principle concerning simplicity in grammar and vocabulary which echoed the words of the English philosopher Jeremy Bentham: 'That international language is best which in every point offers the greatest facility to the greatest number.' Neither Ido nor Novial had any success. See index. [EDUCATION, EUROPE, GRAMMAR, LANGUAGE]. P.C.

**JEWISH ENGLISH**, short form *JE*. A collective term for several varieties of English spoken and written by Jews, marked by a range of lexical, grammatical, and other linguistic and paralinguistic elements. Though both concept and term are recent, JE has existed in one way or another as long as Jews have been speaking English. At present, the most common variety is an English influenced by Yiddish and Hebrew, used chiefly by Ashkenazim (Jews of Central and Eastern European origin or descent). This variety has introduced into colloquial AmE and BrE many neologisms, such as *maven*, *nebbish*, *nosh*, *shlep*. Other varieties include a Judezmo-influenced English used by Sephardim (Jews of Spanish origin or descent), a 19c variety of AusE, and a formal variety that uses general English words, such as *academy* for Yiddish-origin *yeshiva*, *skullcap* for Yiddish-origin *yarmulka* or Hebrew-origin *kipa*, *ritual bath* or *ritualarium* for Yiddish- or Hebrew-origin *mikva*. The term *Judeo-English* was formerly used to suggest a parallel with Jewish languages of the past whose vernacular names were commonly prefixed with *Judeo-*, such as *Judeo-Arabic* or *Judeo-Greek*. The name, like the combining form *Judeo-*, is now archaic, though the parallelism is valid. The following characteristics describe mainly the American Ashkenazic variety of JE.

**Pronunciation.** (1) The following features are traceable to Yiddish influence: the substitution of /ŋg/ for /ŋ/ in present participles and other words, such as *singing* and *singer*; a raising of /o/ in words like *off*, *cough*, *soft*; over-aspiration of /t/; confusion of /s/ and /z/ in pronouncing the plural ending -s in some environments. Certain features of Eastern Ashkenazic New York City English of the immigrant generations (c.1880–1940) are still sometimes heard: pronunciation of such words as *circle*, *nervous*, *first* as if 'soikel', 'noivis', 'foist', and an intrusive /n/ in words like *carpenter* ('carpntner'), *painter* ('paintner'). (2) A widespread feature of Ashkenazic JE is replacement of Yiddish-origin word-final -e /e/, as in *pastrame*, *khale*, *shmate*, *tate*, *Sore* with -i /i/, as in *pastrami*, *khali* Sabbath loaf, *shmati* rag, *tati* daddy, *Sori* Sarah. (3) American Ashkenazic JE has numerous stylistic features, including those of pitch, amplitude, intonation, voice quality, and rate of speech, that reflect the influence of the Yiddish conversational style of the immigrant generations.

**Grammar.** (1) Yiddish and Hebrew loanwords are integrated into English in four ways: by dropping infinitive endings (*davn* pray, from Yiddish *davnen*) then giving the verb English inflections (*davns*, *davned*, *davning*); by replacing Yiddish and Hebrew plural forms (*shtetlekh*

small towns, *Shabatonim* Sabbath social gatherings) with English plurals (*shtetls*, *Shabatons*); by forming new derivatives with English affixes (*shleppy*, *shleppily*, *shleppiness*, *shleppish*, *shleppishly*); by extending the function of loans, for example, the Yiddish interjection *nebish* a pity, used (with the spelling *nebbish*) as an adjective meaning 'pitiful, unfortunate' (*a nebbish character*), and as a noun meaning 'unfortunate person, poor devil' (*What a nebbish he is!*). (2) Some verbs are used in a non-standard absolute way: *Enjoy, enjoy; Go figure; I'm entitled*. (3) The use of inversions for emphasis is common: *Shakespeare he is not; A roof over our heads we have*. (4) The use of Yiddish-origin constructions is frequent, and has spread into some forms of colloquial AmE: *I want you should do this; He is a boy is all* (that's all); *Don't be a crazy; Again with the complaints!* (complaining again); *Enough with the talk; Begin already!* (So begin!); *They don't know from nothing* (Don't know anything). (5) Similarly, Yiddish-origin idioms are often used, have spread into AmE at large, and are becoming increasingly widely used: *Get lost!*; *Eat your heart out; I need it like a hole in the head; I should live so long* (I would need to live a long time to see that); *You should be so lucky* (you are never going to be so lucky). (6) The use of rhetorical questions (usually calques from Yiddish) is frequent and similarly spreading: *Who needs it?; What's with all the noise?; So what else is new?; What's to forgive?* (7) Several Yiddish morphological forms have become common formatives: the dismissive *shm-* in hundreds of reduplications: *Oedipus-shmoedipus*, *richshnich*, *value-shmalue*; the agent suffix *-nik*: *beatnik*, *kibbutznik*, *peacenik*, *real-estatenik*, *spynik*, *noshnik*, *Freudnik*; the endearing diminutives *-ele* and *-l*, often appended to English given names (*Stevele*, *Rachele*), sometimes with a doubling of diminutives (*Debbiinkele*, *Samchikele*), sometimes with common nouns (*roomele*, *roomkele*, *boyele*, *boychickl*, *storele*, *storkele*).

**Vocabulary.** (1) There are thousands of Yiddish and many Hebrew terms used in English that relate to Jewish life: *shadkhn* a matchmaker, *hesped* a eulogy, *kanehore* preserve us from the evil eye, *haleway* would that it be so. (2) There are many compounds of Yiddish and Hebrew loanwords with English words: *matse balls* round dumplings, *shana tova card* a Jewish New Year card, *sforim store* a Jewish bookstore. (3) Lexical items formed from general English words: *Jewish Star*, *Hebrew School*. (4) Semantic shifts in English words, often due to homophony with terms of Yiddish: *learn* to study torah (the law), from Yiddish *lernen*; *give* to take, from *gebn*, as in *Give a look*; *by* with, from *bay*, as in *The money is by him*. (5) Informal abbreviations

for: vulgarisms of Yiddish origin (*TL* a sycophant, from Yiddish *tokhes leker* ass-licker); pejorative terms with English components (*JAP* Jewish American Princess); and Yiddish and Hebrew expressions (*B'H* meaning *with God's help*, *zal* an acronym meaning of *blessed memory*).

**Social issues.** Speakers and writers of JE generally avoid terms with un-Jewish, especially Christian connotations, such as: *Christian name*, the preferred terms being *first name* or *given name*; *AD* and *BC*, preferring *CE* for *Common Era* and *BCE* for *Before the Common Era* (both JE coinages); idiomatic expressions alluding to Christian themes (*cross one's fingers*, *knock on wood/touch wood*, *the gospel truth*, *Christ! Jeez!*); terms with anti-Semitic denotations or connotations, such as *Hymietown* (New York City), *jew down* (to bargain sharply with), *Shylock*, and *Yid*.

**Literary influence.** JE has played an important role in the works of many American, Canadian, British, and South African Jewish writers, among them Saul Bellow, Joseph Heller, Dan Jacobson, Bernard Malamud, Mordecai Richler, Philip Roth, and Israel Zangwill. The English language in the hands of such writers takes on many nuances reflecting their Jewish background. Their writings are liberally sprinkled with the Yiddish- and Hebrew-origin loanwords and calques that characterize the variety.

See ARABIC, ARAMAIC, BIBLE, DIALECT IN AMERICA, DIASPORA, ENGLISH LANGUAGE, ETHNIC NAME, GERMANIC LANGUAGES, HAMITO-SEMITIC LANGUAGES, HEBRAISM, HEBREW, HYPERBATON, ISRAEL, JEWISH ENGLISH, JEWISH JOKE, JEWISH LANGUAGES, LETTER WORD, NEW YORK, PLURAL, PUN, SCHWA/SHWA, SHIBBOLETH, SLAVONIC LANGUAGES, SPANISH, YIDDISH, YIDDISHISM, YINGLISH. [AMERICAS, EUROPE, VARIETY]. S.S.

**JEWISH JOKE.** An ethnic joke by or about Jews, that deals mainly with stereotypes such as mothers and in-laws, *shnorrers* professional beggars, *shadkhnim* matchmakers, *shlemiels* ne'er-do-wells, *leydigeyers* idlers, *luftmenshn* impractical dreamers, and religious and communal functionaries such as rabbis, cantors, sextons, ritual slaughterers, circumcisers, synagogue presidents, and fund-raisers. Almost any Jew who can be stereotyped is a natural target: Conservative, Reform, Orthodox, Hasidic, Lithuanian, Polish, millionaire, pauper. While some of the types may be the targets of anti-Jewish jokes, the quintessential Jewish joke lacks malice. Its aim is to deflate, not destroy; it

does not reflect self-hatred but rather self-mockery or self-irony. For example: a *luftmensh's* business card reads 'Psychologist and Locksmith. Also caterer on weekends.' A miserly rich Jew piously exclaims: 'If God doesn't give to the poor, who am I to give?' A poor Jew pleads with God: 'You help total strangers, so why not me?' A young Jewish mother is asked how old her two little sons are. 'The doctor', she says, 'is four, and the lawyer is three.' Four *leydigeyers* are sitting in a café. 'Oy', groans one. 'Oy vey', says another. 'Nu', says the third. 'Listen!' exclaims the fourth. 'If you men don't stop talking politics, I'm leaving!' While the old Jewish jokes rooted in European life survive under various disguises, the post-war period has introduced new topics (Americanization, Israel, Soviet Jewry) and new targets (bar mitzvas, bat mitzvas, the Catskill 'borscht belt' in New York State). Jews still primarily make fun of themselves and their foibles. See ETHNIC JOKE, JOKE, JEWISH ENGLISH. [STYLE]. S.S.

**JEWISH LANGUAGES.** A descriptive term for the more than 30 languages spoken and written by Jews in the course of their early wanderings and eventual dispersion among the nations. The two most widely known and investigated Jewish languages are *Yiddish*, a Germanic language, and *Judezmo* or *Ladino*, a Romance language and the traditional language of Jews of Spanish descent. Other Jewish languages of historical importance include *Yavanic* or *Judeo-Greek*, *Yahudic* or *Judeo-Arabic*, *Ebri* or *Judeo-Persian*, *Zarfatic* or *Judeo-French*, *Italian* or *Judeo-Italian*, and *Knaanic* or *Judeo-Czech*. As the archaic names with the *Judeo-* combining form imply, a Jewish language is a distinctively Jewish form or correlate of a non-Jewish majority language. Thus, students of Jewish linguistics refer to *Zarfatic* as the Jewish correlate of Old French, *Shuadit* as the Jewish correlate of Old Provençal, *Gruzinic* as the Jewish correlate of Georgian in the Caucasus, and so forth.

The earliest Jewish language was probably a variety of Canaanitic influenced by Aramaic, used by the descendants of Abraham who settled in Canaan. This developed into the classical Hebrew of the Bible. The next most important language was a Hebrew-influenced form of Aramaic used by the Jews of the Middle East after the Babylonian Exile in the 6c BC. This became the foundation of all succeeding Jewish languages: no Jewish language is known that has not had at its core a Hebrew-Aramaic component. This component is not only found in the lexicon of Jewish languages, but is usually integrated into their phonology, morphology, and syntax. Typically, Jewish languages have served as everyday means of communication within

Jewish communities and have often been used with only marginal awareness of the differences in pronunciation, vocabulary, grammar between them and the co-territorial languages of non-Jews. Though Jewish languages were usually written in Hebrew characters and read from right to left, they were considered by their users secular, temporary vernaculars, sharply distinguished from the sacred Hebrew tongue which was the medium in which most religious and communal matters, scholarly exchanges, and literary activities were conducted.

In this way, with no special significance attached to them, most Jewish languages have tended to be easily replaced by other languages acquired through immigration or conquest. This pattern of adoption and replacement characterized, for example, several Jewish languages that were precursors of Yiddish in western Europe. Yet for reasons that are not well understood, certain Jewish languages, including Yiddish and Judezmo, endured for an exceptionally long time. Some have had extensive literatures: for example, *Aramaic*, the Jewish correlate of Aramaic, is the language of both the Babylonian and the Jerusalemite versions of the Talmud, each in its own dialect. *Yahudic* and *Ebri*, the Jewish correlates respectively of Arabic and Persian, produced many influential philosophical and scientific works throughout the Middle Ages. In modern times, Yiddish became the vehicle of a sophisticated and diversified literature that includes the classic works of Mendele Mokher Sforim, I. L. Peretz, Shalom Aleichem, and the Nobel Prize winner Isaac Bashevis Singer. The works of these and many other Yiddish writers have been translated into English. See ARAMAIC, ETHNIC NAME, HAMITOSEMITIC LANGUAGES, HEBREW, ISRAEL, JEWISH ENGLISH, YIDDISH. [ASIA, EUROPE, LANGUAGE].

S.S.

**JINGLE** [14c: apparently echoic]. (1) A noise made by small bells, keys in a bunch, etc., intermediate between clinking and ringing; something that jingles. (2) The repetition of the same sound or a similar series of sounds, as in alliteration, assonance, or rhyme, and usually intended to have a pleasant effect: 'Milton often affects a kind of Jingle in his Words, as in the following Passages . . . "And brought into the World a World of Woe"' (Addison, *Spectator* 297, 1717). The term has often been used pejoratively to suggest that certain verse is closer to doggerel than to poetry. (3) A short, catchy song, used in advertising, especially in radio or television commercials. See DOGGEREL, REPETITION, RHYME, SINGSONG. [STYLE].

T.M.CA.

**JIVE**, also **jive talk**. (1) The slang or jargon associated in the earlier 20c with such African-American forms of music as jive (swing, jazz, etc.). (2) In the later 20c, an informal term for flattering, deceptive, exaggerated, meaningless talk, especially among black Americans (*Hey, don't give me that jive, man!*); double talk: 'Everything that we do must be aimed toward the total liberation, unification and empowerment of Afrika. Anything short of that is jive' (*Black World*, Oct. 1973). Compare BLARNEY, RAP. See TECHNOBABBLE. [AMERICAS, STYLE].

T.M.CA.

**JMB TEST**. See JOINT MATRICULATION BOARD.

**JOHN BULL** [18c: from the chief character of John Arbuthnot's allegorical and satirical series of pamphlets advocating an end to war with France, the first of which was *Law is a Bottomless Pit, Exemplified in the Case of the Lord Strutt, John Bull, Nicholas Frog and Lewis Baboon: who spent all they had in a Law-suit* (1712). The whole series was called *The History of John Bull*, who is described as an honest, plain-dealing fellow, choleric, bold, quarrelsome, and fond of drinking. In the pamphlets, *John Bull* (England) and *Nicholas Frog* (the Dutch) engage in a lawsuit against *Lewis Baboon* (Louis XIV of France). They are represented by the attorney *Humphrey Hocus* (the Duke of Marlborough), and *Lord Strutt* is Philip of Spain]. An ethnic nickname for an Englishman, Englishmen collectively, Anglophiles, England, and Great Britain: 'John Bull was now an Imperialist, and dwelt very much abroad' (*Daily News*, 3 Jan. 1899). It is either neutral or mildly positive, and is closely linked to a cartoon figure, stout and striding out, with a ruddy face, a top hat, and the Union Flag for a waistcoat. The term *John-Bullism* was used in the 19c to signify the spirit of Englishness. In 1884, Leon Paul Blouet wrote *John Bull and His Island*, a book about Ireland; Bernard Shaw adapted it in 1904 as the ironic play *John Bull's Other Island*, written at the request of his fellow Irishman W. B. Yeats 'as a patriotic contribution to the repertory of the Irish Literary Theatre'. See ETHNIC NAME, -ISM. Compare UNCLE SAM. [EUROPE, NAME].

T.M.CA.

**JOHNSON, Samuel** [1709-84]. English lexicographer, critic, poet, and moralist, who achieved through his *Dictionary of the English Language* (1755) and the model of his own writings pre-eminence in his lifetime as an authority on the language. Johnson was a voracious reader in classical literature and English from the earliest years in his father's bookshop in Lichfield, Staffordshire, and had a highly retentive

memory. Such comprehensive scholarly works as his edition of Shakespeare (1765) and *The Lives of the English Poets* (1779–81) drew, like his Dictionary, on an encyclopedic knowledge of the authors of his age.

**The Dictionary.** This work, commissioned by a group of London book-sellers, was in part a response to a widely felt need in the late 17c and early 18c for stability in the language and for canons of correctness in usage. As a language of scholarly communication, English was seen to lack the permanence and concision of Latin, and the efforts of the French and Italian Academies in bringing about improvements in the vernacular were known and envied. Proposals, especially c.1660–1710, for establishing an English Academy to ‘fix’ the language had come to nothing, and the actor David Garrick’s instant comment on the publication of the Dictionary that Johnson had ‘beat forty French, and will beat forty more’ accorded him the status of a one-man academy, and shows the readiness of his age to accept an arbiter of linguistic usage: Johnson himself had said ‘it is more important for a law to be known, than for it to be right’.

Work on the Dictionary took eight or nine years, and was carried out mainly in the large garret at Johnson’s house in Gough Square, London. He is thought to have used an interleaved copy of Nathan Bailey’s *Dictionarium Britannicum* as a foundation word list and had the help of some half a dozen amanuenses, several of them Scots, who copied out the quotations which he had chosen. Johnson’s perception of his task as a lexicographer changed while the Dictionary was in hand. When he published the *Plan of an English Dictionary* (1747), he saw himself as a verbal critic, condemning barbarous words and expressions, and guarding the purity of the language. But in the Preface (1755), he disclaimed that intention, saying that all the stubborn uncertainties of usage were not to be blamed on him, since his task was not to form, but merely to record the language. At the same time, he recognized that his dictionary could well have some effect on the language, though only through slowing down inevitable change, and minimizing undesirable developments (‘It remains that we retard what we cannot repel, and that we palliate what we cannot cure’).

**Johnson’s influence.** The influence of his work on the development of the language has been widely assumed but cannot be proved and is difficult to assess. In particular, it is often held to have fixed English spelling; printers’ spelling had, however, been established largely in the modern form before 1700, and where Johnson differed from it in his dictionary entries (as in words such as

*logick* and *error*) his recommended form has often failed to survive. It is nonetheless likely that, through the countless abbreviated and miniature editions running well into the 19c, the Dictionary played a role in propagating a standard spelling among the less literate and in forming and restraining the writings of the educated. Earlier monolingual dictionaries were mainly concerned with ‘hard’ words: the bookish, Latinate, and technical vocabulary of Renaissance English. Except sometimes in providing etymologies, they were non-historical and paid little regard to literary usage. Johnson differed in seeking to illustrate the meanings of words by literary quotation. He favoured the usage of the preceding century, Shakespeare, Milton, and Dryden alone accounting for a third of all quotations. The arrangement of his citations is chronological, and Johnson commonly surpasses his predecessors in the elegance of his definitions: *enchant* ‘to subdue by charms or spells’; *graceful* ‘beautiful with dignity’; *insinuitive* ‘stealing on the affections’. It can be said that Johnson provided a powerful but conservative model of language usage for at least a century after his time. See index. [BIOGRAPHY, EUROPE, HISTORY, LITERATURE, MEDIA, STYLE]. N.E.O.

**JOHNSONESE** [1830s: coined by Thomas Macaulay]. An often pejorative term for the elevated style of Samuel Johnson. His leanings towards a Latinate vocabulary were remarked on in his own day (for example, by his biographer James Boswell). Thus, *repress the instantaneous motions of merriment* may be seen as a roundabout and obscure way of saying *stop laughing*. In his poetry, the Latinisms often lend compactness through sheer semantic weight (‘The laureat tribe in venal verse relate / How virtue wars with persecuting fate’). The contortions of Latinity often quoted against him (as in the dictionary definition of *network* as ‘any thing reticulated, or decussated, at equal distances, with interstices between the inter-sections’) are not typical of the work. See -ESE, JOHNSON, JOHNSONIAN, LATINATE. [STYLE]. N.E.O.

**JOHNSONIAN** [1780s]. A term applied to the style of Samuel Johnson or any style resembling it. His moralizing essays in *The Rambler* magazine (1750–2) best illustrate the style, not only in its long words, but in the antithetical balancing of phrases which often went with them: ‘I could seldom escape to solitude, or steal a moment from the emulation of complaisance, and the vigilance of officiousness.’ Johnson wrote in a century when English prose was becoming less formal; the subsequent rejection of his Latinate vocabulary reflected that change. See JOHNSON, JOHNSONESE. [STYLE]. N.E.O.

**JOINT MATRICULATION BOARD.** An examining board in England and Wales, founded in 1903, which operates the *General Certificate of Secondary Education (GCSE)* as part of the Northern Examining Group. It has examined largely in the area of its constituent universities: Birmingham, Leeds, Liverpool, Manchester, and Sheffield. Although it does not operate internationally, it has a *Test in English (Overseas)*, popularly known as the *JMB Test*, for overseas applicants for degree courses. See EXAMINING IN ENGLISH. [EDUCATION, EUROPE].

w.s.

**JOKE** [17c: from Latin *iocus* a jest]. Something said or done to cause amusement: 'O Lord, we ken we hae sinned,' say the people in a Scots account of the Flood, 'but a joke can be carried too far.' A joke is a joke as long as two parties acknowledge it: reduce the number and it stops being funny. Children are adepts at the solipsistic joke; adults cannot easily understand why it is funny that Teddy has cornflakes for supper. Making or 'cracking' a joke requires certain well-established devices, such as, in English, a ritual announcement often containing the word *one*: 'Have you heard this one?'; 'I heard a good one yesterday'; 'Do you know the one about the actress and the bishop at Stonehenge?'; '... and there's the one about the politician and the performing seal'. Any such statement or question is a formulaic summons to laughter. Technically, jokes are like chess: there is a limited number of moves, but the variations and combinations are infinite. Old jokes may enjoy an extended span of life through variations on the original formula: 'Who was that lady I saw you with last night?'—'That was no lady; that was my wife.' This tired old two-liner picks up a little energy if recast: 'Who was that lady I saw you with last night?'—'That was no lady; that was your wife', or 'Who was that lady I saw you with last night?'—'If it was last night, that was no lady.' Jokes can be refurbished to suit the latest fashion, appearing and reappearing in different generic settings, as *doctor jokes*, *elephant jokes*, *red-white-and-blue jokes*, *sick jokes*, *waiter jokes*, and even *anti-jokes*, in which the joke is the absence of a joke. They can be attributed to diverse sources, from Geoffrey Chaucer to Groucho Marx, and can be supposedly typical of various races or communities.

The joke which purports to criticize racial or national defects and foibles, with malice or affection, is often of doubtful ethnicity. It can usually be transferred without loss of effect from one social context to another. An instance is the 'Irish joke' about the motor-cycle passenger who for protection against the wind puts on his overcoat back to front, then falls from the pillion on

a bend near a village: 'Sure,' the villagers tell the ambulance men, 'wasn't he speaking and laughing till we got his head the right way round?' This is a jibe at Irish reasoning, but turns up in England as a 'West Country joke' about stolid yokels ('Oh, a-ar, 'e wurr foine till . . .': Ah yes, he was fine till . . .). Ethnic jokes are frequently invented and circulated by their supposed victims, amiably enough as a rule, though sometimes warning signals can be raised: 'What's red, white, and blue and washed ashore in Cumbria?'—'An Englishman who tells too many Irish jokes.' This two-liner has the substance of an ethnic joke, the form of a riddle, and the genus 'red-white-and-blue joke'. When the joke is 'on' somebody ('There was this Xman, see, and . . .'), some person or group has to suffer the consequences, which means that there are occasions when a joke is no joke. In the old ethnic jest about Scottish Calvinism, the preacher tells his trembling congregation that one day they will all 'burn in hell, and as they lie there in torment they will raise their eyes to heaven and cry, 'Lor-r-d, we didnae ken.' 'And then,' the preacher continues, 'Almighty God in his infinite mair-rcy will look down upon ye and say, "Well, ye ken noo"' (*ken* know, *noo* now).

See ABERDEEN JOKE, ANECDOTE, BON MOT, ETHNIC JOKE, HUMO(U)R, IRISH BULL, IRISH JOKE, JEWISH JOKE, JOKE TOWN, NEWFIE JOKE, ONE-LINER, ORAL TRADITION, POLITICALLY CORRECT, PUNCH LINE, SCATOLOGY, SHAGGY DOG STORY, TWO-LINER, WISECRACK, WITTICISM. [STYLE]. W.N.

**JOKE TOWN** [20c]. The name of a town that is considered inherently funny, usually a nearby, smaller town whose residents are regarded by those of its large neighbour as naïve, dull, comic, and the fit butt of humour. Most cities in the US have a neighbouring joke town: for example, the TV comedian Johnny Carson, who broadcasts from Los Angeles, makes jokes about *beautiful downtown Burbank*, and people in Gainesville, Florida, joke about *Micanopy* (pronounced 'mick-a-NO-pee'). [NAME]. J.A.

**JONES, Daniel** [1881-1967]. English phonetician, born in London and educated at Radley and University College Schools. He graduated in mathematics from King's College, Cambridge, in 1903, and received his MA in 1907, the year he was called to the Bar (Lincoln's Inn). However, he never practised law and, even during his legal training, spent time in Paris (part of 1905-6) studying phonetics under Paul Passy, whose niece he married in 1911. He gained an appointment in 1907 at U. College London, the year in which its Department of Phonetics was set up, and worked there for most of his life: as lecturer (1907-14), Reader (1914-21), Professor

(1921-49), and Emeritus Professor (1949-67). He was the leading British phonetician during the first half of the 20c and had a profound effect on the study of pronunciation (for example, as a member of the *BBC Advisory Committee on Spoken English* from its formation in 1926) and was in part responsible for the selection of *Received Pronunciation* or *RP* (which he named in the 1920s) as the norm for radio announcers. Jones collaborated with other scholars in compiling books on the pronunciation of several languages, including Cantonese (1912), Sechuana (now Setswana: 1916), Sinhalese (1919), and Russian (1923). The works for which he is best known are *An English Pronouncing Dictionary* (1917) and *An Outline of English Phonetics* (1918), both of which continue in revised editions. Jones spent most of his life working on phonetic transcription. He thought of the phoneme as a family of related sounds, and therefore differed from his contemporaries in the Prague School who defined it as a bundle of abstract distinctive features such as nasality, plosion, and voice. His views are summed up in *The Phoneme* (1950) and in his papers for the International Phonetic Association (of which he was secretary, 1928-49, and President from 1950), especially *The Principles of the International Phonetic Association* (1949). See index. [BIOGRAPHY, EUROPE, LANGUAGE, SPEECH].

L.T.

**JONES, (Sir) William** [1746-94]. British philologist and jurist, born in London of Welsh parentage, and educated at Harrow and University College, Oxford. His *Grammar of the Persian Language* (1771) was considered definitive for many years. He studied law and was called to the Bar in 1774, becoming a judge of the high court in Calcutta in 1783. His philological pursuits, interest in Indian legal literature (rare among Europeans of his time), and his liberal political outlook, introduced him to Indian languages, including Sanskrit. He founded the Asiatic Society in 1784, and in his presidential address of 1786 announced his view that 'the *Sanscrit* language . . . bear[s] to Greek and Latin] a stronger affinity, both in the roots of verbs, and in the forms of grammar, than could possibly have been produced by accident; so strong indeed, that no philologer could examine them all three, without believing them to have sprung from some common source, which, perhaps, no longer exists. There is a similar reason, though not quite so forcible, for supposing that both the *Gothick* and the *Celtick* . . . had the same origin with the *Sanscrit*; and the old *Persian* might be added to the same family . . .'. By concentrating on systematic resemblances in the form of grammar, accepting that the common source no

longer exists, and listing most of the chief language families that descended from that source, this statement embodies the founding principles of the historical study of the Indo-European languages. A recent study is: *The Life and Mind of Oriental Jones: Sir William Jones, the Father of Modern Linguistics*, by Garland Cannon (Cambridge University Press, 1990). See index. [ASIA, BIOGRAPHY, EUROPE, HISTORY, LANGUAGE].

W.F.B.

**JONSON, Ben** [1572/3-1637]. English poet, actor, dramatist, grammarian, and teacher, probably born in London, and educated at Westminster School. *Every Man in his Humour* (1598) was the first of several comedies, including *Volpone* (1605), *The Alchemist* (1610), and *Bartholomew Fair* (1614). His tragedies *Sejanus* (1603) and *Catiline* (1611) show a desire to respect the facts of Roman history and the conventions of classical drama not typical of contemporary dramatists. Jonson wrote masques for the Court, in collaboration with Inigo Jones; he also introduced the *anti-masque*, a comic prelude in contrast to the formal beauty of the masque. His contemporary prestige was high. He was esteemed as a witty conversationalist, and, although quarrelsome (he killed a fellow actor in a duel), he was convivial and generous. He admired Shakespeare, but could be critical of his work. James I gave him a pension that in effect made him poet laureate, although the title was not then official. His comedies were satirical and pessimistic, giving in blank verse a picture of London life that is vigorous and colloquial rather than beautiful. He caught speech, the technical terms of trades and sects, and named characters descriptively, such as Epicure Mammon, Zeal-of-the-land Busy. His lyrics departed from the prevailing Italian style and, although they used classical forms and allusions, were written largely in familiar everyday English:

Though I am young, and cannot tell  
 Either what Death or Love is well,  
 Yet I have heard they both bear darts,  
 And both do aim at human hearts.  
 And then again I have been told  
 Love wounds with heat, as Death with cold;  
 So that I fear they do but bring  
 Extremes to touch, and mean one thing.

('Death and Love')

Jonson disliked exaggerated style, said that Edmund Spenser 'writ no language', and avoided the elaborate conceits of John Donne. He influenced the Cavalier poets of the next generation, who were said to be 'of the tribe of Ben'. He also wrote an *English Grammar . . . for the Benefit of All Strangers, out of his Observation of the English Language now Spoken, and in Use* (published posthumously, 1640). He was

Professor of Rhetoric at Gresham College. See index. [BIOGRAPHY, EUROPE, GRAMMAR, HISTORY, LITERATURE]. R.C.

**JORDAN.** See ARABIC.

**JOURNAL** [14c: from Old French *journal*, *journal* (Modern *journal*), from Latin *diurnalis* daily: compare DIARY]. (1) Originally, a daily record set down in a more elaborate form than a diary. Journals have always been, or purported to be, factual records, even in such literary forms as Daniel Defoe's fictional *Journal of the Plague Year* (1722). (2) In the 18c, a daily newspaper or periodical. Although this was the base of the 19c term *journalism*, as time passed such publications were less and less likely to be called journals. However, as late as 1903, Lord Northcliffe referred to *The Daily Mirror* in a letter as 'a new morning journal'. (3) Also *review*. In the 19c, a collection of related essays, published monthly or quarterly, the medium of respected intellectual comment in the humanities, the sciences, and current affairs: *Blackwood's Magazine* (Edinburgh, 1817), *The Edinburgh Review* (Edinburgh, 1802), *Quarterly Review* (?1809), *The North Briton* (1762), *London Magazine* (1817), and Charles Dickens's *Household Words* (1850). The content of such publications could, however, be varied: the first and the last of these journals serialized major new works of fiction. Only *Blackwoods* survives as a continuous series. The present *London Magazine* was started in 1954. (4) At the present time, the term has two main senses: the private record and the collected series of academic articles, as in *Journal of Linguistics* (Cambridge, 1965), *International Journal of Lexicography* (Oxford, 1988). See NEWSPAPER, PERIODICAL, REVIEW, SERIAL. [MEDIA]. G.H.

**JOURNALESE** [Late 19c: from *journal(ism)* and *-ese* as in *Japanese*]. A general, usually non-technical term for the way in which journalists write (and speak), or are thought to write (and speak). It is used both neutrally (referring to newspaper style at large) and more often pejoratively (implying that such a style is stereotyped, vulgar, and inclined to debase the language). The *Random House Dictionary* (1987) defines *journalese* as: '(1) a manner of writing or speaking characterized by clichés, occasional neologism, archness, sensationalizing adjectives, unusual or faulty syntax, etc., used by some journalists, esp. certain columnists, and regarded as typical journalistic style; (2) writing or expression in this manner: *Get that journalese out of your copy!* . . . *That word's not English—it's journalese.*'

**Background.** The characteristics of *journalese* arise from the nature of newspapers: ephemeral

sheets of paper printed and published to strict deadlines, kept resolutely up-to-the-minute, and designed to attract and stimulate readers whose attention spans, for various reasons, are likely to be short. The profession and the public share a certain cynicism about how this is done:

Journalists who reveal their occupation at parties are frequently greeted with the response: 'Oh, I always wanted to be a journalist. I was very good at English at school'. This invariably provokes a wry smile from the journalist, who knows that being good at English is very far down on the list of skills. The late Nicholas Tomalin, one of the *Sunday Times's* top reporters, named the three prime qualities for success some years ago. They were, he said, a ratlike cunning, a certain plausibility and a little literary ability. That's still true. I studied English and Drama at university. The drama techniques have probably been of far greater use (Liz Gill, 'Journalese: The Inside Story', *English Today* 11, July 1987).

**Technique.** Working to a deadline and rendering complex issues into reports of the right length and style produce their own structures, short-cuts, and standards of excellence. When a story is too long for the space available, it is cut, usually from the bottom up. Because of this and the need to get the main points quickly to the browsing reader, reporters pack these points into the first paragraphs. If there is a picture, then the story may be little more than a caption to that picture; when the story is unaccompanied, it stands or falls by its opening statement: the introduction or *intro*. The first sentence is often the most difficult to write. There is a technique known as the *dropped intro*, in which the key statement is delayed for several paragraphs and comes as a punch line, but the danger of delay is that many readers will not persevere far enough to enjoy it. More time can be spent on the intro than on any other part of the article.

**Stock expressions.** Stories also use *colour*: striking words or graphic details that attract interest. Liz Gill notes:

I remember covering a murder case once in which an old lady was battered to death. As an agency reporter I was deputed by my colleagues to ring up the family of the dead woman for more details. They piled up their ten pences and waited outside the phone box. I spoke at some length to the relatives who, considering their grief, were helpful and patient. At the end of the conversation I came outside and relayed the quotes to the others. Satisfied they drifted away, all except one. When we were alone he whispered the vital question: 'Was she white-haired?' The questioner wanted to write something like: *White-haired granny Mrs X was yesterday found savagely beaten* . . .

Such a style may be praised for its terseness or deplored because it is cliché-ridden and inelegant. It is, however, as deliberate in its own way and for its own purposes as Homer's use of phrases like *grey-eyed Athene* or *cloud-gathering*

*Zeus*. It provides ways in which people can be recognized and pigeon-holed. The list of stock phrases includes: *bored housewife, broken-hearted clown, devout Catholic, distinguished surgeon, grieving widow*. See EPITHET. Comparably, especially in articles that strive for humour, words are used that relate to the characters or the occupations of the people concerned: when they face problems, teachers get *caned*, cooks are *browned off* or *burn with rage*, doctors might be *sickened*, butchers might be *beefing* about something, or *giving it the chop*.

**Clichés.** Many clichés and hackneyed expressions derive from or are favoured in newspaper writing, especially in relation to groups that can be stereotyped: *the beautiful people* (for the rich, well-dressed, and occasionally good-looking), *the ivory tower* (for the academic world: often concrete and plate glass), *the rat race* (competitive business), *the party faithful* (for loyal workers and voters for a political party), *mecca* (for any location attracting a particular group, other than for religious purposes, as in *fabulous, surfing mecca*).

Events and actions can be dressed with emotive and romantic words that add colour and are easily slotted into a report: such nouns as *burden, disaster, dream, fantasy, glamour, horror, nightmare, terror*; such adjectives as *amazing, bizarre, cataclysmic, devastating, heart-stopping, heart-warming, horrendous, moving, outrageous, scandalous, shattering, staggering*. Close to such stock words are such stock phrases as the now widely parodied *shock horror, street of shame*, euphemisms like *confirmed bachelor* (a homosexual man), *constant companion* (a lover), *fun-loving* (of a woman: sexually free-and-easy), *good-time girl, party girl* (a prostitute), *mystery girl/man* (someone the press is frantically trying to find out about). Certain syntactic forms also occur so regularly as to be clichés: *amid mounting* (*Amid mounting calls for his resignation, X has decided to tough it out*), appositional *many* (*firemen, many of them wearing masks; mothers, many with children in their arms, that was once standing in the ruin that was once central Beirut*). There is a fine dividing line between the everyday sensationalism of popular and tabloid journalism and the parodies in such publications as the British satirical magazine *Private Eye*, which uses proletarianisms in such headlines as *The Royals, dontcha lovm!*

**Special uses of words.** Because they must be concise and make an immediate impact, journalists often use words in novel ways: (1) *Conversions*. Nouns are often put to use as verbs. Many of the first recorded instances of such changes have occurred in newspapers, especially in the US: *to*

*interview, engineer, boom, boost, surge*. (2) *Attributives*. The use of nouns to qualify other nouns: *death* as in *death car, death ride, death ship*; *top* as in *top politician, top referee, top team*; *rescue* as in *rescue worker, rescue party, rescue team*; *community* as in *community leader, community problems, community relations*. (3) *Compounds*. Certain patterns are commoner in journalese than elsewhere, and may seem artificial because they are rare in speech: *litterbug, holidaymaker, roadhog*. (4) *Reduplicatives*. Such coinages often rhyme, lodge easily in the memory, and sometimes become catch-phrases: *the jet set* (the leisured class which travels frequently); *the brain drain* (exodus of academics), *culture vulture* (someone who indiscriminately 'consumes' culture). (5) *Archaisms*. Because they are short or perceived as popular, certain archaic words survive in newspaper usage: *agog, foe, hustings, scribe, slay*. (6) *Neologisms*. Journalists employ a variety of nonce and stunt forms, some of which are accepted in the language at large: *new-look, see-through, lookalike, lensman, weatherman, vocalist*. (7) *Kinds of modification*. Word combination often leads to strings of adjectives and attributive nouns, a style that began in *Time* magazine in the 1920s, with the aim of providing impact and 'colour'. They may be relatively short (*London-born disc jockey Ray Golding . . .*) or long enough to become self-parodies, either pre-modifying a name (*silver-haired, paunchy lothario, Francesco Tebaldi . . .*) or post-modifying it (*Zsa Zsa Gabor, seventyish, eight-times-married, Hungarian-born celebrity . . .*).

**Immediacy of style.** (1) *Short vernacular words*. Because of the need for conciseness and impact, journalists favour monosyllables and disyllables: *poll* for 'election'; *blast* for 'explosion'; *jobless* for 'unemployed'; *homeless* for 'destitute'. (2) *Emotive and inflated expressions*. The urge to promote excitement leads, especially in headlines, to such emotive and often inflated usage as: *fever* for 'excitement' (*World Cup fever grips Barcelona*); *rage or fury* for 'anger' (*Fury over Poll Tax*); *stricken or crippled* for 'disabled' (*stricken tanker adrift in Med*); *glory* for any sporting achievement (*glory day for Tottenham*); *storm and row* for 'controversy' (*storm over price-hikes; Cabinet row over inflation*). (3) *Quasi-illiterate usages*. For effect, some writers and publications, especially in Britain, favour eye dialect that suggests solidarity among philistines: *gonna, loadsamoney, showbiz, whodunnit, dontcha, wanna, wotalotigot*. (4) *Innuendo*. Especially in the tabloids, hints that are more or less explicitly muscular or sexual innuendo are often employed, especially as metaphors: *firm, harden, spurt, spill over, selling climax*. (5) *Allusive punning*. There appears to be a general increase

in the use of a kind of punning allusion traditionally acceptable in US journalism but avoided in Britain: 'TV or Not TV' (*The Times*, 16 Oct. 1989); 'Moore's the pity', 'Know Your Rites', 'Heirs and Graces' (*The Listener*, 16 June 1988); 'Drapes of things to come', 'A test of skull on the Thames' (*The Times*, 26 July 1988); 'breaking into new arias' (*New Statesman*, 24 June 1988). See JOURNAL, JOURNALISM, PUN. [MEDIA, STYLE]. G.H., T.MCA.

**JOURNALISM** [Early 19c: from French *journalisme*. See JOURNAL]. The enterprise of producing newspapers and magazines (including reporting, writing, editing, photographing, and managing) as well as the styles of writing used in such publications. The term came into use some two centuries after the practice had started. From the 18c, there were basically two styles: the elegant and ornate 'high' style of Joseph Addison, Richard Steele, Samuel Johnson, and the other essayists, and the 'low' style of the so-called Grub Street hacks. Daniel Defoe is often regarded as the first journalist, as distinct from the man of letters. With the rise of the popular press in the 19c, the more fashionable alternative terms were the *higher journalism* (Matthew Arnold's term) and the *gutter press*. To a large extent these modes are perpetuated in the division of modern British journalism into the *quality press* and the *tabloids*. By the mid-19c, the term was starting to fall into disrepute, to imply rather superficial social and political commentary and a style which was less than exemplary. In England in 1879, George Eliot commented rather scornfully on 'Journalistic guides to the popular mind', while *journalese*, recorded from 1882, was defined by the *OED* c.1900 as "'newspaper" or "penny-a-liner's" English'. The term *journalism* continues throughout the English-speaking world to retain a tinge of disapproval, and most of the epithets applied to the profession (such as *hacks*, *muck-rackers*, *rat packs*, *reptiles*, *scribblers*) are uncomplimentary.

It was, however, from the early 19c to the First World War that journalism enjoyed its greatest influence. Editors were raised to virtually legendary status, their editorials or 'leaders' being regarded as models of stylistic elegance and political authority, with an impact on current affairs which has never been surpassed. Especially under the editorship of Thomas Barnes, *The Times* became such a powerful voice in Britain (promoting the Reform Bill and condemning the Corn Laws) that by 1829 it had earned the sobriquet *The Thunderer*. Among other prominent names are C. P. Scott of *The Manchester Guardian*, J. L. Garvin of *The Observer*, and W. T. Stead of the *Pall Mall Gazette*. Both

Samuel Coleridge and Benjamin Disraeli served as leader-writers for the *Morning Post*, which also published poems by William Wordsworth, Thomas Hardy, and Rudyard Kipling. Although editors are not so strongly associated with newspapers in the US as in the UK, the names of Ambrose Bierce, A. J. Liebling, H. L. Mencken, Lincoln Steffens, and Tom Wolfe are especially notable in American journalism.

Newspapers will do whatever is necessary to catch and hold readers at the level at which they operate. 'Serious' or 'quality' newspapers cater to a minority with a higher level of education and interest. This minority is willing to read lengthy articles and expects a quasi-literary quality in what it reads. 'Popular' newspapers are aimed at the un-literary majority in any area. Many of their readers have no special interest in language and little time or inclination for detail. They also often have a great interest in social events and sport, and in the human side of the entertainment business. There is therefore a greater emphasis on 'gossip' and 'inside stories' than in the 'heavies' (the serious papers), although these also carry more muted versions of the same thing, often in the form of reviews. Adapting to their markets, newspapers differ in physical terms (with preferred formats such as *broadsheet* or *tabloid*; preferred headline styles; longer or shorter stories and features) and in the linguistic style that appeals to their target readerships.

The tradition of trenchant freelance political journalism founded by Defoe and continued by John Wilkes in the 18c was maintained in the 19c by William Cobbett and Charles Dickens. In the 20c, the emphasis has moved from the editors who run newspapers to the entrepreneurs who own them, while new kinds of journalism have developed, contrasting *print journalists* with *radio journalists* and *television journalists*. **JOYCE, James (Augustine Aloysius)** [1882–1941]. Irish teacher and writer, born in Dublin, and educated at Jesuit schools and U. College, Dublin. He left Ireland in 1904 and, apart from a few brief visits, lived abroad for the rest of his life, mainly in Paris, Trieste, and Zurich. He

supported himself for years by teaching English as a foreign language. Even after he achieved fame, he suffered from poverty and his eyesight steadily deteriorated. Despite his 'exile', Dublin was the background of all his work. He published a volume of poems, *Chamber Music* (1907), and his first important work was *Dubliners* (1914), a series of sketches of Dublin life rich in symbolism and giving an impression of inhibition and paralysis: some of the characters come to new understanding but seem unable to act and change their lives. These moments of revelation (called 'epiphanies' in the unfinished *Stephen Hero*) are important in *A Portrait of the Artist as a Young Man* (1916), an autobiographical novel that follows Stephen Dedalus until he rejects his background and goes abroad. A play, *Exiles* (1918), was not a notable success. Joyce's innovations emerge fully in *Ulysses* (1922). In episodes based loosely on the books of Homer's *Odyssey*, the novel follows Leopold Bloom through a whole day in Dublin. By representing events largely through Bloom's thoughts, Joyce broke away from the narrative tradition and allowed free association of impressions (*stream of consciousness*) to present the story. *Finnegans Wake* (1939) follows a night of dreams in the mind of H. C. Earwicker.

There is progression in style from the plain narrative of *Dubliners* to the dream sequence of *Finnegans Wake*. The use of the stream of consciousness begins with Stephen Dedalus, develops with Leopold Bloom, and becomes a prolonged inner monologue from Marion Bloom at the end of *Ulysses*; then follow the shifting patterns of Earwicker's dream. Aware of psychoanalysis, Joyce used free association and the prompting of unconscious desires to an extent that caused *Ulysses* to be banned as obscene. Behind his characters, he evoked themes and images from many sources, notably Homer, Shakespeare, Irish legends, and Roman Catholicism, whose influence he repudiated but never lost. His linguistic invention was prodigious and included such puns as 'half a league wrongwards' (for the Charge of the Light Brigade), such neologisms, often multilingual, as *mainhur* (a blend of 'mein Herr' and 'menhir'), and such comic assonances and blends as 'Dion Boucciacault' as *Dinosboozycough* and 'Pidgin English' as *pigeony linguish*. Other features are the writing of compounds as single words (*goat-head*, *riverbed*, *streetorgan*), the use of dashes rather than quotation marks for direct speech (in the French style), and a section of *Ulysses* presented as a dramatic script. For *Finnegans Wake*, the hardest of his books to follow, he drew on many European tongues. It often suggests linguistic virtuosity for its own sake, but is built around recurring themes and has a quality

of 'word music'. Musical form underlies much of Joyce's writing and reflects his early home background. Widely considered the greatest 20c innovator in the language, he may be called a comic writer: causing laughter and presenting a basically affirmative view of humanity through looking clearly at its weaknesses. See index. [BIOGRAPHY, EUROPE, LITERATURE, STYLE]. R.C.

**JUDEZMO.** See JEWISH LANGUAGES, ROMANCE LANGUAGES, SPANISH.

**JUNCTURE** [14c: from Latin *iunctura* a joint]. In phonetics, the manner in which successive vowels and consonants are linked. Differences of juncture depend on syllable division, as with *nirate* and *night rate*. In *nirate*, close juncture runs the /t/ and /r/ together in one syllable. In *night rate*, the syllables belong to different words, normally kept apart by open juncture. However, when said quickly, the two forms have the same close juncture. The phrases *ice cream* and *I scream* are comparable in those accents in which both open with the same vowel. Juncture does not necessarily follow grammar: in *bedroom* and *beetroot*, the open juncture comes before /d, t/ instead of after them, and the phrase *at all* is normally pronounced *a tall*. See SYLLABLE. [SPEECH]. G.K.

**JUSTIFYING** [18-19c in this sense]. A printer's term for making a line of type a certain length, normally by adjusting the space between words (but sometimes also between letters, especially in narrow measures), chiefly so that the lines of a column or page have straight margins on the right as well as the left. When this is done, the lines are said to be *justified*. When the margin is straight on the left and uneven on the right, the type is said to be *unjustified* or *ragged right*. Although a straight right margin may be pleasing to the eye, justifying sometimes reduces legibility, especially in narrow columns, and may lead to awkward word-divisions. See TYPOGRAPHY. [TECHNOLOGY]. T.MCA.

**JUTES.** According to the chronicler Bede (c.730), the name of a Germanic tribe which, with the Angles and Saxons, invaded Britain in the 5c and settled in Kent and part of the south coast, including the Isle of Wight. The Angles appear to have come from Schleswig and the Saxons from western Holstein and the north German coast from the Elbe westward. Since the Angles lived between the Saxons and the Jutes, the Jutes appear to have come from further north, probably the Jutland peninsula in Denmark, which may be named after them. See ANGLO-SAXON, KENTISH, OLD ENGLISH<sup>1</sup>. [EUROPE, HISTORY, NAME]. P.C.

# K

**K, k** [Called 'kay', rhyming with *say*.] The 11th letter of the Roman alphabet as used for English. It originated in the Phoenician consonant *kap*, which was adopted as *kappa* for Greek. It reached the Romans via the Etruscans, but was little used in Latin, in which *C* and *Q* were preferred as symbols for the voiceless velar stop /k/. The transliteration of Greek *K* into *C* was standard: *comma* not *komma*, *Socrates* not *Sokrates*. When *c* acquired a soft value before *e* and *i* in later Latin and the Romance languages, *k* was available to represent hard *c* in those positions, and was so adopted by most of the Germanic languages. Old English, however, normally used *c* for /k/ (as in *cwic*, *cyning* for what later became *quick*, *king*), with *k* as an occasional variant. After 1066, under the influence of Norman-French spelling, both letters were widely used, but after a period of uncertainty (*could* being spelt both *coude*, *koude*) fairly distinct functions emerged for *c* and *k*, according to position and context.

**Sound value and distribution.** In English, *k* normally represents a voiceless velar stop, whose voiced equivalent is *g*. It is typically used: (1) Before *e*, *i*: *kennel*, *keep*, *kit*, *kind*, *sketch*, *skirt*, *skin*. It occurs more rarely before other vowel letters (chiefly after *s*) in long-established English words: *skate*, *skull*, *sky* (contrast *scale*, *Scot*, *scud*). (2) After a long vowel (*take*, *break*, *meeke*, *like*, *soak*, *broke*, *duke*) as well as after *oo* (*book*, *cook*). Further syllables may follow (*naked*, *token*). (3) In conjunction with preceding *c* after a short vowel, *ck* having the function of a doubled *c* or *k*: *sack*, *wreck*, *lick*, *mock*, *duck*; *bracken*, *reckon*, *wicked*, *rocket*, *bucket*. (4) After other consonants which follow a short vowel (whose value may be modified and lengthened before *l*, *r*, *w*): *walk*, *whelk*, *folk*, *milk*, *hulk*, *frank*, *pink*, *lark*, *jerk*, *ask*, *desk*, *hawk*; *sparkle*, *whisker*.

**Exotic and innovative usages.** (1) Recently coined or borrowed words use *k* without positional restrictions: names for exotic creatures, such as *kangaroo*, *koala*, have *k*, not *c*, before *a*, *o*, and *yak*, *trek* lack the usual *c* between short vowel and *k*. (2) *K* may be doubled between vowels in such words as *yakkity-yak* and *trekking*. (3) For visual effect, *c* and *q* are sometimes changed to *k*: as trade names (*Kleenex*, based on *clean*) and businesses (*Kwik-Fit*, based on *quick*). The change may take place for facetious, humorous, or sinister purposes: *Krazy Kats*, *Ku Klux Klan*. (4) Foreign names commonly occur with *k* in untypical positions: *Kaiser*, *Kremlin*, *Kuwait*.

**Digraphs.** (1) *Ck* is not a digraph in the sense of a combination creating a new pronunciation, but is common after short vowels in vernacular words (*black*, not *\*blac* or *\*blak*), although the loanwords *bloc*, *chic*, and *dak*, *flak* occur. (2) *Kh* may constitute a digraph by representing a voiceless velar fricative /x/, rather as in *ScotE loch*, transliterating Russian *x* (*Kharkov*, *Khrushchev*) and similar sounds in other languages. However, in such words, the *h* is commonly ignored, and *kh* is pronounced as /k/: *khaki*, *khan*, *khedive*, *astrakhan*.

**Silent K.** (1) In Old and Middle English, initial *c* or *k* (like its voiced equivalent *g*) could be pronounced immediately before *n*: see OLD ENGLISH<sup>1</sup>. In this position, *k* has since fallen silent, but has been retained in writing in some twenty forms that include *knave*, *knee*, *knife*, *knot*, *knuckle*. This orthographic feature strikingly distinguishes several pairs of homophones: *knave/nave*, *knight/night*, *know/no*. (2) In isolated cases, *ck* or *k* has been assimilated or elided before another consonant, as in *blackguard* ('blaggard') and *Cockburn* ('Coburn').

**Variations.** (1) *K* is inserted before vowels in inflected forms and derivatives of verbs ending

## THE CAPITAL LETTER

EARLY FORMS				CURRENT FORMS		
Phoenician	Greek	Etruscan	Roman (Latin)	roman	italic	
↓ ↘	↘ ↘	↘	K	K	K	

## THE SMALL LETTER

EARLY FORMS			CURRENT FORMS	
Roman cursive	Roman uncial	Carolingian minuscule	roman	italic
			k	k

in *c*: *bivouacked*, *picknicker*, *panicking* (but note *arced* not \**arked*, from *to arc*). (2) It occurs before *e* and *i* in place of a *c* in a related word or form: *cat*/*kitten*, *cow*/*kine*, *joke*/*jocular*, *curb*/*kerb*, *curfew*/*kerchief*. (3) It has been replaced in *ake*, which is now *ache*. (4) It has disappeared from *made*, which was formerly *maked*. (5) It no longer occurs in forms ending in *-ic*: *logic*, *music*, which were formerly *logick*, *musick*. (6) *Taken* has the poetic spelling *ta'en*, reflecting a common pronunciation in dialect in England and Scotland. (7) The letter *x* has been replaced *cks* in *coxcomb* and *ck* in *coxswain*, while *bucksome* was one of many earlier forms of *buxom*. In India, it sometimes replaces the Romanized Sanskrit *ksh*, the names *Lakshman*, *Lakshmi* becoming *Laxman*, *Laxmi*. (8) For humorous, commercial purposes, such spellings as *socks* can become *sox*. (9) Alternations with *c* and *qu* in various combinations arise in loans from French: *block*/*bloc*, *manikin*/*mannequin*, *racket*/*racquet*. (10) BrE *barque*, *cheque*, *chequer*, *disc*, *kerb*, *mollusc*, *sceptic* are usually written *bark*, *check*, *checker*, *disk*, *curb*, *mollusk*, *skeptic* in AmE. However, some similar pairs of words are of distinct meaning and origin: *arc*/*ark*, *scull*/*skull*. See ALPHABET, C, LETTER<sup>1</sup>, SPELLING, X. [WRITING].

C.U.

**KAMTOK** [1980s: a blend of *Cameroon* and *talk*. See TALK, TOK PISIN]. The English-based pidgin of Cameroon, widely used for at least 100 years. When the Germans annexed the region in 1884, they found it so well established as a *lingua franca* that they produced a phrase book in pidgin for their soldiers. Its speakers usually call it *pidgin* or *country talk* and linguists refer to it as *Cameroon(ian) Pidgin (English)*, but recently the media has begun to use *Kamtok*, to stress that it is local and useful, despite having no official status. It is the easternmost of a group of pidgins and creoles in West Africa that includes Gambian *Aku* (Talk), Sierra Leone *Krio*, Ghanaian *Pidgin*, and Nigerian *Pidgin*, and is a mother tongue on plantations, in some urban settlements, and in families where the parents speak different languages. It is, however, rarely if ever the only mother tongue. *Kamtok* has various forms, reflecting the age, education, regional provenance, mother tongue, and linguistic proficiency of its users. Its literary use is complicated by three different sets of orthographic conventions: semi-phonetic (*Wi di waka kwik kwik*), English-based (*We dee walka quick quick*), and French-based (*Oui di waka quouik quouik*). It has been used by the media, in Bible and other religious translation, and in creative writing, uses that may lead to standardization. It has relatively high prestige, and is preferred informally

among Africans of different ethnic groups, ranking just below French and English as a vehicle for mobility from rural villages into modern urban life. Special varieties include *Grassfield* or, more usually, *Grafi* (among the Bamileke), *Pidgin-Maqueraux* (urban street slang), and an offshoot of *Krio* in Limbe (formerly Victoria) and in the African Baptist Church, in which *Krio* speakers played a prominent role in the 19c. The former British West Cameroon has extensive influence from Nigerian *Pidgin* and standard English, while in the east there is more influence from French.

**Features.** (1) *Pronunciation.* *Kamtok* is non-rhotic and syllable-timed. It has seven vowels /i, e, ε, a, ɔ, o, u/ and four diphthongs /ei, ai, au, oi/. General English central vowels are replaced, schwa becoming /a/ as in /fada/ for *father*, /ɜ/ becoming /ɔ/ as in /tʃɔs/ for *church*, and /ʌ/ becoming /a/ or /ɔ/ as in /graunat/ for *groundnut* and /bot/ for *but*. Centring diphthongs are reinterpreted, so that *beer* is /bia/, *air* is /ea/ or /e/. *sure* is /sua/. Consonant clusters tend to be simplified, as in /tori/ for *story*, /maf/ for *smash*, or to be broken up by an intrusive vowel, as in /sipia/ for *spear* and /sikin/ for *skin*. (2) *Grammar.* Plurality is assumed from context, as in *tu pikin* two children, or indicated by the third-person plural pronoun *dem*, as in *ma pikin dem* my children. Time and aspect are either deduced from the context or indicated by a number of auxiliaries: *a bin go* I went; *i go go* he will go; *we wan go* we almost went; *wuna di go* you (plural) are going; *yu sabi chop* you habitually eat. Adjectives and verbs are structurally similar: *a big* I'm big, *a waka* I walk, *a go big* I'll be big, *a go waka* I'll walk, *som big man* a big man, *som waka man* a walker. Serial verbs are widely used: *I ron go rich di haus kam* He ran as far as the house and came back. Questions are marked by intonation alone (*I no go kam?* Will he/she not come?) or by a question initiator followed by a declarative form (*Usai i bin go?* Where did he/she go?). (3) *Vocabulary.* Most *Kamtok* words are from English, but many have been widened in meaning: *buk* a book, letter, anything written; *savi buk* ('know book') educated. There are many loan translations from local languages: *krai dai* ('cry die') a wake or funeral celebration; *tai han* ('tie hand') meanness. Non-English vocabulary relates to culture and kinship: *ngombi* a ghost, spirit of the dead, *danshiki* a tunic-like shirt, *mbanya* co-wife in a polygamous family, *mbombo* someone with the same name as someone else, *njamanjama* green vegetables. See CAMEROON, CAMFRANGLAIS, WEST AFRICAN PIDGIN ENGLISH. [AFRICA, VARIETY].

L.T., C.G.

**KANAKA ENGLISH.** See AUSTRALIAN PIDGIN.

**KANNADA**, also **Kannarese**. A Dravidian language of south India. It is spoken by some 37m people, and has a script based on southern Brahmi. Inscriptions in Kannada date from the 5c, and its grammatical tradition from the 11c. Kannada is one of the 15 major languages of India and the state language of Karnataka (formerly Mysore). Kannada literature has a close relationship with Sanskrit, from which, unlike Tamil, it has assimilated many words; Kannada writers exploit to the full the style range provided by borrowings from Sanskrit, Persian, and English. See **BISOCIATION**, **DRAVIDIAN ENGLISH**, **INDIA**, **INDIAN LANGUAGES**. [ASIA, LANGUAGE]. Y.K.

**KELVINSIDE**. See **MORNINGSIDE** AND **KELVINSIDE**.

**KENSINGTON** [c.1900]. Also **Kensingtonian**, **Kensington Hay**. An affected or overly refined accent considered typical of the middle-class residents of the London borough of Kensington: 'Hilda had been deprived of her Five Towns [Staffordshire] accent at Chetwynd's School, where the purest Kensingtonian was inculcated' (Arnold Bennett, *Hilda Lessways*, 1911); 'her Kensingtonian "mothah and brothah"' (*Times Literary Supplement*, 1936); 'the manner is brusque and voice exaggerated Kensington' (J. Lock, *Lady Policeman*, 1968). The phrase *Kensington Hay* satirizes both the affected pronunciation of 'high' as in *Kensington High Street*, and the aspirations of the speakers. Compare **MORNINGSIDE** AND **KELVINSIDE**, **SLOANE RANGER**. [EUROPE, SPEECH, VARIETY]. T.MCA.

**KENTISH**. A dialect of Old English, known in the 8c only from names in Latin charters but in the 9c as a language used for the charters themselves. It may have descended from the speech of the Jutes, who are said to have settled in Kent in the 5c. See **DIALECT IN ENGLAND**, **JUTES**, **STRANG**. [EUROPE, HISTORY, VARIETY]. T.MCA.

**KENYA**. Official titles: Swahili *Jamhuri ya Kenya*, English *Republic of Kenya*. A country of East Africa and member of the Commonwealth. Currency: the shilling/shillingi (100 cents/senti). Capital: Nairobi. Population: 23m (1988), 36m (projection for 2000). Ethnicity: Kikuyu, Luhya, Luo, Kalejin, Kamba, Kisii, Meru. Religions: Protestant 38%, Roman Catholic 28%, traditional 26%, Muslim 6%. Languages: Swahili (official), English (second), indigenous languages. Education: primary 69%, secondary 20%, tertiary 1%, literacy 59%. British control of Kenya was established by the Berlin Conference in 1885. The *British East African Protectorate* was established in 1895, opening the way to European settlers, especially in the area

known as the *White Highlands*. In 1920, Kenya became a British colony. In 1944, African participation in politics was permitted. The Mau Mau rebellion lasted from 1952 to 1960 and Kenya gained its independence in 1963. English was the official language immediately after independence, but a constitutional amendment in 1969 instituted the use of Swahili in the National Assembly. In 1974, Swahili replaced English as the official language. At the time, President Jomo Kenyatta stated:

The basis of any independent government is a national language, and we can no longer continue aping our former colonizers. . . . I do know that some people will start murmuring that the time is not right for this decision; to hell with such people! Those who feel they cannot do without English can as well pack up and go (public address, Nairobi, 1974).

English is, however, the language of higher education and of professional and social status, used by most senior administrators and military officers. The 1967 curriculum focuses on mathematics, science, and English, which is valued as the language of modernity and mobility, often used to express authority, even at the family level, if the parents know it. The mixing of English, Swahili, and the indigenous languages is common. The first newspaper in Kenya was the *African Standard* (established in 1902), now known as the *Standard*. Other English-language publications are the *Daily Nation* (established in 1960) and the *Weekly Review*. Both the Voice of Kenya radio and Kenyan TV broadcast in English as well as Swahili. Contemporary writers include Ngugi wa Thiong'o (b.1938) and Mugo Gathuru (b.1925). In terms of its linguistic features, Kenyan English is usually considered part of East African English, but the authenticity and homogeneity of both the regional and the national variety are currently controversial matters in Kenya.

The following points can, however, be made with some confidence: (1) In pronunciation, Kenyan English is non-rhotic. (2) The fricatives /θ, ð/ are generally replaced by the stops /t, d/: 'tree of dem' for *three of them*. (3) Affricates tend to become fricatives: 'inrish' for *enriched*, 'hwis' for *which*, 'jos' for *judge*. (4) The consonants /b, v/ are often devoiced: 'laf' for *love* and 'rup' or 'rop' for *rub*. (5) The sounds /f, p/ may be hypercorrected to their voiced counterparts, *laughing* and *loving* becoming homophones as 'lavin'. (6) Final -l is often deleted: 'anda-standebu' for *understandable*, 'loko' for *local*, 'pipu' for *people*. (7) Usually uncountable nouns are often countable: *Thank you for your many advices; We eat a lot of breads; I held the child on my laps; A lady with big bums is attractive*. (8) The semantic range of some words has been extended: *dry* (of coffee) without milk or sugar,

*medicine* chemicals, *hear* to feel (pain), to understand (language). (9) Loanwords and loan translations from indigenous languages are common: *panga* a machete, *sufuria* a cooking pot, *sima* cornmeal paste, *clean heart* without guile. Local usage is discussed in W. H. Whiteley, *Language in Kenya* (Nairobi: Oxford University Press, 1974). See EAST AFRICAN ENGLISH, NGUGI, SWAHILI. [AFRICA, NAME, VARIETY]. C.L.N., L.T.

**KERSEY, John.** 18c English lexicographer, credited with compiling *A New English Dictionary* (J.K., 1702), the first dictionary to include the ordinary words of the language, such as *apple*, *bold*, and *forget*. Where earlier dictionaries had concentrated on bookish hard words, the 1702 volume was aimed at those who needed a dictionary to learn to spell, and it boasted the inclusion of words 'now commonly used either in speech, or in the familiar way of writing letters'. In its patently defective definitions ('To Flow, as the Tide, &c.', 'A Lurker, in Corners'), the dictionary had much in common with the spelling books of the time, and the compiler quarried bilingual dictionaries for the common words he could not find elsewhere. In 1706, Kersey produced a thoroughly revised and much enlarged edition of the *New World of Words*, originally published by Edward Phillips in 1658. His *Dictionarium Britannicum* (1708), based on that work, was the first abridged dictionary of English. See DICTIONARY. [BIOGRAPHY, EUROPE, REFERENCE]. N.E.O.

**KEY.** See CODE, CRYPTOGRAPHY, KEYBOARD, KEYWORD, LEGEND, QWERTY, TYPEWRITER.

**KEYBOARD** [19c: compare *switchboard*, *signal board*]. A general and technical term for a complete set of keys on a musical instrument (accordion, organ, piano) and such printing equipment as typesetting machines, typewriters, and computers. On traditional typewriters, the keys are connected mechanically to pieces of type that strike ink through a ribbon on to the surface of a sheet of paper. In computing, the keys are square buttons set in a board that have no mechanical impact on a surface; instead, they transmit a signal to the computer's central processing unit. Such sets of keys include the letters of a variety of the Roman alphabet (as used for English, French, etc.) or comparable symbols in other systems.

**Basic keys.** English-language keyboards have 26 letters, ten numerical digits (0 to 9), punctuation marks, and a variable set of such marks as @, \$, %, &, \*, and +. A *shift key* doubles the function of the other keys by converting lower-case to upper-case letters and in some cases making

alternative symbols available. A *tab key* tabulates by locating the work at pre-set indentions. A (*space bar*) marks spaces between words. The *return key* brings the carriage of a typewriter back so that work can begin on the next line or, on a computer keyboard, opens a new line or executes a function or command. In addition to the basic alphanumeric keys, the keyboard of a computer has a number of cursor, command, and function keys.

**Cursor keys.** The *cursor* [Latin: runner] is a flashing symbol whose position indicates where one can work at any time on the screen. It can be moved around the screen by means of *cursor keys* that are located as a distinct group, as part of a numerical keypad, or both. They can also *scroll* up or down line by line through a file, bringing earlier or later parts of a text into view, or move screen-sized 'pages' or a whole document up or down through such functions as *page up*, *page down*, *home*, *end*.

**Command keys.** The set of *command keys* extends the functions of other keys. It includes *control* (short forms *c* or *ctrl*), which controls the function of another key, *alternate* (*alt*), which specifies an alternative function, and *escape* (*esc*), which indicates to the computer that any key pressed after it has a different function from before. They are like shift keys in typewriters, in that they double the functions of the other keys, and when used in combination can provide characters not visible on the keyboard, such as Greek letters. The *delete key* (*del*) erases material a word, a line, or a block at a time, depending on the specific instruction.

**Function keys.** The set of *function keys*, of which there are ten on most standard keyboards, usually placed above the other keys on the board, are operated either by themselves or with the command keys to give specific instructions to the computer. These functions vary from one program to another: for example, in WordPerfect, the key F7 used alone saves (stores) text while one is working on it, whereas a combination of the shift key with F7 will begin a procedure for printing a document. In *Nota Bene*, F7 used alone will provide access to a number of 'windows' on which one can work on different texts or files simultaneously. In combination with control it will store specific words in an index.

**Variety and complexity.** Because of the variety of programs available, and the lack of a standard for functions and commands, the function arrangements of the keyboard must currently be relearned for each new word-processing program, and the training required for keyboarding is consequently highly specialized. This

situation is made more complex by the sheer variety of specialized functions in the various programs, covering such things as typefaces, sorting, indexing, and layout. Because of this, the keyboard becomes the site of an extraordinary range of tasks and applications. A standard 84-character keyboard can now provide hundreds of different instructions to the processing unit of a computer.

**Keyboarding.** Because of the dominance of both typewriter and computer in the late 20c, a knowledge of the keyboard has become increasingly important in many occupations, and for many people ability to use a keyboard is part of literacy. The verb *to keyboard* applies to *keying* in data to a computer, and a person engaged in such work is a *keyboarder*. A satisfactory speed on a standard keyboard is 60 words per minute, but speeds of up to 149 words in sustained work have been recorded. A recent development has been the use of interactive computer screens as modified keyboards; touching the screen causes computers to receive information. Light pens and optical scanning devices have reduced reliance on keyboards and numerical keypads for inputting data, and separate devices for manipulating the cursor, such as the electronic mouse, the trackerball, and the slate (for handwriting), complement, extend, or replace the standard unit. See COMPUTING, DIACRITIC, QWERTY, TYPEWRITER. [TECHNOLOGY]. W.W.B.

**KEYWORD**, also **key word** [1850s]. (1) A word that serves as a crucial ('key') element in a usage, phrase, sentence, text, subject, concept, theory, or language: *A Dictionary of Key Words—800 key words that an intermediate student of English needs to know, because they cause difficulty, combine with other words to make new meanings, form the basic structures of English grammar, express ideas that are often needed* (Mary Edwards, 1985); *Keywords: A Vocabulary of Culture and Society*, by Raymond Williams (Fontana/Croom Helm, 1976), a work in the form of a glossary of such words as *alienation, career, empirical, fiction, humanity, nationalist, and science*, described in the introduction as 'the record of an inquiry into a *vocabulary*: a shared body of words and meanings in our most general discussion, in English, of the practices and institutions which we group as *culture* and *society*'. (2) A significant word for a person or group: 'Self-reliance and self-care were the keywords' (Mary Kenny, 'Paying the Price of Feminism', *Sunday Telegraph*, 6 Nov. 1988). (3) A technical term for a term in a list through which it is possible to search an index, catalogue, filing system, or database: *For 'deponent', go to LANGE then LATIN then GRAMMAR then*

*VERB.* (4) Also *catchword*. A term in library science for a memorable or important word or term in the title, text, or abstract of an item being indexed and therefore used in the index entry. (5) A term in cryptography for a word that is crucial in the enciphering or deciphering of a coded message. Compare CATCHWORD. [REFERENCE, WORD]. T.MCA.

**KINESICS** [1950s: from Greek *kinēsis* movement and *-ics* as in *economics*]. The study of body movements, gestures, and facial expression as forms of communication, sometimes regarded as a branch of *semiotics*. See BODY LANGUAGE, COMMUNICATION, GESTURE, SEMIOTICS. [LANGUAGE]. T.MCA.

**KINGMAN REPORT.** A British report on the teaching of English in England and Wales, presented in 1988 to the Secretary of State for Education by the Committee of Inquiry into Teaching of English Language under the chairmanship of Sir John Kingman. The Committee was asked to recommend a model to serve as a basis for training teachers in how the language works and to inform professional discussion, to consider how far the model should be made explicit to pupils, and to recommend what pupils should know about how English works. The model which it produced has four parts: the forms of the language; communication and comprehension; acquisition and development; historical and geographical variation. It has been criticized as a checklist of linguistic topics without an internal dynamic connecting the parts, or relating them to educational processes. Nonetheless, some of the Committee's arguments prepared the way for a greater emphasis on knowledge about language in the National Curriculum requirements for England and Wales (1989) than in previous curriculum discussion. See BULLOCK REPORT, COX REPORT, NEWBOLT REPORT, STANDARD ENGLISH, TEACHING ENGLISH. [EDUCATION, EUROPE]. C.J.B.

**KING'S ENGLISH** [16c: apparently by analogy from such expressions as *the king's coin*]. A traditional term in Britain that is earlier than, and more or less synonymous with, *standard English*: 'an old abusing of Gods patience and the Kings English' (Shakespeare, *The Merry Wives of Windsor*, 1. 4; 1598). It is altered to *the Queen's English* when the monarch is a woman: 'Plea for the Queen's English' (title of a work by Henry Alford, 1869, in the reign of Victoria). Formerly invested with considerable respect, the term has in recent years been used less reverently: for example, in *The Queen's English: High Taw Tawk Prawpah-leah* (ostensibly by Sir Vere

Brayne-d'Hemmidge and Lady Mayna Brayne-d'Hemmidge: London, Michael Joseph, 1985), the humorist Dorgan Rushton satirizes the accent technically referred to as 'advanced RP', mainly by means of eye dialect in which *shouting* is represented as 'shiteing', *family* as 'fear-mealy', and *taxi* as 'tex-yah'. The book comes with a bookmark to be gripped between the teeth as an aid to a 'proper' clipped articulation. See **ADVANCED, CLIPPED, EYE DIALECT, KING'S ENGLISH (THE), LONDON, QUEEN'S ENGLISH SOCIETY, RECEIVED PRONUNCIATION, STANDARD, STANDARD ENGLISH. [EUROPE, STYLE, VARIETY].** T.MCA.

**KING'S ENGLISH, The.** A usage manual published in 1906 by the brothers Henry W. Fowler and Francis G. Fowler. It was aimed at writers who 'seldom look into a grammar or composition book', people who found grammars repellent because 'they must give much space to the obvious or the unnecessary', while composition books 'are often useless because they enforce their warnings only by fabricated blunders against which every tiro feels himself quite safe'. In 370 pages, the ten sections of *TKE* contain articles on vocabulary (concrete versus abstract words, malapropisms, loanwords, slang, etc.), syntax (relative pronouns, gerunds, *shall/will*, prepositions, etc.), what the Fowlers call 'Airs and Graces' (archaism, elegant variation, inversion, metaphor, etc.), punctuation, euphony, quotations and misquotations, meaning, ambiguity, and style. Most sections are supported by illustrative examples drawn from unfabricated sources, in particular from unspecified 19c works by Meredith, Thackeray, George Eliot, and others, and from Victorian or Edwardian issues (exact dates not specified) of *The Times*, *The Daily Telegraph*, and *The Guernsey Evening Press* (the brothers lived on Guernsey). At one stage, the work was to be called 'The New Solecist for literary tiroes' (after *The Solecist* of the Greek rhetorician Lucian of Samosata, 2c) or 'The Book of Solecisms for journalists, novelists, & schoolboys'. More than any earlier usage book, *TKE* introduced a new national pastime—the hunting and exhibiting of solecisms. Henry was the *crème de la crème* of schoolmasters and with his brother Francis placed Britain, and soon English-speaking communities abroad, in a new schoolroom. Writers of English everywhere became aware of a voice commanding them to mend their ways. See **DICTIONARY OF MODERN ENGLISH USAGE, FOWLER, KING'S ENGLISH. Compare AMERICAN LANGUAGE (THE). [EUROPE, REFERENCE, STYLE].** RO.W.B.

**KING'S SCOTS.** See **SCOTS.**

**KIPLING, Joseph Rudyard** [1865–1936]. English journalist, novelist, and poet. Born in Bombay, India. Went to England as a child in 1871 and, after five unhappy years with a family in Southsea, was educated at the United Services College. In 1882, he went back to India, where he worked as a journalist and became closely acquainted with both Indians and Anglo-Indians. Returning to England in 1889, he lived in London, then for a time with his wife's family in the US. He was a correspondent in the Boer War before settling in Sussex in 1902. Kipling was a prolific and a versatile writer, one of whose achievements was to gain some public respect for the despised professional soldier through a sympathetic presentation in fiction (*Soldiers Three*, 1890) and in verse (*Barrack Room Ballads*, 1892). In these works, and in stories about the East End of London, his reproductions of Cockney speech were painstaking but sometimes self-defeating through the density of deviant spelling and punctuation. Nevertheless, he caught the tones of colloquial speech there and elsewhere. In the novel *Kim* (1901), he sought to reproduce the various idioms of Indian speakers of English, including what is often called Babu English:

'Suppose we get into a dam'-tight place. I am a fearful man—most fearful—but I tell you I have been in dam'-tight places more than hairs on my head. You say: "I am Son of the Charm." Verree good.'

'I don't understand quite. We must not be heard talking English here.'

'That is all right. I am only Babu showing off my English to you. All we Babus talk English to show off,' said Hurree, flinging his shoulder-cloth jauntily.

Some of his poetry caused offence then and later by his ardent support of imperialism, but there was a sombre and penitent tone in pieces like 'Recessional', which seems to show an awareness of the coming loss of British power:

Far-called, our navies melt away—  
On dune and headland sinks the fire—  
Lo, all our pomp of yesterday  
Is one with Nineveh and Tyre!  
Judge of the Nations, spare us yet,  
Lest we forget—lest we forget!

His books for children are among his lasting successes: *The Jungle Book* (1894) tells of an Indian boy Mowgli brought up by wolves; *The Just So Stories for Little Children* (1902) are fables of how certain things happened in the world, such as 'How the Camel Got his Hump'; *Puck of Pook's Hill* (1906) embodies in simple tales and verses Kipling's love of England and its history; *Stalky and Co* (1899) is a period piece about late 19c boarding-school life. In 1907, Kipling was the first Briton to receive the Nobel Prize for Literature. He contributed to popular language, mainly through phrases from his verse: *the white man's burden*; *the female of the*

*species is more deadly than the male; you're a better man than I am, Gunga Din.* The names of characters in *The Jungle Book*, such as Akela the chief wolf, have been used for leaders of the Wolf Cubs (or simply Cubs), junior members of the Boy Scout movement. See index. [ASIA, BIOGRAPHY, EUROPE, LITERATURE]. R.C.

**KIRIBATI** [Pronounced /kɪrɪbæʃ/. Official title: *The Republic of Kiribati*. A country of Oceania and member of the Commonwealth. Capital: Tarawa. Currency: the Australian dollar. Population: 67,000 (1988), 90,000 (projection for 2000). Ethnicity: 90% Micronesian. Languages: Kiribati (Gilbertese) and English (both official). Education: primary 92%, secondary 15%, tertiary less than 1%, literacy 50%. Formerly known as the *Gilbert Islands*, and part of the British colony of the *Gilbert and Ellice Islands*, Kiribati gained its independence in 1979. See ENGLISH, TUVALU. [NAME, OCEANIA]. T.MCA.

**KISETTLA, KISETTLER.** See SWAHILI.

**KITCHEN** [19c]. A word used attributively and pejoratively for restricted, pidgin-like forms of their languages used by Europeans with servants and other menial workers in Africa and Asia in the 19c and earlier 20c. The term *Kitchen English* was common during the British Raj and continues to be used in South Asia for a minimal variety of English used by domestic servants to communicate with Europeans, and sometimes used in return by speakers of English. In southern Africa, the term *Kitchen Dutch* (Dutch *kombuis-Hollands*) was used in the 19c for the Dutch spoken by Cape Coloureds, and by English-speaking South Africans as a dismissive label for Afrikaans. *Kitchen Kaffir* was a mixture of indigenous and European languages used by employers with servants and in the mines. Some white South Africans continue to use the term to deprecate their lack of skill with indigenous languages: *Well, I muddle along with my dozen words of Kitchen Kaffir*. See AFRIKAANS, BEARER ENGLISH, BUTLER ENGLISH, ETHNIC NAME, PIDGIN. [AFRICA, ASIA, LANGUAGE, STYLE]. T.MCA.

**KITCHEN-SINK DRAMA.** A term used by critics for some plays written in the 1950s, because of an apparent excess of social realism and an emphasis on ugly and sordid aspects of life. It was applied particularly to British dramatists regarded as 'Angry Young Men' and women: John Osborne (b.1929), Arnold Wesker (b.1932), Anne Jellicoe (b.1927), Shelagh Delaney (b.1939). Their work was supported by the English Stage Company at the Royal Court Theatre, London, and defended by the critic Kenneth

Tynan (1927-80). It was widely hailed as a political protest against 'the Establishment' and a theatrical protest against the middle-class plays of Noël Coward (1899-1973) and Terence Rattigan (1911-77). Dramatically, its importance was less in content than in dialogue. The new dramatists broke away from the formal, educated speech used by their immediate predecessors, for whom dialect and non-standard usage was mainly confined to servants or comic characters. They gave the idioms and vocabulary of working-class speech to leading characters and sought to reproduce in their dialogue the hesitations, repetitions, and banalities of normal conversation. See CONVERSATION, DRAMA, GENRE. [LITERATURE]. R.C.

**KIWI** [Early 19c: from Maori, also *kiwi-kiwi, kivi*]. (1) The flightless and long-beaked New Zealand bird known to science as the *Apteryx*. (2) A slang term, originally either American or from New Zealand, applied since the First World War to a non-flying member of an air force. (3) An informal term for someone from New Zealand, originally especially a soldier or sportsman: 'New Zealand football representatives acquired the names *All Blacks*, *Fernleaves*, and *Kiwis*' (Sidney J. Baker, *The Australian Language*, 1945); 'It is hurtful to many Australians to see the Kiwis take all the credit for Antipodean anti-Pom feelings' (*The Times*, 17 June 1974); 'In the early 1970s, thousands of Kiwis took wing for the Australian good life and high wages' (*Observer*, 12 Aug. 1984). (4) An informal synonym for New Zealand English: 'We have exchanged Kiwi phrases over a few beers from time to time' (David McGill, *A Dictionary of Kiwi Slang*, 1988). (5) Also *kiwi fruit, kiwi berry*. An edible oval fruit originally native to Asia and known as the Chinese gooseberry (*Actinidia chinensis*) and now widely associated with New Zealand. (6) The short form of *Golden Kiwi*, New Zealand's national lottery: *He's just won the kiwi!* See ETHNIC NAME. [NAME, OCEANIA, VARIETY]. RO.W.B., L.J.B., T.MCA.

**KNOWLEDGE REPRESENTATION** [Late 20c]. A technical term for computer languages used for the formal representation of ordinary thought. Since at least the 17c, such philosophers as Gottfried Wilhelm von Leibniz in Germany and John Wilkins in England have sought a more precise way than natural language to describe precise thought. They saw that mathematicians were able to prove their statements, and hoped that a mathematical notation would make the same certainty and completeness possible in terms of general knowledge. The 19c philosophers Gottlob Frege in Germany and Charles Sanders Peirce in the US, and the 20c

British mathematician George Boole, developed notations for discussing logical ideas with formal methods. The advent of computers in the mid-20c offered the opportunity to reach such proofs and deductions automatically, and encouraged the hope of certainty and automaticity in ordinary reasoning. The US computer pioneer John McCarthy and co-workers encouraged the development of methods for knowledge processing on machines, along with such US logicians as Alonzo Church.

**Frames.** A typical device for knowledge representation is the *frame*, consisting of a head concept and a series of slots, each of which is a link to another concept serving in a particular role, such as *throw* linked to *the thrower*, *the thing thrown*, and *someone who is thrown to or thrown at*. These slots often match the roles listed in case grammar, such as *agent* or *object*, but some languages of knowledge representation are more expansive, and have hundreds of roles connecting concepts: distinguishing *time* into such details as *since* (starting at a point and continuing indefinitely) and *until* (from the beginning to a particular time). In addition to the slots which link to other concepts, some simple slots may contain local values, such as colour or weight. Some may also contain procedures (that is, computer programs), to be executed: the representation of *Take the next train to London* may require consulting a railway schedule to identify it.

**Hierarchies.** Another device is hierarchical structure, so that properties can be inherited downwards from level to level. Thus, at the bottom of the hierarchy, *canaries* are a subclass of *birds*, which are a subclass of *living things*, and the property *sings* is stored with *canary* (as a special attribute) while the property *flight* is associated with *bird* (as a general attribute). Unfortunately, the structure cannot always be a simple hierarchy with all higher-level properties inherited underneath, since ostriches are birds but do not inherit flight, and canaries also belong in the hierarchy of pets and inherit other properties from that heading. Lower-level slots may therefore contain entries that override values inherited from higher-level frames.

**Language and mind.** It is not known whether this sort of notation is a model for human thought. Most contemporary researchers assume that ordinary language is translated into something else inside the head, but nobody knows what. Studies of *facilitation* (the increase in speed in answering a question when a closely related question has been asked before) show relationships between words, but whether these are of the frame/slot type or hierarchical is impossible to say. Many think that ordinary language

at least limits and shapes thought, suggesting that even if thinking does involve other representations than language at least the labels on the categories resemble those of one's native language. See CASE GRAMMAR, HYPONYM, LEXICAL FIELD, SAPIR-WHORF HYPOTHESIS, SEMANTIC FIELD, SEMANTICS, THEMATIC ORDER. [TECHNOLOGY]. M.L.

**KOINE**, also **koiné** [1910s: from Greek *koiné diálektos* common usage]. (1) A variety of Greek that was the lingua franca of the eastern Mediterranean in Hellenistic and Roman times and the literary language between the heyday of Attic Greek (on which it was based) and the early Byzantine period: c.4c BC to 4c AD. It contained features of many dialects and one of its forms is New Testament Greek. (2) In sociolinguistics, any language or variety representing a compromise among dialects and providing communication across dialects. This may or may not involve a degree of simplification and is often part of standardization; some scholars call the initial stage in forming a standard language *koinization*. Koinés include colloquial Arabic, Belgrade-based Serbo-Croat, the Popular or Vulgar Latin of the Roman Empire, medieval literary Italian, and Modern Israeli Hebrew, but few of these have all the formal and functional features of the original Koine. See CLASSICAL LANGUAGE, GREEK, LINGUA FRANCA, SOUTH AFRICAN LANGUAGES. [LANGUAGE]. T.MCA., S.R.

**KOLHAPUR CORPUS, The.** A computer corpus of written Indian English, compiled in the 1980s by Professor S. V. Shastri of the Department of English at Shivaji U., Kolhapur, Maharashtra. It consists of 1m words from 500 short texts published in 1978, covers 15 categories of prose-writing, and serves as material for such studies as code-mixing, modal verbs, and forms of complementation. Such research is linked with work on the *International Corpus of English (ICE)* at University College London. Work on a general service list of words is intended to lead to 'a modest dictionary of Indian English' (Shastri, *EFL Gazette*, Nov. 1990). See CORPUS. [LANGUAGE]. T.MCA.

**KOREA** [A name usually spelt *Corea* and occasionally *Korea* in the 19c, but fixed in the latter form during the Japanese occupation of the country (1910-45)]. A country of East Asia, currently divided into *North Korea* (1988, population 21.8m) and *South Korea* (42.3m). The Korean language, also spoken by communities in China (1.5m), Japan (1m), and the Soviet Union (0.4m), is agglutinative and usually regarded as a Uro-Altaic language. Ancient Korean

was written in a script called *idu*, in which Chinese characters were used to represent Korean sounds as well as meanings (similar to the present-day Japanese *kanji*). In the 15c, an alphabet of 11 vowel and 17 consonant symbols (reduced later to 10 and 14) was devised and used for popular literature, while classical Chinese continued in use for official and scholarly purposes. Although banned during the last decade of the Japanese occupation, this system (known as *han-gul*, formerly *onmun* common script) was revived and is used on its own or, to a lesser degree, in a mixed script with Chinese characters read as Korean words. English has had a considerable influence on the structure of the modern language. Over the last 40 years, English has generally been assigned as many school hours as Korean for students aged 12–18, and is in the main an analytical grammatical exercise that has affected the study and use of Korean, resulting in adjustments made to some Korean constructions so as to align them more closely with English: for example, greater use of the optional plural particle *-tul*. Although this is not a strict equivalent of the English plural inflection *-s*, many think that it is or should be. Also under the influence of English and other Western languages, the convention of writing each word unit separately was adopted for Korean in the 19c, a procedure which has not been followed for Chinese and Japanese.

English was first taught in the 1880s by American teachers, when the royal government opened a school for the sons of the nobility. Around the same time, missionary schools began to provide instruction to commoners. During the occupation, Japanese teachers of English dominated the new school system and emphasized parsing. The end of the Second World War brought US soldiers to Korea, a fact which largely accounts for the dominance of AmE over BrE in Korea, but despite the importance of spoken English the emphasis on texts and grammatical analysis continued. English is widely regarded as highly subtle, its grammar subsumed under five basic structures, with such categories as the subjunctive mood and the future perfect progressive. When A. S. Hornby, who worked in Japan in the 1930s, classified English sentences into over 20 basic structures, many traditional teachers in both Korea and Japan were reluctant to base their English teaching on his system, or, for that matter, on any other contemporary system. After the war and partition, the need for English declined in North Korea but increased in the South, where it is the main foreign language. Almost all students have three years of it, and the 80% who attend high school have six years. There are many private English institutes, of which there are two sharply different kinds: one

for students preparing for college entrance examinations, emphasizing parsing at deeper levels than in high school, and another for people who want to speak the language. Formal education rarely allows students to experience spoken English, and the minority who speak it generally say that they owe little to their schooling. The dismissive informal name *Konglish* has been used for non-standard usage by Koreans. Industrial expansion has been rapid in recent years and English is seen as vital for keeping pace with modern technology and for communication with trading partners, with the result that a reform of teaching methods is widely regarded as imperative. The influence of English is discussed in Sangsup Lee's 'The Subversion of Korean' (*English Today* 20, Oct. 1989). See AMERICAN LANGUAGES, CHINA, EAST ASIAN ENGLISH, HAWAII, JAPAN, LATIN<sup>1</sup>, PARSING, TELEPHONE. [ASIA, LANGUAGE, NAME, VARIETY].

S.L., T.MCA.

**KOREAN BAMBOO ENGLISH.** See JAPANESE PIDGIN ENGLISH.

**KRAPP, George Philip** [1872–1934]. American linguist, born in Cincinnati, Ohio, and educated at Wittenberg College and Johns Hopkins U. (Ph.D., 1899). Krapp was one of several scholars at Teachers College and Columbia U. who in the early 20c became interested in a scientific study of grammar and usage, correctness and error. He published works on Anglo-Saxon manuscripts (*The Junius Manuscript*, 1931; *The Vercelli Book*, 1932; *The Paris Psalter and The Meters of Boethius*, 1932), medieval texts (*Troilus and Criseyde*, 1932), the historical development of English (*Modern English, Its Growth and Present Use*, 1909; *The Rise of English Literary Prose*, 1915), and English grammar (*Comprehensive Guide to Good English*, 1927; *The Knowledge of English*, 1927). Insistent that grammatical standards be based on the correct cultivated usage and social utility rather than on obsolete rules or literary tradition, he illustrated his research with first-hand observations. His most notable work, however, was the study of AmE. Bringing together data compiled by others as well as much original matter in *The Pronunciation of Standard English in America* (1919) and *The English Language in America* (1925, two volumes), Krapp carefully examined both those traditions and usages of BrE which had persisted in AmE and the US political movement toward a national linguistic standard. Basing his contentions on historical, scientific, and geographical records, he maintained that 'the Elizabethan quality in American English is not an inheritance but a development on American soil'. His theory concerning the

progress of AmE was drawn from material previously overlooked, such as town records of colonial settlements, French gazetteers of the US, and name lists of college graduates. This work, regarded when it appeared as 'the most important scholarly study of American English yet published' (*American Speech*, 1934), incisively evaluated previous research and set the standard for subsequent treatments. See index. [AMERICAS, BIOGRAPHY, LANGUAGE, VARIETY].

R.W.B.

**KRIO**, also **Creo** [Mid-20c: an adaptation of *creole*. Compare CREOLE, KRIO, KWEYOL]. An English creole spoken in Sierra Leone, which developed when freed slaves were transported from Britain and Nova Scotia to Freetown in 1787 and 1792. The Krios were Christian, often literate, and valued as teachers and clerks along the entire West African coast. Sizeable settlements were established in Gambia, Nigeria, Cameroon, and smaller settlements in Liberia and Ghana, and Krio had an influence on all West African pidgins and creoles, with the possible exception of *Merico* in Liberia. Krio is spoken as a mother tongue by some 250,000 people in and around Freetown and by many more Sierra Leoneans as a second language. It has a dictionary (*A Krio-English Dictionary*, ed. C. N. Fyle & Eldred Jones), and is probably the only standardized West African creole. It has been used for translating Shakespeare and parts of the Bible, and for plays, poems, and prose.

**Features.** (1) *Pronunciation.* Krio is non-rhotic, syllable-timed, and a tone language. It has seven monophthongs, /i, e, ε, a, ɔ, o, u/ and three diphthongs /ai, au, oi/. All vowels can be nasalized. Tone is significant, distinguishing grammatical as well as lexical meaning: for example, a customary low tone for auxiliaries becomes high for purposes of emphasis. (2) *Grammar.* There is little morphological variation, time and aspect being carried by pre-verbal auxiliaries, and plurality in the noun is either assumed or marked by *dem*: *I bin kil di arata dem kwik-kwik* He killed the rats quickly. Fluidity of word class is typical: Krio *plenti* can function as an adjective in *plenti pikin* plenty of children, as a verb *Pikin plenti* There are plenty of children, as a noun *Plenti pwe!* Many are spoilt, and as an adverb *I get pikin plenti* He has children in plenty. (3) *Vocabulary.* The majority of words derive from English: body parts such as *han* (hand, arm), *fut* (foot, leg), common verbs such as *bi, get, go, kam, mus* (move), and auxiliaries *bin, de* (progressive), *kin, don* (perfective), *nɔba* (negative perfective). English elements occur in many loan translations, such as *dei klin* (day clean: dawn), *drai ai* (dry eye: brave). There are also words

from African languages: *akara* (beancake, from Yoruba), *bundu* (camwood, from Mende), *jakato* (garden egg, from Wolof), *kola* (kola nut, from Temne), *nono* (buttermilk, from Mandinka). See AKU, GAMBIA, KAMTOK, SIERRA LEONE, WEST AFRICAN PIDGIN. [AFRICA, NAME, VARIETY]. L.T.

**KRIOL** [Mid-20c: an adaptation of *creole*. Compare CREOLE, KRIO, KWEYOL]. Also **Roper River Creole/Kriol, Roper Pidgin**. An English-based creole spoken mainly in northern Australia, from western Queensland, across the Barkly Tablelands and Roper River Basin throughout much of the top half of the Northern Territory and into the Kimberleys of Western Australia. A contact language between Aborigines and outside groups, it is now used in over 100 Aboriginal communities by more than 20,000 people, at least half of whom have it as their primary language. Kriol is a continuum of varieties, from *hebi Kriol* (heavy creole: the basilect) to *lait Kriol* (light creole: the acrolect). Speakers of hebi Kriol are mostly mother-tongue speakers of an Aboriginal language who use Kriol as a second language. Extreme lait Kriol includes virtually all the contrasts of mainstream English.

A word in Kriol may have several different pronunciations: *policeman* may be *balijiman* (basilect), *blijiman* (mesolect), *plisman* (acrolect). Most of the vocabulary is from English, in some cases with meanings altered to parallel the semantic range of equivalent words in Aboriginal languages: *kukwan* (from 'cooked one') means *ripe* as well as *cooked*. There are also some Aboriginal words: *munanga* a person of European descent. The grammar of Kriol shares some features with English-based pidgins and creoles in the Pacific: (1) The form of the transitive marker on verbs is *-im/-um*, as in *kilim* to hit, *kukum* to cook. Compare Tok Pisin *kilim, kukim*. (2) The use of *bin* as a completive auxiliary: *Ai bin rid det buk* I have read the book. Most of the limited Kriol morphology is associated with the verb and there are five prepositions which indicate grammatical relations: *blonga* (from 'belong'), as in *Aibin gibit im mani blonga daga* I gave him some money for food; *longa* (from 'long'), as in *Imbin bogi longa riba* He swam in the river. Other prepositions include *fo* for, *from* from, *garram* with, as in: *Olubat bin kaman from deya* They came from there; *Deibin hambagam mi fo daga* They pestered me for food; *Melabat kaan go garram yumob* We cannot go with you people. Kriol has a distinct orthography and a growing literature. In 1975, a school in Bamyili, where Kriol is a major language, was permitted to introduce it as the language of pre-school instruction. In 1979, permission was sought and obtained from the Northern Territory Department of Education

for the introduction of a bilingual programme, despite opposition from those who did not consider Kriol a real language. See ABORIGINAL ENGLISH, AUSTRALIAN PIDGIN, CREOLE. [OCEANIA, NAME, VARIETY]. S.R.

**KRU PIDGIN ENGLISH.** See LIBERIA.

**KUHN, Sherman McAllister** [1907-91]. American philologist and lexicographer. Born on the South Dakota prairie and raised in the manses of villages which his father served as a Presbyterian minister, he was educated at Dubuque U. and Park College, became a high-school teacher of English, and attended summer school at the U. of Chicago, where he gained an M.A. in American literature (1933) and a Ph.D. in English linguistics (1936), the dissertation for which was *A Grammar of the Mercian Dialect* (published in 1938). Following military service as a cryptographer in World War II, he was appointed Associate Professor of English and Associate Editor of the *Middle English Dictionary* at the U. of Michigan. On the retirement of Hans Kurath in 1961, he was named Editor (and Professor) and continued in that post until retirement in 1983. While the Dictionary occupied most of his time, he continued to work on Mercian Old English and in 1965 published an edition of *The Vespasian Psalter*, a Latin text with an interlinear Mercian translation. At his retirement he was presented with a volume of his major papers (1939-79): *Studies in the Language and Poetics of Anglo-Saxon England* (1984). See MIDDLE ENGLISH DICTIONARY. [AMERICAS, BIOGRAPHY, HISTORY, REFERENCE]. R.W.B.

**KURATH, Hans** [1891-1992]. American dialectologist and lexicographer, born in Villach, Austria. When he graduated from the U. of Texas (1914), he was appointed an instructor in German at the same university. Because of anti-German sentiment following US entry into World War I, like many of his colleagues, he was not reappointed. He completed a doctoral degree at the U. of Chicago (1920), then worked at Northwestern U. (1920-7), the Ohio State U. (1927-32), and as Professor of Germanic Languages and General Linguistics at Brown U. (1932-46). In 1930, he was named director of *The Linguistic Atlas of the United States and Canada*. For this work he used methods established in the *Atlas linguistique de la France* (1902-10), for which fieldworkers selected and interviewed 'informants' long resident in their communities. The results were expected to show the survival or evolution of earlier pronunciations of English; older, rural speakers of

English descent were therefore dominant in the sample. Kurath later wrote: 'Without adequate phonic data no single dialect or idiolect can be adequately described; nor can its historical relation to its sister dialects or its parent dialect be traced in realistic fashion.'

Studies of the settlement history of selected communities, compiled as the work began in New England, were published in his *Handbook of the Linguistic Geography of New England* (1939). The findings themselves were published in 734 maps in three volumes in the *Linguistic Atlas of New England* (1939-43), which listed Kurath and his collaborators, Miles L. Hanley, Bernard Bloch, Guy S. Lowman Jr., and Marcus L. Hansen. Later fieldwork in England (1936-7), to illustrate the filiations of New England dialects, appeared as *The Dialectal Structure of Southern England: Phonological Evidence* (1970). Its co-author was Guy S. Lowman Jr., a student of Daniel Jones. Other segments of North America were assigned to other scholars and several of these regional studies are still in progress today. Kurath published summaries of investigations along the Atlantic seaboard: *A Word Geography of the Eastern United States* (1949) and *The Pronunciation of English in the Atlantic States* (with Raven I. McDavid Jr., 1961). He concluded his work in dialectology with two monographs: *A Phonology and Prosody of Modern English* (1964) and *Studies in Area Linguistics* (1972). From 1946 until retirement in 1961, he was Professor of English and Editor of the *Middle English Dictionary* at the U. of Michigan. Though work on the *MED* began in 1930, it had been suspended during World War II and no parts had been published. He issued the first fascicle in 1954. In amplifying coverage for Middle English in *The Oxford English Dictionary*, Kurath declared the contribution of the *MED* to be: 'Ample documentation of ME usage; full illustrations of regional and chronological variants in the quotations; adequate representation of all types of texts, literary, scientific, documentary, etc., in the quotations.' [AMERICAS, BIOGRAPHY, HISTORY, LANGUAGE, REFERENCE]. R.W.B.

**KUWAIT.** See ARABIC, ENGLISH.

**KWEYOL** [From French *créole*: see CREOLE; compare KRIOL, KRIOL]. A preferred name in Dominica and St Lucia for the local French-based Creole, also called *patois*. The varieties on the islands are mutually intelligible with those in the nearby French departments of Martinique and Guadeloupe. See DOMINICA, PATOIS, SAINT LUCIA. [AMERICAS, LANGUAGE, NAME]. L.C.

# L

**L, l** [Called 'ell']. The 12th letter of the Roman alphabet as used for English. It originated in the Phoenician letter *lamed*, adopted into Greek as *lambda* (*λ*), which became the Roman letter *L*.

**Sound value.** (1) In English, the letter *l* represents a voiced alveolar lateral continuant, its articulation varying with accent and position: for example, in RP, a syllable-final velarization distinguishes the *l* in *pill* from that of syllable-initial *lip*. (2) A following *l* frequently gives a long value to the vowel letters *a, i, o*: *a* is like *aw* in *saw* (*all, fall, halt, talk, altercation, falsify*); *i* is like *y* as in *sky* (*child, mild, whilst*); *o* is like *owe* (*cold, poll, bolt, control*). However, pronunciation occasionally varies, as in such pairs as *holy/holiday, Polish/polish*.

**Double L.** (1) In Middle English, final *l* in monosyllables after a single vowel letter was often single (*al, ful, wel*) but except in recent coinages like *nil, pal* it is now doubled (*all, bull, cell, fill, gull, hall, mill, pull, will*). In long-established compounds, however, such forms commonly have one *l*: *almost, also, although, until, welcome, BrE wilful*. Contrast standard *all right* and non-standard but common *alright*. (2) Single *l* is usual when two vowel letters precede (*fail, haul, peel, coal, foul, tool*) or when *e* follows (*pale, while, pole, rule*). (3) Doubled *ll* usually signals a preceding short vowel: compare the related *vale/valley*. The chief exceptions are monosyllables such as *roll*, the anomalous adverb *wholly*, *tulle* (derived from a French place-name), and *camellia*. (4) On the other hand, single *l* occurs medially after both short and long vowels: compare *balance/ballot, bilious/billet, chalice/challenge, dolour/dollar, felon/fellow, gelatine/jelly, military/million, palate/pallet, talent/tallow, tranquillity/virility, valid/valley, vilify/villain*. (5) Discrepancies: *tonsillitis* with *ll* and *colitis, poliomyelitis, diverticulitis* with *l*;

*fusilier* and *fusillade*; the pairs of alternates *colander/cullender, postilion/postillion, scalawag/scallywag; belletristic*, in which the *ll* derives from the three *ls* in the phrase *belles lettres*. (6) The verb *to parallel* has the common inflected forms *paralleled, paralleling* and the less common and less accepted forms *parallelled, parallelling*. (7) An exotic *ll* occurs in Spanish loans (*llama, guerrilla*), but is pronounced /l/, not as /j/ as in Spanish. (8) Welsh *ll*, as in the names *Llandudno, Llangollen, Llewellyn*, represents an alveolar lateral fricative, and is usually pronounced /l/ by non-Welsh-speakers.

**Doubling by affixation.** (1) Inherited from Latin, when certain prefixes are assimilated: *ad-* (*allocation*), *con-* (*collocation*), and *in-* (*illustration, illegible*). (2) Inherited from Greek when the prefix *syn-* is assimilated: *syllable, syllogism*. (3) When *-less* attaches to a word ending in *l* (*soulless*) and when *-ly* is added to adjectives ending in *l*: *legally, coolly, beautifully*. Base words ending in *ll* add *y* (*fully*) and those ending in vowel plus *-le* normally add *-ly* (*palely, solely*); *wholly* from *whole* is anomalous. Base words ending in consonant plus *-le* replace the *e* with *y*: *able/ably, simple/simply*. The adverb *supply* (in a supple manner) can be written *supplely* to avoid confusion with *to supply*, but there is only one form *multiply* for both adverb and verb. Adjectives ending in *-ic*, with the exception of *public*, add *-ally*: *automatically, basically*.

**Syllabic L.** The letter *l* can function syllabically, as in *table*, whose second syllable is pronounced /əl/, but in *tabling* the *l* loses its syllabic status and is the first consonant in a second full syllable. Many words have a separate vowel letter where schwa occurs in speech before final *l*, and there is no difference in pronunciation in: *bridal/bridle, cubical/cubicle, gamble/gambol,*

### CURRENT FORMS

roman	italic
l	l

*idle/idol, mantel/mantle, metal/mettle* (cognates), *muscle/mussel* (cognates), *naval/navel*. Such endings can constitute a spelling problem, as with *principal* and *principle*. Such surnames as *Liddell, Revell, Waddell* have either syllable stressed, according to owners' preference, leaving strangers who have only seen the name uncertain how to pronounce it. Certain adjectives derived from nouns with syllabic *l* contain a *u* that relates to the Latin origin of the words concerned: *constable/constabular, muscle/muscular, scruple/scrupulous, table/tabular, triangle/triangular*. See SYLLABIC CONSONANT.

**Epenthetic L.** The letter *l* is epenthetic in *chronicle, emerald, participle, principle, syllable*. In *fault, falcon, realm* the *l* at one stage disappeared, but was restored. See EPENTHESIS, PARTICIPLE, SYLLABLE.

**L and R.** The sounds /l/ and /r/ are phonetically similar. The *l* in *belfry, marble, pilgrim* (cognate with *peregrine*), *plum* (cognate with *prune*), and *purple* evolved from *r*. *Glamour* derives from *grammar*, and the spelling *coronel* was replaced by French *colonel* in the 17c, although pronunciation still reflects the *r*. See L-SOUNDS, R-SOUNDS.

**Silent L.** (1) After *a*, before the consonant letters *f/v, k, m*: *calf/calve, half/halve, chalk, stalk, talk, walk, almond, alms, balm, calm, palm, psalm, salmon*. (2) After *o* before *k, m*: *folk, yolk, holm, Holmes* (contrast *film, helm*). (3) In *could, should, would*. (4) The vowel sound preceding *lk* (*chalk, folk*) is generally modified *a* or lengthened *o*, and in RP *a* is also lengthened before *lf, lm, lv* (*half, palm, calve*). Pronunciation may, however, be inconsistent, with *l* sometimes heard in *almond, calm, holm, palm*. (5) In some proper names, especially in England: always in *Alnwick* ('Annick'), *Lincoln* ('Linken'), generally in *Holborn* ('Hohben'). In most of the preceding words, *l* was once pronounced, but in *could* it was inserted unhistorically early in the 16c by analogy with etymological *l* in *should, would*, which was already silent. *Samon* was respelt *salmon* by reference to Latin *salmo*. Conversely, an *l* has disappeared from *as, each, which, much* (compare *also, Scots ilk, whilk, muckle, and German als, welch*).

**British and American differences.** (1) Some disyllabic verbs ending in *l* and with second-syllable stress are usually written with *l* in BrE, *ll* in AmE: *appal/appall, distil/distill, enrol/enroll, enthrall/enthrall, instil/instill*. Others have a single *l* in both varieties: *control, compel, dispel, impel, repel, annul*. Inflected and some derived forms have *ll* in both varieties: *appalled, controlling, distillation, enrolling, installation* (but *enrolment, instalment* chiefly in BrE). (2) Verbs

ending in an unstressed vowel plus *l* (*to equal, travel, pencil*) normally double the *l* in inflected and derived forms in BrE (*travelled, travelling, traveller*), but not in AmE (*traveled, traveling, traveler*). BrE *callisthenics, chilli, councillor, counsellor, fulfil, jewellery, libellous, marvellous, skilful, tranquillity, willful, woollen* correspond to AmE *calisthenics, chili, councilor, counselor, fulfill, jewelry, libelous, marvelous, skillful, tranquility, willful, woolen*. See ALPHABET, LETTER, SPELLING. [WRITING]. C.U.

**L1, L2.** See FIRST LANGUAGE AND SECOND LANGUAGE, LANGUAGE TEACHING.

**LABEL NAME.** See APTRONYM.

**LABIAL** [16c: from Latin *labialis* of the lip(s)]. A term in phonetics for a sound made with the lips or a lip, such as /p, f/. When both lips are used, the sound is *bilabial*: /p, b/. When the lower lip is raised towards the upper front teeth, the sound is *labio-dental*: /f, v/. [SPEECH]. G.K.

**LABIO-DENTAL.** See LABIAL.

**LACONIC.** See LACONISM.

**LACONISM** [16c: from Greek *lakonismós* favouring or imitating the people of Laconia in Greece: that is, the Spartans]. (1) A technical term for habitual brevity or terseness in speech: compressing as much as possible into as few words as possible; the art or habit of being *laconic* (saying as little as possible), as reputedly cultivated by the ancient Spartans. (2) A laconic remark. See MONOSYLLABLE. [STYLE]. T.MCA.

**LADINO.** See JEWISH LANGUAGES, ROMANCE LANGUAGES, SPANISH.

**LALLANS**, also **Lallan** [16c: a variant of Scots *lawland(s)* lowland(s)]. A name for the vernacular speech of Lowland Scotland from the 18c to the present day, adopted after the Second World War by poets of the Scottish Renaissance movement in preference to *Synthetic Scots*, a term coined in the 1920s for eclectic literary Scots. Following Hugh MacDiarmid's aim of restoring dignity and copiousness to Scots, they composed much of their poetry in this form, which hostile critics ridiculed as *Plastic Scots*. The following excerpt from MacDiarmid's 'The Eemis Stane' (*Sangschaw*, 1925) demonstrates its eclecticism, the entire first line, and the archaic words *eemis* and *yowdendrift*, being lifted from John Jamieson's early 19c *Etymological Dictionary of the Scottish Language*:

I' the how-dumb-deid o' the cauld hairst nicht  
The warl' like an eemis stane  
Wags i' the lift;

An' my eerie memories fa'  
Like a yowdendrift.

[*how-dumb-deid* (Jamieson) 'the middle of the night, when silence reigns; Ayrshire'; *cauld* (general) cold; *hairst* (general) autumn; *nicht* (general) night; *warl* (general) world; *eemis* (Jamieson) insecurely balanced, toppling; *stane* (general) stone; *lift* (archaic) sky; *fa'* (general) fall; *yowdendrift* (Jamieson) 'snow driven by the wind']

Literary Lallans remains viable alongside other kinds of Scots verse and prose. It is a principal medium in *Lallans*, the journal of the Scots Language Society (1973- ). See DORIC, LOWLAND SCOTS, SCOTS, SCOTS LANGUAGE ORGANIZATIONS. [EUROPE, VARIETY]. A.J.A.

**LALLATION** [17c: from Latin *lallare/lallatum* to sing the sound 'la-la' or a lullaby]. An obsolescent term in phonetics and speech therapy for the misformation of [l] or the pronunciation of [l] for [r]: 'The Popos and Dahomans have the same lallation as the Chinese, who call rum "lum"' (R. F. Burton, *Dahome*, 1864). In the 1870s, the verb to *lall* was adopted, meaning to misform [l] and/or [r], often by substituting a [w] for either sound, as in 'weawy' for *really*, or a [j] for [l], as in 'yater' for *later*. Compare LAMBDA-CISM, RHOTACISM. See L-SOUNDS. [SPEECH].

T.MCA.

**LAMB, Charles** [1775-1834]. English essayist, born in the Inner Temple, London, and educated at Christ's Hospital, where he was a contemporary of Coleridge. In 1792, he became a clerk in the London office of the East India Company, and worked there until retiring in 1825. He was temporarily mentally ill in 1795-6 and in 1796 his sister Mary killed their mother in a fit of madness. For the rest of his life, Lamb devotedly cared for her; they lived in various places in and around London. Lamb wrote some poetry, and two plays which had little success. His prose *Tales from Shakespeare* (1807), written with his sister, has remained popular, but not a similar work on Homer, *The Adventure of Ulysses* (1808). In 1808, Lamb published *Specimens of English Dramatic Poets who lived about the time of Shakespeare*, an anthology of extracts with commentaries which drew attention to neglected early dramatists. He wrote for a number of contemporary journals; his essay 'On the Tragedies of Shakespeare' examined characters in their own right apart from their dramatic function. A number of contributions to the *London Magazine* were published in 1823 as *Essays of Elia*; a second volume appeared in 1833. After Francis Bacon, Lamb is probably the most famous essayist in English. His work ranges from literary criticism, through accounts of experiences presented as autobiographical, to

humorous fantasies such as 'On the Origins of Roast Pork'. His tone is whimsical, his vocabulary sprinkled with archaisms, and his style frequently digressive, anacolutha indicated by dashes. His thought is seldom organized or his ideas continuous, but he lets his imagination range in a manner that reaches towards *stream of consciousness*. He set a pattern for the subjective type of essay associated in the 20c with writers like Robert Lynd and E. V. Lucas. See ANACOLUTHON, ESSAY. [BIOGRAPHY, EUROPE, LITERATURE, STYLE]. R.C.

**LAMBDA-CISM**, also **labdacism** [17c: from Latin *la(m)bdacismus*, Greek *la(m)bdakismós*, from *la(m)bda*, the 11th letter of the Greek alphabet]. A rare term in phonetics for great use of [l], its mispronunciation, or its substitution for [r], and for any example of this. Traditionally, Chinese speakers of English have been characterized as engaging in such lambdacisms as 'velly solly' for *very sorry*. Compare LALLATION, RHOTACISM. See L-SOUNDS. [SPEECH]. T.MCA.

**LAMINAL** [20c: from Latin *lamina* a thin plate]. A term in phonetics for the blade of the tongue and sounds made with it. The sibilants /s, z, θ, ð/ are usually made with the tip and blade together, raised to the alveolar ridge. See ALVEOLAR. [SPEECH]. G.K.

**LAMMING, George** [b. 1927]. Caribbean novelist, essayist, broadcaster, editor, poet, orator, born in Carrington Village, Barbados, and educated at Combermere School, Barbados. He taught at Mount Saint Benedict College, Trinidad, then migrated to England in 1950, where he became a book and film reviewer for the BBC, contributing to *Caribbean Voices* programmes in the 1950s and co-producing *New World of the Caribbean* (1956), a series of radio broadcasts of thematically arranged readings from West Indian novelists and poets. He was editor of the Guyana and Barbados Independence issues of *New World Quarterly*. His publications include: *In the Castle of My Skin* (1953), *The Emigrants* (1954), *Of Age and Innocence* (1958), *Season of Adventure* (1960), *The Pleasures of Exile* (1960), *Natives of My Person* (1972), *Water with Berries* (1972). Honours include a Guggenheim Fellowship (1955-6) and a Canada Council Fellowship (1962). Lamming is an activist in the causes of cultural sovereignty for small states, people's participation in decisions that affect their lives, and the responsibility of intellectual élites towards the societies that have engendered them. See CARIBBEAN LITERATURE IN ENGLISH. [AMERICAS, BIOGRAPHY, LITERATURE]. L.C.

**LAMPOON** [17c: from French *lampon*, perhaps from *lampons* let us drink: a refrain in popular songs]. A written attack on a person's character, ranging from graffiti to elegant composition and expressing a desire to wound publicly. Lampons may occur in an extended satire, as with Dryden's presentation of the Duke of Buckingham as Zimri in 'Absalom and Achitophel' (1681), and Pope's attack on Addison as Atticus in 'An Epistle to Dr Arbuthnot' (1735). Verbal attacks on public figures have always been popular, and the UK magazine *Private Eye* (founded 1961) is a current specialist in the field. Television has added visual caricature, as in the British puppet show *Spitting Image*. See CARICATURE, PARODY. [LITERATURE].

R.C.

**LANCASHIRE.** (1) A north-western county of England whose name is historically associated with the city of Lancaster and the *Duchy of Lancaster* (which, unlike the *Duchy of York*, has no duke). It is administered from the city of Preston. (2) The dialect of the county, part of Northern English, and related to the Cumbrian and Geordie dialects to the north, and the Yorkshire dialect to the east, while also having features of the Midland dialect area. Some scholars give the town of Rawtenstall as the source of the alliterative 14c poem in North Midland dialect, *Sir Gawain and the Green Knight*. Although the Lancashire dialect is particularly associated with the cotton towns of the south-east, such as Burnley, Bolton, and Rochdale, it has many varieties, including the urban dialects of Manchester and Liverpool.

**Pronunciation.** (1) Lancashire shares many features of pronunciation with other Midland and Northern regions of England, accents ranging from the regional through the RP-influenced to RP. (2) Regional pronunciation is non-rhotic, except for a small and decreasing number of speakers in Rochdale, Accrington, and Preston. (3) Word-initial /h/ tends to be lost in frequently used words such as *house* and *hat*. (4) The same vowel /a/ is used for words such as *gas* and *grass*, *Sam* and *psalm*. (5) There is usually no distinction between the vowels in such words as *hoot* and *hut*, which are homophones pronounced /hʊt/. Among RP-influenced speakers, *book* is often pronounced /bʊk/, a usage that can be considered a shibboleth of Lancashire speech. (6) The long /u/ vowel is sometimes diphthongized in such words as *moon* /mʊən/ and *school* /skuəl/, especially to the north of Burnley. (7) There is a tendency to use the monophthongs /e, o, ɛ/ in words such as *take*, *soap*, *square*, where RP has diphthongs. (8) In the south, there is a tendency to round the /a/ vowel when it precedes a nasal, particularly /m/ and

/n/ in words such as *ham* /hɒm/ and *hand* /hɒnd/. (9) Word-initial /l/ as in *land* and *look* is often dark, and the /l/ in *-ld* clusters is often lost, *old* and *cold* being realized as 'owd' /aud/ and 'coud' /kaud/. (10) In words ending in /ɪ/ a final /g/ is sounded, as in 'long-g' /lɒŋg/ for *long*, 'sing-ging-g' for *singing*. (11) As in Welsh English, intervocalic consonants are sometimes lengthened in the south, making *chapel* sound like 'chap-pel' and *biting* like 'bite-ting'. (12) In the west, especially around Chorley and Southport, there has been a tendency to add a parasitic nasal after word-final plosives, as in *I've hurt my leg-n* and *They were but lad-ns* They were only boys. This feature is rare in the speech of people under 60.

**Grammar.** (1) There are many working-class structures such as multiple negation (*I haven't done nothing*), the use of *them* as a demonstrative adjective (*I don't talk to them people*), and the use of non-standard verb forms (*I seen, he done*). (2) In southern, rural Lancashire, 'aw' and '(h)oo' continue to be occasionally used for *I* and *she*: see verse below. In the south-east, *thou* and *thee* have been traditionally used, as in neighbouring Yorkshire, as a marker of intimacy and solidarity. However, the standard pronouns *I, she, you* are increasingly being used in all sections of society. (3) There is a tendency to drop the *to* in infinitive constructions, especially when the first verb ends in a *t*, as in *What d'you want do?* (4) The definite article is often reduced to /θ/ before both vowels and consonants: see verse below. (5) The negative modal verb *maun't* (mustn't) is sometimes used in rural areas, but the positive form *maun*, as used in Scots and in Northern Ireland, is rare. (6) As in many northern areas of Britain, such forms as *I've not seen it* are more widely used than *I haven't seen it*. (7) *Owt* (anything) and *nowt* (nothing) occur frequently, as in *I didn't say owt* and *He gave us nowt*. (8) *Right* and more recently *dead* and *well* are used as colloquial intensifiers, as in *We were right/dead lucky* and *They were well merry* (quite drunk).

**Vocabulary.** Lancashire shares many dialect words with other parts of northern Britain, including *elder* an udder, *freet* superstition, *fuddle* a drinking bout, *mither* to scold, and *oxter* an armpit. Items that do not occur elsewhere include *allicker* vinegar, *deggin'-can* watering can, *judy* a girl, *kay-fisted* left-handed, *maiden* a clothes-horse. However, most of these words are no longer widespread and are used only by old people, comedians, and dialectologists.

**Literary Lancashire.** The first well-known writer in dialect was John Collier (1708-86), a schoolmaster who lived near Rochdale and wrote under the pen name 'Tim Bobbin'. The most

famous is an admirer of his, Edwin Waugh (pronounced 'Waff'), the son of a shoe-maker who became a journeyman printer and later a full-time writer (1817-90). He wrote, among other things, of the oppression of a work system that forced a father to leave home to gain employment. In the following lines, a woman 'reports' to her absent husband:

When aw put little Sally to bed,  
Hoo cried, 'cose her feyther weren't theer,  
So aw kiss'd th' little thing, an aw said  
Thae'd bring her a ribbin fro' th' fair.

An' aw gav' her her doll, an' some rags,  
An' a nice little white cotton-bo';  
An aw kiss'd her again, but hoo said  
'At hoo wanted to kiss *thee* an' o.

[*thae* thou/you, *bo'* ball, 'at that, o all]

Like other writers of dialect, Lancashire poets have tended to be obsessed with standard spelling and inclined to use apostrophes freely to mark 'lost' letters, some of which were not sounded in standard English either (as in *kiss'd*, above). Organized interest in the dialect centres on the *Lancashire Dialect Society*, founded in 1951 largely through the efforts of the late G. L. Brook, Professor of English Language at the U. of Manchester. The Society publishes an annual journal devoted to the academic study of, and writing in, the dialect. Past articles have covered such matters as inshore fishing terms, nicknames, and a survey of Lancashire bird names. The collection *Songs of the People*, edited by Brian Hollingworth (Manchester University Press, 1977), contains examples of conservative dialect usage. See CUMBRIA, DIALECT IN ENGLAND, ISLE OF MAN, MIDLANDS, NORTHERN ENGLISH, SCOUSE, YORKSHIRE. [EUROPE, VARIETY]. S.E., L.T.

**LANGUAGE** [13c: from Old French *lang(u)age*, from Latin *lingua* tongue]. (1) A human system of communication which uses structured vocal sounds and can be embodied in other media such as writing, print, and physical signs. Most linguists currently regard the faculty of language as a defining characteristic of being human. (2) A particular instance of this system, such as Arabic, French, English, Kwakiutl, Sanskrit, Swahili. (3) Any more or less systematic means of communicating, such as animal cries and movements, code, gesture, machine language, or metaphorically: the *language of dreams*; the *language of love*. (4) The usage of a special group, such as scientific language, technical language, journalese, slang. (5) Usage that is socially suspect, often with a modifier, as in *bad/foul/strong language*, but sometimes alone, as in *Mind your language!*

**Students of language.** Language is the concern of linguistics, the systematic or scientific study of

language, and those who practice it are linguists. They do not, however, monopolize the study of language and languages, which takes various other forms. Many literary humanists, in particular, feel that objective analysis cannot replace the subjective insights of those steeped in literature; some deny or doubt the usefulness of linguistics.

**The nature and properties of language.** Language is a system in which basic units are assembled according to a complex set of rules. There is a major division between *natural language* (traditional human use of languages) and *artificial language* (devised languages like Esperanto; computer languages like BASIC). Human communication is multimodal, in that speech, gesture, writing, touch, etc., all interact. Language as such has the following properties:

(1) *A vocal-auditory channel.* This channel is often referred to as the *phonic medium*, that is, sounds produced by the vocal organs, which are then received by the ear.

(2) *Convertibility to other media.* Such media are writing and print (*the graphic medium*), sign language (*a visual medium*), and Braille (*a tactile medium*).

(3) *Use of arbitrary symbols.* There is no link in most words between the form used and the meaning expressed.

(4) *Duality or double articulation.* Language is made up of two layers: a layer of sounds, in which the units (phonemes) do not normally have meaning, but combine into another layer which does.

(5) *Interdependence.* Language can be regarded as an integrated structure in which the role of every item is defined by that of all the other items in the same system.

(6) *Open-endedness (productivity, creativity).* The number of utterances which can be produced is indefinitely large.

(7) *Displacement.* Language is used to refer to events removed in time and place, and to situations which never existed, as in lying and telling imaginative stories.

(8) *Continual change.* Language is always changing, and there is no evidence that overall progress or decay results from such change.

(9) *Turn-taking.* Spoken language involves structured interchanges in which people take it in turns to talk.

In addition to these features, there has in recent years been a search for universal characteristics which are somewhat more abstract. The difficulty of finding such universals has led to renewed interest in assigning languages to different types.

**Language as a mental phenomenon.** Language appears to be behaviour that is controlled by

maturation, in that it is 'programmed' to emerge at appropriate stages in an individual's development, as long as the nervous system and the environment are normal. Some language disorders are environmental; others may be inherited. Language ability is believed by most linguists to be genetically in-built, at least in its broad outlines, though the nature and extent of the innate contribution is controversial. The mental aspects of language are the concern of *psycholinguistics*, which deals primarily with the acquisition, comprehension, and production of language. Some theoretical linguists also attempt to produce models of the human language faculty, though many of these are controversial. The link between language and thought is another contentious issue. Few linguists accept the claim that language determines thought, but many consider that language has some influence on the way a person thinks.

**Language as a social phenomenon.** The social aspects of language are the concern primarily of *sociolinguistics* and *anthropological linguistics*. There have been various attempts to define the sociocultural notion of 'a language'. Political and geographical boundaries do not necessarily coincide with linguistic boundaries, nor do ethnic names: many Belgians, for example, speak French. Different varieties of the 'same' language may be mutually incomprehensible even within the same country: in England, a Cockney accent may not be understood by someone with a Geordie accent. Linguists usually therefore regard a language as being defined by those who speak it: the many varieties of English used around the world are all defined as English because this is the language the speakers agree that they are speaking. A variety, however, may be regarded by its speakers as a distinct language if there is a strong literary, religious, or other tradition, as in the case of Scots.

**Variation in a language.** Within a language, there are subdivisions traditionally known as *dialects*, increasingly as *varieties*, which are most commonly geographical but may also be social. A dialect is more than a simple difference of pronunciation. In the British Isles, many people speak the same dialect of English, but with different accents. Sometimes, one dialect becomes socially prestigious and is adopted as the norm; it is then usually referred to as the 'standard' language. Social variation in language may be due to social class, ethnic origin, age, and/or sex, and within these, to the level of formality employed at any time. Sometimes this variation remains stable, but is often the forerunner of a change. Language shift usually appears as variation within a community, one

variant increasing in frequency of use and in its distribution.

**Languages in contact.** The use of more than one language is common, particularly in frontier regions and in polyglot countries. Also common is the use of a restricted form of a language for a specialized purpose, such as the restricted variety of English used worldwide for air traffic control. Occasionally, formal and informal varieties of the same language may differ to such an extent that they are used virtually as different languages, as until recently in modern Greece. Sometimes, contact between languages may give rise to a system so different from the original(s) that it can no longer be regarded as the same language. A *pidgin* is a limited language system, with rules of its own, used for communication between people with no common language. A *creole* is a pidgin which has become the first language of a community. A *mixed language* is one in which elements from two or more languages have become so intertwined that it is unclear which is the 'basic' language.

**The world's languages.** There is no agreed figure for the number of languages spoken in the world today. Estimates cluster around 4,000–5,000, with a great deal of variation on either side. Some of the reasons for this uncertainty are: (1) From a linguistic point of view, some parts of the world remain unexplored, including areas where it is known that many languages are in use, such as New Guinea and Central Africa. The rate at which languages are dying, in the face of Western exploration, as in Amazonia, is an unknown factor. (2) Only after a great deal of linguistic enquiry does it become apparent whether a newly encountered community turns out to be speaking a new language or a dialect of an already 'discovered' language. (3) In some areas, it is not easy to decide on the status of what is spoken. Although normally those who can understand each other's spontaneous speech would be said to be speaking the same language, even if there were noticeable differences (as with AmE and BrE, or Cockney and West Country in England), in some places such relatively minor variants are considered important indicators of social, cultural, or political differences. In such cases, it proves necessary to talk of different languages, not different dialects. This has happened, for example, with Flemish and Dutch, Hindi and Urdu, and Swedish, Danish, and Norwegian. In these circumstances, a precise statement about the number of the world's languages is impossible to obtain. Similar differences are encountered when making estimates about the number of speakers of particular languages.

**Language statistics.** The following statistics are based on Crystal (1987, below):

(1) *Major language groups, with numbers of native speakers* (in descending order): 1 Indo-European 2,000m; 2 Sino-Tibetan 1,040m; 3 Niger-Congo 260m; 4 Afro-Asiatic or Hamito-Semitic 230m; 5 Malayo-Polynesian or Austronesian 200m; 6 Dravidian 140m; 7 Japanese 120m; 8 Altaic 90m (central Asia); 9 Austro-Asiatic 60m; 10 Korean 60m; 11 Tai 50m (Thailand); 12 Nilo-Saharan 30m; 13 Amerindian 25m; 14 Uralic 23m (Asia); 15 Miao-Yao 7m (Indo-China); 16 Caucasian 6m (Caucasus); 17 Indo-Pacific 3m (Papua New Guinea); 18 Khoisan 50,000 (southern Africa); 19 Australian aborigine 50,000; 20 Paleo-Siberian 25,000.

(2) *Major languages, with numbers of native speakers* (in descending order): 1 Chinese 1,000m (but see CHINA); 2 English 350m; 3 Spanish 250m; 4 Hindi 200m; 5 Arabic 150m; 6 Bengali 150m; 7 Russian 150m; 8 Portuguese 135m; 9 Japanese 120m; 10 German 100m; 11 French 70m; 12 Panjabi 70m; 13 Javanese 65m; 14 Bihari 65m; 15 Italian 60m; 16 Korean 60m; 17 Tamil 55m; 18 Telugu 55m; 19 Marathi 50m; 20 Vietnamese 50m.

(3) *Major languages and official-language populations* (the 20 main languages of the world according to aggregate populations of territories where they are official, in descending order): 1 English 1,400m; 2 Chinese 1,100m; 3 Hindi 700m; 4 Spanish 280m; 5 Russian 270m; 6 French 220m; 7 Arabic 170m; 8 Portuguese 160m; 9 Malay 160m; 10 Bengali 150m; 11 Japanese 120m; 12 German 100m; 13 Urdu 85m; 14 Italian 60m; 15 Korean 60m; 16 Vietnamese 60m; 17 Persian 55m; 18 Filipino/Tagalog 50m; 19 Thai 50m; 20 Turkish 50m.

*Individual languages.* AFRIKAANS, ANGLO-DANISH, ANGLO-FRISIAN, ANGLO-GAELIC, ANGLO-LATIN, ANGLO-NORMAN, ANGLO-ROMANI, ANGLO-SAXON, ARABIC, ARAMAIC, BAHASA INDONESIA, BAHASA MALAYSIA, BENGALI, BRETON, BRITISH, BRITISH LANGUAGE, BRYTHONIC, CELTIC, CHINA/CHINESE, CORNISH, CUMBRIIC, DANISH, DUTCH, EARLY MODERN ENGLISH, ENG LANG, ENG LANG AND LIT, ENGLISH, ERSE, ESPERANTO, FANAKALO/FANAGALO, FA(E)ROESE, FILIPINO/PILIPINO, FINNISH, FLEMISH, FRANCIZATION, FRANGLAIS, FRENCH, FRISIAN, GAELIC, GERMAN, GOTHIC, GREEK, GUJARATI/GUJERATI, HAUSA, HAWAIIAN, HEBREW, HINDI, HINDI-URDU, HINDUSTANI, HIRI MOTU, ICELANDIC, INGLIS, INGVAEONIC, IRISH, IRISH GAELIC, ITALIAN, JAPAN/JAPANESE, JUDEZMO, KANNADA/KANNARESE, KITCHEN, KOREA/KOREAN, KWEYOL, LADINO, LATIN<sup>1</sup>, LAW FRENCH, LOW DUTCH, LOW GERMAN, LOWLAND SCOTS, MALAY, MALAYALAM, MALTA/MALTESE, MAORI, MARATHI, MIDDLE ENGLISH, MODERN ENGLISH, NORMAN FRENCH, NORN, NORSE, NORWEGIAN, OLD ENGLISH<sup>1</sup>, OLD NORSE, PALI, PANJABI/PUNJABI, PAPUA NEW GUINEA, PENNSYLVANIA DUTCH, PERSIAN, PHILIPPINES, PICTISH, POLARI, POLISH, PORTUGUESE, PRAKRIT, PRIMITIVE GERMANIC, ROMANI/ROMANY, RUSSIAN, SABIR, SANSKRIT, SAXON, SCOTS, SCOTTISH GAELIC, SHELTA, SINHALA/SINHALESE, SPANISH, SWAHILI, SWEDISH, SYNTHETIC SCOTS, TAGALOG, TAMIL, TELUGU/TELEGU, TURKISH, URDU, WELSH, WELSH LANGUAGE SOCIETY, YIDDISH.

**LANGUAGE ACQUISITION DEVICE**, In short form *LAD*. In linguistic theory, a genetic mechanism for the acquisition of language proposed by Noam Chomsky (*Aspects of the Theory of Syntax*, 1965). LAD was supposedly 'wired' with language universals and equipped with a mechanism which allowed children to make increasingly complex guesses about what they hear around them, aided by an in-built evaluation measure that enabled them to select the best grammar consistent with the evidence. It has, however, proved difficult to specify and test this theory, and Chomsky has abandoned it in favour of *parametric theory* (*Knowledge of Language*, 1986), which suggests that children are pre-programmed with some universals but only partially 'wired' with others. They have advance knowledge of certain basic language options, but

have to discover by experience which occur in the language they are exposed to. In Chomskyan terminology, they know the parameters along which language can vary, but have to fix their values, perhaps by setting a 'switch' in one of two possible positions. According to this theory, languages are similar at an underlying level, even though on the surface they appear different. [LANGUAGE]. J.M.A.

**LANGUAGE AND SOCIETY.** A Canadian quarterly review published since the early 1980s by the Commissioner of Official Languages/Commissaire aux langues officielles, Ottawa, one half in English, the other in French. In a style that has become standard for Canadian bilingual publications, each half is 'upside-down' in terms of the other, so that francophone and anglophone readers can read their section as the journal proper. Articles in English are translated for the French section, and vice versa, so that the content of each section is virtually identical. The review, distributed free of charge, is 'for all interested Canadians, and especially for social and political commentators, political and administrative leaders, educators and leaders in voluntary organizations, the private sector and linguistic communities. The review aims at reflecting the linguistic experience of Canadians and at keeping them informed of relevant major events and at encouraging dialogue' (from the masthead, Fall 1990). See CANADA. [AMERICAS, MEDIA]. T.MCA.

**LANGUAGE AWARENESS.** A term in language teaching and applied linguistics for the development of greater awareness among schoolchildren of the nature and purpose of language. Promoters of language awareness seek to apply the findings of linguistic research to education at large. Courses in Modern Languages and in English that are based on language awareness encourage awareness and appreciation of diversity among languages and varieties of languages. They seek to instill an appreciation of such matters as the mechanisms for speech, the nature of writing systems, and the historical development of language. Relevant publications include: Eric Hawkins, *Awareness of Language* (Cambridge University Press, 1984) and companion series of booklets for schools; B. Gillian Donmall (ed.), *Language Awareness* (National Congress on Languages in Education Reports & Papers 6, CILT, 1985); Paul Harvey, 'Language Awareness' (*English Today* 13, Jan. 1988). [EDUCATION, LANGUAGE]. T.MCA., C.J.B.

**LANGUAGE CHANGE.** The modification of forms of language over a period of time and/or physical distance. Such change may affect any

parts of a language (pronunciation, orthography, grammar, vocabulary) and is taking place all the time. It may be abrupt (a change in spelling in a house style) or gradual (a slight change in the pronunciation of a vowel). In cases where language contact leads to pidginization, the changes are often rapid and abrupt. In other cases, change may spread so gradually through a community that it is hardly noticeable. Nevertheless, over time the cumulative effect of such changes may be great. During the past nine centuries, English has undergone more dramatic changes than any other major European language. As a result, Old English or Anglo-Saxon is not immediately accessible to the modern native English speaker in the way that Medieval Icelandic is to the modern Icelandic. When people do notice change, their reactions are often negative: for example, to the use of *regime* in the sense of *regimen*, or *disinterested* to mean *uninterested*, and conscious attempts are made to resist it. These are usually not successful in the long term. However, deliberate attempts are sometimes made by social pressure groups or by governments to change aspects of a language or its use.

**Sound change.** Changes in pronunciation were a primary interest of 19c comparative philologists, who studied the historical relationships among groups of languages such as the Indo-European language family, which includes English, French, and German as well as Greek, Latin, and Sanskrit. The establishment of regular correspondences among sets of sounds enabled them to reconstruct genetic relationships and the shifts responsible for the present differentiation of languages and dialects: for example, a sound change which shifted /p/ to /f/ in some of the Indo-European languages accounts for some major differences between the Germanic and Romance languages. Compare the initial spoken consonant in Latin *pater* and Spanish *padre* with English *father* and German *Vater*. Many of these changes take a long time to complete and may never cover the entire range of a 'language'. Thus, one series of changes, the Great Vowel Shift, is responsible for the present-day pronunciations of English *house*, *mouse*, but has never affected Scots, in which the pronunciations are *hoose*, *moose*, as was true of all English before the shift occurred.

**Grammatical change.** Major changes in syntax and morphology have affected English over many centuries to the extent that speakers of Modern English are not able to understand Old English without training. The structure of Old English was more like Latin in that words had various inflectional endings to indicate their grammatical function. This situation has been

much simplified: for example, the form of the definite article *the*, now invariant, once varied according to case, number, and gender, as in *se mona* (the moon: masculine, nominative, singular), *seo sunne* (the sun: feminine, nominative, singular), and *þæt tungol* (the star: neuter, nominative, singular). Word order in Old English was more flexible because grammatical relations were made clear by the endings: *Se hund seah þone wifmann* (The dog saw the woman) could also be expressed as *þone wifmann seah se hund*, because the inflected forms of the definite article make it clear that 'woman' is the direct object in both cases. In Modern English, however, grammatical relations are indicated largely by word order, so that *The dog saw the woman* and *The woman saw the dog* (compare Old English *Se wifmann seah þone hund*) mean two different things. Modern English has also lost its system of classifying nouns into three grammatical genders, as still occurs in German.

**Lexical change.** Such change is caused by both internal and external factors. Internal change can mean the adaptation of both the meanings and forms of existing words and phrases through such factors as assimilation, elision, and reduction, as with the conversion of *Saint Audries* in *Saint Audries lace* into *tawdry* (cheap and ill-made, originally referring to the quality of the lace sold at St Audrey's Fair in Ely, England). External change includes the borrowing of words, which may be occasional and minimal (as with loanwords taken into English from Turkish) or frequent and massive (as with the flow into English of French, Latin, and Greek words). All such acquisition results in the introduction of new vocabulary and sometimes new word structures and patterns of word-formation.

**Conclusion.** People often react negatively to change and regard it as due to ignorance, laziness, or sloppiness. This can be seen in the letters written to newspapers complaining that the contemporary uses of words like *disinterested*, *hopefully*, and *regime* are 'incorrect'. The spread of language change is basically a social phenomenon, as can be seen from recent sociolinguistic studies, which have shown that changes associated with prestige groups often have a greater chance of being adopted than others. Forms which from the point of view of one variety appear conservative may continue without comment in another, such as the use of *gotten* rather than *got* in *You've gotten more than you need*, which is conventional in Scots and in AmE, but is not now used in the English of England. Older forms may also survive in working-class non-standard speech (*hoose* in urban working-class Scots) and in informal

styles (*workin* instead of *working* in many varieties), though sometimes older forms become restricted to formal or specialized contexts, as with the religious use of *brethren*.

**LANGUAGE DEATH** [1980s]. A term in linguistics for the extinction of a language: 'The present contribution is directed towards disseminating general information on the causes and effects of language shift. It is not a survey of all known cases of language contraction and death in eastern Africa' (Gerrit J. Dimmendaal, 'On Language Death in Eastern Africa', in Nancy C. Dorian (ed.), *Investigating Obsolescence: Studies in Language Contraction and Death*, Cambridge University Press, 1989). The associated term *language obsolescence* refers to a slow diminution in the number of users of a language. See CELTIC LANGUAGES (LINGUICID), CLASSICAL LANGUAGE (DEAD LANGUAGE). [LANGUAGE]. T.MCA.

**LANGUAGE DISABILITY, DISORDER.** See LANGUAGE HANDICAP.

**LANGUAGE FAMILY.** A group of languages which are assumed to have arisen from a single source: English, French, German, Greek, Persian, Russian, Sanskrit, and Welsh are all members of the Indo-European language family, and are considered to have descended from a common ancestor. Common ancestry is established by finding systematic correspondences between languages: English repeatedly has /f/ where Latin has /p/ in words with similar meaning, as in *father/pater*, *fish/piscis*, *flow/pluo* rain. It also often has /s/ where Greek has /h/, as in *six/héx*, *seven/heptá*, *serpent/hérpein* to creep. In addition, English and German compare adjectives in similar ways, as in *rich, richer, richest*: *reich, reicher, reichste*. These and other correspondences indicate that the languages are cognate (genetically related). Various related words can be compared in order to reconstruct sections of a hypothetical ancestor language. The purpose of such reconstruction is to enable ancient sound patterns and structures to be distinguished from more recent forms. The process of comparison and reconstruction is traditionally known as *comparative philology*, more recently as *comparative historical linguistics*. This process formed the backbone of 19c language study, though in the 20c it has become one branch among many. A 'family tree' diagram

(not unlike a genealogy) is commonly used to represent the relationships between the members of a linguistic family, in which an initial parent language 'gives birth' to a number of 'daughters', which in turn give birth to others. This can be useful, but is rarely an accurate representation of how languages develop, since it suggests clean cuts between 'generations' and between 'sister' languages, and implies that languages always become more divergent. In fact, languages generally change gradually, and there is often considerable intermixing among those which remain geographically adjacent. Partly for this reason, their genetic classification (by language family) does not necessarily correlate with their classification by type.

See CLASSIFICATION OF LANGUAGES, HAMITOSEMITIC LANGUAGES, INDO-EUROPEAN LANGUAGES, LANGUAGE CHANGE, LINGUISTIC TYPOLOGY, MALAYO-POLYNESIAN LANGUAGES, PHILOLOGY, SINO-TIBETAN LANGUAGES, URO-ALTAIC LANGUAGES. [HISTORY, LANGUAGE]. J.M.A.

**LANGUAGE HANDICAP.** See AGRAMMATISM, APHASIA, AUDIOBOOK, BRAILLE, DYSLEXIA, ECHOLALIA, LANGUAGE PATHOLOGY, LISP, SIGN LANGUAGE, SLIP OF THE TONGUE, SPEECH PATHOLOGY, SPEECH THERAPY, STUTTERING/STAMMERING, TALKING BOOK, TESD.

**LANGUAGE LEARNING**, short form *LL*. In principle, the learning of any language; in practice, in language teaching, and applied linguistics, the term is usually limited to the learning of foreign languages. The psychological and neurological nature of such learning is not known, but some general statements can be made about its educational and social aspects. In broad terms, there are two kinds of foreign-language learning: *informal* ('picking a language up') and *formal* (taking an organized course).

**The market-place tradition.** Although not often discussed by applied linguists, the informal approach has been by far the commoner way of learning languages, especially among migrants, refugees, traders, sailors, soldiers, and the inhabitants of frontier settlements, garrison towns, and ports. This *market-place tradition* is primarily oral, usually haphazard, and part of a range of ad-hoc communicative strategies that include gesturing, drawing pictures, using interpreters, mixing elements from two or more tongues, and guesswork. The aim has seldom been to learn an approved or 'high' version of another language to the fullest possible extent, but rather to use language to get something else done ('to get by'). In the process, the boundaries between languages may not be well established. Code-mixing and code-switching are common, especially

where people know two or more language systems fairly well. One result of the widespread need to communicate at this level has been what are variously known as *contact languages*, *make-shift languages*, *trade jargons*, and *inter-languages*, such as Bazar Malay, Chinook Jargon, Fanakalo, Lingua Franca, and Pidgin English. In course of time, under appropriate circumstances, some of these forms have evolved into new 'full' languages in their own right. In their early stages of stabilization and growth, such languages are known technically as *creoles*.

**The monastery tradition.** Because of its dominant position in most present-day societies, formal instruction in some kind of institution, in set periods of time, with one teacher and a class of learners in a room, has come to be seen as the 'proper' way to learn a language. Such formality, typical of present-day educational systems, is usually associated with certain assumptions about culture and utility: for example, it is traditionally applied more to prestige languages (such as French in Britain and English in France) than to minority or fringe languages (such as Welsh in Britain and Basque in France). In the Western world, the roots of formal learning of this type are classical, but the truly formative influence was the medieval training of religious novices in Latin as an international language. This *monastery tradition* favours rote learning associated with repetition, the study of canonical texts, and grammatical analysis. Though rigorous and demanding, and greatly valued by many people, it sits apart from the world, favouring abstraction and standardization. It distances learning from immediate need, demanding discipline (often, especially formerly, by coercion: learning Latin *sub virga* or 'under the rod') and motivation (or at least submission) on the part of students.

**Attainment.** Formal language learning is incremental. It is absorbed (or not absorbed) in doses, and runs from zero to whatever ceiling is reached. Progress is usually marked by a reduction of dependence on the teacher and changes in the kind of help needed. Such changes are gradual and occur at different rates for different people and in different aspects of learning. There are no easily displayed tokens of attainment, but administrators, teachers, and students need indicators of attainment, and for this purpose three levels are generally assumed: *beginner*, *intermediate*, *advanced*.

(1) *Beginner.* In the classroom, learning is at first by courtesy of the teacher. At first, beginners understand little and produce nothing, then gradually they understand individual words, fixed formulas, and disconnected items in speech

or text. There is often little creative scope, frustration is common, and regular praise and reassurance are essential. Translation is constant and often overt. Frequent, brief periods of reflection take place on differences between the two systems involved, such as between Italian *ragazza/ragazze* and English *girl/girls*, or on the fact that English nouns have no gender and therefore articles and adjectives do not change in their company: *a good mother, a good father* as opposed to French *une bonne mère, un bon père*. Generally, learning to understand (*receptive ability*) is faster than learning to express (*productive ability*). Performance is usually poor at this stage and dominated by the mother tongue.

(2) *Intermediate*. When learners begin to produce their own phrases and sentences they can use their own creativity in making mental connections (sometimes correct, often wrong, constantly developing) between items already encountered and partly learned. They make guesses, set up provisional theories about what things mean, or how they might be expressed, and modify them in the light of experience. Much of the learner's grasp of syntax is now established, though with gaps and shortcomings. Dependence on translation (spoken or mental) is less compulsive. Intermediates may feel the need for plenty of material, which confirms and consolidates what they know, speeding up recognition and comprehension, extending knowledge, and providing opportunities for reflection, rehearsal, practice, and use. Intermediate experience needs interest, variety, and relevance, without which learners become bored, but at the same time a balance is necessary between being starved and swamped. At this stage, many learners stop, their capacity fossilized at a point where they no longer find the target a challenge or cannot proceed further. For more motivated students, however, it is the level at which the *performance skills* (speaking and writing) improve rapidly, given opportunity, stimulation, and time for assimilation.

(3) *Advanced*. Learners at the advanced stage use their own creativity and need a new kind of help. They seek delicate discriminations of meaning, stylistic niceties, subtleties of culture and discourse, and greater acquaintance with the language. While encouraging such developments, teachers need to watch for idiosyncrasies and recurring errors, often due to carrying over features of the mother tongue into the target language. All going well, inner translation continues to decline and fluency, speed, and accuracy continue to develop. At this level, many learners achieve a close approximation to the skills of the native speaker of the target language.

**Conclusion.** The levels are not watertight. Individuals rise imperceptibly from one to the other, and may also slip back. Members of a class do not move forward uniformly, and the varying rates of fast, average, and slow learners may pose problems for teacher and students. Teachers, writers, and publishers often divide the levels into six: *absolute beginner, beginner-to-intermediate, lower intermediate, upper intermediate, early advanced, late advanced*, making it easier to structure courses and materials and conduct attainment tests. Although the marketplace and the monastery continue to be well-separated styles of language learning, there is a growing tendency to open the classroom door and let the world in, or take students out into that world to immerse them for a time in 'real' usage, before returning to the classroom for a time of consolidation. **LANGUAGE PATHOLOGY**, also **speech pathology, communication disorders, logopaedics, phoniatry** (the various names are paralleled by such names for practitioners as *speech therapist, speech pathologist, and communicologist*). The study of disorders of spoken or written language, and the disorders themselves. Some scholars include disorders affecting ability to use sign language alongside those of speech and writing. Alternatives have been proposed to the term *pathology*, given the exclusively physical and medical application of its original use; *handicap, disorder*, and *disability* are three of the more widely used labels, though nuances differ: for example, 'disorder' implies a more severe disruption than 'disability'. There are two broad approaches to the subject:

(1) **The medical model.** This model examines pathologies of language in relation to their causes and physical symptoms. For example, the articulation of children born with a cleft palate is related to their abnormal anatomy and physiology, and to associated problems, such as

reduced hearing in some cases. Other cases with medical antecedents include the language of deaf children, of children who have suffered brain damage, of aphasics, and of people whose vocal cords have been affected by growths or other conditions. Estimates vary, but about 40% of all pathologies can be related to medical causes. In the remaining cases, the reason for the problem is unclear; there is no obvious medical condition which could explain it, and the person affected seems within normal limits when subjected to medical tests. An appeal may be made to psychological, social, linguistic, and other factors, but it is difficult to arrive at a definite conclusion in such cases. These pathologies include cases of delayed language development, stuttering, abnormal voice quality, and linguistic problems associated with such conditions as hyperactivity, autism, and schizophrenia. In many cases, the combination of medical and other factors seems to be the only way of explaining the symptoms: for example, an abnormal voice quality may have begun as a physical problem, but if the speaker uses the voice professionally, anxiety may build up which in due course exacerbates the condition. Similar combinations of factors must operate to explain the remarkable variety of linguistic symptoms encountered in people who have the same medical condition: for example, a group of profoundly deaf children (all displaying the same levels of hearing loss) will manifest different kinds of language, depending on such factors as personality, intelligence, family background, memory and attention skills, and type of education.

(2) **The behavioural model.** Because medical factors can explain only a part of the problem, an alternative approach of a behavioural nature has been devised that looks directly at the linguistic symptoms and indirectly at the causes. It operates by taking a sample of language from the affected person, spoken or written, audio or video, of sufficient duration to represent the nature of the disorder. This sample is transcribed and analysed, so that the characteristics of the abnormal patterning become apparent. On the basis of this analysis, an assessment is made of the level of abnormality, and in association with non-linguistic factors (primarily, information obtained from psychological and medical tests) a diagnosis is made. Following this, recommendations are given for intervention, and a teaching programme outlined, to be implemented by speech therapists or other professionals. This kind of approach is essential in the case of language-disordered children, where there is often very little medical history and all one has to go on is the child's observed behaviour. It is also important in such cases as stuttering and lisping, where the original causative

factors are usually obscure or unknown. The application of linguistics to the study of these problems is a relatively recent development known as *clinical linguistics*.

**The communicative chain.** Language pathologies are usually classified, using the medical model, in terms of interference with the normal communicative chain of events, involving input, central integration, and output. The chief disruption in input is deafness. Another problem arises when hearing is intact and the signal reaches the brain, but there are difficulties in decoding the signal. One such problem (*auditory agnosia*) is a failure to recognize the nature of incoming auditory stimuli: the sufferer is unable to recognize familiar sounds and cannot identify them in a consistent way. A further problem arises from brain damage which results in *receptive aphasia (receptive dysphasia)*, an inability (mild, moderate, or severe) to comprehend grammar and vocabulary: a receptive aphasic hears incoming speech, but does not understand it. The converse problem is *expressive aphasia (expressive dysphasia)*, an inability to produce the grammar and vocabulary of normal speech. Expressive aphasics know what they want to say, but are unable to formulate the sentences they need. The problem may be of varying severity. It is also possible for aphasics to be *globally* affected, with severe disruption of both receptive and expressive ability.

Damage to areas of the brain specifically concerned with language can produce other disorders. In particular, the ability to make voluntary movements of the vocal organs may be impaired, so that although the intention is present to produce a particular word, the wrong sounds are produced when the speaker attempts to say it. This disorder is known as *dyspraxia* or *apraxia*, often more specifically labelled *verbal* or *articulatory dyspraxia*. In such cases, there is no paralysis of the muscles controlling speech; in this respect, the disorder can be distinguished from *dysarthria*, which is a disorder arising from paralysis affecting the muscles controlling the vocal organs. The problem may be mild (as in a slight difficulty in lip movement), moderate, or severe (as in a major disruption to the functioning of the vocal cords, soft palate, and tongue). Other output problems include various disorders of fluency, which affect the ability of the speaker to control the timing and sequencing of sounds. *Stuttering* or *stammering* is the most widely recognized handicap here, but there is also *cluttering* (uncontrolled speed of speech). Speech can also be badly affected by such diseases as *myasthenia gravis* or *Parkinson's disease* and a wide range of problems can affect the vocal cords.

**LANGUAGE PLANNING.** The attempt to control the use, status, and structure of a language through a language policy developed by a government or other authority. Normally carried out by official agencies, such planning usually passes through several stages: a particular language or variety of a language is selected; codification is undertaken to stabilize it, for example by agreeing writing conventions for previously non-literate languages; the codified language is adjusted to enable it to perform new functions, for example by inventing or borrowing scientific vocabulary; and mechanisms are devised, such as teaching syllabuses and procedures for monitoring the media, to ensure that the language is used in conformity with the policy. This sequence is rarely appropriate for English, whose dominant role in the world gives it a unique position, but English is nonetheless officially planned into national education systems in various ways. In Britain, Welsh has been promoted through the National Curriculum in Wales as a subject to be compulsorily learnt within Wales, but is not compulsorily available to Welsh speakers or others outside Wales. In post-colonial nations the relationship of English to indigenous languages is often carefully defined: as the language of secondary and tertiary education in Tanzania while Kiswahili is the national language; as an official language recognized for legal purposes in India; as a literary language in some subjects in some South American universities. Planning policy may be achieved through agencies at a number of levels in a state hierarchy. Governments may define their language policy throughout a country, ministries of education may define it within education, and institutions may contribute to planning through their own policies: for example, in the UK in the 1980s, local education authorities and individual schools attempted to define the roles of various especially migrant languages like Panjabi and Cantonese within particular regions or institutions. Relevant publications include: John Edwards (ed.), *Linguistic Minorities, Policies and Pluralism* (Academic Press, 1984); C. Kennedy (ed.), *Language Planning and English Language Teaching* (Prentice Hall, 1989); James W. Tollefson, *Planning Language, Planning Inequality: Language Policy in the Community* (Longman, 1991). See ACADEMY, FRANCIZATION, LANGUAGE POLICE, LEXICAL BAR, LOGIC, SOCIOLINGUISTICS, STANDARD. [EDUCATION, LANGUAGE]. C.J.B.

**LANGUAGE POLICE** [Late 20c]. Also **language cops**, **tongue troopers**. An informal, emotive, and usually dismissive term in Canada for the Quebec *Office de la Langue Française*, which seeks to ensure compliance with the province's laws upholding the primacy of French: 'The Quebec language police have pursued and punished a Ste-Anne-de-Beaupré motel owner for having an "office" (a word used to describe government services in Quebec) instead of a "réception," and charged a Hull restaurant owner for using "dry gin" on his menu. "Brunch" and "jogger" are allowed, but "essence," not "gasoline," should be sold. . . . The government's tongue-troopers, after solemn deliberation, recommended that a hamburger be called a "hambourgeois"' (Suzanne Zwarun, 'Language Rights', *Chatelaine*, Feb. 1989). See QUEBEC. [AMERICAS, LANGUAGE]. T.MCA.

**LANGUAGE RIGHTS** [1980s: on the analogy of *civil rights*, *human rights*, etc.]. In linguistics and in law as applied to language, the concept that individuals and communities have certain fundamental rights in relation to the language(s) that they use or wish to use: 'The Supreme Court of Newfoundland is of the view that it must be more cautious interpreting legislative provisions on "language rights" than those relating to "legal guarantees"' (Jacques Robichaud, 'Language Rights and the Courts', in *Language and Society*, Ottawa, Spring 1988); 'Australia and Yugoslavia are among the few countries that have incorporated the principle of language rights into official policy' (James W. Tollefson, *Planning Language, Planning Inequality*, Longman, 1991). Compare LANGUAGE POLICE. [LANGUAGE]. T.MCA.

**LANGUAGE SHIFT** [1960s]. A term in linguistics for a massive shift in use from one language to another, as in Ireland from Gaelic to English (18-20c). In 1964, the US linguist Joshua A. Fishman introduced the dual notion *language maintenance and language shift* (LMLS) to discuss the situation of 'the minority language or small national language faced by pressures related to a much bigger national or international language'. To the latter, of which English is the pre-eminent example, he has given the name *language of wider communication* (LWC): see J. A. Fishman, *Language and Ethnicity in Minority Sociolinguistic Perspective* (Clevedon & Philadelphia: Multilingual Matters, 1989). See BILINGUALISM, IRISH ENGLISH, LANGUAGE DEATH. [LANGUAGE]. T.MCA.

**LANGUAGE TEACHING**, short form *LT*. In principle, instruction in any language, under any conditions, formal or informal; in practice, as

the term is commonly used among language teachers and applied linguists, instruction in a second or foreign language within a system of education, such as the institutionalized teaching of French in Britain and English in France. More specifically, the teaching of a mother tongue, home language, or national language may be referred to as *L1 teaching* (where L1 means *first language*) and the teaching of one or more other languages as *L2 teaching* (where L2 means *second language*).

**L1 and L2 teaching.** By and large, *L1 teaching* is that part of general education which deals with the transmission of a society's written culture and standard speech (which may or may not involve training in an approved accent). It usually includes instruction in aspects of a particular literature, and it has traditionally included explicit instruction in grammar, spelling, punctuation, and composition, matters that are currently controversial. *L2 teaching* for many centuries centred on acquiring a classical language, in Europe especially Latin, sometimes Greek or Hebrew, and elsewhere such languages as classical Arabic, Mandarin Chinese, and Sanskrit. In Britain, the teaching of a second vernacular (non-foreign) language has taken place, on a limited scale and mainly since the 19c, in Scotland and Wales, usually for those who have already had Gaelic or Welsh as their mother tongues, their general education proceeding in English as a second language which more often than not becomes their primary medium. Because there has been no significant other vernacular in England since Norman French in the 14c, L2 teaching in that country has generally been concerned with 'foreign' languages. The most powerful L2 tradition in England, and elsewhere in the English-speaking world, has usually been the teaching of French.

**The literary method.** Throughout Western history, literacy and education have run together. Only in the 20c has the technology of audio-recording allowed conversation to become an object of study. This change, along with a broad acceptance of democratic ideals in education as well as in politics, has made possible a vernacular rather than a classical education, or one that judiciously draws on both. For many centuries, language teaching in the European ('monastery') tradition of Christianity meant the teaching of the languages of religion, literature, and scholarship: Latin and to a limited extent Greek. In addition, in the Middle Ages in England, children of the aristocracy were taught Norman French, while English was a largely irrelevant vernacular. Although some attempt was made to teach spoken Latin (for

example, in the English Abbot Aelfric's *Colloquy*, a conversation reader, c. AD 1000), learning centred mostly on a close acquaintance with the most highly valued literary texts. With the Renaissance and the Reformation, and the return of classical Latin as a model, the language largely ceased to be used in speech; thenceforth, the aim was written mastery, learners imitating the style of 'the classics', and being led away from the 'debased' styles of less highly regarded texts. The 'golden' texts of Cicero, Horace, and Virgil were accepted, while the base metal of Apuleius, Geoffrey of Monmouth, Petrarch, and other later Latin writers was ignored. The route to understanding lay through rote memorization of grammar and vocabulary and imitation that might or might not lead to creativity.

**The grammar-translation method.** Opposition to the literary tradition arose in and around Germany in the late 18c, with methods of teaching Latin and other languages that have in the 20c been given the name *the grammar-translation method/approach*. Reformers sought to organize and simplify the traditional exposure to texts by using specimen sentences and emphasizing practice by translating in both directions. Through translation of specially constructed sentences that were keyed to lessons centred on particular grammatical points, learners could be exposed to the grammatical and stylistic range of the target language in an economical and systematic way. The reform was not, however, complete, and for the next 200 years the grammar-translation method and the less systematic literary method coexisted and often blended.

**The Reform Movement.** Dissatisfaction with the practice of teaching modern languages by such text-based methods came to a head in the *Reform Movement* of the 1880s-90s, among scholars and teachers in Germany, Scandinavia, France, and Britain who were interested in the practical possibilities of a science of speech. It began with the publication in 1877 of Henry Sweet's *Handbook of Phonetics*. With its analyses and specimens of different sound systems, this book opened up the prospect of teaching speech systematically and escaping from the ancient dependence on texts. In 1882, the German phonetician Wilhelm Viëtor expressed the growing impatience in the pamphlet *Der Sprachunterricht muss umkehren* (Language teaching must start afresh), initially published under a pseudonym. Paul Passy in France is credited with inventing the term *la méthode directe* (*the Direct Method*) to sum up the aims of the reformers; other names are the *Natural Method*, *New Method*, and *Phonetic Method*.

Writing in *Transactions of the Philological Society*, Sweet continued to publish analyses of

the sound systems of various living languages, adding in 1884 the paper 'On the Practical Study of Language'. In the same year, Felix Franke in Germany published *Die praktische Spracherlernung* (The Practical Acquisition of Languages), in which while acknowledging his debt to Sweet he emphasized, in addition to the use of phonetic transcription, the psychological aspect of learning, the importance of creating the right associations, of avoiding translation as much as possible, and of entering into the spirit of the community concerned. Later in 1884, Franke's book was issued in a Danish translation by Otto Jespersen. In 1885, Sweet published what for the reformers came to stand as the model textbook of English for a foreign learner, *Elementarbuch des gesprochenen Englisch*, aimed initially at a German-speaking public, but subsequently issued in an English version, *A Primer of Spoken English* (1890).

**Phonetics.** Early in 1886, under the leadership of Paul Passy, a group of teachers in France formed the *Phonetic Teachers' Association* and started a journal in phonetic script entitled *Dhi Fonètik Títcer*. At Jespersen's suggestion, membership was made international; he joined in May, Viëtor in July, and Sweet in September. This body in due course developed into the *Association Phonétique Internationale* (in English the *International Phonetic Association*, in German the *Weltlautschriftverein*), whose deliberations resulted in the IPA alphabet. In 1899, Sweet published *The Practical Study of Languages*. Two years later, Jespersen published his ideas in a book in Danish later issued in English as *How to Teach a Foreign Language* (1904). These complementary works by and large represent the Reform Movement, Sweet's concerned with principles, Jespersen's with classroom work. Their minor differences were typical of the movement as a whole.

**The direct method.** Reformers rejected the teaching of modern languages through grammatical paradigms, specimen sentences, and word lists. They wanted to base teaching directly on speech and to apply the results of phonetics in their courses so as to ensure sound pronunciation from the start. For the rest, they sought as close an approximation as possible to the way a child learns its first language. They adopted the principles of association, visualization, and learning through the senses, through pictures and through activity and play. They emphasized the learning of grammar by practice rather than precept, by making the responses to points of grammar automatic and unconscious. The mother tongue should be avoided as much as possible and translation reduced to a minimum. They held that learning a language in this way meant,

in effect, the absorption of another culture. It was generally agreed that professional language teachers should receive phonetic training, and that at the school stage the teacher should preferably be of the same language background as the pupils. The aim of the teaching should be successful use of the target language, actively and passively, but should not include translation.

**The reformers' influence.** The movement has had a varied impact in different parts of the world. In Continental Europe, it is generally considered to have led, virtually within a generation, to a marked improvement in spoken English and other languages, especially in Scandinavia, Germany, and the Netherlands. The principles and practices of the movement continue to have a strong influence. In Britain, influence has been limited in the teaching of modern languages in schools but considerable in the teaching of English as a foreign and second language. Two EFL pioneers particularly influenced by the movement were Harold E. Palmer, author of *The Oral Method of Teaching Languages* (1921), and Daniel Jones, compiler of the *English Pronouncing Dictionary* (1917). In the US, the movement had little success until the Second World War, although in 1914 Leonard Bloomfield had noted in his *Introduction to the Study of Language*: 'It is only in the last twenty-five years and in the European countries that success in modern-language teaching has ever been attained', adding that 'most of our practice is half a century or so behind that of the European schools.' Bloomfield's interest is reflected in his *Outline Guide for the Practical Study of Foreign Languages* (1942), the text that inspired both the massive US wartime programme of language teaching and post-war theories of teaching and learning.

**The audio-lingual method.** In the US in the 1950s there developed a movement based on the precepts of structural linguistics and behaviourist psychology and known variously as the *audio-lingual method* (ALM), *audio-lingual teaching*, *audiolingualism*, *the structuralist approach*, and *structuralism*. The ALM dominated the teaching of English as a second language in North America for some 25 years, and materials prepared by Robert Lado and others at the U. of Michigan were widely used there and elsewhere. Its content derived from an analysis of the phonemes, morphemes, and sentence patterns of the target language, and it sought to automate classroom activity through *pattern practice* drills (exercises in the repetition of specific kinds of phrases and sentences, with systematic changes intended to extend the learner's skills), taught by techniques

of *mimicry and memorization* known for short as *mim-mem*.

**The structural approach and the audio-visual method.** The American audio-lingual method differed considerably from two European approaches with similar names: (1) The British *structural approach* of Harold E. Palmer and Michael West in the 1920s–30s, which augmented the direct method with graded grammatical structures, word lists, and readers. (2) The French *méthode structuro-globale* (in English usually called the *audio-visual method*), which developed in the 1960s and used a combination of textbooks, tape recordings, filmstrips, slides, and classroom presentation. Although it appeared to be the ALM with illustrations, the French method was technological, not ideological.

**The situational approach.** Almost from the start of the Reform Movement, practitioners used conversation readers in their teaching, often with texts in phonetic script, such as E. T. True and Otto Jespersen, *Spoken English* (1891) and H. Palmer and F. G. Blandford, *Everyday Sentences in Spoken English* (1922). In the 1960s–70s, many textbooks took such a practical approach further, grouping their teaching units around situational themes such as *At the Hairdresser* and *The Post Office*. The dialogues and narratives in the text derived from these settings, and teachers were expected to produce appropriate material to support action-based language use within the situation defined by the chosen topic. The strength of the topic was language appropriate to a situation, but its weakness, the difficulty of generalizing what is learned, led to its being used more in collaboration with other procedures than in its pure form.

**The notional-functional approach.** In the early 1970s there developed in Europe an approach to LT that focused on two kinds of semantic and performative criteria: *notions*, such as *time, place, quantity, emotional attitudes, and functions*, such as *describing, enquiring, apologizing, criticizing*. The introduction of such ideas has influenced subsequent syllabuses and coursebooks. However, courses whose content is entirely notional and functional are often difficult to teach and learn from, because some notions and functions presuppose a knowledge of grammar and vocabulary for which no provision may have been made. It is probable that no definitive list of notions or of functions exists or may even be possible, but the concept has proved useful. See COUNCIL OF EUROPE.

**The communicative approach.** In the 1970s–80s there developed in both Europe and North

America an approach to foreign- and second-language teaching that drew on the work of anthropologists, sociologists, and sociolinguists. In many ways a lineal descendant of the direct method, it has concentrated on language as social behaviour, seeing the primary goal of language teaching as the development of the learner's *communicative competence*. In addition to formal linguistic knowledge, learners are considered to need both rules of use to produce language appropriate to particular situations, and strategies for effective communication. Partly through the influence of the *Council of Europe Languages Projects*, the movement at first concentrated on notional-functional syllabuses, which depended on analyses of semantic and functional categories of language use rather than on those of formal grammar. In the 1980s, however, the approach was more concerned with the quality of interaction between learner and teacher rather than the specification of syllabuses, and concentrated on classroom methodology rather than on content, which remained similar to that of situational and notional-functional course materials.

**The cognitive code approach.** This approach to language teaching, which developed especially in the US in the 1980s, advocates conscious (*cognitive*) awareness of the structure of the target language and argues that study of rules of pronunciation and grammar will give learners a practical command of that language. Some commentators see it as the *grammar-translation method* in a new form, others as essentially a rejection of behaviourism and the audio-visual method.

**A plethora of methods.** A wide range of approaches to L2 teaching are currently available, ranging from the *grammar-translation method* and the *communicative approach* (both 'mainstream', in the sense that they are used by large numbers of teachers) through the now less influential *audio-lingual method* or *structural method* with its behaviourist bias (favoured especially in North America in the 1950s–70s) to such radical 'fringe' approaches as Caleb Gattegno's *Silent Way* and Georgi Lozanov's *Suggestopedia*. The Silent Way seeks to give the learner maximum investment in the language-learning process, by reducing the spoken role of the teacher as much as possible. Highly formal charts for pronunciation and grammar, together with Cuisenaire rods for manipulation, provide the major teaching aids. Suggestopedia is based on the view that relaxation enables learners to exploit their capacities for language acquisition to the maximum degree. Emphasis is placed on comfortable surroundings, use of music and chanting, and trust in the authority of the

teacher. Particularly used to assist memorization, the procedure relies on making language learning different from the stressful effort to produce appropriate communication for pre-defined needs. Conferences for EFL and ESL teachers currently provide sessions on a sometimes overwhelming array of methods and blends of methods, and a plethora of books describes the main varieties in detail or in overviews. *Holistic methods* emphasize putting the learner into a frame of mind for learning or developing the education of 'the whole person', and diminishing the teacher's appearance as an authority-figure. The *humanistic approach* similarly seeks to emphasize the shared interests and needs of teachers and students and provide a caring environment in which to learn. Many pragmatists, however, endorse no particular pedagogical or ideological position and are eclectic in their teaching, a style sometimes referred to as the *eclectic approach*. The ongoing debate testifies to the variety and vitality of the profession.

**Public and community issues.** LT requires today, in every country, deliberate policy decisions by government on such issues as: which language should be encouraged; how many teachers should be employed; what training teachers should be given; how they should be valued in terms of pay and conditions; what average class size should be supported and at what rate of intensity; what teaching resources and materials should be supplied; what support should be given to research and development; what the degree of direct government intervention should be, in such matters as setting a syllabus, prescribing books, and inspecting the teaching; what standards of achievement are desirable and hence what examinations and qualifications should be promoted. Community attitudes (friendly or hostile) towards particular peoples and their languages also strongly affect teaching, as do popular assumptions about how successful members of the community will be in learning languages: for example, compare expectations about whether the average citizen will learn at least one foreign language in The Netherlands and in Britain.

**Teaching formats.** A further aspect of the public and community dimension of LT is the educational format in which it takes place: in a teacher-led class in a school or college; through distance learning by correspondence or radio or television (with or without an element of face-to-face tutoring); in one-to-one contact between a teacher and a learner; in solitary, self-study learning; in 'immersion teaching' (for example, with immigrant children in Canada, where learners are immersed in an English-speaking or

French-speaking life instead of experiencing the target language only in timetabled class hours). Most of these formats are found in most countries; which one is being employed at a given time determines the different settings that will be necessary in the parameters of LT, in order to bring about effective LL. In addition, the ultimate aims of language teaching need to be clarified: whether it is part of general education, geared to instrumental needs such as the integration of immigrants into a particular society, or for such specific purposes as English for maritime communication (*Seaspeak*) or air traffic control (*Airpeak*).

**Conclusion.** Debates in L1 and L2 teaching in the 20c may be interpreted in terms of a tension between the *dual tradition* (the literary and grammar-translation methods) and the *reform movement* (the direct method and its various derivatives). The literary method has provided immediate contact with prestigious texts, serious subject matter, and a link with ancient traditions, while the various phases of grammar-translation have promised a less élitist approach, devising short-cuts to mastery of grammar or the social strategies necessary to become (more or less) part of the target-language community. Greater emphasis on writing or on speech has varied from time to time and place to place, but generally movements to renew or improve the effectiveness of teaching have consistently combined with movements to undercut the classical humanist traditions by appealing directly to usefulness. Reform movements have generally been equivocal about whether they are doing more efficiently the same things that previous traditions have done or whether they are subverting the previous traditions by changing the goals, substituting what any learner could do for what only a select few would wish to do. Each reform has therefore attracted adherents who imagined that they were undermining the values of previous education, together with those whose intention was to improve its effectiveness but not to question its goals.

**LANGUAGE TYPOLOGY.** See LINGUISTIC TYPOLOGY.

**LANGUAGE UNIVERSALS**, also **universals of language**. Terms in linguistics for presumed universal properties of human language, sometimes divided into: *absolute universals*, properties that exist in all languages, and constraints that are valid for all languages, and *statistical universals*, properties that are likely to exist in languages. Universals may exist independently or may be implicational: if a language has X, then it will have Y. The recent search for universals has had two main sources of inspiration: Joseph Greenberg (1963, below) attempted to specify implicational universals relating to word order, while Noam Chomsky (1965, below) argued that a large proportion of language is genetically inbuilt, and that this is likely to be reflected in

such universals. Initially, he hoped to find universals of two types: *substantive universals*, which specify the substance out of which languages are made, such as a universal set of possible sounds, from which different languages select a subset; *formal universals*, which specify that all languages must be arranged in accordance with fixed principles: for example, words can only be combined in certain prescribed ways.

When abstract properties common to all languages proved hard to identify, researchers gradually moved to a search for universal constraints, in an attempt to discover the bounds within which human language operates. A common approach has been to study English in depth, then to examine the extent to which abstract constraints on English are observable in other languages: starting with the sentence *Angela bought a duck and a parrot*, it is possible to form the related question: *What did Angela buy?* It is not, however, possible to question only part of the noun phrase at the end of the sentence and say: *\*What did Angela buy a duck and?* or *\*What did Angela buy and a parrot?* A similar restriction against moving part of a noun phrase seems to be valid for many, perhaps all, languages. More recently, the failure to find a sufficient number of convincing constraints has led to an upsurge of interest in linguistic typology, the attempt to find properties common to groups of languages. Chomsky has also revised his ideas about what may be universal. He argues (1986, below) that a genetically inherited Universal Grammar (UG) involves some fixed principles, supplemented by options which have to be selected after exposure to a particular language. See LANGUAGE ACQUISITION DEVICE, LINGUISTIC TYPOLOGY. [LANGUAGE]. J.M.A.

**LANGUE AND PAROLE** [Early 20c: French, language and speech]. Contrasting terms in linguistics, proposed by Ferdinand de Saussure (*Cours de linguistique générale*, 1915) to distinguish between the language system of a group (*langue*) and instances of its use (*parole*) within language in general (*langage*). See COMPETENCE AND PERFORMANCE. [LANGUAGE]. J.M.A.

**LANKAN ENGLISH.** See SRI LANKA.

**LAPSUS LINGUAE.** See SLIP OF THE TONGUE.

**LARYNX** [16c: from Latin *larynx*, from Greek *lárunx*. Adjective: *laryngeal*]. An anatomical term for the modified upper part of the trachea (windpipe) of air-breathing animals. It is commonly known as the *voice box* in humans because of its importance in the creation of the voice. It contains the vocal cords or folds and influences voice quality. The front cartilage of the larynx is the *Adam's apple*, prominent in adult males. See GLOTTIS, VOCAL CORDS/FOLDS, VOICE, VOICE QUALITY. [SPEECH]. G.K.

**LASER** [1950s: an acronym, from *Lightwave Amplification by Stimulated Emission of Radiation*]. A general and technical term for a device that produces an intense and coherent beam of light. It has many uses in industry, medicine, and communication. When lasers scan written materials, the reflected images are transformed into electromagnetic data for storage. Such data can also be transferred back into light and used to create accurate images on paper. In the *fax* or *facsimile transfer machine*, a laser scans a document and translates the image into signals that can be sent by telephone to another machine that re-creates the image on a device resembling a photocopier drum, producing hard copy at the other end. Lasers are also used to generate typesetting images and, combined with the computer, allow for great flexibility in manipulating visual data. A *laser printer* translates encoded data from a computer into light impulses which are directed on to a small photocopying drum; the image is then transferred to paper. See FAX, PHOTOCOPYING. [TECHNOLOGY]. W.W.B.

**LATE MODERN ENGLISH.** See ENGLISH, MODERN ENGLISH, PERIOD DICTIONARIES OF ENGLISH.

**LATERAL** [16c: from Latin *lateralis* at the side(s)]. A term in phonetics for a vocal sound in which air gets round central blockage by the tongue by escaping round the sides. The only English lateral is /l/ as in *large, hollow, barrel*; Welsh has /l/ as in *Llanberis, Llangollen*. See L-SOUNDS, WELSH. [SPEECH]. G.K.

**LATIN**<sup>1</sup> [Before 10c: from Latin *Latinus*, the adjective of *Latium* ('the broad place'), the region of the River Tiber and the Alban hills in west-central Italy, where the city of Rome was reputedly founded in 753 BC]. The classical and cultural language of Western Europe, a member of the Indo-European language family, and the precursor of the Romance languages. Latin does not have as long an unbroken tradition as Greek, but has existed for c. 3,000 years, a period of time divided by scholars into four phases: (1) From an unknown date to around 5c BC, a western

Italic dialect dominated by Etruscan. (2) From 4c BC to 5c AD, the language of the Roman Republic and Empire, greatly influenced by Greek, with a literary standard and popular forms from which the Romance languages derive. (3) From 3c to 20c, the international vehicle of the Roman Catholic Church, and the learned language of Western Christendom. (4) Also *Neo-Latin, New Latin* (c.15c onward). The cultural medium of Renaissance and post-Renaissance Europe, rich in Greek borrowings.

Particularly since the Renaissance, Latin has also been the scholarly and literary seed-corn for the vernacular European languages. English has proved to be the most receptive among the Germanic languages to direct as well as indirect Latin influence, largely as a consequence of the Norman Conquest.

**Nature and influence.** Latin is a highly inflected language noted for conciseness of expression: for example, the one word *amābunt* translates the three English words *they will love*, while its passive form *amābuntur* translates *they will be loved*. For centuries, formal education in the British Isles has been closely associated with the teaching and learning of Latin. Especially in England, this training was provided in *grammar schools*, in which the term *grammar* was virtually synonymous with *Latin*. Such institutions in the 16c bear close comparison with 19-20c English-medium schools in such countries as India and Nigeria, and with contemporary grammar-based ways of teaching English in such countries as Japan and Korea. Both the terms and the style of the traditional grammatical study of English derive from Latin, and the formal analysis of English grammar widely taught until recent decades owes much to a Latin grammatical model derived in its turn from a Greek model.

Although in the later 20c there has been less interest in and emphasis on the learning of Latin in many school systems, its indirect influence remains great: Latin language and literature have had a pervasive influence over many modern languages and literatures, and the language continues to be taught in its classical form in many schools in Europe and throughout the European diaspora. Latin is often described as a 'dead' language, a metaphor which holds true in that it is well over a millennium since Latin was learned and used as a mother tongue. The concept of 'deadness' is, however, suspect in terms of the unbroken tradition of learning and using Latin, of scholarship in Latin and derived from Latin, and of the Latin loans in so many languages throughout the world. Much of the work done in Latin and the borrowing of lexical material from Latin took place long after it had

ceased to be a language acquired by children from the community around them.

**Latin and English.** In the 4c, St Jerome's Vulgate Bible became the model for Christian writing in Latin. This model was further developed by St Augustine of Hippo (4–5c), a teacher of rhetoric, in works like *Civitas Dei* (The City of God). His example was followed in England by such scholars as Aldhelm (7c), Bede (7–8c), Alcuin (8–9c), and Aelfric (10–11c), while the translations from Latin into Old English by King Alfred of Wessex (9c) laid the foundation of early English prose writing. The fluid interplay of languages in Britain during the Middle Ages is illustrated by three events in the 12c, all associated with the cycle of mythic and legendary material known as the *Matter of Britain*. First, the Oxford cleric Galfridus Monemutensis (Geoffrey of Monmouth), an Englishman with Welsh and Breton connections, wrote the Latin prose work *Historia regum Britanniae* (History of the kings of Britain, c.1135). He claimed that he translated this work from a very old book 'in the British tongue': that is, in a form of Celtic similar to Welsh. The History begins with the settlement in Britain of a great-grandson of the Trojan hero Aeneas, whose name was Brutus and who purportedly gave his name to the island. It ends with the legendary King Arthur, a Celtic hero adopted by the Anglo-Normans. The History was then translated into French, and further romanticized, as the *Roman de Brut* (1155) by Wace, an Anglo-Norman from Jersey. This work then served as the source for the *Brut*, an alliterative poem in the late 12c by the Worcestershire priest Layamon, in what is now called Middle English. Layamon's work was the first appearance in English of the stories of Arthur, Lear, and Cymbeline.

Latin continued to be the primary language of scholarship until the end of the 17c. Such scholars as William Camden wrote by preference in Latin, considering that to use English was to write in sand, and for major contributors to the canon of English literature, such as John Milton, Latin was an essential professional tool. In the late 17c, Sir Isaac Newton chose Latin as the medium for *Philosophiae naturalis principia mathematica* (Mathematical principles of natural philosophy), better known as the *Principia* (1687), and this work was not translated into English until 1729. He chose Latin to ensure that the *Principia* would be widely read, but later wrote *Opticks* in English, its date of publication (1704) marking the point at which significant scholarly work began to appear in English first and, in due course, without any translation into Latin. Because of familiarity with the Classics, however, writers continued to evoke in English

the images and phrases of ancient Rome, often only slightly adapted, and to allude fluently to topics that, until well into the 20c, their readership could generally grasp without editorial help. In addition, numerous Latin quotations and tags have enjoyed an extended life in English to the present day.

**Anglo-Latin pronunciation.** The pronunciation of Latin by speakers of English and the pronunciation of Latin words and tags used in English have had a turbulent history. In Anglo-Saxon times, the pronunciation of Latin had already been somewhat nativized, and after the Norman Conquest, when Latin was taught through the medium of French, it took on a French aspect: for example, both the *i* in *ius* and the *g* in *gens* were spoken as an affricate (the *j*-sound in *just* and *gent*). After the 13c, soft *c* was pronounced /s/, and long vowels were shortened before two or more consonants, as in *census* and *nullus*, much as in present-day English *census* and *null*. In the 14c, English began to take over as the medium of instruction for Latin, largely as a result of the work of the educational reformer John Cornwall, and remained the norm until the early 16c. Controversy was aroused throughout Europe, however, when in 1528 Erasmus published *De recta Latini Graecique sermonis pronuntiatione* (On the correct pronunciation of Latin and Greek). This work discussed the diverse national accents of Latin, forms of pronunciation that were often mutually unintelligible and could lead to confusion and derision at international gatherings. Erasmus proposed that they all be standardized on certain assumptions about classical Latin speech, such as the use of hard *c* and *g*, voicelessness in intervocalic *s*, and the maintenance of contrasts in vowel length.

Erasmian ideas were taken up at Cambridge by such radical young scholars as John Cheke and Thomas Smith, and met with great resistance. In 1542, a university edict forbade Erasmian pronunciation, with heavy penalties that included the beating of offending undergraduates and the expulsion of offending masters. According to Stephen Gardiner, the Chancellor who imposed the edict, speakers of Erasmian Latin were unintelligible to their elders. In 1558, the edict was repealed. The controversy, however, had been maturing while the Great Vowel Shift was taking place, and just as this shift was transforming the pronunciation of mainstream English (and creating many anomalies of spelling and pronunciation), so it also affected the pronunciation of Latin. For example, the Latin long vowels *ā*, *ī*, *ē* acquired the values now found in the English words *same*, *fine*, *been*. A highly Anglicized, non-Erasmian

Latin became the norm in England from the later 16c to the earlier 20c.

Around 1870, a new reformed pronunciation was proposed at Oxford and Cambridge, but did not become widely used until the early 20c, and continued to be resisted until the outbreak of the Second World War. One outcome of the ancient tension between the native and the classical pronunciations has been a certain confusion regarding not only the pronunciation of Latin in its own right but also the pronunciation of some Latin elements in English. These include endings of words like *formulae* (whether to be 'ay' as in *say*, 'ee' as in *see*, or 'y' as in *try*) and *stimuli* (whether to be 'y' as in *try* or 'ee' as in *see*). Anglicization is, however, the norm for most everyday tags: for example, *tempus fugit* with a schwa for the *u* in *tempus*, and a soft *g*; *bona fide* with a long *o* and a schwa in *bona*, and *i* as in *hide* in *fide* (with the alternative pronunciations 'fidey' and 'fide' in both BrE and AmE). In Scotland, in contrast to England, there has been a strong historical preference for an Erasmian pronunciation, with full vowel values and hard *g* and *c*.

**Latin in English.** A large part of the lexicon of Latin has entered English in two major waves: mainly religious vocabulary from the time of Old English until the Reformation, and mainly scientific, scholarly, and legal vocabulary (slightly different in English and Scottish law), from the Middle Ages onwards. In the 17c, such makers of English dictionaries as John Bullokar deliberately converted Latin words into English, building on the already strong French component of the vocabulary so as to create a Latinate register of education and refinement. In it, words like *fraternity* and *feline* were set lexically and stylistically 'above' words like *brotherhood* and *cat*. These lexicographers' methods were straightforward: they turned the endings of Latin words into Anglo-French endings, a practice that has continued with minor modifications ever since: thus, *alacritas* became French-like *alacritie* (later *alacrity*), *catalogus* (Greek in origin) became *catalogue* (later *catalog* in AmE), *incantatio* became *incantation*, *onerosus* became *onerous*, *puerilis* became *puerile*, and *ruminare* (through its past participle *ruminatus*) became *ruminate*.

Such processes are so transparent to those with a knowledge of Latin morphology that they can usually without much difficulty identify relationships between basic Latin forms and words derived from them in languages like Spanish, French, and English. The majority of such forms are either verbal or nominal-adjectival, the verbal relating to the four Latin *conjugations*, the nominal-adjectival relating mainly to three

of the five Latin *declensions*. Latin verbs are routinely listed with two canonical forms, the infinitive and the neuter of the past participle: *amare/amatum* to love (first conjugation); *monēre/monitum* to warn (second); *regere/rectum* to rule (third); *audire/auditum* to hear (fourth). Latin nouns and adjectives are often listed using two categories of case (nominative for the subject of a sentence, genitive for possession): *regina/reginae* queen, *nigra/nigrae* black (both first declension); *dominus/domini* master, *ager/agri* field, *magnus/magni* great, *niger/nigri* black (all second); *rex/regis* king, *nobilis/nobilis* noble (both third).

The bulk of words in Latin-derived English words relate etymologically and structurally to these two broad types. For example, from the verb *cantare/cantatum* (to sing, usually with the form *-cent-* after a prefix) come such words as *cant*, *canticle*, *cantor*, *descant*, *incantation*, *accent*, *incentive*, *precentor*, *recant* (with *enchant*, *enchantment* through French, and *cantata*, *canto* through Italian). From *monēre/monitum* (to warn) come *monitor*, *admonish*, *admonition*, *admonitory*, *premonition*. From *agere/actum* (to do, act) come *agent*, *agency*, *agile*, *agility*, *agitate*, *act*, *actor*, *action*, *enact*, *exact*, *inaction*, *inactivity*. From *currere/cursum* (to run) come *current*, *currency*, *cursive*, *cursor*, *cursory*, *concur*, *incur*, *excursion*, *occurrence*, *precursor*, *recurrent*. From *claudere/clausum* (to close, with the forms *-clud-*/*-clus-* after a prefix) come *clause*, *include*, *exclude*, *preclude*, *seclusive*, *conclusion*. From *dominus/domini* (master) and *dominare/dominatum* (to master) come *dominion*, *dominate*, *domination*, *dominie*, *domineering* (through French and Dutch), *domain* (through French). From *caput/capitis* (head) come *capital*, *capitalism*, *capitalize*, *decapitate*, *decapitation* (and through French *cattle*, *chapter*, *chattel*, *chief*). From *avidus/avid* (greedy) come *avid*, *avidity*; from *rigidus/rigidi* (stiff) come *rigid*, *rigidity*; from *audax/audacis* (bold) come *audacious*, *audacity*; from *ferox/ferocis* (fierce) come *ferocious*, *ferocity*.

In addition, many words that in Latin actually perform grammatical functions have been nominalized in English: *caveat* (beware) as a synonym for a warning, *floruit* (he/she flourished) to mark the period when someone was in his or her prime (usually when precise birth and death dates are not known), *imprimatur* (let it be printed) for someone's approval of a published text, *quorum* (of whom) the minimum number of people necessary for a committee or similar meeting, *tandem* (at length) for a bicycle built for two. Similarly, many phrases and sentences of Latin are perpetuated as tags and mottoes: *ad astra per aspera* to the stars through hardships (the motto of the US state of Kansas), *per ardua*

*ad astra* through difficulties to the stars (the motto of the Royal Air Force); *habeas corpus* you may have the body (a technical term in law); *ipse dixit* he said it himself (as a sometimes caustic comment); *non sequitur* it does not follow (a name for a certain kind of logical fallacy). Further phrases have been abbreviated, and are part of the currency of everyday life, including writing: *AD* (for *anno Domini* in the year of the Lord, as part of calendar dating), *a.m.* (for *ante meridiem* before midday), *p.m.* (*post meridiem* after midday), e.g. (*exempli gratia* for the sake of example), i.e. (*id est* that is).

Currently, continuing a process of de-Latinization that has gathered momentum since the 18c (mainly because of the spread of literacy beyond the schools where Latin was a core subject), there is a tendency to translate such expressions into English (*time flies* rather than *tempus fugit*; *don't despair, don't give up* rather than *nil desperandum*), and to make Latin words more conventionally English: the plurals *cactuses* and *referendums* rather than *cacti* and *referenda*. In the train of such changes, and because the influence of Latin is still tenacious, there is often uncertainty and friction regarding usage: for example, in such vexed issues as the use of *data* and *media* as singular or plural nouns.

See ABBREVIATION, ABLATIVE ABSOLUTE, ABLATIVE CASE, ACCUSATIVE CASE, ANGLO-LATIN, BISOCIATION, BOG LATIN, BORROWING, CASE, CAWDREY, CLASSICAL COMPOUND, CLASSICAL ENDINGS, CLASSICAL LANGUAGE, CLAUSE ANALYSIS, COMPOUND WORD, CONJUGATION, COOPER, DATIVE CASE, DECLENSION, DERIVATION, DOG-, EARLY MODERN ENGLISH, ENGLISH, ENGLISH PLACENAMES, ETYMOLOGY, FOREIGNISM, FRENCH, FUSIONAL, GENITIVE CASE, GENRE, GRAMMAR, GRAMMAR-TRANSLATION METHOD, GREEK, HISTORY OF ENGLISH, INDO-EUROPEAN LANGUAGES, LATIN<sup>2</sup>, LATIN ANALOGY, LATINISM, LATINITY, LATIN LITERATURE, LATIN TAG, LEXICAL BAR, LITERATURE, MOCK, NEO-LATIN, NOMINATIVE CASE, NOTES AND REFERENCES, PARADIGM, PART OF SPEECH, PIG LATIN, PLURAL, RHETORIC, ROMANCE LANGUAGES, SANSKRIT, SENTENCE, SPANISH, STANDARD, THIEVES' LATIN, VOCATIVE, VULGAR (LATIN), WORD, WORD-FORMATION. [EUROPE, GRAMMAR, LANGUAGE]. T.MCA.

**LATIN<sup>2</sup>** (1) A native or inhabitant of Latium in ancient Italy; an ancient Roman. (2) A member of any of the Latin peoples (that is, the speakers of Romance languages) both in southern Europe and elsewhere. (3) Relating to either of these, especially in Central or South America: *Latin America, the Latin republics*. Although the term is used to include the French and French-speaking people and the Italians, it is most usu-

ally understood to refer to speakers of Spanish and Portuguese in the New World, their cultures, languages, usages in English, etc. See AMERICAN<sup>1</sup>, ANGLO, CHICANO, HISPANIC, LATIN<sup>1</sup>, LATINO, PORTUGUESE, ROMANCE LANGUAGES, SPANISH. [AMERICAS, EUROPE, LANGUAGE, NAME]. T.MCA.

**LATIN ANALOGY, The.** A comparison between the prospects of late 20c English and the fate of Latin at the end of the Roman Empire, as in: 'One possible scenario for English as an international language is that it will succumb to the same fate as Latin did in the Middle Ages. That is, that the regional varieties will develop independently to the point where they become different languages rather than varieties of the same language' (Alan Maley, *English Today* 1, Jan. 1985); 'Small wonder that there should have been in recent years fresh talk of the diaspora of English into several mutually incomprehensible languages. The fate of Latin during and after the fall of the Roman Empire presents us with such distinct languages today as French, Spanish, Romanian, and Italian. With the growth of national separatism in the English-speaking countries . . . many foresee a similar fissiparous future for English' (Randolph Quirk, 'The English Language in a Global Context', in R. Quirk & H. G. Widdowson (eds.), *English in the World*, 1985).

**The forms of the analogy.** The comparison can be made in three ways: (1) Pessimistically, sometimes with apocalyptic overtones concerning 'the death of English as we know it'. Here, the breakup of Latin is presented as a dire warning to a careless world. (2) Optimistically, in the spirit of one-world liberalism, pointing to unity in diversity within 'the English languages'. Here, the breakup of Latin is seen as leading to the rich fabric of the Romance languages and the hybrid strength of English. (3) More or less neutrally and objectively, seeking as far as possible to establish the facts: whether Latin did break up and whether such an analogy is apt. Crucial to the discussion are the metaphors used in talking about change in Latin: for example, negative as in *broke up, disintegrated* and positive as in *gave birth to, was the mother language of*.

**The evolution of Latin.** The surviving evidence indicates that the everyday common language of the citizens of the Roman Empire was not the Latin used for literary, legal, and other such purposes. The populace at large used *Vulgar Latin* (*lingua Latina vulgaris*), the speech of the common people. This varied from region to region and coexisted with many vernacular tongues. The Romance languages derive from varieties of

this Latin, such as *Gallo-Roman* in France, and not from the idiom of such aristocrats of literature as Cicero and Virgil. The history of the language of scholars and clerks was in fact different from that of the Latin of the people. It had a script standard that evolved from imperial through ecclesiastical Latin into the Neo-Latin of the late Middle Ages and Renaissance. This variety did not break up as such (although it developed markedly different national pronunciations), but continued as a unity because Europe was 'a morass of hundreds of languages and dialects, most of them never written to this day' (Walter J. Ong, *Orality and Literacy*, 1982). In this 'morass', Ong emphasizes, a single medium of religion, culture, learning, and diplomacy such as what he calls 'Learned Latin' was essential.

Learned Latin derived its power and authority from *not* being ordinary. Like Sanskrit in India, it was canonically fixed and honoured for that reason. It had no baby talk and colloquial usages, and could therefore serve as an elevated second language everywhere. Though variably pronounced throughout Europe, and a dynamic rather than a static medium, it was written for centuries in much the same way in every country. When printing was invented in the 15c, its written conventions helped establish the print standard followed in the European vernaculars. Latin was not a monolith that collapsed because people did not take proper care of it. Rather, in Iberia, one people's Latin evolved into forms called Spanish, Catalan, and Portuguese; among the Dacians, a Romanian complex emerged; among the Gauls and Franks, Gallo-Roman became Francien, then the standard form of French; and the many varieties of Italian developed in the home peninsula and adjacent islands. Central Sardinian or Logudorian was to remain the most conservative of the Romance languages. The historical record is incomplete, the processes were slow, and the outcomes so uncertain that it is only with hindsight that scholars can point to what appears to have happened. A textual Latin survived the changes in the oral Latins, which became in time distinct enough to be called separate languages. Among them, intelligibility varies not only from language to language but among the varieties (called dialects and patois) within each language.

**The evolution of English.** When this condition is compared to present-day English, the analogy takes on a different look. Many of the details of how the Romance languages emerged are missing, but it is currently possible to study what is happening to English, with its print standard, its national and regional varieties and subvarieties, and its pidgins and creoles. Standard

English has much in common with Learned Latin: it is a minority form among the many forms of English, holding a metaphoric centre for purposes of education and communication, both nationally and internationally. The varieties of educated English usage around the world, buttressed by the print standard, are mutually intelligible, but many of the Englishes of the people are not. They appear to be about as mutually intelligible or unintelligible as the Latins of the late Empire, but, because of the power of mass communication, some of them may have become more mutually transparent than in the past and therefore less likely to part company in the future. In the case of some varieties, the status of separate language has long been discussed: Scots is for some a language, for others a dialect, for others something in between, and for others still sometimes a language and sometimes a dialect; Tok Pisin and other creoles are now generally described as 'English-based' rather than as kinds of English. If the Americans had so chosen, they could have called their language *American* and not *English* (and casually they often do), but the prognosis that one day AmE will become as distinct from BrE as Spanish is from Italian does not appear at present to have much foundation. See CLASSICAL LANGUAGE, CREOLE, LATIN<sup>1</sup>, STANDARD, STANDARD ENGLISH. [HISTORY, LANGUAGE]. T.MCA.

**LATINATE** [1900s]. Relating to, derived from, or in the style of Latin: 'Who among us has not strained to decipher the Latinate crypticisms of a doctor's pronouncements?' (Don Ethan Miller, *The Book of Jargon*, 1981). The term is used for both words in which the Latin form has been retained (such as *formula*, *latex*, *mausoleum*, *stimulus*) and those in which adaptations have been made (such as *elucidate*, *legal*, *pungency*, *vociferous*). Texts in a language like English are Latinate if they adhere closely to the models of classical Rome. See AUREATE DICTION, DEFINITION, INKHORN TERM/INKHORNISM, JOHNSONIAN, LATIN<sup>1</sup>, LATINITY. [STYLE]. T.MCA.

**LATINISM** [16c: from Latin *Latinismus* a Latin usage]. A Latin word or other element in another language: for example, in English the word *stimulus*, the phrase *non sequitur*, the sentence *Sic transit gloria mundi*, and the derivative *illegality* (from *illegalis*). The term is sometimes used pejoratively: 'The UGC report is a constipated sequence of Latinisms that would serve as a prize exhibit in any debate about the decline of the English language' (*Observer*, 12 Feb. 1989). See FOREIGNISM, -ISM, LATIN<sup>1</sup>, LATIN TAG. [STYLE, WORD]. T.MCA.

**LATINITY** [17c: from Latin *Latinitas* 'Latinness']. (1) A Latin character or quality. (2) Familiarity with Latin and ease in its use: 'the Humanist traditions of Scottish Latinity' (George Davie, *The Democratic Intellect*, 1961); 'Latinity has largely vanished from the world. What people forget is how long it was kept up' (Tom Shippey, *London Review of Books*, 11 Oct. 1990). (3) A Latinate style, such as that of Samuel Johnson. Compare ANGLICITY. See JOHN-SONESE, LATIN<sup>1</sup>. [STYLE]. T.MCA.

**LATIN LITERATURE.** Literature in Latin, either the literary texts of the Roman Republic and Empire (3c BC–2c AD) or the entire body of writings in Latin from ancient Rome through the Middle Ages and the Renaissance, to works composed in Europe and elsewhere until at least the 18c. Just as Latin literature influenced later European vernaculars, so Latin was itself influenced by Greek literature. The oldest known Latin text (6c BC) is a four-word inscription in the Greek alphabet, and the first literary writer in Latin was Livius Andronicus (3c BC), a freed slave from the Greek colony of Tarentum in southern Italy, who, by translating Homer's *Odyssey*, set a precedent for the adoption of Greek genres into Latin and the loan translation of Greek words. The Romans adopted from the Greeks not only the three great genres (epic, drama, and lyric poetry), but also rhetoric and the writing of history and philosophy. To these they added satire and a forerunner of the novel. Among the most prominent Latin writers, Cicero developed an influential prose style, Livy adapted the historical prose style of Thucydides, Virgil became the Roman Homer, Caesar was an autobiographer and military propagandist, Catullus was a critic, Horace a poet, Ovid a mythologist, Pliny the Elder an encyclopedist, and Petronius Arbiter (the *Satyricon*) and Apuleius (*The Golden Ass*) kinds of novelist. All had a powerful and permanent effect on writing in the later languages of Europe. See ENGLISH LITERATURE, GREEK LITERATURE, LATIN<sup>1</sup>. [EUROPE, LITERATURE]. T.MCA.

**LATINO** [1940s: from American Spanish, a special use of *Latino* Latin: see LATIN<sup>2</sup>. Plural *Latinos*. Used both with and without an initial capital letter]. Someone of Latin-American background or descent, especially if Spanish-speaking and in the US. See CHICANO, HISPANIC, SPANGLISH, SPANISH. Compare LADINO, LATIN<sup>2</sup>. [AMERICAS, NAME]. T.MCA.

**LATIN TAG.** A Latin phrase or other expression in English, such as *obiter dictum* ('a saying by the way') an incidental remark, *pro tem* (short for *pro tempore*) for the time being. Until the

mid-20c, Latin tags were widely used, intentionally or otherwise, as a mark of education, but in recent decades have grown less common (and often less understood) in educated circles, in which less common tags are often considered affected or unnecessary, even by those who know Latin. As a result, expressions like *Tempus fugit* are often loan-translated as 'Time flies'. Many tags are, however, firmly entrenched in everyday usage, whether in full or as abbreviations: in law (*de jure*, *habeas corpus*, *sub judice*), in medicine (*locum tenens*, *placebo*, *post mortem*), in logic (*argumentum ad hominem*, *non sequitur*, *reductio ad absurdum*), in administration (*ad hoc*, *quorum*, *sine die*), in religion (*Deo volente*, *Pax vobiscum*, *Requiescat in pace*), as sayings (*carpe diem*, *in vino veritas*), as set phrases (*mutatis mutandis*, *ne plus ultra*), as mottoes (*Nemo me impune lacessit*, *Semper fidelis*), and as academic footnotes and endnotes (*ibid.*, *op cit.*, *passim*). Some have passed into the language at large: as phrases (*bona fides*, *magnum opus*, *modus operandi*, *per annum*, *prima facie*, *quid pro quo*, *sine qua non*, *terra firma*, *vade mecum*), and as abbreviations (*a.m.*, *c.*, *cf.*, *e.g.*, *i.e.*, *p.m.*, *R.I.P.*). Works of reference list and explain such tags: for example, Eugene Ehrlich's *Nil Desperandum: A Dictionary of Latin Tags and Phrases* (Robert Hale, 1985). See ABBREVIATION, FOREIGNISM, LATIN<sup>1</sup>, NOTES AND REFERENCES, TAG. [STYLE, USAGE]. T.MCA.

**LAW FRENCH.** A fossilized form of Norman French used until the 18c in the courts of England. In 1362, French ceased to be a language of pleading, but its legal use was not officially abandoned until 1731. Many archaic French usages continue in the legal usage of England, such as: *amerce*, *eyre*, *implead*, *jeofail*, *mainour*, *malfeseance*, *puisne*, *seisin*, *tort*. French word order is preserved in *attorney general*, *court martial*, *fee simple*, *heir male*, *letters patent*, *malice aforethought*. The names of most legal roles in English are French in origin, such as: *advocate*, *attorney*, *bailiff*, *coroner*, *counsel*, *defendant*, *judge*, *jury*, *plaintiff*. The same is the case with the names of many crimes (such as *arson*, *assault*, *felony*, *fraud*, *libel*, *perjury*, *slander*, *trespass*) and of legal actions, processes, and institutions (such as *bail*, *bill*, *decree*, *evidence*, *fine*, *forfeit*, *gaol/jail*, *inquest*, *penalty*, *petition*, *pillory*, *plea*, *prison*, *proof*, *punishment*, *ransom*, *sentence*, *suit*, *summons*, *verdict*). See NORMAN FRENCH. [EUROPE, LANGUAGE]. J.M.G.

**LAWRENCE, D(avid) H(erb)ert** [1885–1930]. English writer and painter, born in Eastwood, Nottinghamshire, and educated at University College, Nottingham. He taught in Croydon for a time and published his first novel, *The White Peacock*, in 1911. His father was a coal-miner,

his mother a former teacher who regarded herself as superior to her husband and his family. This and other family tensions, including Lawrence's attachment to his mother, were fictionalized in the novel *Sons and Lovers* (1913). In 1912, he eloped with Frieda, the wife of the lexicographer Ernest Weekley. She was German and during the First World War the couple fell under official suspicion. Resentment about this and the medical examination by which he was rejected for military service contributed to Lawrence's self-exile; after 1918 he never lived for long in England. His novels *The Rainbow* (1915) and *Women in Love* (1920) explored the theme of marriage and sexual attraction more frankly than had been customary in fiction, and aroused hostile criticism. Lawrence lived for some time in Mexico, the setting of *The Plumed Serpent* (1926). His last novel, *Lady Chatterley's Lover* (1928), was first published in Florence. He also wrote poetry and short stories. He died of tuberculosis in the South of France.

Lawrence suffered continually from charges of obscenity, both in his writing and his paintings, some of which were impounded at an exhibition in 1929. *Lady Chatterley's Lover* contained both direct descriptions of sexual intercourse and four-letter words, with the result that, although the novel had long been available in foreign editions, it had not been published in full in Britain. In 1960, however, Penguin books brought out an unexpurgated edition and was duly prosecuted under the Obscene Publications Act of 1959. Eminent witnesses gave strong opinions on both sides; the acquittal of the publishers, whether seen as a catalyst or a symptom, was significant in the new freedom of literary expression. Though some readers may find Lawrence distasteful and regard him as obscene or prurient, he pioneered explicit writing about sexuality and the use of words hitherto taboo in print. He was acquainted with Freudian psychology and used such theories to explore personal relationships. He has been accused of excessive earnestness about the need for individual fulfilment and of failing to see the humorous side of life. Lawrence was in many ways a late Romantic who obtruded his own views at a time when the withdrawal of the author was becoming characteristic of fiction. He was outstanding among 20c writers in describing the natural world, which he related to the feelings of his characters almost in the manner of the *pathetic fallacy*. In dialogue, he recorded the conversation of both simple and sophisticated people, and made considerable use of dialect without obscuring it by excessive deviation. Rather, he showed the nuances of intensity among different dialect speakers, such as Mr and Mrs Morel in *Sons and Lovers*. Some critics, including F. R. Leavis, have regarded him as

the greatest British novelist of the early 20c. See index. [BIOGRAPHY, EUROPE, LITERATURE, STYLE].  
R.C.

**LAX.** See VOWEL QUANTITY.

**LAYOUT** [1840s: AmE]. (1) A plan of a building, periodical, page, etc., showing how the parts contribute to the whole and relate to one another; the arrangement of the parts in such a building, periodical, page, etc. (2) How material is laid out in a book, magazine, newspaper, or other publication. (3) The process of making layouts in publishing, etc. (4) Also *spread*. In journalism, treatment of a subject that usually consists of a story or report, supplementary stories or data (often in *sidebars*: additional matter in marked-off columns or panels), and illustrations with captions (often called a *picture spread*). Such a layout usually extends over several columns or pages. See EDITING, GRAPHIC DESIGN, HEADLINE, PUBLISHING, SPACE, TYPOGRAPHY, WHITE SPACE. [MEDIA, WRITING].  
T.MCA.

**LEACOCK, Stephen (Butler)** [1869–1944]. Canadian writer and humorist, born at Swanmoor, Hampshire, England, and educated at the U. of Toronto and the U. of Chicago (Ph.D., 1899). He taught Political Economy at McGill U. in Montreal (1901–36). His best-known works are *Sunshine Sketches of a Little Town* (1912), *Arcadian Adventures with the Idle Rich* (1914), stories like 'My Financial Career', 'Hoodoo McFiggins' Christmas', 'Boarding House Geometry', a travel book *My Discovery of England* (1922), and his memoir *The Boy I Left Behind Me* (1946). He comments on CanE: 'When I left Hampshire I spoke English. But I've lost it, and it might be too late to pick it up again' (in 'I'll Stay in Canada', *Funny Pieces*, 1936). He reveals typical Canadian linguistic self-deprecation when he notes: 'I myself talk Ontario English. I don't admire it, but it's all I can do: anything is better than affectation' ('Good and Bad Language', in *How to Write*, 1943). See index. [AMERICAS, BIOGRAPHY, STYLE].  
M.F.

**LEADING QUESTION** [1810s]. A question phrased so as to prompt or suggest an answer: *How do you feel about such terrible behaviour?* as opposed to *How do you feel about behaviour of that kind?* The direction in which the question leads may be favourable or unfavourable for the person questioned. If used by a defending counsel in a court of law, it may serve to help the defendant, and therefore be objected to by the prosecution. Lawyers generally object to other lawyers 'leading the witness' when the direction

does not suit their case. See **LOADED LANGUAGE**, **QUESTION**. [STYLE]. T.MCA.

**LEAF** [Before 10c: from Old English *leaf*]. The name of part of a plant extended to a sheet of paper or other material in a book or periodical, especially one of the folds of a larger sheet cut to size and containing two pages (*recto* and *verso*): 'Who so liste it nat yheere, / Turne ouer the leaf, and these another tale' (Chaucer, 'Miller's Prologue', *The Canterbury Tales*, c.1386). Such phrases as *take a leaf out of someone's book*, *turn over a new leaf* indicate the moral impact of books, especially scripture. See **LEAFLET**, **PAGE**. [TECHNOLOGY]. T.MCA.

**LEAFLET** [Late 19c]. (1) A small-sized leaf of paper or a sheet folded into two or more leaves but not stitched, and containing printed matter, often to be given away free as religious tracts, political pamphlets, and commercial advertisements. (2) A pamphlet. See **BOOKLET**, **LEAF**, **PAMPHLET**. [MEDIA, TECHNOLOGY]. T.MCA.

**LEARNED**, sometimes, to avoid ambiguity, **learnéd** [14c: spoken as two syllables]. (1) Knowing a great deal: *a learned scholar*. (2) Of the work of scholars and classical usage in English: *learned borrowings*; *the learned compounds of English*. See **BIG WORD**, **CLASSICAL COMPOUND**, **CLASSICISM**, **LATIN ANALOGY**. [STYLE]. T.MCA.

**LEARNER'S DICTIONARY**, also **English Learner's Dictionary**, **EFL dictionary**, **ELT dictionary**. A dictionary intended for the use of foreign- and second-language learners and printed entirely in English. For foreign learners of most languages, bidirectional bilingual dictionaries (Italian-English, English-Italian, etc.) have been the norm, but since the 1960s the predominant type in TEFL and TESL has been a monolingual 'learner's dictionary', such as A. S. Hornby's *Advanced Learner's Dictionary of Current English* (Oxford University Press).

**Origins**. Although such dictionaries are products of the 20c, their roots lie in the Renaissance, when the vernacular languages of Europe were emerging from the shadow of Latin as the international language of religion and scholarship. In the 15-16c, dictionaries of Latin were generally unidirectional and bilingual (listed Latin words glossed by vernacular words); in the 16c-17c, monolingual works began to appear, to help native speakers with difficult words in their own languages. Robert Cawdrey's *Table Alphabetical* (1604) was both the first dictionary of English and the first learner's dictionary of English, its purpose being to explain 'hard vsuall

wordes' (mainly of Latin origin) through 'plain' everyday words. In the 18c, in addition to such standardizing works as Samuel Johnson's *Dictionary of the English Language* (1755), a number of pronouncing dictionaries appeared, such as John Walker's *A Critical Pronouncing Dictionary of the English Language* (1791), whose aim was to help the Scots, Irish, and Welsh, as well as English provincials and London Cockneys, to conform to the norms of the 'refined' English of the capital and the court.

**Modern learner's dictionaries**. In the late 19c, a reform movement in the teaching of foreign languages discouraged direct translation and favoured the use of phonetic symbols to help learners with the pronunciation of English words. An outcome of this movement was the *English Pronouncing Dictionary* (1917) of Daniel Jones, in which a mix of everyday words, personal names, and place-names was accompanied by phonetic transcriptions representing RP. Another outcome was the work, in the 1920s-30s, of Harold E. Palmer (mainly in Japan) and Michael West (in Bengal and Britain), who pioneered the arrangement of vocabulary in levels for such purposes as preparing graded and structured readers. This led to the first learner's dictionaries proper, such as Michael West & J. G. Endicott, the *New Method English Dictionary* (Longmans Green, 1935). A parallel work, C. K. Ogden's *The General Basic English Dictionary* (1940), used the 850 words of Basic English as a defining vocabulary for over 20,000 words. The following sections describe the four major present-day learner's dictionaries.

**The ALD**. In 1937, Palmer's colleagues in Japan, A. S. Hornby, E. V. Gatenby, and H. Wakefield, began work on a dictionary which the publisher Kaitakusha brought out in Tokyo in 1942 as the *Idiomatic and Syntactic English Dictionary*. After the war, Oxford University Press reissued this work as *A Learner's Dictionary of Current English* (1948). The 2nd edition was called the *Advanced Learner's Dictionary of Current English* (**ALD**, **ALDCE**) (1963), the 3rd the *Oxford Advanced Learner's Dictionary of Current English* (**ALD**, **OALDCE**) (1974), and the 4th the *Oxford Advanced Learner's Dictionary* (**ALD**, **OALD**) (1989). These constitute an international best-seller whose combined sales have exceeded 14m copies. The attractions of what is now often referred to as 'the Hornby dictionary' when it first came out were: (1) Headwords chosen because experienced teachers believed they were the most useful to foreign learners. (2) The omission of archaic usage, historical and literary references, and etymology. (3) The provision of the pronunciation of each word in IPA transcription derived from Jones's *EPD*. (4) Meanings given

in simple language, avoiding the often convoluted and Latinate constructions used in many mother-tongue dictionaries. (5) Meanings explained by definitions and specimen phrases and sentences to show the headword in use. (6) Grammatical information on every headword provided, including codes referring to the syntactic patterns of all listed verbs. (7) Illustrations providing further information and serving to break up the text. (8) Language-related appendices at the back of the book. For 30 years the *ALD* was unrivalled, accustoming teachers and learners to the existence of a non-historical, non-literary, learner-centred work of reference. It became a familiar tool of the trade for teachers in both EFL and Commonwealth ESL, but because of their BrE slant neither the *ALD* nor other subsequent learner's dictionaries became so well known in North American ESL teaching.

**LDOCE.** When the *Longman Dictionary of Contemporary English* (ed. Paul Procter) appeared in 1978, it was comparable to the *ALD* in size, layout, column style, and typeface, but differed in the following: (1) Headwords defined by means of a restricted defining vocabulary based on Michael West's *General Service List* (1953). (2) Grammatical information based primarily on *A Grammar of Contemporary English* (Randolph Quirk *et al.*, 1972) and provided as codes constituting a kind of distilled grammar of the language. (3) A Jonesian transcription similar to the *ALD* that provided AmE as well as BrE pronunciations. In 1974, Oxford had changed to a phonetic transcription in which there was no length mark (:), with certain vowel symbols, disturbing many teachers worldwide. In 1978, Longman capitalized on the change, supplying length marks in their transcription.

**CULD.** In 1980, W. & R. Chambers published the *Chambers Universal Learners' Dictionary* (*CULD*). Similar in general style to the preceding and other such dictionaries, this work had small type, provided a limited range of grammatical information, had no pictures, and was marketed by a publisher not normally involved in ELT. Although provided with clear definitions, examples of usage, and a simplified 'broad' RP transcription by David Abercrombie, this work did not challenge Oxford or Longman.

**COBUILD.** In 1987, Collins published the *Collins COBUILD English Language Dictionary*, generally known as *COBUILD* (from *Collins Birmingham University International Language Database*). This was an innovative work with the following special features: (1) Meanings phrased not in elliptical dictionary style but as whole-sentence definitions in the style of teacher talk.

(2) Specimens of usage drawn directly from the Birmingham database and advertised as 'real English', sometimes amended for the sake of clarity. (3) Grammatical codes and semantic information listed in an 'extra column' (in effect as marginalia), so as not to clutter the text of the entries. (4) Superscript numbers added to the otherwise Jonesian phonetic transcription to indicate degree of weakness towards the central vowel /ə/, with the vowels of stressed syllables underlined (and reminiscent of the use of superscripts by Walker in the 18c).

**Conclusion.** Such dictionaries tend to mix simplicity (in definitions, specimens of usage, and language notes) with complexity (in the phonetic transcriptions and grammatical codes). As a result, despite their many innovations, a learner needs a good understanding of dictionary style, abbreviation, etc., to make good use of them. The direction of development appears, however, to be towards easier access and more lucid presentation. Such dictionaries have not only become a genre in their own right but have begun to influence the organization of mother-tongue dictionaries, often because many British lexicographers during the last two decades have worked on both kinds of book. A series of papers by authorities on such dictionaries is published as: *Learners' Dictionaries: State of the Art*, ed. Makhan L. Tickoo (SEAMEO Regional Language Centre, Singapore, 1989).

See BASIC ENGLISH<sup>1</sup>, COBUILD, DEFINING VOCABULARY, ELT PUBLISHING, ENGLISH PRONOUNCING DICTIONARY, GENERAL SERVICE LIST, HORNBY, JONES (D.), LONGMAN, OXFORD DICTIONARIES, PALMER (H.), TEFL, TESL, WEST. [EDUCATION, REFERENCE].

P.S., T.MCA.

**LEAVIS, F(rank) R(aymond)** [1895-1978]. English critic, born and educated at Cambridge, where he became a Fellow of Downing College and later Reader in English. As a pupil of I. A. Richards, he learned the importance of close textual study and acquired a hostility to the 'literary history' approach of the previous generation of critics. He believed passionately in the importance of English studies as a civilizing influence in an increasingly technological mass culture and desired the emergence of an intellectual élite trained in English studies. His standards of judgement were rigorous and demanded deep seriousness in the approach to literature. Because his assessments were individual, his opponents accused him of an excessively empirical approach and a failure to establish a coherent theory of literature. In *New Bearings in English Poetry* (1932), Leavis was hostile to Victorian poetry and extolled T. S. Eliot, Ezra Pound, and other Modernists. In *Revaluation* (1936), he sought to trace the mainstream of

English poetry, praising Donne and Pope, among others, and attacking Spenser, Milton, and Shelley. In *The Great Tradition* (1948), he did the same for the novel, with enthusiasm for Austen, George Eliot, James, and Conrad. Leavis recognized writers like T. S. Eliot and D. H. Lawrence before they were widely accepted. He edited the critical journal *Scrutiny* (1932–53), whose contributors were known as *Scrutiniers*. Critics often refer to his extensive influence as *Leavisism* and to the members of his 'school' as *Leavisites*. His prose style was forceful but not elegant and sometimes turgid to the point of obscurity. See index. [BIOGRAPHY, EUROPE, LITERATURE]. R.C.

**LECT** [1960s: extracted from *dialect*; ultimately from Greek *lektós* capable of being spoken]. A term in sociolinguistics for a speech variety; it is used relatively little on its own but often occurs in combination, as in *idiolect*. See ACROLECT, BASILECT, DIALECT, ENGLISH, GENDERLECT, IDIOLECT, MESOLECT, PRIVATE LANGUAGE (CRYPTOLECT), SOCIOLECT. [LANGUAGE]. T.MCA.

**LEEWARD ISLANDS.** See ANTILLES.

**LEGALESE** [1910s, on the analogy of *journal-ese*, etc.]. An informal, usually pejorative term for language that is typical of lawyers or that contains too much legal terminology: "It is highly probable, and more likely than not in the light of [the TV series] 'L. A. Law's' nationwide popularity, that one or more jurors viewed this segment and was impressed by or even discussed same among themselves," he argued in his best legalese' ('Role Models for Attorneys?', *International Herald Tribune*, 11 May 1990). See -ESE, JARGON, LAW FRENCH, LEGAL USAGE, REGISTER. [STYLE, USAGE]. T.MCA.

**LEGAL-SIZE.** A US and Canadian measurement of paper, approximately  $8\frac{1}{2} \times 14$  inches ( $22 \times 36$  cm). Office equipment that is legal-size is made to take legal-size sheets. See LETTER-SIZE, PAPER. [TECHNOLOGY]. T.MCA.

**LEGAL USAGE**, also **legal English**. The register of the legal profession. The term covers the formulas and styles of both courts of law in all English-speaking countries and such documents as contracts and writs. In England, from the Norman Conquest in 1066 to the later 14c, the languages of law were French and Latin, and both have left their mark on the English which succeeded them, especially in such terms as *lien* (French 'binding, tie': a legal claim on someone's property to secure the payment of debt) and *hab-eas corpus* (Latin 'you may have the body': a writ requiring that someone be brought before a

judge or court, especially as a protection against that person's unlawful imprisonment). Legal usage in all English-speaking countries tends to be conservative, formal, syntactically complex, and often archaic, using expressions such as *aforsaid, hereinafter, thereto* that hardly occur in the language at large. Lawyers generally argue that the conventions and complexities of legal prose ensure that all possible contingencies are covered and ambiguities removed from documents on which legal decisions must rest. Critics reply that 'legalese' makes lawyers necessary as interpreters as well as counsellors, may obscure the implications of contracts and other documents, and often worries people unnecessarily. The first excerpt below is part of a traditional contract, the second the same material recast in 'plain' language:

**GENERAL LIEN**—The contractor shall have a general lien upon all goods in his possession for all monies due to him from the customer or for liabilities incurred by him and for monies paid on behalf of the customer, and if part of the goods shall have been delivered, removed or despatched or sold the general lien shall apply in respect of such goods as remain in the Contractor's possession. The Contractor shall be entitled to charge a storage charge and all other expenses during which a lien on the goods is being asserted and all these conditions shall continue to apply thereto.

*Our right to hold the goods.* We have a right to hold some or all of the goods until you have paid all our charges and other payments due under this contract. These include charges, taxes or levies that we have paid to any other removal or storage business, carrier or official body. While we hold the goods and wait for payment you will have to pay storage charges and all other necessary expenses. This contract will apply to the goods held in this way.

In recent years, campaigners for plain English have sought simpler contracts and in some cases 'translations' of difficult usage, so that the public can grasp the meaning and intent of documents couched in legal terms. In 1983, an English court ordered a law firm to pay £93,000 damages for unintentionally misleading a client by using 'obscure' legal language in a letter of advice; in the same year the report *Small Print* criticized the language and layout of many contracts and sought to show that clear presentation was not only desirable but also possible. See CHANCERY STANDARD, LAW FRENCH, LEGALESE, PLAIN ENGLISH, REGISTER. [STYLE, USAGE]. T.MCA.

**LEGEND** [14c: from French *légende*, Medieval Latin *legenda* (what is) to be read (as a religious lesson), from *legere/lectum* to read]. (1) *Obsol-ete*: a saint's life story, especially stressing miracles, read on his or her name-day; a collection of such accounts, such as *Legenda (Aurea)* or *The (Golden) Legend*, compiled by Jacobus de Voragine in Genoa in the 13c. (2) A

traditional, unverifiable, usually fabulous story passed down (often orally) in a community, and widely accepted as in some sense true (*a national legend; the Legend of Robin Hood*); the body of such stories (*a hero in local legend*); a person who is the centre of such stories (*a legend in one's lifetime; a living legend*). (3) Obsolete: a roll, list, or record. (4) Rare: writing, as in 'a child's legend on the tideless sand' (Shelley, *Fragments*, 1822). (5) An inscription or motto on a coat of arms, a monument, a coin, or a medal, or under a picture. (6) A written explanation, often in the form of a headed table, chart, list, or key, on a map or accompanying an illustration. Compare BIOGRAPHY, CAPTION, FABLE, KEY, LEMMA, MOTTO, MYTH. [LITERATURE, WRITING]. T.MCA.

**LEMMA** [16c: from Latin *lemma* a theme, title, epigram, from Greek *lēm̄ma* something taken (as given), an argument, a title. Plural: traditionally *lemmata*, sometimes *lemmas*]. (1) In science, mathematics, and logic, a premiss or subsidiary proposition brought in, assumed, or demonstrated to help prove some other proposition (especially if taken from another field). (2) A heading or title that states the argument, theme, or subject of a piece of written work; the argument, theme, or subject itself. (3) A motto or legend below a picture. (4) A word or phrase that is glossed; a headword in a dictionary or other work of reference. In lexicography, the creation of a list of headwords is known as *lemmatization*. See GLOSS, HEADWORD, LEGEND, MOTTO, PROPOSITION. [LANGUAGE, REFERENCE, WORD, WRITING]. T.MCA.

**LENGTH MARK**. In phonetics, the mark (:), used after a vowel to indicate that it is long, as when the RP pronunciation of *feast* is shown in IPA symbols as /fɛ:st/. For reasons of economy and simplicity, the colon (:) is often used instead: /fi:st/. Compare MACRON. See MARK, VOWEL QUANTITY. [SPEECH, WRITING]. T.MCA.

**LENIS**. See HARD AND SOFT, VOICE.

**LEONINE VERSE**. See INTERNAL RHYME.

**LESOTHO**. Official title: *Kingdom of Lesotho*. A country of southern Africa and member of the Commonwealth. Capital: Maseru. Currency: the loti (100 sente): plurals *maloti, lisente*. Population: 1.67m (1988), 2.3m (projection for 2000). Ethnicity: mainly Basotho. Religion: 45% Protestant, 40% Roman Catholic, 15% traditional. Languages: Sesotho and English (both official). Education: primary 85%, secondary 22%, tertiary 2%, literacy 35%. The first Bantu-speaking peoples arrived in the area in the 16c. In 1854, the territory was incorporated by the Boers into

the Orange Free State, but in 1869 became the British protectorate of *Basutoland*. The territory gained internal self-government in 1955 and independence as *Lesotho* in 1966. See AFRICAN LANGUAGES, ENGLISH, SOUTH AFRICA. [AFRICA, NAME, VARIETY]. T.MCA.

**LETTER**<sup>1</sup> [12c: from French *lettre*, Latin *littera* a shape or symbol used in writing]. An alphabetic symbol such as *A* or *a*, *B* or *b*. In writing based on the classical Roman alphabet, the separation of letters into *majuscules* (capital letters) and *minuscules* (small letters), the many variant alphabets (such as for English and Spanish), the typefaces available to them, and the distinctive joined letters of cursive handwriting have produced a wide range of letter forms.

**Naming letters**. In the Greek alphabet, each letter has a name that is not directly related to its sound value (*alpha, beta, gamma*, etc.), but this practice is not common in Roman-derived alphabets. The ways in which letters are referred to in English (*ay, bee, cee*, etc.) echo those of French, except that French *double-v* is English *double-u*, and the name of *y* may descend from the rounded Old English pronunciation of that vowel. Except for *h, w*, the names (*ay, bee, cee*, etc.) have a recognizable relationship with the sounds they commonly represent. The vowel letters are named by the long values in *mate, meet, might, moat, mute*, not the short values as in *pat, pet, pit, pot, putt/put*. Nine consonants in BrE and ten in AmE are named with a vowel after the sound value: with following *ee* in the case of *b, c, d, g, p, t, v* (and AmE *z*) and *ay* in the case of *j, k*. Six others are named with a preceding short *e*: *f, l, m, n, s, x*. The remainder (*h, q, r, w, y*, and BrE *zed*) have individual names. Teachers have often preferred not to use the names of letters when teaching children to read and write, but instead use the short values of the vowels and the immediate isolated sounds of the consonants, so as to make the relationship between sound and spelling as clear as possible. To make the task of learning easier, regularized letter names such as *fee, hee, lee, mee* or *eb, ed, eg*, or a schwa after the consonant sound have sometimes been used in teaching in the UK and the US. This may have been the origin of AmE *zee*. Even then, the alternative hard and soft values of *c, g*, whose names suggest only a soft value, can cause difficulty; beginning readers sometimes read *once* as 'onky' and *gone* as 'Joan'.

**Letters as symbols**. When letters are used as symbols they may operate alone, in sets, or in combination with words: (1) Alone: capitals *A, B, C*, etc., to mark an educational or other grade, *X* to indicate a mystery; small letters such as *a, x*, and *y* as used in mathematical expressions. (2) In

sets: *zzz* in cartoons and elsewhere, to represent sleep; the thousands of letter-based abbreviations, such as *BBC*, *NATO*, e.g., i.e., UN/U.N. (3) In combination with a word, as an abbreviation: BrE *L-plate*, where *L* means *Learner* (such plates being attached to the front and rear of motor vehicles); AmE *T-bill*, where *T* means *Treasury* (a reference to high-denomination promissory notes). (4) Combined with one or more words as part of a series: *B-movie* in the motion-picture industry; *C minor* in music. (5) Representing a shape: *X* in *Charing X* for the junction known as Charing Cross in London; *U-turn* a turn made through 180°. Some letters operate within established conventions, such as *A*, *B*, *C* and *X*, *Y*, *Z*, as the opening and closing letters of the Roman alphabet, often used to refer to sets of three things taken in order. *A to Z* means from the beginning to the end of something, such as a subject to be learned, while the Greek *alpha and omega* means the beginning and the end. The uses of letter symbols are complex and varied, and include: economy of expression in generalizing and in labelling, mnemonic aid, the replacement and augmentation of numbers, and special effects.

**Economy of expression.** Letters are widely used to form general statements abstracted from many specific instances, through such formulas as *How do we get from Point A to Point B?* and *Flight X is now boarding at Gate Y*. For some purposes, such letters form sets, as in *You need a minimum of BCC to get into the University of Wessex*, reference to examination grades. Letter symbols as compact labels are usually interim or temporary, such as *Factor S* used to name an element identified in research into sleep, but may become permanent, as with *X-ray*. Sometimes, such a letter combines with an initialism, as with the terms *UVA* and *UVB*, standing for *ultraviolet A* and *ultraviolet B* (types of solar radiation).

**Mnemonic aids.** The first letters of words and names in a list may be used acronymically to form a kind of name, such as *fonybas*, a mnemonic list of coordinating conjunctions (*for*, *or*, *nor*, *yet*, *but*, *as*, *so*), and *St Wapniacl*, once used to help US children memorize the departments of government in the order in which they were created (*State*, *Treasury*, *War*, *Attorney General*, *Post Office*, *Navy*, *Interior*, *Agriculture*, *Commerce*, *Labor*). Such usages may come in alliterative sets of three (*the three Bs* for *Bach*, *Beethoven*, *Brahms*), *the three Cs* for *cameras*, *computers*, *cars*), the words sometimes adapted to fit the idea and the rhythm (*the three Rs* for *reading*, *'riting*, *'rithmetic*).

**Letters and numbers.** Letters can be used instead of numbers (*A*, *B*, *C* for 1, 2, 3), and in lists and

classifications often occur with numbers, preceding as in *B-51*, *F-18* (types of US aircraft) or following as in *4A* (the top stream or track of the fourth year in a school). Such usages as *6(c)* indicate that the subsection headed *c* occurs in the section numbered *6* in a system or textbook. Letters are commonly used in such chemical formulae as *H<sub>2</sub>O* for a molecule of water (based on the abbreviations used for the elements of the periodic table): *H* for hydrogen, *2* for the number of hydrogen atoms, and *O* for oxygen. Letter symbols used for listing can take on a life of their own and acquire grammatical attributes such as plurality and possession, as in: 'With totalitarian efficiency, the country's citizens had been classified as *A*, *B* or *C*, depending on whether they enthusiastically backed the regime, failed to demonstrate support for it, or opposed it; the *Bs* and *Cs* suffered economic reprisals' (*Los Angeles Times*, June 1983).

**Special effects.** Although all letters are available for use as special symbols, *K* and *X* have been particularly popular for such purposes. The uses of *K* include: an abbreviation meaning one thousand (from *kilo*), *10K* being 10,000 of a unit of currency; a token of alienness, as in *Amerika*, for the US conceived as dominated by Communists or Nazis; an eye-catching spelling for words in *q* and *c*, as with a company called *Kwik-Fit* and cartoon characters called *the Krazy Kids*. The uses of *X* include: a token for something unknown: *Mr X*, *Substance X*, *X-ray*; to represent *ex-*, as in *MX* for *missile experimental*, in *Xtra strong* and *X-ellent* (compare *D-grading* and *D-lightful*); for *Christ* in *Xmas*, representing the Greek letter *khi*; to signify censorship: *an X-rated movie*, not to be shown to minors; as the signature of an illiterate person; to mark a place on a map or where a signature should go on a paper (commonly called a cross and not necessarily identified as a letter); to represent a kiss, often in a series written in a letter.

**Letters in word use and word-formation.** Letter symbols are often attributive (*an A student*, *Type B behaviour*), and occur as abbreviations in compounds (*A-bomb*, *N-test* for *atomic bomb*, *nuclear test*). They may serve to emphasize significant words, whose full form may be taboo (*the F-word* for *fuck*), undesirable (*the big C* for cancer), or highly significant (*the big O* for the Olympics). Technical letter symbols in electrical engineering include *GeV* for *gigaelectron volt* and *TeV* for *teravolt*. Such symbols can include an ampersand: *R & D* for *research and development*. However, it may not always be easy to distinguish letter symbols from initialisms: in Britain, *ABC* may refer to the socio-economic classes *A*, *B*, *C* taken together; in the 1983 general election in

Canada, they meant *Anybody but Clark*; in Australia, they stand for the Australian Broadcasting Corporation; in Los Angeles, they have been used to mean *American-born Chinese*; in military terms, they mean *atomic, biological, chemical*.

See the entries for individual letters, A-Z, and ABBREVIATION, ACCENT, ACRONYM, ACUTE ACCENT, AGGLOMERATE, AITCH, ALPHABET, ASCENDER AND DESCENDER, ASH, CAPITAL, CONSONANT, DIACRITIC, DIGRAPH, DOUBLE LETTER, ENG, EPSILON, ESH, ETH, GOTHIC, GRAVE ACCENT, INITIAL, INITIALISM, INITIAL TEACHING ALPHABET, INTERNATIONAL PHONETIC ALPHABET, ITALIC(S), LETTER WORD, LITERAL, LONG S, MARK, MINIM, ORTHOEPIY, ORTHOGRAPHY, ROMAN, SEMI-VOWEL, SERIF, SILENT LETTER, SPELLING, SPELLING REFORM, TECHNO SPEAK, THORN, TRANSLITERATION, TYPOGRAPHY, WORD, WRITING (SYSTEMS), YOGH. [TECHNOLOGY, WORD, WRITING].

C. U., T. MCA.

**LETTER**? [See **LETTER**']. Also **epistle** [Through Old French from Latin *epistola*, Greek *epistolē* message, letter: now generally considered Biblical and/or pretentious]. A piece of writing addressed and usually sent to someone. Personal and official letters date from remote antiquity, as for example between Hittite and Egyptian rulers in the late second millennium BC. The letters of Cicero (106–43 BC) and the younger Pliny (AD 62–112) are valuable records both of Latin prose and contemporary life. In England, the Paston Letters (15c) and Stonor Letters (14–15c) are similarly important for the study of their periods. Until the invention of the telegraph and telephone, letters were the commonest means through which people living at a distance from each other could keep in touch, and the 19c growth of national and international postal systems created a boom in letter-writing. Writing and reading letters became a major aspect of literacy after Rowland Hill introduced the penny post in Britain in 1840. Although with the spread of telephones the writing of personal letters and cards may have diminished, business letters remain a significant element of local and worldwide communication, whether posted or faxed.

**Letters and literature.** Literary compositions in the form of personal letters were popular in the 17–18c. The device was used mainly for the circulation of ideas and arguments, with the appeal of apparent direct address to the reader, as in Locke's *Letters on Toleration* (1689–92). Swift's *Drapier's Letters* (1724) were widely read and forced a change in government policy in Ireland regarding the grant of a private patent. Pope followed classical tradition in calling some poetic satires 'epistles', but indicates the contemporary

liking for the idea of the letter, as did the early newspaper *Dawks's News Letter* (1696–1716), printed to look as if handwritten. The most famous 18c political letters are the *Letters of Junius* (1769–72), pseudonymously attacking King George III and his ministers, and now usually attributed to Sir Philip Francis. Edmund Burke wrote several political letters, including *Letters on a Regicide Peace* (1796–7), which urged resistance to the French Jacobins. The use of letters in fiction was pioneered in the 16c by Lyly in *Euphues*, and taken up in the 18c by Richardson, who published *Letters to and from Particular Friends*, out of which grew the first major epistolary novel, *Pamela* (1740–1). This form of fiction was also practised by Smollett, Frances Burney, and, experimentally, by Austen, among others, but declined in vogue after the early 19c. It is now rare, but C. S. Lewis's *The Screwtape Letters: Letters from a Senior to a Junior Devil* (1942) uses the same technique. William Golding's *Rites of Passage* (1980) combines the epistolary and diary forms. Although often artificial in style, the epistolary novel combines personal narration by characters with multiple points of view.

**Published letters.** There have been many scholarly editions of letters not originally intended for publication, such as those of Horace Walpole, Byron, Keats, George Eliot, Henry James, Woolf, Shaw, and Tolkien. They reveal the lives and characters of their authors, often give insight into their literary methods, and show them using English in a more informal and personal manner. Newspapers, in addition to reportage, material from wire services, feature articles, and editorials, generally print letters from readers in their *correspondence columns*. Such letters cover a wide range of topics: commenting on material published in the newspaper and on general issues of the day, and raising matters of personal concern to the correspondent. On writers of letters to the editor, George Crabbe observed in his poem 'The Newspaper' (1785):

These are a numerous tribe, to fame unknown,  
Who for the public good forego their own;  
Who volunteers in paper-war engage,  
With double portion of their party's rage:  
Such are the Brutii, Decii, who appear  
Wooing the printer for admission here;  
Whose generous souls can condescend to pray  
For leave to throw their precious time away.

If a paper war goes on too long, however, the editor is likely to intervene with the note: 'This correspondence is now closed.' Such letters often complain about language usage, a subject that sometimes stirs a treble portion of rage. See **NEWSPAPER**, **NOVEL (EPISTOLARY)**, **POSTSCRIPT**, **USAGE GUIDANCE AND CRITICISM**. [LITERATURE, MEDIA, USAGE, WRITING].

R. C., T. MCA.

**LETTERPRESS** [18c]. (1) Also **relief printing**. Generally, the process of printing from raised type (letters in relief), as used from the mid-15c to the late 20c. Type and/or images cut in relief receive ink on their raised surfaces; the ink is then transferred by pressure to paper or some other surface. In general printing, letterpress has been superseded by photo-offset printing, except for large runs of newspapers and mass-market paperbacks; here, speed and volume require the durability of raised type made from photographic images transferred on to plastic cylinders, not from traditional lead typesetting. There are also some small private presses and specialist printers that continue to use letterpress. (2) Mainly in Britain, printed text as distinguished from illustrative material like drawings and photographs. See **LETTERSET**, **PRINTING**, **PRINTING PRESS**. [TECHNOLOGY]. W.W.B., T.MCA.

**LETTERS**. A former term for scholarship, especially in the classical languages, and for imaginative literature. The phrase *man of letters* originally denoted a scholar and later became the respectful title of a literary author. Carlyle spoke of the 'Hero as Man of Letters' in his lectures *On Heroes and Hero-Worship* (1840), with Johnson, Burns, and Rousseau as his examples. A Victorian monograph series on authors was called *English Men of Letters*. By the end of the 19c, the phrase generally referred to critics, essayists, and biographers. Now little used, the original meaning survives in the university degrees of M.Litt. and D.Litt. [Latin: *Litterarum Magister* and *Litterarum Doctor* Master and Doctor of Letters]. The title *litterae humaniores* [Latin: higher human letters] has been used in universities for study of the classics: originally, it distinguished secular from sacred texts. Compare **BELLES LETTRES**. See **WRITER**. [LITERATURE]. R.C.

**LETTERSET** [1962: a blend of *letterpress* and *offset*, a new term for the earlier *dry litho*]. A process of rotary printing that transfers the image from a 'wraparound' plate with letters in relief (as in *letterpress*) to an intermediate rubber roller or blanket cylinder then to the paper by offset techniques. See **LETTERPRESS**, **PRINTING**. [TECHNOLOGY]. T.MCA.

**LETTER-SIZE**. Mainly a North American measurement of paper, approximately  $8\frac{1}{2} \times 11$  inches ( $22 \times 28$  cm). Letter-size equipment takes letter-size sheets. In recent years, US-style computer printouts in this size have made it more international. Compare **LEGAL-SIZE**. [TECHNOLOGY]. T.MCA.

**LETTER WORD**, also **letter name**. A word or name formed from the letters, usually the first letters, of several other words: *BBC* from British Broadcasting Corporation, *NATO* from North Atlantic Treaty Organization. It is a kind of abbreviation, with two forms: the *initialism* (*BBC* pronounced 'bee-bee-see'); the *acronym* (*NATO*, pronounced 'Nay-toe'). The practice of forming words from letters is ancient. Medieval Jews formed personal names from the initials of a title, first name, and father's name: *Hida*, from *Hayyim Joseph David Azulai*. In medieval logic, letter words were used mnemonically to identify syllogisms (*Barbara*, *Bramantip*, *Celarent*), so as to help students remember and discuss the forms so labelled. See **ACRONYM**, **INITIALISM**, **LETTER**<sup>1</sup>. [NAME, WORD]. T.MCA.

**LEVEL OF LANGUAGE**. A term in (structural) linguistics. In the second quarter of the 20c, language was modelled by some linguists as a series of layers arranged one on top of the other, with units of sound (*phonology*) on the bottom layer, gathered into units of structure (*morphology*) above, which were then combined into larger grammatical units (*syntax*) above them, and, according to some, into units of meaning (*semantics*) at the top. The two lowest levels each had a unit of its own, formed with the suffix *-eme*: *phoneme* for phonology, *morpheme* for morphology. In some theories, this approach continued upwards with *lexeme* for an abstract lexical unit, and *tagmeme* sometimes used for syntax. The term has come into widespread, fairly loose usage to mean any one such layer: the phonological level, the syntactic level, etc. Originally, each level was studied independently of the others, at least in theory, and it was considered necessary to work from phonology upwards, finishing the study of one level before moving on to the next. A number of introductory textbooks of linguistics are organized in accordance with this model, which is still of value, although the strict separation of levels is no longer adhered to. In recent years, some linguists have tended to abandon the vertical 'layer cake' model in favour of a horizontal model with a *syntactic component* flanked by a *phonological component* on one side and a *semantic component* on the other. Syntax has this central role because it can be regarded as the component that links sound and meaning. See **MODEL**, **MORPHOLOGY**, **PHONOLOGY**, **SEMANTICS**, **SYNTAX**. [LANGUAGE]. J.M.A.

**LEXEME** [From Greek *léxis* speech, and *-eme*]. Also **lexical item**, **lexical unit**. In linguistics, a unit in the lexicon or vocabulary of a language. Its form is governed by sound and writing or print, its content by meaning and use. Thus,

*penicillin* is the realization in print of a single English lexeme, while the nouns *crane* and *bank* represent at least two lexemes each: *crane* (a particular bird and a particular machine), *bank* (the shore of a river and a particular kind of financial institution). Most English dictionaries treat *crane n.* as a single headword with two senses (a case of polysemy) and *bank n.* as two headwords, each with at least one sense: a case of homonymy. Conventionally, a lexeme's inflections (such as *cranes*, *banks*) are considered variant forms, whereas such derivatives as *banker* are considered separate lexemes. In English as in other languages, lexemes may be single words (*crane*, *bank*), parts of words (*auto-*, *-logy*), groups of words (the compound *blackbird* and the idiom *kick the bucket*), or shortened forms (*flu* for *influenza*, *UK* for *United Kingdom*). See -EME, LEXICOLOGY, MORPHEME. [LANGUAGE, WORD].

R.F.I.

**LEXICAL BAR** [1980s: coined by the linguist David Corson]. A name for a perceived social, educational, and cultural barrier associated with a dual aspect of English lexis:

In English-speaking societies coincidences of social and linguistic history have combined to create a lexical situation that is unique among languages: most of the specialist and high status terminology of English is Graeco-Latin in origin and most of the less abstract terminology is Anglo-Saxon in origin. English in this respect, relative to other languages, has a fairly clear boundary drawn between its everyday and its high status vocabularies. This boundary is only contingent upon and reinforced by the etymological provenance of words, however; it is not erected by it. English etymology simply offers us a template for recognising more fundamental differences in conceptual frameworks. These more fundamental differences block high level interaction for some within the dominant culture. Once identified, though, these differences give us knowledge upon which we can base language planning policies in education to confront the social inequalities which are in part produced by the differences themselves. . . . The bar is partly a function of the historically introduced and social class-based orderings of society that are associated with the division of labour: It separates the lexes of the members of conservative peripheral social groups from the dominant and high status lexicon of the language (Corson, *The Lexical Bar*, Pergamon Press, 1985).

An illustration provided by Corson of the differences in the linguistic style of young people on opposite sides of the bar is:

I dunno, there's times when I think there are a few laws I'd like to stop but . . . don't know any I'd like to bring in (London poorer working-class 15-year-old).

I don't think I'd *introduce* many new ones but I would *abolish* quite a few (London upper middle-class 15-year-old).

An earlier work on the same theme is Victor Grove's *The Language Bar* (Routledge & Kegan

Paul, 1949). Compare ACCENT BAR. See BISO-CIATION, DIGLOSSIA, DOUBLET, ELABORATED AND RESTRICTED CODE, PHRASAL VERB, SPELLING. [VARIETY, WORD].

T.M.CA.

**LEXICAL FIELD**, also **lexical domain** and, if relatively small, **lexical set**. A group of words or lexemes whose members are related by meaning, reference, or use: for example, kinship terms, military ranks, colour words, and names for parts of the body. Some are hierarchically ordered (for example, ranks and taxonomies); some exhibit a part-whole relationship (*finger* and *toe* as parts of the hand or leg, and *hand* and *leg* as parts of the body); some occur in sequences or cycles (numbers, the seasons). Dictionary definitions of some items in the lexical field of animals might be *sheep* (an animal of a certain kind), *ram* (a male sheep), *ewe* (a female sheep). In such definitions, *sheep* is explained as a hyponym of *animal*, *ram* and *ewe* as hyponyms of *sheep*, while *ram* and *ewe* are also distinguished in terms of sex. Compare SEMANTIC FIELD. [WORD].

R.F.I., T.M.CA.

**LEXICAL ITEM**. See LEXEME.

**LEXICAL SEMANTICS** [20c]. A term in linguistics for the study of the meaning of words, phrases, and lexemes, especially in sets rather than in isolation. See LEXICAL FIELD/SET, SEMANTICS. [LANGUAGE].

T.M.CA.

**LEXICAL SET**. See LEXICAL FIELD.

**LEXICOGRAPHY** [17c: from Greek *lexikós* about words, and *-graphia* writing]. The procedure and profession of arranging and describing items of vocabulary in such works of reference as dictionaries, glossaries, thesauruses, synonym guides, usage guides, and concordances. Traditionally, lexicography has been of two kinds: *alphabetic lexicography*, the dominant form whose best-known product is the dictionary properly so called, and *thematic lexicography*, which arranges words by themes or topics, usually accompanied by an index, of which such a 'classified' work of reference as *Roget's Thesaurus* is a leading example. By and large, however, lexicography is taken to be a process of describing words in an alphabetic list, and most lexicographers work on dictionaries of a relatively standard kind. Equally traditionally, lexicography can be said to include the compilation not only of books about words (dictionaries, etc.), but also books about things (encyclopedias, etc.). Again, however, it is generally taken to centre on the making of word-books, which may be more encyclopedic (like

many French and American works) or less encyclopedic (like many British works).

**Products.** The products of lexicography are varied. In terms of dictionaries proper, they range from the 20-volume *Oxford English Dictionary* and such large ('unabridged') one-volume US works as the *Webster's Third New International Dictionary* and the *Random House Dictionary of the English Language* through the desk, family, or collegiate dictionary (such as *Chambers English Dictionary* and *Webster's Ninth New Collegiate Dictionary*), to the concise or compact (*The Concise Oxford Dictionary*), the pocket (*The Pocket Oxford Dictionary*), and even smaller works (the *Collins Gem* series). Lexicographic work may be monolingual (dealing in one language only), bilingual (with sections that define a language A in terms of another language B, and vice versa), or multilingual (in various ways covering three or more languages), and may be undertaken for general purposes or for (among others) small children, school and college students, or a range of other special-interest groups from musicians to word buffs. Whatever form they take, however, their compilation rests on the amassing and sifting of evidence about words and other expressions (for example citations from texts), and editorial guidelines as to what should be included, how it should be organized, and what special features (such as phonetics, etymologies, pictures, etc.) should be added.

**Sources and coverage.** All types of linguistic evidence are available to lexicographers, including introspection and discussion, the examination of pre-existing works of reference and other sources, and the formal use of survey questionnaires and citation corpora (both traditional, kept on cards, and electronic, stored in computer databases). Some classes of vocabulary item are normally excluded from most general dictionaries, but may appear in encyclopedic and specialist dictionaries, such as the binomial nomenclature of biology, the names of people, places, organizations, and events, proverbs, and quotations. After systematic exclusions are dealt with for the purposes of a general dictionary, what remains of the vocabulary is assessed for potential entries. Where large dictionaries seek to cover as much as possible, smaller dictionaries aimed at certain kinds of user have (often as the result of ad-hoc decision-taking) lists judged appropriate to their level. Specialist dictionaries have lists appropriate to their core topic (for example, *Brewer's Dictionary of Phrase and Fable*, *The Penguin Dictionary of Saints*, *Fowler's Dictionary of Modern English Usage*, *Partridge's Dictionary of Slang and Unconventional English*, etc.).

**Dictionary information.** Dictionaries generally give some or all of the following types of information in an order appropriate to the work in question: (1) Headword and any variants, sometimes with syllabication marked and homograph status indicated. (2) Pronunciation in a system of respelling or phonetic symbols. (3) Grammatical information and usage labels (often in the form of abbreviations or codes). (4) Number of senses as necessary. (5) Explanations proper. (6) Possible illustrative phrases or sentences. (7) Compounds, derivatives, phrasal verbs, and idioms (if not listed separately). (8) Etymology. (9) Points of usage. (10) Information about synonyms and antonyms. Dictionaries, however, are often characterized by the type of information on which they concentrate: for example, *The Oxford Dictionary of English Etymology* (1966, etc.), Daniel Jones's *English Pronouncing Dictionary* (1917, etc.), and in the study of English as a Foreign or Second Language such learner's dictionaries as the *Oxford Advanced Learner's Dictionary* (1948, etc.) and the *Longman Dictionary of Contemporary English* (1978, etc.).

**Conventions.** In presenting their information, most lexicographical works of reference (dictionaries, thesauruses, etc.) have two columns of densely organized information in small type. They use contrastive typefaces for distinct purposes, such as bold-face type for headwords, roman for definitions, italics for abbreviated codes and specimen words and phrases, and small capitals for cross-references. Square brackets may enclose special information, such as etymologies at the beginning or end of entries, while round brackets (parentheses) may add ancillary information in the body of the explanations. By and large, even when schools and colleges give students guidance on what to expect in a dictionary, the differences of format and emphasis from dictionary to dictionary are seldom discussed. As a consequence, for many people the complex layout of standard dictionaries may be intimidating. Thus, compounds may be main entries in one dictionary but sub-entries in another; abbreviations, word elements, biographical information, etc., may be in appendices at the back in one book, and interspersed through the main text in another.

Nowadays, lexicographers generally try to avoid unnecessarily cryptic abbreviations and conventions. However, some special conventions are necessary, if only to keep the size of the book within manageable proportions. Lexicographers are acutely aware of the importance of communicating with the user on the understanding of these conventions, which often involve knowledge of a limited number of facts and principles.

They often feel the need to develop strategies and techniques that encourage the user to become familiar with such matters, in order to get the maximum benefit from a work of reference. See **DICTIONARY, LEXICOLOGY. [REFERENCE, WORD].**

**LEXICOLOGY** [1820s: from Greek *lexikós* of words, *-logia* study]. An area of language study concerned with the nature, meaning, history, and use of words and word elements and often also with the critical description of lexicography. Although formerly a branch of philology, lexicology is increasingly treated as a branch of linguistics, associated with such terms as *lexeme*, *lexical field*, *lexical item*, *lexicon*, *lexis* (see entries), on the premiss that they offer (or could offer, if tightly defined and widely adopted) a more precise and useful basis for the study of language than imprecise terms such as *word* and *vocabulary*. [LANGUAGE, WORD]. T.M.C.A.

**LEXICON** [From Greek *lexikón* (*biblión*) a word book, from *lexikós* concerning speech]. (1) A work of reference listing and explaining words: Henry G. Liddell & Robert Scott, *Greek-English Lexicon* (1843). A lexicon is usually a dictionary that deals either with a classical or scriptural language (a Hebrew lexicon) or a technical or facetious subject (Jonathon Green, *The Cynic's Lexicon: A Dictionary of Amoral Advice*, 1984). It may also, however, be a word list (Roland Hindmarsh, *The Cambridge English Lexicon*, 1980) or a thematic work of lexical reference (Tom McArthur, *The Longman Lexicon of Contemporary English*, 1981). The Greek-derived ending *-icon* is sometimes used as, or as if it were, a clipping of *lexicon*: *The Paradoxicon* (a collection of paradoxes, by N. Falletta, 1983) and *The Archaicon* (about archaisms, by J. E.

Barlough, 1974). (2) A term in especially American linguistics for the vocabulary of a language or sub-language, consisting of its stock of lexemes. Compare **LEXIS. [LANGUAGE, REFERENCE, WORD].** T.M.C.A., R.F.I.

**LEXIS** [1960c: from Greek *léxis* speech]. A term in especially British linguistics for the vocabulary of a language or sub-language, consisting especially of its stock of lexemes. The term became popular because it is unambiguous, unlike its synonym *lexicon* (see entry), and is Greek in origin (fitting well with such other terms of Greek origin as *phonology* and *syntax*), in contrast with Latin-derived *vocabulary* (associated with Latin *pronunciation* and Greco-Latin *grammar*). [LANGUAGE, WORD]. R.F.I.

**LIBEL** [13c: from Latin *libellus* a little book]. The publication of a false, defamatory statement likely to harm a person's reputation. In law, libel is a criminal offence; the intention of the defendant is immaterial, and it is the jury, not the judge, which decides whether the words are defamatory or not. See **CENSORSHIP, FREEDOM OF THE PRESS, MALEDICTA, SLANDER. [MEDIA].** G.H.

**LIBERIA** [Early 19c: Latin, free place]. Officially *Republic of Liberia*. A country in West Africa. Capital: Monrovia. Currency: the dollar (100 cents). Population: 2.4m (1988), 3.5m (projection for 2000). Languages: English (official), and over 20 Niger-Congo languages, including Kru and Mande. Religion: 61% traditional, 29% Muslim, 10% Christian. Education: primary 76%, secondary 23%, tertiary 2%, literacy 35%. The region was mapped by the Portuguese in the 15c and later visited by the Dutch, British, and other Europeans looking for gold, spices, and slaves. The idea of a homeland for freed slaves was conceived by a group of US philanthropical societies, including the American Colonization Society, influenced by the British creation of Freetown in neighbouring Sierra Leone. Monrovia, named after President Monroe, was founded in 1822. The governors of Liberia were white Americans until Joseph Jenkins Roberts, a black born in Virginia, took over in 1841. He declared the *Free and Independent Republic of Liberia* in 1847. Freed slaves migrated from the US until the end of the Civil War in 1865, and black Americans have settled in small numbers ever since. After a coup in 1980, the US-style constitution was suspended and a People's Redemption Council established, with a new constitution in 1984. Civil war and inter-ethnic strife were widespread in the early 1990s.

**Liberian English.** Liberia is the only black African country in which English is a native language and the only country in Africa owing its

English more to the US than the UK. The variety originated first in contacts from the 17c between native speakers of BrE and AmE and such coastal peoples as the Kru (among whom English pidgins developed), and then in the settlement of repatriated blacks. Their descendants, known formally as *Americo-Liberians* and colloquially as *Mericos* and *Congos*, established and maintained the prestige of English and dominated Liberian society politically and economically, especially through the True Whig Party, until the 1980 coup, which was led by Samuel Doe, a non-Merico army sergeant. Sierra Leone Krio has had some impact on usage, and frequent travel to, and close political relations with, the US have given standard AmE and American Black English continuing prestige and influence. English in Liberia can be described in terms of an acrolect (high-prestige form), several basilects (low-prestige forms), and emerging mesolects (intermediate forms). *Standard Liberian English* is acquired through, and is a mark of, a high level of education, is heard on radio and television, and is the speech of those locally referred to as *civilized*. At the other end of the continuum, the basilects include *Kru Pidgin English* (the oldest pidgin), *Settler English* (formerly *Merico*), the everyday usage of the Americo-Liberian settlers (closely related to Southern US English before the Civil War), and *Liberian Interior English*, used mainly by speakers of Mande in the non-coastal areas. *Soldier English* is a pidgin used since the early 20c by and with non-English-speakers in the army, and *Vernacular Liberian English* includes urban and rural mesolects that compromise between the standard and non-standard varieties.

**Features.** The close historical link with AmE gives Liberian English its distinctiveness in relation to other West African varieties. Phonologically, the varieties range from a rhotic standard associated with AmE to non-rhotic pronunciations influenced by Kru and Mande. Grammatically, the mesolects and basilects have the following features: (1) Non-standard auxiliaries: *He done come* He has come; *A was not know* I did not know; habitual *do as in I do see boy all de time* I see the boy all the time; progressive *de as in I de go* I am going. (2) Uninflected verbs: *You see da man?* Did you see the man?; *A know dem* I knew them; *Dey kesh gra-hapa* They caught grasshoppers. The distinction between Settler English and Kru Pidgin can be seen in Settler *Da pekin cryin*, Kru *Di pekin de kra* (The child is crying), Settler *I ain see him*, Kru *A neva siam*. Distinctively Liberian words include: *bugabug* termite, *dumboy* boiled, pounded cassava, *favour* to resemble (compare AmE), *fresh cold* a runny nose, head cold, *groundpea*,

*peanut*, *groundnut*, *jina* spirits, *kanki* measurement for rice (around two cups), *kwi* a foreigner, *outside child* a child acknowledged although born outside marriage, *sasse* cheeky, smart, sassy. Traditionally, the standard has been emphasized and the other varieties generally disparaged, but since the coup the compromise forms have begun to gain recognition in such public contexts as the media and informal greetings, as expressions of political and social solidarity. The mesolect in Monrovia is the centre of innovation, and is spreading throughout the country. Typically, the same kind of thing can be said at several different 'levels': acrolect *What you're saying, it's true, and I won't do it again*; mesolect *The thing you talking, that true, but I will not do it again*; basilect *The thing you telli me you no lie, but I can't do some again*. See AFRICAN ENGLISH, ENGLISH, WEST AFRICAN ENGLISH, WEST AFRICAN PIDGIN. [AFRICA, VARIETY]. L.B.B.

**LIBRARY** [14c: from French *librairie*, Latin *libraria* 'a book place', from *liber* book. Various pronounced 'ly-brery', 'ly-bery', 'ly-bry']. (1) A collection of books, periodicals, and/or other materials, primarily written and printed, but increasingly in the 20c recorded on film or tape or kept in electronic storage. Libraries are sometimes commercial enterprises, but most often are public or institutional services that offer on-site reference and/or borrowing facilities. Larger libraries, such as the British Library and the Library of Congress (the national libraries of the UK and US respectively), may offer educational and cultural programmes, such as lectures and artistic performances, in addition to services more strictly related to information. *Librarians* work in libraries, *librarianship* is their profession, and *library science* is the study of the organization and administration of libraries and their services. (2) A series of books or other printed products, of the same type and with similar covers, usually dealing with related topics, such as *The Penguin Poetry Library*, which consists of works by major English-language poets. (3) In computing, a thematic collection of data or software. For further details, see BIBLIOGRAPHY, BOOK, BRITISH LIBRARY, CATALOG(UE), LIBRARY LANGUAGE, LIBRARY OF CONGRESS, SERIAL. [EDUCATION, MEDIA]. T.MCA., R.E.A.

**LIBRARY LANGUAGE** [1960s]. A language used for reference purposes in libraries, etc., especially for such subjects as engineering, medicine, and business: 'For a long time English will remain the most important library language for higher education in India and her window on the world' (Jamal Kidwai, *Times Educational Supplement*, 25 Oct. 1968). Compare ENGLISH

FOR SPECIFIC/SPECIAL PURPOSES, READING. [EDUCATION, LANGUAGE, MEDIA]. T.MCA.

**LIBRARY OF CONGRESS**, short form *LC*. The library which serves the United States Congress in Washington, DC, founded in 1800 with a grant of \$5,000. Many early LC materials were lost in a fire in 1814 during the bombardment of Washington by a British fleet. The collection was re-established through the acquisition of the library of Thomas Jefferson and has been expanding ever since. It is now the world's largest library, housing over 22.5m books and pamphlets, with more than 80.7m items in its collections. It serves in effect, though unofficially, as the national library of the US: the bulk of its funding comes from Congress and its librarian is appointed by the President, with the approval of the Senate. The staff of the LC provides research services to Congress, as required by law, as well as to the rest of the government and the general public.

**Collections.** Major collections include social and political science, US history and civilization, science and technology, aeronautical literature, music (including recordings), technical reprints, Chinese, Japanese, and Russian language books (the largest collections outside their respective countries), and the largest collection of incunabula in the western hemisphere. The Division of Motion Picture, Broadcasting and Recorded Sound, with over 250,000 reels, focuses on American films from 1914 to 1942. The special collections include the papers of many organizations (the League of Women Voters, the National Association for the Advancement of Colored People, the American Council of Learned Societies), most presidents, and other well-known Americans, such as Clara Barton, Alexander Graham Bell, Frederick Douglass, Felix Frankfurter, Benjamin Franklin, and Walt Whitman.

**Services.** Since 1870, the LC has been responsible for copyrights, and copies of all copyrighted materials must be deposited with it. It provides cataloguing services for libraries and publishes the *National Union Catalog* as well as specialized catalogues. It is responsible for the development of the Library of Congress classification scheme for books and subject headings for all printed matter; disseminates technical information on the preservation of books and manuscripts; and records books for the blind. Its *Center for American Folklife*, established in 1976, is charged with supporting, preserving, and presenting American folklife through exhibits, workshops, and archival presentation, including an extensive collection of early recordings on wax cylinders. The

*Center for the Book*, established in 1977, promotes reading as well as research and discussion about books and their production. The LC reading-rooms are open, free, to adult members of the public, though access to some collections is restricted to those with specific research purposes. The catalogue is now computerized. Some research services are also available by mail and phone, and some materials may be obtained through photo-duplication or through inter-library loan. See **BOOK, BRITISH LIBRARY, LIBRARY.** [AMERICAS, MEDIA]. D.E.B.

**LIEBER, Francis** [1800-72]. American political scientist. Born in Berlin, he received his Ph.D. from the U. of Jena (1820). After participating in the Greek War of Independence (1822) and working as a library assistant in Italy (1823), he studied mathematics in Berlin and Halle. Unable to obtain employment in Germany because of his politics, he went first to England then the US, where he became Professor of History and Political Economy at the U. of South Carolina (1835-56) and Columbia (1857-64), before transferring to the School of Law at Columbia (1865-72). He continued to espouse often unpopular causes, including the establishment of AmE as an international language. As the first editor of the *Encyclopaedia Americana* (1829-33, 13 volumes), he explored the ways in which Americans viewed their speech and urged his contributors to study English outside Britain. He suggested that AmE be examined diachronically, first as a variety of BrE, then as a language form with its own varieties. Maintaining that understanding is primarily 'the art of finding out the true sense of words', he encouraged the description of AmE as used in specific contexts and criticized those who did not correctly delimit AmE contributions to the English lexicon.

Interested in language change and language maintenance, he kept notebooks (1849-51) focusing on interactions among speakers, inter-relationships between writing and speech, and constraints on communication posed by differences in education and class. While recognizing the power of language as an instrument of nationalism, he advocated the right of linguistic minorities to maintain their first languages while adding English as a second. Suggesting that language shift and acquisition needed to be studied as processes of simplification and amplification, he kept records of his children's linguistic development as well as the development of children of slaves, and of Laura Bridgeman, a child born deaf and blind. Lieber's study of English in non-native contexts (found in collections of his letters, essays, addresses, and reminiscences) called attention to the ideology of languages and helped form the agenda for American linguistic

research. [AMERICAS, BIOGRAPHY, EDUCATION, EUROPE, REFERENCE]. R.W.B.

**LIGATURE** [14c: from Latin *ligare/ligatum* to bind]. (1) A term in printing for two or more joined letters cast in the same piece of type: *æ* in *Caesar*; *fl* in *florin*; *ffi* in *office*. Early typesetters had many ligatures, imitating connected letters in handwriting, but few are retained in contemporary English printed alphabets. Vowel ligatures such as *æ* are now commonly replaced by open *ae*, even when transcribing Latin, Latinized Greek, and Old English: *Caesar* not *Cæsar*; *Aeschylus* not *Æschylus*; *Aelfric* not *Ælfric*. (2) In phonetics, a mark like the slur in musical notation placed over or under a pair of symbols to show that they are spoken together: *ai̇*, and *ai̇*. Top ligature is favoured for letters with descenders, bottom ligature for letters with ascenders. Compare **ASH**, **DIGRAPH**. [SPEECH, TECHNOLOGY, WRITING]. R.W.B.

**LIMERICK** [19c: from the town of *Limerick* in Ireland]. A five-lined piece of light verse, rhyming *aabba*. The first two and the last lines should be anapaestic trimeter, with the third and fourth anapaestic dimeter, but the metre is often less regular. Traditionally, the name of a place or person is introduced in the first line and may be repeated in the last. The form is thought to derive from impromptu versifying about the inhabitants of a town or village, with the refrain 'Will you come up to Limerick?' Edward Lear made the form popular in the 19c, using it for nonsense verse. An anonymous limerick on the Theory of Relativity runs:

There was a young lady named Bright  
Who could travel much faster than light.  
She started one day  
In a relative way  
And came back on the previous night.

The limerick's simple form and easy, swinging rhythm make it particularly suitable for humorous or scurrilous use and for taboo subjects. [EUROPE, LITERATURE]. R.C.

**LIMITED ENGLISH SPEAKER**, short form *LES*. A term in language teaching and applied linguistics for someone who speaks too little English for general purposes or only enough English for a particular purpose, such as hawking goods or acting as a tour guide. [EDUCATION]. T.MCA.

**LINE** [13c: from Old English *līn* flax (from Latin *linum* flax), influenced by Old French *ligne*, Latin *linea*, noun use of adjective *lineus* flaxen (also from *linum*). The concept of the line in writing derives from a plant fibre capable of being woven

into a pattern: compare **TEXT**, **VERSE**]. (1) A narrow, continuous mark made by a stick, plough, blade, pen, pencil, brush, etc., across a surface. (2) A similar feature of script and print, in which signs are arranged in sequence for the purposes of composing a text, usually straight and either vertical (as with Chinese characters) or horizontal (as in Western writing). Among literate people, the *linear* concept of language (both writing and speech) arises from this convention. Before the advent of writing, no poet could ever have 'recited a few lines (of verse)' or have conceived poetry in terms of lines. See **ASCENDER AND DESCENDER**, **BREVE**, **DISTICH**, **HYPHEN**, **JUSTIFYING**, **LIST**, **MACRON**, **ONE-LINER**, **PRINTING**, **PUNCH LINE**, **STORY LINE**, **TRISTICH**, **TWO-LINER**, **TYPOGRAPHY**, **WIDOWS AND ORPHANS**. [LITERATURE, TECHNOLOGY, WRITING]. T.MCA.

**LINE BREAK, LINE-BREAK**. See **HYPHEN**, **JUSTIFYING**, **SYLLABICATION**.

**LINGO** [17c: perhaps from Polari *lingo*, perhaps an adapted clipping of *lingua franca*]. An informal, slangy, usually dismissive term for: (1) A language that is perceived as strange and unintelligible: 'When men speak French, or any Outlandish Linguo' (J. Chubbe, *Miscellaneous Tracts*, 1770). (2) A hybrid patois, often as used in an area where different language groups meet: *Border Lingo*, a name for the mix of English and Spanish in Texas, also known as *Tex-Mex*. (3) An unusual way of speaking that is hard to follow; slang or jargon: 'Well, well, I shall understand your Lingo one of these days, Cozen; in the mean while I must answer in plain English' (William Congreve, *The Way of the World*, 1700); 'I have often warned you not to talk the court gibberish to me. I tell you, I don't understand the lingo' (Henry Fielding, *Tom Jones*, 1749). See **JARGON**, **LINGUA**, **LINGUA FRANCA**, **PATOIS**, **TEX-MEX**. Compare **-ESE**, **-SPEAK**, **TALK**. [LANGUAGE]. T.MCA.

**LINGUA** [17c: From Latin *lingua* tongue, mainly through Italian. Compare **LINGUA FRANCA**]. Obsolete: an informal term for a language or lingo: 'Was ever such a Beuk-learn'd Clerk / That speaks all linguas of the Ark?' (W. W. Wilkins, *Political Ballads*, 1678); 'Many of the women speak a little of the lingua called Chinese English, or, in the cant phrase, *pigeon*' (R. Tomes, *Americans in Japan*, 1857). See **JAPANESE PIDGIN ENGLISH**, **LINGO**, **PIDGIN**. [LANGUAGE]. T.MCA.

**LINGUA FRANCA** [17c: from Italian, language of the Franks. The plural is usually *lingua francas*, but sometimes Italian *lingue franche*]. (1) Originally, a name for the mixed language,

based on Italian and Occitan (Southern French), used for trading and military purposes in the Mediterranean in the Middle Ages. (2) By extension, a semi-technical term for any additional (often compromise) language adopted by speakers of different languages, as a common medium of communication for any purposes and at any level. A lingua franca may be either a fully-fledged language (Latin in the Roman Empire, Hausa at the present time in West Africa), or a pidgin or creole (Tok Pisin in Papua New Guinea, Krio in Sierra Leone). A language may become somewhat reduced if it is widespread as a lingua franca (Swahili in East Africa). French served widely in Europe as the lingua franca of diplomacy in the 18–19c, and English now serves as a lingua franca in many countries with linguistically diverse populations (such as India and Nigeria) and for many purposes (as with the restricted variety Seaspeak, used by the world's merchant marine). See BUSINESS ENGLISH, EUROPEAN COMMUNITY, LANGUAGE LEARNING, LINGO, LINGUA, LINK LANGUAGE, PIDGIN, POLARI, SABIR. [LANGUAGE]. S.R., T.MCA.

**LINGUAL** [14c: from Latin *lingualis*]. (1) Relating to the tongue, as with a *lingual brace* in dentistry, which fits behind the teeth and is invisible when the wearer speaks or smiles, and a *lingual protrusion lisp*, a lisp caused by the tongue coming forward too far. (2) In phonetics, formed by (especially the tip of) the tongue, as with the consonants /d, t, n/; a *lingual sound*. (3) Relating to languages: *lingual skills*. The simple adjective is rare in this sense, but the combining form *-lingual* is common, as in *bi-*, *tri-*, and *quad-lingual* able to use two, three, and four languages respectively. There are two terms for 'able to use (only) one language': the commoner *monolingual* (a hybrid form using Greek-derived *mono-* sole) and the etymologically more consistent *unilingual* (using Latin-derived *un-* one). The latter is common in CanE, under the influence of French *unilingue*. Compare -GLOT. See APICAL, BILINGUALISM, MULTILINGUALISM, TONGUE. [LANGUAGE]. T.MCA.

**LINGUIST** [16c: from Latin *lingua* tongue, language, and *-ist* as in *specialist*]. (1) Traditionally, someone who speaks a number of languages fluently and usually also works with languages (such as an interpreter or translator): *The Linguist*, the title of the journal of the *Institute of Linguists*, a UK-based organization for translators. (2) In the 20c, someone trained in linguistics, the science of language, and who may or may not be a linguist in the first sense. The term is often ambiguous; *linguistician* (coined in the 1890s) has been proposed from time to time as the 'proper' name for a student of linguistics.

It is, however, widely regarded as unwieldy and pretentious, and its main use is facetious (when, for example, scientific linguists poke fun at themselves) or pejorative (suggesting a new species of pedant): 'A "linguist" who isn't at least bilingual is not a linguist at all. He's merely a linguistician' (Peter Fabian, *EFL Gazette*, Oct. 1990). [LANGUAGE]. T.MCA.

**LINGUISTIC** [1830s: from *linguist* and *-ic*]. A general-purpose adjective, meaning anything to do with language and linguistics: *linguistic skills*. *linguistic theories*. [LANGUAGE]. J.M.A.

**LINGUISTIC ASSOCIATION OF CANADA AND THE UNITED STATES**, short form *LACUS*. An American and Canadian association founded in 1974, and concerned with linguistics at large. It publishes an annual proceedings *LACUS Forum* and the journal *Forum Linguisticum*. [AMERICAS, LANGUAGE, MEDIA].

J.A.

**LINGUISTIC ASSOCIATION OF GREAT BRITAIN**, short form *LAGB*. An association founded in 1959 to promote the study of linguistics. It holds regular spring and autumn meetings and publishes the *Journal of Linguistics* (Cambridge University Press). See BRITISH ASSOCIATION FOR APPLIED LINGUISTICS. [EUROPE, LANGUAGE, MEDIA].

C.J.B.

**LINGUISTIC ATLAS**, also *dialect atlas*. A book of maps which show the distribution of language features over a chosen area, as an aid to visualizing the parts of that area where alternative or competing forms are in use: for example, *The Linguistic Atlas of England* (1978), *The Linguistic Geography of Wales* (1973). Phonological or lexical features are those most often mapped, but morphological, syntactic, and other features may be similarly displayed. The maps show, with conventional signs such as dots, circles, and triangles, the locations of features as used by native speakers. Ideally, the speakers are directly interviewed in their home communities and their responses immediately noted, but the data are sometimes gathered by postal enquiry. The linguistic atlas is a tool of dialectology. The first attempt to collect data massively was made by the German philologist Georg Wenker who, in 1876, sent out a series of literary sentences to 1,266 schoolmasters in the Rhineland, requesting them to convert the sentences to local dialect equivalents. Wenker later extended the work to cover all of Germany, but few maps were published. Unfortunately, many schoolmasters did not know phonetics and some did not know the local dialects. The results were not without value, but Wenker's method and maps were

severely criticized and were superseded by the new 'direct' method of collecting used by Jules Gilliéron for the *Atlas linguistique de la France* (Paris: Champion, 1902-10), the first to cover an entire nation. Though postal enquiries are still in limited use, on-the-spot recording of local informants' speech currently prevails. Display of results on maps is slow, costly, and therefore limiting, but currently they provide the best direct image of variation within an area.

Linguistic atlases have been undertaken, though not many completed, for at least 30 provinces and many other areas of Europe and for more than 20 languages and regional dialects, with some beginnings in Africa, Asia, and South America (compare Sever Pop, *La Dialectologie*, 1951). In terms of English, atlases have been made for Scotland by Angus McIntosh (1952, *An Introduction to a Survey of Scottish Dialects*, U. of Edinburgh Press) and J. Y. Mather and H. H. Speitel (1975, 1977, 1986, *The Linguistic Atlas of Scotland*, 3 volumes, Croom Helm); for Wales by Alan R. Thomas (1973, *The Linguistic Geography of Wales*, U. of Wales Press), and for England by Harold Orton, Stewart Sanderson, and John Widdowson (1978, *The Linguistic Atlas of England*, Croom Helm). In North America, the overall project 'The Linguistic Atlas of the United States and Canada', for which fieldwork was begun in 1931, has been only partly achieved. Parts completed and published are: *The Linguistic Atlas of New England*, handbook and 3 volumes, by Hans Kurath (1939-43, Brown U.); *The Linguistic Atlas of the Upper Midwest*, 3 volumes, by Harold B. Allen (1973-6, U. of Minnesota Press); *The Linguistic Atlas of the Gulf States*, 3 volumes, with others in preparation, by Lee Pederson (1986-9, U. of Georgia). Supplementary publications covering other parts of the eastern states are: by Kurath (1949, *A Word Geography of the Eastern United States*, U. of Michigan Press); E. Bagby Atwood (1953, *A Survey of Verb Forms in the Eastern United States*, U. of Michigan Press); Gordon R. Wood (1971, *Vocabulary Change*, Southern Illinois U. Press). Field collecting has covered most of the US, especially east of the Mississippi. Almost all linguistic atlases are synchronic, but historical ones have been attempted, the most considerable being Angus McIntosh's pioneering work, begun in 1952 and published in 1986, *A Linguistic Atlas of Late Medieval English* (2 volumes, Aberdeen U. Press). See LINGUISTIC ATLAS OF ENGLAND, LINGUISTIC ATLAS OF THE UNITED STATES AND CANADA, LINGUISTIC SURVEY OF SCOTLAND. [AMERICAS, EUROPE, LANGUAGE, REFERENCE, VARIETY].

F.G.C.

**LINGUISTIC ATLAS OF ENGLAND**, short form *LAE*. An atlas of the dialects of England edited by Harold Orton, Stewart Sanderson, and

John Widdowson, published by Croom Helm, London, in 1978. Orton directed its preparation at the Institute of Dialect and Folk Life Studies, U. of Leeds, of which Sanderson was Director. The maps display selected material from the *Survey of English Dialects*, grouped according to phonology, lexis, morphology, and syntax. The phonological maps cover not only vowel differences but also variants in the pronunciation of such words as *tongue* with closing /g/ and *bacon* with /j/ after /b/ ('byacon'). The lexical maps show the distributions of such usages as *byre*, *cow-stable*, *mistal*, *neat-house*, *shippon* (dialect synonyms of *cowshed*) and *mowdy*, *mowdy-warp*, *want* (synonyms of *mole*). The morphological maps show the distribution of such forms as *he say* rather than *he says*. The irregularities of the verb *to be* are graphically shown, with occurrences of *I bin*, *I be*, *I are* rather than *I am*. Syntactic maps deal with such forms as *We put the light on* and *We put on the light*, which emerge as geographical distinctions. The *Atlas* is not exhaustive, and a corpus of material resulting from the Survey remains unresearched. See LINGUISTIC ATLAS, SURVEY OF ENGLISH DIALECTS. [EUROPE, REFERENCE, VARIETY].

S.E.

## LINGUISTIC ATLAS OF THE UNITED STATES AND CANADA

short form *LAUSC*. The inclusive title for a series of affiliated investigations into North American dialects of English. Planning for an atlas project was begun by the Present-Day English Research Group of the Modern Language Association in the 1920s. The Linguistic Society of America, the American Council of Learned Societies, and the American Dialect Society supported the project, whose aim was to map linguistically the whole of English-speaking North America. The New England region was chosen for a pilot project, with fieldwork begun there in 1931. Under the editorship of Hans Kurath, that project was completed and published as the *Linguistic Atlas of New England* (*LANE*, 3 volumes in 6, Brown U., 1939-43, plus a *Handbook of the Linguistic Geography of New England*, 1939, 2nd edition AMS Press, 1973). By the time *LANE* was finished, however, it had become clear that North America was too large to be covered by a single team or project. Consequently, the original project was divided into a number of autonomous but loosely correlated regional dialect studies.

As fieldwork for the New England atlas was completed, that for a *Linguistic Atlas of the Middle and South Atlantic States* (*LAMSAS*) was begun and continued from 1933 to 1949. Originally separate projects for the Middle Atlantic (New York, New Jersey, Delaware, and Pennsylvania) and the South Atlantic (Maryland

south to the north-east tip of Florida), the project was unified under the direction of Kurath; on his retirement, he was succeeded by one of the main fieldworkers, Raven I. McDavid Jr. Pending editing of the atlas, three interpretive volumes were published based on its field records and those of *LANE*: Hans Kurath, *A Word Geography of the Eastern United States* (U. of Michigan Press, 1949), E. Bagby Atwood, *A Survey of Verb Forms in the Eastern United States* (U. of Michigan Press, 1953), and Kurath & McDavid, *The Pronunciation of English in the Atlantic States* (U. of Michigan Press, 1961). Editing of the atlas proper is currently being done by William A. Kretschmar Jr., at the U. of Georgia.

Work toward a *Linguistic Atlas of the North Central States (LANCS)* was begun by Albert H. Marckwardt in 1938. Fieldwork was carried out in Ohio, Indiana, Illinois, Kentucky, Michigan, Wisconsin, and portions of the Canadian province of Ontario. The field records are now stored at the U. of Georgia; the field records of both *LANCS* and *LAMSAS* are available on microfilm from the U. of Chicago. The second project to reach completion was *The Linguistic Atlas of the Upper Midwest (LAUM)*, 3 volumes, U. of Minnesota Press, 1973-6, initiated in 1947 and edited by Harold B. Allen. The New England data had been published as large and costly hand-drawn maps; the Upper Midwest atlas used small maps as illustrations to a narrative exposition of the data, and included a variety of charts and tables. *LAUM* covers the states of Minnesota, Iowa, North and South Dakota, and Nebraska.

*The Linguistic Atlas of the Gulf States (LAGS)* began publication in 1986 (U. of Georgia Press), with second and third volumes appearing in 1988 and 1989. Several more volumes are in preparation. Edited by Lee Pederson of Emory U., this atlas covers the states of Florida, Georgia, Alabama, Mississippi, Tennessee, Louisiana, Arkansas, and eastern Texas. The data on which the atlas is based, including a concordance of all responses, is available on microfiche, and a computer program exists to map the information in complex combinations. In an independent study (*Vocabulary Change*, Southern Illinois U. Press, 1971), Gordon R. Wood covered much of the same geographical area using a lexical checklist distributed by mail. Dialect atlas studies west of the Mississippi, other than the Upper Midwest, are in various stages of progress. Although each of the published regional atlases has been in a different format and each project has had somewhat different emphases, all have been efforts to describe regional usage in a comparable way according to the age, sex, and social

group of speakers. In addition, there is a common core of items for which questionnaires seek to elicit terms. They are set forth by Alva L. Davis, Raven I. McDavid Jr., and Virginia G. McDavid, *A Compilation of the Worksheets of the Linguistic Atlas of the United States and Canada and Associated Projects*, 2nd edition (U. of Chicago Press, 1969) and Lee Pederson et al., *A Manual for Dialect Research in the Southern States*, 2nd edition (U. of Alabama Press, 1974). [AMERICAS, REFERENCE, VARIETY].

J.A.

**LINGUISTIC GEOGRAPHY**, also **dialect geography** [1920s]. The study of regional dialect variation. See DIALECT, ISOGLOSS, LINGUISTIC ATLAS. [LANGUAGE]. T.MCA.

**LINGUISTICIAN**. See LINGUIST.

**LINGUISTICS** [1850s: from French *linguistique*, Latin *lingua* tongue, language]. The systematic study of language. Its aim is to look at language objectively, as a human phenomenon, and to account for languages as they are rather than to prescribe rules of correctness in their use. It therefore has a twofold aim: to uncover general principles underlying human language, and to provide reliable descriptions of individual languages.

**History**. Although the formal study of language dates from at least the middle of the first millennium BC in India and ancient Greece, the era of scientific language study is commonly dated from the end of the 18c, when English was discovered to have the same ancestor as a number of European and Asian languages. This discovery initiated at least a century of intense interest in comparative philology, which involved uncovering links between languages, writing comparative grammars of related languages, and reconstructing their common 'ancestors'. These activities stimulated a search for the mechanisms underlying language change. In the 20c, a change of emphasis occurred, largely through the work of the Swiss linguist Ferdinand de Saussure, sometimes regarded as 'the father of modern linguistics'. He advocated separating historical from synchronic aspects of language study. He argued that language at any point in time is an interlocking structure, in which all items are interdependent, an insight which is now taken for granted in linguistics and forms the basis of 20c structuralism. In the 1930s and 1940s, descriptive linguistics was developed largely in the US, as linguists sought to describe the fast-disappearing American-Indian languages, with Edward Sapir and Leonard Bloomfield being regarded jointly as the 'fathers of American linguistics'. Midway through the

20c, Noam Chomsky triggered another change of direction, when he instigated work in *generative linguistics*, a concern for the principles in the minds of speakers which could *generate* language (account for their knowledge of language in an explicit way).

**Branches.** Linguistics is a relatively young social science, in which there has recently been a massive expansion in almost all areas. It now comprises a large number of flourishing branches, several of them hybrids with other disciplines. Although *phonetics*, the scientific study of speech sounds, is usually regarded as an intrinsic part of linguistics, it is often taken to be a discipline in its own right, especially by phoneticians, who point to its 19c origins. Linguistics and phonetics together are therefore often referred to as *the linguistic sciences*. At its core, linguistics can be said to have three classic subdivisions: (1) *Phonology* the study of sound patterns; (2) *Morphology and syntax* the composition of words and sentences; (3) *Semantics* the study of meaning. Some linguists consider that morphology and syntax can be subsumed under the traditional term *grammar*; others argue that phonology, morphology, syntax, and semantics all constitute the grammar of a language. Each can be studied synchronically or diachronically (or both together) and the order in which they have been dealt with within a grammar has fluctuated over the years. In the last quarter-century, some previously fringe areas have become increasingly important, notably *pragmatics* the study of language usage, a topic which includes *discourse analysis*; *sociolinguistics* the study of the relationship between language and society; *psycholinguistics* language and the mind; *neurolinguistics* language and the brain; *linguistic typology* the analysis of languages into types; *computational linguistics* the use of computers to simulate language processes; *stylistics* linguistic analysis applied to literature and style; *applied linguistics* linguistics in relation to such practical activities as language teaching, lexicography, and speech therapy.

**LINGUISTIC SCIENCES.** See LINGUISTICS.

**LINGUISTIC SIGN** [From French *signe linguistique*, as used by Ferdinand de Saussure]. A term in especially early 20c linguistics. Such a sign has two parts: a signifier (French *signifiant*), the form; something signified (*signifié*), what is referred to, the meaning. According to Saussure, language was a system of signs, in which each formed part of an interdependent whole *où tout se tient* (where everything holds together). He stressed the arbitrary nature of the sign, evidently covering two notions of arbitrariness: (1) That there is mostly no connection between the two parts of the sign: there is no intrinsic link between the sound sequence *cow* and the animal it refers to. This is accepted as a tenet of linguistics. Apparent exceptions, as with onomatopoeic words (*bang, coo, quack*) are relatively few and vary from language to language. In addition, sound symbolism, when a group of words in a language is characterized by a particular sound (such as *fl-* in English for *flickering* and *fluttering*) is also language-specific and conventional. See PHON(A)ESTHESIA. (2) That each language cuts up the world in different, arbitrary ways. This viewpoint is controversial, as linguists are divided as to whether there is an underlying reality which is assembled differently by various languages, or whether the cutting up is as arbitrary as Saussure suggested. See SEMANTICS, SEMIOTICS, SIGN. [LANGUAGE]. J.M.A.

**LINGUISTIC SOCIETY OF AMERICA**, short form *LSA*. An American and Canadian association founded in 1924 'for the advancement of the scientific study of language' to support research and publication in descriptive and theoretical linguistics. It holds an annual meeting for the presentation of papers, sponsors in cooperation with various universities a summertime programme of courses and lectures bringing together students and teachers from all over the world, and publishes the journal *Language*. The LSA's c.7,000 members are mostly college and university teachers. [AMERICAS, LANGUAGE, MEDIA]. C.C.E.

**LINGUISTIC SURVEY OF SCOTLAND.** A survey instituted by the U. of Edinburgh in 1949, following preparatory work since 1935. It has two sections: Gaelic and Scots. The work of the Gaelic Section has been chiefly on dialect phonology and is yet to be published. In the main, the Scots Section has investigated the regional distribution of several hundred items of vocabulary (through postal questionnaires) and aspects of phonology (through interviews). The latter employ a 'polysystemic' approach to elicit systems of stressed vowels in distinct structural positions (before *t, h, d*, word-finally, etc.). A selection of findings was published in *The Linguistic Atlas of Scotland*, volume 1 (1975), volume 2 (1977), volume 3, *Phonology* (1986), edited by J. Y. Mather and H. H. Speitel. See LINGUISTIC ATLAS. [EUROPE, LANGUAGE]. A.J.A.

**LINGUISTIC TYPOLOGY** [20c]. Also **language typology**, **typology of language**. The classification of human languages into different types on the basis of shared properties which are not due to common origin or geographical contact. Linguistic typology therefore complements the long-established tradition of genetic classification, in which languages are assigned to a family on the basis of their presumed historical origin. The criteria used for dividing languages into types depend to some extent on the purpose of the classification, since a typology based on sound structure does not necessarily correlate with one based on word order. The most common classificatory criteria are morphological (word structure), syntactic (word order), and phonological (sound patterns), though recently a number of new criteria have been proposed, and there has been an increasing interest in the notion of implicational relationships: if a language has feature X, then it will also have feature Y.

**Morphology.** Investigation of the way in which different languages combine grammatical units (morphemes) within words is the longest-established aspect of typology. In the 19c, there was an attempt to assign languages to a number of basic morphological types, most commonly three, which divided languages according to the degree to which morphemes are fused together: (1) *Analytic or isolating languages*, in which each morpheme tends to form a separate word, as in Vietnamese *Com nấu ngoài trời ăn rất nhạt* (rice cook out sky eat very tasteless: 'Rice which is cooked in the open air is very tasteless'). (2) *Agglutinating languages*, in which several morphemes are juxtaposed within a word, as in Turkish *adamlardan* (*adam-lar-dan*, *man-plural-from*: 'from the men'). (3) *Fusional languages*, in which morphemes are fused together

within a word, as in Latin *servorum* (of slaves), where the ending *-orum* is a fusion of *possession*, *plural*, and *masculine*. In practice, few languages are pure types, since many use all three processes for handling morphemes, even though one favoured method tends to predominate. English has a tendency towards isolation (as in *I will now go out for a walk*), but both agglutination (as in *clever-ly* and *high-er*) and fusion (as in *gave*, in which *give* and *past* are fused) are also found.

Alternatively, languages may be classified morphologically according to the number of morphemes within a word: *analytic languages* (ideally, one morpheme per word, such as Vietnamese, with an estimated 1.06 morphemes per word) are opposed to *synthetic languages* (two or more morphemes per word, such as Sanskrit with an estimated 2.59 morphemes per word). The most extreme form of synthesis is found in a *polysynthetic* language, such as Inuit (Eskimo), which has an estimated 3.72 morphemes per word. On this scale, English comes out as mildly analytic with 1.68 morphemes per word. *Inflected languages* are a variety of synthetic language in which a word takes various forms, most usually by the addition of suffixes, which show its role in the sentence. Many languages have some inflection (such as English *boys*, *the boy's mother*, *play/played*) but in a highly inflected language, such as Latin, this process predominates. There are therefore two morphological scales, one which measures degree of fusion (*isolating—agglutinating—fusional*), the other degree of synthesis (*analytic—inflected—polysynthetic*). Since an isolating language is inevitably also an analytic language, English is at the low end of both scales.

**Syntax.** In the past quarter-century, basic word order has been the main criterion for classifying languages. In the early 1960s, it was observed that of the possible combinations of subject (S), verb (V), and object (O) within a sentence, only certain ones actually occur, and that these are not all equally likely. The commonest are those in which the subject comes first (SVO as in English, SOV as in Turkish), less common are those in which the verb comes first (VSO as in Welsh, VOS as in Malagasy), and least common are those in which the object comes first (OVS as in Hixkaryana, spoken in northern Brazil, OSV of which no sure example has yet been found). Many languages have mixed word orders, and not all languages have a firm order, so this classification has its flaws. However, English with its SVO structure, such as *The rabbit (S) gnawed (V) the carrot (O)*, is a language with one of the two commonest word orders, even though some subsidiary orders are possible, such as *Up jumped the rabbit*.

The relative order of verb and object is often considered to be the most important from the point of view of typology, since not all languages express overt subjects. The main interest in classifying languages in this way lies in the *implicational* relationships, in that certain other constructions are statistically likely to occur in each type. A VO language, such as English, is likely to have prepositions rather than postpositions (such as *up the tree* rather than *\*the tree up*), and auxiliaries before main verbs (such as *Bill may come* rather than *\*Bill come may*). It is also likely to have relative clauses (beginning with *who/which*, etc.) after the noun they refer to, such as *The burglar who stole the silver escaped* rather than *\*The who stole the silver burglar escaped*. The general principle behind these observations appears to be a preference for consistency in the position of the *head* (main word) in any construction with regard to its *modifiers* (items attached to it): so a VO language such as English is a '*head first*' language and an OV language such as Turkish is a '*head last*' language.

A recent, controversial proposal by Noam Chomsky is that humans are genetically 'hard-wired' with some universal features of language, but that these are supplemented with a number of options which have to be selected on the basis of exposure to a particular language: see LANGUAGE ACQUISITION DEVICE. The choice of one rather than another has complex ramifications throughout the language. Different language types are therefore the result of a number of fairly simple choices which are automatically available to humans. One proposal for such an option is between a *pro-drop language* (one which can optionally drop pronouns at the beginning of sentences, as in Italian *Io sono Italiano/Sono Italiano* (I am Italian/Am Italian) and one which does not usually do so, such as English. Pro-drop languages seem to behave somewhat differently over a range of constructions from languages which do not drop their pronouns.

**Phonology.** Phonological typology has received somewhat less attention, though some interesting work has been done on types of vowel system. In addition, a number of studies have proposed implicational hypotheses, such as if a language has fricative consonants, it will also have stop consonants. With regard to rhythm, some linguists divide languages into: (1) *Syllable-timed languages*, such as French and Japanese, in which the rhythm appears to be fairly even, with each syllable giving the impression of having about the same weight as any other. (2) *Stress-timed languages*, such as English and Arabic, in which stressed syllables recur at

intervals. In recent years, a somewhat 'weak' version of this view has gained ground. The absolute division has been replaced by a sliding scale, in which there are few pure types, though many which can be placed towards one or the other end of the scale. There is no doubt that English is on the stress-timed end of the scale. Another distinction is sometimes made between *tone* or *tonal languages*, such as Mandarin Chinese, and *intonation* or *non-tonal languages*, such as English. In a tone language, the pitch level of any syllable is of critical importance, since words are sometimes distinguished from one another purely by the tone, such as Mandarin *ma* with level tone (*mother*), with rising tone (*hemp*), with a dipping tone (*horse*), and a falling tone (*scold*). In a language such as English, however, sentence intonation plays a crucial role, as in *You saw him!* versus *You saw him?*, where difference in meaning is signalled by the intonation.

**Conclusion.** Linguistic typology is a fast-expanding branch of linguistics and is consequently in a state of considerable flux and controversy. A wide range of criteria apart from those outlined above are currently under discussion, and it will be some years before reliable methods of classifying languages are established.

**LINK HYPHEN.** See HYPHEN.

**LINKING R.** In certain accents of English, including RP, /r/ pronounced between a word or syllable ending in the vowels /ɔ, ɑ, ə/ and a following vowel: the *r* in *beer* and *a sandwich, car engine*. See INTRUSIVE R, RECEIVED PRONUNCIATION, RHOTIC AND NON-RHOTIC. [SPEECH].

G.K.

**LINKING VERB.** See COPULA, VERB OF INCOMPLETE PREDICATION.

**LINK LANGUAGE** [1960s]. A semi-technical term for a language that allows communication between groups with no other common language: for example, Hindi in India, Swahili in East Africa, and forms of Malay in Indonesia and Malaysia. It may or may not be seen as neutral in relation to other languages used in a particular place. English serves as a link language in most of Africa and Asia: 'There has been a sort of political platform, that we should revert to Hindi as the national language, that English should not be given the importance it is. But if a thing is in force it is because it is needed. English is needed as a link language between the Indian states, and between the union government and the states' (Nayantara Sahgal, *South*, Aug. 1985). Compare LINGUA FRANCA. [AFRICA, ASIA, LANGUAGE]. T.MCA., B.B.K.

**LINOTYPE** [Late 19c: from *line o' type*, on the analogy of forms like *kilogram*]. The trade name of a typesetting and typesetting machine operated by keyboard, invented in the 1880s by the German-born US instrument maker Ottmar Mergenthaler. The name also refers to type produced by such a machine, which casts type from hot metal one line or slug at a time. When finished with, the slug is melted down and the metal used again. In such a process, if an error occurs the whole line has to be set again. It was widely used until the mid-20c, especially for printing newspapers. See MONOTYPE, TYPESETTING. [TECHNOLOGY]. W.W.B.

**LIPOGRAM** [18c: from *lipogrāmmatos* missing a letter]. A piece of writing constructed without using a particular letter of the alphabet. The omitted letter is usually a vowel. Thus, Ernest Vincent Wright's novel *Gadsby* (1939) and Georges Perec's *La Disparition* (1969) both avoid the letter *e*, the most commonly used letter in normal writing. A similar challenge is provided by the *univocalic*, which employs only one vowel, as in the verse: 'Persevere, ye perfect men, / Ever keep the precepts ten.' See WORD GAME. [WORD]. T.A.

**LIQUID** [14c: from Latin *liquidus* flowing, clear]. A term in phonetics for a frictionless approximant, especially an *r*- or *l*-sound. See APPROXIMANT, CONSONANT, L-SOUNDS, R-SOUNDS. [SPEECH]. T.MCA.

**LISP** [From Middle English *lipsen, wlispēn*, from Old English *awlypsian*]. A minor abnormality of articulation that typically affects the /s/ phoneme in English, but which may also be heard on

other sibilant sounds. Most commonly, the /s/ is replaced by a dental fricative /θ/, which remains when the rest of a child's pronunciation has moved on from the stage when such substitutions would be considered normal. It can be caused by physical or psychological factors, but often there is no apparent reason for it. See LANGUAGE PATHOLOGY, LINGUAL. [LANGUAGE]. D.C.

**LIST** [16c: from a Germanic source shared by Old English *liste* and French *liste*: the first sense relates to Old English, the second to Old French]. (1) (Obsolete or rare) the edge of a piece of cloth; a strip of cloth or paper; a line, band, stripe, mark, scar; a limit, boundary, region; a place of combat or competition (as in the idiom *to enter the lists*). (2) A connected sequence of items, as found in a dictionary, directory, or index: for example, of words (*a word list*), and of names, such as serving soldiers (*the active list*), members of an association (*a membership list*), and books (*a book list*). Written lists may run horizontally, filling each line in turn, or vertically, one item per line: 'Reassuring things, lists. They affirm that the blooming confusion of the universe can be reduced to a tidy vertical column. . . . Man is an inveterate listmaker. *I list therefore I am*' (Richard Stengel, *Time*, 31 Dec. 1990). The concept underlies most reference systems: for example, library catalogues, works of reference, databases, and thesauri. Informal lists usually exhibit some kind of ordering, especially the compiler's priorities, and their items are often numbered for easy reference; formal lists are usually *alphabetic* or *thematic*, or a mix of both. A *publisher's list* consists of the titles of books already or about to be published (*a spring/autumn list*); a *backlist* contains books in stock and therefore available for sale. Less obviously, listing is an inherent feature of language itself: whenever three or more words, phrases, clauses, sentences, etc., of the same type follow one another, they constitute a list. Compare ALPHABETIC(AL) ORDER, CATALOG(UE), INDEX, LINE, MARK, THEMATIC ORDER, THESAURUS. [MEDIA, REFERENCE]. T.MCA.

**LIT CRIT.** An informal, sometimes dismissive, clipping of *literary criticism* and *literary critic*: 'The lit crits argue that they are looking at the world in a new way, a way that requires the invention of a new language' (Richard Bernstein, '(Post)modern Lit Crit Positionality', *New York Times News Service*, July 1990). See LITERARY CRITICISM. [LITERATURE]. T.MCA.

**LITERACY** [1880s: from Latin *lit(t)eratus* lettered, able to read, learned]. The ability to read and write in at least one language. This

ability developed in West Asia in the third millennium BC, when the Sumerians developed a system of symbols to record spoken language. They were followed by the Syro-Palestinians who, between 2000 and 1000 BC, introduced a consonantal script using a small number of signs, the precursor of the alphabet. During the same period, increasingly complex commercial, administrative, and religious structures and growing urbanization led to the invention of writing systems in such other regions as Egypt, India, and China. In ancient cultures, literacy was rare and specialized, and therefore a token of considerable learning. In more recent centuries, however, the term has often been interpreted minimally: as at least the reading and writing of one's name, anyone unable to do so being classed as *illiterate*. In the 20c, however, the ability to read and write has been delimited in many ways and *literacy* is often used interchangeably with *functional literacy*: the production and understanding of simple oral or written statements reflecting the social, economic, and educational conditions of a particular region. Yet the threshold of literacy is indeterminate, making exact measurements difficult or culturally variable. In 1965, at a world congress of ministers of education, UNESCO adopted the view that 'rather than an end in itself, literacy should be regarded as a way of preparing man for a social, civic and economic role that goes far beyond the limits of rudimentary literacy training consisting merely in the teaching of reading and writing' ('Literacy, Gateway to Fulfillment,' special issue of *UNESCO Courier*, June 1980).

**Literacy in English.** The earliest written English was the concern of a small minority of men, first in the runic alphabet, whose letters were carved on objects for both practical and ornamental purposes, then in the Roman alphabet introduced in Britain by Christian missionaries at the end of the 6c. Education remained for many centuries a province largely of the Roman Catholic Church and the need for reading and writing was not greatly extended until the introduction of movable type and inexpensive paper in the late 15c. This helped standardize written versions of English, expand the uses of literacy, and give reading and writing greater circulation among the populace. Determining who is literate and for what purposes has always been difficult. The collection of statistics tends to be confounded by the under-representation of people marginalized from the economic and political centres of a culture: for example, in censuses, by incomplete records, and by variable standards of what should be measured. Data such as signatures or court and ecclesiastical testimony have been used to estimate the degree of literacy

in particular locales at particular times, but tend to depend on self-reports and minimal evidence; they give no account of such skills as comprehension of printed matter. Moreover, reading and writing have had different constituencies and uses during different periods. Thus, in the 17c Protestant communities of early New England, where male literacy was well above 60% by 1700, it was considered important to help women acquire reading skills for religious purposes but not writing because its 'commercial uses lay beyond women's traditional sphere of activity' (Clifford, 1984, below).

**Ideology and literacy.** Deliberately taught rather than acquired like speech, literacy has traditionally been seen as a commodity delivered through political, educational, and religious bureaucracies. Reading, writing, and counting at sophisticated levels continued to be reserved first for the clergy and then for the sons of the aristocracy and of wealthy merchants; the term *literacy* in its 15-18c usages was regularly associated with a classical education and with priestly or civic élites. The literacy needs of most people, however, have tended to be functional: the production of reports, accounts, journals, and letters, and in recent times the completion of forms. Institutional arrangements for instruction in literacy according to the British and American models have, until the 20c, generally been aimed at achieving low to moderate levels of literacy for large numbers of people and higher levels for smaller privileged groups. Educational developments in 18c Scotland, linked with Presbyterianism, were typical: while the literacy rate for adult males jumped from 33% in 1675 to 90% in 1800, the increase was due to emphasis on reading, memorization, and recall of familiar material; neither writing nor the application of knowledge was demanded (compare Stone, 1969).

**Literacy, knowledge, and problem-solving.** The association of literacy with the acquisition of theoretical knowledge and the development of problem-solving abilities was by and large a product of the Industrial Revolution and, prior to the 20c, was generally confined to centres of education in cities. Country schools, whose pupils were needed to work the land and whose instructors were not always professionally certified, generally offered training in basic skills rather than fluency in written language. Both in town and country, however, children were drilled first on letter names and sounds, then on syllables and words. During the 19c, many reform-minded educators stressed the need for comprehension of reading materials, asserting that encountering words in context would lead students to a more rapid acquisition of meaning

and a more appropriate use of emphasis and inflection. However, since lack of high-level literacy was regarded as neither degrading nor detrimental to economic or social advancement, 19c levels of literacy remained low while numbers of people described as literate grew.

During the 20c, attitudes to literacy have changed. School-based definitions of literacy and standards relating to year groups have been adopted in most English-speaking countries, as competency testing has replaced functional determinants. Paradoxically, because of heightened expectations and increased technological demands, many people who have exceeded traditional literacy criteria are now considered *semi-literate* or *functionally illiterate*. In addition, legislators, educators, and public activists throughout the English-speaking world have sought to broaden the social and personal dimensions of literacy through mandatory training in such things as *historical literacy* (awareness of the main outlines of history, especially as regards one's own country), *cultural literacy* (a knowledge of classical texts and great writers of one's own culture), *mathematical literacy* (also called *numeracy*), *symbolic literacy* (an appreciation of the value and use of symbols of various kinds), *media literacy* (familiarity with and a capacity to understand and to some extent evaluate the different media and what they provide), and *computer literacy* (familiarity with and ability to use a computer, without necessarily being able to write programs).

**Conclusion.** Literacy requirements, which often relate to and depend on such highly specific contexts as occupational need, continue to vary among social and economic groups, with low levels concentrated among the poor, the under-educated, and members of minority populations. Given the lack of contemporary agreement concerning its definitions and uses, literacy is best conceived as a continuum whose dissemination involves various kinds of behaviour at higher and lower levels, including reading, writing, speaking, listening, thinking, counting, coping with the demands of the state, of employment, and of social life. See COMMUNICATIVE SHIFT, COMPUTERATE, CULTURAL LITERACY, DYSLEXIA, FUNCTIONAL LITERACY, ILLITERACY, LETTER<sup>2</sup>, ORACY, ORALITY, READING, SPELLING, SPELLING REFORM. [EDUCATION, WRITING]. R. W. **LITERAL** [14c: from Latin *lit(t)eralis* of letters].

(1) A term traditionally opposed to *figurative* and *metaphorical*. Although it is generally unrelated to letters, literacy, and literature, it suggests the influence of the letter as a measure of strictness and rightness: *the literal truth* is seen as being true in a basic and absolute way. If something is done *literally*, a person follows instructions 'to the letter' or 'word for word', without flexibility or imagination. Paradoxically, however, the adverb *literally* is often used to mean *figuratively*: 'And with his eyes he literally scoured the corners of the cell' (Vladimir Nabokov, *Invitation to a Beheading*, 1960). Compare PROSAIC. (2) A term in proof-reading for a misprint such as the substitution of one letter for another, the omission or addition of a letter, or letters transposed (for example, *paradoxical*, *responsibility*, *assumed*, *phenonemon*, *prniter*). Usually such errors do not affect sense, but sometimes they do, causing confusion and misleading the reader. A famous literal in a 1922 edition of Hermann Melville's *White-Jacket* (1850: ch. 92) reads *soiled fish of the sea* for *coiled fish of the sea*. Critics have debated whether or not the slip improved the text. See FIGURATIVE LANGUAGE, MISPRINT, TYPOGRAPHICAL ERROR. [STYLE, TECHNOLOGY]. T.MCA., W.W.B.

**LITERARY** [17c: from Latin *lit(t)erarius* of letters, reading, and writing, from *lit(t)era* a letter].

(1) Of writing and especially literature: *literary language*. (2) Well-versed or engaged in works of literature: *a literary man*. (3) Having the style of literature, often to the point of affectation or stiltedness; bookish: *literary style*, *literary pretensions*. See LITERARY CRITICISM, LITERARY METHOD, LITERARY SCOTS, LITERARY STANDARD, LITERARY TERM, STILTED. Compare LETTER<sup>1</sup>, LETTER<sup>2</sup>, LITERAL. [LITERATURE, STYLE]. T.MCA.

**LITERARY CRITICISM** [19c]. Short form *lit crit*. The formal study, evaluation, and discussion of literary texts. Like any other subject, the critical analysis of literature requires a set of terms and usages through which discussion and instruction can proceed. Much of this meta-language is traditional and dates from classical times: category terms such as *comedy*, *drama*, *epic*, *sonnet*; descriptive terms such as *anagnorisis*, *catharsis*, *hamartia*, *hubris*; rhetorical and stylistic terms such as *alliteration*, *irony*, *metaphor*, *simile*. Others have emerged in recent centuries, such as *denouement*, *imagery*, *pathetic fallacy*, *romanticism*; others still belong to the 20c, such as *deconstructionism*, *intertextuality*, *stream of consciousness*, *structuralism*. Although moral, social, political, and other issues may be introduced, criticism starts from the language of the original writer.

**Origins.** Western critical analysis began in classical Greece and was focused on poetry and drama. Plato (5-4c BC) did not place a high value on imaginative literature, which he saw as likely to present unifying matters, inflame emotions, and harm the morality of the state, but his pupil Aristotle (4c BC) was the most important literary critic of the ancient world. Though incomplete, his treatise the *Poetics* established ideas that were influential for many centuries and still directly and indirectly influence critical thinking. Aristotle saw poetic composition as *mimesis*, an imitation or representation of life through the medium of words: art imitates life. The most detailed part of his treatise relates to tragic drama, which he presented as therapeutic, bringing the benefit of *catharsis*, a purgation or purification achieved by witnessing emotional events on the stage. He characterized the tragic hero as a noble person with a tragic flaw (*hamartia*) that proves fatal, as well as pride (*hubris*) that leads to a fall. Although the doctrine of the *three unities* (of time, place, and action) was later ascribed to him, Aristotle discussed only action, remarking that in tragedy the action usually took place within a period of 24 hours. Horace (1c BC) was the most important of the Roman critical writers. His ideas were largely derived from the Greek, but were expressed with Augustan vigour and enthusiasm. His *Ars Poetica*, written in hexameter verse, is not a systematic treatise but a set of maxims for success in writing poetry that emphasizes sincerity and attention to the best models from the past. Nothing certain is known about Longinus (1c AD), to whom the Greek text *Peri Hupsous* (On the Sublime) is attributed. This influential work relates poetic excellence to the profundity of writers' emotions and the seriousness of their thought. Plotinus (3c AD) provided a full statement of neo-Platonic thought,

in which poets had a noble role, almost that of a second Creator, as their art ascends to the realm of the Platonic *Ideas* from which the world derives its being.

**The Middle Ages and the Renaissance.** In medieval Europe, assessments of literature were concerned principally with its moral value. The classical authors were distrusted for their paganism and valued more for their rhetorical advice than their literary views. Theories of poetry, like the *Poetria* of Jean de Garlande (mid-13c), discussed technique and the choice of appropriate style. Vernacular writing had little critical esteem before Dante Alighieri, in his unfinished *De vulgari eloquentia* (Of Common Eloquence, 1307), made a serious enquiry into the most suitable type of language for vernacular poetry. Giovanni Boccaccio advanced the importance of post-classical writing with his lectures on the writings of Dante (1373-4). The foundations of modern textual criticism were laid in *Miscellaneorum centuria* (A Century of Miscellanies) by the neo-Platonist Angelo Poliziano (1454-94, sometimes known in English as Politian), a dramatist and professor of Greek and Latin at Florence. The Renaissance revived interest in the classical critics. In the 16c, Julius Caesar Scaliger with his *Poetica* (Poetics) and Torquato Tasso with his *Discorsi* (Discourses) influenced writers and critics in England. Native English writers did not show a comparable concern for theory, although Geoffrey Chaucer in the 14c praised Dante, Boccaccio, and Petrarch as his masters and models, and took an adversely critical position towards some of the still popular but moribund poetic forms, parodying in *The Canterbury Tales* the ballad-romance style in his *Tale of Sir Thopas* and making his Parson dismiss alliterative verse ('I am a Southren man, / I can nat geste—rum, ram, ruf—by lettre'). William Caxton, as a printer, publisher, and editor, was anxious to develop English as a literary language.

**Early English criticism.** On the whole, the first approaches to literary criticism in England were conservative and legislative. They guided writers to emulate the classics, because English was regarded as not fully proved as a literary medium and therefore in need of judicious support. Thomas Campion in *Observations on the Art of English Poesie* (1602) asserted the supremacy of classical metres; he was answered by Samuel Daniel (1563-1619) in *A Defence of Rhyme* (1603), arguing on the basis of established practice and the nature of English: 'for as Greeke and Latine verse consists of the number and quantitie of sillables, so doth the English verse of measure and accent'. Philip Sidney wrote theoretical criticism in *The Defence of Poesie* (1579-

80, printed 1595), an analysis of poetic types based on ancient practice. Sidney thought little of contemporary English poetry and less of the new drama. George Puttenham stated some basic Elizabethan critical attitudes in *The Arte of English Poesie* (1589), in which he offered vernacular names for classical figures of rhetoric, such as 'the over reacher' for *hyperbole*. He ascribed to Sir Thomas Wyatt and Henry Howard Surrey the beginning of courtly poetry, after the rough work of John Skelton. By and large, although 'English' literary styles were developing, poets and critics alike continued to look primarily to classical and Italian sources for their inspiration.

**Neo-classical criticism.** In the 17c, simple appreciation of classical genres, motifs, and techniques gave way to a more descriptive and specific analysis of texts. From the Restoration to the late 18c, however, because of the prevailing spirit of neo-classicism, work in English was still generally constrained by classical standards. In most instances, the leading critics were also leading writers. As a consequence, John Dryden, himself a dramatist, treated English drama seriously in *Of Dramatick Poesie* (1668) and *Of Heroick Plays* (1672). Jonathan Swift, in *The Battle of the Books* (1697), satirized controversy between admirers of English writing and those who saw merit only in the classics. Thomas Rymer supported the ancients, denigrating Elizabethan and Jacobean drama in *The Tragedies of the last Age* (1678) and *A short View of Tragedy* (1692). John Dennis, an admirer of Longinus, replied in *The Impartial Critick* (1693). Alexander Pope wrote his major critical work in verse: his *Essay on Criticism* (1711) is legislative, advising poets and critics on virtues to cultivate (such as judicious assessment, 'Avoid extremes; and shun the fault of such / Who still are pleased too little or too much') and faults to avoid (such as hackneyed rhymes, 'the same unvaried chimes, / With sure returns of still expected rhymes'). The most influential critic in the later 18c was Samuel Johnson, the preface to whose edition of Shakespeare (1765) refutes insistence on the three unities in drama. His *Lives of the English Poets* (1779-81) exemplifies contemporary critical values and reflects some of his prejudices, including an attack on the Metaphysical poets. Neo-classical critics were prescriptive, regarding themselves as arbiters of public taste and guardians of the purity of English. Among them the novel attracted little serious critical attention in the 18c, Henry Fielding defending it as a 'comic epic in prose'.

**Romantic criticism.** Samuel Taylor Coleridge was the foremost among the Romantic critics of the late 18c and early 19c. He abandoned

prescriptivism, to 'establish the principles of writing rather than to furnish rules how to pass judgement upon what has been written by others'. He cited specific texts mainly as illustrations of the poetic process, but wrote closely on Shakespeare, Milton, and others. William Wordsworth wrote little direct criticism apart from his theory of poetic diction in prefaces to *Lyrical Ballads* (1798, 1800, 1802). His concern with the language of poetry and its relationship to ordinary discourse anticipates some of the linguistic criticism of the 20c. In true Romantic spirit he wrote that 'poetry is the spontaneous overflow of powerful feelings: it takes its origin from emotion recollected in tranquillity'. William Hazlitt, among the first in the British Isles to make criticism a career, wrote reviews that were incisive in analysis and judgement. Charles Lamb, although an admirer of Coleridge, took the judgemental tone of Johnson towards what he saw as excess and indiscipline in writers of the 16c and 17c, but made a witty defence of Restoration drama.

**Victorian criticism.** In the Victorian period, the literary output, especially in fiction, was accompanied by a growth of periodical reviews, such as *Fraser's Magazine* (1830), *Saturday Review* (1855), *Cornhill Magazine* (1860), *Fortnightly Review* (1865). Matthew Arnold saw poetry as a spiritual force, a 'criticism of life' in an age of growing doubt and anxiety. His love of the Greek spirit and the austerity of its literature made him critical of much English poetry. Poetry, he considered, should be 'particular, precise and firm' and should appeal to 'those elementary feelings which subsist permanently in the race'. The claim he made for universality in particular texts has been challenged in 20c criticism. Many of the Victorian novelists commented on their art, notably Anthony Trollope in his autobiography; it was the American novelist Henry James who first attempted ordered criticism of the novel. He embodied his theories in his own fiction, while seeking to create a tradition of novel criticism. He emphasized form and design ('the figure in the carpet'), to be discerned in good fiction. He took his examples mainly from contemporary novelists, many of whom seemed to him to lack artistic discipline.

**Early twentieth-century criticism.** The development of English as an academic subject brought vigorous expansion in literary criticism. T. S. Eliot was influential as a critic, appealing to the tradition of past literature which must be respected by new writers ('the historical sense'), but without unthinking submission to the prescriptions of the past. Eliot was rigorous and

selective in his judgements, admiring Elizabethan and Jacobean drama and Metaphysical poetry and disliking Romanticism. Other creative writers who wrote about the art which they practised were Virginia Woolf and E. M. Forster; the latter's *Aspects of the Novel* (1927) is a post-Jamesian attempt at a theory of fiction. The leading academic critics were I. A. Richards, who advocated a *practical criticism* that would concentrate on the text and its verbal nuances without preconceived ideas about the author; F. R. Leavis, who believed passionately in the civilizing influence of rigorous literary criticism in an age of technology and mass culture; and William Empson, whose *Seven Types of Ambiguity* (1930, revised 1947, 1953) explored levels of response to literary language and the verbal nuances open to individual readings. Whereas in the past critics had generally also been writers, the new academic status of literary critics meant that they were in the 20c increasingly commentators on literature with specialist assumptions and terminologies of their own.

**New Criticism.** Richards's practical criticism influenced both Empson and the *New Critics* in the US, who discountenanced the study of literature in terms of history, morality, or any purpose outside itself. New Criticism demanded close attention to the text itself and favoured the virtual exclusion of everything except the words on the page, including the author's life and interactions. Following the publication of J. C. Ransom's *New Criticism* (1941), it was dominant in critical circles in Britain and America for some twenty years. Other leading figures were R. P. Blackmur, A. Tate, and R. P. Warren. Although these critics differed in many respects, their collective influence struck at the roots of the idea of 'literary history' with its categorized authors and movements.

**Russian Formalism.** An earlier reaction against emphasis on content and 'message' appeared in Russia with the development of *formalism*; the name was first used by its opponents for its concentration on the formal pattern of sounds, words, and literary devices. The Russian Formalists regarded literature as a special use of language, which draws attention to its own distinctive features and thus distances or 'defamiliarizes' itself from the normal use of language referring to the external world. They considered that even mimetic realism uses language in a contrived and artificial way. All language is a medium infused with feeling and purpose by its users; literary writers have devices and techniques that make their work distinctive and that criticism should try to identify in a text. Features like metre, rhyme, and alliteration are thus essential qualities of literary language and not

embellishments. The influence of the Formalists, particularly Roman Jakobson, has been considerable, even on those who challenged their approach. Jakobson left Russia in 1920 and continued the work of Formalism with the Prague School.

**Structuralism.** The Formalists were influenced by the theory of the Swiss linguist Ferdinand de Saussure, whose work was also seminal for the Structuralist movement, including Jakobson, Roland Barthes (1915–80), and Tzvetan Todorov (b.1940). They challenged the traditional mimetic theory, arguing that the important relationship is not with external reality but with recurrent elements in the code or 'system of signification' in a text. Language, in their view, is a first-order system that generates literature as a second-order system. Gérard Genette (b.1930) wrote: 'Literature has been regarded as a message without a code for such a long time, that it became necessary to regard it momentarily as a code without a message' (*Figures*, 1966: translated from the French). Structuralism demotes the individual author but considers that a distinct quality of *literariness* can be identified, even though non-literary elements appear in a text.

**Deconstructionism or post-structuralism.** A further retreat from tradition came with the Deconstructionist view of Jacques Derrida (b.1930) that literature continually subverts its own apparent claim to establish a definitive meaning. Literary and other uses of language are *logocentric* (focused on words), and imply that a self-certifying Platonic absolute does not exist. In the view of Deconstructionists, the reader plays a major part in producing meaning, and becomes in effect the creator of literary language. In the process, however, ultimate meaning is continually deferred, because every reader interprets every text differently. Derrida did not create a systematic critical theory but rather a number of close readings of texts to illustrate his approach. In the US, his followers include J. Hillis Miller (b.1928) and Paul de Man (1919–83). The term *post-structuralism* can also include recent developments in criticism based on the psychoanalytical theories of Sigmund Freud. Earlier critics found Freudian analysis a useful approach to the study of literature; the French critic Jacques Lacan (1901–81) held that the form as well as the content of linguistic expression was significant and revealed the individual struggle to come to terms with the world of language and meaning. *Marxist criticism*, emphasizing historical, social, and political influences on literature, was practised by a number of critics. The Hungarian critic Georg Lukács (1885–1971) considered that language is determined by

the social background and ideological disposition of authors, many of whom have been proponents, consciously or otherwise, of a bourgeois world-view. All writers, especially those opposed to socialism, revealed inner tension in their work that transcended overt ideology: 'In every society the production of discourse is at once controlled, selected, organised and redistributed according to a certain number of procedures, whose role is to avert its powers and dangers' (Michel Foucault, 'The Discourse on Language', in *The Archaeology of Knowledge*, 1972).

**Feminist criticism.** The social and political movement for women's rights developed in the 19c and has become known as *feminism* in the later 20c. In the process, it has prompted an influential contemporary critical viewpoint among women, both as writers and critics. An early exponent of feminist criticism was Virginia Woolf in *A Room of One's Own* (1929). The principal lines of feminist criticism are women's freedom to write equally with men and to give full expression to their distinctive experience; a traditional predominance in literature of a male view of women; the implication that the standard reader is male creates sexist language, such as the use of male pronouns and *androcentric* words as generic terms (such as *he* for any human being and *mankind* for the human race). Feminist critics consider that literary language has expressed the dominance of the patriarchal society that shaped it and that traditional literary criticism has neglected female insights. Feminism has encouraged new women's writing, publishers with a special interest in women's writing, and the revival and reissuing of overlooked works by women in past centuries.

**New Historicism.** Marxist and feminist criticism, often working together, have challenged the exclusion of history as proposed and practised by the New Critics. Those critics who have revived a concern for literary texts as aspects of history belong to a movement known as *New Historicism*. They have moved from a Formalist approach to the examination of texts in relation to their historical background so as to gain insights into past societies, with their distinctive world-views. For the New Historicist, any text is open to scrutiny without 'privileging' one type over another, and particularly without giving special status to the traditional literary text or any canon of such texts.

**Contemporary literary theory.** The proliferation of critical schools, the mixing of their views and terms, and the plethora of works describing them can be bewildering for the student of literature, who may have first approached literary theory with the view that a literary text simply 'tells a

story' about which there can or should be little disagreement. Critical theory is now a well-established academic subject and most critics are now trained professionals rather than (as in the 19c in particular) enthusiastic amateurs who wrote reviews for literary periodicals (although something of this broader humanist tradition survives in the book review sections of the 'quality' press, in which authors continue to comment on each other's works). Academic literary theory is currently in an unsettled state, with the possibility, as some see it, of becoming an end in itself (criticism for the sake of criticism) rather than as a means of understanding the literary heritage of a language or a society and a means of helping people select what they might most usefully read. Descriptive criticism is sometimes limited to texts that respond conveniently to a favoured approach. At the same time, however, variety and controversy have given vitality to literary studies and the study of literary language. Despite different and often warring ideological presuppositions, most critics currently give close attention to the details of literary language and use the insights of linguistics to identify and describe textual features. In addition, the metalanguage of criticism has added many new words and senses of words to the language of literary theory, including *foregrounding*, *gynocriticism*, *intertextuality*, *logocentricity*, *narratology*, *privileging*, and *subtext*. **LITERARY ENGLISH.** (1) See LITERARY STANDARD. (2) See ENGLISH LITERATURE, LITERATURE.

**LITERARY METHOD.** See LANGUAGE TEACHING.

**LITERARY SCOTS.** See SCOTS.

**LITERARY STANDARD,** also **Literary English.** A term used by Eric Partridge in the mid-20c for the English of literary prose:

'[It] lies beyond any matter of pronunciation, and is confined to written English,—and should it be used in speech, it is too bookish to be Received. Of Literary English—Literary Standard—it is necessary only to say that it is the more conventional, stylized, and dignified, more accurate and logical, sometimes the more beautiful form that Received Standard assumes, like evening dress, for important occasions; it is also more rhythmical and musical. The prose of Sir Thomas Browne, Gibbon, De Quincey, The Landors, Pater is in Literary English. With dialect, colloquialism, slang, cant, it has nothing to do unless they possess a long pedigree—and then only in rare instances' (*Usage and Abuse*, 1947, revised 1957).

See RECEIVED STANDARD AND MODIFIED STANDARD, STANDARD. [LITERATURE, STYLE, VARIETY].

T.MCA.

**LITERARY TERM.** A term associated with works of literature. Its area of reference is imprecise: for example, in *A Dictionary of Literary Terms* (UK Deutsch, US Doubleday, 1977; Penguin, 1982), J. A. Cuddon lists ten overlapping categories for the inclusion of an expression: technical terms (such as *iamb*, *metonymy*), forms (*limerick*, *sonnet*), genres (*elegy*, *pastoral*), technicalities (*aesthetic distance*, *tenor and vehicle*), groups and schools (*Parnassians*, *Pre-Raphaelites*), well-known phrases (*pathetic fallacy*, *willing suspension of disbelief*), -isms (*nationalism*, *realism*), themes or motifs (*Faust*, *leit-motif*), personalities (*jongleur*, *villain*), and modes and styles (*irony*, *sentimental comedy*). Chris Baldick, however, in *The Concise Oxford Dictionary of Literary Terms* (1990), lists three overlapping categories for the exclusion of terms from his survey: too common (such as *anagram*, *biography*), self-explanatory (*detective story*, *psychological criticism*), and general (*art*, *culture*). See LITERARY, TERM. [LITERATURE, REFERENCE, WORD].

T.MCA.

**LITERARY THEORY.** See LITERARY CRITICISM, LITERATURE.

**LITERATURE** [14c: partly through French *littérature* from Latin *lit(t)eratura* alphabetic letters, grammar, language study, learning, from *lit(t)era* letter.]. (1) Artistic creation through language and its products: *French literature*, *literature in English*. Although this is currently the major sense of the term, it was not in general use

before the 19c. (2) The texts of a group or subject: *scientific and technical literature, the latest literature on computers*. Although this is currently the minor sense, it is the historically prior meaning of the term.

**'Literary' literature.** It is impossible to define the now primary sense of literature precisely or to set rigid limits on its use. Literary treatment of a subject requires creative use of the imagination: something is constructed which is related to 'real' experience, but is not of the same order. What has been created in language is known only through language, and the text does not give access to a reality other than itself. As a consequence, the texts that make up English literature are a part and a product of the English language and cannot be separated from it, even though there may be, especially in Britain, distinct university departments of English as 'language' and as 'literature'. Among the various ways of defining *literature* are to see it as an imitation of life, through assessing its effect on a reader, and by analysing its form.

(1) *The imitation of life.* Since at least the 4c BC, when Aristotle described poetry as *mimesis* (imitation), literature has been widely regarded as an imitation of life. The mimetic theory was dominant for centuries, only falling into disfavour in the late 18c with the rise of Romanticism, which took poetry to be essentially an expression of personal feeling. In the 20c, however, the idea of mimesis was revived by the neo-classical Chicago School of criticism.

(2) *Effect on the reader.* Reading literature is widely believed to develop understanding and feeling, by complementing the primary experiences of life with a range of secondary encounters. Although the experience of literature is not the same as 'real' experience, it can have an influence that extends beyond the period of reading. The response is inward and does not necessarily lead to physical movement or social action, although texts written as scripture or propaganda may have such results. In the 5-4c BC, Plato acknowledged the power of poetry, but distrusted its rhetorical effect and mythic quality. In the *Phaedrus*, he attacked the cultivation of persuasion rather than the investigation of truth, and in the *Republic* argued that, in an ideal state, poets would have no educational role. Aristotle, however, thought that the *catharsis* or purgation experienced in witnessing a tragic drama was beneficial. Generally, like Aristotle, critics have attached importance to the ethical purpose of literature and the morally uplifting value of 'the best' literature. The importance of moral values inculcated through reading the classics was emphasized in the 19c by Matthew Arnold and in the 20c by F. R. Leavis.

(3) *Analysing form.* A reader is unlikely to respond with interest to the discovery that a text-book is written in continuous prose, with paragraphs and chapters. This is simply the accepted mode of referential writing. However, confrontation with a sonnet or the structure of a novel raises questions about the author's choice of form, a choice often related to contemporary fashion as well as individual intention. The literary writer imposes on language a more careful ordering than the choice of words and syntax that accompanies general communication. The pattern is strong and overt in *verse*, less apparent but equally important in literary *prose*.

**Identifying a literary text.** Traditionally, literary texts have been easy to identify: an ode or a play is 'literary', but a menu or a telephone directory is not. There is, however, an indeterminate area of essays, biographies, memoirs, history, philosophy, travel books, and other texts which may or may not be deemed literary. Thomas Hobbes's *Leviathan* (1651) is commonly studied as a political text and John Bunyan's *Pilgrim's Progress* (1678-84) as a literary text, yet they share certain qualities, such as lively personifications; Bunyan creates Giant Despair and Little-faith, while Hobbes writes 'the Papacy is not other than the Ghost of the Deceased Roman Empire, sitting crowned upon the grave thereof'. As Edward Gibbon's *The History of the Decline and Fall of the Roman Empire* (1776-88) has grown less important as history, it has become more significant as literature. Many texts appear therefore to have literary aspects combined with other qualities and purposes, and ultimately individual or consensual choice must decide which has priority. Private and group judgement is also exercised in evaluative criticism. The word *literature* tends to be used with approval of works perceived as having artistic merit, the evaluation of which may depend on social and linguistic as well as aesthetic factors. If the criteria of quality become exacting, a *canon* may emerge, limited in its inclusions and exclusions, and the members of a society or group may be required (with varying degrees of pressure and success) to accept that canon and no other. Academic syllabuses for degrees in English have traditionally covered periods, focused on such well-established writers as Chaucer, Spenser, Shakespeare, Milton, and Wordsworth. Courses introduced more recently may include such topics as Women's Writing, with study of recent novelists like Doris Lessing and Margaret Atwood as well as Charlotte Bronte and Virginia Woolf, or Black American Literature, with James Baldwin and Richard Wright.

**Literature and language.** In the formative period of a written language, a successful literature may

favour a particular dialect and contribute towards its becoming a national printed standard, in the case of English the East Midlands dialect from the 14c onwards. The prestige of literature can attract favour to an associated 'high style' that rejects aspects of common usage as vulgar. This favour prevailed for a time in some Continental European literatures, such as the *dolce stil* of 12c Italy and 17-18c classical French writing, but apart from the 18c cult of *poetic diction* has had little influence in the English-speaking world. Literature is an exceptional area of language use, which many people have regarded as the highest service to which language can be put and the surest touchstone of good usage. Its creation is dependent on the resources available to the author in any period, but those resources may be enriched and increased by a literary tradition in which quotations from and allusions to 'the classics' abound and many words have literary nuances. Writers have created such enduring neologisms as Spenser's *blatant*, Milton's *pandemonium*, and Shaw's *superman*.

**The language of literature.** In the 20c, much attention has been given to the language of literature and the question of whether there is in fact distinctively *literary language*. Many features thought of as literary appear in common usage. Metre and formal rhythm derive from everyday speech, words often rhyme without conscious contrivance, multiple meaning and word associations are part of daily communication, and tropes and figures of speech are used in ordinary discourse. However, literary language shows a greater concentration of such features, deliberately arranged and controlled. It may be said that communication is impossible without artifice, yet there is a difference between the colloquial simile that someone is 'as bold as brass' and T. S. Eliot's simile for the young man in *The Waste Land* (1922): 'One of the low on whom assurance sits / As a silk hat on a Bradford millionaire.' The difference lies not only in the originality and unexpected juxtaposition, but in the appropriateness of image to context, in the austere tone of the whole poem, in the evocation of a snobbish post-1918 attitude to men who had become rich through government contracts during the war, in the rhythm of the verse and the contemptuous sounds of the short vowels in the second line. Literary language makes us pause to consider, re-read, and assess in a way that would destroy the flow of other modes of communication.

**Language in literature.** Literary language may be drawn from any area or register of daily usage. Colloquialism, and dialect are used in fictional

and dramatic dialogue, as in this passage from *Sons and Lovers* (D. H. Lawrence, 1913):

'But how late you are!  
'Aren't I!' he cried, turning to his father. 'Well, dad!  
The two men shook hands.  
'Well, my lad!  
Morel's eyes were wet.  
'We thought tha'd never be commin', he said.  
'Oh, I'd come!' exclaimed William.

In James Joyce's *Ulysses* (1922), Leopold Bloom reads an advertisement in a newspaper:

What is home without  
Plumtree's Potted Meat?  
Incomplete.  
With it an abode of bliss.

and incorporates the jingle into his stream of consciousness. The pattern of metre and rhyme may transform into poetry a statement which has neither rare words nor unusual syntax:

The lad came to the door at night,  
When lovers crown their vows,  
And whistled soft and out of sight  
In shadow of the boughs.  
(A. E. Housman, 'The True Lover', 1896)

Prevailing literary fashion may make literary language seem artificial without impairing comprehension:

If aught of oaten steve or pastoral song  
May hope, chaste Eve, to soothe thy modest ear,  
Like thy own solemn springs,  
Thy springs and dying gales.  
(William Collins, 1721-59, 'Ode to Evening')

Experiment and the personal vision may challenge the reader to make a new response to language and to accept T. S. Eliot's dictum that 'genuine poetry can communicate before it is understood':

Now as I was young and easy under the apple boughs  
About the lilting house and happy as the grass was  
green,  
The night above the dingle starry,  
Time let me hail and climb  
Golden in the heydays of his eyes.  
(Dylan Thomas, 1914-53, 'Fern Hill')

These extracts are from texts commonly accepted as part of literature, yet, out of context, they seem to present irreconcilable differences. Every literary work must be seen in its totality as a unique creation, often connected by similarities with other texts but dependent on none for its validity. [HISTORY, LITERATURE]. R.C.

### The literature theme

A—E. AELFRIC, ALEXANDRINE, ALLEGORY, ALLITERATIVE VERSE, ANAGNORISIS, ANAPAEST/ANAPEST, ANGLO-INDIAN, ANTICLIMAX, ARCHETYPE, ASIDE, AUTOBIOGRAPHY, BALLAD, BALLADE, BARDOLATRY, BELLES LETTRES, BEOWULF, BIBLE, BLANK VERSE, BOOK OF COMMON PRAYER, BOUT-RIMÉS, BRIEVE, BURLESQUE, BUSH BALLAD, CAESURA/CESURA, CANTO, CARICATURE, CATASTROPHE, CATHARSIS, CENSORSHIP, CHARACTER, CLASSIC, CLASSICISM, CLERIHUEW, CLICHÉ, CLOSE READING, COMEDY, COMIC, COMIC RELIEF, COMMUNICATIVE SHIFT, CONCEIT, CONCRETE POETRY, CORPUS, COUPLET, DACTYL, DENOUEMENT, DETECTIVE STORY/ROMAN POLICIER, DIALOGUE, DIARY, DIRGE, DISTICH, DOGGEREL, DOUBLE RHYME, DRAMA, DUB, DUMB SHOW, ECHO VERSE, ECLOGUE, ELEGY, ELIZABETHAN, ENG LANG/ENG LANG & LIT, ENGLISH LITERATURE, ENGLISH STUDIES, ENG LIT, EPIC, EPIGRAM, EPIGRAPH, EPILOG(UE), EPISTOLARY NOVEL, EPITAPH, ESSAY, EULOGY, EXPLICATION DE TEXTE.

F—N. FABLE, FANTASY, FARCE, FEMININE ENDING, FICTION, FILM, FOOT, FREE VERSE, GENRE, GOTHIC, GRUB STREET, HALF RHYME, HAMARTIA, HEAVY, HOLOFERNES, HOMERIC SIMILE, HOMILY, IMAGINATION, INITIAL RHYME, INTERTEXTUALITY, KITCHEN-SINK DRAMA, LAMPOON, LEONINE VERSE, LETTER<sup>2</sup>, LETTERS, LIMERICK, LINE, LIT CRIT, LITERARY, LITERARY CRITICISM, LITERARY STANDARD, LITERARY TERM, LITERATURE, LITERATURE IN ENGLISH, LORIMER, LYL, LYRIC, MACARONIC, MACDIARMID, MACRON, MAKAR, MAN OF LETTERS, MASCULINE ENDING, MASQUE, MATTER OF BRITAIN, MELODRAMA, MEMOIR, METRE/METER, METRICS, MIME, MIMESIS, MODERNISM, MONODY, MONOLOG(UE), MORALITY PLAY, MUMMERSET, MUSE, MYSTERY PLAY, MYTH, NARRATIVE POETRY, NARRATIVE VOICE, NARRATOLOGY, NOM DE PLUME, NONSENSE VERSE, NOVEL, NOVELETTE, NOVELIZATION, NOVELLA.

O—Z. OBLIQUE RHYME, OCTAVE, OCTET, ODE, OFF RHYME, ORAL LITERATURE, ORAL TRADITION, ORATURE, OTTAVA RIMA, PANTOMIME, PARABLE, PARODY, PASTICHE, PASTORAL, PATHETIC FALLACY, PATHOS, PEN NAME, PERIPETEIA, PINDARIC ODE, PLAY, PLOT, POET, POETIC DICTION, POETIC JUSTICE/POETIC LICENCE/LICENCE, POETIC PROSE, POETICS, POET LAUREATE, POETRY, POLEMIC, POPULAR FICTION, POST-MODERNISM, POST-STRUCTURALISM, PROLOG(UE), PROSE, PROSODY, PROVERB, PSALM, PYGMALION, QUATRAIN, QUIRE, REFRAIN, REPERTORY, REVIEW, RHYME, ROMANCE, ROMAN POLICIER, ROMANTICISM, SAGA, SATIRE, SCANSION, SCRIBBLER, SCRIPT, SERIAL, SERIES, SERMON, SESTET, SHORT STORY, SONGSONG, SLANT RHYME, SOCIAL REALISM, SOLILOQUY, SONNET, SPENSERIAN STANZA, SPONDEE, SPRUNG RHYTHM, STAGE, STANZA, STORY, STREAM OF CONSCIOUSNESS, TELEVISION, TERCET, TERZA RIMA, TEXT, THEATRE/THEATER, THEATRE OF THE ABSURD, THESIS, THRENODY, TRAGEDY, TRAGICOMEDY, TRILOGY, TRIOLET, TRIPLE RHYME, TRIPLET, TRISTICH, TROCHEE, TROPE, VERSE, VERSIFIER, VERS LIBRE, VOICE, WHODUN(N)IT, WORLD LITERATURE, WORLD LITERATURE WRITTEN IN ENGLISH, WRITER.

*International varieties.* AFRICAN LITERATURE IN ENGLISH, AMERICAN LITERATURE, ANGLO-IRISH LITERATURE, ANGLO-WELSH LITERATURE, AUSTRALIAN LITERATURE, CANADIAN LITERATURE IN ENGLISH, CARIBBEAN LITERATURE IN ENGLISH, COMMONWEALTH LITERATURE, FILIPINO LITERATURE IN ENGLISH, GREEK LITERATURE, INDIAN ENGLISH LITERATURE, IRISH LITERATURE, LATIN LITERATURE, LITERATURE, NEW ZEALAND LITERATURE, POST-COLONIAL LITERATURES IN ENGLISH, SCOTS LITERATURE, SCOTTISH LITERATURE, SOUTH AFRICAN LITERATURE IN ENGLISH, WELSH LITERATURE, WORLD LITERATURE.

*Literary biographies.* ACHEBE, ADDISON, ARNOLD (M.), AUSTEN, BEHN, BOSWELL, BRATHWAITE, BRIDGES, BRONTE SISTERS, BUNYAN, BURGESS, BURNS, BUTLER, CARROLL, CHAUCER, CHURCHILL, COLERIDGE (S.), CONRAD, DEFOE, DICKENS, DICKINSON, DRYDEN, ELIOT, FIELDING, GORDIMER, HARDY, HAZLITT, HUNT, JOHNSON, JONSON, JOYCE, KIPLING, LAMB, LAWRENCE, LEAVIS, MELVILLE, MILTON, NAIPAUL, NGUGI, ORWELL, PIOZZI (THRALE), POPE, POTTER, QUILLER-COUCH, RICHARDS, RICHARDSON, RICKERT, SCOTT, SHAKESPEARE, SHAW, SHERIDAN, SIDNEY, SMOLLETT, SOYINKA, SPENSER, STEELE, STERNE, STEVENSON, SWIFT, TENNYSON, THOMAS, TWAIN, TYNDALE, WELLS, WILSON, WOLLSTONECRAFT, WOOLF, WORDSWORTH, WYCLIF(FE).

**LITERATURE IN ENGLISH** [Late 20c]. A term used to circumvent the ambiguities in the term *English literature*, making it clear that the focus is on the language and not on England, as in the titles *The Cambridge Guide to Literature in English* (1988) and *The Feminist Companion to Literature in English* (Batsford, 1990). See ENGLISH LITERATURE. [LITERATURE]. T.M.C.A.

**LITHOGRAPHY** [18c: from Greek *lithós* stone, *graphia* writing]. A process of printing letters and images from a metal or stone surface, in which the surface to be printed is not raised, but a flat area is treated to hold ink in some places and reject it in others, some areas becoming *ink-receptive*, others *ink-repellent*. The antipathy of grease and water provides the basis of the lithographic process: a greasy image repels water but receives greasy ink, while a non-greasy area receives water but repels greasy ink. Only a greasy image is printed when the inked surface is pressed against paper or other material to receive the ink. The process, discovered almost by accident in 1798 by the Czech-born German playwright Alois Senefelder (who experimented with stone), has developed into a high-speed printing technology. See PHOTO-OFFSET PRINTING. [TECHNOLOGY]. W.W.B., T.M.C.A.

**LITOTES** [17c: through Latin from Greek *littēs* meagreness. Stress: 'lie-TOE-teez']. In rhetoric, a positive and often emphatic statement made by denying something negative, as when

St Paul called himself 'a citizen of *no mean city*' (Acts 21: 39). Common phrases involving litotes include in *no small measure* and *by no means negligible*. See MEIOSIS. [STYLE]. T.MCA.

**LIVERPOOL, LIVERPUDLIAN.** See SCOUSE.

**LOADED LANGUAGE.** Biased and often emotive language, loaded like dice to favour the thrower. It may, among other things, be promotional and commercial (*New improved ZAPPO washes whiter than white!*) or social, political, and ideological (*They're taxing hard-working people to support idlers; There are too many foreigners getting into this country these days*). Compare PROPAGANDA. [STYLE]. T.MCA.

**LOAN** [19c in this sense]. An item of language given, as if by a lender, from one language to another, used both on its own and in such combinations as *loanword*, *loan translation*, *loan blend*, and *loanshift*. The commonest loans are single words: *pizza* (from Italian to English), *babysitter* (from English to French, German, and other languages). Once adopted, loans usually show some adaptation: in sound, French *garage*, variously pronounced in English; in form, English *night* taken into Italian as a clipping of *nightclub*; in grammar, English nouns borrowed into French and provided with a gender, *la babysitter* (feminine), *le golf* (masculine). Verbs adapt to the morphology of the borrowing language: in German, *babysitten* to *babysit*, past tense *babysittete*, past participle *gebabysittet*. See ASSIMILATION, BORROWING, CALQUE, CODE-MIXING AND CODE-SWITCHING, FOREIGNISM, LOAN BLEND, LOAN TRANSLATION, LOANWORD. [HISTORY, WORD]. S.R., T.MCA.

**LOAN BLEND** [mid-20c]. A usage that combines a foreign loan with a native form: *grün-grocer* in the German spoken in Australia, the first element German, the second English (from *greengrocer*); *Afrikanerdom*, combining *Afrikaner* (from Afrikaans) and the English suffix *-dom* as in *kingdom*. See BLEND, LOAN. [HISTORY, WORD]. S.R., T.MCA.

**LOAN TRANSLATION** [1930s] also **calque**. A compound or complex loan in which, rather than borrow an expression directly, speakers analyse the parts and replace them with similar native forms: AmE *skyscraper* adopted into French as *gratte-ciel* (scrape-sky), into German as *Wolkenkratzer* (cloud-scrape). See CALQUE, LOAN. [HISTORY, WORD]. S.R., T.MCA.

**LOANWORD**, also **loan-word**, **loan word** [1870s: from German *Lehnwort*]. A word taken into one language from another: in English, *garage* from

French, *leitmotif* from German. Such words are, on the analogy of money, both 'loans' from Language A to B and 'borrowings' by B from A. Philologists use a three-word German system to discuss the process of lending and assimilation. *Gastwort*, *Fremdwort*, *Lehnwort*. A *Gastwort* (guest-word) is an unassimilated borrowing that has kept its pronunciation, orthography, grammar, and meaning, but is not used widely: for example, *Gastwort* itself, with /v/ for the *W* of *Wort*, a capital letter because it is a noun, and the alien plural *Gastwörter*. Such words are usually limited to the terminology of specialists and italicized and glossed when used. A *Fremdwort* (foreign-word) has moved a stage further. It has been adapted into the native system, with a stable spelling and pronunciation (native or exotic), or a compromise has been made by translating all or part into a native equivalent: for example, *garage* and *Lehnwort* itself (which has for general purposes been converted to *loanword*). A *Lehnwort* proper is a word that has become indistinguishable from the rest of the lexicon and is open to normal rules of word use and word formation. It is seldom possible, however, to separate the stages of assimilation so neatly: Russian *sputnik* and *glasnost* entered English virtually overnight, with immediate derivatives like *anti-sputnik* and *pre-glasnost*. Assimilation into a language as widespread as English occurs on three levels: local, national, and international. For example, such a Mexican-Spanish word as *taco* may remain local in AmE, used only along the US-Mexican border, then become national, then international. Such a process often takes years, leaving many loans drifting uncertainly. See ASSIMILATION, BORROWING, CALQUE, FOREIGNISM, LOAN, REGIONAL DICTIONARIES OF ENGLISH. [HISTORY, WORD]. G.C., T.MCA.

**LOCALISM** [19c]. An expression that belongs to a particular place or geographical variety of a language: for example, in Sierra Leone, *hot drink* means 'alcoholic beverage'; in ScoE, *loch* refers to a lake in Scotland, while *lake* is used for more general purposes. See -ISM, REGIONALISM. [STYLE, WORD]. T.MCA.

**LOCATIVE** [18c: from Latin *locativus* indicating place]. In some inflected languages, nouns have forms to show that they are the location of the action of the verb: Latin *domus* (house, home) has the locative *domi* (at one's house, at home). In English, such concepts are usually expressed with prepositions: *at home*, *to London*, *in New York*. In case grammar, English subjects and objects referring to place are sometimes said to be locative: *walls* in *The walls were running with water* (Water was running down the walls);

room in *She paced the room* (She went up and down the room). See CASE<sup>1</sup>, CASE GRAMMAR. [GRAMMAR]. S.C.

**LOCUTION** [15c: from Latin *locutio*/*locutionis* (style of) speech, from *loqui*/*locutus* to speak]. (1) The act of speaking; utterance; speech as the expression of thought; (style of) discourse. (2) A formal, technical, sometimes pedantic term for an utterance, word, phrase, or idiom, especially if regarded as characteristic of a social or regional group: *Irish locutions*. (3) The base on which the British philosopher J. L. Austin coined a set of terms for the discussion of utterance and its consequences: 'The act of "saying something" . . . I call, i.e. dub, the performance of a locutionary act, and the study of utterances thus far and in these respects the study of locutions, or of full units of speech' (*How to Do Things with Words*, 1962/75, ch. 8). For Austin, a *locutionary act* is an act of speaking (a result of *locution*); an *illocutionary act* is an act of speaking that promises, requests, suggests, warns, etc. (a result of *illocution*); a *perlocutionary act* is an act that leads to an action of some kind on the part of a listener (a result of *perlocution*, an instance being a *perlocution*), such as laughing, complaining, or departing. 'He said that I should go' is locutionary; 'He argued that I should go' is illocutionary; and 'He convinced me that I should go' is perlocutionary. Compare ELOCUTION, INTERLOCUTOR. See SPEECH ACT. [LANGUAGE, STYLE]. T.M.C.A.

**LOGIC** [14c: from Latin *logica*, Greek *logikḗ tékhnē* the craft of speech]. In general usage, the process of reasoning and sound judgement, often taken to be the outcome of adequate education, an aspect of common sense, or both: a *logical decision*. In philosophy, the study and development of close reasoning, especially inference, traditionally the concern of logicians and mathematicians and currently important for computer programmers, computational linguists, and researchers into artificial intelligence. There are several kinds of logic, such as *formal logic* and *symbolic logic*, of philosophical systems that acknowledge its influence, such as *logical positivism*, and of techniques considered to incorporate logic, such as *logic arrays* and *logic circuits* in electronic technology.

**Classical logic.** The term *logikḗ* was coined by the Greek philosopher Alexander of Aphrodisias in the 3c, but systems of organized thinking had already developed well before this in Greece, India, and China. Western culture has inherited the Greek tradition mainly through Rome and the Arab world. In this tradition, logic is closely linked with grammar and rhetoric, and discussion of one often leads to discussion of the

others. Greek speculation appears to have begun with Thales (7–6c BC) and Pythagoras (6c BC), in the study of geometrical shapes and theorems, a discipline made possible by writing and scale drawing: for the Greeks, both reasoning and language were encompassed in the word *lógos*. From the philosopher Heraclitus (6–5c BC) to the early Christian era, the term also served to describe a rational principle considered to pervade the universe, and linked language and logic with God: 'In the beginning was the Word, and the Word was with God, and the Word was God' (The Gospel according to John, 1: 1, Authorized Version, in which *word* translates *lógos*).

The Greeks also contrasted *lógos* with *mūthos*, a term that encompassed words, speech, stories, poems, fictions, and fables. Plato (5c BC) in *The Republic* represented Socrates as wishing to exclude poetry from the proper education of the young, and after some 2,500 years, this viewpoint still carries weight: logic, science, and reason are commonly set on one side and poetry, art, and myth on the other. To make his case, however, Plato used many devices from poetry and rhetoric: he so structured his dialogues that Socrates always won, often with the help of poetic analogies such as the Simile of the Cave. His pupil Aristotle laid the foundations of logic proper, as the study of inference from *propositions* arranged as formal *arguments*. Sound arguments were taken to depend on two kinds of reasoning: *deduction* and *induction*. In deductive logic, well-framed propositions necessarily lead to a certain conclusion: for example, if Socrates is a man, and all men are mortal (propositions), then Socrates is mortal (conclusion). Inductive logic, however, draws analogies and deals not in certainty but in probability. A conclusion is drawn from a range of instances taken as evidence or justification for that conclusion: the sun has always risen in the east, all observers agree about this, all their lives they have seen it happening, and so (it is highly probable that) the sun will rise again tomorrow. There is, however, no proof or guarantee that it will do so. Because of such a marked difference, and because the scientific method during and after the Renaissance drew so heavily on induction, it was removed from logic proper. Deduction is now usually regarded as the concern of logicians and induction as the concern of scientists and statisticians.

**Mind, brain, and logic.** In the later 20c, the pre-eminence of sequential, propositional thinking has been challenged by such students of thinking as the Maltese psychologist Edward de Bono. He contrasts the *vertical thinking* of logic with the *lateral thinking* of creative minds, arguing:

Old style thinking insists on fixed concepts, certainties and absolutes. These are processed by means of traditional logic, and the answers are treated with the arrogance and dogmatism which always accompanies academic logic. There is nothing wrong with the logic as such, but the emphasis is on the perfection of the processing and not on the basic concepts used. Another important danger is the smugness that follows perfect logic and excludes the search for new ideas and better approaches (*Po: Beyond Yes and No*, 1972).

Recent neurological research indicates that, by and large, the hemispheres of the human brain have distinct functions: in the left (for most people) is the propensity for language, mathematics, and linear reasoning, in the right the propensity for visual, spatial, intuitive, and analogical skills, the hemispheres working together through their neural links. This discovery has prompted a re-examination of the roles and relationships of *lógos* and *múthos*, suggesting that they may be partners rather than rivals. If this is so, creative thought may require both linear left and holistic right. In linguistic terms, logic is as likely in verse as in prose, and analogy and metaphor are as much the tools of philosophers and scientists as of bards and mystics.

**Language and logic.** Because logic and grammar developed together they have overlapping terminologies: both use the term *sentence*, and deductive logic consists of a *logic of propositions* (also called *sentential logic*) and a *logic of predicates* (also called a *logic of noun expressions*). Logicians, grammarians, and rhetoricians are all interested in such matters as ambiguity, fallacy, paradox, syntax, and semantics, and in such modalities as necessity, possibility, and contingency; linguists who are concerned with grammar, computation, and artificial intelligence take as much interest in logic as in natural language. Logicians and mathematicians have created systems that contain both sets of abstract symbols and the rules necessary for their combination and manipulation in strings. Such symbols, rules, and strings are often idealizations of elements in, or thought to be in, natural language (but isolated from such everyday factors as dialect variation, personal idiosyncrasy, figurative usage, emotional connotation, colloquial idiom, social attitude, and semantic change). When such a system of symbols is adapted to practical ends, however, as in computer technology and artificial intelligence, *pure logic* becomes *applied logic*, operating within a real machine intended to do real work in real time.

**Grammar and logic.** Although many logicians, grammarians, and linguists have been interested in a universal calculus of language (something that would transcend and dispense with the Babel of natural language or allow the dispassionate description of all language), they

have built their systems out of the natural languages that they know best: Greek for Aristotle and his disciples, Latin for medieval and Renaissance grammarians, and English for such present-day theorists as Noam Chomsky. Both prescriptive and descriptive grammarians of such Western languages as French and English have been influenced by logic and by the languages in which the principles of logic developed. Because it emerged in large part through the use and analysis of language, it has not been difficult to find quasi-logical patterns in language. Some analysts have been inclined to see logical orderliness either as inherent in language or as a reasonable goal of language planning, especially when a language is in the process of being standardized. Everyday language, however, has a persistent (even frustrating) tendency towards the illogical or non-logical, as for example in the use of double negatives (*I didn't do nothing*, which does not therefore mean 'I did something') and in idiomatic expressions (such as *it's raining cats and dogs*).

All analysts of language work towards orderliness, but some go further and engage in or recommend making certain aspects of language, such as the spelling of English, more 'regular' (that is, more rule-governed and therefore more logically consistent). They may also favour an artificial language such as Esperanto or Basic English that is (apparently) free from the illogic of natural language. Interest in such reforms has often gone hand in hand with particular conceptions of and assumptions about, progress, science, efficiency, education, literacy, and standards. Logic has therefore been used as a tool for both the description of natural language and its prescriptive improvement. In the development of the first grammars of English, the model was Latin and the analytical terms were Greek as used by the describers of Latin. Medieval and Renaissance models for vernacular prose as a vehicle of rational discourse were either Latin prose or vernacular prose written in the Latin style. Theories of sentences and parts of speech were those developed by classical grammarians and logicians, often the same people. The analysis of sentences into subjects and predicates, main and subordinate clauses, and the like, has paralleled the logician's view of propositions as the core of language and of binary division as a powerful conceptual tool.

**The limits of logic.** In the second half of the 20c, ancient practice has gained fresh impetus through the work of Noam Chomsky. Some features of his work are: (1) The definition of a language as a set of well-formed sentences,

indefinite in number. (2) Abstract and diagrammatic analyses of sentences of standard written English. (3) The use of quasi-logical symbols such as S for sentence, NP for noun phrase, and VP for verb phrase, to sustain the analysis of such sentences. (4) Logical transformations performed on strings of symbols so as to produce further strings. (5) The creation of a generative grammar, that is, a set of explicit, formal rules that specify or generate all and only the sentences which constitute a language; in so doing, they are seen as demonstrating the nature of the implicit knowledge of that language possessed by an ideal native speaker-hearer. Such an approach has often been taken to be a break with the past, but is rooted in more than two millennia of logical and grammatical system-building. It remains a matter of debate whether natural language can be handled by linguistic theories that derive in the main from or are closely associated with aspects of formal logic. Natural language is a neural mechanism, apparently the result of genetic and social evolution. While it is sometimes regular, logical, and precise, it is as often irregular, non-logical, and imprecise, and oftener still a mix of the two. It blends intellect with instinct, logic with inspiration, and the standard with the varied. Logic is closely associated with language and with its description and discussion in literate societies. As such, it is an essential tool, but one cannot deduce from this usefulness that it is the sole or even primary means by which natural language can be understood.

See AMBIGUITY, AMPHIBOLY, ANALOGY, ANALOGY AND ANOMALY, APORIA, ARGUMENT, AXIOM, BEGGING THE QUESTION, CARROLL, CASE GRAMMAR, DIALECTIC, FALLACY, LEADING QUESTION, LETTER WORD, MEANING, METALANGUAGE, OPPOSITION, PREMISS/PREMISE, PROPOSITION, RATIONALIZATION, REFERENT, RHETORIC, SEMANTICS, SOPHISTRY, SYLLOGISM, TAUTOLOGY, THESIS, TYPE, TYPE AND TOKEN, USAGE. [GRAMMAR, LANGUAGE]. T.MCA.

**LOGO** [20c: a short form of either *logogram* or *logotype*]. A unique graphic representation of an institutional or other name (including trademarks and abbreviations). Logos like the penguin framed in an oval (Penguin publishers) or the ship in full sail (Longman publishers) serve as immediately recognizable symbols on books, vehicles, buildings, etc., and are meant, in addition, to sharpen the public image of the organization in question. Compare IMAGE, SYMBOL. See LOGOTYPE. [MEDIA, TECHNOLOGY]. T.MCA.

**LOGOGRAM**. See ALPHABET, WRITING.

**LOGOPAEDICS**. See LANGUAGE PATHOLOGY.

**LOGOPHILE**. See WORD BUFF.

**LOGORRHOEA** BrE, **logorrhea** AmE [1900s: from Greek *logós* speech, *rhoía* flow]. (1) A pathological need to talk. (2) A facetious term for talking and writing too much: 'an author suffering from acute logorrhoea' (*Daily Telegraph*, 5 Feb. 1970). See LANGUAGE PATHOLOGY, VERBOSITY. [STYLE]. T.MCA.

**LOGOTYPE** [1810s: from Greek-derived *logo*-word, speech, and *type*]. A single piece of type that bears two or more uncombined letters, a syllable, or a word. See LOGO, TYPE. [TECHNOLOGY, WORD]. T.MCA.

**LONDON** [Before 10c: from Romanized Celtic *Londinium*]. A city on the River Thames in southern England, the ancient capital of England and also the capital and seat of government of the United Kingdom of Great Britain and Northern Ireland. The city has experienced many languages: Celtic, the Latin of Roman Britain, Old English, Norman French, Middle and Modern English, and the languages of immigrants, diplomats, merchants, and visitors. It is, in the late 20c, one of the world's great cosmopolitan and polyglot cities, identified in particular with three varieties of English: *King's/Queen's English*, *BBC English*, and *Cockney*. The primacy of London (in England, in the United Kingdom, and in the British Empire) has in the past given a certain status to the language used there. However, the city did not play a major part in Old English culture until the reign of Edward the Confessor (1042-66). Prior to that period, Winchester to the south-west was the seat of the Saxon kings and West Saxon was the literary dialect. Through the medieval period, London grew in importance, and the triumph of Middle English over Norman French in the 14c gave preference to the variety of the East Midland dialect that was becoming current in London. The poet Geoffrey Chaucer, a Londoner of the time, generally used slightly older and more southern forms, with traces of Kentish.

**Capital and provinces**. The comparative stability of the Tudor period, with London as the seat of the royal court and major litigation, brought still greater regard for its superiority in language. In 1589, Puttenham advised the use of 'the vsual speach of the Court, and that of London and the shires lying about London with lx [sixty] myles, and not much aboute' (*The Arte of English Poesie*, 1589). The introduction of dialect speakers in drama, like Shakespeare's Welsh captain Fluellen and Scots captain Jamy in *Henry V*, and the use of 'stage southern' as affected by Edgar in *King Lear*, showed that Londoners were

aware of their distinctive speech and amused by other varieties. The tendency is even more marked in later 17c comedy, in which country characters are differentiated by their speech: the restored Stuart court and the London location of groups like the new Royal Society made the city seem ever more significant than 'the provinces'. Discussions about the correct forms of English and the possibility of an Academy to regulate the language were carried on mainly by London speakers.

Perhaps because London usage was taken for granted by so many of the influential, there is not an extensive record of its nature before the 19c. When dialogue was written for plays or novels, only speakers of other dialects were marked by deviant spelling, the established orthography being used for the rest. The hymnographer Isaac Watts, in his *Art of Reading and Writing English* (1721), dismisses the 'dialect or corrupt speech that obtains in the several counties of England' and lists words that are written differently from their common and frequent pronunciation in the City of London'. He adds that 'there are some other corruptions in the pronouncing of several words by many of the citizens themselves' and cites among others *yourn* for 'yours', *squeedge* for 'squeeze', *yerb* for 'herb'. However, Samuel Pegge notes, in *Anecdotes of the English Language* (1803), words whose pronunciation 'is a little deformed by the natives of London'; as well as Cockney features like the confusion of /v/ and /w/, he mentions some that 'savour rather of an affected refinement' like *daater* for 'daughter' and *saace* for 'sauce'.

The greater mobility of the middle and late 19c, with increasing prosperity and concomitant confidence in other parts of Britain, helped bring other dialects into literary use for serious and even tragic as well as comic characters. The Brontës, Gaskell, and Hardy reminded readers that London was not the undisputed linguistic heart of England, and showed how Londoners might sound to those from other areas. Gaskell makes John Barton say, when he describes his visit to London for a Chartist meeting, that the policemen 'speak in a mincing way (for Londoners are mostly tongue-tied and can't say their a's and i's properly)' (in *Mary Barton*, 1848). In Hardy's poem 'The Ruined Maid', a country girl from Dorset marvels at the new and apparently refined speech of her friend, who has become a London prostitute and who observes, 'Some polish is gained with one's ruin.'

**London English.** True Cockney is relatively limited, though some of its features are shared by Londoners who are not themselves Cockneys. The double negative, found also in other parts of the country, is common in London. Some

vowel and diphthong sounds, notably the nasalization of the diphthong /au/ as in *now* and the changing of /ei/ to /ai/ which makes *paper* sound like *piper*, are frequently heard, as is the dropping of initial *h* (*We're 'appy to 'elp you*). Characteristics of neighbouring counties are heard in London, particularly in the outer suburbs, which have penetrated into what were once rural areas of Surrey, Kent, and Essex. It would be an acute or very bold observer who could guarantee to analyse all the features of speech among a random selection of Londoners, claiming, as Shaw's Professor Higgins did in *Pygmalion* (1913), to identify a person within a street or two. Shaw commented that 'Ladies and gentlemen in Southern England' pronounce *plum, come, humbug* as 'plam', 'cam', 'hambag', and in *Pygmalion* he makes Freddy Eynsford-Hill pronounce 'how do you do' as *ahdedo*.

The speech of educated Londoners is not necessarily to be equated with Received Pronunciation, but this is the model which has traditionally been followed by the 'upwardly mobile'. In many instances, however, there appears in the late 20c to be a levelling-out in the speech patterns of younger, educated Londoners of many backgrounds, including RP, into a distinctive accent and voice quality. Currently, however, the situation is complex, and London speech ranges from 'core' Cockney usage through a wide variety of intermediate forms to RP and forms of RP that some may regard as prestigious and others as affected or 'posh'.

The lexis and syntax of London English show few distinctive features. Immigrants in the 19c tended to remain in closed groups and in later generations to be absorbed into British society without adding new linguistic features to the extent that has happened in New York City. The immigrant influx in the second half of the 20c has been large, but has been shared with other parts of the country and such additions as have appeared have been disseminated by the media rather than localized. Londoners generally refer in an abbreviated or deictic form to topographical features which others would specify more fully, such as 'the Palace' (Buckingham Palace), 'the Abbey' (Westminster Abbey), 'the Elephant' (the Elephant and Castle, originally a public house, now used to refer to a major road complex and shopping area), 'the Palladium' (the London Palladium), but these are typical of local usage anywhere, magnified however by the significance of such landmarks simply because they are part of the topography of one of the world's best-known cities.

**LONDON CHAMBER OF COMMERCE AND INDUSTRY.** Short form *LCCI*. A British organization concerned with the promotion of business, which conducts as part of its Commercial Education Scheme, begun in 1890 in collaboration with the London-based College of Preceptors, a range of examinations which link proficiency in English with office skills and related background knowledge. The LCCI's associations with foreign Chambers of Commerce have helped make these examinations popular in Europe and particularly in France. See EXAMINING IN ENGLISH. [EDUCATION, EUROPE, MEDIA]. W.S.

**LONDON-LUND CORPUS.** See SURVEY OF ENGLISH USAGE.

**LONG AND SHORT** Contrasting terms in prosody, orthography, and phonetics, used to discuss and mark the duration (or quantity) of speech sounds. In prosody, they refer to syllables and vowels; in orthography and related aspects of pronunciation, they focus principally on written vowels; in phonetics, they apply to spoken vowels and their written representations in IPA transcription. The three areas of application and their interrelationships are discussed below.

**Prosody.** Traditional prosodists have used the terms *long* and *short* primarily to contrast syllables, and to do this have placed marks above the vowels of those syllables. The practice began in the prosody of Latin and was applied to English during the Renaissance. Latin verse is quantitative, its rhythm established by the length of its syllables; if a syllable is long, it is marked by a macron over its vowel (*ā*), if short by a breve (*â*): see BREVE, MACRON. English verse, however, is not quantitative but stress-related (accentual): syllables are not long or short, but *strong* (stressed, accented) or *weak* (unstressed, unaccented). Despite this difference, the early prosodists of the language applied the techniques of Latin scansion by analogy to English, marking the vowel of each strong syllable long and of each weak syllable short. In English metrical analysis, therefore, the macron and the breve serve to mark a rhythm quite distinct from that of Latin, and (despite the implications of their names and origins) they do not involve length. See SCANSION.

**Orthography.** In writing systems that use the Roman family of alphabets, the terms *long* and *short* relate to greater or less duration in spoken vowels: for example, in one form of written Maori, macrons are used to mark phonetically long vowels, while unmarked vowel letters are taken to be short: see MAORI. This practice derives from a long-established technique for indicating long and short vowels in Latin for educational and lexicographical purposes: for example, *lūminōsus*, the dictionary form of *luminosus*, is shown by macrons to have two long vowels. Short vowels are usually left unchanged (as in *bonus* in Latin, though not in English), but if clarification is required, a breve may be added over the vowel (*bōnus*): see LATIN<sup>1</sup>. As with prosody, the contrast of long and short in Latin vowels was applied to the description of English, in whose earliest form, Old English, vowel pairs could usefully be described as long and short: see OLD ENGLISH<sup>1</sup>. By the time of Middle English, the vowel differences were no longer a matter of simple duration, but also of laxness or tenseness in the tongue: see MIDDLE ENGLISH. Later still, as Middle English became Modern English, the long, tense, and stressed vowels became subject to a major sound change that gave them their distinctive present-day values, some of which are not monophthongs but diphthongs: see GREAT VOWEL SHIFT.

Nonetheless, in traditional and popular accounts of English pronunciation and orthography, the ancient contrast between long and short vowels has been maintained, despite the wide phonetic gap between the two kinds of vowel. Thus, the six so-called 'long vowels' in *mate*, *meet*, *mite*, *moat*, *moot*, *mute* are often contrasted with the six 'short vowels' in *bat*, *bet*, *bit*, *hot*, *but*, *put*. Here, *mate* is said, for example, to contain a 'long *a*', in contrast with *bat*, which has a 'short *a*'. Such statements, often useful (sometimes even indispensable) in describing aspects of English spelling, are not accurate for Modern English in phonetic terms: for example, in *mate*, neither the /eɪ/ sound of RP nor the /e/ sound of ScoE is a 'long' version of the RP /æ/ or ScoE /a/ in *bat*. The differences in the two systems (the traditional and orthographic on the one hand and the phonetic on the other) make a consistent and clear discussion of English spelling and pronunciation difficult (as for example in the entries for the letters A, E, I, O, and U in this volume).

**Phonetics.** Phoneticians use the terms *long* and *short* to discuss only the degree of duration, greater or less, in a particular speech sound, usually a vowel. The relative value 'long' is shown by means of a *length mark* (: ) after a vowel symbol, as in /a:/, where unadapted /a/ is the

unmarked short equivalent: see LENGTH MARK. Even so, however, a vowel sound referred to as having both a long and a short value is not necessarily always one vowel in qualitative terms: for example, in English, the *long i* represented by the IPA symbol /i/ and the *short i* represented by /ɪ/ are qualitatively as well as quantitatively different. In addition, each is a distinct phoneme: /hit/ (that is, *heat*), for example, is very different in sound and sense from /hɪt/ (*hit*). In dictionaries and other works intended for foreign learners of English, long *i* is often visually reinforced by a length mark, /i:/, as in /hi:t/: see LEARNER'S DICTIONARY. Sometimes, but not in English, quantitative difference alone can be phonemic: for example, contrast the long and short vowels in German *Bahn* (path, track) and *Bann* (magic spell). See COMMON, METRE/METER, QUANTITY, VOWEL, VOWEL QUANTITY. [SPEECH, WRITING]. T.MCA.

**LONGHAND**, also **long-hand** [17c]. Conventional handwriting, in which every word is written in full: *taking notes in longhand*; *a longhand report of what they said*. See HAND. Compare SHORTHAND. [WRITING]. T.MCA.

**LONGMAN**. The oldest commercial publishing house in Britain, founded in 1724 by Thomas Longman, son of a Bristol merchant. His business was conducted at the sign of the Ship and Black Swan in Paternoster Row in London, whence the company logo of a ship in full sail. After being owned by seven generations of the family, the company was acquired in 1968 by the Pearson Group, which has interests in publishing, information, and entertainment. Since 1969, only the name *Longman* has appeared on the company's publications, but earlier works have *Longmans* or *Longmans, Green & Co*, or, in the 19c, long lists of partners. The *Longman Group* is currently an international publisher in education (including ELT and works of reference), medicine, technology, and science, with an annual turnover close to £200m. The firm's premises in London, along with part of its archives, were destroyed by incendiary bombs in 1940. Modern records are kept in the library of the U. of Reading. Longman moved to Harlow in Essex in the 1960s.

**Johnson and Roget**. After acquiring the rights of the 4th edition of Bailey's *Universal Etymological Dictionary* (1728), Thomas Longman became one of five book-sellers who in 1746 signed a contract with Samuel Johnson for the compilation of *A Dictionary of the English Language* (published in two volumes in 1755). Thomas Longman II, the founder's nephew and heir, published later editions of Johnson's dictionary, as well as those of William Kenrick and

Thomas Sheridan. His son, Thomas Norton Longman III, acquired sole rights to Johnson's dictionary in 1805; the company published the editions revised by H. J. Todd and R. G. Latham before bringing the series to an end in the 1880s. Longman also published Wordsworth and Coleridge, Disraeli, Macaulay, and Scott, and in 1852 brought out a first edition of 100 copies of Peter Mark Roget's *Thesaurus of English Words and Phrases*, which has been published by Longman ever since and has sold over 30m copies. The name *Roget* was registered in the UK in 1990 as a trademark belonging to Longman.

**ELT and dictionaries**. The firm has been active in Africa, the Caribbean, and West Asia, and in India as *Orient Longman*. Its extensive and often pioneering ELT publishing has included Michael West's New Method Readers (1920s), *New Method English Dictionary* (1935: the first specifically ELT dictionary), and *General Service List of English Words* (1952), C. E. Eckersley's *Essential English for Foreign Students* (1938), and L. G. Alexander's *New Concept English* (1967) and *Look, Listen and Learn* (1968-71). In 1978, the company published the *Longman Dictionary of Contemporary English* (ed. Paul Procter), an advanced learner's dictionary (2nd edition 1987, ed. Della Summers) with a defining vocabulary of 2,000 words. Its offshoots include the *Longman Dictionary of American English* (1983) and the *Longman Active Study Dictionary* (1983, 2nd edition 1991). It also provided material for the *Longman Lexicon of Contemporary English* (1981, ed. Tom McArthur), a thematic wordbook with semantic fields and contrastive definitions. The 1,876-page *Longman Dictionary of the English Language* (1984, 2nd edition 1991) is a substantial revision and Briticization of *Webster's New Collegiate Dictionary*, and has a range of offshoots. Current dictionaries benefit from one of the first UK computerized compiling systems, a collection of some 0.5m citation slips, and the Longman/Lancaster Corpus of 30m running words.

**Language and literature**. In 1795, Longman published Lindley Murray's *English Grammar*, which led the field until superseded by another Longman publication, Alexander Bain's *English Grammar* (1863). This tradition was revived in 1972 with *A Grammar of Contemporary English*, expanded in 1985 as *A Comprehensive Grammar of the English Language*, by Randolph Quirk, Sidney Greenbaum, Geoffrey Leech, and Jan Svartvik. Linguistics and phonetics are a significant part of the Longman list, including titles in the Longman Linguistics Library, edited by R. H. Robins, the English Language Series,

edited by Randolph Quirk, and the *Longman Pronunciation Dictionary*, compiled by John C. Wells (1990). In the field of world literature in English, Longman is currently developing the Longman Literature in English series, edited by David Carroll and Michael Wheeler, whose sections include pre-Renaissance literature, poetry, drama, fiction, prose, criticism and theory, intellectual and cultural contexts, and national and regional literatures (such as American, Australian, Canadian, and Indian).

See ALEXANDER (L.), BAILEY (N.), BRITISH NATIONAL CORPUS, COMPREHENSIVE GRAMMAR OF THE ENGLISH LANGUAGE, DEFINING VOCABULARY, ENGLISH-SPEAKING UNION, GENERAL SERVICE LIST, IDIOM, JOHNSON, LEARNER'S DICTIONARY, LEXICON, PENGUIN, QUIRK, RECEIVED PRONUNCIATION, ROGET'S THESAURUS, WEBSTER'S COLLEGIATE DICTIONARIES, WEST. [EDUCATION, EUROPE, MEDIA]. T.MCA.

**LONG S.** Formerly, a variant of the lower-case letter *s* (roman form *f*, italic *f*) in initial and medial positions in words, such as *ſin* for *sin*, *ſleep* for *sleep*, *ſhall* for *shall*, *himſelf* for *himself*, *grafs* for *grass*, *thouſand* for *thousand*, *conſcience* for *conscience*, *poſſeſs* for *possess*. After 1800, the greater convenience of *s* for all positions prevailed, and *f* fell into disuse in English. In Germany and Austria, but not Switzerland, the variation survives vestigially in the combined *ß* (called 'eszett') for *ss* in most positions, as in *groß* (= *gross* big, great). See ALPHABET, ESH, LETTER<sup>1</sup>. [WRITING]. C.U.

**LONG WORD** [15c]. (1) Obsolete and only in the plural: a long speech or discourse: 'Dame what ſhall avaylle thenne Longe wordes?' (Caxton, *Dialogues*, c.1483). (2) A polysyllabic word, especially of Latin or Greek origin, and if uncommon and difficult to spell or pronounce, such as *diuretic* or *phantasmagorical*: 'He ain't like old Veal, who is always bragging and using such long words, don't you know?' (Thackeray, *Vanity Fair*, 1848). People often ask what the longest word in English might be, but the answer depends on what can be accepted as a word. Some chemical combinations have names of over 1,000 letters, but these are usually amalgams of combining elements rather than words in the commonly understood sense: for example, the full chemical name, 1,913 letters long, for *tryptophan synthetase A protein* (an enzyme with 267 amino acids) begins *methionylglutaminylarginyltyrosyl . . .*, and is listed in full in *Mrs Byrne's Dictionary* (1974). James Joyce invented several 100-letter words in *Finnegans Wake* (1939). Thomas Love Peacock's *Headlong Hall* (1816) describes the human body as *osseocarnisanguineoviscericartilaginonervomedullary* (51

letters). The longest word in the 1st edition of the *OED* is *floccinaucinihilipilification* (29 letters), 'the action or habit of estimating something as worthless', which the *Supplement* of 1982 topped with the lung disease *pneumonoultramicroscopicsilicovolcanoconiosis* (45 letters). This is longer than *supercalifragilisticexpialidocious* (34 letters), the title of a song in the film *Mary Poppins* (1964), and *antidisestablishmentarianism* (28 letters). The longest word in Shakespeare is the Latin *honorificabilitudinitatibus* (27 letters), used by Costard in *Love's Labour's Lost*. See BIG WORD, DERIVATION, HARD WORD, WORD-FORMATION. [WORD]. T.MCA., T.A.

**LOOKALIKE.** See CONFUSIBLE, FAUX AMI.

**LORIMER, William Laughton** [1885–1967]. Scottish classicist and translator, born at Strathmartine in Angus, educated at Dundee High School, Fettes College, and Oxford. He taught classics at U. College, Dundee, and the U. of St Andrews, where he became Professor of Greek in 1953. From 1946 until his death he contributed to the *Scottish National Dictionary*, and served from 1947 as member and later chairman of the Executive Council of the Scottish National Dictionary Association. He is especially remembered for his *New Testament in Scots*. Though completed shortly before his death in 1967, this work was not published until 1983, edited by his son R. L. C. Lorimer and published by the W. L. Lorimer Memorial Trust. The book was greatly acclaimed and republished in 1985 by Penguin Books. Lorimer was uniquely qualified for this project by his knowledge of Bible scholarship, the classical languages, several modern European languages and dialects, and a lifelong enthusiasm for literary and spoken Scots. To prepare the translation, made from the original texts, he studied versions of the Bible in many languages, including tongues of comparable status to Scots, such as Frisian and Rhaeto-Romansch. The special orthography is consistent and, to a greater extent than any translation in English, the *New Testament in Scots* employs a variety of styles to reflect those of the original. The translation is the greatest achievement of modern Scots prose. For an illustrative excerpt, see BIBLE. [BIOGRAPHY, EUROPE, LITERATURE]. J.D.M.

**LOUISIANA.** See AMERICAN PLACE-NAMES, CAJUN, DIALECT IN AMERICA, NEW ORLEANS, SOUTH (THE), SOUTHERN ENGLISH.

**LOW DUTCH.** See FLEMISH, LOW GERMAN.

**LOWER CASE.** In the present-day printed Roman alphabet, small letters of varying size,

known as *lower-case letters*, as distinguished from capitals or *upper-case letters*. See CAPITAL (LETTER), CASE<sup>2</sup>, LETTER<sup>1</sup>, PRINTING. [TECHNOLOGY]. W.W.B.

**LOW GERMAN.** [1830s: a translation of German *Plattdeutsch*]. (1) Also *Plattdeutsch*. Dialects of German other than *High German* (*Hochdeutsch*), especially in Saxony and Westphalia: 'Then, too, *cambric*, *hawker*, *muff*, and *scone* found their way [into English] from Dutch and Low German' (Simeon Potter, *Our Language*, 1966). (2) All West Germanic languages except High German and English (that is, Dutch, Flemish, Frisian, and Plattdeutsch): 'Some [English words] may be of native origin, but their history is often obscure. They appear to be Low German in form, and to have been introduced from the Netherlands or Friesland or Hanover at various dates' (W. W. Skeat, *Etymological Dictionary of the English Language*, 1879-82). (3) Also sometimes *Low Dutch*. All West Germanic languages except High German, and including English: 'High German and Low German, the latter including certain German dialects, Dutch, Flemish, Frisian, and English in all the forms it has taken throughout the world' (Barbara Strang, *A History of English*, 1970, p. 405). Ambiguities arise because of the various applications of the term, as when in the same work Strang says: 'The debt of English to Low German (Dutch, Flemish, Saxon) chiefly reflects maritime relations' (p. 123). See GERMAN, INGVAEONIC, SAXON. [EUROPE, LANGUAGE]. T.MCA.

**LOWLAND SCOTS**, sometimes **Lowland Scotch**. A common name for the Scottish dialects of northern English that stresses both their location east and south of the Highland Line and their distinctness from the languages of the Highlands (*Gaelic* and *Highland English*). In the Middle Ages, Gaelic was known in Latin as *lingua Scotica* (the Scottish language) and some Gaels therefore claim that the Lowland tongue has usurped the name *Scots*. However, the usage dates from the 16c, and the 18c addition of *Lowland* serves to remove any ambiguity. See DORIC, INGLIS, LALLANS, SCOTS. [EUROPE, VARIETY]. A.J.A.

**LOWLAND SOUTHERN.** See SOUTHERN ENGLISH.

**LOW LANGUAGES.** See CLASSICAL LANGUAGE, DIGLOSSIA, VERNACULAR.

**LOWTH, Robert** [1710-87]. English clergyman and grammarian, born in Winchester, educated at Winchester School and New College, Oxford. Appointed Bishop of London in 1777, Lowth

was a philologist 'more inclined to melancholy than to mirth', who believed that Hebrew was spoken in paradise. His *Short Introduction to English Grammar* (1762) became a standard textbook, and his name has become synonymous with prescriptive grammar. Lowth's reputation as a prescriptivist is not entirely deserved. Though he liberally illustrated his grammar rules with errors to be found in the English Bible and in standard authors, his approach to correctness was not invariably rigid and, like most grammarians, he described English as well as prescribing its rules. While Lowth advised against ending sentences with prepositions, he acknowledged the construction as 'an idiom, which our language is strongly inclined to'. Lowth also distinguished between *shall* and *will* as the future auxiliary, yet he noted that the pattern is a new one that took hold in the language after 'the vulgar translation of the Bible'. Lowth was convinced that English is rule-governed, and he defended the regularity and simplicity of the language against a tradition which viewed it as too primitive to possess any grammar at all. His model was Latin grammar, but he readily modified this to accommodate the idiosyncrasies of English. He also championed English language study in school, arguing that it facilitated the acquisition of the classics as well as the concept of universal grammar. See index. [BIOGRAPHY, EUROPE, GRAMMAR]. D.E.B.

**L-SOUNDS.** There are various ways in which the letter *l* is expressed in English. In phonetic terms, /l/ is made by raising the tongue tip to make and maintain central contact with the alveolar ridge, allowing air to escape round the sides. Variations can be made by changing the shape of the tongue behind the apical closure. A *dark l* [ɫ] is made by pulling the body of the tongue backwards, and a *clear l* [l] by pushing it up and forward towards the hard palate. Dark *l* is characteristic of the speech of northern England (excluding Geordie) and southern Scotland; clear *l* is characteristic of southern Ireland and India. Both types are heard in Northern Ireland and northern Scotland, and widely in AmE. In the speech of southern England and in varieties that developed from it, such as AusE, /l/ tends to be clear before the vowel in a syllable, as in *lick* /lik/, and dark after it, as in *kill* /kiɫ/. As the tongue takes up the position for /ɫ/, a transitional schwa-like sound may be heard: /kiəɫ/. Dark *l* may be accompanied by lip rounding, which often begins on the transitional vowel, making it sound more like /ʊ/, as in /kiʊɫ/. The transitional vowel indicates that a dark *l* follows immediately, and the /l/ is in effect redundant. In some varieties, such as that of south-east England (in particular Cockney) and AusE, dark *l* is

frequently vocalized (turned into a vowel), because the tongue tip does not make a central closure with the alveolar ridge. This 'l' therefore sounds like a back vowel or /w/: /kiw/, /kiw/ for *kill*. In NZE, where the influence of ScoE is strong, /l/ can be dark in all environments, but the clear/dark distinction as in RP is widespread. If, instead of maintaining central contact, the tongue strikes the alveolar ridge momentarily, or is held close to it, the result to the ears of native speakers of English is a kind of /r/. Some languages, such as Chinese and Japanese, have a single phoneme, in which the tongue contact is optional. When speakers of these languages speak English, they appear to mix up /l/ and /r/, as in the shibboleths of Chinese English *velly solly* (very sorry) and Japanese English *I rub you* (I love you). Many personal-name diminutives in English have *l* rather than *r*, as with *Hal* for *Harry*, *Del* for *Derek*, and *Tel* for *Terry*. See ALVEOLAR, APICAL, CONSONANT, LALLATION, LAMBDAICISM, LATERAL, LIQUID, R-SOUNDS, SOMERSET. [SPEECH].

G.K., L.T.

**LYLY, John** [c.1554-1606]. English writer and Member of Parliament, born in Kent, and educated at Oxford and Cambridge. Known as 'the Euphuist', he was one of the first prose stylists to leave a lasting mark on the language. He wrote the two-part romance *Euphues, or the Anatomie of Wit* (1578) and *Euphues and his England* (1580), an early epistolary 'novel' with comments on religion, love, and style. His 'new English' favoured an ornate, classical style widely admired during the Renaissance and known to this day as *euphemism*: see entry. His prose comedies, performed by boy actors, include *Campaspe* and *Sappho and Phao* (c.1583), *Endimion*

(1586-7), and *Midas* (1589), and strongly develop dialogue. His popularity, however, was eclipsed by Shakespeare, Marlowe, and other playwrights, and he died in embittered poverty. See index. [BIOGRAPHY, EUROPE, HISTORY, LITERATURE, STYLE]. T.MCA.

**LYRIC** [16c: from Latin *lyricus*, Greek *lurikós*, of the lyre, referring to a poem sung to its accompaniment, especially as composed by Sappho, Pindar, and other poets c.7-6c BC. The Roman poets Catullus and Horace wrote similar poems, but to be read aloud rather than sung]. (1) Having the form and musical quality of a song: *lyric poetry* (contrasting with *narrative poetry*). (2) A usually short poem that expresses personal feelings, and may or may not be set to music: a *Romantic lyric*. The plural *lyrics* can refer to the words of a song, echoing the original Greek usage: *Who wrote the lyrics for that song?* In the Middle Ages and later, lyrical songs were written on many subjects and were often popular in style and content; they helped lay the foundations of English poetry, at times in the face of ecclesiastical disapproval. Such songs appear in Elizabethan and Jacobean plays, and on the Roman model lyrical poems were written to be read aloud or silently; they came to be regarded as essentially poems of personal feeling, and especially of love. The term was seldom further defined, and is used of almost any poem that is not clearly narrative, dramatic, or satirical. Although the lyric is usually short, the lyrical mood can extend into the ode and the elegy. The lyric has no prerequisite of form, metre, rhyme, or wording: a present-day lyrical poem may use colloquial and even coarse language. See CHORUS, GENRE, POETRY, VERSE, WORDSWORTH. [LITERATURE]. R.C.

# M

**M, m** [Called 'em']. The 13th letter of the Roman alphabet as used for English. It originated in the Phoenician symbol *mem*, a zigzag line probably representing water (the word for which began with that letter: compare Hebrew *mayim* water). It was adapted by the Greeks as *mu* (*M*) and adopted with the same sound value by the Etruscans and the Romans.

**Sound value** The sound represented by *m* is normally a voiced bilabial nasal, but before /f/ the closure may be labio-dental rather than bilabial (*comfort*), and before /b, p/ an *n* may be pronounced /m/: *none better* ('numbetter'), *input* ('imput'). Assimilation of this kind helped turn the late Middle English phrase *in kenebowe* ('in keen bow', that is, in a sharp curve) into present-day *akimbo*.

**Double M.** (1) Final *m* is normally single in monosyllabic words: *am, aim, tame, rim, time, home, some, room, gum, fume, rhyme*. A suffix beginning with a vowel prompts *mm* after a short vowel (*jammed, brimming, drummer*), unless a silent consonant or final *e* in the base word intervenes (*thumbed, coming, damning*: contrast *damming*). (2) Medial *mm* normally signifies a preceding short vowel (contrast *comma/coma*), and also occurs in assimilations of Latin prefixes ending in *n*: *immaterial* (not \**inmaterial*). Similarly, Greek *syn-* produces *mm* in *symmetry*. (3) *M*-doubling is inconsistent after short vowels, as shown by the pairs *camel/mammal, image/scrimmage, lemon/lemming*, prompting such common consequent misspellings as \**accomodate, \*ommit*.

**Syllabic M** The letter *m* can function syllabically, as in *rhythm, chasm*. See SYLLABIC CONSONANT.

**Silent M.** The *m* is silent in initial Greek-derived *mn-* (*mnemonic, Mnemosyne*), but is pronounced

after a prefix (*amnesia*). See ALPHABET, B, EM, LETTER<sup>1</sup>, SPELLING. [WRITING]. C.U.

**MACAO**, also **Macau**. An overseas province of Portugal close to Hong Kong. Population: c.260,000 (90% Chinese). Portuguese is the official language, Cantonese is generally spoken, and English is seen as vital for modernization, resulting in a growing demand for courses. Macao's private U. of East Asia, many of whose students are Hong Kong citizens, uses English as its medium of instruction. See CHINA, HONG KONG, PORTUGUESE. [ASIA, NAME]. J.P., H.W.

**MACARONIC** [17c: from Latin *macaronicus* and older Italian *macaronico* (modern *maccheronico*), from Greek *makaria* barley food. First recorded in the *Carmen macaronicum de Patavinis* (1490), popularized in the *Liber Macaronices* of the monk Teofilo Folengo (1517), who described his verses as literary macaroni: 'a gross, rude, and rustic mixture of flour, cheese, and butter']. (1) Burlesque verse in which Latin and vernacular words with Latin endings are mixed, such as the following lines attributed to William Drummond (1684): 'Maggeam, magis doctam milkare coweas, / Et doctam sweepare flooras, et sternere beddas' (Maggie, trained up in milking cows, sweeping floors, and making beds). (2) Serious vernacular verse in which Latin elements are incorporated into a native pattern of metre and rhyme. The practice predates the name, as for example mingled Latin and Old English at the conclusion of the late 9c poem *The Phoenix*. Macaronics of this kind were common in English when Latin was the language of learning, as in William Dunbar's 'Lament for the Makaris' (c.1507):

I that in heill wes and gladnes  
Am trublit now with gret seiknes

## THE CAPITAL LETTER

And feblit with infirmite:

*Timor mortis conturbat me.*

[*heill* health, *wes* was, *trublit* troubled, *gret seiknes* great sickness, *feblit* enfeebled]

(3) Although the term usually refers to Latin and a vernacular together, macaronic verse is possible in principle between any two languages and any two varieties of a language: for example, in Scottish songs translated from Gaelic, the refrain and occasional phrases often remain in the original language. Comparably, there is sometimes a macaronic quality in the poetry of Robert Burns, vernacular Scots being mixed with Augustan English:

November chill blaws loud /lud/ wi' angry

sough /sux/;

The short'ning winter-day is near a close;

The miry beasts retreating frae the plough /plux/;

The black'ning trains o' craws to their repose.

(‘The Cotter’s Saturday Night’, 1786)

Compare CODE-MIXING AND CODE-SWITCHING.  
[LITERATURE, STYLE]. R.C., T.MCA.

**MACAULAY, T(homas) B(abington)** [1800–59]. British essayist, critic, poet, and historian, born in Rothley Temple, Leicestershire, son of the Presbyterian philanthropist Zachary Macaulay, who hailed from the Hebrides, had been governor of Sierra Leone, and opposed slavery. His mother was a Quaker and the daughter of a Bristol book-seller. At the age of eight he wrote ‘The Battle of Cheviot’, a romantic poem in the style of Sir Walter Scott. Macaulay was educated at a private school and Trinity College Cambridge, and intended a career in law, but an essay on Milton for the *Edinburgh Review* in 1825 brought him sudden fame and led to many subsequent articles. In 1830, he became Whig Member of Parliament for Calne in Wiltshire and helped pass the Reform Act of 1832. He became a member, then secretary, of the Board of Control that oversaw the work of the East India Company in India, and in 1834 went there to serve on the new Supreme Council of India. He played a part in the slow transfer of government from Company to Crown, and supported both freedom of the press and the equality of Indians and Europeans before the law. He set up a national system of education and in 1835 wrote the Minute that made English the subcontinent’s future language of education: see INDIAN ENGLISH<sup>1</sup>.

Macaulay returned to Britain in 1838, and began his *History of England*, which appeared in five volumes (1849–61) and covered only the period 1688–1702, yet was one of the best-selling books of the century in the UK and US and was translated into many languages. He was elected MP for Edinburgh in 1839 and 1852. In addition to holding major government offices, he wrote

copiously, including in 1842 the immensely popular *Lays of Ancient Rome*, which remained in use in schools well into the 20c. Although often criticized in his lifetime and later for shallowness, overconfidence (especially in the civilizing role of the Empire), narrowness of interests, and a tendency to glamorize history, Macaulay was markedly successful as a writer of popular history and criticism. His style was special pleading, not impartial assessment. Its emphatic manner and short sentences greatly influenced ‘quality’ journalism. He never married, was raised to the peerage in 1857, and died two years later from heart disease. See index. [ASIA, BIOGRAPHY, EUROPE, HISTORY, WRITING]. T.MCA.

**McDAVID, Raven I(oor), Jr** [1911–84]. American dialect geographer, born in Greenville, South Carolina, and educated at Furman U., completing a Ph.D. on Milton at Duke U. in 1935. McDavid came to an early appreciation of speech varieties and cultural stereotypes when he found ‘speech correctionists’ from outside his native region eager to alter his locally standard dialect. In 1937, he attended a summer school at the U. of Michigan where Bernard Bloch, a fieldworker for the *Linguistic Atlas of New England*, taught linguistic geography and selected him as an informant for the course. The excitement of dialect study that summer shaped his subsequent career. During World War II, along with other linguists he prepared language materials to assist in the war effort; his tasks included studies of Burmese and pedagogical tools to assist Italians learning English. In 1945, McDavid turned full-time to fieldwork for the *Linguistic Atlas of the Middle and South Atlantic States (LAMSAS)* under the general direction of Hans Kurath. He conducted several hundred field interviews recorded in precise phonetic transcription, not only in the South Atlantic region, but later in the Middle Atlantic and North Central States as well. McDavid joined the U. of Chicago in 1957 where he remained until retirement and beyond. When Kurath retired from active management of the *Linguistic Atlas* projects, McDavid became his successor. Editing *LAMSAS* and the *Linguistic Atlas of the North Central States* began under his direction and is continued today by his successors. With Kurath, he was co-author of the first comprehensive work drawing on *Atlas* files: *The Pronunciation of English in the Atlantic States* (1961). His abridgement and updating of Mencken’s *American Language* (1963) renewed the popularity of that book. His many essays were revised and collected in two volumes: *Dialects in Culture* (1979) and *Varieties of American English* (1980). In 1972, his colleagues and former students published a congratulatory

volume, *Studies in Linguistics in Honor of Raven I. McDavid, Jr.* See index. [AMERICAS, BIOGRAPHY, LANGUAGE, VARIETY]. R.W.B.

**MacDIARMID, Hugh**, pen name of *Christopher Murray Grieve* [1892–1978]. Scottish poet, critic, and polemicist, leader of the Lallans movement. Born and educated in Langholm, a Border town whose dialect and traditions contributed to the striking individuality of his poetic style, Grieve was a founder (1928) of the National Party of Scotland (expelled 1933) and a member of the Communist Party (expelled 1938, rejoined 1956). Although passionately committed to Scottish cultural and political nationalism, he was at first unconvinced of the viability of Scots for 20c poetry. He deplored the sentimentality of poets since Robert Burns and strongly disapproved of the North-East dialect writing of Charles Murray. His discovery of the extent and expressiveness of Scots vocabulary, however, particularly as recorded in Jamieson's *Etymological Dictionary of the Scottish Language* (1808), prompted him to experiment with a Synthetic Scots, first for short lyrics, then for extended metaphysical poem-sequences (most importantly *A Drunk Man Looks at the Thistle*, 1926) showing great linguistic virtuosity and an adventurous spirit of philosophical exploration not attempted in Scots poetry since medieval times. His omnivorous learning, social and political extremism, and exuberant fondness for linguistic effects formed an explosive and controversial poetic compound. His Scots is often difficult and challenging, but his success in revitalizing poetry in the language has been marked. In later life, he adopted English for equally experimental poetry, but other poets have continued his practice of writing effectively in Lallans. See index. [BIOGRAPHY, EUROPE, LITERATURE, VARIETY].

J.D.M.

**MACHINE LANGUAGE** [Later 20c]. Also **machine code**. A term in computing for information in a form which can be used by a machine such as a computer, in particular the system of numbers and/or instructions for the processing of data, usually by means of a binary code. Most programmers write in higher-level computer languages which are translated into a machine language to be executed by a *compiler* such as *Turbo Pascal*, designed for the language Pascal as used on IBM personal computers. Thus, a high-level language statement such as  $x = x + 1$  (add one to the variable  $x$ ) must be turned into a three-instruction sequence: 'Load  $x$  from main memory into a central part of the processor; add one to that central item; store the result in the

main memory location which holds the variable  $x$ .' See COMPUTING. [LANGUAGE, TECHNOLOGY].

M.L.

**MACHINE-READABLE TEXT** [Later 20c]. A term in computing for: (1) A text that can be read by a machine. (2) Such products of electronic publishing as information on magnetic tapes and laser discs. (3) Electronic versions of printed texts, created so that the material can be processed by computer in various ways and for various purposes. A machine-readable version of a large novel such as Herman Melville's *Moby-Dick* represents about a megabyte of computer storage. With machine-readable text, concordances can quickly be made for such a work, showing each occurrence of every word in context. Often, however, traditional texts are not available in machine-readable form. The availability of computer tapes or discs varies widely by subject and language: the entire corpus of classical Greek literature is available from the *Thesaurus Linguae Graecae* at the U. of Nancy in France, but English literature, being a much larger living tradition, is less well covered. There are, however, major archives, such as at Oxford in England, Brigham Young in Utah, and Lund in Sweden. The Oxford Text Archive serves as an international coordinating point for the effort to accumulate material in machine-readable form. See COMPUTING, TEXT. [TECHNOLOGY, WRITING].

M.L.

**MACHINE TRANSLATION**. Translation by computer. In 1949, the US mathematician Warren Weaver, reflecting on the wartime successes of computers at cryptography, proposed that they might be able to translate languages: 'It is very tempting to say that a book written in Chinese is simply a book written in English which was coded into the *Chinese code*' (in *Machine Translation of Languages*, ed. W. N. Locke & A. D. Booth, 1955, pp. 15–27). This suggestion stimulated research in the 1950s, which however found the problem too hard to solve with the technology then available. Word-by-word translation was tried first, but the result was confusing because of the many senses and therefore translations a word might have unless the context could be recognized by the machine. To go beyond word-by-word translation, it proved necessary to parse the languages concerned, something which depends on having a comprehensive description of those languages. Even with an adequate grammar, however, it is difficult for a computer to parse unambiguously, because it does not have a sufficient knowledge of the world that humans invoke intuitively when disambiguating such sentences as *I am going to run* (where *run* means either 'to move

rapidly on foot' or, especially in AmE, 'to offer oneself for election'). Research was curtailed in the early 1960s and efforts have focused on creating aids for human translators, in particular word lists for special subjects. Some systems use a 'raw' translation which is then edited. It has proved possible to produce systems which operate well in limited areas, the best-known being a weather-report system designed in Canada by Ray Kittredge of the U. of Montreal (1974-6). Most researchers, however, consider that a fully automatic translation program for a wide subject area requires advances in computational linguistics rather than in technology. See COMPUTATIONAL LINGUISTICS, TRANSLATION. [LANGUAGE, TECHNOLOGY]. M.L., T.MCA.

**MACHINE WORD** [Later 20c]. A term in computing for a string of bits, characters, or bytes that is treated as one unit by a computer. [TECHNOLOGY, WORD]. T.MCA.

**McLUHAN, (Herbert) Marshall** [1911-80]. Canadian literary critic and communication theorist, born in Edmonton, Alberta, and educated at the U. of Manitoba (BA 1933, MA 1934) and the U. of Cambridge (BA 1936, MA 1939, Ph.D. 1943). In 1946, he began to teach literature at the U. of Toronto, where he met and was influenced by Harold Innis, and began the work on communication which led to the founding of the university's Centre for Culture and Technology, which he directed from 1963 until 1979. His publications include *The Mechanical Bride: Folklore of Industrial Man* (1951), *The Gutenberg Galaxy* (1962), *Understanding Media: The Extensions of Man* (1964), and *The Medium is the Message* (1967). In the 1960s, his controversial ideas about the impact of the media on the mind gained international currency. His phrase *the global village* and the aphorism *the medium is the message* have become part of the language. McLuhan postulated an oral tribal culture which involved all the senses, followed by a print culture (the Gutenberg galaxy), which favoured reason and sight, followed by a global village formed by television, which promoted a return to 'tribal' values. An account of his life and work is given by Philip Marchand in *The Medium and the Messenger* (New York: Random House, 1989) and a symposium on his theories has been edited by G. E. Stearn, *McLuhan Hot and Cool* (Harmondsworth: Penguin, 1968). See index. [AMERICAS, BIOGRAPHY, MEDIA]. M.F.

**MACMILLAN.** An international British-based publishing company that includes the London-based *Sidgwick & Jackson* and the paperback publisher *Pan Books*, and the New York-based

*St Martin's Press* and *Stockton Press*; the original US house, now *Macmillan Inc.*, was sold in 1952 and is a separate organization. The company was founded in 1843 in London and Cambridge by the brothers Daniel and Alexander Macmillan, and remains a private company controlled by the Macmillan family trusts. The current president is the Earl of Stockton, grandson of Harold Macmillan, the British Prime Minister, who worked for the firm for many years. Macmillan publish across the spectrum: fiction; non-fiction; children's books; journals and magazines (including *Nature*, the leading international science weekly); reference books (including *The Statesman's Year-Book* and *The Macmillan Encyclopedia*); university, college, and school textbooks; academic, scientific, technical, medical, business, and management books; and ELT books. Macmillan authors include Kipling, Hardy, Tennyson, Yeats, and O'Casey, and well-known titles include Margaret Mitchell's *Gone with the Wind*, J. G. Frazer's *The Golden Bough*, and Lewis Carroll's *Alice in Wonderland*. See CARROLL, HARDY, KIPLING, TENNYSON. [EDUCATION, EUROPE, MEDIA]. T.MCA.

**MACQUARIE DICTIONARY, The.** See AUSTRALIAN DICTIONARIES.

**MACRON** [1850s: from Greek *makrón*, neuter of *makrós* large]. Also less formally **stroke, bar**. A traditional diacritic in the form of a horizontal bar over a vowel letter (ˉ), to show that it is long (as in some renderings of Latin and Maori words). From its use in classical scansion to indicate a long syllable, it has come to indicate in English scansion that the syllable in which it occurs is stressed (contrasting with the *breve*). Similarly, the macron has been used over vowel symbols in the respelling systems of English dictionaries and in teaching grammars to mark traditional 'long' vowels, which include diphthongs. See BREVE, LENGTH MARK, LONG AND SHORT, SCANSION. [LITERATURE, SPEECH, WRITING]. T.MCA.

**McWORD** [1983 AmE: coined by Paul Dickson on the analogy of *McMuffin*, *McChicken*, etc.: see below. The first element derives from Gaelic *mac* son of, as in many Scottish and Irish names, such as *Macintosh*, *Mackintosh*, *MacIntosh*, *McIntosh*, the Anglicized variants of *Mac an Toiseich* Son of the Chief]. An informal term for certain words beginning with *Mc* or *Mac*. The McDonald Hamburger company was set up in 1955 in Illinois by the entrepreneur Ray Kroc. Its leading product, the *Big Mac*, is accompanied by such other quasi-Scottish foodstuffs as *Chicken McNuggets* and *Egg McMuffin*. By

analogy, Kroc's business has been referred to facetiously as a *McEmpire*, and related coinages suggest the quick, cheap, and superficial, as with *McFashion* pre-packaged clothing, *McPaper* (a dismissive name for) the newspaper *USA Today*, *News McNuggets* its news reports, *McLatin* classical studies made easy, and *McWar* 'a fast, cheap, well-packaged conflict that makes you feel good and doesn't cause indigestion' (*Independent Magazine*, 26 Jan. 1991). This range of McWords is distinct from another that emerged after an Apple personal computer (California, mid-1980s) was named after the Macintosh apple. This led to the short forms *Apple Mac* and *Mac*, names for software such as *MacWrite*, *MacPaint*, and *MacAuthor*, and periodicals with such names as *Mac World* and *The MACazine*. In computing, the *mac* prefix is neutral or positive. In the words based on *McDonalds*, the stress is usually on the syllable following *Mc*; in the computer words, *Mac* usually receives full stress.

Special uses of *mac* are older than hamburger franchises and personal computers. Because of the many *mac*-names, the patronymic element has long been used in Scotland as a casual form of address by one man to another whose name he does not know ('Hi, Mac, ye got the time?'); through emigration this usage spread to North America. In addition, someone with a *mac*-name may be referred to simply as *Mac* ('Where's Mac gone?'). The BrE abbreviations *mac* and *mack* stand for *mac(k)intosh*, the light raincoat invented by Charles Macintosh (d.1843). *Mac* also appears in the blend *tarmac*, short for the trade name *Tarmacadam* (after its inventor John McAdam, d.1836), and *CalMac*, the syllabic acronym for *Caledonian MacBrayne*, a Scottish ferry company. It also occurs in such facetious usages as *MacBeeb* (an informal name for the BBC in Scotland), *MacHISmo* (a stunt term protesting against Scottish male chauvinists), and *McYuppie* (a young Scottish urban professional). See PATRONYMIC. [AMERICAS, EUROPE, NAME, WORD]. T.MCA.

**MAGAZINE** [16c: from French *magasin* a store, shop, from Italian *magazzino* a storehouse, from Arabic *makhāzin*, plural of *makhzan* a storehouse. Figuratively developed in English as a storehouse of information: compare THESAURUS]. A publication issued periodically and intended for a wide circle of readers, usually bound in a paper cover, and typically containing articles, stories, poems, pictures, advertisements, etc. However specialized a magazine may be, there is always a suggestion of a miscellany about it. The first English publication to use the name, the *Gentleman's Magazine* (1731), described itself as 'a Monthly Collection to

Treasure up, as in a Magazine, the most remarkable Pieces on the Subjects abovemention'd'. Oliver Goldsmith may have summed up the objectives of the genre when he observed: 'It is the life and soul of a magazine never to be dull long upon one subject.'

**British magazines.** Until the late 19c, British magazines were predominantly literary and intellectual. Although the term is still used in such titles as *The London Magazine* or *Blackwood's Magazine*, which have maintained this characterization, the more serious publications in the field are now usually called *reviews* or *journals*. The more popular tone and format was announced with the appearance of George Newnes's *Tit-Bits from all the Most Interesting Books, Periodicals and Newspapers of the World* (1861). With increasingly sophisticated printing technology, the emphasis became pictorial rather than literary. There are now few British magazines which are purely verbal: indeed, some glossy magazines have 200-400 pages, of which over 50% may be devoted to consumer advertisements. Most serious ('heavy') British Sunday newspapers now incorporate such publications. When they first came out in the 1960s, they were known as *colour supplements*, but they are now promoted as magazines in their own right.

**American magazines.** The first US magazines, both published in 1741, were inspired by the *Gentleman's Magazine*. They were *The American Magazine*, or *A Monthly View of the Political State of the British Colonies* and Benjamin Franklin's *General Magazine and Historical Chronicle for All the British Plantations in America*. The first had three issues; the second, six. They were succeeded by a long line of short-lived magazines. Eventually some more enduring and influential publications appeared: *The North American Review* (1815), *The Saturday Evening Post* (1821), *Godey's Lady's Book* (1830), *The Knickerbocker* (1833), *New-Yorker* (1834), *Harp-er's New Monthly Magazine* (1850), *Atlantic Monthly* (1857), *Woman's Home Companion* (1873), *Ladies' Home Journal* (1883), *Good Housekeeping* (1885), *Collier's* (1888), *The Smart Set* (1890), *McClure's* (1892), *McCalls* (1897), *The Reader's Digest* (1922), *The American Mercury* (1924), *The New Yorker* (1925), *Life* (1936), and *Look* (1937). For the current scene, see AMERICAN PRESS.

American magazines have until recently served in lieu of national newspapers, providing a popular culture in which all could participate and a national perspective on issues which might otherwise have been left to merely local interpretations. In a nation the size of the US, in both area and population, such cultural binding

served an important role in the history of the people. Magazines have provided their readers with literature, news, political commentary, muckraking, humour, entertainment, do-it-yourself guidance, social satire, titillation, and much else. The *National Era* in 1852 published Harriet Beecher Stowe's *Uncle Tom's Cabin* in serial form, struck a blow for the abolition of slavery, and helped provoke the Civil War. In 1870-1, *Harper's Weekly* led a successful attack on the Tweed Ring in New York's Tammany Hall. *McClure's* exposed the greed and exploitiveness of unrestrained capitalism. *The American Mercury* of H. L. Mencken and George Jean Nathan was the voice of iconoclasm, irony, scepticism, and cultural criticism of the 1920s.

**Magazines, radio, and television.** In the 20c, magazines have been a major growth area of popular publishing. Specialist magazines cater for every imaginable field and activity. In the UK, over 12,000 periodicals, magazines, bulletins, annuals, trade journals, and academic journals are published on a regular basis. There are some 40 women's magazines and over 60 dealing with particular sports, games, hobbies, and pastimes. Although some US magazines, such as the *Saturday Evening Post*, have succumbed to the competition of television, many continue to have enormous international circulations, *The Reader's Digest* over 16m, the *National Geographic* over 10m. For many people, magazines have been the most available and widely used form of continuing education, providing information about history, geography, literature, science, and the arts, as well as guidance on gardening, child-rearing, cooking, tailoring, home decoration, financial management, psychological coping, and conjugal adjustment.

Until the rise of television, magazines were the most available form of cheap, convenient entertainment in the English-speaking world. Radio served a similar function, but was more limited in what it could do. Magazines and television, however, both address the more powerful visual sense. During the third quarter of the 20c, coincident with a dramatic rise in the popularity of television, many general-interest, especially illustrated magazines went out of business. The shift in attention of a mass audience from reading such magazines to watching television has been a major factor in this decline, but it is an implicit tribute from television to the older genre that its programmes are generally organized in a similar format and content. See BROADCASTING, BULLETIN (THE), DIGEST, JOURNAL, JOURNALISM, NEWSMAGAZINE, NEWSPAPER, NEW YORKER (THE), PERIODICAL, PUNCH, READER'S DIGEST. [AMERICAS, EUROPE, MEDIA].

G.H.

**MAGIC E.** See DIGRAPH, E, VOWEL.

**MAIN CLAUSE**, also **principal clause**. A clause in a sentence to which other clauses are subordinated, and which is not itself a subordinate clause. In a simple sentence, the main clause is the entire sentence. In a compound sentence, there is more than one main clause. Complex sentences contain a main clause and one or more subordinate clauses. [GRAMMAR].

R.E.A.

**MAINSTREAM** [17c]. A term for the main element or direction in a society, activity, etc.: *the mainstream of American culture; mainstream British politics*. In the 1980s, the term came increasingly into use to contrast the standard or general form of a language with non-standard, especially minority forms: 'The rise of local varieties . . . or the generalization of imperfectly learned English . . . pours innovation back into the international mainstream of English' (R. W. Bailey & M. Görlach, Introduction, *English as a World Language*, 1982); '*slang*: informal language from mainstream English or non-technical subcultures (bikers, rock fans, surfers, etc.)' (Eric S. Raymond, *The New Hacker's Dictionary*, MIT Press, 1991). Compare GENERAL ENGLISH, STANDARD. [STYLE, VARIETY].

T.MCA.

**MAJUSCULE AND MINUSCULE.** See CAPITAL [LETTER].

**MAKAR** [14c: a translation of Greek *poiētēs* maker (of poetry). Pronounced 'macker']. A term for a poet in Middle English and in Scots, as in William Dunbar's *Lament for the Makaris* (c.1507). Compare POET. [LITERATURE].

T.MCA.

**MAKESHIFT LANGUAGE.** A rudimentary form of language used for such purposes as trade among groups with no common language. Compare CONTACT LANGUAGE, MARGINAL LANGUAGE, PIDGIN, RESTRICTED LANGUAGE. [LANGUAGE].

S.R.

**MALAPROPISM** [19c: from *Mrs Malaprop*, a character in Richard Sheridan's play *The Rivals* (1775), from the French *mal à propos* inappropriate, and *-ism* as in *euphemism*]. An error in which a similar-sounding word is substituted for the intended one, a characteristic of the fictional Mrs Malaprop, who produced such errors as 'pineapple' for *pinnacle* ('He is the very pineapple of politeness!'), 'hydrostatics' for *hysterics* ('Oh! It gives me the hydrostatics to such a degree!'), 'interceded' for *intercepted* ('I have interceded another letter from the fellow!'). Such slips are sometimes divided into *classical malapropisms*, in which the mistakes are due to ignorance (as in the case of the self-educated Mrs Malaprop), and temporary *slips of the tongue*, in which the intended word is known by the

speaker, but has been inadvertently replaced by another. Mrs Malaprop's mistakes are artificial and literary, but genuine errors of word selection in English show certain recurring characteristics: they come from the same word class (part of speech), tend to have similar beginnings and endings, and similar word rhythm, as with *magician* for musician, *competent* for confident, *anecdote* for antidote, *exhibition* for expedition. See CONFUSIBLE, DIALOG(UE), ELOCUTION, SLIP OF THE TONGUE. [LANGUAGE, NAME, STYLE]. J.M.A.

**MALAWI.** Official title: *Republic of Malawi*. A country of East Africa and member of the Commonwealth. Capital: Lilongwe. Currency: the kwacha (100 tambala). Population: 7.9m (1988), 11.6m (projection for 2000). Ethnicity: 99% indigenous (Chewa, Nyanja, Lomwe, Sena, Tombuka, Yao, etc.), 1% Asian, European. Religion: 40% Protestant, 30% traditional, 20% Roman Catholic, 10% Muslim. Languages: Chichewa, English (both official), and indigenous. Education: primary 46%, secondary 5%, tertiary 1%, literacy 49%. The first European contact was in 1859, by the Scottish missionary David Livingstone. In 1878, the *African Lakes Company* was established; in 1883, Britain appointed a consul to the Kings and Chiefs of Central Africa; the territory became the British protectorate of *Nyasaland*, which became independent in 1964 as Malawi. English is the principal link language and the language of education from the fourth year of school, and is used in the media. English-language newspapers include *The Daily Times*, the *Malawi News* (weekly, English and Chichewa), and *The Okini* (biweekly, English and Chichewa). See EAST AFRICAN ENGLISH, ENGLISH. [AFRICA, NAME, VARIETY]. C.L.N.

**MALAY.** An Asian language of the Western or Indonesian branch of the Malayo-Polynesian language family, used in the Malay Peninsula and many of the islands of Malaysia and Indonesia. The dialect of the southern peninsula is the basis of both *Bahasa Malaysia* and *Bahasa Indonesia*, the official languages of Malaysia and Indonesia respectively. Malay is spoken by some 60m people, many of whom use it as a second language for professional, academic, or other purposes. The two national standards use slightly different versions of the Roman alphabet and can also be written in Arabic script. *Bazaar Malay* is a pidgin used in markets and by servants. Currently, both national varieties are undergoing rapid lexical expansion, drawing especially on English for the vocabulary of technology. Loans from English into Bahasa Malaysia include: (loanwords) *ais* ice, *famili* family, *kempen* campaign, *oksyan* oxygen, *terompet* trumpet, *traktor* tractor, *variasi* variation, *wayar*

wire, *wiski* whisk(e)y, *zeng* zinc; (loan translations) *bulan madu* honeymoon, *meja bulat* round table, *papan hitam* blackboard, *pelum berpandu* guided missile, *pasar gelap* black market; (hybrids) *bom waktu* time bomb, *tenaga solar* solar energy, *antikerajaan* anti-government; (loans from trade names) *beraso* Brasso, *klorox* Chlorox, *termos* Thermos, *zeroks* Xerox. Such borrowing is discussed in detail in *The Influence of English on the Lexical Expansion of Bahasa Malaysia*, by Carmel H. L. Hsia (Dewan Bahasa dan Pustaka/Ministry of Education, Kuala Lumpur, 1989). See ARABIC, BORROWING, BRUNEI, INDONESIA, MALAYO-POLYNESIAN LANGUAGES, MALAYSIA, SINGAPORE. [ASIA, LANGUAGE]. T.M.CA.

**MALAYALAM.** A Dravidian language of south India that branched from Tamil in medieval times. It is one of the 15 major languages of India and the state language of Kerala. Malayalam is written in a script based on southern Brahmi, and has a literary tradition dating from at least the 14c. It is spoken primarily by some 25m people in Kerala, Malaysia, and Singapore. The standard language is highly Sanskritized and also borrows from English. A style mixed with Sanskrit and known as *manipravālam* (rubies and coral) is unique to literary Malayalam. See BISOCIATION, BORROWING, DRAVIDIAN ENGLISH, INDIA, INDIAN LANGUAGES, TAMIL. [ASIA, LANGUAGE]. Y.K.

**MALAYO-POLYNESIAN LANGUAGES,** also **Austronesian languages.** A family of 300–500 languages, with a mainly insular distribution. The languages are found in Cambodia, Indonesia, Madagascar, Malaysia, Melanesia, Micronesia, the Philippines, Polynesia, Singapore, Taiwan, and Vietnam. Their speakers have come into contact with English in varying degrees since the 16c, with particular impact on Hawaiian, Indonesian, Malay, and Maori. See ASIAN LANGUAGES, BLOOMFIELD, HAWAII, INDONESIA, LANGUAGE, LANGUAGE FAMILY, MALAY, MALAYSIA, MAORI, MELANESIA, NEW ZEALAND, PAPUA NEW GUINEA, PHILIPPINES, SOLOMON ISLANDS, TAIWAN, VANUATU. [ASIA, OCEANIA]. S.R.

**MALAYSIA** [Until the 1960s, a term among geographers for all lands inhabited by Malays, including Indonesia and the Philippines; now largely restricted to one nation]. Formal title: *Federation of Malaysia*. A country of South-East Asia, a member of the Commonwealth, and a constitutional monarchy (a king being elected for five-year periods from among the sultans of the Malay states). Capital: Kuala Lumpur. Currency: ringgit (100 sen). Economy: mixed. Population: 17m (1988), 21m (projection for 2000).

Ethnicity: 47% Malay, 32% Chinese, 8% South Asian, 3% Iban, 3% Kadazan, 7% others. Religions: 53% Muslim, 25% Buddhist, Confucianist, and Taoist, 10% Christian, 8% Hindu, 5% traditional. Main languages: Bahasa Malaysia or Malay (the official language, link language, and medium of education), English (compulsory second language in education), Chinese (mainly Hokkien and Cantonese), Tamil, Punjabi, Iban. Education: primary 99%, secondary 53%, tertiary 6%, literacy 74%.

From the 16c, the British competed with Sumatran settlers, the Dutch, and the Portuguese for control of the Malay Peninsula. In 1826, Singapore, Malacca, and Penang were incorporated into the *British Colony of the Straits Settlements*, and from 1874 British protection was extended over the sultanates of Perak, Selangor, Negeri Sembilan, and Pahang, which became in 1895 the *Federated Malay States*. Further treaties were made with the sultans of Johor, Kedah, Perlis, Kelantan, and Terengganu, which were known as the *Unfederated Malay States*. After the Second World War, Singapore became a separate colony, Sarawak became a colony, the colony of North Borneo was formed, and the *Malay Union* created to unite the peninsular Malay states with the Straits Settlements of Malacca and Penang. Non-Malay opposition to this union led to the *Federation of Malaya* in 1948, which (after the defeat of a drawn-out Communist insurrection) gained independence in 1957. In 1963, when Sabah (North Borneo) and Sarawak joined the group, the *Federation of Malaysia* was formed. Singapore left the federation and became an independent republic in 1965. The Malay state of Brunei in Borneo also chose to remain distinct. See BRUNEI, ENGLISH, INDONESIA, MALAY, MALAYSIAN ENGLISH, SINGAPORE, SPELLING REFORM. [ASIA, NAME, VARIETY].

T.MCA.

**MALAYSIAN ENGLISH.** The English language in Malaysia. The name *Anglo-Malay* has been used to describe the variety that emerged during colonial times among expatriates and a local élite, serving as the vehicle through which such words as *compound/kampung*, *durian*, *orang utan*, and *sarong* have passed into general English. Some English-medium schools were established in the 19c (in Penang in 1816, Singapore 1823, Malacca 1826, and Kuala Lumpur 1894), at the same time as Malay, Chinese, and Tamil schools were encouraged. Those members of the various ethnic groups who were educated in the English-medium schools came to use English increasingly in their occupations and their daily life; the 1957 census reported 400,000 people (some 6% of the population) as claiming to be literate in the language. When the British

began to withdraw in the late 1950s, English had become the dominant language of the non-European élite, and with independence became with Malay the 'alternate official language'. However, the National Language Act of 1967 established Malay (renamed *Bahasa Malaysia* in 1963) as the sole official language, with some exceptions in such areas as medicine, banking, and business. Among Malaysians, the term *Malaysian English* tends to refer to a more or less controversial variety that centres on the colloquialisms of those educated at the English-medium schools. Its essence is distilled in the cartoons of K. H. Boon in the *Malaysian Post*: 'Myself so thin don't eat, can die one, you know?'

English-medium education expanded after independence; there were close to 400,000 students in such schools when, in 1969, the Ministry of Education decided that all English-medium schools would become Malay-medium. By the early 1980s, the process through which Bahasa Malaysia has become the national language of education was virtually complete, but the shift prompted widespread concern that general proficiency in English would decline. To prevent this, English has been retained as the compulsory second language in primary and secondary schools. Some 20% of the present population (c.3.4m) understands English and some 25% of city dwellers use it for some purposes in everyday life. It is widely used in the media and as a reading language in higher education. There are seven English-language daily newspapers (combined circulation over 500,000) and three newspapers in Sabah published partly in English (circulation over 60,000). English is essentially an urban middle-class language, virtually all its users are bilingual, and code-switching is commonplace. Creative writers in English include Kassim Ahmad, Lee Kok Liang, and K. S. Maniam.

**Features.** (1) Malaysian and Singapore English have much in common, with the main exception that English in Malaysia is more subject to influence from Malay. (2) Pronunciation is marked by: a strong tendency to syllable-timed rhythm, and a simplification of word-final consonant clusters, as in /lɪv/ for *lived*. (3) Syntactic characteristics include: the countable use of some usually uncountable nouns (*Pick up your chalks; A consideration for others is important*); innovations in phrasal verbs (such as *cope up with* rather than *cope with*); the use of reflexive pronouns to form emphatic pronouns (*Myself sick* I am sick; *Himself funny* He is funny); and the multi-purpose particle *lah*, a token especially of informal intimacy (*Sorry, can't come lah*). (4) Local vocabulary includes: such borrowings

from Malay as *bumiputera* (originally Sanskrit, son of the soil) a Malay or other indigenous person, *dadah* illegal drugs, *rakyat* the people, citizens, *Majlis* (from Arabic) Parliament, *makan* food; such special usages as *banana leaf restaurant* a South Indian restaurant where food is served on banana leaves, *chop* a rubber stamp or seal, *crocodile* a womanizer, *girlie barber shop* a hairdressing salon that doubles as a massage parlour or brothel, *sensitive issues* (as defined in the Constitution) issues that must not be raised in public, such as the status of the various languages used in Malaysia and the rights and privileges of the different communities; such colloquialisms as *bes* (from *best*) great, fantastic, *relac* (from *relax*) take it easy; and such hybrids as *bumiputera status* indigenous status, and *dadah addict* drug addict. See MALAY, SINGAPORE, SOUTH-EAST ASIAN ENGLISH. [ASIA, NAME, VARIETY]

**MALDIVES, The.** Official title: in Divehi *Divehi Jumphuriya*, in English *Republic of the Maldives/Maldivian Republic*. Also, especially formerly, *the Maldive Islands*. A country of 19 atoll clusters in South Asia, and member of the Commonwealth. Capital: Malé. Currency: rufiya (100 laari). Economy: mixed. Population: 200,000 (1988), 300,000 (projection for 2000). Ethnicity: mixed Sinhalese, South Indian, Arab. Religion: Sunni Muslim. Languages: Divehi (official), also called Maldivian, related to Sinhala and with a script derived from Arabic, and English, widely used in government and tourism. Education: primary 76%, secondary 29%, tertiary 1%, literacy 70%. From 1887 to 1965, the Maldive sultanate was a British protectorate. See ENGLISH, SINHALA/SINHALESE, SOUTH ASIAN BROADCASTING, SOUTH ASIAN ENGLISH. [ASIA, NAME, VARIETY].

T.MCA.

**MALEDICTA**, full title *Maledicta: The International Journal of Verbal Aggression*. An American journal devoted to uncensored studies and glossaries of verbal aggression and abuse, curses, blasphemy, scatology, taboo language, exclamations, boasting, euphemism, terms of endearment, pet names, jargon, libel and slander, nicknames, slurs, stereotypes, racial and other names, the terminology of sex and body parts, proverbs and sayings, metaphors, similes, and comparisons, graffiti, satire and sarcasm, affixes, gestures, physical aggression, and murder and suicide. It was founded in 1977 in Waukesha, Wisconsin, by its editor and publisher Reinhold Aman, and appears more or less annually in a volume of c.300 pages, with subscribers in 71 countries: 'The journal's whimsical and humorous contributions, as well as its editor's personal engagement and verbal aggression against cowardly, repressed, and hypocritical establishment scholars are the major reasons why many of the latter ignore *Maledicta*. The uncensored presentation of so-called vulgar, obscene, and otherwise "sensitive" language material is another reason for establishment scholars to disdain *Maledicta* and to ignore the valuable linguistic corpus presented in its pages' (editor, personal communication, 1990). See SWEARING. [AMERICAS, LANGUAGE, MEDIA].

T.MCA.

**MALTA.** Official title: *Maltese Republika ta Malta*, English *Republic of Malta*. A Mediterranean island nation and member of the Commonwealth. Capital: Valletta. Currency: lira (100 mils or cents). Economy: mainly industry and tourism. Population: 360,000 (1988), 360,000 (projection for 2000). Religion: 98% Roman Catholic, 2% others. Languages: Maltese/Malti, English (both official, English the medium of education), and Italian. Maltese, a variety of Arabic with elements of several other Mediterranean languages, is the only Semitic language written in the Roman alphabet and used for official purposes in Europe. Education: primary 95%, secondary 76%, tertiary 20%, literacy 84%. Malta was a Sicilian dependency from the late 11c and was controlled by the Knights of St John from 1530. It was a French colony from 1798 and a British colony from 1802, becoming self-governing in 1921, then an independent monarchy (with the Queen as head of state) in 1964, and a republic in 1974, the last British troops being withdrawn in 1979. The use of English is widespread, especially in the cities. English-language newspapers include *The Democrat* (established in 1975) and the *Times* (1978). See ARABIC, ENGLISH. [EUROPE, LANGUAGE, NAME, VARIETY].

T.MCA., C.L.N.

**MALE BIAS.** See GENDER BIAS.

**MANCHESTER.** See LANCASHIRE.

**MANDARIN CHINESE.** See CHINA, SINGAPORE.

**MAN, ISLE OF.** See ISLE OF MAN, MANX.

**MANNERISM** [18c]. A characteristic way in which a person behaves, consciously or unconsciously, occasionally or habitually. Mannerisms are often part of body language: for example, a gesture like frequently touching the hair or raising an eyebrow. When gestures or speech are *mannered*, however, they are stylized and affected. See AFFECTATION, BODY LANGUAGE, -ISM, REFINED. [STYLE]. T.MCA.

**MANNER OF ARTICULATION.** See SPEECH.

**MAN OF LETTERS.** See LETTERS.

**MANUAL** [14c: from Latin *manualis* that can be held in or done by the hand]. (1) Done or worked by hand (*manual labour*); related to the use of the hands (*manual dexterity*). (2) Also *handbook*. An instructional book suitable for holding in the hand, especially when working on a particular task: *a repair manual; a gunnery manual; a style manual*. (3) Also *manual typewriter*. A non-electric typewriter. Compare COMPANION, GUIDE. See HAND, MANUSCRIPT, TEXTBOOK, TYPEWRITER. [REFERENCE, TECHNOLOGY]. T.MCA.

**MANUAL ENGLISH.** See SIGN LANGUAGE.

**MANUSCRIPT** [16c: from Medieval Latin *manuscriptus* written by hand, from Latin *manu* by hand, *scribere/scriptum* to write]. Short form *MS* or *ms* (plural *MSS* or *mss*). (1) A handwritten document, especially one produced before the widespread adoption of printing. (2) The original text of an author's work, especially as submitted to a publisher. From the late 19c, the term has also been used to refer to type-written documents (*a typed manuscript*); in the US in the 1890s, the term *typescript* was coined by analogy for a typed document. (3) Handwriting as distinguished from print (*notes in manuscript*); handwritten (*a manuscript poem on vellum*). The term *typescript* is used in the same way (*notes in typescript; a typescript poem*). See BOOK, HAND, MANUAL, SCRIPT, SCROLL, VOLUME. [TECHNOLOGY, WRITING]. T.MCA.

**-MAN/WOMAN.** Elements used in compounds to indicate that someone was born in a country or region: *Englishman, Scotswoman, Cornishman, Manxwoman*. Such usages appear to have originally been written separately (*Irish man, Welsh woman*), but are now solid, with stress on the first element, a practice that evidently began

in the 15c. However, where a usage does not represent a traditional label, as with *a Glasgow man* (a man from Glasgow) or *a New York woman*, the place-names are used attributively, not as parts of compounds, and solid spelling is not used. The masculine form has traditionally been regarded as generic: that is, as including the feminine in general statements like *This is a matter of concern to all Englishmen*. Currently, this practice is resisted by feminists and others, along with such non-geographical terms as *chairman* and *fireman*. The forms *Scotsman/woman* can be shortened to the neutral *Scot*, widely preferred as a compact bias-free term, but most such terms cannot. The expressions *an Irishman* and *an Irish* (plural *Irishes*) were once common in Britain and Ireland, and the latter is still used in West Africa. See SEXISM. [NAME, WORD]. T.MCA.

**MANX** [16c: from Old Norse *manskr*, Middle English *Manisk(e)*, with *sk* metathesized to *x*. Compare dialect *aks* for *ask*]. (1) The adjective for the Isle of Man and its people, as in *Manx cat* a local breed of tailless domestic cat. (2) Also *Manx Gaelic*. The Celtic language of the Isle of Man. See GAELIC, ISLE OF MAN, METATHESIS. [EUROPE, NAME]. T.MCA.

**MANX ENGLISH.** See ISLE OF MAN, MANX.

**MANXMAN/WOMAN.** See -MAN/WOMAN, MANX.

**MAORI** [19c: from Maori, perhaps meaning 'the usual kind']. The name of the indigenous people (*tangata whenua*) of New Zealand and their language. Maori is spoken by about one-third of the approximately 300,000 Maori population. With such other languages as Hawaiian, Samoan, and Tongan, it is a member of the Polynesian branch of the Malayo-Polynesian language family.

**Pronunciation.** The Maori pronunciation of *Maori* has a long *a* /'ma:ɔri/, a usage which is fairly common in NZE alongside the traditional Anglicized /'maʊri/. No single dialect has emerged as the basis for a standard form of Maori. Tribal variation in pronunciation is shown in such pairs as *inanga/inaka* (a kind of fish), *mingimingi/mikimiki* (an evergreen shrub), and the place-name *Waitangi/Waitaki*. In each of these cases, /ŋ/ is a North Island equivalent of a South Island /k/. In words conventionally spelt with *wh* (*whare, kowhai*), some tribes use a sound approximating to /f/, others a sound approximating to /hw/. Maori has the consonants /p, t, k, m, n, ŋ, f, h, r, w/ and the five vowels /i, e, a, ɔ, u/, which can be either long or short. It also permits a maximum of one consonant sound before any vowel. Consequently,

loanwords from English may undergo considerable change: *sheep* to *hipi*, *Bible* to *paipera*, *London* to *Ranana*. The written consonant cluster *ng* is pronounced /ŋ/, as in *sing*, whether initial or medial. Maori *r* in many words corresponds to Hawaiian and Samoan *l*: *aroha*, Hawaiian *aloha* love; *whare*, Samoan *fale* house.

**Writing.** The language was unwritten before the arrival in the early 19c of British missionaries, who, in creating a written form for the language, did not always successfully equate its phonemes with the nearest equivalents in English. A major feature of their work was the decision that vowel length in Maori did not need to be reflected in spelling (although diacritical marks have since been optional). Some present-day scholars of Maori have adopted a system of doubling long vowels: *Maaori* instead of *Maori* or *Māori*; *kaakaa* instead of *kaka* or *kākā* (parrot); *kaakaapoo* instead of *kakapo* or *kākāpō*. However, since most printing of the language shows the older conventions, it seems likely that the missionaries' style will prevail.

**Influence on English.** All Maoris speak English, but few Pakehas (white New Zealanders) and a diminishing number of Maoris speak Maori with any fluency, although attempts are now being made to give greater prominence to Maori language and culture. From the beginning, European settlers adopted Maori names for physical features and tribal settlements, but such names came to be pronounced with varying degrees of adaptation. Thus, the place-name *Paekakariki*, pronounced /pae'kakariki/ by the Maoris, was Anglicized to /paɪkəkə'riki:/ and frequently reduced to the disyllabic /paɪkək/. The place-name *Whangarei* /'faŋareɪ/ was Anglicized to /'wɒŋ'reɪ/. Most of the Maori names for the distinctive flora (*kowhai*, *nikau*, *pohutukawa*, *rimu*, *totara*) and fauna (*kiwi*, *takahe*, *tuatara*, *weta*) were also adopted and varyingly adapted into NZE. The issue of how far English-speakers should attempt to adopt native Maori pronunciations of such words has, for many years, been a major point of linguistic discussion in New Zealand. Broadcasting now attempts, not always successfully, to use a Maori pronunciation at all times. Two features of colloquial NZE are frequently attributed to Maori influence: the use of the tag question *eh?* and plural *youse*. However, while these may have been encouraged by Maori structures, they are both found elsewhere in the English-speaking world.

**Status.** In the later 19c and early 20c, the use of Maori was officially discouraged in schools. Many Maoris concurred with this policy, seeing English as the language which was likely to give their children the greater advantage in later life.

In more recent times, there has been a resurgence in the use of Maori as a marker of ethnic and cultural identity. *Language nests* or *kohanga ro* have been established for pre-school children, and many Maori people aim at bilingualism. Although Maori has now been recognized as an official language in the courts, it is still too early to say what effect this growing recognition of Maori will have in the long term. See BORROWING, HAWAIIAN, KIWI, MACRON, MALAYO-POLYNESIAN LANGUAGES, NEW ZEALAND ENGLISH, NEW ZEALAND PLACE-NAMES, PAKEHA. [LANGUAGE, NAME, OCEANIA]. RO.W.B., L.J.B.

**MAORI ENGLISH.** A widely used term for a variety of NZE. Its features, however, remain poorly defined and to the extent that the variety is neither spoken by all Maoris nor exclusively by Maoris the label is misleading. It is spoken by pakehas (whites) in areas where there are many Maoris or as a means of showing solidarity with them. Maori English is primarily identifiable through voice quality and a greater tendency towards syllable timing than is normal in pakeha English. Certain vowel qualities appear to differ from those in standard NZE, but reliable descriptions are not yet available. In a survey of Maori schoolchildren by Richard A. Benton in 1963-4, it was found that they sometimes made no distinction between /ð/ and /d/, /θ/ and /t/, /s/ and /z/, /k/ and /g/, that /t/ and /d/ were sometimes interchanged, and that /ŋ/ was replaced by /n/. The use of the high-rise terminal intonation pattern for statements was also commented on. It is not clear to what extent these are maturational 'problems' and, if not, to what extent they also beset pakehas. The high-rise terminal is today widespread among pakehas, including the middle class, and variation between /ŋ/ and /n/ is a notorious shibboleth throughout the English-speaking world.

Similar problems arise in interpreting data on the grammar of Maori English. The above study mentions constructions such as *I went down the henhouse*, *Me and Bill went there*, *He learned me to do it*, all common non-standard forms in English elsewhere. It also mentions constructions that may be more representative of Maori English: *I went by my Auntie's*; *Who's your name?*; *To me, the ball*. Recent research shows some grammatical differences between Maori and pakeha speakers, such as the omission of *have* before some past participles and before *got to*. The use of the tag question *eh?* is stereotypical, but also occurs in other varieties of NZE and elsewhere. Typical vocabulary items include both Maori and non-Maori words: *kai* food, *fellers* /'faləz/ people, males (often in the vocative *you fellers*). There is another variety,

mainly written and not usually called *Maori English*, in which far more Maori vocabulary is used. In it, the elements are neither italicized nor glossed: 'This indeed may be the nub from which this book gains perspective—that even after 145 years of Pakeha terms of reference, ka tu tonu the Maori. And so they should remain as yet to be consulted tangata whenua. Whether this book bears fruit will depend on a response to the kaupapa laid down on marae throughout Aotearoa at the feet of the manuhiri' (Philip Whaanga, *New Zealand Listener*, 5 Apr. 1986). The average pakeha New Zealander will not understand enough Maori to know precisely what is being said here. It is not clear whether the variety reflects code-switching in Maori speech or is a literary style that may provide a model for spoken usage. In either case, it seems to be a new development and may mean that a more prestigious kind of Maori English will soon emerge. See DIALECT IN NEW ZEALAND, MAORI, NEW ZEALAND ENGLISH. [OCEANIA, VARIETY].

L.J.B.

**MARATHI.** An Indo-Aryan language of India, spoken by some 50m people on the west coast of the peninsula and eastward across the Deccan, the state language of Maharashtra, and one of the 15 major languages of India. It is written in a modified version of Devanagari script and has a literary tradition dating from the 11c. Standard Marathi is based on the variety spoken in the city of Pune (formerly Poona). Structurally, Marathi is closer to the Dravidian languages than to any other major Indo-Aryan language. In the 17–18c, Marathi and Bengali absorbed the impact of Europeans, especially the British, earlier than other Indo-Aryan languages and led the way in the development of sub-continental vernacular literatures. See BORROWING, INDIA, INDIAN LANGUAGES, INDO-ARYAN ENGLISH. [ASIA, LANGUAGE].

Y.K.

**MARCH, Francis Andrew** [1825–1911]. American lexicographer and philologist, born in Sutton, Massachusetts, and educated at Amherst College, Massachusetts, where, influenced by Noah Webster and Webster's son-in-law, William C. Fowler, he developed an interest in philosophy and language. While teaching at Amherst, he studied law and was admitted to the New York Bar (1850). Ill-health forced him to abandon this career and resume teaching, at Lafayette College (1855–1904) where, despite invitations from better-known institutions, he remained for the rest of his career as chair of the Department of English Language and Comparative Philology (the first of its kind at any US institution). His method of research and instruction is delineated in *Method of Philological Study*

*of the English Language* (1865). Intrigued by historical grammar, March specialized in the study of early medieval English, producing *A Comparative Grammar of the Anglo-Saxon Language, in which its forms are illustrated by those of the Sanskrit, Greek, Latin, Gothic, Old Saxon, Old Friesic, Old Norse, and Old High German* (1870). Because of the scope and depth of his research, he is credited with laying the foundation on which subsequent English historical grammarians built. It was, however, his work in lexicography which earned him international attention. Having served as director of the American workers for the *OED*, he became consulting editor of the *Standard Dictionary* (1893–5, two volumes) and *A Thesaurus-Dictionary of the English Language* (1902, etc.). Active in the simplified spelling movement, he wrote one of the most widely reprinted texts on the subject, *The Spelling Reform* (1881). A member of many scholarly societies, he served as president of the American Philological Association (1873–4, 1895–6), the Spelling Reform Association (1876–1905), and the Modern Language Association (1891–3). [AMERICAS, BIOGRAPHY, LANGUAGE, REFERENCE].

R.W.B.

**MARGIN** [14c: from Latin *margo/marginis* a border: Compare MARK]. The space around the written or printed matter on a page, especially to left and right, and most particularly in English the left-hand margin: *He made notes in the margin; Don't start too close to the top of the page and leave a decent margin; Go in from the margin when you start a new paragraph.* The term *marginal note* refers to a single note in a margin and *marginalia* to marginal notes collectively. See GLOSS, INDENTING, LAYOUT, NOTES AND REFERENCES, SPACE, TYPOGRAPHY. [WRITING].

T.MCA.

**MARGINAL LANGUAGE.** A sociolinguistic term for a makeshift language arising through culture contact, where it is impossible or impracticable for the peoples concerned to learn each other's languages well. See CONTACT LANGUAGE, MAKESHIFT LANGUAGE, TRADE JARGON. [LANGUAGE].

S.R.

**MARITIME PIDGIN, also Nautical Jargon.** A trade jargon widely used by sailors, many of whom were multilingual, on European vessels from the 17c. Some scholars argue that it was passed on to others with whom the sailors came into contact, providing the origin of the European-based pidgins and creoles. Evidence can be found in the fact that most pidgins and creoles have a nautical element, though that should not be surprising since many of these languages are spoken in maritime areas. Not much support can be found for the so-called

*nautical jargon theory* of the origin of pidgins, but the role of sailors in spreading linguistic features across vast areas accounts for some lexical similarities among such widely separated pidgins as *Hawaii Pidgin English*, *Chinook Jargon*, and *Eskimo Jargon*: for example, *kanaka* [Hawaiian: person, man] in Chinook Jargon and the English and French-based Pacific pidgins, and *kaukau* [from Chinese Pidgin English *chowchow*] in Eskimo Jargon and Hawaii Pidgin English. See JARGON, PIDGIN. [VARIETY]. S.R.

**MARITIME PIDGIN HAWAIIAN.** See HAWAII PIDGIN ENGLISH.

**MARITIME PROVINCES, The**, also **the Maritimes**. The Atlantic provinces of mainland Canada: New Brunswick, Nova Scotia (which includes Cape Breton Island), and Prince Edward Island. When Newfoundland is added, the collective term is *the Atlantic Provinces*. The regional accents of the Maritimes have features in common with Newfoundland and differ considerably from usage to the west; the urban accents of Fredericton, Halifax, and other centres of population are similar to inland urban CanE. The territory is roughly the region called *Acadian* by the French. It was also claimed by the English and settled by both in the 17c, changing hands several times until 1713, when it was ceded to Britain. A complex settlement history explains its variety of rural dialects, some of which were influenced by Acadian French, some by German (in Lunenburg County, Nova Scotia, settled in 1753), some by Gaelic (Cape Breton, settled 1802–28 by 25,000 Highlanders during the Clearances in Scotland), as well as various dialects of England. In 1783, the arrival of Loyalists after the American War of Independence almost tripled the English-speaking population.

The main differences between standard Canadian and the Maritimes appear to arise from the earlier settlement of the Maritimes (from 1713) than Ontario (from 1783), but it has also been suggested that they arise from the localities from which the Loyalists migrated. Most of the new arrivals in the Maritimes were from New England, while those moving into central Canada were primarily from further west and were the first settlers there. A well-known shibboleth of pronunciation is mentioned by a character in Margaret Atwood's *Lady Oracle* (1977): 'Being from the Maritimes, he said *ahnt* . . . whereas I was from Ontario and said *ant*.' Regional grammar includes the use of *some*, *right*, *real* as intensifiers: *It's some hot*; *It's right hot*; *It's real hot*. Regional vocabulary shares some terms with Newfoundland and some with New England, and includes: *banking* the storing of illegally trapped lobsters until the season

opens; *barachois* small ponds near the sea, held back by a narrow causeway, and by extension the causeway itself (from Canadian French *barachois*; a sandbar; in Newfoundland, also a *barrasway*); *bogan* a backwater; *grayback* a large ocean wave; *make*, *make cod*, *make fish* to dry fish or cod; *malpeque* a famous oyster, from Malpeque Bay, Prince Edward Island; *sloven* a long low wagon with a specially low back axle, to make loading easier; *tern* a three-masted schooner. See CANADA, CANADIAN DICTIONARIES IN ENGLISH, DIALECT IN CANADA. [AMERICAS, VARIETY]. M.F.

**MARK** [From Old English *mearc* a sign, banner, dividing line, border: compare MARGIN]. (1) A visible impression or sign, such as a spot, line, cut, or dent. (2) A sign, usually a cross, in lieu of a signature made by someone who cannot write his or her name: *He made his mark at the bottom of the page*. (3) A symbol used in writing and printing to help in the organization of a text (*a punctuation mark*) or to identify a product and indicate ownership (*a trademark*). (4) A sign or token: *a mark of respect*. (5) An actual or figurative symbol used in rating ability, conduct, etc.: *a high mark in an exam*; *a black mark for poor behaviour*. (6) A norm or standard: *Their work isn't really up to the mark*. See DIACRITIC, EXCLAMATION MARK/POINT, INTERROGATION MARK/POINT, LENGTH MARK, LETTER', LIST, MARKED AND UNMARKED TERMS, PAPER (WATER-MARK), PUNCTUATION MARK, QUESTION MARK, QUOTATION MARKS, SIGN, SIGNATURE, STANDARD, SYMBOL, TRADEMARK. [WRITING]. T.MCA.

**MARKED AND UNMARKED TERMS** [Originating in the work of the Russian linguist Nikolay Trubetzkoy (1890–1938) in relation to pairs of phonemes]. Terms in linguistics which designate a contrasting pair, one possessing a special 'mark', the other neutral: in *play/played*, *play* is unmarked and neutral, and *played* has the mark *-ed*. Similarly, *host* is unmarked, but *hostess* is morphologically marked for femaleness. The mark is not necessarily visible or audible: in the pair *horse/mare*, *horse* is the more general, unmarked term, while *mare* is marked for femaleness. In the pair *cow/bull*, *cow* is unmarked, while *bull* is marked for maleness. The terms are sometimes extended to wider, typological characteristics of languages, and also to social situations, to distinguish between normal (unmarked) behaviour and a less common variant. See MARK. [LANGUAGE]. J.M.A.

**MARSH, George Perkins** [1801–82]. American diplomat and philologist, born in Woodstock, Vermont, and educated at Dartmouth College. Marsh was a lawyer with a passionate interest

in European languages and their history. While practising law in Burlington, Vermont, he published *A Compendious Grammar of the Old Northern or Icelandic Language* (1838), a translation of the innovative philological work of Rasmus Rask. A member of the US Congress (1843–9), he was later named the first US minister to the Kingdom of Italy, where he served from 1861 until his death. His *Lectures on the English Language* (1860) and *The Origin and History of the English Language* (1862) articulated for readers in the US and UK the newest discoveries of mid-19c literary and linguistic scholarship. His object in these books was to provide ordinary people such a facility in the mother tongue that they might take part 'in the never-ceasing dialogue, which, whether between the living and the living and the living and the dead, whether breathed from the lips or figured with the pen, takes up so large a part of the life of every one of us'. [AMERICAS, BIOGRAPHY, LANGUAGE]. R.W.B.

**MASCULINE** [14c: from French *masculin*, Latin *masculus*, representing *genus masculinum*, the translation of Greek *arrhenikòn génos* the male kind]. A term relating to grammatical gender in nouns and related words, contrasting with *feminine* (as in French) and feminine and *neuter* (as in German and Latin). Words denoting male people and animals in such languages are usually masculine, but grammatical gender is not about sex: in French *le courage du soldat*, the courage is as masculine as the soldier. In English, the term is confined to personal pronouns (*he/him/himself/his*) and some nouns (such as *drake* in contrast with *duck*). See GENDER. [GRAMMAR]. S.C.

**MASCULINE BIAS.** See GENDER BIAS.

**MASCULINE ENDING.** A stressed syllable that ends a line of verse. If the line rhymes, the rhyme itself is called a *masculine rhyme*: *begun/sun, think/drink*. The masculine line has a tendency to be end-stopped and risks becoming monotonous. Compare FEMININE ENDING. [LITERATURE]. R.C.

**MASQUE** [16c: French *masque* mask]. A usually short dramatic entertainment with music and spectacle. It developed in Renaissance Italy and became a pastime of the English court and aristocracy in the late 16c and early 17c. It was usually presented by amateurs in disguise; at the end, the actors would reveal themselves and join the spectators in a dance. Plots were slight, often classical or allegorical. The dramatic element came to be increasingly subordinated to the musical and visual effects, which could be costly.

The form attracted poets rather than dramatists, though Jonson wrote court masques. Shakespeare introduced a masque-like interlude in *The Tempest* and there is a wordless masque in *Henry VIII*. Milton's *Comus* (1634), though described as a masque, is a pastoral play. See DRAMA, JONSON. [LITERATURE]. R.C.

**MASS NOUN.** See COUNTABLE AND UNCOUNTABLE.

**MASTHEAD** [18c: by analogy with the flag at the head of a ship's mast]. (1) A statement printed in each issue of a periodical, often in a column or special area on the contents or editorial page, providing such information as its name, founding date, motto or slogan, and editors' names. (2) Also *flag, nameplate, title*. The line of type for the name on the front of a periodical. (3) *The Masthead*: the title of the magazine for members of the *National Council of Editorial Writers* (of US newspapers). See PERIODICAL. [MEDIA, TECHNOLOGY]. T.M.C.A.

**MATHEWS, Mitford McLeod** [1891–1985]. American lexicographer, born in Jackson, Alabama, and educated at Southern U. He taught English and Latin in Alabama high schools until enrolling at the U. of Chicago in 1926. There he became William A. Craigie's student and research assistant, travelling to Oxford to select citations for the *Dictionary of American English* and assisting in Craigie's 1933 *Supplement* to the *OED*. In 1934, he enrolled at Harvard and completed the Ph.D. in 1936 with the dissertation 'Notes and Comments Made by British Travelers and Observers upon American English'. All the while, he worked as Assistant Editor of the *DAE* and, on its completion in 1944, was appointed as head of the dictionary department of the U. of Chicago Press, supervising, among other works, publication of the *Dictionary of the Older Scottish Tongue*. In 1951, Matthews published the *Dictionary of Americanisms* to bring the *DAE* up to date and provide more detailed analysis of words and senses originating in the US. Among his publications were: *The Beginnings of American English* (1931), *A Survey of English Dictionaries* (1933), *American Words* (1959), and *Americanisms* (1966), an abridgement of the *DA*. See index. [AMERICAS, BIOGRAPHY, REFERENCE]. R.W.B.

**MATTER OF BRITAIN.** See BRITAIN, CELTIC LANGUAGES, LATIN<sup>1</sup>, ROMANCE, STANDARD, WELSH LITERATURE.

**MAURITIUS.** An Indian Ocean country and member of the Commonwealth. Capital: Port Louis. Currency: the rupee (100 cents). Head

of state: the British monarch. Population: 1m (1988), 1.2m (projection for 2000). Ethnicity: 68% Indian (Indo-Mauritian), 27% African Creole, 3% Chinese. Religions: 53% Hindu, 30% Christian, 17% Muslim. Languages: English (official), a French-based creole called Morisiè, French, Hindi, Urdu, and Hakka Chinese. Education: primary 92%, secondary 51%, tertiary 3%, literacy 83%. A French colony from 1715 and a British colony from 1810, Mauritius gained independence in 1968. The Creole minority is descended from African slaves and French settlers, the Indo-Mauritian majority from indentured labourers brought to the islands by the British after the abolition of slavery in 1833. The mixture of influences is noticeable in place-names, such as the districts of *Rivière du Rempart*, *Pamplemousses*, *Flacq*, *Moka*, *Black River*, *Plaines Wilhems*, *Grand Port*, *Savanne*. Local newspapers print articles in English and French side by side. See BRITISH INDIAN OCEAN TERRITORY, ENGLISH, FRENCH. [AFRICA, NAME, VARIETY]. T.MCA.

**MAXIM** [15c: from Latin *maxima* (*propositio*) greatest proposition (in logic), axiom, feminine of *maximus* greatest, superlative of *magnus* great]. A statement that compactly expresses a general truth or principle; an axiom or aphorism, especially if pithy and moralistic; a rule or principle of conduct. See APHORISM, AXIOM, PROPOSITION, SAYING. [STYLE]. T.MCA.

**MEANING** [13c: from Old English *mænan* to have in mind, intend, signify. The obsolete phrase *a good meaning* had the sense of both 'a good intention' and 'a friendly disposition': compare *to mean well*]. (1) The purport or message conveyed by words, phrases, sentences, signs, symbols, and the like: '*Semantics*' means '*the study of meaning*'; *A red traffic light means drivers have to stop and a green one means they can go*. (2) Signification, sense, interpretation, as in *The Meaning of Meaning*, the title of a book on semantics by C. K. Ogden & I. A. Richards (1923); any instance of these, as in *What is the meaning of the word 'semantics'*? (3) What a speaker or writer intends: *What do you mean?*; *They don't mean any harm*. For further discussion, see SEMANTICS, SEMIOTICS, SIGN, SIGNAL, SYMBOL. [LANGUAGE]. T.MCA.

**MEDIA** [1920s: short for **mass media**. In the later 20c, the usage has been increasingly perceived independently of the singular *medium*, and is often construed with a singular verb, like *data*: see MEDIUM, CLASSICAL ENDING]. A collective term for newspapers, broadcasting, and other vehicles of mass communication, often used attributively in such phrases as *Media Studies*

and *media education*. Traditionally, speech and writing have been regarded as information media ('Cogitations [are] expressed by the Medium of Words', Francis Bacon, *Advancement of Learning*, volume 2, 1605), but over the last century new systems of electrical and electronic communication have become capable of doing more than simply convey information from person to person; they serve to inform and entertain huge audiences, often hundreds of millions worldwide. Following the spread of television as a news medium, the Canadian communication theorist Marshall McLuhan fostered in the 1960s a radical and controversial perception of societies as shaped more by the style than the content of their media ('the medium is the message'). He divided media into two broad kinds: *hot* (high-definition media, such as radio or a photograph) and *cool* (low-definition vehicles, such as television or the telephone), a distinction based largely on the degree of visual definition inherent in each or the amount of data supplied by each. McLuhan argued that cool media had greater impact, since they encouraged, indeed required, greater audience participation. Furthermore, he saw the visual media as superseding the written media in modern times. One corollary of his basic distinction was that the term *medium* in its traditional sense was inadequate, since the media were not neutral, impassive agencies that transmit news and views but were themselves highly influential selectors, shapers, manufacturers, and even fabricators of news and views. The plural became institutionalized in the same way as *the press*, as a set of services that mould as well as interpret events. See MCLUHAN, MEDIUM. [MEDIA].

**MEDIA LITERACY.** See LITERACY.

**MEDIA REVOLUTION.** See COMMUNICATIVE SHIFT.

**MEDIA STUDIES.** See EDUCATION, MEDIA.

**MEDICANT** [Late 20c: a blend of *medical* and *cant*]. An informal term for the jargon of the health professions that allows doctors and others to ease (often by means of euphemisms) some of the hard and unpleasant aspects of their work, to avoid responsibility, or to impress those who are not members of their group. In extreme medicant, especially in the US, patients do not die but *systems fail*, they have a *terminal episode*, or there is *negative patient care outcome*. Medical malpractice is a *therapeutic misadventure* or a *diagnostic misadventure of a high magnitude*. Patients are *compromised susceptible hosts* and ageing is *cell drop out* or *decreased propensity for cell replication*. Some US hospitals now call themselves *wellness centres* where patients can seek to *fulfill their wellness potential*. See CANT, JARGON. [STYLE, USAGE]. W.D.L.

**MEDIUM** [16c: from Latin *medium*, neuter singular of *medius* middle: see CLASSICAL ENDING, MEDIA]. (1) An intervening substance or process through which something else acts or travels, such as heat through glass. Language is often called *the medium of thought*. (2) In linguistics, a vehicle for the transmission of language, such as the *phonic medium* of speech (vibrations passing through air from mouth to ear), the *graphic medium* of writing (signs on surfaces created by the hand and interpreted by the eye), and *signing* (sign language for the deaf, involving hands,

eyes, and space). See MEDIA, POETRY. [LANGUAGE, MEDIA]. T.MCA.

**MEIOSIS** [16c: through Latin from Greek *meiōsis* lessening. Stress: 'my-OH-sis']. In rhetoric, a kind of understatement that dismisses or belittles, especially by using terms that make something seem less significant than it really is or ought to be: for example, calling a serious wound a *scratch*, or a journalist a *hack* or a *scribbler*. Compare LITOTES. [STYLE]. T.MCA.

**MELANESIA** [From Greek *Melanēsia* place of black islands: that is, an archipelago inhabited by black people]. An island group in the southwestern Pacific Ocean. See BEACH LA MAR, BISLAMA, FIJI, HIRI MOTU, MELANESIAN PIDGIN ENGLISH, MICRONESIA, PAPUA NEW GUINEA, PIJIN, POLYNESIA, SOLOMON ISLANDS, TOK PISIN, VANUATU. [NAME, OCEANIA]. S.R.

**MELANESIAN PIDGIN ENGLISH**, also **Melanesian Pidgin**. The name commonly given to three varieties of Pidgin spoken in the Melanesian states of Papua New Guinea (*Tok Pisin*), Solomon Islands (*Pijin*), and Vanuatu (*Bislama*). Although there is a degree of mutual intelligibility among them, the term is used by linguists to recognize a common historical development and is not recognized by speakers of these languages. The development of Melanesian Pidgin English has been significantly different in the three countries. This is due to differences in the substrate languages, the presence of European languages other than English, and differences in colonial policy. In Papua New Guinea, there was a period of German administration (1884-1914) before the British and Australians took over. The people of Vanuatu were in constant contact with the French government and planters during a century of colonial rule (1880-1980) and for a time there was a condominium rule by the British and French; contact with French has continued after independence in 1980. However, Solomon Islanders have not been in contact with any European language other than English. See BISLAMA, ENGLISH, PIDGIN, PIJIN, TOK PISIN. [OCEANIA, VARIETY].S.R.

**MELIORATION** [17c: from Latin *melioratio/meliorationis* making better]. Also **amelioration**. A process of semantic change in which there is an improvement or 'upward' shift in the meaning of a word: for example, *nice* has meant foolish, stupid (13-16c), lascivious, loose (14-16c), extravagant, elegant, rare, strange (15-16c), effeminate, shy, tender, slender, delicate, unimportant (16-17c), over-refined (17-18c), careful, precise, intricate, difficult, fastidious (16-19c), dainty,

appetizing (18-19c), refined, cultured, discriminating (17-20c), and agreeable, pleasant (18-20c). See PEJORATION, SEMANTIC CHANGE. [HISTORY, LANGUAGE]. T.MCA.

**MELODRAMA** [19c: influenced by French *mélodrame*, from Greek *mēlos* song, *drama* action]. Originally, a play with music. Traditionally, a play in which plot and characters are exaggerated for effect. Early in the 19c, plays with musical accompaniment were staged to circumvent the restrictions on legitimate drama in London; these developed into a type of play, without music, in which the characters are stock types, totally good or bad, or providing comic relief. The plot usually centred on the perils of the heroine, pursued by the villain and eventually united with the hero; audience response (groans, sighs, shouted warnings, cries of condemnation) was part of the entertainment. Episodes were vigorous and sensational, emotions extreme, and overblown language (clichés like 'Curses, foiled again!' and 'Unhand me, villain!') was frequent. Dialogue was declamatory and subordinate to the plot. Some melodramas like *Sweeney Todd* and *Maria Marten* became classics of the popular 19c theatre. The 19c novel has touches of melodrama, such as Fagin in the condemned cell, in Dickens's *Oliver Twist*, and melodrama is a common element in motion pictures and television drama. The adjective *melo-dramatic* has come to apply to excessive emotions and reactions in life as well as in literature, drama, and the media. See DRAMA. [LITERATURE]. R.C.

**MELVILLE, Herman** [1819-91]. American novelist, storyteller, and poet. Born in New York City, he moved with his family to Albany, where his father died in 1832 shortly after the collapse of his business. His formal schooling ended, and after a variety of jobs he went to sea, spending four years whaling in the South Pacific. On his return, to Boston in 1844, he published six novels that drew on his experiences: *Typee* (1846), *Omoo* (1847), *Mardi* (1849), *Redburn* (1849), *White Jacket* (1850), and *Moby-Dick* (1851). Initial popularity waned, however, as he incorporated into *Mardi* and particularly *Moby-Dick* a mythic dimension. 'Dollars damn me', he wrote to Nathaniel Hawthorne while writing this book (which he dedicated to Hawthorne); 'What I feel most moved to write, that is banned,—it will not pay. Yet, altogether, write the *other* way I cannot. So the product is a final hash and all my books are botches.' The financial failure of *Moby-Dick* was followed by a land-based novel, *Pierre* (1852), which was an experimental personal fable and a satire on the literary profession, a series of magazine

tales, the novels *Israel Potter* (1855) and *The Confidence-Man* (1857), and poetry that included *Battle-Pieces and Aspects of the War* (1866) and *Clarel* (1876), a narrative poem about a pilgrimage to the Holy Land. In his last years, he arranged for the private publication of two slender volumes of poems, *John Marr and Other Sailors* and *Timoleon*. He also returned to fiction and completed a short novel, *Billy Budd*, that was published posthumously in 1924.

At his death, Melville was largely forgotten in the US until British interest spurred belated international recognition, Oxford University Press publishing *Moby-Dick in the World's Classics* series in 1920, and Constable publishing in 16 volumes *The Works of Herman Melville* in 1922–4. Melville assimilates styles ranging from such classic texts as Shakespeare, the King James Bible, Robert Burton, Sir Thomas Browne, and John Milton, to the talk and songs that he listened to as a sailor. On his first voyage to Liverpool, young Wellingburgh Redburn tells of the singing that accompanies every nautical task:

Sometimes, when no one happened to strike up, and the pulling, whatever it might be, did not seem to be getting forward very well, the mate would always say, 'Come, men can't any of you sing? Sing now, and raise the dead.' And then some one of them would begin, and if every man's arms were as much relieved as mine by the song, and he could pull as much better as I did, with such a cheering accompaniment, I am sure the song was well worth the breath expended on it. . . . Some sea-captains, before shipping a man, always ask him whether he can sing out at a rope (*Redburn*, ch. 9).

*Moby-Dick* has a symphonic prose-poetry that conveys such mighty subjects as the Pacific Ocean:

To any meditative Magian rover, this serene Pacific, once beheld, must ever after be the sea of his adoption. It rolls the midmost waters of the world, the Indian ocean and Atlantic being but its arms. The same waves wash the moles of the new-built Californian towns, but yesterday planted by the recentest race of men, and lave the faded but still gorgeous skirts of Asiatic lands, older than Abraham; while all between float milky-ways of coral isles, and low-lying, endless, unknown Archipelagoes, and impenetrable Japans. Thus this mysterious, divine Pacific zones the world's whole bulk about; makes all coasts one bay to it; seems the tide-beating heart of earth. Lifted by those eternal swells, you needs must own the seductive god. bowing your head to Pan (*Moby-Dick*, ch. 3).

The grandeur of such prose contrasts with the colloquialism of the sailors, and of Ahab himself, capable both of quasi-Shakespearean soliloquizing and of salty nautical talk, as when he tells his men about the white whale:

'Corkscrew!' cried Ahab, 'aye Queequeg, the harpoons lie all twisted and wrenched in him; aye, Daggoo, his spout is a big one, like a whole shock of wheat, and

white as a pile of our Nantucket wool after the great annual sheep-shearing; aye, Tashtego, and he fan-tails like a split jib in a squall. Death and devils! men, it is Moby Dick ye have seen—Moby Dick—Moby Dick!' (ch. 36).

See index. [AMERICAS, BIOGRAPHY, LITERATURE, STYLE]. B.L.

**MEMOIR** [16c: from French *mémoire*, Latin *memoria* memory]. A written record of people and events as experienced by the author; a form of autobiography that gives particular attention to matters of contemporary interest not closely affecting the author's inner life. It is not a formal personal history, but an assembly of memories. Memoirs in the ancient world include Xenophon's *Anabasis* and Julius Caesar's *Commentaries*; among modern literatures, they are commonest in French, but English ranges from the 17c *Memoirs of Colonel Hutchinson* through Siegfried Sassoon's *Memoirs of an Infantry Officer* (1930) and Peter Wright's *Spycatcher* (1987). The memoir form has been a device for fiction, especially in the early novel: John Cleland's pornographic *Memoirs of a Woman of Pleasure* (1748–9) and Henry Mackenzie's sentimental novel *The Man of Feeling* (1771). See AUTOBIOGRAPHY, BILDUNGSROMAN, DIARY. [LITERATURE]. R.C.

**MENCKEN, H(enry) L(ouis)** [1880–1956]. American journalist and social critic, born in Baltimore, Maryland, and educated at a local private school and the Baltimore Polytechnic. He is remembered chiefly for his monumental work *The American Language* (*AL*, 1919), which was instrumental in establishing the scholarly study of English in the US. A lifelong resident of Baltimore, Mencken began writing for the city's newspapers in 1899 and continued doing so for most of his career. He was an iconoclast, noted for cynically witty essays in literary, social, and political criticism. Among his favourite targets were religion, the cultural barrenness of the American South (which he called 'The Sahara of the Bozart' (*beaux arts*)), the motives of politicians, and an English cultural tradition in America that he identified as puritanism. His terms for the stupid and gullible were *booboisie* and *Homo boobiensis*. Proud of his German ancestry, Mencken reacted strongly to the wave of anti-German feeling that swept the US during World War I. His unpopular position supporting Germany before US entry into the war, together with his strong opposition to President Woodrow Wilson's policies, made assignments scarce for several years. The result, however, was that Mencken had time to produce his *magnum opus*, *AL*.

Mencken's caustic journalism proved attractive to many who had become disillusioned after

the war, with the result that his voice became central in American letters during the 1920s. He had achieved national prominence as early as 1908, when he became the drama reviewer of *The Smart Set: A Magazine of Cleverness*. He later co-edited that review (1914-23) with George Jean Nathan, bringing James Joyce, Aldous Huxley, and Somerset Maugham to US audiences, as well as publishing Sherwood Anderson, Willa Cather, F. Scott Fitzgerald, Eugene O'Neill, and Ezra Pound. In 1924, Mencken and Nathan started *The American Mercury*, a review that Mencken later continued to edit alone, focusing not on literature only but also on broad social commentary. For example, volume 13 (1928) contains articles by Vachel Lindsay on 'The Real American Language' and Bernard DeVoto on 'English A', as well as work by James M. Cain, Zola Gale, and Sinclair Lewis. In the 1930s, Mencken's influence on the cultural scene declined, though he continued to write essays and to revise and expand *AL*.

Mencken was an autodidact whose interest in language led him to read widely and to collect citations of all aspects of AmE. His goal was to make the study of language accessible to the general reader. The 1st edition of *AL* claimed that Americans spoke a separate language of their own making that they could take pride in, not an imperfect imitation of the language of England. The language that he described as *American* was full of regional variation, new words borrowed from immigrant groups, figurative usage from such institutions as railroading and baseball, jaunty slang, and raucous vulgarisms. Americans in the era following World War I found in *AL* verification of their cultural independence as the US became an international power.

Incorporating new information from both scholars and general readers, Mencken brought out revised and enlarged editions of *AL* in 1921 and 1923. In 1925, he was instrumental in founding the journal *American Speech*, which he hoped would be sold at corner news-stands. Though the journal never attained such popularity, Mencken's publications and his personal encouragement influenced a number of scholars to turn their attention to the study of the English language in America. The 4th edition of *AL* (1936), along with two supplements (1945, 1948), is an unrivalled compendium of information about English in the US and its historical development before the mid-century. In later editions, Mencken abandoned his earlier thesis that BrE and AmE were developing as separate languages in favour of the view that they were merging, but with American as the dominant partner. Shortly after the publication of the second supplement in 1948, he suffered a stroke which left him

unable to read or write. See index. See AMERICAN DIALECT SOCIETY, AMERICANISM, AMERICAN SPEECH. [AMERICAS, BIOGRAPHY, MEDIA, VARIETY].

**MENU** [17c in its general sense: from French *menu* a detailed list, especially of dishes served at a meal in a restaurant, from *menu* detailed, from Latin *minutus* made small]. A display of options on a computer screen, that like a menu in a restaurant lets the user choose what to do next. A menu for choosing a type style might show for selection a series of names such as *Caslon*, *Helvetica*, *Times*, while an editing menu might show *abandon*, *information*, *layout*, *print*, *save*. Such displays save the user from having to remember or spell names and having to know which items are available with a program. A key or a cursor (on its own or controlled by a mouse) selects the desired item from the display. Software run by means of menus is said to be *menu-driven*. See COMPUTING, KEYBOARD, THEMATIC ORDER. [TECHNOLOGY]. M.L.

**MERCIA** [From Old English *Merce* Borderers]. A kingdom of the Angles, before the unification of England, occupying the Midland areas between the Welsh border and East Anglia, the Humber and the Thames. The zenith of Mercian power was in the 8c, when King Offa was treated virtually as an equal by the Frankish emperor Charlemagne. Later, Mercia was weakened by the assaults of the Danes and Wessex took its place as the leading Anglo-Saxon kingdom with the most prestigious dialect. Specimens of Mercian are preserved in royal charters, glosses on religious texts, and in bilingual Latin-English glossaries (8-10c). See HEPTARCHY, MIDLANDS, OLD ENGLISH<sup>1</sup>. [EUROPE, HISTORY, NAME]. T.MCA.

**MERICO**. See AMERICO-, LIBERIA.

**MERRIAM-WEBSTER**, originally known as the *G. & C. Merriam Company* of Springfield, Massachusetts. An American company publishing reference books and especially dictionaries descended from Noah Webster's *An American Dictionary of the English Language* (1828). Its origins can be traced to a family of

bookbinders and printers in 1831. In 1843, after Webster's death, George and Charles Merriam secured publishing and revision rights to the 1841 edition of his dictionary. The brothers then pursued a vigorous commercial campaign, mostly against the publishers of dictionaries by Joseph Worcester, which resulted in the unrivalled success of their dictionaries until at least 1893. Part of their success arose from their ability to secure exclusive selling privileges to state and commercial institutions such as schools, newspapers, and legislatures. G. & C. Merriam pursued a policy of continual updating. Revised editions of the unabridged Webster appeared in 1847, 1864, 1890, 1909, 1934, and 1961. The rights to the abridged dictionaries were either retained by Merriam or farmed out to other companies, such as the American Book Company, which published school dictionaries. In addition to *Webster's New International Dictionary* and *Webster's New Collegiate Dictionary*, the company's publications include *Webster's New Dictionary of Synonyms*, *Webster's Biographical Dictionary*, *A Pronouncing Dictionary of American English*, *Webster's Thesaurus (School and Collegiate)*, *Webster's New Geographical Dictionary*, *Webster's American Biographies*, *Webster's Sports Dictionary*, and *Webster's Dictionary of English Usage*. The G. & C. Merriam Company changed its name to Merriam-Webster Inc. with the publication of *Webster's Ninth New Collegiate Dictionary* (1983). The change reflects the descent of the company, which has been a subsidiary of Encyclopaedia Britannica Inc. since 1964. See DICTIONARY, WEBSTER, WEBSTERS, WEBSTER'S COLLEGIATE DICTIONARIES, WEBSTER'S DICTIONARY OF ENGLISH USAGE. [AMERICAS, MEDIA, REFERENCE]. R.W.B.

**MERSEYSIDE.** See SCOUSE.

**MESOLECT** [1960s: from Greek *mésos* middle, and *-lect* as in *dialect*]. The variety of language in a post-creole continuum intermediate between *basilect* and *acrolect*, often retaining semantic and syntactic features not found in the acrolect and tending to vary from speaker to speaker, such as between standard Jamaican English and Jamaican Creole. See DIALECT, LECT. [LANGUAGE]. S.R.

**MESSAGE** [13c: through Old French, probably from Popular Latin \**missaticum* something sent, from *mittere/missum* to send]. (1) A communication of any kind that contains information, news, a request, a command, or the like. (2) A communication seen as divine, mediated by a prophet or other messenger of a god or God. (3) The meaning, point, or moral of a work

of art, parable, allegory, action, gesture, etc. (4) In computing and information science, one or more words regarded as a unit; a single group of characters (letters, numbers, symbols); a unit of information; a single transmission of data in one direction. See CODE, COMMUNICATION, CRYPTOGRAPHY, INFORMATION, MCLUHAN, MEDIUM. [LANGUAGE, MEDIA]. T.MCA.

**MESTIZO** [16c: from Spanish *mestizo* mixed, from Popular Latin *mixticius*, from *miscere/mixtum* to mix. The feminine *mestiza* is sometimes used: compare MÉTIS]. A non-technical term for a person of mixed ancestry, especially in Latin America (of a Spanish or Portuguese father and an Amerindian mother) and in the Philippines (of a Spanish father and a Filipino mother), and sometimes for an Amerindian who has adopted European ways and language. It has often been pejorative: 'Creoles and mestizes are for the most part too idle even to keep sheep' (Jagor, *Travels in the Philippines*, 1875). See RACISM. [AMERICAS, ASIA, NAME]. T.MCA.

**METALANGUAGE** [1930s: from Greek *meta*-beyond, and *language*]. A term in linguistics for language used to talk about language. In the sentence, 'In Early Middle English, the word *eyren* meant "eggs"', the *object language* (the language under discussion) is Early Middle English, and the *metalinguage* is Modern English. In the sentence, 'In Danish there is an epistemic verb *burde* which satisfies the criteria of auxiliarity proposed above', the *object language* is Danish and the *metalinguage* is the register of linguistics in English. In the latter example, *metalinguage* is marked by a distinctive technical terminology: for example, *epistemic verb* and *auxiliary*. The term *metalinguage* is also used to refer to symbolic systems that describe and discuss other such systems and in logic to refer to systems of propositions about propositions. The term is common in discussions of semantics and is often applied to specially constructed systems such as the formal logical system known as Montague grammar, devised by Richard Montague to represent linguistic semantics. The adjective relating to *metalinguage* is *metalinguistic*. [LANGUAGE]. J.M.A., T.MCA.

**METANALYSIS** [1914: from Greek *meta*-across, *análusis* loosening up. Coined by Otto Jespersen]. A technical term for a change in the way the elements in a phrase or sentence are interpreted and used, such as: Middle English *a naddre* reinterpreted as *an addre* (Modern *an adder*); Perso-Arabic *nāranj* becoming Old Provençal *auranja* then French and English *orange*, the /n/ being attracted to the article in both languages (but retained in Spanish *una naranja*).

On syntactic metanalysis, Jespersen notes: 'A good many sentences . . . are double-barrelled and present the possibility of a "metanalysis", by which "It is good for a man/not to touch a woman" may come to be apprehended as 'It is good/for a man not to touch a woman' (*Modern English Grammar*, volume 5, 1940, p. 308). [GRAMMAR, WORD]. T.MCA.

**METAPHOR** [16c: from Old French *métaphore*, Latin *metaphora*, Greek *metaphorá* a carrying-over, transfer]. A rhetorical figure with two senses, both originating with Aristotle in the 4c BC: (1) All figures of speech that achieve their effect through association, comparison, and resemblance. Figures like *antithesis*, *hyperbole*, *metonymy*, *simile* are all species of metaphor. Although this sense is not current, it lies behind the use of *metaphorical* and *figurative* as antonyms of *literal*. (2) A figure of speech which concisely compares two things by saying that one is the other. A warrior compared to a lion becomes a lion: *Achilles was a lion in the fight*. In such usages, the perception of something held in common brings together words and images from different fields: warriors and lions share bravery and strength, and so the warrior is a lion among men and the lion is a warrior among beasts.

**Description.** When introducing students to the idea of metaphor, teachers have generally adopted the approach of the Roman rhetorician Quintilian (1c AD), using the simpler figure simile (*He fought like a lion*) as a way in to the more complex metaphor (*He was a lion in the fight*). A typical definition on this principle is: 'A metaphor is like a simile condensed. In a simile the comparison is explicitly stated with the help of some such word as *like* or *as*, whilst in a metaphor the comparison is implied by an identification of the two things compared' (Ronald Ridout & Clifford Witting, *The Facts of English*, 1964). Such descriptions have helped generations of students recognize metaphors, but do not comment on the creative process at work. Aristotle provided a formula for creating metaphors which pointed to something inherent in all kinds of comparison. He proposed a ratio (*análogon*) of the type *A is to B, as X is to Y*, exemplified as *Life is to old age, as day is to evening*. This ratio demonstrated that *life* and *day* can come together because of a third shared factor, *time*. He then switched the second terms to get *A is to Y, as X is to B*, producing: *Life is to evening, as day is to old age*. Such a cross-over creates such phrases as the *evening of life* and *day's old age* (*Poetics*, 31. 11). Here, terms from distinct contexts are first aligned, then spliced, demonstrating the close relationship between

metaphor and *analogy*. In 1936, the English critic I. A. Richards provided labels for the three aspects of metaphor implied by Aristotle: the original context or idea is the *tenor* of the metaphor, the borrowed idea is the *vehicle*, and the shared element the *ground*. In Aristotle's example, *life* is the tenor, *day* the vehicle, *time* the ground. Commentators, however, are not usually precise about where the metaphor proper resides: it is sometimes defined as the vehicle alone, sometimes as the combination of tenor and vehicle, and sometimes as tenor, vehicle, and ground together.

**Range.** Most commentators have been aware of how pervasive metaphor is. Quintilian considered it 'the commonest and by far the most beautiful' of figures, 'certainly so natural to us that even the uneducated unthinkingly use it a great deal' (*Institutio Oratoria*, 8). The Elizabethan critic George Puttenham treated metaphor (which he referred to as *transport*) as a literary matter, but through his examples showed that he recognized it as part of language at large:

And first, single words have their sence and vnderstanding altered and figured many wayes, to wit, by transport, abuse, crosse-naming, new naming, change of name. This will seeme very darke to you, vnlesse it be otherwise explained more particularly: and first of *Transport*. There is a kinde of wresting of a single word from his own right signification, to another not so naturall, but yet of some affinitie or conueniencie with it, as to say, *I cannot digest your unkinde words*, for I cannot take them in good part: or as the man of law said, *I feele you not*, for I vnderstand not your case, because he had not his fee in his hand. Or as another said to a mouthy aduocate, *why barkest thou at me so sore?* (*The Arte of English Poesie*, 1589).

Metaphor is often used in naming and in extending the senses of words. Its capacity to name was exemplified in the US in 1966, when a group of black activists adopted the name *Black Panther*. At about the same time, people who disliked the police began calling them pigs. As a result, the sentence *Black Panthers hate pigs* could occur and be suitably interpreted in a context far removed from 'real' black panthers and pigs. In Orwell's *Animal Farm* (1945), pigs stand for Communist Party members, dogs for the police, and humans for the Russian *ancien régime*. Because of the meanings given to *pig* and *man*, the story's close is particularly potent as a comment on the fate of revolutions:

Twelve voices were shouting in anger, and they were all alike. No question, now, what had happened to the faces of the pigs. The creatures outside looked from pig to man, and from man to pig, and from pig to man again; but already it was impossible to say which was which.

**Extended metaphors.** Orwell's tale is an *allegory*, based on the *master metaphor* 'farm is to state

as animals are to citizens', and its plot runs parallel to real life. The result of its use throughout a text is an *extended metaphor*, a device which can operate at many levels of speech and writing. The same imagery may run through a text, as a writer develops an analogy between the topic of immediate interest and another topic considered relevant and informative:

The architect delivers a number of completely impersonal plan drawings and typewritten specifications. They must be so unequivocal that there will be no doubt about the construction. He composes the music which others will play. Furthermore, in order to understand architecture fully, it must be remembered that the people who play it are not sensitive musicians interpreting another's score. . . . On the contrary, they are a multitude of ordinary people (S. E. Rasmussen, *Experiencing Architecture*, 1959).

Here, the writer splices architecture and music, so that tenor and vehicle run together through the whole paragraph. In the following text, the writer is more explicit, turning direct comparison into metaphor:

Can I compare Mrs Thatcher to a tomb-robber? Well, I can try. Nearly a decade ago, she broke through into the subterranean hall of sacred British assumptions. Her candle showed frowning idols towering in the shadows, each guarding its basin of gold, each inscribed with a curse on the violator. A thrill of fear must have run through her as she scooped the first handful of treasure: would the statues topple and crush her, or would the heraldic beasts leap at her from the darkness? But nothing happened. She took more. Still nothing. It was not long before she was striding about the tomb giving orders, as bull-dozers broke in and began to drag the colossi out into daylight and away to museums (Neal Ascherson, 'The Tomb-Robber of Downing St', *Observer*, 22 May 1988).

**Metaphoric networks.** In addition to this extension of a theme through a single discourse, networks of metaphor criss-cross language at large, especially in the form of idioms and sayings. In proverbs, similar advice may be proffered through different images: *A stitch in time saves nine, Look before you leap, Don't count your chickens before they're hatched, Don't cross your bridges before you come to them.* Idioms all drawn from the same source may reflect a significant element in a society and culture: for example BrE cricketing expressions, used to talk about arguments, contests, and life itself. A politician might *go in to bat* in the House of Commons, intent on *knocking the Opposition for six*, only to be *clean-bowled, stumped, or caught out* by an opponent. If people do things *off their own bat*, they do them without help from anyone else, and if they live to be a hundred, they *knock up their century*, in which case they have had a (*jolly*) *good innings*. The master metaphor animating such usages can be compactly expressed as: *Life is a Game of Cricket.*

Creative users of language can build up successions of linked metaphors in complex patterns. For example, in the *Rubāiyāt of Omar Khayyām* (1859), Edward Fitzgerald equates life with a cup of wine and time with fire, clothing, and a bird, in the delicately ornate style of Persian poetry:

Come, fill the Cup, and in the fire of Spring  
The Winter-garment of Repentance fling:  
The Bird of Time has but a little way  
To fly—and Lo, the Bird is on the Wing.

In the same poem, he extends one master metaphor through nine verses, in which God is potter and humankind his pots:

Shapes of all Sorts and Sizes, great and small,  
That stood along the floor and by the wall;  
And some loquacious Vessels were; and some  
Listened perhaps, but never talked at all.

Said one among them—'Surely not in vain  
'My Substance of the common Earth was ta'en  
'And to this Figure moulded, to be broke,  
'Or trampled back to shapeless Earth again.'

After a momentary silence spake  
Some Vessel of a more ungainly Make;  
'They sneer at me for leaning all awry;  
What! did the Hand then of the Potter shake?'

**The universality of metaphor.** Because metaphor is so pervasive in linguistic and cultural terms, it is often seen as central to thought and ordinary, non-literary language. In such speculation, the broader Aristotelian interpretation of metaphor is evoked. Language is seen as a system of symbols running parallel to reality, its purpose to blend form and meaning. All models of existence are associative make-believe: 'Existence is *like* X or Y', 'It is *as if* there were a Heavenly Father', or as T. R. Wright has put it: 'If narrative is the way we construct our sense of identity, metaphor is how we think, especially in areas in which we need to build our knowledge of the unknown by comparison with the known' (*Theology and Literature*, 1988). He adds that theology 'has always been irredeemably riddled with metaphor'. The Christian Gospels 'make Jesus repeatedly risk and often suffer the misunderstanding of the literal-minded', so that in Matthew (16: 6-7) the disciples say that they have no bread when Jesus warns them against accepting the leaven of the Pharisees, while in John (3: 4) Nicodemus wonders how a man can enter his mother's womb a second time so as to be 'born again'. Most religions and ideologies are imaginative in the shapes they lend reality, asserting in faith the virtues of Image X over Picture Y or Model Z. Wright considers that it is not so important to replace one metaphor with another ('addressing God continually as Mother instead of Father, She rather than He') as to

understand the processes involved in concretizing infinity and 'recognize the metaphorical status of all these terms'.

**Dead metaphors.** Whether such a status is recognized or not, metaphors and models tend to have a time of vigour, after which they may 'fade' and 'die'. Traditionally, those that have lost their force have been called *dead metaphors*; as such, they may still continue in service as *clichés* and *hackneyed expressions*. Many venerable metaphors have been literalized into everyday items of language: a clock has a *face* (unlike human or animal face), and on that face are *hands* (unlike biological hands); only in terms of clocks can hands be located on a face. Again, *decide* began as a metaphor, where Latin *decidere* meant to *cut through* something in order to achieve a conclusion or a solution. In their turn, *conclusion* and *solution* were once metaphorical (Latin *concludere* to shut up, and *solvere* to unfasten). The deadness of a metaphor and its status as a cliché are relative matters. Hearing for the first time that 'life is no bed of roses', someone might be quite swept away by its aptness and vigour.

**METATHESIS** [16c: through Latin from Greek *metáthesis* placing across. Stress: 'me-TA-the-sis']. The transposition of elements of language, usually two sounds and/or letters in a word: Old English *bridd* becoming Modern English *bird*, Middle English *Manisk* becoming Modern English *Manx*. Non-standard *aks* in *Don' aks me metathesizes standard ask*. Compare SLIP OF THE TONGUE, SPOONERISM, X. [STYLE].

T.MCA.

**METCHIF PATOIS.** See MÉTIS.

**METER.** See METRE.

**METHOD** [14c: from Latin *methodus*, Greek *méthodos* ('way across') a way, means]. A procedure for teaching and learning a language. The term became popular in the late 19c and for many decades it was incorporated (capitalized) into the names of particular procedures: *the Direct Method*, *the Berlitz Method*, *the Natural Method*, *the Oral Method*, *the Audio-lingual Method*. Proponents of 'Methods' have often presented them as sure-fire solutions. Since the 1960s, the initial capital has tended to be dropped (*the direct method*, *the grammar-translation method*) and the more tentative *approach* often used instead (*the situational approach*, *the humanistic approach*, *the communicative approach*). The terms are often interchangeable (*the direct approach*, *the situational method*), and many methods or approaches have names that do not incorporate either term: *cognitive code teaching*, *the Monitor Model*, *the Silent Way*, *Suggestopedia*, *Total Physical Response*. See APPROACH, LANGUAGE TEACHING, TEFL, TESL. [EDUCATION]. T.MCA.

**MÉTIS** [1810s: through French from Latin *mixticus*, mixed, from *miscere/mixtum* to mix. Compare MESTIZO, *miscegenate*]. Also **mixed-bloods**, and pejoratively **half-breeds**. Canadian names for individuals and communities of Amerindian and European descent (usually from European fur traders and Native women), especially those who settled in the 19c in the valleys of the Red, Assiniboine, and Saskatchewan rivers: French-speaking Roman Catholic Métis (also called *les bois brûlés*: burnt woods) and English-speaking Métis (also called *English half-breeds* or *Métis anglais*). The latter were usually descendants of Scots employed by the Hudson's Bay Company and if so were also called *Hudson Bay Scots* or *improved Scotsmen*. For some, the term *Métis* is properly restricted to the French group. In 1870, the Métis set up a provisional government in the Red River area under the leadership of Louis Riel. Troops were sent in by the federal government after the Métis tried and executed a government surveyor, and Riel fled to the US. After Manitoba joined Confederation in 1870, Métis interests were ignored in favour of the railways and new settlers; many moved to Saskatchewan, and the failure of their attempts to claim land there sparked the North-West Rebellion of 1885, again led by Riel. The Métis have founded various political and cultural organizations, mainly to pursue land claims, often in alliance with status and non-status

Indians. The Constitution Act of 1982 recognized them as an aboriginal people.

The word *Métis* is part of the general vocabulary of CanE, usually pronounced /'meti/ as in French, but in the Prairies sometimes as /'mets/, while older Native people say it as 'metchif'. Pidgin languages spoken by the Métis were used in the fur trade, centred in the Red River Valley, now in the province of Manitoba. The best-known English-based dialect is *Bungee* (from Ojibwa *panki* a little), also known as the *Red River dialect*. Howard Adams has recalled: 'In all the twenty years I spent in my halfbreed home, a bed was known as a *paillasse* (*pa-jas*). Doughnuts made by Métis women were called "la bange" [French *beignet*]. . . . When I first went into mainstream society my Métis ways were ridiculed and my language of "Metchif patois", a combination of English, French, and Cree, was openly mocked' (*Prison of Grass: Canada from the Native Point of View*, 1975, p. 175). The writer Maria Campbell reported in an interview: 'We talk English, but we talk such a broken mixture of French, English, Gaelic and Cree, all mixed together' (to Doris Hills in 'You Have to Own Yourself', in *Prairie Fire*, 1988). [AMERICAS, NAME, VARIETY]. M.F.

**METONYMY** [16c: from Latin *metonymia*, Greek *metōnumia* change of name, cross-naming]. A figure of speech which designates something by the name of something associated with it: *the Crown* substituting for monarchy, *the stage* for the theatre, *the bottle* for alcoholic drink, *No. 10 Downing Street* for the British Prime Minister, *the White House* for the US President. A word used metonymically (*crown* or *bottle*, as above) is a *metonym*. Metonymy is closely related to and sometimes hard to distinguish from *metaphor*. It has sometimes been seen as a kind of *synecdoche* and sometimes as containing *synecdoche*. Both metaphor and metonymy express association, metaphor through comparison, metonymy through contiguity and possession. Many standard items of vocabulary are metonymic. A *red-letter day* is important, like the feast days marked in red in church calendars. *Red tide*, the marine disease that kills fish, takes its name from the colour of one-celled, plant-like animals in the water. The word *redcap* (a porter) originally referred to a piece of red flannel tied for visibility around the caps of baggage carriers at New York's Grand Central Station. On the level of slang, a *redneck* is a stereotypical member of the white rural working class in the Southern US, originally a reference to necks sunburned from working in the fields. Often the original metonymic connection is lost, but the term persists: the business of a *red light district*, a neighbourhood where prostitutes are

available, is usually carried out without the aid of brothels sporting actual red lights. Metonymy is a strategy commonly used to make sense of reference by association. In the sentence, 'I'm parked two blocks away in an illegal parking zone', the speaker uses the pronoun *I* to stand for his or her vehicle. Instances of such pragmatic metonymy do not involve additions to the vocabulary and usually pass unnoticed in conversation. See FIGURATIVE LANGUAGE/USAGE, METAPHOR, SLANG, SYNECDOCHE. [STYLE]. C.C.E.

**METRE** BrE, **meter** AmE [14c: from Old French *metre* (Modern *mètre*), Latin *metrum*, Greek *métron* a measure]. In music, the pattern of regular pulses and the arrangement of their parts, by which a piece of music is measured in terms of time (the number of beats to the bar); in prosody, a comparable stylized rhythm by which verse is measured in time (the number of feet to the line). The study of metre is known, especially in the US, as *metrics*. Two kinds of metre figure in the discussion of English verse: the *quantitative metre* of classical Greek and Latin, in which the length or quantity of a syllable depends on whether it contains a long or short vowel; the *accentual metre* of spoken English, in which accented, strong, or stressed syllables contrast with unaccented, weak, or unstressed syllables. Most of the terms used to discuss the metrical nature of English, such as *iamb* and *pentameter*, have been drawn from the classical tradition: such terms are understood quantitatively when applied to Latin and Greek, but accentually when applied to English. The labels for metres combine the name of a kind of foot, such as *iambic* or *trochaic*, with the number of feet in a line: *dimeter* for two feet, *trimeter* for three, *tetrameter* for four, *pentameter* for five, *hexameter* for six, and *heptameter* for seven. Combinations include *trochaic tetrameter*, *iambic pentameter*, and *dactylic hexameter*.

The distinctness of the two kinds of rhythm has not always been clear; under the influence of the classical languages 16c poets of English such as Spenser and Sidney attempted quantitative verse, without great success. Coleridge, Tennyson, and Bridges also experimented with quantitative metre, but English vowel quantity is too uncertain to produce consistent results. No major work of English poetry is quantitative. All Old English and some Middle English poetry was composed in *strong-stress metres*, in which only the stressed syllables are counted and the number of unstressed syllables is not fixed. The stressed words in such poems were also marked by alliteration. The metric conventions in some Middle English and most traditional Modern English poetry, however, fix the number of

unstressed syllables. Few poems are entirely regular; syntactic or rhetorical demands for stress can cause breaks in the pattern adopted, affecting the regularity of the feet in which lines are arranged. See ACCENT, FOOT, PROSODY, RHYTHM, SCANSION. [LITERATURE]. R.C., T.MCA.

**METRICS.** See METRE/METER, PROSODY.

**MEXICAN-AMERICAN ENGLISH.** See CHICANO ENGLISH, SPANISH, TESD, TEXAS, TEX-MEX.

**MICRONESIA** [From Greek *Micronēsia* place of small islands]. A name for island groups east of the Philippines and north of the Equator, including the Mariana, Marshall, Caroline, and Gilbert Islands. See MELANESIA, POLYNESIA. [NAME, OCEANIA]. S.R.

**MID-ATLANTIC.** A term for kinds of English, especially accents, that have features drawn from both North AmE and BrE: 'It may be that one of the main influences on the speech of young people in Britain today . . . is the "mid-Atlantic" flavour of the accents in which many pop singers and pop music presenters speak or sing' (John Honey, *Does Accent Matter?*, 1989). See ATLANTIC. [AMERICAS, EUROPE, VARIETY]. T.MCA.

**MIDDLE AMERICAN.** See AMERICAN<sup>1</sup>.

**MIDDLE ENGLISH**, short forms *ME*, *M.E.* From one point of view, the second stage of the single continuously developing English language; from another, a distinct language that evolved from Old English (OE) and slowly turned into Modern English (ModE). ME began when the linguistic effects of the Norman Conquest were complete (c.1150) and came to an end at the start of the period that scholars generally call Early Modern English (c.1450). Three features of ME contrasted with OE: a greatly reduced system of grammatical inflections; greatly increased lexical borrowing from other languages, in particular French and Latin; and a highly varied and volatile orthography. Surviving texts indicate that there was no uniform way of writing ME, and as a result texts are sometimes easy to read without much help, sometimes more difficult, and sometimes well-nigh impossible. The following sentence, from Chaucer's late 14c translation of Boethius, *De Consolatione Philosophiae* (*On the Consolation of Philosophy*: opening, Book I, prose VI), is representative:

First woltow suffre me to touche and assaye the estat of thy thought by a few demaundes, so that I may understonde what be the manere of thy curacioun?

Word for word in more or less modern usage, this sentence runs:

First wilt thou suffer me to touch and try the state of thy thought by a few demands, so that I may understand what be the manner of thy curation?

In more relaxed modern usage still, it might be:

First will you let my try the state of your thinking by asking a few questions, so that I can understand the way you cure people?

In the original sentence, many words have the same spelling (but generally not the same pronunciation) as ModE, and their meaning is often the same (*first, me, and, the, of, thy, thought, by, a, so, that, I, may, what, be*), some have a similar spelling (but not pronunciation) to present-day usage, and much the same meaning (*touche, estat, fewe, understonde, manere*), or similar spellings but rather different meanings and uses (*suffre, demaundes*), and some are variously alien at first encounter yet become less so after translation (*woltow, assaye, curacioun*). In terms of grammar, the most obvious difference between ME and strict standard ModE (as shown by means of this specimen sentence) is the loss of the second-person pronoun (*thou*, etc.) in everyday usage, though the form was present in Early ModE and continues to be widely and easily understood. Another is the loss of the subjunctive form as used in *so that I may understonde what be*. In terms of pronunciation, ME can very broadly be said to blend Germanic and Romance sound systems, words of Germanic origin being pronounced more or less with the values of Old English, words of Romance origin being pronounced more or less as in Norman French.

**Background.** As a spoken vernacular, ME was continuous with OE, but as a written medium it did not have the erstwhile autonomy or prestige of OE prose and verse. Instead, it competed unequally with Latin and French through most of its history. Latin was the dominant literary and ecclesiastical language in Europe long before the Norman Conquest and well into the Renaissance, while Norman French became after the Conquest the primary language of the cultivated classes of England, sharing with Latin high prestige in literature and administration; the legal profession in particular was permeated by French and Latin. As a result, English, the language of a conquered people, made scant literary and official appearance in documents during the two centuries after the Conquest, and no dialect had precedence over any other. In the 14c, Chaucer's much-admired contemporary John Gower wrote his vast poem *Confessio Amantis* (*The Lover's Confession*) in English (yet with a Latin title), but also wrote long poems in Latin and French. Such multilingual expertise was normal among the writers and scholars of the day.

**Dialects.** The four great dialect boundaries of OE developed in ME as follows: (1) The vast Mercian dialect area divided into East Midland and West Midland. (2) Kentish became part of a wider South-Eastern dialect to the south of the River Thames. (3) West Saxon, latterly the most prestigious OE dialect, especially for literature, shrank westward to become the South-Western dialect, which entirely lacked the prominence of its OE ancestor. (4) Northumbrian divided into the Northern dialects of England and the Lowlands of Scotland. Scholars generally refer to ME north of the border as Middle Scots, which developed its own courtly use and literature: see SCOTS. In addition to the growth of a separate national variety in Scotland, slowly spreading at the expense of Gaelic, ME was carried through invasion and settlement westward into Wales and Ireland. Although the city of London was close to the South-Eastern dialect, the distinctive usage of the capital towards the end of the ME period was primarily influenced from north of the Thames, by East Midland. It was the high form of this eclectic metropolitan variety that in due course became the primary source of modern standard English.

**Pronunciation and spelling.** (1) In the main, the sounds of ME were the same as those of OE, and for several lifetimes after the Norman Conquest the written language retained many of the characteristic features of OE orthography. In due course, however, script and style changed radically under the influence of Norman French, obscuring for later readers the continuity of the pronunciation system. Whereas OE spelling was relatively stable and regular, ME spelling varied greatly from place to place, person to person, and period to period, offering many variants for the same words: for example, OE *lēaf* (ModE *leaf*) became ME *lief*, *lieif*, *leif*, *lefe*, *leue*, *leewe*, *leawe*, etc. (2) The special OE letters ash (æ), wynn (ƿ), yogh (ȝ), and eth (ð) went out of use early in the ME period; thorn (þ) remained longer and appears sporadically in early 15c Chaucer manuscripts. (3) The distinctive short and long vowel pairs of OE gave way to a system in which the lax or tense state of the tongue (and not the duration of the sounds themselves) distinguished such sounds as the /ɛ/ of *vers* (verse) from the /e/ of *wep* (weep). (4) Some ME sound changes altered vowel values, resulting for example in the present-day vowel differences between singular *child*, *staff* (a large stick) and plural *children*, *staves*. (5) The OE pronunciation of the first consonant in the initial cluster *cn-* (as in *cnāwan* to know) continued for centuries, though the new spelling was *kn-*. It died out only in the later stages of ME, leaving its mark, however, in contemporary spelling, as in *know*,

*knee*, *knight* (with their 'silent' fossil *k*). (6) Similarly, the voiceless velar or palatal fricative of OE (as in German *ach* and *ich*) continued in use for most of the period in England and continues to the present day in Scots. It has usually been represented in ModE by *gh*, leaving its silent fossils in such words as *dough*, *night*, *through*, *thought*, *thorough*. In Chaucer's line 'A knight ther was, and that a worthy man', *knight* (OE *cnihht*) was pronounced /kniht/ or /kniçt/. (7) Consonants coming between vowels were increasingly elided, with the result that many OE disyllables have been reduced to ModE monosyllables: for example, earlier OE *hlāfweard* ('loaf-ward') became later OE/early ME *hlāford* and *laford*, then 13c *louerd*, and 15c *lord*; OE *fūsel* (bird) developed into 12c *vuhel*, 13c *fuwel*, 14c *fouxl* and *fowl* (etc.), becoming 16c *fowle*, *foule* (etc.), and ModE *fowl*. (8) The voiced values /v/ and /z/ of the OE letters *f* and *s* became distinctive sounds in their own right, distinguished *fat* from *vat* and *seal* from *zeal*.

**Grammar.** (1) While the sound system of ME was relatively unchanged from OE, the inflectional system was greatly reduced, possibly because of close, long-term contacts between native OE speakers and first Danish- then French-speaking settlers. (2) The main classes of verb inflection survived, but the distinction in strong verbs between the singular and the plural of the past was on its way out in Chaucer's day: for example, for the verb *bind* (from OE *bindan* to bind), he had the past singular *bond* (from OE *band*) and past plural *bounde* (from OE *bundon*), but *bond* was soon to vanish as ModE *bound* took over both the singular and plural. (3) The occasional surviving inflectional suffixes for the plural and the infinitive in Chaucer's day likewise soon disappeared, and the four-case OE inflections for the noun were reduced to two (common and possessive) as in ModE. (4) The OE function words (pronouns and articles, conjunctions, prepositions, and auxiliary verbs) remained in ME and largely survive to the present day.

**Vocabulary.** (1) By and large, the everyday vocabulary of OE has survived into ME and ModE, as in the following sets, with OE first, then typical ME, then ModE: *bricg*, *bregge*, *bridge*; *fæstnian*, *festen*, *fasten*; *īegland*, *eland*, *island*; *langung*, *longinge*, *longing*; *nīwe*, *newe*, *new*; *strang*, *stronge*, *strong*. (2) As a result of the Norman Conquest and the great social and political changes that came in its wake, many OE words fell entirely out of use, often being supplanted by words of French provenance: for example, *eftsīð* was replaced by *retorn*, *retorne*, *retourne*, etc. (return), *eorlscipe* ('earlship') by *nobilite*, *nobylyte*, etc. (nobility), and *lārcwide* by

*conseil, counseil*, etc. (counsel). (3) In the centuries immediately after the Conquest, English took on the basic forms and patterns of its present-day dual Germanic and Romance vocabulary: for example, native-based *freedom* as against French-based *liberty*; *hearty* versus *cordial*; *kingly* and *royal* (and also *regal*, directly from Latin); *knight* and *chevalier*, *knighthood* and *chivalry*; *lawful* and *legal*, *unlawful* and *illegal*, *unlawfulness* and *illegality*; *pig* and *pork*, *sheep* and *mutton*, *calf* and *veal*, *cow* and *beef*. See BISOCIATION, NORMAN FRENCH.

**Intelligibility.** ME words generally bear a fair resemblance to their present-day descendants, with the result that reading ME without help, though by no means always easy, is far simpler than reading OE: the OE sentence *Gemiltsa minum suna* (c.1000) is entirely foreign to speakers of ModE, but the ME equivalent *Haue mercy on my sone* (though only about 385 years more recent and with a distinctive pronunciation) shows its antiquity in only two small oddities of spelling. The grammatical functions signified by the suffixes on all three OE words in this sentence are gone; the grammatical function of *my sone* is indicated not by a case ending as in OE but by the preposition *on* (absent in OE); and the function of *haue* is indicated by word order. The OE word *gemiltsa* has vanished, replaced by a phrase composed of OE *haue* in its ME form, and ME *mercy*, borrowed from French. See CHAUCER.

**Texts.** The literary and other texts of ME vary greatly, dependent on the time and place of writing and often the individual orthographic inclinations of the writer: for further detail, see ENGLISH LITERATURE, PROSE. Below are three brief specimens. The first is from the 13-14c: the opening lines of an anonymous lyric poem. The second belongs to the late 14c, and is also anonymous: the work of a West Midlands poet that continues the alliterative verse patterns of OE. The third is from the 14c translation of a popular Latin work that provided the specimen sentence at the beginning of this entry.

(1) *Verse: Alison*

Bytuene Mersh and Averil,  
When spray biginneth to springe,  
The lutel foul hath hire wyl  
On hyre lud to syngre.  
Ich libbe in love-longinge  
For semlokest of alle thinge—  
He may me blisse bringe;  
Icham in hire baundoun.

TRANSLATION

Between March and April,  
When the twigs begin to leaf,  
The little bird is free  
To sing her song.  
I live in love-longing

For the seemliest of all things—  
She may bring me bliss;  
I am in her power.

(From *The Norton Anthology of Poetry*, coordinating editor Arthur M. Eastman, New York 1970, p. 5)

(2) *Verse: Sir Gawain and the Green Knight* (opening lines)

Sithen the sege and the assaut was sesed at Troye,  
The borgh brittened and brent to brondes and askes,  
The tulk that the trammes of tresoun there wrought  
Was tried for his tricherie, the trewest on erthe.  
Hit was Ennias the athel and his high kynde,  
The sithen deprecd provinces, and patrounes bicomme  
Welnege of al the wele in the west iles.

TRANSLATION

After the siege and the assault were ceased at Troy.  
The city crumbled and burned to brands and ashes,  
The man who the plots of treason there wrought  
Was tried for his treachery, the truest on earth.  
It was Aeneas the noble and his high race,  
Who after subjugated provinces, and lords became  
Wellnigh of all the wealth in the western isles.

(Adapted from the version in *The Norton Anthology of English Literature*, general editor M. H. Abrams, 5th edition, vol. 1, New York, 1986, pp. 232-3)

(3) *Prose: Chaucer's translation of the De Consolatione Philosophiae of Boethius*

Allas! I, weping, am constreined to biginnen vers of sorowful matere, that whylom in florisching studie made delitable ditees. For lo! rendinge Muses of poetes endyten to me thinges to be writen; and drery vers of wrecchednesse weten my face with verray teres. At the leeste, no drede ne mighte overcomen tho Muses, that they ne weren felawes, and folwedden my wey, *that is to seyn, whan I was exyled*; they that weren glorie of my youthe, whylom weleful and grene, comferten now the sorowful werdes of me, olde man (from the *Complete Works of Geoffrey Chaucer*, Oxford University Press, 1954).

[Glossary: *weping* weeping, *whylom* formerly, *delitable* delightful, *ditee* a ditty, song, *endyte(n)* to write, *verray* true, real, *tere* a tear(drop), *no drede ne mighte* (double negative) no dread might, *tho* those, *felawe* a companion, comrade, *folwe* to follow, *seyn* to say, *whan* when, *weleful* ('well-ful') prosperous, happy]

Mossé, Fernand. 1952. *A Handbook of Middle English*. Baltimore: Johns Hopkins University Press.

**MIDDLE ENGLISH DICTIONARY**, short form *MED*. A dictionary on historical principles now close to completion, covering the period 1100-1475. In his sketch of future dictionaries (1919), William A. Craigie declared existing accounts of Middle English vocabulary inadequate and envisaged a dictionary that would encompass the 'marvellous richness and interest' of both the language and 'the manners and customs of the time'. Though some earlier scholars had gathered material for a planned Chaucer dictionary, editing for a comprehensive *MED* took place at Cornell U. under the direction of C. S. Northrup during 1925-30. The materials were transferred in 1930 to the U. of Michigan so that work might profit from editing then in progress for the *Early Modern English Dictionary*. Soon thereafter, Craigie arranged for the transfer to Michigan of the Middle English citations gathered for the *OED* in Oxford. A reading programme (1930-4) led by Samuel Moore increased the collection by 280,000 slips from 66,000 pages read or re-read from selected texts. At the same time, a dialect census helped date and localize manuscripts so that regional terms could be identified and described. Following Moore's sudden death, Thomas A. Knott became editor (1935-45), though economic depression and World War II made rapid progress impossible. In 1946, Hans Kurath became editor and under his direction publication began in 1954. On his retirement in 1961, responsibility for the project was successively assigned to Sherman M. Kuhn, John Reidy, and Robert E. Lewis. The *MED* is rich in etymological discoveries; meanings are conveyed through Modern English translations, and brief encyclopedic notes are appended to explain details of medieval English technology, society, and culture. Like all dictionaries on historical principles, the *MED* provides abundant quotations to illustrate constructions and range of meanings. Issued in fascicles by the University of Michigan Press, the *MED* is expected to reach completion in 1994. See OXFORD DICTIONARY OF ENGLISH ETYMOLOGY, PERIOD DICTIONARIES OF ENGLISH. [HISTORY, REFERENCE]. R. W. B.

**MIDDLE NAME**. See PERSONAL NAME.

**MIDDLE SCOTS**. See SCOTS.

**MIDLAND**. (1) For the UK, see MIDLANDS. (2) For the US, see DIALECT IN AMERICA.

**MIDLANDS, The**. A region of England often associated with dialect and contrasted with *the North* and *the South*. It is generally held that there were five main dialect areas in medieval England: *Northern*, *East Midland*, *West Midland*, *Southern*, and *Kentish*. The Midland group are described as having clearly defined boundaries. They were found north of the Thames and Severn and south of a line from the mouth of the Humber to the west coast, south of Heysham, and the line of the Pennines divided the East Midland and West Midland areas. Some dialectologists consider that such boundaries continue to be significant in contemporary language research, others that the post-industrial urban dialects of the cities of Birmingham, Wolverhampton, Leicester, and Peterborough now exert greater influence than those of the rural areas. Apart from speakers of RP, most people in the English Midlands share features of pronunciation with speakers from the North rather than the South. They often use /ʊ/ not /ʌ/ in words such as *but*, *come*, *fun*, *some* (*put* and *putt* being homophones), and use /a/ for the RP sounds /æ/ and /ɑ/, so that the vowel sound is the same in *bat* and *bath*, *lass* and *last*, *pat* and *path*. The speech of the Midlands is not, however, homogeneous. People in the West are more likely to use /ŋg/ for /ŋ/ in words such as *singing* /sɪŋŋɪŋ/ and *tongue* /tʌŋŋ/, to use /ɒn/, not /an/, in words such as *man* and *pan*, and to be to some degree rhotic in words such as *far* and *farm*. People in the north-east of the region are generally likely to use /z/ in *us*, to substitute /r/ for /t/ in *got a* ('gorra'), and to use an alveolar tap for /r/ instead of the more widely used post-alveolar approximant of RP. See BIRMINGHAM, DIALECT IN ENGLAND, EAST ANGLIA, EAST MIDLAND DIALECT, MERCIA. [EUROPE, NAME, VARIETY]. L. T., S. E.

**MILTON, John** [1608-74]. English poet and pamphleteer, born in London and educated at St Paul's School and Cambridge. He travelled abroad, mainly in Italy (1637-9). In the Civil War, he supported the Parliamentary side and was Latin Secretary to the Commonwealth government afterwards. He became blind in 1651. After the Restoration, he escaped reprisals and lived quietly in London. His early poems, in Italian and Latin as well as English, included sonnets in the Italian form and the contrasting pair 'L'Allegro' and 'Il Penseroso'. He wrote a masque, 'Comus' (1634), and a long elegy, 'Lycidas' (1637). During his years of public office, he wrote polemical pamphlets in prose, notably *Areopagitica* (1644), a plea for freedom of the press. His greatest works are the 12-book *Paradise Lost* (1667), which established the use of

blank verse for English epic poetry, the four-book *Paradise Regained* (1671), and a Biblical tragedy in classical style, *Samson Agonistes* (1671). His style in both prose and verse is classical, often using borrowed words in their original Latin meanings: *admire* wonder at, *involved* wrapped in, *offend* harm, *fame* report, rumour. He also constructed his poetry in a Latinate style, as in the following extract, in which the main verb is delayed until the end of the sentence:

Till, the signal given,  
Behold a wonder! they but now who seem'd  
In bigness to surpass Earths Giant Sons  
No less than smallest Dwarfs, in narrow room  
Swarm numberless.

(from *Paradise Lost*, Book 1)

He also, however, used popular and dialect words and experimented with spelling, differentiating stressed and unstressed pronouns: *thir* unstressed, *their* stressed; *we* unstressed, *wee* stressed. He sometimes favoured pronunciation over tradition (*sovran* for *sovereign*), and indicated a syllabic consonant with an apostrophe (*forbidd'n*), and coined *pandemonium* ('place of all demons') as the name for Satan's palace in Hell. See index. [BIOGRAPHY, EUROPE, HISTORY, LITERATURE, STYLE]. R.C.

**MIME** [17c: from Latin *mimus*, Greek *mimos* imitator; compare MIMESIS]. Acting without speech, depending on gesture, movement, and facial expression to convey feelings and actions. The mimed performance may be given by one actor or several working together. The mime was popular in the classical theatre, particularly in Rome. It appears in Elizabethan and Jacobean drama as the *dumb show*, prefiguring what is to be fully enacted later or giving a disguised message to characters in the play; the dumb show before the visiting players' performance in Shakespeare's *Hamlet* is a well-known example. Mimes were performed on the later English stage, and were popular in the 18c. The era of the silent film brought mime to a new level of sophistication, notably in the acting of Charlie Chaplin. Celebrated stage mimes in the 20c include the French actor Marcel Marceau, who combined clownish humour with an exploration of physical movement. Mime has enjoyed a new status in the second half of the 20c as an important aspect of contemporary theatre, perhaps reflecting a distrust of language and a clown-like view of the human situation.

Mime is a form of non-linguistic semiotics, distinct from systems like sign language for the deaf, which depend on an underlying language system and are not universally comprehensible. Much mimed action can be widely shared, such as shading the eyes to look into the distance.

Some gestures, however, like the 'thumbs up' of triumph, are limited to particular groups of speakers. Mime that is recorded in a text must be verbalized descriptively, as in printed editions of early plays, and may be interpreted in words by a character on the stage. Similar explanation will follow the more private entertainment of silent charades, which are also initially planned through the medium of language. Compare CHARADE, GESTURE, MUMMERY, SIGN LANGUAGE. [LANGUAGE, LITERATURE]. R.C.

**MIMEOGRAPH** [1880s, AmE: from Greek *mimēomai* I imitate, and *-graph*. A trademark, 1903-48]. Short form *mimeo*. (1) Also especially BrE *duplicator*. A desk-size printing machine with an ink-loaded drum around which is wrapped a waxed stencil containing perforations made by handwriting or typing. As the drum is rotated by a handle, successive sheets of paper are fed to it, receiving impressions from the ink passing through the stencil. (2) A copy made by this means. See PRINTING. [TECHNOLOGY]. T.MCA.

**MIMESIS** [17c: through Latin from Greek *mimēsis* imitation; compare MIME]. (1) In rhetoric, the imitation or reproduction of someone's supposed words, especially so as to represent his or her character and interests. (2) Mimicry. (3) The condition through which art and literature seek to imitate and represent life. See POETICS. [LITERATURE]. T.MCA.

**MINCED OATH** [Perhaps 16c: from *mince* to soften, suggesting both primness and indirectness. Compare a *mincing* walk and the idioms *not (to) mince words/matters*]. A semi-technical term for a swearword modified so as to be used without giving offence: *God* modified to *Gosh*, *shit* to *shoot*. Two forms of modification are common: (1) Creating a nonsense equivalent: (*by*) *God* becoming (*by*) *Golly/Gosh/Gum*; *Jesus* becoming monosyllabic *Gee* or disyllabic *Jeepers*; and *Jesus Christ* becoming *Jeepers Creepers*; *hell* becoming *heck*. (2) Substituting an everyday expression of similar sound and length, sometimes with an associated meaning, sometimes with no association whatever: *bloody* becoming *ruddy*; *damn (it)* becoming *darn (it)*; *fuck* becoming *flip*. See CENSORSHIP, EUPHEMISM, SWEARING, TABOO. [STYLE]. T.MCA.

**MINIM** [17c: from Latin *minimus* smallest]. In handwriting and calligraphy, a single downstroke of the pen, and, especially in Court hand or Secretary hand, the short downstroke in the letters *m*, *n*, *u*, etc. Compare ASCENDER AND DESCENDER, SERIF. [TECHNOLOGY, WRITING]. T.MCA.

**MINIMAL PAIR.** In phonetics, a pair of words that differ in one phoneme, such as *pin* and *bin* /pɪn, bɪn/ or *rich* and *wretch* /rɪtʃ, retʃ/. *Sick* and *sink* are a minimal pair, the latter having an extra phoneme; *slink* and *shrink* are not minimal, as they differ in two phonemes. Minimal pairs are used in order to ascertain the phonemes of a language or dialect. Some differences are however phonetic rather than phonemic: for example, the differences in the vowels of *feed* and *feel* can be ascribed to the influence of the following consonants, and so the vowels are allophones of the same phoneme and not independent phonemes. The contrasting vowels of *bead* and *bid*, on the other hand, are in the same environment (in this instance, preceded by /b/ and followed by /d/), and must therefore belong to different phonemes. Pairs that are different in one dialect may be identical in another: for example, *cod* and *cawed* contrast in RP, but are identical in some Irish dialects. See OPPOSITION, PHONEME. [SPEECH]. G.K., T.MCA.

**MINUSCULE.** See CAPITAL (LETTER).

**MIS-** [A vernacular prefix as in *mistake*, associated with French formations in *més-*, as in *misadventure* (*mésaventure*). In Old and Middle English manuscripts, forms containing *mis-* were sometimes written as two words, sometimes as one; a hyphen was never used. From the 16c, the compounds have been printed as one word, with or without a hyphen, which is currently rare]. A prefix with such meanings as 'amiss', 'bad(ly)', 'wrong(ly)', 'improper(ly)', and 'mistaken(ly)', often used to identify error in the use of language: *mispronounce*, *misspelling*, *misrelated participle*, *misuse*. See MISPRINT, MISPRONUNCIATION, MISSPEAK, MISTAKE, MUMPSIMUS, QUOTATION. [STYLE, WORD]. T.MCA.

**MISKITO COAST CREOLE**, also **Miskito Coast Creole English**, **Nicaraguan English**. The language of the Creoles of the Miskito Coast (the Caribbean coast of Nicaragua and Honduras, named after Carib Indians known as Miskitos). Its focus is Bluefields, Pearl Lagoon, and Corn Island in Nicaragua and it is a second language of many Amerindian and Spanish speakers. It dates from the mid-17c and is similar to other varieties of Creole, but its vocabulary has been influenced by Spanish and Chibcha. See CARIBBEAN CREOLE ENGLISH, CENTRAL AMERICA. [AMERICAS, VARIETY]. L.C.

**MISPRINT** [15c]. Also *printer's error*. A mistake in printing, such as a missing letter, taken to be the responsibility or fault of the typesetter, editor, or publisher and not usually the writer.

A *misspelling* in print may or may not be a misprint. See BIBLE, LITERAL, MIS-, TYPOGRAPHICAL ERROR. [TECHNOLOGY]. T.MCA.

**MISPRONUNCIATION** [16c]. Wrong pronunciation, usually of a specific sound: for example, when a foreign learner of English says 'chilled' for *child* (on the analogy of *build* and *gild*); or, in the accentual pattern of a word, stressing *cement* on the first syllable and eliding the *t*, so that it sounds like *seaman* or *semen*. Within one language, what is correct in one variety may be incorrect in another: in most accents of English, the word *loch* (as in the name *Loch Lomond*) is a homophone of *lock*, but in ScoE it ends with the velar fricative /x/, as in German *ach*; most Scots regard the pronunciation 'lock' as incorrect, and many find it irritating. For foreign learners, the mispronunciation of English words may occur for systemic reasons, because of the phonology of their mother tongues, as with the tendency among German-speakers to devoice final voiced consonants:

At this point Nora appears to say: 'You will not vont much, John, after the crap you had earlier!'

'Crap? . . . You don't talk about things like that in public, you know!'

There has, though, been a misunderstanding.

'I am talking about the crap you bought on the beach, John,' Nora explains.

'Oh, the crab!' Lydon realises. 'She's saying crab!'

(interview with the punk rocker Johnny Rotten/John Lydon, *The Independent Magazine*, 27 Oct. 1990).

Among native speakers of English, the mispronunciation of a word or name usually arises from unfamiliarity, either because an item is exotic (as with 'makizmo' for *machismo*) or because it derives from Latin or Greek (as with 'fthizzis' for *phthisis*, usually pronounced 'thigh-sis' or 'tie-sis'). Many English words of classical origin have two or more possible pronunciations. Sometimes both or all the variants are accepted, as with 'hibbiskus' and 'high-biskus' for *hibiscus*, and with 'HEDGE-emony', 'heDGEMony', and 'heGGEMony' for *hegemony*. Sometimes one or the other is widely regarded as an error, as with *lamentable*, when stressed on the second syllable. See BBC PRONUNCIATION UNIT, ELOCUTION, MIS-, PRONUNCIATION. [SPEECH, USAGE]. T.MCA.

**MISRELATED PARTICIPLE.** See PARTICIPLE.

**MISSPEAK** [12c]. (1) Obsolete: to speak wrongly, improperly, and disrespectfully; to speak ill: 'I me repente if I mis spak' (Chaucer, *Troilus and Criseyde*, c.1374). (2) To speak, say, or pronounce something in an incorrect or inappropriate way: *I'm sorry; I misspoke that bit—*

*I'll say it again.* (3) Reflexive: to fail to convey the intended meaning: "The President," Ziegler said, "misspoke himself." He explained that [President Nixon] had noted his error in reviewing the transcript of the press conference' (*Harper's Magazine*, June 1973). See MIS- [STYLE]. T.MCA.

**MISTAKE** [From Old Norse *mistaka* to err, miscarry]. A misapprehension of meaning or a fault in execution: 'Your whole letter is full of mistakes from one end to the other' (Lady M. W. Montagu to Lady Richmond, letter, 17 June 1717). Like Lady Richmond, everyone is at some time or other taken to task for committing an actual or perceived mistake. Following Chomsky (*Aspects of the Theory of Syntax*, 1965), mistakes can be divided into two types: *competence mistakes* (sometimes technically called *errors*), that arise from ignorance or ineptness in using a language (as when an EFL learner says 'He no comes today' or a native user spells *receive* 'recieve'); *performance mistakes* (technically *mistakes*), where one knows what to say or write but through tiredness, emotion, nervousness, or some other pressure makes a slip of the tongue, leaves out a word, or mistypes a letter. People are particularly frustrated if a slip in performance is seen as a gap in their competence.

Native speakers, however, tend to get away with more slips than foreigners; in conversation, they can stop, start, change grammatical direction, mispronounce and then correct themselves, and so forth, without much or any censure, but a foreign user's shortcomings are on display all the time. Advanced users of a second language often appear to set themselves higher standards for that language than for their own, partly because they are more conscious of the mistakes they make in it. In educational circles, conservative teachers tend to treat mistakes as disease-like symptoms that need isolation through red ink. Radical teachers tend to overlook mistakes in the interests of good relations, students' confidence, and their ability to communicate and create. Neither extreme appears to be efficient in teaching the mother tongue or another language: the first intimidates and depresses, while the second may invite chaos. Since it appears to be inherent in the human condition to slip up in language as in other matters, a balance between correction and censure on the one side and turning a blind eye or a deaf ear on the other may be more productive.

See ACCEPTABILITY, ANALOGY, BAD ENGLISH, BARBARISM, CATACHRESIS, COMPETENCE, CONFUSIBLE, CORRECT, CORRUPT, DEVIANT, ERROR ANALYSIS, FREUDIAN SLIP, GHOST WORD, GOOD ENGLISH, GRAMMAR CHECKER, GRAMMATICALITY,

[EDUCATION, STYLE, USAGE]. T.MCA.

**MISTAKE NAME** [1970: first used by George R. Stewart in *American Place-Names* (New York: Oxford University Press)]. A place-name whose form has been modified as the result of a mistake in writing or reading it: for example, *Yolo* in California is of Amerindian origin, but *Tolo* in Oregon, which is said to have been named after it, has an erroneous substitution in the first letter. [NAME]. J.A.

**MIXED METAPHOR.** A feature of style in which unrelated and sometimes discordant metaphors occur together: 'The butter mountain has been in the pipeline for some time' (President of Farmers' Union, BBC1 news, 1987). The practice is widely regarded as a stylistic flaw caused by unthinkingly mixing 'clichés'. Although mixing metaphors is often ridiculed because of the amusing and distracting effects it can produce, the practice is commonplace and often goes unnoticed. It usually occurs when two or more figurative expressions that have become idiomatic are used together without considering how contact might 'reawaken' their images: 'On the basis that there is no smoke without fire, surely his hands cannot be completely clean?' (*Independent*, 9 Jan. 1988). See METAPHOR. [STYLE]. T.MCA.

**MNEMONIC** [18c: from Greek *mnēmonikós* of memory, mindful, from *mnēmē* memory: see MUSE]. (1) Helping or intended to help the memory (*a mnemonic system*), and something that helps the memory (*acronyms used as mnemonics*). (2) In computing, a programming code that is easy to remember. The terms *mnemonics* and *mnemotechnics* refer to techniques that are intended to improve memorizing. See ABBREVIATION, ACRONYM/PROTOGRAM, COMMUNICATIVE SHIFT, LETTER<sup>1</sup>, LETTER WORD, PROVERB, RHYME. [EDUCATION, LANGUAGE, TECHNOLOGY]. T.MCA.

**-MO** [18c: from the last syllable of the Latin singular masculine ablative phrase *duodecimo* (folded) in twelve parts]. A suffix used in printing and binding to help name certain book sizes. It is added to the number of leaves formed by folding a sheet of paper: *twelvemo* (12mo) rather than *duodecimo*, *sixteenmo* (16mo) rather than *sextodecimo*. It does not, however, replace

*quarto* and *octavo* (no \**fourmo* and \**eightmo*). See BOOK. [TECHNOLOGY]. T.M.CA.

**MOCK** [16c: attributive]. A term for something feigned: for training purposes (*a mock examination, a mock battle*); as a literary style imitating another, especially for humorous or satirical purposes (*mock-heroic poetry, a mock-romance*); as a style of any kind, but particularly in architecture, usually taken to be in poor taste (*a mock-Tudor mansion*); and as the deliberate, nonsensical, often disparaging imitation of a language (*a mock-Swedish accent, fluent mock-Welsh*). The term *mock Latin* refers to pseudo-Latin motto-like phrases whose humorous effect is achieved by adding a quick 'translation': *Non illegitimis carborundum* 'Don't let the bastards grind you down. Compare DOG-, DOG, PASTICHE. [STYLE]. T.M.CA.

**MODAL AUXILIARY.** See MODAL VERB.

**MODALITY** [17c: from Latin *modalitas* the quality relating to manners, forms, and limits, from *modus* form, manner, limit: see MODE, MOOD]. In syntactic and semantic analysis, a term chiefly used to refer to the way in which the meaning of a sentence or clause may be modified through the use of a modal auxiliary, such as *may, can, will, must*. In a wider sense, the term is used to cover linguistic expression of these concepts other than through the modal auxiliaries: 'It will *possibly* rain later this evening'; 'I *am sure* that the plane has landed by now'; 'You *have my permission* to smoke now'; 'I *am obliged* to go.' Adverbs such as *possibly, perhaps, probably, certainly* have been called *modal adverbs*, and such adjectives as *possible* have been called *modal adjectives*. The term is also extended to include the subjunctive mood and the past verb forms used to express hypothetical meaning (that is, that the situation is unlikely to occur or has not occurred): 'I wish I *knew* her'; 'If I *saw* him, I *would recognize* him'; 'If you *had said* that, I *would not have minded*.' In case grammar, *modality* refers to one of the two underlying constituents of sentence structure (the other being *proposition*). The modality includes those features that relate to the sentence as a whole, such as tense and negation. See MODAL VERB. [GRAMMAR]. S.G.

**MODAL VERB**, also **modal auxiliary**, **modal**. A verb, normally an auxiliary such as English *must* and *should*, used to express *modality* (see entry). In English, such verbs have largely replaced the subjunctive mood, and three kinds of modality can be distinguished for them: (1) *Epistemic modality*, which expresses a judgement about the truth of a proposition (whether it is possible,

probable, or necessarily true): *John may be in his office*. (2) *Deontic modality*, which involves the giving of directives (in terms of such notions as permission and obligation): *You must leave immediately*. (3) *Dynamic modality*, which ascribes such properties as ability and volition to the subject of the sentence: *I can come*. Often the same modal verb is used for more than one kind of modality: *may* for possibility (*It may rain tomorrow*) and permission (*You may smoke now*); *must* for necessity (*The plane must have landed by now*) and obligation (*I must go*).

**Central and marginal modals.** The central modal verbs are *can, could, may, might, must, shall, should, will, would*. The marginal modal verbs, sometimes called *semi-modal verbs*, are *dare, need, ought to, used to*. All share the following characteristics: (1) They are auxiliary verbs. (2) They have no third-person -s form: *She may go, They may go* (contrast *She goes, They go*). (3) They have no non-finite forms (no infinitive, -ing participle, or -ed participle), and therefore in standard English can appear only in initial position in the verb phrase, and cannot occur with each other (although 'double modal' forms such as *might could go* occur in some non-standard varieties, such as Southern US English). (4) All except *ought* and *used* are followed by the bare infinitive without *to*. (5) They have idiosyncratic semantic and formal features, affecting particularly their use in the past tense and in negation.

**Kinds of modals.** (1) Epistemic modals: *may* (*He may be at home*), *might* (*It might get too hot*), *must* (*It must be your sister on the phone*), *ought to* (*They ought to have heard by now*), *should* (*The show should be over soon*), *will* (*That will be the doctor*), *would* (*Who would have guessed he was so young?*). (2) Deontic modals: *can* (*You can leave now*), *could* (*Could I go now please?*), *may* (*You may smoke*), *might* (*Might we have another one?*), *must* (*You must be patient*), *need* (*You needn't say anything*), *ought to* (*I ought to write more often*), *shall* (*You shall have my resignation letter tomorrow: a promise or a threat*), *should* (*You should write more legibly*). (3) Dynamic modals: *can* (*Neil can drive a car*), *could* (*He couldn't drive at that time*), *dare* (*I daren't tell/don't dare tell my parents*), *shall* (*We shall allow no obstacle to impede our programme*), *will* (*I will stay as long as I wish*).

**Future expressions.** (1) *Shall* (with first-person subjects only, particularly in Southern England) and *will* (often contracted to 'll) express future time and are often said to comprise the future tense: *I shall be back next week; He will be here soon*. Other ways of expressing the future include the semi-auxiliaries (see below) *be going to* (*It's going to rain*) and *be to* (*She is to be married tomorrow*), the present continuous (*I'm leaving*

for *New York next week*), and the simple present (*The plane leaves at noon*).

**Marginal modals and semi-auxiliaries.** *Dare*, *need*, *ought to*, and *used to* share most of the characteristics of modal verbs but are marginal for various reasons. Unlike the central modals, *ought* and *used* are followed by *to* and despite prescriptive objections often combine with *do* in negative and interrogative constructions, like a full verb: especially in England, *They didn't ought to say that* alongside the more traditionally acceptable *They oughtn't to say that*; *Did he used to play the violin?*, alongside the rare *Used he to play the violin?* *Used to* also differs semantically from central modals, since it conveys aspect (habitual situation) and not modality. In negative and interrogative contexts, *dare* and *need* may be either modals (*I daren't object*; *Need I say more?*) or full verbs with preceding *do* and following *to*-infinitive (*I don't dare to object* or the blend without the *to*, *I don't dare object*; *Do I need to say more?*). Elsewhere, they are full verbs: *I dare/dared to object*; *I need/needed to say more*. There are a number of semi-auxiliaries that express modal or aspectual meanings, such as *be able to*, *be about to*, *be bound to*, *be going to*, *have to*, *have got to*. They can be used as non-finite forms and are therefore convenient substitutes for modals in non-finite positions: for example, the use of *You may be able to see me tomorrow* instead of the impossible *\*You may can see me tomorrow*.

**Negation.** When a verb phrase containing a modal is negated, the negation applies in some instances to the modal and in other instances to the proposition: for example, the modal is negated in *You may not leave* (You are not allowed to leave), whereas the proposition is negated in *I may not be on time* (It is possible that I won't be on time). The difference may affect the choice of the auxiliary: for example, epistemic *must* (*It must be your sister on the phone*) usually forms its negative equivalent through *may not* for negating the proposition (*It may not be your sister on the phone*: It is possible that it is not your sister on the phone) and *can't* for modal negation (*It can't be your sister on the phone*: It is not possible that it is your sister on the phone).

**Past tense.** *Can*, *may*, *shall*, *will* have the past-tense forms *could*, *might*, *should*, *would*. These forms are chiefly used to express tentativeness or conditionality rather than past time, so that there is no time difference between *I may see you later* and *I might see you later*, or between *Can you pass the salt?* and *Could you pass the salt?* The past forms, however, are used for past time in indirect speech (*I may see you later* is reported as *She said that she might see me later*). There are no past forms for *must*, *dare*, *need*, *ought to*.

The epistemic modals indicate the past time of the proposition by using *have*: *Andrew may/might have been in his office*; *You must have seen them*; *They will/would have landed by now*. The deontic modals *ought to have* and *should have* express past obligation, usually with the implication that it was not fulfilled: *You ought to have phoned* (but you didn't); *They should have come in*. Dynamic *could* (was able to) and *would* (was willing to) are used for past time in negative contexts (*He couldn't type*; *They wouldn't help us*).

*Would* is commonly used in the main clause of a sentence expressing a hypothetical condition: *If I were you, I would buy it*; *If you had seen them, you would have been shocked*. Sometimes, in BrE, *should* is used with a first-person subject in place of *would*: *If I had seen them, I should have reported it*. *Would* and *should* appear in other hypothetical contexts: *I was at the demonstration, but it would take too long to tell you what happened*. *Should* may also appear after evaluative expressions (*It's odd that he should say that*; also *It's odd that he says that*) and expressions of necessity, intention, and the like (*We insisted that he should stay*). See AUXILIARY, DIALECT IN AMERICA, SCOTS, VERB. [GRAMMAR].

— 1986. *Mood and Modality*. Cambridge: University Press.

**MODE** [13c: from French *mode*, Latin *modus* form, manner, limit. Compare MOOD]. A term in linguistics used in two ways: (1) As a synonym of *mood*. (2) To refer to the choice of features influenced by the purpose of an activity, including the format of presentation: *lecture mode*; *essay mode*. [GRAMMAR]. S.G.

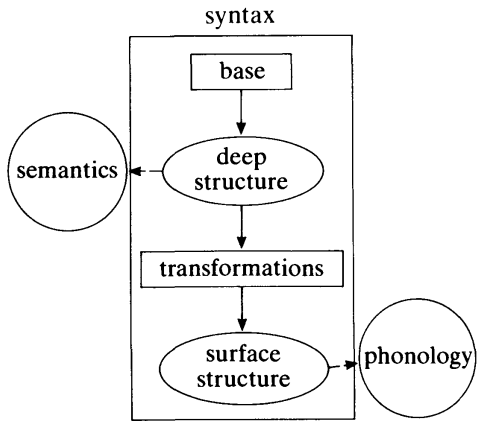

**MODEL** [16c: from Old French *modelle* (Modern *modèle*), from Italian *modello* a small measure, something on a small scale]. A representation of something else, on a smaller and more manageable scale. It is either concrete (like a model boat), and matches the original in most details, or an idealization (like a mathematical model), which does not copy an original but seeks to represent its main features. The making of abstract models is an important part of theory-building, both on an informal level (using similes, metaphors, and analogies, as in the 19c view that languages are like living organisms) and on a formal level (in science and technology). Models give shape to concepts and systems that are otherwise hard to think about and

work with, but, because they often rest on analogy (X is like Y), they are not always precise and are often deficient, especially in areas such as language. The model which the British librarian Peter Mark Roget used to create his *Thesaurus* (1852) was botanical, comparing relationships among words with the genera and species of living things. Words, however, are not discrete and organic entities like plants, and such a model, though useful in creating ordered lists, does not make an ultimate statement about the nature of the words so listed. Similar problems have arisen with the metaphor of language as a computer program. It may be useful to think of language in this way, but there is no evidence that the mind works like a digital computer.

Linguistics in the past two centuries has been heavily influenced by the *model* or mental picture of language assumed to be valid at a particular time. Over the years, such models have become increasingly detailed and explicit. In the 19c, language was often envisaged as a living organism which, like a plant or an animal, developed to maturity and then decayed. Under the influence of the Darwinian theory of evolution, the relationships among languages were also often described in terms of 'parent' languages giving way to 'daughter' languages, the whole presented in family-tree diagrams. In the first half of the 20c, this botanical model was complemented by a structural model, one version of which represented language as a series of relatively independent systems set one on top of the other in a box-like arrangement: see LEVEL OF LANGUAGE. Later, such an 'arrangement model' of language gave way to a 'process model' influenced by the theories of Noam Chomsky, who has taken syntax to be the basic component on which other language components such as phonology and semantics are dependent.

In Chomsky's classic transformational model of grammar (*Aspects of the Theory of Syntax*, 1965), a few syntactic rules in the *base* of the grammar provided a syntactic *deep structure* which was then elaborated by processes known as transformations in order to produce a *surface structure*. Semantics or meaning was dependent on the deep structure, while phonology or sound was dependent on the surface structure (see diagram). More recently, in *Knowledge of Language* (1986), Chomsky has envisaged a model of grammar which is less obviously directional, and which, as with a computer program, is composed of a series of modules, each of which is fairly simple in its general workings, but which becomes complex as it interacts with other modules. Compare ANALOGY, METAPHOR. [GRAMMAR, LANGUAGE].

J.M.A., T.MCA.

**MODERN** [16c: from Late Latin *modernus*, from Latin *modo* just now. In English, the Latinate sense of *modern* as 'at the time of speaking, writing, etc.', as in 'the first and modern President of the said Society' (charter, 1752) has long been obsolete]. (1) Of the present time (as contrasted with *ancient* and *medi(a)eval*); contemporary, up-to-date, recently developed or invented; not antiquated or obsolete. The concept of three ages, *Ancient*, *Medieval*, and *Modern* is essentially European; the *Modern Age* is not, however, young, being traditionally regarded by historians as beginning with the Renaissance and the Reformation in the 15–16c. It is associated with a change of mentality, considered by many traditionalists to be for the worse (by abandoning such things as classicism and medieval spirituality), by both social radicals and people of fashion as for the better (by embracing greater individualism, the scientific method, the concept of progress, the cult of the new and the original, and, increasingly, secular humanism). The attitude identified by the terms *modernity* and *modernism* looks to the future rather than the past as a source of inspiration and aspiration; it does not, in its purest form, depend on anything sanctioned or sanctified by tradition. Especially in art, architecture, and literature, modernists have sought to break sharply with practices that they see as bound to the past. However, many critics of art and literature towards the end of the 20c have in their turn reacted against modernism, seeing it as also having had its day, as belonging to the stultifying past. They discuss it in relation to *post-modernism*, a catch-all term for a range of recent cultural developments: see LITERARY CRITICISM. The use of *post-modern*, with its negative implications, adds to the difficulty of using the term *modern* objectively: in contexts in which it might

mean 'at the present time' it may also be interpreted as meaning either 'and therefore better than in earlier times, states, and traditions' or 'and therefore suspect, because itself passé'. In this volume, the adjectives *current* and *present-day* are often therefore used instead, as in *current usage* and *present-day English*. (2) Used to identify the variety of a language in current use: for example, *Modern Greek* as opposed to *Classical* or *Ancient Greek*. In philology, it is the third of three terms for stages into which languages may be divided, as with *Old French*, *Middle French*, *Modern French*. (3) In printing, a term that designates a group of typefaces developed in the 18-19c, distinguished by flat serifs, increased contrasts between the thick and thin parts of the letters, and an effect of greater vertical emphasis. See MODERN ENGLISH, MODERN LANGUAGE. Compare CLASSICAL. [LANGUAGE, STYLE, TECHNOLOGY]. T.MCA.

**MODERN ENGLISH**, short form *ModE*, *MnE*. Also sometimes **New English**. (1) The third stage in the history and development of the English language, c.1450 to the present day, often divided into *Early Modern English* (c.1450-1700) and (*Late/Later*) *Modern English* (c.1700 to the present day). (2) Late Modern English treated as a fourth stage in the history and development of the language. See EARLY MODERN ENGLISH, ENGLISH, ENGLISH PLACE-NAMES, MODERN, MODERN LANGUAGE, PERIOD DICTIONARIES OF ENGLISH. [HISTORY, VARIETY]. T.MCA.

**MODERN ENGLISH USAGE**. See DICTIONARY OF MODERN ENGLISH USAGE.

**MODERNISM**. See ENGLISH LITERATURE, MODERN.

**MODERN LANGUAGE** [17c]. (1) A language used in recent times, in contrast to an ancient, classical, or medieval language: 'Our English Tongue . . . may be said to equal, if not surpass all other Modern Languages' (Edward Phillips, *The New World of English Words: or, a general dictionary*, ed. John Kersey, preface, 1706 edition). (2) (In the plural and often with initial capital letters) an area of linguistic study and a department in an educational institution devoted to it. Here, the phrase is generally taken to cover only the major living literary languages. In English-speaking countries, the term usually excludes English and includes only European languages, especially (for teaching purposes) French, German, Spanish, and Italian. Non-European languages are usually studied in other departments, such as *African Languages* and *Oriental Languages*. This is primarily because *modern* has long been used in Europe to contrast

its own living indigenous languages with *Classical Languages* (Latin and Greek) or their own earlier forms, such as *Old French* and *Middle German*. Used attributively, the phrase may sometimes need disambiguating: 'In modern-language teaching, what is modern is the languages; in modern language teaching what is modern . . . is the teaching of languages' (R. B. Long, *The Sentence and its Parts*, 1961). See MODERN, MODERN LANGUAGE ASSOCIATION. Compare CLASSICAL LANGUAGE, ENGLISH STUDIES. [EDUCATION, LANGUAGE]. T.MCA.

**MODERN LANGUAGE ASSOCIATION**, short form *MLA*. The major professional organization of US college and university teachers of English and modern foreign languages, founded in 1883 to encourage the study of modern languages and literature at a time when the curriculum was dominated by Greek and Latin. Having grown to a membership of over 28,000, the MLA has for over a century held an annual meeting between Christmas and New Year's Day for the presentation of papers and the discussion of both scholarly and professional issues. Average attendance for the years 1983-7 was 8,500. The MLA is organized into 76 divisions and 32 discussion groups. Although most of them emphasize literary history and criticism, five divisions and three discussion groups focus on language: Linguistic Applications to Literature, Applied Linguistics, Language and Society, Language Change, and Language Theory; General Linguistics, Lexicography, and Present Day English. Among MLA publications is an annual bibliography, which includes English language and linguistics, and the organization's official journal, *PMLA* (the abbreviation being its only title). See MODERN LANGUAGE, STYLE CHECKER. [AMERICAS, LANGUAGE, MEDIA]. C.C.E.

**MODERN SCOTS**. See PERIOD DICTIONARIES OF ENGLISH, SCOTS.

**MODIFICATION** [15c: through French from Latin *modificatio/modificationis* setting limits]. A term for the dependence of one grammatical unit on another, the less dependent unit being delimited or made more specific by the more dependent unit: the adjective *good* modifying the noun *weather* in the phrase *good weather*; the noun *diamond* modifying the noun *mines* in *diamond mines*; the adverb *strikingly* modifying the adjective *handsome* in *strikingly handsome*. A distinction is made between *pre-modification* (modifying by preceding) and *post-modification* (modifying by following). In *diamond mines* in *South Africa*, *diamond* is a pre-modifier and in *South Africa* is a post-modifier. The example

illustrates a phrase (here a prepositional phrase) used as a modifier (here a post-modifier of a noun). Clauses may also be modifiers in phrases, usually post-modifiers of nouns, such as the relative clause in 'the bag *that you are carrying*'. The dependence of a subordinate clause on its superordinate clause is generally not described in terms of modification: the subordinate clause in 'I know *that you are there*' is not said to be a modifier. Some grammarians, however, use the term *sentence modifier* for adverbials (including adverbial clauses) that express a comment on the sentence or clause: *fortunately* in '*Fortunately*, no one was hurt'; in *all probability* in '*In all probability*, it is closed by now'; the *since*-clause in '*Since you're here*, you may as well make yourself useful.' Although the distinction is obvious between such examples and clear instances of adverbials functioning as modifiers of verbs (such as 'The band is playing *too loudly*'), there is no agreement on how to draw the line between sentence modifiers and verb modifiers or on how many relational categories to establish for adverbials. [GRAMMAR]. S.G.

**MODIFIED RP.** See RECEIVED PRONUNCIATION.

**MODIFIED STANDARD.** See RECEIVED STANDARD AND MODIFIED STANDARD.

**MONODY** [16c: from Latin *monodia*, Greek *monōideia* a single song]. A song sung by one actor in a Greek tragedy; a musical composition for a single voice; a poem of lamentation. See ELEGY, THRENODY. [LITERATURE]. T.MCA.

**MONOGLOT** [1820s: from Greek-derived *mono-* single, *-glot* tongue, language]. (1) (Of a person) knowing only one language; (of a text) composed or available in only one language. (2) Someone who knows only one language well or at all, sometimes used dismissively by multilingual persons: 'Hands up, all you EFL monoglots, how many of you can function adequately in a foreign language? 20%? 15%? 10%? This, of course, is one of the real scandals of EFL . . . it is rather like being taught to drive by someone who has never learnt himself' (John A. Bishop, letter, *EFL Gazette*, Nov. 1990). See -GLOT, LINGUAL, POLYGLOT. [LANGUAGE]. T.MCA.

**MONOGRAPH** [1810s: from the Greek elements *mono-* single and *-graph* writing]. Earlier form *monography*. Originally, in natural history, a treatise on a species, genus, or group of plants, animals, or minerals. Currently, an academic treatise or paper on a single topic, accompanied by the full apparatus of notes, references, and

documentation. Compare ESSAY. [MEDIA, WRITING]. T.MCA.

**MONOLINGUAL.** See LINGUAL.

**MONOLOGUE**, also AmE **monolog** [17c: from French *monologue*, 'one that loves to hear himself talk; or talks very much about very little' (Randle Cotgrave, *A dictionary of the French and English tongues*, 1611), from Greek *monólogos* speaking alone]. (1) Obsolete: someone who does all the talking. (2) A scene in a play in which a character speaks by himself or herself (in contrast to *dialogue* and *chorus*). (3) A dramatic composition for a single performer; a kind of dramatic entertainment performed throughout by one person, a *monologist*, often humorous and presented with mock-solemnity; literary composition of this kind: *the art of monologue*. (4) A poem or other non-dramatic composition in the form of a soliloquy. (5) A long speech by one member of a group who is in effect 'hogging the conversation'. Many social dialogues can, however, in the nature of things contain stretches of monologue, and formal speeches are monologues in the sense that no immediate direct response is normally expected. *Heckling* a speaker at a meeting can, however, turn such solo performances into (more or less welcome) impromptu dialogues. (6) Talking aloud to oneself in private. (7) The solitary act of creative writing, the text serving as something 'overheard' by the reader. (8) In some novels, *interior monologue* is a spoken or written train of thought equivalent to the soliloquy of drama:

I knew it. I knew if I came to this dinner, I'd draw something like this baby on my left. They've been saving him up for me for weeks. Now, we've simply got to have him—his sister was so sweet to us in London; we can stick him next to Mrs Parker—she talks enough for two. Oh, I should never have come, never, I'm here against my better judgement, to a decision. That would be a good thing for them to cut on my tombstone: Wherever she went, including here, it was against her better judgement. This is a fine time of the evening to be thinking about tombstones. That's the effect he's had on me, already, and the soup hardly cold yet (Dorothy Parker, 1893–1967, in the short story 'But The One on The Right').

See ASIDE, CONVERSATION, DIALOG(UE), SOLILOQUY, STREAM OF CONSCIOUSNESS. [LITERATURE, SPEECH]. T.MCA.

**MONOPHTHONG** [17c: from Greek *monóphthonggos* a single sound]. In phonetics, a vowel whose quality is relatively constant, in contrast to a *diphthong* or *triphthong*. Some varieties of English have more monophthongs, some have fewer: in RP there are 12 (as in *see*, *sit*, *set*, *hat*, *arm*, *got*, *saw*, *pull*, *pool*, *cup*, *fur*, and the first syllable of *ago*); in ScOE there are 11, rather

differently distributed (as in *say, see, sit, set, hat/arm, got/saw, so, pull/pool, cup/fur*, and the first syllables of *never, ago*). See DIPHTHONG, VOWEL. [SPEECH]. G.K.

**MONOSYLLABLE** [16c: from Late Latin *monosyllabus*, Greek *monosúllabos* (one-syllabled)]. Formerly also **monosyllabon**. A word of one syllable. 'Native' English is often said to be inherently monosyllabic ('Words monosyllabic which be for the more part our naturall Saxon English,' George Puttenham, *The Arte of English Poesie*, 1589), as opposed to polysyllabic Latinisms and other borrowings. Certainly, many common monosyllables are Germanic in origin (such as *am, be, can, dog, eye, fox, gun, hot, it, jump, key, leap, mum, nut, odd, pot, queen, run, say, two, up, vat, who, you*), but the same Germanic source also provides such polysyllables as *cold-bloodedly* and *longwindedness*. The many monosyllables from non-Germanic sources include *act* and *flex* from Latin, *bloc* and *joy* from French, *crag* and *loch* from Gaelic, *gong* and *kris* from Malay, *steppe* and *tsar* from Russian, and *gene* and *zone* from Greek. A tendency to clip words does, however, provide some support for the idea of Anglo-Saxon *monosyllabism* (addiction to monosyllables or the quality of being monosyllabic), as with *cred* from the Latinate word *credibility*, *mob* from the Latin phrase *mobile vulgus*, and *zoo* from the hybrid Greco-Latin and vernacular *zoological gardens*. A person who is monosyllabic in style tends to be curt and keep to short words, especially simply *yes* and *no*. See CLIPPING, LACONISM, POLYSYLLABLE, SWIFT, SYLLABLE. [SPEECH, STYLE, WORD]. T.MCA.

**MONOTONE** [17c: from Latin *monotonus*, from Greek *monótonos* having only one tone]. Sustained level pitch. Whereas, in singing or chanting, such a pitch can be maintained over a syllable or group of syllables, in natural speech it is constantly moving. Speakers do not normally sustain a level pitch, and someone perceived as 'speaking in a monotone' is probably using a narrower pitch range than usual. See PITCH, TONE. [SPEECH]. G.K.

**MONOTRANSITIVE**. See TRANSITIVE AND INTRANSITIVE.

**MONOTYPE** [1890s: from Greek *mónos* single, *túpos* blow, impression. Compare LINOTYPE]. (1) The trade name of a typesetting and typesetting machine operated by a keyboard and devised in the 1880s/90s by the US lawyer and inventor Tolbert Lanston. (2) The type produced on this two-part machine. It first creates a perforated

paper ribbon whose codes drive a metal type-caster, which rapidly and in serial order produces single pieces of type from hot metal. Monotype was widely used until the mid-20c, especially for setting books. Linotype was also popular for this purpose in the US. (3) An unrelated process by which prints are made from oil or ink paintings on glass and metal. See TYPE-SETTING. [TECHNOLOGY]. W.W.B.

**MONTSERRAT**. Officially *Colony of Montserrat*. Also *Emerald Isle*. A British dependency in the Leeward Islands. Capital: Plymouth. Currency: East Caribbean dollar. Economy: tourism, agriculture. Population: 12,000 (1984). Ethnicity: African, European, and mixed. Languages: English, Creole. Columbus named the island when he visited it in 1493, its terrain reminding him of Montserrat in Catalonia (from Latin *Mons Serratus* Saw-Toothed Mountain). In 1632, the island was colonized by English and Irish settlers from St Christopher, followed by more Irish from Virginia. Slaves from Africa began arriving in 1664. Although the French took the island for brief periods in 1664, 1667, and 1782, it remained British, but did not become a colony until 1871. In 1958, it became a member of the Federation of the West Indies, and did not seek independence on the dissolution of the Federation in 1962. The island's active volcanoes are known as *soufrières* (French: sulphurous ones). The highest point, Chances Peak, rises above the Soufrière Hills in the south. The private radio service, Radio Antilles, broadcasts from the island to the Caribbean region in English. See BLACK IRISH, CARIBBEAN, ENGLISH. [AMERICAS, MEDIA, NAME, VARIETY]. T.MCA.

**MOOD** [16c: from French *mode*, Latin *modus* form, manner, limit, influenced by and assimilated to Old English *mōd*, later *mood*, feeling, disposition. Compare MODALITY, MODE]. In traditional grammar, a term for a form of the verb that affects the general meaning of the sentence and for the sentence or clause type in which it occurs. Three moods are customarily recognized for English: the *indicative* (*God helps us*); the *imperative* (*Help us*); and the *subjunctive* (*God help us*). See IMPERATIVE, INDICATIVE, SUBJUNCTIVE. [GRAMMAR]. S.G.

**MOON TYPE**. See BRAILLE.

**MORALITY PLAY**. See DRAMA, ENGLISH LITERATURE.

**MORNINGSIDE AND KELVINSIDE**. Accents of English in Scotland, named after middle-class districts of Edinburgh and Glasgow; in effect one accent, generally regarded as an affected,

hypercorrect imitation of RP. In popular and literary caricatures since the 1940s, it is identified with two shibboleths in particular: a raised realization of the short, front vowel /a/, frequently represented as *e*, as in 'actually' for *actually*; a single, narrowed realization of the ScoE diphthongs in *five*, *time* ('faive', 'taime'). The features come together in 'Eh'm quate well aware of that fect' (Mrs M'Cotton, in Helen W. Pryde's *McFlannels United*, 1949). As a stigmatized stereotype, Kelvinside is on record since 1901, Morningside since the 1940s. The accent may have originated in 19c middle-class girls' private schools and seems not to be regionally restricted. Although the stereotype flourishes the accent may be dying out. The names are also used by speakers of the vernacular for any 'anglified' variety of ScoE, especially the near-RP speech of lawyers, architects, and other professional people. Other designations include (*to speak*) *pan loaf/haigh cless*, *tae pit oan the high pan* or simply *tae pit (it) oan* (to put on airs), and *to speak posh*. Compare KENSINGTON. See AFFECTATION, ANGLIFY, POSH, SCOTTISH ENGLISH. [EUROPE, VARIETY]. A.J.A.

**MORPHEME** [1890s: from French *morphème*, coined by analogy with *phonème*, from Greek *morphê* shape, form. See -EME, PHONEME]. In linguistics, a minimal unit of form and meaning. There are many variations in how the term is used and understood, arising in the main from a distinction between language as arrangement and language as process: (1) As proposed by the US structural linguist Leonard Bloomfield (*Language*, 1933), the morpheme is the unit of morphology and therefore grammatical. In this approach, language analysed as a static arrangement of data consists of minimal units of form and meaning, each of which can be physically identified. The sentence *The cats were sitting unhappily in the rain* is analysable into the morphemic string *the + cat + s + were + sit(t) + ing + un + happy + ly + in + the + rain*. The 8-word sentence consists of 12 morphemes, all of equal status. (2) As proposed by the French linguist Joseph Vendryes (*Le Langage*, 1921), the morpheme is one of two units, one grammatical, one semantic, and each in its own sense minimal. Language in this approach is the outcome of processes which may or may not all have observable forms, but which can be analysed as units of grammatical meaning (*morphemes*) and units of lexical meaning (for Vendryes *semantemes*, but now known as *lexemes*). Here, morphemes are the glue that holds lexemes together, and the specimen sentence can be analysed as: *the + CAT + s + (BE + past/plural) + SIT(T) + ing + un + HAPPY + ly + in + the + RAIN* (in which the lower-case items are morph-

emes, the upper-case lexemes). The 8-word sentence in this analysis contains 8 morphemes and 5 lexemes.

There have been many variations on these themes. The US linguist Dwight Bolinger (*Aspects of Language*, 1968) divided Bloomfield's morpheme into a *system morpheme* (the glue) and a *source morpheme* (the content), while the French linguist André Martinet (*Éléments de linguistique générale*, 1970) subsumed Vendryes's morpheme and lexeme under a unifying unit the *moneme*. In this approach, the specimen sentence has 13 monemes divided into 8 morphemes and 5 lexemes. Currently, whatever the terms used, linguists tend to agree on three points: (1) Grammatical and lexical units need to be distinguished: for example, the two elements *cat* and *s* in the word *cats* are different aspects or levels of language. (2) Not all the features in a stretch of language are physically realized: for example, *cats* may exhibit a marker of plurality, but *sheep* does not. (3) One unit of form may serve more than one end: for example, *were* in the specimen sentence above combines *BE* and *past*. The traditional structuralist approach assumes that all the morphemes of a language can in principle be listed in a *morpheme inventory*, like a phoneme inventory, but because of the complexities involved, few such lists have been attempted and none exists for English.

In later structural linguistics, the *morpheme* has been defined as the abstraction behind a *morph* (a form that has semantic distinctiveness). It may subsume two or more *allomorphs*, morphs that have common semantic identity but differ in their pronunciation according to well-defined rules: for example, the prefixes *in-*, *im-*, *il-* are allomorphs of the same morpheme (in this case a negative prefix) in the words *insincere*, *impolite*, *illogical*, the choice of prefix being determined by the initial sound of the stem that follows the prefix. When it deals with morphs and morphemes, morphology is known as *morphemics*. See BLOOMFIELD, -EME, LEVEL OF LANGUAGE, LEXEME, MORPHOLOGY, PHONEME. [GRAMMAR, LANGUAGE, WORD]. T.MCA., S.G.

**MORPHOLOGY** [19c: from Greek *morphê* shape, structure, and *-logy* study]. In linguistics, the study of the structure of words, as opposed to *syntax*, the study of the arrangement of words in the higher units of phrases, clauses, and sentences. The two major branches are *inflectional morphology* (the study of inflections) and *lexical morphology* (the study of word-formation). See ACCIDENCE, DERIVATION, INFLECTION/INFLEXION, LINGUISTICS, LINGUISTIC TYPOLOGY, MORPHEME, SYNTAX, USAGE, VERB, WORD, WORD-FORMATION. [GRAMMAR, LANGUAGE]. S.G.

**MORRIS, Edward Ellis** [1843–1902]. Australian philologist, born in Madras, India, and educated at Oxford, England. He was appointed headmaster of Melbourne Church of England Grammar School in 1875 and held the chair of English, French, and German languages in the U. of Melbourne from 1883 until his death. His major publication was *A Dictionary of Austral English*. See AUSTRALIAN DICTIONARIES. [BIOGRAPHY, OCEANIA, REFERENCE]. W.S.R.

**MOTHER COUNTRY** [16c]. (1) Especially formerly, a person's native land; the country of origin of a person or a group. (2) More commonly, the country from which colonists have moved in order to establish a new settlement (for example, Greece, in ancient times the mother country of colonies around the coasts of the Mediterranean and the Black Sea), or the founding country of an empire (in more recent times, England or Britain, the mother country of the British Empire). The term was widely used until the 1960s/70s, often with sentimental affection, especially in Australia and New Zealand, after which it began to die out as memories of the Empire have faded. Compare HOME, OLD COUNTRY. See BRITISH EMPIRE, COLONIAL. [NAME]. T.MCA.

**MOTHERESE** [c.1960s]. A term used in the study of child language acquisition for the way mothers talk to their young children. Its features include simplified grammar, exaggerated speech melody, diminutive forms of words such as *doggie*, and a highly repetitive style. There is also a tendency to expand or comment on what the child has just said: when a child says *Castle down*, and the mother replies, *Yes, the castle's fallen down*. Although originally mothers were the focus of research study, similar conversational patterns have been observed in fathers' speech (sometimes referred to as *fatherese*) and in the speech of others who look after young children, such as grandparents and nannies (users of *caretaker speech*). These patterns, however, are not identical: for example, research indicates that fathers tend to be more intense and demanding in talking to young children, using more direct questions and a wider range of vocabulary. See BABY TALK, CHILD LANGUAGE ACQUISITION, -ESE. [LANGUAGE]. D.C.

**MOTHER TONGUE**. A general term for the language of the childhood home, learned 'at one's mother's knee', often used synonymously with *native language*. Although the implication is usually clear, there is no necessary connection between a child's use of language and the language of its mother: some children learn the language of a nurse or ayah first; a mother may talk

to her child in a language not originally her own; the mother may be dead. The term is often used to mean a national language, such as French, whether or not it is the first or preferred language of all members of the nation, as with Basques and Bretons in France. Compare FIRST LANGUAGE/SECOND LANGUAGE, NATIVE LANGUAGE. See TONGUE. [LANGUAGE]. P.C., T.MCA.

**MOTION PICTURE** [20c]. Also technically **cinefilm**, informally (especially AmE) **movie**, (especially BrE) **film**. A series of sequentially ordered photographs or drawings (known as *frames*) recorded on one or more reels of film and projected at speed on to a screen by strong, focused light, giving an impression of natural motion. The pioneers of such strip pictures in the late 19c were Louis and Auguste Lumière with the *Cinématographe* in France, whose *La Sortie des ouvriers de l'usine Lumière* ('Workers leaving the Lumière factory', 1895) is regarded as the first successful motion picture, and Thomas A. Edison with the *Vitascope* in the US. Collectively, especially when considered as an art form, motion pictures are referred to as *cinema*, the art form being *cinematic art* or *cinematics*, and the process and technology *cinematography*. All words based on *cine-* have been inspired by the name chosen by the Lumières for their equipment (from Greek *kinēma* motion and *grāphein* to write). Public enthusiasm for filmshows, at first presented in music halls, fairgrounds, and the like, strong from the start, led to the development of specialized buildings called in the US first *nickelodeons* (shows priced at a nickel per person) then *movie theaters*, and in the UK *cinemas* and (formerly) *picture houses*.

In the first decade of the 20c, French production was pre-eminent, Charles Pathé building up the first film 'empire'. America, however, began to catch up, bringing out in 1906 the first full-length movie, *The Story of the Kelly Gang*; in the following year, film-making began in the Los Angeles suburb of Hollywood. In 1916, *The Gulf Between*, the first film in colour, was produced in the US, where movie-making benefited greatly from damage caused to the European film industry by the First World War. By 1918, when the US War Industries Board declared motion pictures an essential national industry, Hollywood with its system of *stars* (major actors and actresses) had come to dominate the international market and has remained dominant throughout the century. The first full-length 'talkie' (film with a soundtrack) was *Dream Street* in 1921; the first newsreel, Fox's *Movie-tone News*, appeared in 1927, the same year as the first film with fully developed dialogue, *They're Coming to Get Me*. On the coming of speech, and especially American speech, to the

'silver screen', *The Encyclopaedia Britannica* notes:

The silent film had been an international language; the talkies were a return to Babel. Hollywood's foreign market inevitably suffered, and talking films permitted a degree of revival in such film industries as those of Germany, France, and Italy. The international dominance of the United States, however, was not seriously or permanently affected. Hollywood's advantages were its vast domestic and foreign English-language audience, an unrivalled mastery of the techniques and marketing of films, and the ability to create and market star personalities of universal appeal (in the *Micropaedia* entry *motion picture*, 1986).

A major linguistic consequence of the international success of American films (in cinemas, on network television, or in videotaped versions) has been a diffusion of English to the world at large (whether or not films were subtitled and despite dubbing into other languages) and of AmE to the rest of the English-speaking world, especially informal usages such as *OK*, slang expressions such as *dough* for money, catch-phrases like *Play it again, Sam* (associated with the actor Humphrey Bogart in the film *Casablanca*), and snatches from the lyrics of songs in musicals. Only one other national movie-making enterprise and with it one other language have attained anything close to the scale of Hollywood's success: Indian films with soundtracks in Hindi, produced in Bombay, whose industry has as a result of its success been nicknamed *Bollywood*. In addition to the mammoth American operation, English-language films with an international market are made in Britain, Australia, and Canada. See BROADCASTING, FEATURE, LIBRARY OF CONGRESS. [MEDIA]

T.MCA., G.H.

**MOTTO** [16c: through Italian from Latin *mutuum* sound, utterance. Plural: *mottos*, *mottoes*].

(1) Originally, a word or phrase attached to an emblem to emphasize or explain its symbolic importance. (2) A word, phrase, or sentence on a badge, banner, coat of arms, or the like, expressing an ideal, attitude, or guiding principle associated with the group, family, or organization to which it belongs. Mottos in English-speaking countries have often been in Latin (such as *Fide et opera* by faith and deeds, motto of Clan MacArthur) or in French (such as *Honi soit qui mal y pense* Shamed be he who thinks evil of it, motto of the Order of the Garter). (3) A proverb or pithy saying, especially if adopted as a rule of conduct: '*Never say die*', *that's my motto*. (4) A quotation set at the beginning of a book, chapter, or the like; an epigraph. (5) The doggerel lines in a paper cracker or the like. Compare EPIGRAPH, LATIN TAG, MAXIM, PROVERB, SLOGAN. [STYLE].

T.MCA.

**MOUSE** [1980s in this sense]. A term in computing for a device resembling a mouse, with an electrical lead as the tail, which is moved by hand on a surface such as a desktop. A rollerball in the mouse reads its motion and transmits it along the lead to the screen of a computer, where it influences the position and functions of a *cursor* (a movable point on the screen that indicates where one can type a letter or perform another function). See KEYBOARD. [TECHNOLOGY].

M.L.

**MOUTH.** See SPEECH.

**MOVIE.** See MOTION PICTURE.

**MULATTO** [16c: from Spanish and Portuguese *mulato*, a young mule. The feminine form *mulatta* sometimes occurs]. A general term for someone of mixed usually Caucasian and African ancestry, especially of a European father and an African mother. It is associated with the slave plantations of the New World, in which precise gradations of colour were marked; the offspring of a mulatto and a white was a *quadroon*, of a quadroon and a white an *octroon*, etc.: 'A Mulatto woman, the offspring of a Spaniard and a negress, may give birth to a Morisco by uniting with a Spaniard' (Deniker, *Races of Man*, 1900). Until recently, a person in white society believed to have mixed ancestry was commonly said to *have a touch of the tar brush*. The term *mulatto* is sometimes intended neutrally ('92% African, 4% Caucasian, 4% Mulatto': population percentages in *South, 1990 Diary*) but has generally been dismissive: 'two wooly-headed poor little mulattos' (W. M. Thackeray, *The Newcomes*, 1854). Compare BLACK, CREOLE, MESTIZO, MÉTIS, RACISM, WHITE. [AMERICAS, NAME]

T.MCA.

**MULCASTER, Richard** [1530?-1611]. English scholar, schoolmaster, author, and liberal educational theorist; the poet Spenser's headmaster at the Merchant Taylors' School in London and perhaps Shakespeare's model for the pedant Holofernes in *Love's Labour's Lost*. Mulcaster's *The First Part of the Elementarie* (1582) was the period's most significant pronouncement on English. It took an innovative stand in the movement on reforming spelling, issued the first call for a comprehensive dictionary of English, defended the right of borrowing words from other languages, and exhibited unlimited pride in English. He said that it is the learning in a language and not any inherent virtue that makes it esteemed, and English can be as learned and expressive as any: 'I loue Rome, but London better, I fauor Italie, but England more, I honor

the Latin, but I worship the English.' Mulcaster's prose, which he admitted was difficult as befitting a scholar, is by turns witty and eloquent, exemplifying his confidence in the language. See index. [BIOGRAPHY, EDUCATION, EUROPE, HISTORY]. W.F.B.

**MULTICULTURALISM** [1960s]. (1) Also *cultural pluralism*. Sociological terms for the co-occurrence of many cultures (including hybrid forms) in one area, as in the cities of Auckland, Bombay, London, New York, Singapore, Sydney, and Toronto. (2) A sociopolitical policy of encouraging the coexistence and growth of several cultures in one place: 'A policy of multiculturalism within a bilingual framework commends itself to the government as the most suitable means of assuring the cultural freedom of Canadians' (*Daily Colonist*, Victoria, British Columbia, 9 Oct. 1971). The term *multicultural* is sometimes used as a synonym of *multiracial*: 'Although Britain has a multi-cultural society, where are the black faces among the television announcers, newscasters and sports commentators?' (*Daily Telegraph*, 20 July 1973). In recent years, the terms *multicultural*, *multiculturalism*, *multiculturalist*, etc., have been used, both positively and negatively, to identify and discuss a movement that confronts certain perceived biases in Western and especially US society, particularly in education and on college campuses: 'New York's state government voted last week to introduce multicultural history into its schools. The new syllabus, designed to reflect the multiracial make-up of the state, will emphasise the role of women and ethnic minorities, and play down the importance of those who have now been labelled Dwems (dead white European males), like Columbus, Jefferson, and Custer. The New York decision was the biggest victory yet for the "multiculturalists", an increasingly powerful group who believe the Anglo-Saxon tradition is a racist, sexist plot designed to preserve white male dominance' (John Cassidy, 'History turns its back on America's heroes', *Sunday Times*, 28 July 1991); 'It is in its most intense and extreme form . . . that multiculturalism is on its way to being a major educational, social and eventually political problem. This version is propagated on our college campuses by a coalition of nationalist-racist blacks, radical feminists, "gays" and lesbians, and a handful of aspiring demagogues who claim to represent various ethnic minorities' (Irving Kristol, 'The Tragedy of Multiculturalism', *Wall Street Journal*, 31 July 1991). See AUSTRALIAN ENGLISH, BICULTURALISM, CULTURE, MULTILINGUALISM, POLITICALLY CORRECT, RACISM, SEXISM. [AMERICAS, LANGUAGE, STYLE]. T.MCA.

**MULTILINGUALISM** [Mid-20c]. The ability to use three or more languages, either separately or in various degrees of code-mixing. There is no general agreement as to the degree of competence in each language necessary before someone can be considered multilingual; according to some, a native-like fluency is necessary in at least three languages; according to others, different languages are used for different purposes, competence in each varying according to such factors as register, occupation, and education. Where an individual has been exposed to several languages, as for example in India, Nigeria, or Singapore, one language may be used in the home, another professionally, another passively for listening or reading, another spoken but not written or read, and so forth. In a multilingual state, such as India, most individuals have a knowledge of several languages, but not uniformly nor in the same combinations across the nation: in Bombay, people may have a varying acquaintance with Marathi (the state language of Maharashtra), Hindi (the national official language), English (the national associate official language and an important language of business and culture in the city), and Gujarati (the language of two important minority groups, the Gujaratis and Parsis); in such a setting, few people are unilingual. BILINGUALISM, CODE-MIXING AND CODE-SWITCHING, LANGUAGE PLANNING, LINGUAL, MULTICULTURALISM, POLYGLOT. [LANGUAGE, STYLE]. T.MCA.

**MULTIMEDIA** [1960s: from *multi-* many, and *media*, plural of *medium*: see MEDIA]. A term, generally used attributively, for forms of educational, artistic, commercial, or other communication in which more than one medium is used simultaneously or in close association: *a multimedia rock festival*; *a multimedia publishing company*. A typical multimedia production is *The Hitch Hiker's Guide to the Galaxy* by Douglas Adams, which since 1979 has had a radio, a television, and a printed version. See BBC ENGLISH<sup>2</sup>. [MEDIA, STYLE, TECHNOLOGY]. T.MCA.

**MULTIPLE MEANING**. See MEANING, POLYSEMY, SEMANTIC CHANGE, SEMANTICS.

**MULTIPLE NEGATION**. See DOUBLE NEGATIVE, NEGATION.

**MUMBO JUMBO** [18c: of uncertain origin, but probably from Mandingo *mama dyumbo*, the name of a god, perhaps influenced by *mumble-jumble* to speak indistinctly and incoherently. In 1738, Francis Moore (*Travels into the inland parts of Africa*) reported among the Mandingo and other tribes 'a dreadful Bugbear call'd Mumbo-Jumbo, which is what keeps the Women

in awe'. In 1799, Mungo Park (*Travels in the Interior of Africa*) reported 'A sort of masquerade habit . . . which I was told . . . belonged to Mumbo Jumbo . . . a strange bugbear employed by the Pagan natives in keeping their women in subjection, in effect a man grotesquely dressed up at night, with a rod to beat troublesome women]. (1) An object of superstitious awe or unintelligent veneration, such as an idol; foolish religious ritual or incantation. (2) Sometimes *mumbo* alone. Obscure, complicated, and confusing language: 'Mumbo jumbo developed by educators to confound the public in general and inquisitive parents in particular' (Mario Pei, *Words in Sheep's Clothing*, 1970); 'Labour's elected representatives mouth the mumbo-jumbo of capitalism: "The pound must be kept strong", "We must all buy British" ' (*The Times*, 14 Aug. 1975). Compare JARGON, NONSENSE. See REDUPLICATIVE. [AFRICA, STYLE].

T.MCA.

**MUMMERSET** [20c: a blend of *mummer*, one who mutters and murmurs, or takes part in a mime, and *Somerset*]. Also **Mummersetshire**. An imaginary rustic county of England and its dialect: 'Nowadays you can't be sure if they are eggs, even when somebody on television says they are in B.B.C. Mummerset' (C. Mackenzie, *Paper Lives*, 1966). This form of stage West Country is drawled and emphasizes retroflex /r/ ('Arrr, that'll be roit, zurr'). It replaces /s/ with /z/, /f/ with /v/ ('We ain't zeen 'im zince last Vroiday'), and uses special forms of *be* ('We be happy yere, bain't we?'). Comedians sometimes add pseudo-dialect words to the brew. See BURR, MUMMERY, SOMERSET, STAGE, WEST COUNTRY. [EUROPE, LITERATURE, VARIETY].

T.MCA.

**MUMMERY** [16c: from Old French *mommerie*: compare MUMMERSET]. (1) A performance of *mummers*, actors in a mime or dumb show, usually extravagant in style, in fancy dress, and masked. The word *mummer* has three meanings: one who mutters; one who 'keeps mum' (is silent or dumb); and one who is masked (from Old French *momeur*, from *momon* mask). The term *mumming* refers to the art and actions of mummers and also to indistinct or inarticulate speech (compare *mumbling*). (2) By extension, ridiculous ceremonial or play-acting, often applied dismissively to religious ritual. See MIME, MUMBO JUMBO, MUMMERSET. [LITERATURE, SPEECH].

T.MCA.

**MUMPSIMUS** [16c: from a once well-known humorous story told among others by Erasmus, of a semi-literate priest who had got into the habit of using in the Mass the nonsensical word *mumpsimus* (probably a textual corruption) in

the Latin phrase *quod in ore sumpsimus* (that we have taken up in the mouth). He doggedly refused to change when told of his error, saying: 'I will not change my old mumpsimus for your new sumpsimus'. Archaic: (1) An established reading of a text that is patently wrong but obstinately retained; an erroneous tradition blindly adhered to: 'Some be to styff in their old *Mumpsimus*, other be to busy and curious in their newe *Sumpsimus*' (Henry VIII, referring to religious reformation, in a Parliamentary speech, 24 Dec. 1545). (2) Stubborn persistence in using a mispronunciation, a misspelling, etc., when the fault has been pointed out. (3) One who persists in this; an ignorant and bigoted opponent of reform: 'other doctoures mumsimusses of diuinyte' (William Tyndale, *The practyse of prelates*, 1530). Compare CORRUPT, MIS-, MISPRONUNCIATION, NONSENSE. [STYLE, WRITING].

T.MCA.

**MURISON, David Donald** [b.1913]. Scottish lexicographer and philologist, born in Fraserburgh, Aberdeenshire, and educated at the U. of Aberdeen (from 1933) and Cambridge (from 1936). In the late 1930s, he was assistant to the Professor of Greek at Aberdeen. In 1946, he succeeded William Grant as Editor of *The Scottish National Dictionary*, the editing of which was then near the end of C. Murison completed the Dictionary some 30 years later, at a rate of progress high for a work of this kind, editing seven of the ten volumes. He has also produced many other scholarly writings on Scots, such as 'Linguistic Relationships in Medieval Scotland' (in *The Scottish Tradition*, 1974) and 'The Language of the Ballads' (in *Scottish Literary Journal*, Supplement 6, 1978), and several authoritative popular works such as *The Guid Scots Tongue* (1977) and *Scots Laws* (1981). Murison helped found and develop the study of Scots as an academic subject. During the 1960s, he lectured on Scots in the English Department of the U. of Aberdeen, and was Lecturer then Reader in Scots in the U. of Glasgow (1975-8). A festschrift in his honour, entitled *Scotland and the Lowland Tongue*, was edited by J. Derrick McClure (Aberdeen University Press, 1983). See SCOTTISH DICTIONARIES. [BIOGRAPHY, EUROPE, REFERENCE].

A.J.A.

**MURRAY, Sir J(ames) A(ugustus) H(enry)** [1837-1915]. Scottish lexicographer and philologist. Born in Denholm, Roxburghshire, he had no formal education after the age of 14, acquiring his erudition by private study. He moved from Hawick to London in 1864 in the hope that milder southern winters might help his first wife's health, but she died shortly afterwards. From 1870 to 1885, he was English master at

Mill Hill School in north-east London. He joined the circle of professional and amateur scholars who were establishing the scientific study of phonetics, Early English, and dialectology. From 1868, he was active in the Philological Society, and, urged on by F. J. Furnivall, produced several editions of Scots texts for the Early English Text Society. In 1873, he brought out *The Dialect of the Southern Counties of Scotland*, on which all subsequent work on the history and description of Scots has depended. His entry on the English Language in the 9th edition of the *Encyclopaedia Britannica* (1878) has long been regarded as a classic.

In 1876, Murray was invited by the publisher Macmillan to produce a major new dictionary of English. Although this proposal came to nothing, it reawakened the interest of Furnivall and others in the Philological Society's own lapsed project for a new historical dictionary. The upshot was its relaunching by Murray in 1879 at Mill Hill. With the help of hundreds of new volunteer excerptors, he augmented the collection of quotations (already over 2m on slips) assembled by Coleridge and Furnivall. At the same time, following the principles set out in R. C. Trench's paper of 1857, he laid down plan and methodology, after which, in the face of financial and other difficulties, he began to produce copy for *A New English Dictionary on Historical Principles* (later renamed *The Oxford English Dictionary*) at the remarkable rate of over 200 dictionary pages per year. In 1885, he gave up his part-time post at Mill Hill School and moved to Oxford to devote himself exclusively to the dictionary. He edited some 7,207 of its 15,487 pages, the remainder being divided among Henry Bradley, William Craigie, and Charles Onions. Because of the influence on later historical dictionaries of the methods he devised and of the editorial standard he set, and his own prodigious achievement as a dictionary compiler, Murray is widely regarded as the greatest ever lexicographer. His granddaughter, K. M. Elisabeth Murray, has written *Caught in the Web of Words: James A. H. Murray and the Oxford English Dictionary* (Yale University Press, 1977). See index. [BIOGRAPHY, EUROPE, REFERENCE]. A.J.A.

**MUSE** [14c, through French from Latin *musa*, Greek *moûsa*, also the source of *music* (through Latin *musica*, from Greek *mousikḗ tékhnē* the craft of the muse), and of *museum* (through Latin from Greek *mouſeion* the place of the muses). Often written with initial capital]. A classical female symbol of creative inspiration. In the mythology of the Greeks there appears originally to have been one muse, but various traditions list three, seven, or nine sisters born to

Mnemosyne, the goddess of memory, and to Zeus. Homer invoked only one such unnamed 'goddess' at the start of both the *Iliad* and the *Odyssey*, and since his time many poems have begun with a so-called *invocation to the Muse*. The multiplication of muses suggests the development of an evolving taxonomy of the arts, each with a symbolic patron. The three muses were *Aoide* song, *Melete* meditation, and *Mneme* memory; the nine that the poet Hesiod claimed to have met were *Calliope*, the muse of epic poetry and foremost of them all, *Clio*, the muse of history, *Erato* of lyric poetry, *Euterpe* of music, *Melpomene* of tragedy, *Polyhymnia* of religious music, *Terpsichore* of dance, *Thalia* of comedy, and *Urania* of astronomy. Milton invoked a Christianized Urania, his 'Heavenly Muse', in *Paradise Lost* (1667), identifying her with the Holy Spirit that spoke to Moses. The term *the Muses* has been used to represent the liberal arts and *the Muse/muse* has referred to any source of inspiration: for example, the phrase *My muse was silent* might refer to a lack of ideas or to an inspiring woman who has nothing to say to the would-be poet. There have been many extensions of use, such as *a northern Muse* (Scottish poetic talent), *a crowned Muse* (King James I of England as literary patron), *a youthful muse* (the ability of a young, callow poet), and *the tenth Muse* (for a new kind of writing, such as both journalism and American literature in the 19c). Currently, the Muse is most commonly found in book titles, such as Stephen Potter's *The Muse in Chains* (1937), on the development of 'Eng. Lit.' as an academic subject, Herbert E. Read's *The Tenth Muse: Essays in Criticism* (1957), and Hugh Kenner's *The Mechanic Muse* (1987), a study of literature's response to technology. See IMAGINATION, MNEMONIC, POTTER. [LITERATURE, MEDIA]. T.MCA.

**MYSTERY PLAY.** See DRAMA, ENGLISH LITERATURE, TROPE.

**MYTH** [1820s: from Latin *mythos*, Greek *mûthos*, a story]. (1) A culturally significant story or explanation of how things came to be: for example, of how a god made the world or how a hero undertook a quest. As such, myth is opposed to *history*, in that it is usually fabulous in content even when loosely based on historical events. The term *mythology* refers both to the study of myth and a system of myths, such as *Greek mythology*. (2) A fictitious or dubious story, person, or thing: *That's a myth; it never happened*. Stories once regarded as true (and therefore not myths) may lose their power to convince (and be demoted to the status of myth), because other stories replace them (as pagan accounts of life were replaced by Christian

accounts) or they are no longer considered relevant, credible, or useful. The adjectives *mythic* and *mythical* are synonymous, but *mythic* is often kept for the first sense of *myth* ('Mythic figures like Zeus and Heracles'; 'a story of mythic proportions') and *mythical* for the second sense ('the mythical land of El Dorado'). In classical Greece, *mūthos* was contrasted with *lógos*; both derive from verbs that translate as 'speak', but where *mūthos* subsumed poetry, emotion, and

mythic thought, *lógos* subsumed prose, reason, and analytical thought. The present-day dichotomy between poetry, literature, and the humanities on the one hand, and reason, logic, analysis, and science on the other dates from the anti-mythic and anti-poetic stances adopted in the 5/4c BC by such philosophers as Plato. See ARCHETYPE, FICTION, LEGEND, LOGIC, RHETORIC. [LANGUAGE, LITERATURE].

T.MCA.

# N

**N, n** [Called 'enn']. The 14th letter of the Roman alphabet as used for English. It originated as the Phoenician symbol *nun*, adopted by the Greeks as *nu* (*N*), a form which the Romans adopted in their turn.

**Sound value.** In English, the letter *n* represents a voiced alveolar nasal. Before a vowel, the sound-symbol correspondence is regular (*name, many*), but in loans from French a preceding medial *g* indicates a *y*-sound after the *n* (*cognac*: 'con-yack'). In French loans *n* may nasalize a preceding vowel, but have no clear sound of its own (*restaurant, lingerie*). Articulation may be affected by a following consonant: *b, p* may give the value of *m*, as in *inbred* ('imbred') and *input* ('imput'), and following hard *c, k, g, q, x* may produce a velar nasal 'ng': *zinc, increase, ink, sing, anger, concrete, congress, conquer, anxious*.

**Double N.** (1) In monosyllables following an initial consonant and vowel, *n* is normally single (*ban, can, fan, man, ran, tan, ten, tin, ton, tun*), with doubling before inflections beginning with a vowel (*bans, banned, banning*). *Nn* follows the initial short vowel in *inn, Ann*, but not in grammatical words (*an, in, on*). (2) In disyllables, after a short vowel, especially before *-er, -a, -y*: *manner, tenner, dinner, gunner; manna, henna; canny, tinny*. The pairs *dinner/diner, tinny/tiny* show the force of the doubling. However many other words do not observe this pattern: *any, canon* (beside *cannon*), *enemy, honour, linen, money, tenor*. A single *n* is usual before *-ish* (*ban-ish, replenish, finish* (compare *Finnish*), *astonish, punish, Spanish*) and *-ion* (*companion, minion, pinion, onion, union*). Many such words derive from French, but do not follow modern French use of *nn/n*: *diner, ennemi, étonner, honneur, manière, monnaie*. (3) With the Germanic prefix *un-* before *n* (*unnecessary, unnerved*) and Latin

prefixes ending in or assimilated to *n* (*annul, connect, innate, innocent*). (4) When the Germanic suffix *-ness* is added to words ending in *n*: *barrenness, openness* (but usually with a geminated or 'double' pronunciation). (5) In the comparative of adjectives ending in *n* following a short vowel if stressed (*thinner, thinnest*), but not if unstressed (*commoner, commonest*).

**Syllabic N.** The letter *n* may have syllabic value after alveolar consonants, as in the negative contractions *hadn't, isn't, mightn't* and the name *Haydn*. In similar environments, syllabic *n* can alternate with /n/ preceded by schwa. The schwa may, however, be spelt with a range of vowel letters: *beaten, raisin, fashion, cotton*. These variations can cause uncertainty: for example, in the endings *-ant, -ent*: *resistant, consistent*. See A, SYLLABIC CONSONANT.

**Epenthetic N.** Sometimes, an epenthetic *n* has been inserted in a word: *messenger, passenger*, from *message, passage* (compare French *messager, passager*). See EPENTHESIS.

**Transfer.** (1) Some nouns have lost an initial *n* that has been transferred to the indefinite article: *an adder* from *a nadder*, *an apron* from *a naperon*, *an umpire* from *a noumpere*. (2) Conversely, the *n* of *an* has sometimes been transferred to a following noun: *a newt* from *an ewt*, *a nickname* from *an ekename*, *the nonce* from *then anes*. See METANALYSIS.

**Silence.** (1) Word-final *n* is silent after *m* (*damn, hymn, autumn, column*), including inflected forms (*condemned, condemning*), but is pronounced in derived forms where a vowel follows (*autumnal, condemnation, hymnal, solemnity*). (2) *N* is sometimes preceded by a silent *g, k, p*: *gnat, feign, foreign; knit, know; pneumatic, pneumonia*. See G, K, P.

**Other patterns.** Many words in older English which ended in *n* (often an inflection) have lost

## THE CAPITAL LETTER

EARLY FORMS			CURRENT FORMS		
Phoenician	Greek	Etruscan	Roman (Latin)	roman	italic
𐤍	Ν	𐌒	N	N	N

## THE SMALL LETTER

EARLY FORMS			CURRENT FORMS	
Roman cursive	Roman uncial	Carolingian minuscule	roman	italic
𐌶	N	n	n	n

the *n* with the inflection. Nevertheless, there are some pairs of words in which one member is without and another has kept the final *n*: *a/an*, *drunk/drunken*, *maid/maiden*, *my/mine*, *oft/often*, *ope/open*. One of the terms often has an archaic or poetic flavour: *maiden*, *oft*, *ope*. The inflectional function survives in the *olden of olden days/times*. See ALPHABET, EN, LETTER<sup>1</sup>, SPELLING. [WRITING]. C.U.

**NADSAT.** See BURGESS.

**NAIPAUL, (Sir) V(idiadur) S(urujprasad)** [b.1932]. Novelist, critic, essayist, reviewer, and broadcaster, of Indian background, born in Trinidad, and educated at Queen's Royal College, Trinidad, and Oxford. Widely travelled, he has regularly contributed to journals in the UK and US, and has been a Nobel Prize nominee. His works, mainly published in London by André Deutsch, include: *The Mystic Masseur* (1957), *Miquel Street* (1959), *A House for Mr Biswas* (1961), *The Middle Passage* (1962), *Mr Stone and the Knights' Companion* (1963), *An Area of Darkness* (1964), *A Flag on the Island* (1967), *The Mimic Men* (1967), *The Loss of Eldorado* (1970), *In a Free State* (1971), *The Overcrowded Baracoon* (1972), *Guerrillas* (1975), *India: A Wounded Civilization* (1977), *The Return of Eva Peron* (1980), *Among the Believers* (1981), *Finding the Centre* (1984), *The Enigma of Arrival* (1987, New York: Knopf), *A Turn in the South* (1987). Honours include the Trinity Cross (Trinidad and Tobago, 1989) and a knighthood. Further biographical details are provided in K. Jarvis, *V. S. Naipaul: A Selective Bibliography with Annotations, 1957-1987* (New Jersey: Scarecrow, 1989). See index. [AMERICAS, BIOGRAPHY, LITERATURE]. L.D.C.

**NAME** [From Old English *nama*, cognate with Latin *nomen* and Greek *ónoma/ónuma*]. A general, non-technical term for a word or phrase that designates a person (*woman*, *Helen*) an animal (*cat*, *Felix the Cat*), a place (*Helensburgh*, first a town in Scotland, then by commemorative extension a town in Australia), or a thing (the mineral *stone*, the subject or activity *electrical engineering*, the novel and motion picture *The Hound of the Baskervilles*). The same name may serve to designate more than one distinct though linked referent: for example, *Saint Helena* denotes both a saint and the island 'named' in her honour.

**Common and proper names.** Traditionally, names fall into two categories: (1) The *common name*, which designates a member of a class, such as *cat*, *tomcat*, *stone*, *rhinestone*, *verse*, *blank verse*. Generally, common names are written without initial capital letters. (2) The *proper name*, which

designates a specific entity: *Helen*, *Troy*, *Helen of Troy*; *Henry*, *Henry Smith*, *Henry VI* (both a person and a play). Generally, proper names are written with initial capital letters for each of their constituents, especially if they are nouns or adjectives: *Prince Hal*, *Blind Harry*. Occasionally, however, the capitals are dropped for effect, as in the name of the American poet *e. e. Cummings* (1894-1962), and the names of some periodicals (such as the Australian literary magazine *overland*). Many common names that take the form of generic phrases that open with an embedded proper name, and therefore contain a capital letter, as in *Cheddar cheese*, *Siamese cat*, *Trojan horse*, *Wellington boot*. See NOMENCLATURE, NOUN, TERM, TERMINOLOGY, WORD.

**The study and classification of names.** The descriptive and historical study of proper names is *onomastics*, and the study of common names (particularly as they form lexical systems or terminologies and vary from one group of speakers to another) is *onomasiology*. Proper names are distinguished, according to referent, as: personal names (*William Smith*, *Heather Gibson*); place-names (*Alice Springs*, *Chicago*); names of events (*Armageddon*, *the Boer War*); names of institutions (*the British Museum*, *the Library of Congress*); names of vehicles (*Ford*, *Pontiac*; *The Orient Express*, *the Queen Elizabeth II*); and works of art such as books and plays (*Pickwick Papers*, *Othello*), paintings (*the Mona Lisa*, *the Laughing Cavalier*), and musical compositions (*Eine kleine Nachtmusik*, *Finlandia*). Name study is logically a branch of linguistics, with an affinity to such other subjects as anthropology and topography, but in practice it is an independent discipline that combines the interests of philologists, linguists, historians, geographers, encyclopedists, sociologists, psychologists, genealogists, literary critics, and others. See FORM OF ADDRESS, ONOMASIOLOGY, ONOMASTICS, PERSONAL NAME, PLACE-NAME.

**Associated meaning.** The associations evoked by proper names may be either public (as with *Chernobyl*, a Ukrainian city associated throughout the world with a nuclear accident in 1986) or private (for example, someone associating the name *Rex* with pain and fear, because once bitten by a dog with that name). Public associations with some place-names are so strong that the names may come to be used in a sense that was originally no more than an association: for example, *Fleet Street*, a street in London, was until the late 1980s the location of many British newspaper offices, and came to mean, by metonymy, the British national press. It continues to be so used even though all London newspapers are now located elsewhere. Personal

names often have both public and private associations that derive from particular individuals with those names: for example, *Mary* used to be, in the words of a popular song, 'a grand old name', the epitome of feminine virtue. Recently, however, it has been declining in popularity over much of the English-speaking world, and is now widely regarded as old-fashioned and pietistic. It may continue, however, to be used in certain families, for the sake of tradition, and may evoke the memory of a particular *Mary* whenever mentioned.

**Name magic.** In many societies, especially in the past, people's names have been regarded as closely linked with their owners' inmost natures. They are often intimately associated with those to whom they refer and in a non-rational way are considered to possess great power. Such names have often been conferred in special acts, such as the Christian rite of infant baptism, or such rites of passage as the taking of vows on entering a religious order, when monks and nuns give up worldly names along with worldly interests and assume new names to mark a new life. Giving and acquiring a personal name is a social act, once widely assumed to have a magical aspect: in ancient Egypt, for example, it was believed that to know someone's secret name gave one power over that person. The passing on of names within a family from one generation to the next is a long-established instance of what was once powerful word magic: a kind of time-binding by which ancestors are kept alive in their descendants.

**Changing names.** A change of personal name can be a powerful symbolic statement. In Western society, a woman once automatically adopted her husband's surname as her own, and socially used his full name instead of the names given to her at birth (as in *Mrs William Smith, née Heather Gibson*, where the French-derived *née* means 'born'). Current practice is variable. Generally, a compromise is achieved in the everyday form (*Mrs*) *Heather Smith*, where the personal first name is kept but the personal surname is changed. Especially in North America, the woman may keep her birth name, sometimes for professional purposes only, sometimes for all purposes (so that husband and wife may introduce themselves as *William Smith and Heather Gibson*). Occasionally, both partners will combine their surnames, as in *Heather and William Gibson-Smith*. Some committed feminists have dropped their family surnames altogether, and do not take a new one if married, since all such names are from the male line; instead, they may use a middle given name as surname (so that *Heather Rebecca Gibson*

becomes *Heather Rebecca*). A comparable reaction, especially in the US, is the dropping of traditional surnames by African-Americans who, seeing them as 'slave names', adopt instead African or Islamic names, as when the American boxer *Cassius Clay* became *Muhammad Ali*. **NAMIBIA.** A country of southern Africa. Capital: Windhoek. Currency: the rand (100 cents). Population: 1.3m (1988), 1.8m (projection for 2000). Ethnicity: 50% Ovambo, 9% Kavango, 8% Damara, 8% Herero, 5% Nama, 4% Caprivian, 3% Afrikaner, 3% San (Bushman), 2% German, 2% Basters, 5% mixed. Religion: 50% Protestant, 31% traditional, 19% Roman Catholic. Languages: English (official), Afrikaans, Damara, German, Herero, Kavango, Ovambo, Nama, etc. Education: primary 80%, secondary 60%, tertiary 3%, literacy 28%. Because of the Namib Desert, British and Dutch missionaries did not penetrate the region until the late 18c. The Germans colonized it as *German West Africa* in 1892-3, but lost it during the First World War to South Africa, which governed it from 1920 as *South West Africa*, under a League of Nations mandate. The United Nations sought to make it a trusteeship after 1946, but South

Africa refused to cooperate. In 1966, the UN mandate was withdrawn. In 1968, the territory's name became Namibia. South Africa governed the territory without international recognition until independence in 1990. English, Afrikaans, and German were all official until independence, when English was declared the sole official language. Afrikaans is, however, more widely used. See ENGLISH. [AFRICA, NAME, VARIETY]. T.MCA.

**NARRATION** [15c: from Latin *narratio/narrationis* telling, recounting; see NARRATIVE]. (1) The act, process, or result of narrating or telling; something narrated; the work of a *narrator*. (2) In classical rhetoric, the expounding of points or recounting of facts, the second of three stages in public speaking. (3) In the study of fiction, 'Narration is an aspect of the whole process of communication or discours(e) between author and reader, and between narrator and narratee. In critical studies and narratology it has involved the discussion of voices and points of view, of the different kinds and levels of narration (first person; third person, omniscient, etc.)' (Katie Wales, *A Dictionary of Stylistics*, 1989). In formal English, narration is usually in the past tense, but in informal and especially colloquial usage it is often in the present. See NARRATIVE, NOVEL, PLOT, RHETORIC, STORY, VOICE. [STYLE, WRITING]. T.MCA.

**NARRATIVE** [16c: from Latin *narrativus* suitable for telling, from *narrare/narratum* to tell, relate, ultimately from archaic *gnarus* knowing, practised, and cognate with Latin-derived *cognition*, Greek-derived *agnostic*, and vernacular *know*]. (1) The general or inclusive term for a story or account of any events or experiences, fact or fiction, long or short, detailed or plain. (2) The form that such a story takes, whether physical (a text or book) or a literary genre (epic or novel). (3) Without article: the process, art, or technique of narrating (telling a story): *the art of oral narrative; dramatic narrative*. (4) Relating to storytelling and the like: *narrative line; a narrative voice*. (5) In the fine arts, telling a story: for example, through sculpted forms or pictures (*narrative painting*). Compare DISCOURSE, PLOT, STORY, TEXT. See CHILD LANGUAGE ACQUISITION, NARRATION, NARRATIVE POETRY, NOVEL, STORY, VOICE. [STYLE]. T.MCA.

**NARRATIVE POETRY**, also *narrative verse*. Poetry or verse that tells a story. It ranges from such epics as Milton's *Paradise Lost* to the traditional ballad. Elizabeth Barrett Browning's *Aurora Leigh* (1857) is an 11,000-line story that Robert Browning called 'a lyric in verse'. Narrative poetry differs from *novel poetry* in content

and authorial stance. See EPIC, GENRE, POETRY. [LITERATURE]. R.C.

**NARRATIVE VOICE.** See NARRATIVE, NOVEL, VOICE.

**NARRATOLOGY.** See PLOT, POETICS.

**NARROW.** See PHONETIC TRANSCRIPTION.

**NASAL** [14c: from Latin *nasalis* of the nose]. A term used generally and in phonetics for a speech quality influenced by air passing through the nose. When a nasal consonant is produced, the velum is lowered to allow air to pass out through nose as well as mouth: /m, n, ŋ/ as in *am, an, sing*. These consonants are generally referred to as *nasal consonants* or *nasals*. *Nasalization* is the production of resonance in the nose to accompany a speech sound, as in French *bon* but not *bonne*. English vowels may be partially nasalized when followed by a nasal consonant. Some accents of English are more nasal than others; some people's voices are said to sound nasal or are described as having a *nasal accent* or a (*nasal*) *twang*. Nasality is a feature of most varieties of AmE and CanE and some kinds of London English. It is the consequence of a setting of the velum which causes a degree of nasal resonance greater than the user of such a term as *twang* would consider normal. Reduced nasal resonance is also described as *adenoidal*. There is no fixed norm. See ACCENT, ARTICULATORY SET-(TING), ENG, LONDON, NEW ENGLAND, SCOUSE, TILDE, TWANG, VELUM. [SPEECH]. G.K.

**NATE**, full form *National Association for the Teaching of English*. The national professional organization of teachers of English in Britain, founded in 1963. It organizes an annual conference and a range of local meetings and workshops, and its publications include a newsletter and the journal *English in Education*. NATE grew out of the work of the *London Association for the Teaching of English*, and has concentrated on local groups and interest groups producing responses to specific problems: during the 1960s, for example, it advised the Schools Council on research in curriculum development, members contributing to projects on oracy, the development of writing abilities 11-18, teaching literature, and children as readers. Joint activities with US colleagues produced a statement of current views in John Dixon's *Growth through English* (Oxford University Press, 1967; 2nd edition 1975). The model outlined by Dixon was developed through the 1970s as NATE became increasingly concerned with English and those disadvantaged in society. In response to the Bullock Report, whose conclusions were much

influenced by NATE members, 'language across the curriculum' became the concern of a number of conferences. In the same period, there was an increased interest in the role of language, in response especially to developments in sociolinguistics. In the 1970s-80s, NATE defended the achievements of English teaching against criticism and attack from various official and unofficial bodies. It gave substantial evidence to the Kingman Inquiry and to discussion on the National Curriculum for England and Wales, which was incorporated into the Education Act of 1988. Compare NCTE. [EDUCATION, EUROPE, MEDIA]. C.J.B.

**NATECLA**, full form *National Association for Teaching English and Other Community Languages to Adults*. An association founded in Britain in 1978 as *NATESLA* (*National Association of Teachers of English as a Second Language*), for teaching ESL to adults. It seeks to provide a professional forum for organizers and teachers of English and community languages to adults. It provides a network for training and the sharing of materials, and publishes a newsletter and the journal *Language Issues*. See COMMUNITY LANGUAGE. [EDUCATION, EUROPE, MEDIA]. C.J.B.

**NATIONAL ASSOCIATION FOR TEACHING ENGLISH AND OTHER COMMUNITY LANGUAGES TO ADULTS.** See NATECLA.

**NATIONAL ASSOCIATION FOR THE TEACHING OF ENGLISH.** See NATE.

**NATIONAL COUNCIL OF TEACHERS OF ENGLISH.** See NCTE.

**NATIONAL CURRICULUM.** See CURRICULUM.

**NATIONAL LANGUAGE** [20c]. A language officially designated the language of a nation or country, usually for cultural and/or ethnic reasons. Such a language may or may not be the *official language* of the country in question (that is, used in its government and administration): for example, in Botswana, the national language is Setswana, but the official language is English. Compare NATIVE LANGUAGE, OFFICIAL LANGUAGE. [LANGUAGE]. T.MCA.

**NATION LANGUAGE** [1980s]. A term coined by the poet and scholar Edward Brathwaite to present Caribbean Creole in a positive light, especially in its artistic and literary use (*History of the Voice: The Development of Nation Language in Anglophone Caribbean Poetry*, London: New Beacon, 1984). His concern has been to break away from the traditions of speakers of

English in the Caribbean and elsewhere. Although he develops his concept and examples in terms of English and the anglophone Caribbean, incidental remarks and references indicate that he applies the term to other creoles besides those based on English. He acknowledges the English lexical sources of Creole, but affirms the Africanness of its rhythms, experiential content, and personality, as well as its cultural links with West Africa. He opposes the term to *dialect*, whose pejorative connotations he sees as inappropriate and limiting. See BRATHWAITE, CARIBBEAN ENGLISH, CREOLE. [AMERICAS, VARIETY].

L.D.C.

**NATIVE.** See ETHNIC NAME.

**NATIVE AMERICAN.** See AMERICAN<sup>1</sup>, AMERINDIAN, ETHNIC NAME.

**NATIVE LANGUAGE** [Since at least the 16c]. A general term often used synonymously with *mother tongue*. It dates from the Middle Ages, when it was widely believed that language is physically inherited, one's birth determining both language and nationality. Because of this association with birth and birthright and the confusion associated with the word *native*, some linguists consider that the term should, like *native speaker*, be avoided or used with caution in scholarly work. See ETHNIC NAME, FIRST/SECOND LANGUAGE, MOTHER TONGUE, NATIVE SPEAKER. [LANGUAGE].

P.C.

**NATIVE SPEAKER** [Date uncertain: *native* used in this sense since at least the 16c]. A person who has spoken a certain language since early childhood: *A native speaker of French*. Native speakers are often appealed to, including by linguists, over questions of correct usage, because traditionally the language in which they are fluent has been regarded as their exclusive property. Some linguists, however, have in recent years argued that no one is 'born' into a language (as the etymology of the usage suggests) but acquires it from an environment that may in fact change in childhood, adolescence, or later, causing an individual to develop a second language into a medium as personal as the first (sometimes losing skills in the earlier 'mother tongue'). Whether such a *non-native speaker* is able to acquire the same command of the language as a native speaker is a much-debated question to which there is no simple answer. *Native* and *non-native* are not clear-cut homogeneous categories; each group comprises wide variations depending on such individual factors as regional or national origin, age of learning (for non-natives), degree of formal training, aspirations, and sense of identity. To avoid misleading associations with

birth, birthright, and claims of ownership, some scholars consider that the terms should be used with caution. See NATIVE LANGUAGE, NATIVE USER. [LANGUAGE, SPEECH].

P.C., T.MCA.

**NATIVE USER** [1970s]. A term increasingly used in language teaching and applied linguistics in preference to *native speaker*, to emphasize that language includes writing and print as well as speech. See FOREIGN USER, NATIVE SPEAKER. [LANGUAGE].

P.C., T.MCA.

**NATIVISM** [1840s] (1) Prejudice in favour of natives against foreigners, especially immigrants, usually due to fear and self-interest and associated with *ethnocentrism*, a preference for one's own kind, customs, language, etc. The newcomers most subject to nativism are those most easily distinguishable on racial, linguistic, religious, and other grounds and those who arrive during times of economic or social tension. An often-cited example is the anti-Catholic 'Know-Nothing' Party of the 1850s in the US, a response to large-scale Catholic immigration, particularly from Ireland. For a time it had considerable political clout and was a factor in the 1856 presidential election. Recent campaigns to make English the official language of the US have been interpreted as nativistic, with an anti-Spanish bias. As with 19c nativism, it comes at a time of change, and has widespread popular appeal. Nativist sentiment also often occurs among earlier immigrants against later immigrants. (2) The movement of an indigenous society back to its traditional culture or what is taken to be traditional culture after sustained and unsettling influence from outside pressures. Anthropologists regard such developments as the Native American Church among Amerindians and the cargo cults of Oceania as nativist. See CENTRICITY, ENGLISH LANGUAGE AMENDMENT, ETHNIC NAME. [AMERICAS, LANGUAGE].

J.E., T.MCA.

**NATIVIZATION**, also **nativisation** [1930s]. (1) The process by which a transplanted language becomes native to a people or place, either in addition to or in place of any language or languages already in use, as with English in Ireland and both English and French in West Africa. The process is often given a specific name, such as *Africanization* or *Indianization* (in the case of English), and takes place at every level of language, local users of that language developing, among other things, distinctive accents, grammatical usages, and items of vocabulary, such developments generally linked with their other or former languages. (2) The process by which a pidgin language becomes a creole, as with Tok Pisin in Papua New Guinea. (3) The

process by which a foreign word becomes 'native' to a language, as in the various pronunciations of French *garage* in English. Compare ENGLISHIZE, INDIGENIZATION. [LANGUAGE]. B.B.K., T.MCA.

**NATURAL LANGUAGE.** A term in linguistics for language as it naturally occurs in humans. Compare ARTIFICIAL LANGUAGE, MACHINE LANGUAGE, METALANGUAGE. [LANGUAGE]. J.M.A.

**NATURAL METHOD.** See DIRECT METHOD, LANGUAGE TEACHING.

**NAURU.** Official title: *Republic of Nauru*. A country of Oceania, an island of 21 square miles, and member of the Commonwealth. Capital: Yaren district. Currency: Australian dollar. Economy: mainly mining and agriculture. Population: 9,000 (1988), 10,000 (projection for 2000). Ethnicity: c.58% Nauruan, 25% other Pacific Islanders, 8% Chinese, 8% Caucasian. Religions: 65% Protestant, 20% Roman Catholic, 15% others. Languages: Nauruan (official), English. Education: primary 100%, secondary 50%, tertiary 15%, literacy 99%. A German colony since the late 19c, Nauru became a League of Nations mandate in 1920 and later a UN trust territory administered by Australia, gaining internal self-government in 1966 and independence in 1968. See ENGLISH. [NAME, OCEANIA, VARIETY]. T.MCA.

**NAUTICAL JARGON.** See MARITIME PIDGIN.

**NBC.** See AMERICAN BROADCASTING.

**NCTE, The,** full form *National Council of Teachers of English*. The national professional organization of some 58,000 elementary, high-school, and college teachers of English throughout the US and Canada. Since its founding in 1911, the NCTE has sought to improve the teaching of English from kindergarten through college by sponsoring research projects, annual conferences, and workshops on special topics. Over 100,000 individuals and libraries subscribe to some or all of the nine NCTE journals: *Language Arts* (formerly *Elementary English*, devoted to language skills in the early years), *English Education* (concentrating on the nature of English teaching and the training and retraining of teachers at all levels), *English Journal* (containing short, illustrated articles on topics of general interest to secondary-school teachers), *College English* (mainly essays on topics of general professional interest), *Research in the Teaching of English* (reporting new research, summarizing trends in research, and publishing a continual annotated bibliography of current research on language and learning at all levels),

*College Composition and Communication* (providing articles about the history, theory, and sociopolitical implications of teaching writing in college as well as on research on the writing process and its relationship with other cognitive skills and forms of communication), *Teaching English in the Two-Year College* (directed at teachers of college freshmen and sophomores and focusing on the teaching of composition and literature), *Conference for Secondary School English Department Chairmen* (a source of information for administrators of high-school English programmes), and the *Quarterly Review of Doublespeak* (see entry).

Over the years, the NCTE has taken a particular interest in encouraging research and developing teaching materials about the language. Moving away from the strong grammatical and lexical prescriptivism that had characterized earlier generations of US teachers of English, in the 1930s the NCTE sponsored two works on usage: Sterling Leonard's *Current English Usage* (1932) and Albert Marckwardt and Fred Walcott's *Facts about Current English Usage* (1938). NCTE backing helped to publish Charles C. Fries's *American English Grammar* (1940). By 1949, interest in composition had grown so strong that the NCTE sponsored a special springtime conference that soon grew into the Conference on College Composition and Communication, now known almost exclusively by its acronym CCCC ('four cees'). During the 1960s, the emphasis was on dialects and NCTE published materials like the phonograph recording *Americans Speaking* and Roger Shuy's *American Dialects* (1967). In 1974, CCCC and NCTE adopted a controversial resolution entitled 'Students' Right to Their Own Language', affirming that 'teachers must have the experience and training that will allow them to respect diversity and uphold the right of students to their own language'. Responding to other societal issues that have consequences in the classroom, the NCTE published *Responses to Sexism* (1976) and *Sexism and Language* (1977) and adopted a non-sexist language policy for all NCTE publications and communications. In the 1980s, the NCTE provided through its meetings and special workshops a forum for discussing opening up the literary canon to include women and authors of various ethnic backgrounds. In 1991, the NCTE launched *The Council Chronicle*, a newspaper to be published five times per working year, in September, November, February, April, and June, as an exclusive benefit of membership. All activities are currently centralized at 1111 Kenyon Road, Urbana, Illinois, 61801. Compare NATE. [AMERICAS, EDUCATION, MEDIA].

C.C.E.

**NDJUKA.** An English-based creole of Surinam spoken since the 18c by the Eastern Bush

Negroes (the Aucan or Ndjuka and the Boni or Aluku). The language developed among runaways from plantation slavery. It is closely related to *Sranan* and to a limited degree mutually intelligible with it. Ndjuka is unusual among creoles in having its own syllabic writing developed by its speakers, a system with strong similarities to indigenous scripts of West Africa. See SRANAN, SURINAM(E). [AMERICAS, VARIETY, WRITING].

L.D.C.

**NEAR RHYME.** See HALF RHYME.

**NEAR-RP.** A term in phonetics and sociolinguistics for an accent of English considered close to but not identical with RP, even though speakers of such an accent and others hearing them may regard it as the same. See MORNINGSIDE AND KELVINSIDE, NEW ZEALAND ENGLISH, RECEIVED PRONUNCIATION. [SPEECH].

T.MCA.

**NEGATION** [14c: through French from Latin *negatio/negationis* denial]. A grammatical term for the process that results in changing a positive (affirmative) sentence or clause into a negative one: from *They came* to *They did not come*. This is sometimes known as a contrast in *polarity*. In English, a sentence is typically negated through the verb, by the insertion of *not* or its contraction *n't* after the first or only verb: *It is raining* becoming *It is not/isn't raining*. If an auxiliary verb is present, as with *is* in the above sentence, *not* follows it or *n't* is attached to it as an enclitic (*must not*, *mustn't*). If no auxiliary is present, then the relevant form of the auxiliary *do* (*do*, *does*, or *did*, according to tense and person) is inserted to effect the negation: *I know him* becoming *I do not/don't know him*.

**Special cases.** (1) The verb *be* is used in the same way when no auxiliary is present: *Justin was ill* becoming *Justin was not/wasn't ill*. (2) The verb *have* allows both alternatives, but in a variety of forms. The negation of *Benjamin has his own bedroom* can be *B. has not his own b.* (traditional BrE), *B. hasn't his own b.* (its informal variant), *B. has not got his own b.* (a current emphatic, especially BrE usage), *B. hasn't got his own b.* (its common, informal equivalent), *B. does not have his own b.* (a widely used formal, especially AmE usage), *B. doesn't have his own b.* (its common, informal equivalent). (3) See MODAL VERB [NEGATION].

**Contracted forms.** The contraction *n't* is typically informal, especially in speech, except when the negation is emphasized, as in a denial of something said before, in which case the full *not* is used and stressed. With many auxiliaries, there is often also a possibility of auxiliary contraction in informal English: *It isn't fair* or *It's not fair*

(more common); *He won't object* (more common) or *He'll not object*; *They haven't finished* (more common) or *They've not finished*.

**Tag questions.** When tag questions are used to invite confirmation, positive sentences are normally followed by negative tag questions (*David is abroad, isn't he?*) and negative sentences by positive tag questions (*David isn't abroad, is he?*). Positive sentences are sometimes followed by positive tag questions (*So David is abroad, is he?*), indicating an inference or recollection from what has been said. Occasionally, they suggest suspicion or a challenge: *So that's what Doris wants, is it?*

**Expressions used with negation.** Some expressions are found exclusively or typically in negative sentences: the *not . . . any* relationship in *Doris hasn't produced any plays*, contrasted with *Doris has produced some plays*; the *not . . . either* relationship in *David doesn't smoke a pipe, either* (in response to such statements as *John doesn't smoke a pipe*), contrasted with *David smokes a pipe, too* (in response to *John smokes a pipe*).

**Negation other than through the verb.** *No*, *not*, and other negative words may be introduced in order to negate a sentence: *Jeremy has no difficulties with this* (compare *Jeremy hasn't any difficulties with this*); *Ray said not a word to anybody* (compare *Ray didn't say a word to anybody*); *Maurice will never make a fuss, will he?* (compare *Maurice won't make a fuss, will he?*); *Nothing surprises them, does it?* (compare *There isn't anything that surprises them, is there?*); *Mervyn hardly ever makes a mistake, does he?* (compare *Mervyn doesn't ever make mistakes, does he?*).

**Implied contrasts.** The negative particle or word extends its scope over the whole or part of the sentence. The extent is manifested when expressions associated with negatives are present, as in the difference between *I didn't read some of the papers* (that is, I read others) and *I didn't read any of the papers* (that is, I read none). The *focus* of the negation (marked intonationally in speech) is the part of the sentence which presents a negative contrast: *Ted doesn't teach history* may imply that someone else does or that Ted teaches something else.

**Double negation.** Prefixes such as *un-* and *in-* make the word negative but not the sentence in which it is used: *unhappy* in *They are unhappy about their new house*; *insensitively* in *They spoke rather insensitively to him when he lost his job*. Such words may be combined with another negative to cancel out, to a large extent, the force of the negative prefix: *Jeremy was not unhappy*, meaning that he was fairly happy. See LITOTES. This type of double negation, which results in a

positive meaning, is different from the kinds of *multiple negation* found in both general non-standard English (*I didn't see nothing*: I didn't see anything) and in some dialects (Glasgow *Ah'm no comin neer Ah'm no*: I am not coming neither I am not). Such usages are widely stigmatized and equally widely used. See DOUBLE NEGATIVE. [GRAMMAR]. S.G.

**NEHRU, Jawaharlal** [1889-1964]. Indian politician, lawyer, writer, born in Allahabad, the only son of Motilal Nehru and the father of Indira Gandhi, and educated at Harrow and Trinity College, Cambridge. He joined the Inner Temple in London in 1910 and became a barrister in 1912. Nehru took a great interest in Fabian socialism, but the greatest impact on his politics was made by Mahatma Gandhi, who nominated him as his political heir. Nehru was elected President of the Congress Party five times, and during 17 years as Prime Minister of India directed its foreign policy and its industrial and scientific growth. His extensive writings in English fall into three periods: mainly journalism (1920-8), when he wrote for such publications as *The Independent*, *Young India*, and *Modern Review*; a period when he was often imprisoned by the British (1928-42), when he wrote such works as *The Autobiography* (1936), *Glimpses of World History* (1934-5), and *The Unity of India* (ed. V. K. Krishna Menon, 1941); and his political heyday (1942-64), at the beginning of which he wrote *The Discovery of India* (1946). His works were exhilarating to many Indians and contributed towards an understanding of their past that differed from Western interpretation. Of himself, he is widely quoted as having observed, 'I have become a queer mixture of East and West, out of place everywhere, at home nowhere.' His 'prison writing' includes *Letters from a Father to His Daughter* (1930). In one of his last statements on the language question, Nehru touched on India's continuing love/hate relationship with English: 'It is not the fact that many people know English and learnt it, but it was a kind of fixation that English was a symbol of status, that a man who knew very indifferent English was somehow better than a scholar in our own languages. That was a fixation that was obviously most improper and most objectionable, and it had to be got rid of. I am not quite sure if we have got rid of it even yet. That has nothing to do with our liking English, considering it a very desirable language to learn and study. It is the mental attitude that is objectionable' (*Bulletin of CIEFL* 3, 1963). See index. [ASIA, BIOGRAPHY]. B.B.K.

**NEO-CLASSICISM.** See AUGUSTAN, CLASSIC, CLASSICISM, ENGLISH LITERATURE, LITERARY CRITICISM.

**NEO-LATIN**, also **New Latin**. A variety of Latin current during and after the Renaissance, especially in academic and scientific discourse. One of its features is a stratum of Greek associated with scholarly and highly technical usage. See BISOCIATION, CLASSICAL LANGUAGE, GREEK, LATIN<sup>1</sup>. [EUROPE, LANGUAGE]. T.MCA.

**NEOLOGISM**, also **neology** [18c: from French *néologisme* and *néologie*, both from Greek *néos* new, *lógos* word]. Terms used by students of language for a new word or sense of a word and for the coining or use of new words and senses. Most neologisms in English belong in the following categories: (1) Compounding: *couch potato*, someone constantly slumped on a couch watching television: *deep pocket*, a dependable source for financing; *teletext*, a computer-based news and information service transmitted by television; *video-conferencing*, a number of people taking part in a conference or conferences by means of video equipment rather than all meeting in one place. (2) Derivation: *yuppie*, formed from *yup*, the initial letters of the phrase 'young urban professional' by adding the suffix *-ie*; *yuppiedom*, the condition of being a yuppie, formed from *yuppie* by adding the further suffix *-dom*. (3) Shifting meaning: *spin*, a journalist's term for a special bias or slant given to a piece of writing; *necklace*, a name in South Africa for a tyre soaked in petrol, to be put round someone's neck and set alight. (4) Extension in grammatical function: the nouns *quest* and *necklace* (see preceding) used as verbs. (5) Abbreviation: in Stock Exchange usage, *arb* from *arbitrager* or *arbitrageur*, one who sells securities or commodities simultaneously in different markets to benefit from unequal prices; the computer acronym *GIGO*, meaning *garbage in, garbage out*. (6) Back-formation: *disinform* formed from *disinformation* (and not the reverse). (7) Blending: *harmolodic* mixing *harmony* and *melodic*; *orature* formed from *oral* and *literature*. (8) Borrowing: loanwords such as *glasnost* from Russian and *nouvelle cuisine* from French; calques or loan translations such as *found object* from French *objet trouvé*. (9) Very rarely, root-creation, or coinage from sounds with no previous known meaning whatever: *googol*, *Kodak* (both apparently formed *ex nihilo*).

New words are often the subject of scorn because they are new, because they are perceived as unaesthetically or improperly formed, or because they are considered to be unnecessary. They are, however, a normal part of language change; with frequent use and the passage of

time they become unremarked items in everyday use, as can be seen from many of the items in the following representative decade-by-decade lists of neologisms coined between 1940 and 1990:

*1940s.* acronym, airlift, apartheid, atomic age, automation, baby-sit, bikini, blockbuster, call girl, circuitry, cold war, crash landing, debrief, declassify, doublethink, flying saucer, freeze-dry, genocide, gobbledygook, gremlin, guided missile, hydrogen bomb, nerve gas, petrochemical, quising, radar, snorkel, spaceship, starlet, tape recorder, task force, vegan, VIP, xerography, zero in.

*1950s.* A-OK, automate, beatnik, brainwashing, common market, cosmonaut, countdown, desegregation, discotheque, do-it-yourself, egg-head, hard sell, H-bomb, hotline, Kremlinology, LSD, McCarthyism, moonlighting, moonshot, Ms, name-dropping, nuke, overkill, panelist, paramedic, parenting, sci-fi, scuba, senior citizen, sex kitten, shopping mall, soft sell, space medicine, spfuitnik.

*1960s.* affirmative action, biodegradable, bionics, brain drain, cable television, counter-productive, cryonics, cybernation, disco, Eurocrat, Eurodollar, fast-food, genetic engineering, jet lag, microelectronics, microwave oven, pleabargaining, pop art, postcode/postal code (BrE), quasar, reverse discrimination, sitcom, space shuttle, theme park, tokenism, underachiever, uptight, ZIP Code (AmE).

*1970s.* boat people, bottom line, condo, corn row, downsize, ecocatastrophe, ecofreak, empty nester, flextime, gas guzzler, gasohol, hit list, junk food, Legionnaire's Disease, Mediagate, miniseries, nouvelle cuisine, petrodollars, shuttle diplomacy, supply-side economics, Watergate, Watergatology.

*1980s.* cash point, channelling, couch potato, Filofax, glasnost, golden handcuffs, golden handshake, golden parachute, gridlock, home shopping, kiss-and-tell book, necklacing, New Agers, perestroika, personal organizer, power breakfast, silent majority, telemarketing, wholefoodie, whoopie, yuppie, yuppiedom.

Publications that document neologisms include: *American Speech* (which has had a section called 'Among the New Words' since 1941); *The Barnhart Dictionary Companion* (since 1982); *The Barnhart Dictionary of New English since 1963* (1973), *The Second Barnhart Dictionary of New English* (1980); *The Third Barnhart Dictionary of New English* (1992); *Longman Guardian New Words* (1986); *12,000 Words: A Supplement to Webster's Third New International Dictionary* (1986); *Bloomsbury Neologisms: New Words Since 1960* (1991); *The Oxford Dictionary*

*of New Words* (1991); *Fifty Years Among the New Words: A Dictionary of Neologisms, 1941-1991* (reproducing and extending the articles in *American Speech*, and published by Cambridge University Press, 1991). See ABBREVIATION, BACK-FORMATION, BARBARISM, BLEND, BORROWING, CAPITAL, COINAGE, NONCE WORD, NONSENSE VERSE, ROOT-CREATION, SEMANTIC CHANGE, TIME-SPEAK, WORD-FORMATION. [MEDIA, REFERENCE, STYLE, WORD].  
J.A., T.MCA.

**NEO-MELANESIAN.** See TOK PISIN.

**NEO-SOLOMONIC.** See PIJIN.

**NEPAL.** A country in South Asia. Capital: Kathmandu. Population: 17.8m (1988), 24.1m (projection for 2000). Ethnicity: mainly Nepali and Tibetan. Religion: 90% Hindu, 5% Buddhist, 3% Muslim, 2% other. Languages: Nepali/Gurkhali (official), an Indo-Aryan language, the mother tongue of 58% of the people; other languages such as (Indo-Aryan) Bhojpuri and (Tibeto-Burman) Gurung; English, the primary foreign language, but more prevalent than this status suggests. Education: primary 55%, secondary 25%, tertiary 5%, literacy 26%. Although influenced by Britain and providing Gurkha soldiers for both the British and Indian armies, Nepal was never part of the British Empire. English in Nepal is unique in that it was introduced neither by colonization nor by missionaries. Until 1950, Nepal was a closed society ruled by hereditary prime ministers, but a tradition of English instruction came primarily from India, in whose universities most Nepalese teachers were educated. Since the 1960s, Nepal has had an open-door policy and English has become a major language of travel, tourism, and regional communication. In 1951, as part of a process of democratization, use of English in the media received some support. In 1985, there were 417 Nepali- and 32 English-language periodicals. English is widely used in advertising and there is a small body of creative writing. Radio and television have contributed to the diffusion of English and are used for teaching it. Code-mixing and code-switching with English are as common as in other parts of South Asia; Nepalese English has much in common with that of northern India. See ENGLISH, SOUTH ASIAN ENGLISH. [ASIA, VARIETY].  
B.B.K.

**NETHERLANDIC.** See DUTCH, FLEMISH.

**NETWORK** [16c]. (1) A construct in which threads, wires, or other materials are arranged as or like a net; anything analogous (*a railway network, a police network*). (2) A communicative system that 'consists of linked dyads in which

the receiver in one dyad is the source in the next. Such networks will vary in size and not all members . . . will necessarily have equal access to information or participation' (James Watson & Anne Hill, *Communication and Media Studies*, 1989). Such systems may have different structures, such as a *chain network* and a *circle network*. (3) A group of radio or television stations that are linked by wire or microwave relay so that they can broadcast programmes at the same times: 'The stations can be owned by a headquarters company—the network—that is the source of the programs or can be independent—an *affiliate* or *network affiliate*' (Richard Weiner, *Webster's New World Dictionary of Media and Communications*, 1990). The term *network identification* refers to the name or other signal used by such a network, usually at the beginning of each hour or programme: compare SIGNATURE. (4) In computing, a linked set of computers or computer systems that share programs, files, storage facilities, and peripheral devices. The constituents of a *Local Area Network (LAN)* are all in one place, such as a company or university, while those in a *Wide Area Network (WAN)* are dispersed and linked by telephone, radio, and/or satellite. The terms *to network* and *networking* relate to the design, construction, and operation of computer networks and any analogous way in which information and services may be shared among people with similar interests. See BROADCASTING, COMPUTING, NETWORK STANDARD. [MEDIA, TECHNOLOGY]. T.MCA.

**NETWORK STANDARD.** A variety of pronunciation supposedly favoured by radio and television announcers on US national network broadcasts, in effect a pronunciation without any features easily recognizable as characteristic of any region or social group. Thus, most Americans are rhotic (that is, they pronounce *r* where it is spelled); its non-pronunciation (except before vowels) is characteristic of eastern New England, New York City, and the South. Consequently, network standard is rhotic. Similarly, it neither diphthongizes the vowel of *caught*, as in the South, nor pronounces it long and tense, as in parts of the Northeast. On the other hand, in some regions of the US *caught* and *cot* are distinct in pronunciation (typically with a rounded vowel in the first and an unrounded vowel in the second); in other regions, they are homophonous. However, the different treatments of these words are not perceived as regional features by Americans; consequently, both options are appropriate for network standard. Because many national TV announcers have tried to avoid regionally identifying language, their homogenized speech has been given the name

*Network standard*. The word *standard* is, however, misleading because it suggests a more formally recognized variety than exists. Recently, moreover, there has been an increasing tendency in both the US and the UK to use regional accents on national broadcasts, so the bland pronunciation that inspired the term is less important than formerly. *Network standard* is the closest American analogue to British *Received Pronunciation*, but it is a distant one. It is best defined negatively as an AmE variety that has no regional features, does not mark class, is not learned collectively in childhood, and has never been institutionalized or set up as a pronunciation model. See DIALECT IN AMERICA, GENERAL AMERICAN, NETWORK, MODEL, STANDARD. [AMERICAS, SPEECH, VARIETY]. J.A.

**NEUROLINGUISTICS** [1960s]. A branch of linguistics that studies the neurological basis of language development and use, and constructs models of the way the brain controls the processes of speaking, listening, reading, and writing. Particular attention has been paid to the processes thought to underlie speech production: what kind of programming is it necessary to propose in order to explain the sequence and timing of articulation movements? Of central relevance to this approach are research findings in two main areas: (1) From the study of clinical linguistic conditions, such as aphasia, it is possible to construct hypotheses about the nature of the underlying system by looking at what happens to speech when it breaks down. (2) Hypotheses can be adduced from the study of everyday speech-production 'errors' in normal speech, such as slips of the tongue and hesitations. For example, based on the study of the distribution of tongue slips in a large corpus of speech data, it is possible to predict where they are likely to occur. In a sentence such as *I bought a POUND of MINCE | and a BOTTLE of GIN* (where | marks the intonation-and-rhythm boundary and capitals indicate the most strongly stressed), the more likely slips of the tongue are going to be between *pound* and *mince*, or between *bottle* and *gin*: in other words, *within* the intonation-and-rhythm units. Moreover, the initial sounds of the words are more likely to be affected. This kind of evidence can be used to support models of the way in which the brain processes speech: if slips tend to occur within intonation-and-rhythm units, this suggests that these units have a neuro-psychological reality as part of the programming mechanism for speech. See LANGUAGE PATHOLOGY, LINGUISTICS, PSYCHOLINGUISTICS, RHYTHM, SLIP OF THE TONGUE. [LANGUAGE]. D.C.

**NEUTER** [14c: from Old French *neutre*, from Latin *neuter* neither]. A term referring to grammatical gender in nouns and related words, contrasting with *masculine* and *feminine* in languages that have three genders such as German and Latin. Although there is some connection between natural and grammatical gender in such languages, a word which is grammatically neuter may be semantically quite different: in German *das Kind* (the child); *das Mädchen* (the girl). The personal pronoun *it* is sometimes said to be neuter in gender, but more accurately it is non-personal since it may be used to refer to animals and babies. See GENDER. [GRAMMAR]. S.C.

**NEUTRAL VOWEL.** See S(C)HWA.

**NEWBOLT REPORT.** A report on the teaching of English in England and Wales, presented to the Board of Education in 1921 by a committee chaired by Sir Henry Newbolt. Entitled *The Teaching of English in England*, the report argued that English was unduly neglected as a subject in many schools, and insisted that it should be built into the total educational experience. Cautiously rather than enthusiastically progressive, it covered the whole range of education, from elementary schools to universities, and argued that the understanding of literature should have a central role and that emphasis should be placed on teaching pupils how to form well-constructed arguments. See BULLOCK REPORT, KINGMAN REPORT. [EDUCATION, EUROPE]. C.J.B.

**NEW CRITICISM.** See LITERARY CRITICISM.

**NEW ENGLAND.** The name of the six north-easternmost states of the US (Maine, Vermont, New Hampshire, Massachusetts, Connecticut, and Rhode Island); the site of the second oldest permanent English settlement on the North American mainland. The New England colonies were populated by Puritans mainly from East Anglia, who came to the New World primarily for religious reasons. Because of their predominantly common origin and cultural unity, the New England settlers formed a more homogeneous community than did colonists elsewhere.

**The Puritan inheritance.** The character of the colonists was early famed for its seriousness, emphasis on the work ethic, and a social consciousness that sprang from the scriptural injunction to charity; this was, however, often expressed as a tendency to enforce their view of what is good on those who did not share it. The conflict between Puritanism and pleasure can be seen in much of American social life to the present day. Other aspects of the Puritan character,

such as studiousness and intellectual mysticism, expressed themselves in the *New England Transcendentalists*, who blended German Romantic philosophy with ideas from Hindu philosophy. Ralph Waldo Emerson and Henry David Thoreau are the best-known embodiments of this merger of exotic East and Puritan West. New England has served as the school-house and conscience of the US. One of its most famous sons, Noah Webster, was a force in shaping the dictionary and schoolbook tradition of the country; today, his name has entered the lore of the nation as a synonym for dictionaries. One of its most famous daughters, Harriet Beecher Stowe, wrote a story, *Uncle Tom's Cabin* (1852), which so inflamed sentiment against slavery that it has been credited as a cause of the Civil War. New England's two greatest colleges, Harvard (founded 1636) and Yale (1701), became the models and source of teaching faculty for other institutions of higher learning throughout the nation.

**Linguistic features.** New Englanders are famed for laconism and a 'flatness' of accent. The terms applied popularly to present-day New England speech are often the same as those used in the 17c to characterize the language of the English Puritans: a nasal twang, high-pitched, harsh, and unmusical. In fact, however, New England is divided between two rather different dialects: *Eastern New England*, with Boston as its hub, and *Western New England*, which blends into upper New York State as the wellspring of the *Inland Northern* dialect that sweeps across the northern tier of states to the Pacific. One of the defining characteristics of these two dialects is their treatment of *r* when not followed by a vowel. Eastern New England is non-rhotic, articulating it much as British RP does, with a gliding vowel. Western New England, on the other hand, is rhotic, as is most of the US. In addition, present-day New England has had its Puritan roots considerably entangled with those of newer immigrants: French-Canadian, Italian, Irish, Greek, and many others, as well as of Black in-migrants from the American South and yuppies from metropolitan New York. Even so, however, the old Yankee personality and the Puritan ethic vigorously survive. See BOSTON, DIALECT IN AMERICA, PURITAN, WEBSTER, YANK(EE). [AMERICAS, NAME, VARIETY]. J.A.

**NEW ENGLISH** [1980s: often plural]. A term in linguistics for a recently emerging and increasingly autonomous variety of English, especially in a non-Western setting such as India, Nigeria, or Singapore. Two works of the 1980s have had virtually the same title: *New Englishes*, ed. John Pride (US: Newbury House, 1982), and *The New Englishes*, by John Platt, Heidi Weber,

and Ho Mian Lian (UK: Routledge & Kegan Paul, 1984). The term is sometimes used generically: 'The first documented evidence of the New English of Sierra Leone (NESL)' (Joe Pe magbi, 'Still a Deficient Language?', *English Today* 17, Jan. 1989). See -GLISH AND -LISH, ENGLISH, ENGLISHES, LYLY. [NAME, VARIETY]. T.MCA.

**NEWFIE**, also **Newf**. An informal name for a person born in Newfoundland and for the variety of English spoken there. See ETHNIC NAME, NEWFIE JOKE, NEWFOUNDLAND. [AMERICAS, NAME]. T.MCA.

**NEWFIE JOKE**. A joke about Newfoundlanders, a version of the ethnic put-down, that became popular in Canada in the late 1960s. Robert Tulk, a Newfoundlander, collected many of them (*Newfie Jokes*, 1971; *More Newfie Jokes*, 1972), including: 'What is black and blue and floats in the bay? A Mainlander, after telling a Newfie joke.' See ETHNIC JOKE. [AMERICAS, STYLE]. M.F.

**NEWFOUNDLAND**. (1) An Atlantic island of North America and England's first colony. The capital, St John's, was founded as a base for English fishermen in 1504 and Sir Humphrey Gilbert claimed the island in 1583. In 1855, it became self-governing, and in 1949, after two close votes, it was united with Canada. Its population in 1981 was 567,681. Its local nickname is *the Rock*. (2) A province of Canada from 1949, consisting of the island of Newfoundland and the adjacent mainland area known as Labrador. Its economy is mainly fishing, hydro-electricity, mining, oil, pulp, and paper. Its languages are English and French, and Amerindian languages in Labrador. See CANADA, CANADIAN, NEWF(IE), NEWFIE JOKE, NEWFOUNDLAND ENGLISH. [AMERICAS, NAME]. T.MCA.

**NEWFOUNDLAND ENGLISH**. The English language as used in the island and province of Newfoundland for almost 500 years, and the oldest variety in the Americas. It derives primarily from the speech of early settlers from the English West Country and later Ireland, and is the outcome of long, stable settlement and relative remoteness. The isolation, however, should not be overemphasized: 'The women in these communities were isolated, while the men were not, because they travelled to find seasonal work sealing, logging, and cod-fishing' (*Dictionary of Newfoundland English*, 1982). Many Newfoundland *townies* have features of pronunciation, grammar, and vocabulary that are distinct from the rest of Canada, and the varied dialects of the *baymen* are possibly the most distinctive in the country. Because of such factors,

the English of Newfoundland is something more than a dialect of CanE, and can be described as a variety with a standard and dialects of its own. Harold Paddock, in *Languages in Newfoundland and Labrador* (1982), delineates five main dialect areas on the island. In a survey by Sandra Clarke (reported in Paddock), the residents of St John's ranked six local accents in terms of prestige: first, BrE Received Pronunciation, then upper-class St John's Irish, Canadian Standard English, non-standard St John's 'Anglo-Irish', and a non-standard regional dialect of the southern shore.

**Pronunciation**. (1) Newfoundland speech is mainly rhotic. (2) There is English West Country influence in initial /v/ for /f/ and /z/ for /s/: 'a vine zummer' for *a fine summer*. (3) There is Irish influence in /t, d/ for /θ, ð/: 'tree of dem' for *three of them*. (4) Initial /h/ is unstable, sometimes added before the vowels of stressed syllables ('helbow' for *elbow*), sometimes dropped ('eel' for *heel*). (5) Final consonant clusters are often simplified: 'a soun in the loff' for *a sound in the loft*. (6) Certain vowel distinctions are commonly not made: *boy* is a homophone of *buy*, *speak* rhymes with *break* and *port* with *part*.

**Grammar**. Dialect usage includes: (1) The use of *is* or 'm for present forms of *be*: *I is, you is, he is, we is, they is; I'm, you'm, we'm, they'm*. (2) The negative forms *baint'e* are you not, *I idden* I am not, *you idden* you are not, *he idden* he is not, *tidden* it is not (reflecting West Country influence). (3) Distinctive forms of *do, have, be*: *They doos their work; I haves a lot of colds; It bees cold here in winter; Do Mary work here?; Have she finished?; 'Tis cold here now*. (4) In some areas, an -s in all simple present-tense verb forms (*I goes, he goes, we goes*, etc.), distinguishing the full-verb use from the auxiliary use of *do, have, and be*. (5) Weak rather than strong forms in some irregular verbs: 'knewed' for *knew*, 'threwed' for *threw*. (6) Four variants for the perfect: *I've done, I've a-done, I bin done, I'm after doin*. (7) *He/she* as substitutes for inanimate countable nouns: *We'd have what we'd call a flake-beam, a stick, say, he'd be thirty feet long*. (8) In some areas, the form *un* or *ən* as a masculine pronoun and for *it*: *Tom kicked un* (the shovel). If, however, the shovel rather than the rake is stressed, *he* is used: *Tom kicked he*. (9) Some expressions of Hiberno-English origin: *It's angry you will be; It's myself that wants it*.

**Vocabulary**. (1) Expressions that are archaic or obsolete elsewhere: *angishore* a weak, miserable person (from Irish Gaelic *ain dei seoir*), sometimes transformed to *hangashore; bavin* brushwood used for kindling; *brewis* (from Scots, pronounced 'brooze') stew (applied to a mix of soaked ship's biscuits, salt codfish, and pork fat).

(2) Words for natural phenomena, occupations, activities, etc., such as terms for seals at various stages of development: *bedlamer*, *dotard*, *gun seal*, *jar*, *nog-head*, *ragged-jacket*, *turner*, *white-coat*. (3) A local word familiar elsewhere in Canada is *screech*, a potent dark rum (from Scots *screech* whisky). (4) A *liver* (live here) is a permanent inhabitant, while a *come-from-away* (sometimes shortened to *CFA*) is an outsider or mainlander. See CANADIAN DICTIONARIES, CANADIAN ENGLISH, DIALECT IN CANADA, IRISH ENGLISH, MARITIMES PROVINCES, WEST COUNTRY. [AMERICAS, VARIETY]. M.F.

**NEW HISTORICISM.** See LITERARY CRITICISM.

**NEW LATIN.** See NEO-LATIN.

**NEW ORLEANS.** A city in Louisiana whose distinctive variety of AmE is the result not only of the influence of its founders from Spain and France (who governed the region before the 19c) but also waves of migrants from Ireland, Germany, Italy, and most recently Vietnam. West African influence through pan-Caribbean creole is also apparent. The term *Creole*, as defined by local whites, applies to white descendants of early French or Spanish settlers. As defined by blacks, it applies to persons of Afro-French parentage. Both express 'authentic' local identity. Some of the dialect's characteristics come directly from French, either locally or from present and former French-speaking regions of the state, such as the obsolescent *banquette* for (AmE) sidewalk, (BrE) pavement, and the phrases *make the groceries* to shop for groceries, *make menage* to clean (the) house, and *save the dishes* to put the dishes away. The city has locally well-understood stereotypes based on race, class, and neighbourhood, though linguistic features criss-cross these in complex ways. Typical grammatical features include a widespread tendency to use *had* + past participle for the simple past (as in *Yesterday I had run into him*) and the tags *no* (as in *I don't like that, no!*) and the more widely current Coastal Southern *hear* (as in *I'm having another piece of pie, hear?*).

**Yat.** The most distinctive local variety is *Yat*, called by one observer 'the Cockney of New Orleans'. The name is said to derive from the greeting *Wha'y'at?* 'What are you at?' Associated with such working-class districts as the Irish Channel and old Ninth Ward, it is also heard in other parts of the city and recently in some suburban *parishes* (government units in Louisiana that correspond to *counties* in much of the rest of the US). Outsiders confuse *Yat* with *Brooklynese*; its stereotypic features include such quasi-phonetic spellings as *berlin* boiling, *dat*

that, *earl* oil, *mudder* mother, and *taught* thought.

**Cuisine and Mardi Gras.** The city has a varied cuisine with characteristic vocabulary, much of it from Louisiana French: *beignet* (pronounced 'bane yea') a square doughnut dusted with powdered sugar, *debris* pan gravy, *etouffee* stewed, *file* (pronounced 'fee-lay') thickener for soups and stews derived from young sassafras leaves, *jambalaya* a dish prepared with rice, seasoning, and meat or seafood, *praline* (pronounced 'prah-leen') a confection made with pecans and brown sugar, *sauce piquante* a condiment made from tomatoes and red pepper. Other terms are from English: *cajun popcorn* deep-fried crawfish/crayfish tails, *dirty rice* a spicy rice dish with chicken giblets, *king cake* a ring-shaped coffee cake traditionally served from Epiphany to Shrove Tuesday, *po' boy* a sandwich of the type known elsewhere in AmE as a *grinder*, *hoagie*, or *submarine*. Mardi Gras (Shrove Tuesday celebrated in Latin-American style) has a technical vocabulary emerging into national consciousness through US-wide television broadcasts of its elaborate parades: *krewe* an organization sponsoring a parade float, *throw* (throw) a trinket tossed by a parader to the streetside crowd, and *pair of beads* a necklace of plastic beads used commonly as a throw. See CAJUN. Compare BROOKLYNESE. [AMERICAS, NAME, VARIETY]. R.W.B.

**NEWS** [15c: from late Middle English *newis* (plural of *newe*), on the model of Old French *noveles* and Medieval Latin *nova*, plural of *novum* (something) new. Compare NOVEL, NOVELLA]. (1) Information about a recent event or events: *What's the latest news from China?* (2) The presentation of such information as reports by journalists and others in the media (print, radio, television, electronic, or other), often in a format described through a compound beginning with *news* such as *news broadcast*, *newscast*, *newspaper*, sometimes used as the title of a publication, column, or programme, such as *Newsweek*, *Newsday*, and *Newsnight*. See BULLETIN, FLASH, JOURNAL, NEWSLETTER, NEWSMAGAZINE, NEWSPAPER. [MEDIA]. T.MCA.

**NEWSLETTER** [17c]. A report or set of reports, usually printed as a leaflet or slim magazine, and issued periodically by or for an agency, club, group, company, or institution, to provide associates, members, employees, the media, and the like with information concerning relevant events, activities, and interests. See NEWS, NEWS-PAPER. [MEDIA]. T.MCA.

**NEWSMAGAZINE** [1920s: combining *news* and *magazine*]. An illustrated, usually weekly

magazine with reports and commentaries on events and issues of current interest. The genre began in the US, prompted by a lack of nationwide newspapers. The forerunner was, however, British: *The Illustrated London News* (founded 1842), which sought to present 'all the news in pictures' and (before the development of the half-tone photograph) used 32 woodblocks per issue. This tendency was followed by the *Penny Illustrated Paper* (1861), *The Graphic* (1869), the *Sketch* (1892), and the *Sphere* (1899). Of these, only the founder has survived, with difficulty. By contrast, the prominent US newsmagazines, *Time* (founded 1923) and *Newsweek* (founded 1933), have acquired an international readership and enjoy respective weekly circulations of nearly 5m and over 3m. There are specialized newsmagazines for such fields as business and science, and a variety of clones of *Time* have appeared in other countries, serving both English and other languages. See BULLETIN, MAGAZINE, NEWS, NEWSPAPER, PERIODICAL, TIME MAGAZINE, TIMESPEAK. [MEDIA]. G.H.

#### NEW SOUTH WALES PIDGIN ENGLISH.

See AUSTRALIAN PIDGIN.

**NEWSPAPER** [17c]. A publication issued at close, regular intervals, especially on a daily or weekly basis. It has large sheets and columns of text, usually interspersed with photographs, and commonly contains not only news but also comment, features, and advertisements (which are generally more important for the economic success of the publication than is the relatively small purchase price per copy).

**History and nature.** The genre originated in commercial (originally handwritten) *newsletters* made available at meeting-places such as coffee-houses and often consolidated into *newsbooks* or *news-pamphlets* (the first surviving example dated 1513). *Newspapers* or *news-sheets* appeared only sporadically, on an ad-hoc basis, in response to events of great importance. Regular news-sheets are recorded on the Continent from 1566, and Nathaniel Butter, a freeman of the Stationers' Company, is credited with the first regular series of newsbooks in England (1622-3). After these there appeared what were called *Intelligencers* and *Relations*, which announced their partiality in fairly direct terms: 'Mercurius Civicus. Londons INTELLIGENCER, or Truth Impartially related from thence to the whole kingdom, to prevent mis-information' (1643); 'An Exact and true Relation of the late Plots which were contrived and hatched in Ireland' (1641).

The first regular daily newspaper was Samuel Buckley's *The Daily Courant* (1702). This followed the abolition of censorship in 1695, after

which the production of newspapers and periodicals increased dramatically. In many cases, they responded to a public thirst for 'news' with colourful, but unreliable, rumour, gossip, and 'eye-witness accounts'. The steady raising of the punitive Stamp Tax from 1d. to 4d. was intended to suppress both the 'gutter' and the radical press, and succeeded in this aim. The abolition of the tax in 1855 removed this restraint. With the great developments of printing technology achieved in the 19c, mass circulation, low-cost national newspapers became increasingly common. *The Daily Telegraph* (launched in 1855) was the first popular daily newspaper, while *The Daily Mirror* (1911-12) became the first British newspaper to achieve a daily circulation of 1m. Its success led the modern trend towards tabloid journalism. Many commentators on the modern British Press have detected a similarity between the divisions of the newspaper market and the class structure: the *quality press* catering for the élite, the *popular press* for the bourgeoisie, the *tabloid press* for the working class. Such divisions, however, do not apply to the American Press, where the main differences are between national and regional newspapers.

Sunday newspapers, the last genre to emerge, have become a significant institution in Britain. They initially encountered moral and religious objections, since only milk and mackerel were permitted to be sold on the Lord's Day. However, the first in the field, *Mrs E. Johnson's Sunday Monitor and British Gazette* (1779), proved so popular that by 1812 at least 18 Sunday papers were being published in London. The moral tone, initially high, has steadily declined in the case of the more popular publications, several being notoriously salacious and sensational, notably *The News of the World* (established 1843), which has long had the highest single circulation of the British press (currently over 5m). However, the 'quality' or 'heavy' Sundays, such as *The Observer* (1791), *The Sunday Times* (1822), and *The Sunday Telegraph* (1961), have a reputation for a high standard of comment on and analysis of current affairs. These were joined by the short-lived *Sunday Correspondent* (1989) and *The Independent on Sunday* (1990), making a combined circulation of some 20m. These papers have tended to increase in size, to the point that they divide, like many US newspapers, into sections and supplements covering business, sport, the arts, property, and a colour magazine.

The number of national newspapers published in the UK has declined steadily over the past half-century, since newspapers survive, not simply through readership, but as vehicles of advertising revenue. This means that they must

cater for a particular segment of the advertising market. Consequently, it is possible for newspapers with large circulations, such as *Empire News*, *News Chronicle*, *The Graphic*, *Sunday Chronicle* (all of which had circulations of over 1.5m) to be closed through lack of advertising revenue. Others, like the *Morning Post* (1772–1937), have been merged with more successful operations, in this case *The Daily Telegraph* (1855). A new 'quality' daily newspaper *The Independent*, was launched in 1986. As a consequence of the increasing competition from radio and television, with their capacity for 'live' broadcast and virtually instant comment, newspaper circulations have declined, from over 25m in the late 1970s to 23m in the mid-1980s. Newspapers still retain a powerful influence, however, through their capacities for informed analysis and detailed comment, and as wielders of public opinion.

**Format and content.** The aims and formats of newspapers influence the ways in which editors, sub-editors, and journalists prepare and finalize copy for publication. Factors that constrain them include: immediacy and importance (influencing the position of a *story*, the most important being at the top of the front page, the least important 'buried' somewhere inside); type-sizes used for various purposes and levels of emphasis, ranging from headlines to small ads; distinctive arrangements of text in columns; limitations on space for copy in relation to the priority given to advertisements; and the pressure of recurring deadlines. In addition, there is a spectrum of locations and forms for separating or mixing *news* and *comment*, *stories* and *features*, as well as a range of departments or sections with their own editors, such as *news*, *features*, *letters to the editor*, *sports*, *entertainment*, *the arts*, *book reviews*, and *cookery*, depending on the profile of the readership on which the paper depends. All such factors in turn affect the styles in which journalists write, often lumped together as *journalese*.

**Newspapers of the English-speaking world.** Largely as a legacy of British colonialism and the Empire, there are well over 2,000 daily English-language newspapers worldwide (excluding international publications). The great majority of these are regional or city newspapers without national circulations.

*The United Kingdom.* The greatest concentration of newspaper readership per head of population is in the British Isles, where there are more than 25 national newspapers and 113 dailies in all, with a total circulation of 23m in the mid-1980s, catering for a population of 56m (a ratio of 1 : 2.4). This market, more than any other, divides into quality and tabloid, the former often

having an influence on political and social developments.

*The United States.* The earliest newspapers to be produced outside Britain were American. The first US newspaper, Benjamin Harris's *Publick Occurrences Both Forreign and Domestick* (Boston, 1690), was immediately suppressed by the British authorities. The first continuously published American newspaper was the Boston *News-Letter*, which first appeared in 1704, though it was superseded in influence by James Franklin's *New England Courant* (1729). Modern US newspaper readership is not as concentrated as in the UK, with 1,676 dailies generating a circulation of 63m catering for a population of 243m (a ratio of 1 : 4). Partly because of the size of the nation and its different time-zones, and partly because of its social diversity and political decentralization, there are few national papers, though the *Wall Street Journal* has four US editions as well as an Asian and a European edition (making a total combined circulation of nearly 2m). *The New York Times* (circulation over 1m) introduced a national edition in 1980. Others with a national readership are the *Washington Post*, *Los Angeles Times*, and the *Christian Science Monitor*.

*The Commonwealth.* The largest anglophone Black African country, Nigeria, has fourteen dailies (the *Daily Times* with a circulation of 400,000), while one of the smallest, the Gambia, has eight. In Zimbabwe and Zambia, both daily newspapers are English. In Australia, there are 63 daily newspapers generating a circulation of 4.8m for a population of 15m (a ratio of 1 : 3.1). Prominent among these are the *Sydney Morning Herald* (circulation 400,000) and the *Melbourne Age* (236,000). *The Australian* (135,000) is the only newspaper which can claim to have national status. Of New Zealand's 32 dailies, the *New Zealand Herald* is dominant (243,000). In Canada, the *Toronto Globe & Mail* (318,000) is the only English-language newspaper with national distribution out of 110 dailies which claim to reach 62% of the country's households. Hong Kong, with the highest news readership in Asia after Japan, has five English-language dailies, including the *South China Morning Post* (101,000) and the *Hongkong Standard* (60,000). In India, New Delhi has six, including the *Times of India* (175,000) and the *Navbharat Times* (294,000), both of which are published in other centres. Bombay also has the *Indian Express* (86,366), Calcutta the *Statesman* (223,000), Madras *The Hindu* (348,000). Other major newspapers within the Commonwealth are the Singapore *Straits Times* (281,000), the Kenya *Daily Nation* (148,000), and the Jamaican *Gleaner* (42,000).

*Others.* Elsewhere, significant numbers of English-language newspapers are to be found in South Africa, Sri Lanka, and the Philippines. Prior to its closure (by the management) in 1984, *The Rand Daily Mail* was South Africa's most respected and influential newspaper, mainly because of its opposition to the government. This role has largely been taken over by *The Cape Times* (circulation 75,000). The Johannesburg daily *The Star* has the largest circulation (200,000).

For further details of newspapers in particular countries, aspects of journalism and of newspaper usage, and other matters relating to newspapers generally, see AMERICAN PRESS, AUSTRALIAN PRESS, BROADSHEET, BULLETIN, CANADIAN PRESS, CARIBBEAN PRESS, EUROPEAN (THE), FLEET STREET, HEADLINE, HONG KONG, INDIAN PRESS, INTERNATIONAL HERALD TRIBUNE (THE), IRISH PRESS, JAPAN, JOURNAL, JOURNALESE, JOURNALISM, MAGAZINE, NEWS, NEWSLETTER, NEWSMAGAZINE, NEW ZEALAND PRESS, PAKISTANI ENGLISH, PRESS, QUALITY PRESS, SOUTH AFRICAN PRESS, SRI LANKA, TABLOID, TIMES (THE), USAGE, USAGE GUIDANCE AND CRITICISM, YELLOW PRESS. [MEDIA]. G.H.

**NEWSPEAK.** A simplified artificial language based on English in George Orwell's novel *Nineteen Eighty-Four* (1949): 'Newspeak was the official language of Oceania and had been devised to meet the ideological needs of Ingsoc, or English Socialism. In the year 1984 there was not as yet anyone who used Newspeak as his sole means of communication, either in speech or writing' (Appendix: The Principles of Newspeak). Oceania has a team of Newspeak philologists 'engaged in compiling the eleventh Edition of the Newspeak dictionary'. Almost any Newspeak word could serve as any part of speech; hence the verb *think* did duty for the noun *thought*, and *Newspeak* replaced *Newspeech*. Affixes were common: *ungood*, *good-wise*. The regular *stealed* and *mans* replaced irregular forms like *stole* or *men*. Compounds were frequent: *doublethink*, *oldthink*, *Oldspeak* (standard English). Other words were telescoped: *Ficdep* Fiction Department, *Ingsoc* English Socialism, *Minitrue* Ministry of Truth.

Newspeak was intended not only to express but to form politically acceptable habits of thought, 'at least so far as thought is dependent on words'. It therefore excluded ambiguities and shades of meaning, along with words for unacceptable concepts like *honour* and *democracy*. Its ideological slant rendered it unable to express or translate such statements as the Oldspeak 'all men are created equal', because the concept of political equality was *crimethink*. For the same

reason, Newspeak readily expressed politically orthodox statements contrary to objective fact, such as 'Freedom is slavery'. Orwell's inspiration for Newspeak probably included the artificial languages in Jonathan Swift's *Gulliver's Travels* (1726), Evgeny I. Zamyatin's *We* (1920-1), C. K. Ogden's *Basic English* (1930), Aldous Huxley's *Brave New World* (1932), and H. G. Wells's *The Shape of Things to Come* (1933). For its features, he drew on standard English for compounding and changes of part of speech, the political propaganda of his day for the catchy slogan style, and the condensed syntax of telegraphic communication. *Newspeak* has become a term in the language at large for misleading (especially political) jargon, and is the source for a large number of words modelled on it, such as *nukespeak* and *teenspeak*. See BASIC ENGLISH<sup>1</sup>, NOVEL, ORWELL, -SPEAK. [SPEECH, STYLE, VARIETY]. W.F.B.

**NEW SPELLING.** See SIMPLIFIED SPELLING SOCIETY, SPELLING REFORM.

**NEW YORK.** A city and port at the mouth of the Hudson River, in the state of the same name: a major city of the US and of the English-speaking world, and the centre of one of the largest US urban areas. It occupies Manhattan and Staten Island, the western end of Long Island, and part of the adjacent mainland, and its conurbation extends into the states of New Jersey and Connecticut. It typifies the American concept of the melting-pot, having received through Ellis Island many waves of immigrants, especially from Europe and Latin America. Many languages are spoken in the city, which is the centre of a sub-dialect within the general Northern dialect area of AmE.

**Pronunciation.** (1) New York pronunciation has a long, tense, very round vowel in words like *caught*, and a long, tense, relatively high vowel in words such as *cab*. (2) Like eastern New England and the American South, it is a non-rhotic (non-*r*-pronouncing) variety and, also like eastern New England and some accents of England (including RP), it has the linking *r* and intrusive *r*. When a word ending in *r* (which would normally not be pronounced) is followed closely by a word beginning with a vowel, the linking *r* is sounded: *gopher* is pronounced 'gopha', but in *The gopher is lost* the *r* is pronounced. By analogy, an intrusive *r* occurs where it is not etymologically or orthographically justified: *sofa* rhymes with *gopher*, but in *The sofa/r is lost* an *r*-sound often intrudes. In contrast, the Southern US shares neither the linking nor intrusive *r*-sounds with the other non-rhotic varieties, indeed often losing an *r*-sound even between vowels, as in *ve'y* for *very* and *Ca'olina* for *Carolina*. Non-rhotic pronunciation differs widely in

its prestige, depending on where it occurs. In the American South, *r*-lessness is a universal feature of many areas at all social levels. In New York City, on the other hand, it correlates strongly with class differences and has low prestige. In his investigations, William Labov found that *r*-pronouncing was more common among the employees of up-market department stores and shops than among those of businesses with merchandise of lower quality and prices. He also found more *r*-pronouncing in 'careful', self-conscious speech than in spontaneous dialogue. There is also an upper-class, old-family New York English, but it has been little studied and its features are not widely known.

**Low prestige.** New York English has low prestige even among its own speakers. Their reaction, which has been dubbed 'linguistic self-hatred', is not typical of many other areas, where the local speechways are usually regarded as indicating that the speaker is honest, friendly, sympathetic, intelligent, and reliable. New Yorkers' discomfort with their speech patterns may reflect the low regard the rest of the nation has for those patterns. It is, however, odd that the major city of the nation (its cultural and financial centre) should be low in linguistic prestige. In fact, the stereotype of New York English is the language of a lower socio-economic group, as though London English were to identify with Cockney usage, without the affectionate respect often accorded to it. See AMERICAN ENGLISH, BROOKLYNESE, DIALECT IN AMERICA, JEWISH ENGLISH, NEW ENGLAND, NEW YORKESE, NEW YORRICAN, RHOTIC AND NON-RHOTIC. [AMERICAS, NAME, VARIETY]. J.A.

Labov, William. 1966. *The Social Stratification of English in New York City*. Washington: Center for Applied Linguistics.

— 1972. *Sociolinguistic Patterns*. Philadelphia: University of Pennsylvania Press.

**NEW YORKER, The.** An American weekly magazine founded in 1925 by Harold Ross and known for its cartoons, essays, biographical studies, reports from abroad, and short works of fiction. Although associated through its title and style with New York City and an upper-middle-class metropolitan view of the world, the magazine has a nationwide readership devoted at least as much to its cartoons as its articles. Whereas the older British institutional weekly *Punch* has declined in sales, significance, and prestige in recent years, *The New Yorker* remains socially and commercially buoyant, with a circulation of c.600,000. It continues to be leisurely and literary, and apparently immune to the com-

petition of television and pop culture, forces that have helped close a number of erstwhile rivals. A particularly conservative feature is the cover, which in each issue displays a single illustration unrelated to anything inside. Every February, however, as a matter of continuity, the cover features the character Eustace Tilley, an early American dandy, the magazine's trademark. *The New Yorker* comments wryly on the ways of the world, the denizens of bars, cocktail-party habitués, executives, fashionable folk, and life in New York's various communities. The cool put-down is common in its cartoons: (Intense woman to smug man) 'You remind me of why I found the Eighties wanting.' Literary contributors have included Truman Capote, John Hersey, Dorothy Parker, S. J. Perelman, Lillian Ross, Rebecca West, and E. B. White; cartoonists have included Charles Addams, Peter Arno, Roz Chast, Helen Hopkinson, Rea Irvin (creator of Eustace Tilley), Bob Mankoff, George Price, Saul Steinberg, and Jack Ziegler. James Thurber contributed both writing and cartoons. Charles Addams was the creator in its pages (1940s-50s) of the 'Addams Family', a group of ghoulish characters who subverted the idea of the family as the rock on which democracy and civilization are founded: Morticia to daughter Wednesday, complaining about brother Pugsley, 'Well, don't come whining to me. Go tell him you'll poison him right back' (1944). The family in due course moved from the pages of the magazine to become a cult TV series of the 1960s and in the early 1990s were revived in a motion picture. See MAGAZINE. Compare PUNCH. [AMERICAS, MEDIA]. T.MCA.

**NEW YORKESE** [1890s]. An informal and sometimes pejorative term for the speech of people in or from New York City. See BROOKLYNESE, DIALECT IN AMERICA, -ESE, NEW YORK. [AMERICAS, NAME, VARIETY]. T.MCA.

**NEW YORRICAN** [1980s: a blend of *New York* and *Puerto Rican*]. (1) Among Puerto Ricans, an informal, often pejorative term for Puerto Ricans living in New York City and for people who return to Puerto Rico from the New York area: 'The New Yorrican students . . . seem to have plenty to say about their island brethren. "A lot of snotty people," said one high school student at the Padre Juan Rulfo School in San Juan' (*International Herald Tribune*, 17 Feb. 1990). (2) In the form *Nuyorican*, the name given in 1975 by the Puerto Rican poet Miguel Algarín to a mixture of Spanish and New Yorkese, as in *Aquí your credito is good* Here your credit is good. See ETHNIC NAME, NEW YORK, PUERTO RICO. Compare SPANGLISH, TEX-MEX. [AMERICAS, NAME, VARIETY]. T.MCA.

**NEW ZEALAND** [17c: adapted from Dutch. The islands were first named *Staten Landt* by the Dutch explorer Abel Tasman, then *Nieuw Zeeland*, after the province of Zeeland]. In Maori, *Aotearoa* Land of the Long White Cloud. A country of the Southern Pacific and a member of the Commonwealth, comprising North Island, South Island, and many small islands. Capital: Wellington. Head of state: the British monarch represented by a governor-general. Population: 3.3m (1988), 3.6m (projection for 2000). Ethnicity: 88% European, 11% Polynesian (Maori and Pacific Islander, especially from Western Samoa, Niue, and Rarotonga). Languages: English, Maori (official in courts), and various Polynesian languages. Education: primary c.100%, secondary 85%, tertiary 35%, literacy 99%. The Maori people probably settled in the islands from the 9c. European settlers have been largely of British and Irish descent. The first European sighting was by Abel Tasman in 1642. The British explorer James Cook visited them in 1769, and the first European settlement was by sealers in 1792. When whaling stations were established and trade began with the colony of New South Wales in Australia, the territory became first a part of New South Wales, then a colony in its own right. In 1840, by the Treaty of Waitangi, the Maori ceded sovereignty to Great Britain, but disputes, especially over land, led to outbreaks of war (1860–70). The relationship between Maori and *Pakeha* (Europeans: a Maori term meaning *white, strange*) has been better than in many lands settled during the European diaspora, but continues to be uneasy, especially with regard to land ownership and the cultural and linguistic assimilation of the Maori. Ties between New Zealand and Britain have traditionally been strong, but New Zealanders increasingly see their future as a 'Euro-Polynesian' nation on the Pacific Rim.

See ANTIPODEAN ENGLISH, ANTIPODES, AOTEAROA, AUSTRAL, AUSTRALASIA, AUSTRALASIAN ENGLISH, AUSTRALIAN ENGLISH, BURCHFIELD, DIALECT IN NEW ZEALAND, DOWN UNDER, ENGLISH, GODZONE, KIWI, MAORI, NEW ZEALAND BROADCASTING, NEW ZEALAND ENGLISH, NEW ZEALANDISM, NEW ZEALAND LITERATURE, NEW ZEALAND PLACE-NAMES, NEW ZEALAND PRESS, NEW ZEALAND PUBLISHING, OCEANIA, PACIFIC RIM, PAKEHA, PARTRIDGE, POLYNESIAN LANGUAGES. [NAME, OCEANIA]. T.MCA.

**NEW ZEALAND BROADCASTING.** New Zealand broadcasting has been subject to government regulation and involvement. Radio broadcasting in NZ began in 1921, and in 1925, the government-owned *Radio Broadcasting Company of New Zealand* was given permission to start broadcasts from Auckland, Wellington,

Christchurch, and Dunedin. In 1936, a Labour government made broadcasting more or less a government preserve, and set up the *New Zealand Broadcasting Service*, succeeded in 1962 by the *New Zealand Broadcasting Corporation*, which was also responsible for television. In 1977, the NZBC was replaced by the *Broadcasting Corporation of New Zealand*, controlling the two TV channels and *Radio New Zealand*. In 1988, BCNZ was split into TVNZ and RNZ, deregulation was promised, and Maori-language stations broadcast for the first time. RNZ controls not only the *National* and *Concert Programmes* (funded out of the broadcasting licence fee), but also commercial radio. *The New Zealand Listener* (published since 1939) is jointly owned by TVNZ and RNZ. In 1987, approximately 29% of TV programmes broadcast were NZ productions, the rest imported, mainly from the UK, US, and Australia. See BROADCASTING. [OCEANIA, MEDIA]. L.J.B.

**NEW ZEALAND DICTIONARIES.** The first NZ dictionary is shared with Australia: E. E. Morris's *A Dictionary of Austral English* (1898). After that, there were a number of school dictionaries and supplements to such dictionaries called *New Zealand* or *Australian and New Zealand*, mostly derived from Morris; the supplement to *Reed's School Dictionary* (1947) appears to be independent. In recent years, three pocket dictionaries have been edited to contain NZ material: the *Heinemann New Zealand Dictionary* (1979, revised 1989, ed. H. W. Orsman), *The New Collins Concise English Dictionary, New Zealand Edition* (1982, ed. I. A. Gordon), *The New Zealand Pocket Oxford Dictionary* (1986, ed. Robert Burchfield). The *Macquarie Dictionary* (1981, Australia) and *The Oxford English Dictionary* (2nd edition, 1989) both contain many NZ items. *The Dictionary of New Zealand English*, a major dictionary on historical principles (ed. H. W. Orsman), is close to publication. There are also several dictionaries of slang and colloquial NZE. The earliest, Sidney J. Baker's *New Zealand Slang: A Dictionary of Colloquialisms* (Whitcombe & Tombs, 1941) is thematic in form and discursive in style. Eric Partridge's *Dictionary of Slang and Unconventional English* (1937; 8th edition 1984, ed. Paul Beale) contains much specifically NZ material, reflecting Partridge's origins. Two recent works are *A Personal Kiwi-Yankee Slangue Dictionary* by Louis S. Leland (John McIndoe, 1980) and *A Dictionary of Kiwi Slang* by David McGill (Mills Publications, 1988). See AUSTRALIAN DICTIONARIES, BURCHFIELD, DICTIONARY, PARTRIDGE. [OCEANIA, REFERENCE]. L.J.B.

**NEW ZEALAND ENGLISH**, short form *NZE*. The English language as used in New Zealand. English has been used in New Zealand for over 200 years, from the first visit of Captain James Cook and his English-speaking crew in 1769. He recorded in his diary some Maori words, such as *pah* (a fortified village) and on a later visit *pounamu* (greenstone or nephrite), that later became part of the vocabulary of all New Zealanders. However, a more realistic starting-point is 1840, when the Maori, inhabitants of the islands since the 9c, ceded *kawanatanga* (governorship, interpreted by the British as sovereignty) to the British Crown in the Treaty of Waitangi. From that time, settlers from the British Isles began to arrive in increasing numbers, bringing their regional modes of speech with them.

**Australian and New Zealand English.** Parallels are often drawn between AusE and NZE. Although the two varieties are by no means identical, they are often indistinguishable to outsiders. Some phoneticians consider that there is a social and historical continuum in which three varieties of pronunciation can be identified: *Cultivated New Zealand*, *General New Zealand*, and *Broad New Zealand*. If this is so, NZE is similar to AusE, in which these categories are generally established, but other phoneticians regard the matter as unproved. Many speakers of NZE share with many speakers of AusE and CanE the habit of using an upward inflection of the voice in declarative sentences, often considered by non-New Zealanders to produce a tentative effect, as if inviting confirmation of a statement. This intonational pattern, however, serves to check that someone is still following what one is saying. See AUSTRALASIAN ENGLISH.

**Pronunciation.** NZE is non-rhotic, with the exception of the *Southland burr*, the use by some speakers in Southland and Otago, South Island, of an /r/ in words like *afford* and *heart*. It is believed to derive from ScoE, since Otago was a predominantly Scottish settlement. It has been said that the norm of educated NZE is the Received Pronunciation of the BBC World Service. There are, however, relatively few RP-speakers in New Zealand, a larger proportion speaking what is now called *Near-RP*. Its consonants do not differ significantly from those in RP except that a *wh/w* distinction is often maintained in words like *which/witch*. In words like *wharf*, where no near-homonym \**warf* exists, aspiration is less detectable.

Features of General New Zealand include: (1) Such words as *ham*, *pen* perceived by outsiders as 'hem', 'pin'. (2) Centralization of short *i* to schwa: *ships* pronounced /ʃəps/ in contrast with General Australian /ʃɪps/. These usages are sometimes stigmatized in print as 'shups' and

'sheeps' respectively. (3) The maintenance of RP 'ah' in *castle* /kɑːsl/, *dance* /dɑːns/ by contrast with General Australian /kæsl, dæns/. (4) Schwa used in most unstressed syllables, including /ə'fekt/ for both *affect* and *effect*, and /'rʌbʌʃ/ for *rubbish*. (5) A tendency to pronounce *grown*, *mown*, *thrown* as disyllabic with a schwa: 'growen', 'mowen', 'throwen'. (6) A distinctive pronunciation for certain words: *geyser* rhyming with 'riser', *oral* with 'sorrel'; the first syllable of *vitamin* like 'high', as in AmE and ScoE; the *Zea of Zealand* pronounced with the vowel of *kit*. Occasional pronunciations such as *basic* /'bæsik/ and *menu* /'mɪnjuː/ are also heard. (7) A tendency to diphthongize some long vowels, opening with a schwa, as in *boot* /bəʊt/ and *bean/been* /bəɪn/. (8) Lengthening of final -y in such words as *city*, *happy*: /'sɛtɪː/, /'hæpɪː/. (9) Full pronunciation of -day in *Monday*, *Tuesday*, etc. (10) A policy of the Broadcasting Corporation that words and place-names of Maori origin be pronounced by announcers as in Maori, rather than in Anglicized forms: *kowhai* not /'kəʊ(w)aɪ/ but /'kɔɪfai/.

**Grammar.** (1) Standard NZE is to all intents and purposes the same as standard BrE. However, the plural forms *rooves* and *wharves* are preferred to *roofs* and *wharfs*, and in spelling New Zealanders like Australians use *-ise* as in *centralise*, not *-ize*. Although *-ise* is common in BrE, *-ize* is widely used. (2) Nouns of Maori origin often appear in NZE, as in Maori itself, without a plural marker: *iwi* a tribe, as in *A Maori nation exists comprising various iwi* (not *iwis*); *marae* a courtyard of a meeting house, as in *Marae have always been open to all* (not *maraes*). The word *Maori* itself is now commonly spoken and written in plural contexts without a final -s: *the powerlessness which frustrates so many Maori*. Such usage is, however, currently controversial. (3) In recent works of literature, Maori speakers of non-standard English have begun to be portrayed, drawing attention to syntactic aspects of Maori English: *Here's your basket nearly finish* (Patricia Grace, 1986); *You big, brave fellow, eh?* (Bruce Mason, 1963).

**Vocabulary.** In the absence of a comprehensive dictionary of NZE on historical principles, the number of distinctive words cannot be estimated with any certainty, but the total is likely to be less than a third of the 10,000 claimed for AusE. This vocabulary falls into five classes: loanwords from Polynesian languages, words showing extension of or departure from the meanings of general English words, the elevation of regional BrE words into standard currency, loanwords from AusE, and distinct regional word forms. This vocabulary is distributed through all walks of life, but particularly in the language of

farming, food production, government, local administration, education, and informal usage. In more detail, these are:

*Loanwords from Maori.* In addition to names of flora and fauna, there is an increasing number of Maori loanwords for abstract concepts and tribal arrangements and customs: *ae* an interjection expressing astonishment, distress, etc., *haere mai* a term of greeting, *iwi* a people, tribe, *mana* power, prestige, authority, *manuwhiri* a visitor, guest, *mauri* the life principle, *rahui* a sign warning against trespass, *tupuna* an ancestor. There are also some verbs, such as *hiko* to march, *hong* to press noses. Some Maori words have been Anglicized to such an extent that they no longer look like Maori words: *biddy-bid* a plant with prickly burrs (Maori *piripiri*), *cockabully* a small fish (Maori *kōkōpu*), *kit* a flax basket (Maori *kete*).

*Loanwords from Samoan.* Samoan loanwords are not widely used by non-Samoan New Zealanders. They include: *aiga* an extended family, *fale* a house, *palagi* a non-Samoan, *talofa* a ceremonial greeting, and the returned loanword *afakasi* a half-caste.

*Extensions and alterations.* Adaptations of general English words include: *bach* a holiday house at beach (a clipping of *bachelor*), *creek* (also AusE) a stream, *crook* (also AusE) ill, *go crook at* (also AusE) to be angry with, *farewell* as in *farewell someone* (also AusE) to honour that person at a ceremonial occasion, *section* a building plot, *tramp* to walk for long distances in rough country, hence *tramper* one who does this.

*Standardization of British English dialect words.* BrE dialect words promoted to standard, all also AusE, include: *barrack* to shout or jeer (at players in a game, etc.), *bowyang* a band or strip round a trouser-leg below the knee, to prevent trousers from dragging on the ground, *burl* a try or attempt, as in *give it a burl*, *chook* a chicken, fowl, *dunny* a lavatory, *larrikin* a hooligan, *lolly* a sweet of any kind, especially boiled, *Rafferty's rules* no rules at all, *smooge* a display of amorous affection, *wosser* a killjoy or spoilsport.

*Loanwords from Australian English.* Words acquired from AusE include, from the preceding section, *larrikin*, *Rafferty's rules*, and: *backblocks* land in the remote interior, *battler* someone who struggles against the odds, *dill* a fool, simpleton, *ocker* a boor, *offsider* a companion, deputy, partner, *shanghai* a catapult. However, many AusE words are not used in NZE, especially words of Aboriginal origin and words associated with the swagmen (old-time itinerant workers). Similarly, many NZE words are unknown in Australia, especially

words of Maori origin like the common fish names *hapuku*, *kahawai*, *tarakihi*, *toheroa*.

*Distinct word forms.* Regional coinages include compounds, fixed phrases, and diminutives: (adjective + noun) *chilly bin* a portable insulated container for keeping food and drink cool, *Golden Kiwi* the name of a national lottery, *informal vote* a spoiled vote (also AusE), *silver beet* seakale beet; (noun + noun) *Canterbury lamb* from the name of a province, *kiwifruit* the Chinese gooseberry; (diminutive suffix *-ie*) *boatie* a boating enthusiast, *postie* a person delivering post (shared with ScoE and CanE), *swannie* an all-weather woollen jacket (from the trademark Swannndri), *truckie* a truck-driver (also AusE), *wharfie* a waterside worker, *stevadore* (also AusE); (diminutive suffix *-o*, *-oh*): *arvo* afternoon, *bottle-oh* a dealer in used bottles, *compo* compensation, especially for an injury, *smoko/smoke-oh* a break from work for a rest, with or without a smoke.

**English and Maori.** The most significant social issue relating to language is the relationship between the European majority and the Polynesian minority. This includes issues such as the status of Maori as an official language on a par with English in the courts and the pronunciation of Maori words, including place-names, in English. See AUSTRALASIAN ENGLISH, L-SOUNDS, MAORI, MAORI ENGLISH, NEW ZEALAND, NEW ZEALANDISM, NEW ZEALAND LITERATURE. [OCEANIA, VARIETY].

**NEW ZEALANDISM** [20c: from *New Zealand* and *-ism* as in *Scotticism*]. A word, phrase, idiom, or other usage peculiar to, or particularly common in, New Zealand. Such expressions are drawn from the Maori language (*Pakeha* a white New Zealander, *tangi* a ceremonial funeral) or

are adaptations of general English (*grass fence* a strip of long grass along an electric fence, a barrier to sheep even when the current is off, *share-milker* a tenant farmer on a dairy farm who receives a share of the profits). See -ISM, MAORI, NEW ZEALAND ENGLISH. [OCEANIA, VARIETY, WORD]. T.MCA.

**NEW ZEALAND LITERATURE.** Arriving in Christchurch as an immigrant farmer in 1860, Samuel Butler was 'rather startled at hearing one gentleman ask another whether he meant to wash this year, and receive the answer "No"'. Butler soon discovered that a person's sheep were himself: 'He does not wash his *sheep* before shearing, *he* washes; and, most marvellous of all, . . . he "lambs down" himself.' Butler promptly turned this pragmatic settlers' language to literary purposes, creating in *A First Year in Canterbury Settlement* (1863) and later *Erewhon* (1872) a narrative language that intercuts between European cultivation and colonial earthiness. He could write of being 'stuck up' by a waterfall, and having to 'slew' it, in a spectacular gorge that he had just compared picturesquely to a street in Genoa. Most early New Zealand writing was in the spirit of dispossessed Tennysons, nostalgic for the old home or rhapsodic about the new. The best has a double-edged quality, like Butler's ironic utopia in *Erewhon*, or in poetry the mix of frontier ballad with literary verse by Blanche Baughan, or of intellectual and pastoral elements by Ursula Bethell (both early 20c).

The paradox of writing in English at the furthest possible distance from England became for such writers a source of energy, not loss. When Katherine Mansfield, a native of Wellington, reviewed from London Jane Mander's *The Story of a New Zealand River* (1920), she rebuked Mander for labouring to gloss words of Maori origin like *puriri* and *rimu*, preferring to weave threads of local diction and reference into her own stories set in New Zealand. Such local elements are the prime source of the mixture of mystical and domestic with which she invested 'my undiscovered country' in such works as 'Prelude' (1918) and 'At the Bay' (1921). The growth from a colonial to an independent culture has at times been controversial. Each new anthology seems to provoke dispute about the viability of an identifiable national literature in such a small and apparently 'English' country. There have, however, been distinctive characteristics. Between the wars, liberal-socialist realism prevailed, its emphases working-class, male, and outdoors. Its most sustained accomplishments were John Mulgan's *Man Alone* (1939), for years almost an archetype, and the vernacular narratives of Frank Sargeson, such as his stories *A*

*Man and His Wife* (1940) and the novel *I Saw in My Dream* (1949). A vigorous line of low-life ballads also emerged, nurtured by such mid-century poets as A. R. D. Fairburn, Denis Glover, and James K. Baxter. Literature has very largely stayed close to local realism and local speech, even in philosophical and religious poets and dramatists like Baxter and non-realist novelists like Janet Frame. The same is largely true of the ongoing effort to respond imaginatively to the country's awesome volcanic terrain.

New Zealand's remoteness, which might have caused self-absorption, has sharpened the national eyesight. There is a considerable literature in which life is observed from various oblique viewpoints: children, the old, and other marginal observers are the narrative voices of such notable fictions as Ian Cross's *Good Boy* (1958), Maurice Gee's *Plumb* (1978), and Janet Frame's *Owls Do Cry* (1957) and *Intensive Care* (1979). Semi-detachment is the nation's geographical and cultural situation. The Kiwi bombardier who provides the first level of narration in M. K. Joseph's European war novel *A Soldier's Tale* (1976) is witness, as New Zealanders have had to be in at least five wars, of conflicts which involve them but are not theirs. The literature of New Zealand is therefore watchful and fairly muted. It is rarely exuberant, but the effort to connect the immediate and the inherited continues, in such different writers as Allen Curnow, the major contemporary poet, and Keri Hulme, whose *The Bone People* (1985) takes its strangeness from mixing intensely local ethnicity with gleefully eclectic bookishness: oral and literary cultures interact for her as they did for Butler. The emergence in the 1970s of a Maori literature in English has added a new dimension. Witi Ihimaera and Keri Hulme has transposed into English the sonorous spoken rhythms of Maori oratory. Patricia Grace has more subtly established the 'ways of talking' of her people, and has begun to adapt English prose fiction to Maori forms, rather than the other way round. This movement has been sympathetically received. See BUTLER. [LITERATURE, OCEANIA, VARIETY]. R.R.

**NEW ZEALAND PLACE-NAMES.** According to the New Zealand Geographic Board, the body charged by Act of Parliament with registering place-names, 58% of officially recognized names (including those of rivers and mountains) are of Maori origin, 42% of European origin. The breakdown between the two islands reflects the patterns of Maori and European settlement: in the North Island, 79% Maori, 21% European; in the South Island, 67% European, 33% Maori.

**Maori.** The longest officially recognized place-name is *Taumatawhakatangihangakouauotamateapokaiwhenuakitanatahu*, the name of a hill in southern Hawkes Bay, North Island. It means 'The hill on which Tamatea, circumnavigator of the land, played his kouau (flute) to his loved one'. In this name, the elements are clearly recognizable, but that is not always the case with Maori place-names, either because they have changed with time or have been altered by Europeans, as in *Amuri* from Maori *Haumuri* East Wind, and *Petone* from Maori *Pito-one* End of the Beach. Nevertheless, many Maori names can be understood, such as *Awakino* ('valley ugly') Ugly Valley, *Maungani* ('mountain big') Big Mountain, *Waikaremoana* Great Lake of Rippling Water, *Waitangi* Weeping Water (that is, Waterfall).

**European.** While most European names are English (*Auckland*, *Christchurch*, *Wellington*), there are some from other languages, such as *Aiguilles Rouges* (French), *Dannevirke* (Danish), *Dunedin* (Celtic), *Franz Joseph* (Austrian), *New Zealand* (Dutch). Some English place-names reflect the experiences of early explorers, such as *Bay of Plenty*, *Cape Foulwind*, *Poverty Bay*, others commemorate people, such as *Clive*, *Greytown*, *Nelson*, *Onslow*, and many reflect the origins of the settlers, such as the Scottish *Aviemore*, *Bannockburn*, *Ben Lomond*, *Portobello*, *Roxburgh*. See PLACE-NAME. [NAME, OCEANIA]. L.J.B.

**NEW ZEALAND PRESS.** There is no national daily newspaper, the major dailies being associated with the four main centres of population: *The New Zealand Herald* (Auckland), *The Dominion* (Wellington), *The Press* (Christchurch), *The Otago Daily Times* (Dunedin). There are four other daily morning papers and over 20 daily evening papers, all regional. Some 80% of daily circulation is controlled by three major groups: New Zealand News, Independent News, and Wilson and Horton. Apart from the dailies, there are over 80 community newspapers and over 500 magazines, journals, and newsletters which accept advertising. See NEWSPAPER, PRESS. [MEDIA, OCEANIA]. L.J.B.

**NEW ZEALAND PUBLISHING.** There are over 300 publishers in NZ, some two-thirds of which are government departments, societies, and private organizations. Local companies include Cape Catley, Caxton Press, and John McIndoe, and the university presses of Auckland and Victoria (Wellington). In addition, large international companies such as Allen & Unwin, William Collins, Longman Paul, Macmillan, Octopus (Heinemann-Reed), Oxford University Press, Penguin, and Random Century are represented, all with specifically NZ as well

as imported titles. Local publishing has increased its share of the NZ market from about 20% ten years ago to over 33% today, and includes many educational books. About 60% of those used in high schools are locally produced, while in primary schools the percentage is even higher. School texts have been important in the growth of publishing as an export industry: four NZ publishers export over 80% of their production to such countries as the UK, US, France, Spain, and Scandinavia, elementary teaching materials accounting for this percentage. In percentage terms, NZ book exports are second only to those from the UK, over 25% of local production being exported. See PUBLISHING. [MEDIA, OCEANIA]. L.J.B.

**NGUGI WA THIONG'O**, also written **Ngũgĩ**; formerly *James Ngugi* [b.1938]. Kenyan (Kikuyu) teacher, critic, dramatist, and novelist, born in Limuru, and educated in Kenyan schools and at Makerere U., Uganda, and Leeds U., England. His first works were in English, set against a background of social and political upheaval as Kenya moved towards independence from Britain in the 1950s and early 1960s. Ngugi's style has been described as Biblical in its purity, and expresses an African Marxist viewpoint. His writings in English include the novels *Weep Not Child* (1964), *The River Between* (1965), *A Grain of Wheat* (1967), and *Petals of Blood* (1977), and the plays *The Black Hermit* (1968), *This Time Tomorrow*, *The Rebels*, *The Wound in the Heart* (all 1970), and *The Trial of Dedan Kimathi* (1976, with Micere Mugo). When he completed *Petals of Blood*, he gave up English as the medium for his fiction, but continued to use it to translate his works and for non-fictional purposes. He argued that to provoke and cultivate the social and political reforms needed in Kenya requires novels and plays in the local languages. For this, his medium is Kikuyu (or Gĩkũyũ, as he writes the name). With Ngugi wa Mirii, he produced the play *Ngaahika Ndeenda* (1980), translated as *I Will Marry When I Want* (1982). It was immediately banned. In *Detained: A Writer's Prison Diary* (1981), he describes his one-year detention without trial in 1978. His Kikuyu novels are *Caitani Mutharabaini* (1980), translated as *Devil on a Cross*, and *Matigari Ma Njirungi* (1986), translated as *Matigari*. In these, Ngugi draws on oral traditions and tribal values to attack neo-colonialism, and their apparently plain language is laden with aphorisms, symbols, and slogans. His works are widely read in Kenya by people far from the modern metropolitan centres. Ngugi discusses the language issue in *Decolonising the Mind: The Politics of Language in African Literature* (1986), a work dedicated to 'all those

who write in African languages, and to all those who over the years have maintained the dignity of the literature, culture, philosophy, and other treasures carried by African languages'. He adds in the preface: 'If in these essays I criticise the Afro-European (or Eurafrikan) choice of our linguistic praxis, it is not to take away from the talent and the genius of those who have written in English, French, or Portuguese. On the contrary I am lamenting a neo-colonial situation which has meant the European bourgeoisie once again stealing our talents and geniuses as they have stolen our economies.' In the same work, he says: 'This book . . . is my farewell to English as a vehicle for any of my writings. From now on it is Gikũyũ and Kiswahili all the way.' See index. [AFRICA, BIOGRAPHY, LITERATURE].

G.D.K., T.MCA.

**NICARAGUA, NICARAGUAN ENGLISH.** See CENTRAL AMERICA, ENGLISH, MISKITO COAST CREOLE.

**NICE-NELLYISM**, also **nicenellyism**, **nice-nellieism** [1930s AmE: from *nice Nelly*, a disparaging name for a prudish woman or anyone considered to behave in a similar way. Used with or without capital letters for *nice* and *Nelly*]. (1) Excessive prudishness in speech or behaviour: 'Mr. Pyles attributes much of the nice-nellyism that blighted polite speech and writing during the nineteenth century to Webster's Puritan prudishness' (*New Yorker*, 18 Oct. 1952). (2) A genteelism: 'Nor is there an entry for *toilet* because Americans regard the word as indelicate and a shade vulgar but not as a subject of usage controversy, whereas some Britons use it as the most general word and others have distaste for it as what Americans call a nice-nellyism—a genteel euphemism' (John Algeo, reviewing *Webster's Dictionary of English Usage in English Today* 26, Apr. 1991). See EUPHEMISM, GENTEELISM, -ISM. [STYLE].

T.MCA.

**NICKNAME** [15c: from Middle English *a nekename*, metanalysis of *an ekename* an extra name: compare NONCE WORD]. An informal name used in place of, or together with, a formal name: for example, the short form *Ed* for *Edward*, or *Lefty* for someone left-handed. Nicknames are most common for persons, but are also used of places: *the Big Apple* for New York City, *the Smoke* for London, *Mile-High City* for Denver, Colorado, *the Eternal City* for Rome. Nicknames tend to suggest that their user is on familiar terms with the bearer of the name, although the familiarity may be equivocal (affectionate, disdainful, defamatory, even a mix of these). A common form of nickname is a modification of the formal name by clipping

alone (*Ed* for *Edward*), clipping and adaptation (*Ted* and *Ned*), clipping and diminutive suffix (*Eddy*/*Eddie*, *Teddy*, *Neddy*), sometimes with many variations (*Eliza*, *Liza*, *Lisa*, *Liz*, *Lizzie*, *Betty*, *Bess*, *Beth*, and *Betsy* for *Elizabeth*). On occasion, the modification can lead to an entirely different form, such as *Polly* from *Mary* and *Peggy* from *Margaret*. Another form of nickname is the descriptive epithet, on its own (*Shorty* for someone short, or ironically for someone tall; *chalky*, applied in BrE to someone whose surname is *White*; *Bluebeard*, someone with a beard dyed blue, or a menace to women, like the original holder of the nickname) or following the given name (*Ivan the Terrible*, *Richard Lionheart*). See EPITHET. Nicknames are informally given, as opposed to the ritual naming ceremonies typical of formal names, as in christening ceremonies or launching ships. They have, however, sometimes been adopted as regular names, as with such surnames as *Bright* and *Daft*. Relevant publications include: Jane Morgan, Christopher O'Neill, & Rom Harré, *Nicknames: Their Origins and Social Consequences* (Routledge & Kegan Paul, 1979), and Laurence Urdrag, *Names and Nicknames of Places and Things* (US: Hall, UK: Grafton Books, 1987). Compare PET NAME, SO(U)BRIQUET. See FORM OF ADDRESS. [NAME].

J.A.

**NIGER-CONGO LANGUAGES.** See AFRICAN LANGUAGES, BANTU, LANGUAGE, LIBERIA.

**NIGERIA.** Official title: *Republic of Nigeria*. A country of West Africa and the most populous country in Africa. Capital: formerly Lagos; since 1991 Abuja. Currency: the naira (100 kobo). Population: 110.5m (1988), 162.5m (projection for 2000). Ethnicity: 21% Hausa, 21% Yoruba, 18% Igbo, 10% Fulani, 6% Tiv, 5% Kanuri, 5% Ibibio, 4% Edo, 10% others. Religion: 47% Muslim, 19% traditional, 17% Protestant, 17% Roman Catholic. Languages: English and the main languages of each state (official); the most widely spoken of the estimated 400 indigenous languages are Hausa (27%), Igbo (11%), Yoruba (18%); Nigerian Pidgin English, a widely used lingua franca. Education: primary 98%, secondary 29%, tertiary 3%, literacy 43%. English is the language of education after the first three years of primary school.

**History.** The Portuguese established the first trading posts along the Guinea coast in the 15c and various European nations traded in the area for gold, ivory, and slaves. British contacts with Nigeria go back at least to the 16c and varieties of English were sufficiently well established in coastal areas in the 18c for an Efik chief in Calabar to keep a diary, from which the following is an excerpt: 'about 6 am in aqua Landing with

small Rain morning so I walk up to see Esim and Egbo Young so I see Jimmy Henshaw come to see wee and wee tell him for go on bord . . .' (D. Forde (ed.), *Efik Traders of Old Calabar: The Diary of Antera Duke*, 1956). British missionaries began to teach English in Nigeria during the first half of the 19c, but relations between Britain and parts of Nigeria were not formalized until 1861 when the settlement of Lagos was declared a colony. The Berlin Conference of 1885 recognized Britain's claim to the *Oil Rivers Protectorate* created in 1882 in the Niger delta area. This was enlarged and renamed the *Niger Coast Protectorate* in 1893. The *Protectorate of Southern Nigeria* and the *Protectorate of Northern Nigeria* were created in 1900 from territories controlled by the Royal Niger Company. These were amalgamated into the *Colony and Protectorate of Nigeria* in 1914. Nigeria became independent in 1960, a republic within the Commonwealth in 1961, and a federal republic in 1963.

**English and Pidgin.** A wide spectrum of English is used in Nigeria, including standard English whose spoken forms are influenced by various mother tongues, more general English whose structures are influenced by the mother tongues, the Indian English of many traders and teachers, and Nigerian Pidgin English, which is part of the continuum of West African Pidgin English and has many features in common with Krio in Sierra Leone and Kamtok in Cameroon. Pidgin is used throughout the country as a lingua franca. It is sometimes acquired as a mother tongue in such urban areas as Calabar and Port Harcourt, but almost always in conjunction with one or more local languages. It has many forms that reflect mother-tongue and English influence and, although a number of Pidgin dictionaries have been written and cyclostyled, it has not yet been standardized. It has been used in prose by many writers, including Chinua Achebe, and as a vehicle for poetry by Frank Aig-Imoukhuede and for drama by Ola Rotimi.

**Pronunciation.** (1) All varieties of Nigerian English are non-rhotic. RP is no longer the norm for the media, but continues to have prestige and to influence pronunciation. (2) There is a tendency towards syllable-timing that becomes more pronounced as one moves from standard English to Pidgin. Polysyllables tend to have all syllables equally stressed. (3) The central vowels /ə/ and /ɪ/ in RP tend to be replaced by /a/, /ɔ/, or /ɛ/, so that *but* can rhyme with *got* or in hypercorrect forms with *get*, and all three can occur in *church*. (4) There are fewer vowel contrasts in Nigerian English: often no distinction between *cheap* and *chip*, *caught*, *court*, and *cot*, *pool* and *pull*. (5) The diphthongs in RP *day* and *dough* tend to

become the single vowels /e/ and /o/; those in *hear* and *hair* tend to have the schwa replaced by /a/. (6) There are differences in the pronunciation of consonants in different parts of the country. The initial consonants in *thin* and *then* tend to be replaced by /t, d/ in Igbo and Yoruba-influenced English, and by /s, z/ in Hausa-influenced English. Igbo and Yoruba speakers tend to replace the final consonant /ʒ/ as in *rouge* by *sh* ('roosh'), while Hausa speakers often use /dʒ/ ('roodge').

**Grammar.** Educated Nigerians use standard forms especially in the written medium, but the following features are widely described as occurring in general Nigerian English: (1) Uncountable nouns are often treated as countable: *I had only fruits to eat; I am grateful for your many advices*. (2) Definite articles are sometimes used as if the rules of standard English have been reversed: *Lorry was overcrowded; What do you think of the Structuralism?* (3) The use of prepositions can differ from BrE and AmE norms: *He came to my office by four o'clock* (that is, at four o'clock); *She is the best teacher for our school* (in our school). (4) Phrasal verbs are sometimes used differently (as in *He couldn't cope up with any more money worries*) or drop their particles (*Pick me at the corner*: not *pick me up*). (5) The modal verbs *could* and *would* are often used instead of *can* and *will*: *He has assured me that he could come tomorrow; They say that he would be attending our next meeting. Will* is also sometimes used for *would*: *I will first of all like to thank you*. (6) *Themselves* is often used with *like/love* for each other: *The husband and wife loved themselves dearly; Why do they like themselves so much?*

**Vocabulary.** There are three groups of distinctive words in Nigerian English: (1) Borrowings from local languages and Pidgin: *danshiki* (Hausa) male gown, *oga* (Yoruba) master, boss, *obanje* (Igbo) spirit child, *dash* (Pidgin) to give, a gift. (2) Loan-translations from local languages: *have long legs* to exert influence, *throw water* to offer a bribe. (3) Items given local meanings or coined for local purposes: *come*, as in *I'm coming* I'll be with you soon, *You've come!* Welcome; *decampee* a person who moves to another political party; *hear* to understand, as in *I hear French*; *senior elder*, as in *senior sister* elder sister. SEE ENGLISH, WEST AFRICAN ENGLISH, WEST AFRICAN PIDGIN ENGLISH. [AFRICA, NAME, VARIETY]. L.T., T.MCA.

**NOISE.** See INFORMATION, SOUND.

**NOM DE PLUME** [1820s: from French, pen name]. A pen name or pseudonym. The expression was not approved in classical French, which preferred *nom de guerre* war name. Formerly

widely used in English, the expression is now generally considered affected. See PEN NAME. [LITERATURE, WRITING]. R.C.

**NOMENCLATURE** [17c: from Latin *nomenclatura* a calling by name, list of names. Stress: on first or second syllable]. A system of names or terms, as used for any purpose but particularly an art or science. Compare TERMINOLOGY. See BINOMIAL NOMENCLATURE, TERMINOLOGY. [NAME, WORD]. T.MCA.

**NOMINAL** [15c: from Latin *nominalis* relating to a name or noun]. (1) Relating to nouns: a *nominal group*. (2) A noun or pronoun: *He and bridge* are the nominals in the sentence *He crossed the bridge*. (3) An adjective functioning as a noun: *the poor* (poor people); *the accused* (the accused person). The terms *nominal group* and *nominal clause* mean the same as noun phrase and noun clause. A nominal clause is a finite or non-finite clause that resembles a noun phrase in the range of its functions; for example, as the subjects of sentences, *That he can't lift his arm* in *That he can't lift his arm worries me*, and *Smoking cigarettes* in *Smoking cigarettes can cause cancer*. Compare ABSOLUTE ADJECTIVE, SUBSTANTIVE. [GRAMMAR]. S.C., T.MCA.

**NOMINALIZATION** [Mid-20c in this sense]. (1) The process or result of forming a noun from a word belonging to another word class: *writing/writings* and *shaving/shavings* derived from *white* and *shave* by adding *-ing*; *sanity* derived from *sane* by the addition of the noun-forming suffix *-ity*; *nominalization* derived from *nominalize* by adding *-ation*. (2) The process or result of deriving a noun phrase by a transformation from a finite clause: *their rejecting my complaint* or *their rejection of my complaint* from *They rejected my complaint*. [GRAMMAR]. S.G.

**NOMINATIVE ABSOLUTE**. See ABSOLUTE CLAUSE.

**NOMINATIVE CASE** [14c: from Latin *casus nominativus* the naming case]. A term in the case system of Latin and other inflected languages, typically marking a noun or pronoun as the subject of a sentence. The nominative is the citation form of nouns and pronouns listed in dictionaries and the first or top form in declension tables. *Marcus* is the nominative of the Latin name whose equivalent in English is *Mark*, and has the masculine nominative inflection *-us*. In English, the subjects of sentences have sometimes been described as nominatives. [GRAMMAR]. S.C.

**NONCE WORD**, also **nonce-word** [From Middle English *for the nanes*, metanalysis of *\*for then anes* for the one (thing), present-day *for the nonce* for the time being, for the work in hand: compare NICKNAME]. In medieval poetry, variants of the word *nonce* were used to complete lines, often plural and rhyming with *bones* or *stones*: 'Eneas hymself doun layd for the nanis, / And gave schort rest vnto his wery banis' (Gavin Douglas, *Aeneis*, 1513). The term *nonce-word* was adopted in the preparation of the *OED* (1884) 'to describe a word which is apparently used only for the nonce'. From this usage have come by analogy such further forms as *nonce borrowing*, *nonce combination*, *nonce form*, *nonce formation*, *nonce meaning*, *nonce usage*, *nonce use* (all often hyphenated). Because of the special functions, ephemerality, and even eccentricity of such usages, it is not easy to exemplify them. Recent nonce occurrences, however, include the verb *to perestroik*, formed from the Russian loanword *perestroika* (for an illustrative quotation, see BACK-FORMATION), as if it were 'perestroiker' (one who perestroiks), and the noun *Excaliburger*, for a hamburger sold at Tintagel in Cornwall, a site associated with the legendary King Arthur, whose sword was called Excalibur. Although nonce forms are coined for the occasion and may never occur again or be used in another context, they sometimes become regular, widely used words, as with *mob* in the early 18c, clipped from Latin *mobile vulgus* (the fickle crowd). See BLEND, BUZZ WORD, -ITIS, NEOLOGISM/NEOLOGY, ROOT-CREATION, STUNT WORD. [STYLE, WORD]. T.MCA.

**NON-COUNT NOUN**. See UNCOUNTABLE NOUN.

**NON-DEFINING RELATIVE CLAUSE**. See RESTRICTIVE AND NON-RESTRICTIVE RELATIVE CLAUSE.

**NON-FINITE VERB**, also **nonfinite verb**. A form of the verb that does not display a distinction in tense, in contrast with *finite verb* (where there is a distinction between present tense and past tense: *hopes, hoped*). A non-finite verb is either an *infinitive* or a *participle*. There are two infinitives: the *to*-infinitive ('Estelle wants *to dance* with Matthew'); the *bare infinitive* ('Philip will *come* with Matthew'). There are two participles: the *-ing participle* or the *present participle* ('James is *playing* cards') and the *-ed participle* or (according to its function) the *past participle* or *passive participle* ('James has *visited* me recently'; 'Jane was *helped* by Jeremy'). See FINITE VERB, INFINITIVE, VERB [GRAMMAR]. S.G.

**NON-RESTRICTIVE RELATIVE CLAUSE.**  
See RELATIVE CLAUSE.

**NONSENSE** [17c]. Words or language with little or no meaning and perhaps an absurd or trivial quality: 'For learned Nonsense has a deeper Sound, / Than easy Sense, and goes for more profound' (Samuel Butler, *Genuine Remains of Samuel Butler*, published 1759); 'I daresay I shall go on scribbling one nonsense or another to the end of the chapter' (Walter Scott, letter, 1803). The form *non-sense* is occasionally used as a neutral antonym of *sense*: '[Lear's] non-sense is not vacuity of sense: it is a parody of sense, and that is the sense of it' (T. S. Eliot, *Music of Poetry*, 1942). The term is often attributive: a *nonsense book*, *nonsense verse*.

A *nonsense syllable* is formed by putting a vowel between consonants to produce a non-word, as in the sequence *dib, gib, kib, mib, pib, zib*, from which the forms *bib, fib, lib, nib* are excluded because they 'make sense' (that is, form known words or abbreviations). Nonsense syllables have often been used by psychologists in experiments that test memory and learning. The use of *nonsense words* is venerable: sometimes, like children's rhymes and folk expressions, they serve to fill out a phrase or a character (as with the giant who says *see-fi-fo-fum, I smell the blood of an Englishman*); sometimes they garble words that once made altogether too much sense, like the references to plague behind *Ring-a-ring-a-roses, a pocket full of posies, hush-a, hush-a, all fall down*. Often, however, nonsense appears to be spontaneous and a matter of whimsy: for example, in 1862 the painter and poet Edward Lear wrote the following to his friend Evelyn Baring:

Thrippy pillivinx,

Inky tinky pobblebockle abblesquabs?—Flosky!  
Beebul trimble flosky!—Okul scratchabibbleongibo,  
viddle squibble tog-a-tog, ferrymoyassity amsky  
flamsky ramsky damsky crocklefeather squiggs,

Flinkywisty pomm,  
Slushypipp

The French linguist Jean-Jacques Lecercle draws attention to this letter in *The Violence of Language* (1990), saying first that it appears to be an incomprehensible hoax: 'The only surprise is that a man of 50 should still indulge in such childish games.' He notes, however, that the text is not entirely chaotic: it is English nonsense (not French), is laid out as a letter, suitably opens and closes, and is properly punctuated and (apparently) spelt. The words are clear-cut, some look credible, and here and there a bit of 'sense' creeps in (except that it may not be safe to assume that *ink, scratch, and tog, or -le and -y* are doing their usual jobs). Questions, exclamations, and statements also present themselves

clearly, and so it is 'only' at the level of meaning that the system breaks down. Lecercle adds:

But perhaps I am looking for the wrong meaning. If I forget denotation and look for connotation, in other words if I go from semantics to pragmatics, the text as a whole acquires meaning. . . . We all have to write official letters, full of the expression of high-flown but empty feeling, of conventional phrases and clichés. . . . Hollowness, sometimes even hypocrisy, are the order of the day. Would not a semantically empty text, keeping only the pragmatic skeleton of a conventional letter, aptly embody the artificiality of such letters? Lear's meaning, if my hypothesis is correct, is satirical.

Lecercle draws this meaning almost painfully from Lear's text, his conclusion pointing to a distinctive feature of nonsense: that people often work on it, like a Delphic prophecy, to eliminate as much of the *non-* as they can.

Lear's interest in nonsense has been considerably enlarged throughout the world in the last decade, during which, especially in Japan, a kind of pseudo-English has begun to appear regularly on the packaging of goods, on T-shirts, and the like: *Joyful, let's dash in a sky* and *When I jumped far beyond your imagination, I found myself a gust of wind*. Such surreal snippets may now have become trendy in the English-speaking world. In 'English know-how, no problem' (an article in *The Independent on Sunday*, 9 Sept. 1990), the American writer Bill Bryson discusses such a 'message' on a British-made jacket seen in London: *Rodeo—100 per cent Boys for Atomic Atlas*. 'What', he asks, 'do these strange messages mean?' In the literal sense, nothing of course. But in a more metaphoric way they do rather underscore the huge, almost compulsive, appeal of English in the world. It is an odd fact that almost everywhere on the planet products are deemed more appealing, and sentiments more powerful, if they are expressed in English, even if they make next to no sense.' See ACCEPTABILITY, BABY TALK, CUMBRIC, DECORATIVE ENGLISH, GRAMMATICALITY, JAPAN, MINCED OATH, MUMBO JUMBO, MUMPSIMUS, NONSENSE VERSE, TWADDLE, VERBALISM, WAFFLE. [LANGUAGE, STYLE]. T.MCA.

**NONSENSE VERSE** [Late 18c]. Light verse on improbable or fantastic subjects. The humour is usually emphasized by rare words, neologisms, and unexpected juxtapositions. Often intended for children, such verse also appeals to an adult sense of the ridiculous or whimsical. In English, the 19c writers Edward Lear and Lewis Carroll are its best known exponents. Carroll's poem 'The Hunting of the Snark' developed from a single line ('For the Snark was a Boojum, you see') that occurred to him while out walking one day in 1874. Whenever asked if the poem had allegorical, satirical, or other significance, he

would answer, 'I don't know'. In the poem, Carroll is imprecise about the nature of Snarks, but makes it clear that Boojums are a kind of Snark, and a dangerous kind at that. The poem ends with the line out of which it first grew:

'It's a Snark!' was the sound that first came to their ears,

And seemed almost too good to be true.  
Then followed a torrent of laughter and cheers:  
Then the ominous words 'It's a Boo—'  
Then silence. Some fancied they heard in the air  
A weary and wandering sigh  
That sounded like '—jum!' but the others declare  
It was only a breeze that went by.

They hunted till darkness came on, but they found  
Not a button, or feather, or mark,  
By which they could tell that they stood on the ground  
Where the Baker had met with the Snark.

In the midst of the word he was going to say,  
In the midst of his laughter and glee,  
He had softly and suddenly vanished away—  
For the Snark was a Boojum, you see.

Nonsensical refrains are common in the traditional ballad and folk-song; they eke out the singer's material and allow audience participation:

Ha, ha! Ha, ha! This world doth pass  
Most merrily I'll be sworn,  
For many an honest Indian ass  
Goes for a unicorn.  
Fara diddle dyno  
This is idle fyno.

(Christ Church manuscript, early 17c)

The language of nonsense verse ranges from the opaque and fanciful but often aesthetically pleasing ('Hi-diddle-diddle, the cat and the fiddle / The cow jumped over the moon'), to words on the edge of meaning that tell a not-quite story:

Long years ago  
The Dong was happy and gay,  
Till he fell in love with a Jumbly Girl  
Who came to those shores one day.  
For the Jumbles came in a sieve, they did,—  
Landing at eve near the Zemmery Fidd  
Where the Oblong Oysters grow.

(Edward Lear, 'The Dong with a Luminous Nose', 1877)

Successful nonsense verse must respect the structure and syntax of a language; comic neologisms need to be rooted in the familiar. In the opening lines of Carroll's 'Jabberwocky':

'Twas brillig, and the slithy toves  
Did gyre and gimble in the wabe.

The reader can deduce that *toves* and *wabe* must be nouns, *slithy* an adjective and *gyre* and *gimble* verbs. See FANTASY, NONSENSE, VERSE. [LITERATURE]. R.C., T.MCA.

**NON-SEXIST LANGUAGE/USAGE.** See SEXISM.

**NON-STANDARD, NONSTANDARD** [1920s]. A term for usages and varieties that are not part of a standard language: such socially marked usages as *He ain't comin'*, *I seen him*; such regionally marked usages as *Ah dinnae ken* (Scots: I don't know); such regional varieties of English as Geordie in England and Brooklynese in the US. The term has three uses: as a neutral alternative to *sub-standard*; as one in a set of three (*standard*, *non-standard*, *sub-standard*); as a euphemism for *sub-standard*. It is not always easy to establish which use is dominant in particular texts and contexts. See STANDARD. [LANGUAGE, STYLE, USAGE]. T.MCA.

**NON-U.** See U AND NON-U.

**NORFOLK.** See EAST ANGLIA.

**NORFOLK ISLAND.** See PITCAIRNESE.

**NORM** [1810s: from Latin *norma* a rule, pattern, carpenter's square]. A standard, model, or average, often used of social behaviour and consensus in the use of a language: *deviations from the norm*; *linguistic norms*. See DEVIANT, NORMATIVE, REFERENCE NORM, REGULAR. Compare CANON, MODEL, RULE, STANDARD. [LANGUAGE, USAGE]. T.MCA.

**NORMAN** [13c: from Old French *Norman* (Modern *Normand*), from Teutonic *Northman*: compare Medieval Latin *Nort(h)mannus* and *Normannus*]. Noun and adjective for Scandinavian (mainly Danish) raiders who settled on the northern coast of France c.900, where they became Christians and gave up Norse in favour of French. In 911, the French king Charles the Simple made Hrolf the Ganger (Rollo the Rover) first Duke of Normandy (Latin *Northmannia*), a new province on the Lower Seine. The Normans are best remembered for Duke William's conquest of England: 'Apparently as the result of one day's fighting (14 October 1066), England received a new royal dynasty, a new aristocracy, a virtually new Church, a new art, a new architecture, and a new language' (R. H. C. Davis, *The Normans and Their Myth*, 1976). The Normans, however, also gained for a time the kingdom of Sicily, lands in southern Italy, and the principality of Antioch in the eastern Mediterranean, as well as having a powerful impact on Wales, Scotland, and Ireland. Normandy appears originally to have been the home of an aristocracy of Norse extraction and a general population of Celts and Franks; among William the Conqueror's followers were Bretons, Franks, Flemings, and Normans, all generally referred to as both *Norman* and *French*. In Ireland they were generally known as *English* and

in Scotland as *French*. In England, their speech, *Norman French*, was the language of the court, the law, and literature until the mid-14c. Once in control of the country, the Normans compiled *Domesday Book* (1086), a comprehensive land record. Despite their enormous significance, however, by the beginning of the 12c they had disappeared as a distinct people, having merged into the communities on which they had imposed themselves. In England, they left a particular mark on the upper classes, many of whose members in the 20c continue to note that their families 'came over with the Conqueror'. See ANGLONORMAN, ANGLONORMAN, BRETON, BRITANY, CHANNEL ISLANDS, ENGLAND, ENGLISH, ENGLISH PLACE-NAMES, FRENCH, IRELAND, IRISH, IRISH ENGLISH, IRISH PLACE-NAMES, LATIN<sup>1</sup>, NORMAN FRENCH, NORSE, Q, SCOTS, SCOTTISH LANGUAGES, SCOTTISH PLACE-NAMES, SPELLING, W, WALES, WELSH PLACE-NAMES. [EUROPE, HISTORY, NAME]. T.MCA.

**NORMAN FRENCH.** The variety of Old Northern French adopted in the 10c by the *Normans*, Norse settlers who gave their name to Normandy. It extended to England after the Norman Conquest in 1066. In its British context, it is often referred to as *Anglo-Norman*. Although native only to the aristocracy and their immediate retainers, Norman French was until the 13c dominant in England and important in Wales, Scotland, and Ireland. It influenced English and was in turn influenced by it, as well as by Central (Parisian) French, which as the language of the French court was considered more refined. In Chaucer's *Canterbury Tales* (14c), the Prioress is singled out as a speaker of English French: 'And French she spak ful faire and fetisly, / After the scole of Stratford atte Bowe, / For French of Paris was to hir unknowe.' By the end of the Hundred Years War (mid-15c), French was no longer a living tongue in England, although elements of it were preserved for centuries afterwards, as in *Law French*. Its last British remnant is in the Channel Islands.

Among the many Old French words in English, the oldest have a Norman French aspect (sometimes with doublets from Central French, shown in parentheses): (1) Hard *c* as opposed to *ch* as in *chair*: *caitiff*, *capon*, *car* (*chariot*), *carrion*, *carry*, *castle*, *catch* (*chase*), *cater*, *cattle* (*chateaux*), *cauldron*, *decay*, *escape*, *pocket* (*pouch*). The Modern French equivalent is the *sh*-sound in *chateau*. (2) Hard *g* as opposed to *j* as in *James*: *gammon*, *garden*, *garter*. *Gaol* has a Norman French spelling but a Central French pronunciation, whence the alternative *jail*. The Modern French equivalent is the *zh*-sound in *jardin*. (3) A *w* as opposed to a *g(u)*: *ewer*, *reward*

(*regard*), *wage* (*gage*), *wait*, *wallop* (*gallop*), *ward* (*guard*), *warden* (*guardian*), *warranty* (*guarantee*), *warren*, *waste*, *wicket*, *wile* (*guile*), *wise* (*guise*). The Modern French equivalent is the *g(u)* in *garde*, *guichet*. (4) The *ch* in *chair*, *cherry*, *chisel*, *patch* (*piece*), etc. The Modern French equivalent is the *s*-sound in *cerise*. (5) The *sh* in *ashet* (ScE), *brush*, *cushion*, *fashion*, *leash*, *mushroom*, *parish*, *push*, *usher*, etc. The Modern French equivalent is the *s*-sound in *façon*, *pousser*. *Sh* is notable in English verbs formed on Norman French verbs in *-ir*: *abolish*, *finish*, *perish*, *polish*. (6) The *qu* in *conquest* (but not *conqueror*), *enquire*, *quality*, *quarter*, *question*, *quit*, etc. The Modern French equivalent is the *k*-sound in *quitter*. (7) An *ai*, *ei*, or *ey* spelling (and an *ee* or *ay* pronunciation): *convey* (*convoy*), *deceive*, *faith*, *heir*, *leisure*, *prey*, *receive*, *veil*. The Modern French equivalent is the *wa*-sound in *loisir*. See ANGLONORMAN, CHANNEL ISLANDS, FRENCH, NORMAN. [EUROPE, HISTORY, LANGUAGE]. J.M.G.

**NORMATIVE** [1870s]. A term in linguistics and education for belonging to or serving to establish and maintain a norm, as in *normative grammar*. If a language, variety of a language, or culture depends for its norms on another community, it is *exonormative*; if it does not, it is *endonormative*. Most colonies and many post-colonial societies have exonormative rules: until recently AusE was exonormative in terms of BrE, but has in recent years become increasingly endonormative. See NORM, SOLECISM, STANDARD. [LANGUAGE, STYLE]. T.MCA.

**NORN** [First recorded c.1485 in Shetland: from Old Norse *norroena* (*mál*) or *norroent* (*mál*) northern (language), applied specifically to the language of ancient Norway and its colonies]. A variety of Norse once spoken in and around the Northern Isles of Scotland, and known as *Orkney Norn* and *Shetland Norn*. The name has also been recently applied to the Norse spoken in medieval Caithness on the mainland (*Caithness Norn*). Orkney and Shetland were settled in the 9c by Norse-speaking farmers, mainly from south-western Norway, who imposed their language on the local Pictish people. At about the same time there were settlements by Scandinavians in Caithness and in the West Highlands and Islands. But nowhere else in the British Isles apart from Orkney and Shetland did links with Scandinavia endure so long and leave such striking imprints on dialects, place-names, culture, and folk memory.

There was Scots influence in the family of the earls of Orkney from the 12c, but after the accession of the Lowland Scottish Sinclairs to the Earldom in 1379, and the pledging of Orkney and Shetland in 1468/9 by the King of Norway

and Denmark to the King of Scots, the islands became dominated by Scots-speaking rulers, administrators, and clerics. From the 16c or earlier, Scots appears to have been the 'high' and Norn the 'low' language, and a probably common Scots attitude occurs in: 'Scho aundit in bitt, quhilk is ane Nourn terme and to [be] exponit into right languag is also mikill as scho did blaw her breath thairin' [Translation: She aundit [blew] into a *bitt* [bucket], which is a Norn term and to be expressed in proper language is as much as to say she blew her breath therein] (from *Orkney Witch Trial*, 1633, in *Register of the Privy Council of Scotland*, 2nd series, v. 545).

It has been conjectured that Norn was superseded by Scots in Caithness in the 15c and by Gaelic in the West Highlands and Islands in the 16c, but it appears to have endured to the later 18c in Orkney and perhaps into the 19c in Shetland. Garbled fragments (rhymes, proverbs, riddles, and snatches of songs) persisted in Orkney and especially Shetland folklore to the 20c (as late as 1958 on the island of Foula). The scanty earlier records reveal a language related to Faroese, but with a decaying inflectional system, as in this passage from the Lord's Prayer, as recorded by James Wallace in *Account of the Islands of Orkney* (1700): *Ga vus da on da dalight brow vora, firgive vus sinna vora, sin vee firgive sindara mutha vs* (Give us each day our daily bread, Forgive us our sins, as we forgive sins against us). The equivalent Old Norse was: *Gef oss dag um dag dagligt brauð vort, fyrirgef oss syndir várar, sem vér fyrirgef syndir i móti oss*. Local documents in Older Scots (from 1433) contain many administrative and legal terms of Norn origin, and court records (from the early 17c) introduce many originally Norn words, including: *galt* boar, *grind* gate, *heavie* straw basket, *row* to 'roo' or pluck (sheep), *spick* fat, blubber, *voe* inlet, *voir* springtime. Most of the 450 or so *noa* and other terms, constituting the former 'sea language' of Orkney and Shetland fishermen, are survivals of Norn. See FAROESE, NORSE, ORKNEY AND SHETLAND DIALECT, SCOTTISH PLACE-NAMES, SCANDINAVIAN LANGUAGES. [EUROPE, LANGUAGE].

**NORSE** [16c: perhaps from Dutch *noorsch*, an obsolete variant of *noordsch* (modern *noords*)

north. Compare Danish, Norwegian, Swedish *Norsk*]. Also *Old Norse*, *Scandinavian*, and (with particular reference to its use in England) *Danish*. The Scandinavian languages in an early, relatively homogeneous form. Old English and Old Norse were related and to some extent mutually intelligible. Despite differences in grammar, communication appears to have been widespread, especially in the early Middle Ages when Danes settled in much of England and the country was ruled by Danish kings (1016-42). The numerous place-names in *-by*, *-thorp*, *-thwaite*, *-toft* testify to the density of the settlement known as the Danelaw. Many words were identical or similar in the two languages, such as *folk*, *hus*, *sorg* (sorrow), which were both English and Norse, and such correspondences as Old English *fæder*, *gærs/græs*, *wif*, Old Norse *fadir*, *gras*, *vif* (father, grass, wife). Norse came to exercise a marked influence on English, especially when the Norman Conquest in the 11c broke the continuity of the Old English standard based on the West Saxon dialect. Norse influence has taken two forms: influence on English at large and influence on Northern English and Scots.

**Influence on English at large.** Much of the everyday vocabulary of English is of Norse origin: *call*, *cast*, *fellow*, *gape*, *happy*, *hit*, *husband*, *ill*, *leg*, *loose*, *low*, *sister*, *skill*, *skirt*, *sky*, *take*, *weak*, *window*, *wrong*. See BORROWING. Occasionally, both the English and the Norse form of the same word have survived as doublets: *shirt* (English), *skirt* (Norse). Norse borrowings include such legal and administrative terms as *hustings*, *law*, *bylaw*, *outlaw*, and *riding* (as in the North Riding of Yorkshire and as used in CanE for a parliamentary constituency), but the overwhelming majority of Norse words in English are general, everyday expressions, such as must have arisen from close social contact between the two peoples, an impression reinforced by the Norse origin of a number of English grammatical words: *they/their/them*, *though*, *both*. It is also possible that some syntactic structures common to Modern English and Scandinavian but unknown in other Germanic languages (such as *the house we live in*) had their origin in the Danelaw.

**Influence on Northern English and Scots.** A large number of Norse words which have not spread into English at large survive in the usage of northern England and Scotland: *gate* a street, *ken* to know (used in general English only in the phrase *beyond our ken*), *lake* to play, *neb* beak. Sometimes the Norse form is regional while a corresponding English form is standard: *garth/yard*, *kirn/churn*, *kist/chest*, *skell/shell*. In other cases of north-south doublets, both forms now

belong to general English: *kirk/church, skirl/shrill, screech/shriek*.

**Conclusion.** The extensive Norse settlements in the British Isles during the Viking age, followed by a long period of coexistence, have had a profound influence on English. Because of close kinship, Scandinavian influence is less immediately obvious than other foreign influences, yet it has altered basic vocabulary and grammar, and has permeated dialect usage even more than the standard language. In its origin and earliest form, English is classed with the West Germanic languages, a group which comprised the ancestors of Dutch, Frisian, and German, but a detailed comparison of the languages in their present form might place English nearer to the North Germanic group.

See ANGLO-DANISH, BORROWING, DANISH, ENGLISH PLACE-NAMES, IRELAND, IRISH, IRISH ENGLISH, IRISH PLACE-NAMES, NORMAN, NORSE, NORTHERN ENGLISH, SCANDINAVIAN LANGUAGES, SCOTS, SCOTTISH PLACE-NAMES, WELSH PLACE-NAMES. [EUROPE, HISTORY, LANGUAGE]. P.C.

**NORTH, The.** (1) The northern part of a country: *Southern Italy is very different from the North*. The adjective is used contrastively with *South* in such national and regional names as *North Africa, North Korea, North Carolina (the United States), North Island (New Zealand)*. (2) Also the *North Country*. The North of England, usually taken to include the traditional counties of Cumberland, Durham, Lancashire, Northumberland, Westmorland, and Yorkshire, and such cities as Leeds, Liverpool, Manchester, and Newcastle upon Tyne. (3) The North of Ireland, particularly Northern Ireland, a part of the UK, in contrast to the Irish Republic: *You're from the North, are you not?* (4) The area of the US to the north of the Ohio River, and especially the states that fought to maintain the Union in the Civil War (1861-5), usually also taken to include Maryland and Missouri. Compare SOUTH. See AMERICAN<sup>1</sup>, CUMBRIA, DIALECT IN AMERICA, GEORDIE, LANCASHIRE, NORMAN, NORSE, NORTH AMERICAN, NORTH COUNTRY, NORTHERN ENGLISH, NORTHERN IRELAND, NORTHERNIZE, NORTHUMBRIA, SCOUSE, YANKEE, YORKSHIRE. [AMERICAS, EUROPE]. T.MCA.

**NORTH AFRICA.** See AFRICA, ARABIC.

**NORTH AMERICAN.** The adjective for North America and the name of a person born in North America, particularly the US and Canada. Canadians tend to use the term more than Americans, because it is inclusive and enables them to distinguish themselves from Americans: 'North Americans, when they read at all, prefer big, dumb, forgettable novels' (Crawford Kilian,

'Whatever Happened to Canadian Literature?', *Toronto Globe & Mail*, 24 Feb. 1990). Compare AMERICAN<sup>1</sup>. [AMERICAS, NAME]. T.MCA.

**NORTH COUNTRY** [13c: often capitalized and attributive]. (1) In general, the north of any country, but specifically England beyond the Humber: *a North Country story*. (2) The accent(s) and dialect(s) of the North of England: '“If you borrow you make bad friends”—a flash of honest north country peeped through the trained accent' (C. Drummond, *Death at Bar*, 1972); '[The Lancashire singer] Gracie Fields reverts to the characteristic mixture of North Country, standard English and American overtones' (*The Times*, 30 Dec. 1974). See NORTHERN ENGLISH. Compare WEST COUNTRY. [EUROPE, NAME, VARIETY]. T.MCA.

**NORTHERN.** See DIALECT IN AMERICA, NORTH, NORTHERN ENGLISH.

**NORTHERN ENGLISH.** An occasional term for: (1) The Northumbrian dialect of Old English and its successor dialects in the North of England and in Scotland. (2) English as used in the North of England, sometimes extended to include Scots and ScoE. See CUMBRIA, DIALECT IN ENGLAND, GEORDIE, LANCASHIRE, LONG AND SHORT, L-SOUNDS, NORSE, NORTH COUNTRY, NORTHUMBRIA, SCOTS, SCOTTISH ENGLISH, SCOUSE, YORKSHIRE. [EUROPE, VARIETY]. T.MCA.

**NORTHERN IRELAND.** A part of the United Kingdom, consisting of the six north-easterly Irish counties Antrim, Armagh, Derry or Londonderry, Down, Fermanagh, and Tyrone. Northern Ireland in the geographical sense is usually referred to as *the North of Ireland or the North*. Paradoxically, Donegal, one of the most northerly counties in the island, is in the South: that is, it is part of the Irish Republic. See IRELAND, ULSTER, UNITED KINGDOM. [EUROPE, NAME]. T.MCA., L.T.

**NORTHERN IRISH ENGLISH.** English used in Northern Ireland, of which there are four varieties: (1) *Ulster Scots*, also known as *Scotch-Irish*, brought to the area in the 17c by Lowland Scots. It is the most northerly variety, found in Antrim, Down, Derry/Londonderry, and in eastern and central Donegal in the Irish Republic. (2) *Anglo-Irish* or *Ulster English*, introduced by 17c settlers from England. It stretches northward from Bundoran in the west to Dundalk in the east, has much in common with southern Anglo-Irish, and has been influenced by Ulster Scots. (3) *Hiberno-English*, influenced by Gaelic. It is most widely found in rural Armagh, Donegal, Fermanagh, and Tyrone. There is a

further pocket in the Glens of Antrim, where Irish Gaelic was reinforced by Scottish Gaelic and survived into the 1940s. (4) The distinctive speech of Belfast. See ANGLLO-IRISH, BELFAST, IRISH ENGLISH, L-SOUNDS, ULSTER ENGLISH, ULSTER SCOTS. [EUROPE, VARIETY]. L.T.

**NORTHERN ISLES, The.** The collective name for the island groups known as *Orkney* and *Shetland*. See NORN, ORKNEY AND SHETLAND DIALECT, SCOTLAND. [EUROPE, NAME]. T.MCA.

**NORTHERNIZE** AmE & BrE, **northernise** BrE & AusE [19c]. To make northern in respect of language, culture, character, etc.: '[George] Washington had, long previously to his death, . . . become perfectly Northernized' (*Charleston Mercury*, 21 June 1859). See NORTH. Compare SOUTHERNIZE. [VARIETY]. T.MCA.

**NORTHUMBERLAND BURR.** See BURR, R-SOUNDS.

**NORTHUMBRIA** [A Latinization of Old English *Northanhymbre* those north of the Humber]. A kingdom of the Angles before the unification of England, from the Humber to the Forth, formed through the union of *Bernicia* in the north and *Deira* in the south. In the 7c, especially under Edwin, its leadership was recognized by the other English kingdoms and its monasteries were in the forefront of European religious life. The Venerable Bede was a monk at Jarrow and the Lindisfarne Gospels demonstrate great skill in the illuminating of manuscripts. In the 9c the kingdom was overwhelmed by Danes and in the 10c the Scots (speakers of Gaelic) extended their border from the Forth to the Tweed, acquiring a province of speakers of Northumbrian English. In 944, when the last Danish king was expelled from York, Northumbria became an earldom of England. The Northumbrian dialect was ancestral to Northern English and Scots and is preserved in glosses on the Lindisfarne and other gospels, in manuscripts of Caedmon's *Hymn* and Bede's *Death Song* (8-9c), and in runic inscriptions (8-10c). See ANGLES, BEDE, GEORDIE, NORTHERN ENGLISH, RUNE, SCOTS. [EUROPE, HISTORY, NAME]. T.MCA.

**NORTHUMBRIAN BURR.** See BURR, R-SOUNDS.

**NORWEGIAN** [Called by its speakers *Norsk*]. The Germanic language of Norway. When differences began to appear in Old Norse (c.1000), the split was between *West Norse* in Iceland and Norway and *East Norse* in Denmark and Sweden. After the union with Denmark in 1387, written usage in Norway followed Danish,

and the speech of educated Norwegians became Danish with a local accent and Norwegianisms. The union was dissolved in 1814, there was for a time a looser union with Sweden, then in 1905 Norway became independent. The union with Denmark, however, has left a mark on the language of Norway. Throughout the 19c, most of the leading literary figures, including Henrik Ibsen, wrote in Danish with Norwegian features, and many had their books published in Copenhagen. They called their usage *Norwegian* (*Norsk*) or *Dano-Norwegian* (*Dansk-Norsk*).

Dano-Norwegian contrasts with a kind of Norwegian advocated from mid-19c by Ivar Aasen, a self-taught philologist and the son of a farmer, who had constructed a composite of various dialects that he called *Landsmaal* (country language). Speakers of Dano-Norwegian gave it a mixed reception, and a passage in Ibsen's *Peer Gynt* satirizes it as a 'primeval forest tongue'. *Landsmaal*, however, developed a literature and in 1885 was recognized as an official language to be taught in school alongside Dano-Norwegian, which came to be known as *Rigsmaal* (state language). Parents voted on the kind of Norwegian they wanted as their children's primary medium. The two terms, later spelt *Landsmål* and *Riksmål*, were replaced in 1929 by *Nynorsk* (Neo-Norwegian) and *Bokmål* (book language).

There have been three official language reforms, in 1907, 1917, and 1938, aimed primarily at bringing Bokmål closer to Nynorsk. Despite protests, the reforms have narrowed the gap, but differences remain and it is uncertain whether a *Sammorsk* (Pan-Norwegian) will develop. Since the Second World War, support for reform and for education in Nynorsk have declined, perhaps because of increased urbanization. Bokmål is the medium of most books and newspapers but lacks a firm standard. Educated Danes and Norwegians communicate with ease in speech and writing, but whereas before 1907 there was a common reading public, a novel or play in one country must now be 'translated' to succeed in the other. Compare FRISIAN, SCOTS. See BORROWING, NORN, NORSE, SCANDINAVIAN LANGUAGES, SPELLING REFORM. [EUROPE, LANGUAGE]. P.C.

**NOTATION** [16c: from Latin *notatio/notationis* a marking]. (1) Obsolete, but common in the 17c: the explanation of a word in terms of its actual or supposed etymology; the etymological or primary use of a word; its etymon. (2) Rare: the act or result of taking written notes. (3) A process or system of representing something audible or abstract by means of graphic symbols, such as *musical notation*, *phonetic notation*, or *mathematical notation*. See ETYMON, NOTE, NOTES AND

REFERENCES, PHONETIC TRANSCRIPTION, TRANSCRIPTION, TRANSLITERATION. [WRITING]. T.MCA.

**NOTE** [12c: through Old French from Latin *nota* a means of recognition, mark, sign]. (1) A graphic sign: *a musical note*. (2) A single tone of definite pitch, produced especially by a musical instrument, a bird, or a human voice when singing: *a musical note*. (3) A token of emotion, alarm, etc.: *sounding a note of caution; a note of reproach in one's voice*. (4) Importance: *a writer of note*. (5) A written record, usually brief and to the point: *to keep a note of what one spends*. A book used for such purposes is a *notebook* or a *notepad*; both words have been adopted as generic terms for small portable computers that can be used, among other things, for note-taking. (6) In the plural: a more or less informal memorandum or record, in greater or less detail, for any purpose, such as the written prompts used by someone giving a lecture or talk and the record kept of such a lecture by a listener (both called *lecture notes*). (7) A point to remember: *to make a mental note; taking note of what was needed*. (8) A comment added to a text, especially in a margin (*a marginal note*), or provided formally with a text (*scholarly notes*), especially as background or associated information, such as the name, etc., of an authority quoted or of a work cited. A work to which detailed notes have been added (especially in the margin) contains *annotations*, a point to which its title may refer: for example, *The Annotated Dickens* (Orbis, two volumes, 1986). (9) A brief statement that provides information in a concise form (such as a *usage note* in a dictionary), often one of several in a list (such as *study notes*). (10) In library science, an additional item of information included in a catalogue entry about a work, such as the series to which it belongs. (11) A short, informal letter: *a thank-you note*. See CONTRACTION, GLOSS, MARGIN, NOTES AND REFERENCES, USAGE GUIDANCE AND CRITICISM. [WRITING]. T.MCA.

**NOTES AND REFERENCES.** Additions to works of scholarship and science such as supplementary points of information and details of the sources to which writers have referred. There is no sharp distinction between the two categories: notes can consist of or contain references, and references may be annotated. Notes, however, are often more substantial than references (for example, in monographs), and tend to be either *footnotes* (at the bottom of a page) or *endnotes* (at the end of a chapter or entire work). *Sidenotes*, set in a margin, also sometimes occur. Scholarly notes are usually signalled by superscript numbers at appropriate points in a text, but such symbols as asterisks and obelisks

may be used instead for footnotes. References, on the other hand, tend to be listed in appendices whose titles and locations are usually given on the contents page of the work in question. The advantage of footnotes to the reader is ease of reference; the disadvantage to both reader and typesetter is that long notes are likely to run over to the lower part of the next page. The advantage of endnotes, especially for the printer and publisher, is that they are all arranged sequentially in one place, regardless of the length of individual notes. The disadvantage for the reader is that they are at a distance from the various parts of the text to which they relate, but this disadvantage may be lessened if the notes are so organized as to provide a linked set of supporting comments on the text. For texts which authors and publishers wish to keep free of superscript symbols, endnotes are keyed to such points of reference as page numbers or repeat identifying phrases from the text. All such addenda are generally kept as brief as possible, but endnotes can sometimes be in effect supplementary essays. Endnotes, bibliographies, lists of works referred to, and the like, are usually set in a smaller type-size than the main text. Footnotes, the compactness of which is especially desirable, may be set even smaller, several sizes down from the text type. Generally, the bulk of any set of notes and references is taken up by citations of the authors, titles, dates, etc., of publications. These may be presented in either of two ways: in note form, often in a *reference list*, such as 'See K. Wales, *A Dictionary of Stylistics*, 1989'; or in bibliographical form, such as 'Wales, K. 1989. *A Dictionary of Stylistics*. Harlow: Longman'. To save space, but also as a legacy from the days when Latin was the language of pan-European scholarship, authors and editors have tended to use, in texts and notes, Latin terms of reference, usually in abbreviated form and often printed in italic. The most common traditional usages are:

- c., ca.* Short for *circa* 'around': indicating an approximate date or figure, as in 'Chaucer was born c.1340' and 'c.3m' (for 'around three million').
- cf.* Short for *confer* 'compare': inviting the reader to compare an entry, topic, or work with one or more others, as in '*cf.* Havelock, *Preface to Plato*', '*cf.* analogy, metaphor, simile'.
- e.g.* Short for *exempli gratia* 'for the sake of example': preceding an example of the point being discussed.
- et al.* Short for *et alii* (masculine), *et aliae* (feminine), *et alia* (neuter), 'and others': coming after the first of a list of names whose other elements the writer does not wish to provide

- or repeat: 'R. Quirk *et al.*, *A Comprehensive Grammar of the English Language.*'
- etc.* Short for *et cetera* 'and so on': used widely, both formally and casually, for more of the same: 'books, magazines, newspapers, etc.'
- fl.* Short for *floruit* 'flourished': indicating the period in which someone lived, usually because actual life dates are not known: 'Gautama the Buddha, *fl.* 6th century BC'.
- ibid.* Short for *ibidem* 'in the same place': referring the reader to a publication mentioned in an immediately preceding note: *Ibid.* p. 330.
- id., ead.* Short for *idem* 'the same man', *eadem* 'the same woman': used after the first reference in notes that have more than one reference to works by the same author, to save repeating the author's name.
- i.e.* Short for *id est* 'that is': used in running text to gloss or clarify a statement just made: '... the work of an *ovate*, i.e. a minor druid'.
- loc. cit., l.c.* Short for *loco citato* 'in the place cited': used in notes to indicate a passage already cited: 'Urdang, *loc. cit.*'
- NB or N.B.* Short for *nota bene* 'note well': used to call attention to something the writer considers important.: *NB* difficulties in dating such texts'.
- op. cit.* Short for *opere citato* 'in the work cited': used in notes to indicate reference to a publication already cited: 'Urdang, *op. cit.*, p. 18'.
- passim* 'here and there': used to inform the reader that the topic under discussion is treated in various parts of a cited publication: 'Chap. 5, *passim*' (that is, throughout Chapter 5), 'Chap. 5 *et passim*' (throughout Chapter 5 and elsewhere).
- q.v.* Short for *quod vide* 'which see': once a common device to indicate in passing that something is treated fully elsewhere, in its proper place: 'In 1792, the Jacobins under Georges Danton (*q.v.*) seized power' (that is, see the entry *Danton*). Plural *qq.v.*
- sc., scil., scilicet.* Adaptations of *scire licet* 'it is permitted to know' (understood as 'namely'): a reference in apposition that identifies a person or thing, as in 'Superman, *scil.* Clark Kent.'
- sic* 'thus': used parenthetically by writers and editors, especially in square brackets, to distance themselves from a dubious or erroneous usage, but also sometimes to draw attention to it, perhaps highlighting it in order to mock it: '... but they did not receive [*sic*] the letter'.
- s.v.* Short for *sub verbo* or *sub voce* 'under the word/heading', 'under that word/heading': used in references to indicate the entry for a specified word in a dictionary, etc., as in 'see *OED* s.v. *camel*' or 'for the etymology of *camel*, see *OED* s.v.' Plural *s.vv.*
- ut 'as':* used in *ut infra* (as cited below) and *ut supra* (as cited above), to indicate that something has been or will be mentioned, discussed, etc.
- vide, vid., v. 'see':* used as a cross-reference, as in 'vide hematite', and in running text to draw the reader's attention to a passage the writer considers relevant: referring to something preceding (*vide supra* see above, *vide ante* see before) or to something following (*vide infra* see below, *vide post* see after).
- viz.* Short for *videlicet* 'it is permitted to see' (understood as 'namely', 'to wit'): a reference in apposition that specifies examples or identifies a person or thing, as in 'The Magi, *viz.* Melchior, Caspar, and Balthazar'.

The organization and presentation of notes and references are discussed in: *Hart's Rules* (Oxford University Press, 1983); *The Chicago Manual of Style* (Chicago University Press, 1982); *The McGraw-Hill Style Manual* (1989); *The Canadian Writer's Handbook* (Prentice-Hall of Canada, 1980); *The Canadian Style* (Department of the Secretary of State, 1985); *Style Manual* (Australian Government Publishing Service). See ACADEMIC USAGE, APPENDIX, ASTERISK, BACK MATTER, BIBLIOGRAPHY, NOTE. [REFERENCE, WRITING]. T.MCA.

## NOTIONAL-FUNCTIONAL APPROACH.

See COUNCIL OF EUROPE, LANGUAGE TEACHING.

**NOUN** [14c: from Anglo-Norman *noun*, Old French *nun, num*, from Latin *nomen* name, translating Greek *ónoma*]. A part of speech or word class typically used in a variety of sentence functions such as subject and object, generally in combination with the definite or indefinite article and modifiers and traditionally regarded as 'naming' or identifying persons and things.

**Form.** In English, many especially monosyllabic nouns cannot formally be identified as such (*woman, girl, dog, cat, king, war*), whereas in some languages, such as Latin, they have distinctive endings (*femina, puella; canis, faelis; bellum*). Many polysyllabic nouns, however, are identifiable by suffixes used to derive nouns from other nouns or from verbs and adjectives: *-ing* (*farming, swimming*); *-er* (*dancer, writer*); *-ation* (*association, organization*); *-ity* (*morality, reality*); *-ness* (*darkness, kindness*); *-ism* (*humanism, racism*), *-ist* (*rationalist, socialist*).

**Function.** In a noun phrase, a noun functions as the main or only word which can be subject ('The crew boarded the vessel'), direct object ('They will clean up the waste'), indirect object ('I told the committee my views'), subject complement ('One fascinating discovery was a musket'), object complement ('Everybody thought her the

best *candidate*'), adverbial ('We saw them last night'), complement of a preposition ('We did it for Tony'); modifier of another noun ('income tax').

**Subclasses.** There are a number of grammatical and semantic subclasses of nouns: common or proper (*Jane, Jeremy*); animate (*child*) or inanimate (*pencil*); abstract (*opinion*) or concrete (*glass*), countable (*student*) or uncountable (*information*). In the sentence *Pick up the book*, the noun *book* is common, inanimate, concrete, and countable. In the sentence *Barbara came too*, the noun *Barbara* is proper, animate, concrete, and in this instance uncountable. A noun may have one feature in one context and the opposite feature in another: *glass* is countable in *Have another glass of orange juice*, uncountable in *That dish is made of cut glass*.

**Number.** Countable nouns make a distinction between singular and plural in number. The distinction is generally indicated by a difference between singular and plural forms (*cat/cats, sample/samples, phenomenon/phenomena*).

**Gender.** English does not have gender classes of nouns as in Latin and German, but some nouns have male and female reference: *father, boy; mother, girl*. There are some pairs of nouns one of which has a suffix marking a male/female contrast: *host/hostess, hero/heroine, usher/usherette; widow/widower*. The gender reference of human nouns becomes manifest when *he* or *she* relates to the noun: *My neighbour said she/he wanted to speak to you*. Non-human animate nouns (and nouns relating to young children, depending on the circumstances) allow male, female, or non-sexual reference: *Don't touch the dog; he/she/it has fleas*.

**Case.** Old English had, like Latin, a complex case system for its nouns. Modern English, however, only makes two case distinctions: common case (*Tom*) and genitive case (*Tom's*). For regular plurals, the distinction is found only in punctuation, but not in pronunciation: *students'/students'* (contrast *men and men's*).

See ABSTRACT AND CONCRETE, ANIMATE NOUN, CASE<sup>1</sup>, COMMON NOUN, COUNTABLE AND UNCOUNTABLE, GENDER, NAME, NUMBER, OLD ENGLISH<sup>1</sup>, PART OF SPEECH, PROPER NOUN, SUBSTANTIVE. [GRAMMAR]. S.G.

**NOUN CLAUSE.** See RELATIVE CLAUSE.

**NOUN-INCORPORATION** [Mid-20c]. A term in word-formation for the creation of a compound in which a noun is incorporated into a verb as its first element: *baby-sit, house-hunt, sleep-walk*. Such forms go back at least to the Middle Ages, as with *backbite* (c.1300) to bite someone on or behind the back. They are often

nonce or stunt usages, sometimes with a touch of humour: *backseat-drive, ballroom-dance*. They generally have two sources: (1) Back-formation: *eavesdrop* from *eavesdropper*; *kidnap* from *kidnapper*; *mass-produce* from *mass production*; *window-shop* from *window-shopping*. (2) The conversion of a noun-noun compound to use as a verb: *fingerprint*, as in *fingerprinting suspects*; *scent-mark*, as in: 'How often a cat scent-marks varies according to how old it is' (*BBC Wildlife*, Jan. 1989). See WORD-FORMATION. [GRAMMAR, WORD]. T.MCA.

**NOVEL** [16c: from Italian *novella* (*storia*) a little new (story). In the 14c, collections of stories in Italian and French, such as Boccaccio's *Decameron*, were known as novels. In the 17c, the term generally referred to romances of illicit love, and in the 18c, *history* was used for the long prose works (often in several volumes) that led to the modern novel in English]. A work of prose fiction, usually 30,000 to 100,000 words in length. The genre is recent compared with poetry and drama, but has antecedents in narrative verse and in the tales of every age and culture. Its connections with the *romance* are reflected in *roman*, the name for the genre in several European languages. The rise of the novel appears to owe much to the printing press and an increasing number of literate middle-class people (15-18c) with the time and money to devote to works of fiction.

**Kinds of novel.** The novel has tended to be realistic and to reflect contemporary life, with characters and concerns essentially of the urban middle class. However, the range of works that can be called novels is wide and no definition can cover them all. Some of these are, in rough order of their emergence: (1) The *picaresque novel*, relating in episodic form the adventures of an eccentric or disreputable hero: Cervantes's *Don Quixote* (1605), Smollett's *Roderick Random* (1748). (2) The *epistolary novel*, in which the story progresses in the form of letters and journals/diaries, popularizing the first-person style of narration: Richardson's *Pamela* (1741). (3) The *historical novel*, set in a period earlier than that of writing: Scott's *Waverley* (1814), whose action occurs in the Jacobite Rebellion of 1745. (4) The *regional novel*, set against the background of a particular area: Scott's *Rob Roy* (1817); Hardy's Wessex novels (1870s onward). (5) The *Bildungsroman* [German: novel of growth], the novel of development from childhood, a fictional autobiography: Dickens's *Great Expectations* (1861). (6) The *roman à thèse* [French: novel with an argument], the novel of social or political concern that emphasizes realism and seeks to influence changes in society:

Upton Sinclair's *The Jungle* (1906). (7) The *roman à clef* [French: novel with a key], in which the events are imaginary and real people are disguised as fictional characters: Aldous Huxley's *Point Counter Point* (1928). (8) The *roman-fleuve* [French: stream novel], in which a common theme or range of characters stretches across a number of novels: Anthony Powell's *A Dance to the Music of Time* (1951-75). Compare SAGA. (9) The *non-fiction novel*, in which living people and recent events are presented in the form of a story: Truman Capote's *In Cold Blood* (1979); Norman Mailer's *The Executioner's Story* (1965).

**Style in the novel.** The point of view of a story may be aided by *narrative voice*: a story can be told in the first person, in letters between characters, or by a detached narrator, *the third-person omniscient*. Unlike the theatre, encounter with the novel is usually solitary and silent, although reading aloud from novels was popular in the 19c. Apart from the linguistic experiments of a few 20c novelists like James Joyce, it is generally written in the accessible language of common usage, but more discursively than the tighter patterns of poetry and drama permit. Dialogue seeks to resemble real conversation and draws on all areas of the language, using dialects and registers as appropriate. The new style of post-Renaissance English prose, drawing on native patterns of the language, was better suited to telling a connected story than the attempts of earlier writers such as Lyly in *Euphues* (1578-80) to create an elaborate style with the classical periodic sentence and forms of rhetoric like extended similes.

**The English novel.** Antecedents of the novel include 16c romantic prose narratives such as Robert Greene's *Pandosto* (1588) and Thomas Lodge's *Rosalynde* (1590), and such tales of low life as Thomas Nashe's *The Unfortunate Traveller* (1594). 'Proto-novels' written after the Restoration by Aphra Behn, John Bunyan, and Daniel Defoe have a story rather than a plot, and relate a sequence of events with little change in the central characters. The novel proper begins in the 18c with Samuel Richardson, whose work was attractive to a middle class with increasing leisure and a relatively firm moral code. The rules of virtue rewarded and social morality upheld were largely accepted by novelists until the late 19c. They were partly contested by Henry Fielding, who praised honesty and generosity above forced obedience, and established the omniscient narrator who frequently comments on the action. Tobias Smollett developed the picaresque tradition, exploiting the humour and excitement of the less reputable section of society. He caught the tones

of uneducated speech, sometimes by deviant spellings. Laurence Sterne's *Tristram Shandy* (1759-67) has tricks of thought-representation and internal reference to the novel as a fiction which anticipate 20c developments.

**The nineteenth century: Britain.** The developing novel attracted many writers but there were few major novelists in the period between 1770 and 1830; in the Romantic revival, poetry was the dominant genre. Romantic interest in medievalism and in the supernatural combined to make the sensational Gothic type popular in fiction. Walter Scott raised the status of the more serious novel. He built up the tradition of the historical novel in a regional setting, often using dialect, especially Scots, for the speech of his characters. Jane Austen observed upper-class society with irony and compassion; her conversations may seem formal to modern readers but they convey the feelings of real life. The Victorian period, however, was the great age of the novel in Britain, when writers benefited from growing literacy, cheaper production and distribution, and circulating libraries. Their strongly drawn characters and turbulent plots owe much to these libraries and to publication in serial form. In the early part of the 19c, the novel was often attacked as immoral, time-wasting, and creating falsehood, but gradually it came to be seen as a serious social and moral force. Charles Dickens wrote about the ills of society, but was above all an entertainer, mingling humour and pathos in narrative and dialogue with an ear for the comic potential of Cockney speech.

W. M. Thackeray had a different line of social comment in *Vanity Fair* (1847) and *Pendennis* (1848-50), satirizing the brittleness and insincerity in contemporary life. The Brontë sisters mingled realism and fantasy in novels that owed much to inspiration from Romantic and Gothic sources, but also expressed women's experience and frustrations. Like Elizabeth Gaskell in *Sylvia's Lovers* (1863), they followed Scott in using dialect for serious as well as comic speech. Still greater realism developed by the middle of the 19c. Anthony Trollope took a less sentimental view of the world than many predecessors in the Bassetshire novels of county life (1855-67), the Palliser novels of politics (1864-80), and in the broader social criticism of *The Way We Live Now* (1875). Realism mingled with sensation and crime in the novels of Wilkie Collins (*The Woman in White*, 1860) and Charles Reade (*Griffith Gaunt*, 1866). Naturalism never grew as strong in Britain as in France, but had a part in tales of urban poverty by George Gissing (*New Grub Street*, 1891) and George Moore (*A Mummer's Wife*, 1885), with scenes and dialogue

that shocked many contemporaries. George Eliot (Mary Ann Evans) took up the challenges of new intellectual and religious movements, showing the nexus of human consequences in *Adam Bede* (1859) and *Middlemarch* (1871–2). The disquiet aroused by scientific and evolutionary discoveries influenced the work of George Meredith in *Beauchamp's Career* (1874–5) and Thomas Hardy, notably in *Tess of the D'Urbervilles* (1891) and *Jude the Obscure* (1896). The novel in 19c Britain gradually moved from simple representation to the use of imagery, symbolic themes, and different authorial stances: Samuel Butler used a detached first-person narrator for social criticism in *The Way of All Flesh* (1903) and Oscar Wilde combined witty dialogue with supernatural evil in *The Picture of Dorian Gray* (1890).

**The nineteenth century: the United States.** The American novel was established by the beginning of the 19c with the Gothic fiction of Charles Brockden Brown, including *Wieland* (1798) and *Edgar Huntley* (1799). An original tradition emerged with James Fenimore Cooper who, influenced by Scott, wrote of the expanding nation and contacts with the Indians. He produced over thirty novels, including *The Last of the Mohicans* (1826) and *The Deerslayer* (1841). Nathaniel Hawthorne wrote a different type of fiction; his *The Scarlet Letter* (1850) and *The House of the Seven Gables* (1851) are rich in symbolism and use narratives of ordinary life to allegorize contemporary attitudes and behaviour. Herman Melville, who admired Hawthorne's work, continued the allegorical approach in *Moby-Dick* (1851), sometimes seen as the archetype of the modern American novel in its sense of quest and wide horizons. However, the first linguistic break with British tradition was made by Mark Twain's *Tom Sawyer* (1876) and *Huckleberry Finn* (1884). Previous writers had generally followed the British literary pattern, but Twain used the forms and cadences of the American South and proved that North American English could provide its own literary idiom.

**The twentieth century.** The early 20c novel was influenced by new social attitudes and psychological insights. Henry James showed transition from the old to the new, particularly through the experiences of Americans in Europe. In Britain, D. H. Lawrence broke the Victorian taboo on depicting sexual relationships and advocated a new freedom and honesty in *Women in Love* (1920) and *Lady Chatterley's Lover* (1928). Closer attention to thought and motivation became characteristic of the novel, particularly through the technique known as *stream of consciousness*. Virginia Woolf used it in *Mrs*

*Dalloway* (1925) and *The Waves* (1931), and James Joyce followed the free flow of characters' thoughts in *Ulysses* (1922) and dreams in *Finnegans Wake* (1939). In other respects there has been less technical innovation in prose fiction than in poetry. E. M. Forster wrote traditionally and with acute observation, in *Howards End* (1910) and *A Passage to India* (1924). In the US, the 20c brought revolt against what seemed the inhibiting restraints of the immediate past. Theodore Dreiser wrote with powerful and frank realism in *An American Tragedy* (1925), influencing the next generation of social realists like John Steinbeck, author of *Grapes of Wrath* (1939). A more restrained but incisive satirist of social limitations was Sinclair Lewis in *Babbitt* (1922). He received the Nobel Prize for Literature in 1930, the first American to do so. Ernest Hemingway's macho tales of adventure, such as *A Farewell to Arms* (1929) and *For Whom the Bell Tolls* (1940), won wide popularity. More recent tensions and achievements in American life are depicted by Saul Bellow (b.1915) and Norman Mailer (b.1923).

**Science and fantasy.** The growth of science inspired both popular science fiction and the scientific romances of H. G. Wells, such as *The Time Machine* (1895) and *The First Men on the Moon* (1901). Dystopian literature has included Aldous Huxley's *Brave New World* (1932) and George Orwell's *Nineteen Eighty-Four* (1949). Since 1945, darker visions of uncertainty and anxiety include William Golding's *Lord of the Flies* (1954), Iris Murdoch's *The Time of the Angels* (1968), and John Fowles's *The Magus* (1966). Although Orwell's dystopia discusses a new kind of English, Newspeak, the narrative language makes little use of it and follows traditional standard English, in contrast to the creation of a new futuristic kind of slang used by the narrator of Anthony Burgess's *A Clockwork Orange* (1962).

**The English novel at large.** From the 18c, the novel has gone with the language into all parts of the world. The literary and popular novels of the UK and US continue to dominate, but those of Australia, Canada, Ireland, and New Zealand are gaining international ground, followed by Black Africa, the Caribbean, the Indian subcontinent, and parts of Asia. Some of these newer traditions have roots in the 19c, others have begun in the 20c. For example, early Australian novels include Marcus Clarke's account of the convict settlements in *For the Term of his Natural Life* (1874), and the pioneers of the English novel in Canada were Thomas Haliburton (*The Clockmaker*, 1836) and John Richardson (*Wacousta*, 1832). In South Africa, the

foremost 19c novelist in English was Olive Schreiner, whose *Story of an African Farm* (1883) includes a radical affirmation of feminism. In India, R. K. Narayan has created the town of Malgudi as the setting for such novels as *The English Teacher* (1945). West Indian novelists have written about life in both the Caribbean and England, including V. S. Naipaul's *Of Trees and the Sea* (1956) and E. Brathwaite's *To Sir with Love* (1959). In Nigeria, Amos Tutuola has used allegory in *The Palm-Wine Drinkard* (1952) and Chinua Achebe has written of the conflict of cultures and traditions in *Things Fall Apart* (1958). New Zealand novelists include Sylvia Ashton Warner (*Spinster*, 1958), Ruth Park (*Harp in the South*, 1948), and Janet Frame (*Owls Do Cry*, 1957). Although in the UK and US doubts are still expressed about the claims of certain territories to their own varieties of English, the success of novel-writing in those languages has greatly contributed to affirming their status.

**Conclusion.** Of all the genres, the novel appears to have covered the widest range of tastes and interests. Joyce and Woolf may be considered of high literary merit but be little read. For those who seek mainly entertainment or to pass the time on a journey, there is a stream of books whose authors find no place in mainstream critical studies of fiction. The line between the 'literary' and the 'popular' is not, however, always easily drawn. Dickens has delighted generations and his critical reputation has continued to grow; detective fiction is generally considered ephemeral, but the Sherlock Holmes stories of Sir Arthur Conan Doyle have become classics. The James Bond novels by Ian Fleming, such as *Doctor No* (1962) and *From Russia with Love* (1963), have all the ingredients of suspense, sex, and violence associated with the 'thriller', but have also been esteemed for their wit and elegant style and have received critical consideration. Graham Greene is treated as a serious novelist despite the fact that works like *Brighton Rock* (1938) and *Our Man in Havana* (1958) have much in common with the thriller. The ready transfer of both literary and popular novels to cinema and television, as single productions and as series, indicates qualities in the genre that do not depend, and never have depended, on academic approval.

**NOVELETTE.** See NOVELLA.

**NOVELIZATION** [1870s]. The conversion of a play, motion picture, or television film into a novel for sale to the general public. See NOVEL. [LITERATURE]. T.MCA.

**NOVELLA** [16c: from Italian *novella* a little new thing]. Originally applied to short narratives, such as the stories in Boccaccio's *Decameron* (1349-51), the term now refers to a work of prose fiction between the short story and the novel (around 12,000 to 30,000 words). Examples in English include Henry James's *The Turn of the Screw* (1898) and Joseph Conrad's *Heart of Darkness* (1902). The terms *long short story* and *short novel* are also used for literary works, while *novelette* usually describes a popular love story. See NOVEL, SHORT STORY. [LITERATURE]. R.C.

**NUCLEAR ENGLISH.** See NUCLEUS.

**NUCLEUS** [17c: from Latin *nucleus*, originally *nuclueus* ('little nut') a kernel]. (1) A part around which other parts are gathered; a core or kernel. The term *Nuclear English* has been used in recent years for a proposed 'core' language consisting of elements from natural English; in it, for example, such potentially ambiguous modal verbs as *can* and *may* would be replaced as appropriate by such paraphrases as *be able to* and *be allowed to*. Nuclear English would serve as the basis for purpose-built 'restricted' international varieties comparable to Seaspeak, the medium of worldwide maritime communication. (2) In phonetics, the central, most prominent part of a syllable, consisting of a vowel or vowel-like consonant, such as the [a] sound in *bat* or the [l] sound in *battled*. (3) In phonetics,

the syllable that carries the tone change; the tonic syllable. See SYLLABLE, TONE. [SPEECH]. T.MCA.

**NUMBER**<sup>1</sup> [13c: from Old French *nombre*, Latin *numerus*]. A concept associated with quantity, size, measurement, etc., and represented by a word such as *three*, a symbol such as 3, a group of words such as *eighty-three point five*, or a group of symbols such as 83.5. Every number, regardless of the language in which it is expressed, occupies a unique position in a series, such as 3 in the series 1, 2, 3, 4, 5, . . ., enabling it to be used in such arithmetical processes as addition, subtraction, multiplication, and division. There are two basic kinds of number in such languages as English and French: *cardinal numbers* (the term deriving ultimately from Latin *cardo*/*cardinis* a hinge: that is, something on which other things turn or depend), denoting quantity and not order (as in 1, 2, 3, 4); and *ordinal numbers* (the term deriving ultimately from Latin *ordo*/*ordinis* order), denoting relative position in a sequence (as in 1st, 2nd, 3rd, 4th). Grammatically, the number system of a language contrasts with its system of quantifiers: for example, *one house* with *a house*, and *two/three/forty people*, etc., with *some people*, *several people*, and *many people*, etc.

**Numbers as words.** A spoken number is a word or phrase in a language, but a written number may be realized as either a word or phrase or a symbol or groups of symbols, usually a *figure* such as 1, 2, 12, 21. Written words are generally used for low numbers, from *one* to *ten* or *twelve* (as in the phrases *three blind mice*, *the seven wonders of the world*, and *the twelve signs of the Zodiac*). They are also often used for numbers up to 100 (with hyphenation for compound forms such as *twenty-one* and *eighty-three*) and for large round figures as in *a thousand years* and *four million visitors a year*. Words may or may not be used to express percentages, which may be given as *ten per cent*, *10 per cent*, or *10%*, depending on house style or personal preference. Most house styles and editors aim for consistency in whichever forms they have chosen.

**Numbers as symbols.** Arabic figures are commonly used for numbers above *ten* or *twelve* (as in *The ship sank with the loss of 18 lives*), before abbreviations (as in *8 pm* for *eight o'clock in the evening*, *7K* for *seven thousand*, and *3m* for *three million*), and for dates, addresses, and exact sums of money. Large numbers such as 118,985 are usually given as figures; when spoken, there is one significant difference between British and American usage: BrE always has *and* after *hundred*, as in *one hundred and eighteen thousand*,

*nine hundred and eighty-five*, while AmE generally does not, as in *one hundred eighteen thousand, nine hundred eighty-five*. In large numbers, commas are generally used after the figures representing millions and thousands (1,345,905), but spaces are also, perhaps increasingly, used for this purpose (1 345 905); commas or spaces may or may not be used for thousands alone (2,345 and 2 345), for which solid numbers are also common (2345). Telephone numbers are generally written with spaces between regional and local numbers (0223 245999), and reference numbers are generally solid (N707096). Plural *s* after a set of numbers is often preceded by an apostrophe, as in *3's and 4's* or *the 1980's*, but many house styles and individuals now favour *3s and 4s* and *the 1980s*.

**Numbers in -illion.** Formerly, BrE and AmE differed greatly in their use of numbers representing multiples of *million*: for example, in Britain, France, and Germany, *billion* was 'one million million', or 10<sup>12</sup> (10 to the power 12), while in the US and Canada it was 'one thousand million' or 10<sup>9</sup>. The North American equivalent to the British *billion* was the *trillion*. In the last decades of the 20c, however, the North American use has become universal, providing the set *million, billion, trillion, quadrillion, quintillion, sextillion, septillion, octillion, nonillion, decillion*. Generally, the higher numbers are little used or known, but ever-growing budgets coupled with inflation have in recent years brought *trillion* into increasingly common currency. Although, by and large, numbers in English leave little room for poetry or fantasy, the *-illion* pattern has prompted some word-play, especially in AmE, that makes use of various initial consonants and syllables: 'The savings-and-loan industry bailout, which as of yesterday afternoon was expected to cost taxpayers \$752.6 trillion skillion, is now expected to cost \$964.3 hillion jillion bazillion' (Dave Barry, 'Give or Take a Whomptillion', *International Herald Tribune*, 13 June 1990). The widely-used *zillion*, with its end-of-alphabet prefix, usually suggests the ultimate in facetious scale, but Barry's *ba-* adds even more force. See ALPHANUMERIC, COMPUTING, DATE, LETTER<sup>1</sup>, NUMBER<sup>2</sup>, QUANTIFIER, ROMAN NUMERAL, TECHNOSPEAK. [WORD]. T.MCA.

**NUMBER**<sup>2</sup> [13c: see preceding]. A grammatical category used in describing parts of speech that show contrasts of *plural, singular, dual*, etc. In English, the number system is basically a two-term contrast of singular and plural, shown in nouns and some pronouns and determiners, and to some extent in verbs. Even dual words, such as *both, either, neither*, take singular or plural

verb concord: *both* taking the plural; *either, neither* usually taking the singular. English nouns, as far as number is concerned, can be divided into: singular only, plural only, and words that can be both. Singular-only nouns are: (1) Uncountable nouns which can occur with such uncountable-specific words as *much, little*: *much money, little sugar*. (2) Most proper nouns: *Edinburgh, the Thames* (in which other restrictions apply). Plural-only nouns are: (1) Countable: *people* in *six people*, but not in *the European peoples*. (2) Usually uncountable: *not enough clothes* (not \**six clothes*); *many thanks* (not \**five thanks*); *trousers* (*a pair of trousers* and not usually *three trousers*). The vast majority of countable nouns can be both singular and plural (*book/books, fox/foxes, mouse/mice*), but a few have no distinct plural form (as with *one sheep/three sheep*). Many nouns, however, have both countable and uncountable uses, in which case they may have a plural in some uses (*What an excellent wine/What excellent wines!*) but not in others (*I never drink wine*). Pronouns having distinct singular and plural forms include *personal,*

*reflexive,* and *possessive*. Number contrast is neutralized with *you*, but the second-person reflexive forms distinguish *yourself* and *yourselves*. *Demonstrative* pronouns also have separate forms, singular *this, that* being used both with singular countable nouns (*this restaurant*) and with uncountable nouns (*this food*). Number contrast in verbs, except in the verb *be*, is confined to the distinct third-person singular tense form (*look/looks*). See CONCORD, NUMBER<sup>1</sup>, PARTITIVE, PLURAL, PRONOUN, QUANTIFIER, SINGULAR. [GRAMMAR]. S.C.

**NUMERAL** [16c: from Latin *numeralis* relating to a number or numbers, from *numerus* a number]. A word or symbol, or a group of words or symbols, that represents a number. The two systems used for numbers in English are *arabic numerals* (ultimately of Indian origin), the major system, and *roman numerals*, the minor system. See NUMBER<sup>1</sup>, ROMAN NUMERAL. [WORD]. T.MCA.

**NUYORICAN**. See NEW YORRICAN.

# O

**O, o** [Called 'oh']. The 15th letter of the Roman alphabet as used for English. It originated as the Phoenician consonant symbol *ʾain*, representing a pharyngeal plosive (or 'glottal catch'). It had a roughly circular form and meant 'eye'. The Greeks adopted it as a vowel symbol, at first for both long and short values. Later, a letter *omega* ( $\Omega$ ) (that is *O-mega*, 'big O') was created for the long value, with  $\omicron$ , known as *omicron* (that is, *O-micron*, 'little O'), kept for the short value. Latin took over only *omicron*, for both long and short values.

**Sound values** In English, as well as long, short, and digraph values, *o* has some irregular values, often overlapping with values of *u*. In some words, the letter *o* has a different value in different accents. Native speakers differ as to whether *log* and *dog* rhyme, whether *bother* has the vowel of *father*, whether *horse* and *hoarse* are homophones, and whether *your* is pronounced like *yore* or as *ewer*. The sound values are listed in the following paragraphs as *short O*, *word-final long O*, *pre-consonantal long O*, *O with the value of U*, *O and the inflections of DO*, and *O with doubled consonants*.

**Short O.** (1) In monosyllables before consonants, but not before *h, r, v, w, y*: *mob, lock, botch, odd, soft, log, dodge, doll, on, top, Oz*. The biblical name *Job*, however, has long *o*. (2) In polysyllables such as *pocket, soccer, biography, geometry*. (3) Before consonant plus *e* in *gone, shone*, in one pronunciation of *scone* (contrast *tone*), and before *ugh*, representing /f/, in *cough, trough*. (4) In RP and related accents, a lengthened variant of short *o* occurs before word-final *r* (*or, nor*), medially as in *corn, adornment*, and before final silent *e* as in *ignore*. The same value occurs as *oa* uniquely in *broad*, as *ou* in *ought, thought*, etc., and is sometimes heard (as it commonly was in old-fashioned RP)

instead of short *o* in *off, often, lost*, sometimes facetiously or mockingly rendered as *aw* in 'crawss' (*cross*), 'Gawd' (*God*); the poet John Keats, a Londoner, rhymed *crosses* and *horses*. This value is also spelt *au, aw*, as seen in the sets *saucе/source, fraught/fought/fort*. (5) In other accents, this distinction does not occur: in most Scottish accents, for example, the same vowel is heard in *cot, caught, ought*, and *saucе* does not rhyme with *source*. (6) In RP and related accents, the vowel sound in *word, work, world, whorl* is the same as that in *were*, and the set *whirled, whorled, world* is homophonous.

**Word-final long O.** (1) Standard long *o* occurs word-finally spelt simply as *-o* in the monosyllables *fro, go, so*, and in polysyllabic loans (*hero, piano, potato, radio, tomato, zero*), but in *lasso* final *o* usually has the value of long *u*. There is often uncertainty whether such loans form their plurals with *-s* (*armadillos*) or *-es* (*potatoes*) or optionally either (*lassos, lassoes*). Those ending in vowel plus *o* add *s*: *cameos, radios, duos*. Syllable-final long *o* is found in *coaxial, cloaca, oasis* (compare *coax, cloak, oats*), *poet, coerce, coeval*, etc. (2) The same sound occurs word-finally as *-oe* in the monosyllables *doe, foe, floe, hoe, sloe, throe, woe* and in some polysyllables (*aloe, felloe, oboe*), but *shoe, canoe* give *-oe* the value of long *u*. (3) Long *o* occurs as *-oh* in *oh, doh, soh*, as *-ough* in *dough, though* (but not other *-ough* words), and as *-ow* as in some 14 words: *bow, blow, crow, know, low, mow, row, show, slow, snow, sow, stow, tow, throw*. Of these, the forms *bow, row, sow* have different meanings (that is, are different words) when they rhyme with *how*. (4) The long-*o* value of the *-ow* ending occurs in disyllables of mainly vernacular origin, after *d* (*meadow, shadow, widow*), after *ll* (*gallows, swallow; bellow, yellow; billow, willow; follow, hollow*), after *nn* (*minnow, winnow*), and after *rr* (*arrow, barrow; borrow, sorrow; burrow*,

## THE CAPITAL LETTER

*furrow*); and also in *window* (from a Scandinavian compound of *wind* + *eye*) and *bungalow* (from Hindi). (5) The diphthong value of final *-ow* (*now*, *vow*) is rare in polysyllables: *allow*, *endow*. (6) Some French loans have a final silent consonant after long *o*: *apropos*, *depot*. (7) Final long *o* may become *i* in the plural of Italian loans: *libretto*|*libretti*, *virtuoso*|*virtuosi*.

**Pre-consonantal long O.** (1) Simple *o* before *ld* (*bold*, *cold*), *lst* (*bolster*, *holster*), *lt* (*bolt*, *molten*), *ll* (*stroll*, *troll*), *lk* (*folk*, *yolk*). Sometimes also before final *st*, *th* (*ghost*, *most*, *past*; *both*, *sloth*, but contrast short *o* in *lost*, *cloth*, etc.). The anomalous long *o* in *only* contrasts with the related forms *one*, *alone*, *lonely*, which all have following *e*; however, a parallel may be seen in *nobly*. (2) Before a single consonant, with a following *a* or a magic *e* after the consonant: *soap*, *choke*. (3) Digraphs *ou* and *ow* often before *l* or *n* (*boulder*, *poultry*, *shoulder*, *smoulder*; *bow*l, *own*, *sown*), but contrast the diphthong value in *how*l, *down* and the more usual vowel spellings in *foal*, *sole*, *loan*, *tone*. Before *r* in RP, this value becomes that of *or* in *course*, *court*, *source*. (4) Uniquely as *oo* in *brooch* (contrast *broach*).

**O with the value of U.** (1) The letter *o* often has one of the values of *u*, phonetically central and short as in *but*, close and short as in *put*, or close and long as in *truth*. (2) The short *u*-value is common in monosyllables, especially before *n* (*son*, *front*, *monk*, *month*, *sponge*, *ton*, *tongue*, *won*), and in some words with silent *e* (*some*, *come*, *done*, *none*, *love*, *dove*). *One*, *once* contain the further anomaly of an unspelt initial /w/. The short *u*-value is heard before nasals, *l*, *r*, *th*, *v*, and *z* in such polysyllabic words as *above*, *accomplish*, *among*, BrE *borough*, *brother*, *colour*, *comfort*, *conjure*, *cover*, *dozen*, *dromedary*, *frontier*, *govern*, *Monday*, *money*, *mongrel*, *monkey*, *mother*, *nothing*, *onion*, *other*, *shovel*, *slovenly*, *smother*, *somersault*, *stomach*, *wonder*. Pronunciation varies, however: *Coventry*, *constable* occur in BrE with both short *o* and *u* values. This use of *o* for short *u* has been explained as a graphic device in Middle English to reduce the confusing succession of vertical strokes (minims) that would otherwise arise in manuscript in a word such as *money*. (3) Longer (close) values of *u*, as in *put* or *truth*, occur: with simple *o*, in *do*, *to*, *two*, *who*, *lasso*; with *o* before a consonant plus *e*, in *lose*, *whose*, *move*, *prove* (contrast *choose*, *booze*, *use*, *hose*, *drove*); with *oe* in *shoe*, *canoe*; in such special cases as *bosom*, *Domesday*, *tomb*, *whom*, *wolf*, *woman* (but *o* with the value of short *i* in the plural *women*), *womb*.

**O and the inflections of DO.** The forms of *do* are highly anomalous: the long-*u* value of *o* in *do*, the short-*u* value in *does* (contrast the plural of

*doe*), and the long-*o* value of *don't*, matching *won't*.

**O with doubled consonants.** When followed by doubled consonants, *o* often has a short value, but before double *l*, whether final or medial, both values occur: *doll*, *loll*, but *poll*, *roll*; *dolly*, *follow*, but *swollen*, *wholly*. Doubled *l* in *holly* distinguishes its short *o* from the long *o* in *holly*. Many words with a short *o* preceding a single consonant, despite parallels with doubled consonants (*body/shoddy*, *proper/copper*) or with long vowels (*honey/phoney*, *hover/rover*). Other examples of single consonants after short *o* include *colour*, *holiday*, *honour*, *honest*, *money*. On the other hand, doubled *r* distinguishes short *o* in *sorry*, *lorry* from longer *o* in *story*, *gory*, though not in *historical*.

**Digraphs.** **O** is the first element in the following digraphs:

**OA.** The digraph *oa* has the values of: (1) Long *o* as in *no* (*soap*, *cloak*). (2) The open *aw*-sound before *r* in RP and related accents (*coarse*, *hoarse*).

**OE.** The digraph *oe* has the value of long *o* as in *no* (*woe*, *woeful*), or of *ee* in such Greek-derived forms as BrE *amoeba*, *foetus*, or of the first *o* in *colonel* in such German names as *Goethe* and *Goebbels*.

**OI and OY.** (1) The digraphs *oi* and (usually as a word- or syllable-final variant) *oy* are diphthongs: short *o* preceding short *i*, as in *boil*, *boy*. They are common in monosyllables and incorporate a glide before a vowel at a syllable boundary: *join*, *noise*, *voice*, *oyster*, *royal*, *voyage*, *buoyant*. (2) Rare final *oi* occurs in *borzoi* (from Russian) and *envoi* (Anglicized from French). (3) Special occurrences include: *porpoise*, *tortoise* with *oi* often reduced to schwa; a unique use in *choir* (rhyming with *friar* and *wire* and respelt from *quire*); in recent French loans, the value of /*wa*/ (*boudoir*, *reservoir*). (4) The *oi* combination is not always a digraph: compare *coin*/coincide.

**OO.** (1) The digraph *oo* is generally considered to have the value of long *u* as in *rule* (*booty*, *choose*), but with variation depending on accent. Exceptionally, it has the value of short *u* in *blood*, *flood*. (2) In RP and related accents, *oo* in some words is long *u* as in *truth* (*food*, *soon*), but elsewhere has the shorter *u* of *put* (*good*, *hood*) especially before *k* (*book*, *cook*, *look*). In *room*, both values occur in free variation. Similar variations occur before *r*: *door*, *floor*, *moor*, *poor*. (3) The form *too* developed in the 16c as a stressed variant of *to*; German has *zu* for both senses. (4) Occasionally, *oo* corresponds to French *ou* (contrast cognate *troop*/*troupe*), and *-oon* to French *-on* (*balloon*/*ballon*). (5) A few *oo* words are

exotic: *bamboo* (probably Malay), *typhoon* (Chinese), *taboo* (Tongan). The digraph formerly occurred in *Hindoo*, now *Hindu*, and the alternative *tabu* exists for *taboo*. (6) *Zoo* is a clipping of *zoological garden*, but uniquely in *zoology* the second *o* functions simultaneously as part of the *oo* digraph and as a normal short *o*. (7) *Oo* becomes *ee* in the plural of *foot*, *goose*, *tooth*: *feet*, *geese*, *teeth*.

**OU and OW.** (1) The digraphs *ou* and (usually its word-final variant) *ow* can represent a diphthong, as in *cow*, *cloud*, *flour*, *flower*. Word-final *ou* occurs exceptionally in archaic *thou*, but *ow* is sometimes used medially. It is contrastive in *foul/fowl*, and is an alternative spelling in *to lour/lower* and formerly in *flour/flower*. (2) *Ou* has other values, as in *soul* (rhyming with *pole*), *sought* (with *bought*), *source* (with *course*), *soup* (with *loop*), *scourge* (with *urge*), and *touch* (with *hutch* and *much*). See *v*. (3) Final *-ow* as long *o* in *know* occurs in some 50 words as compared to some 15 with final *-ow* as in *bow*, *brow*, *cow*, *dhow*, *how*, *now*, AmE *plow*, *prow*, *row*, *sow*, *vow*, *wow*, *allow*, *endow*. (4) On its own, the form *wound* is ambiguous: the past tense of *to wind* has the standard diphthong value, but the noun has the value of *ou* in *soup*. (5) Exceptionally, *ow* has the value of short *o* in *knowledge*, *acknowledge*. (6) *Ou* becomes plural *i* in the plurals of such pairs as *louse/lice*, *mouse/mice*.

**-OUGH.** (1) Some *-ough* spellings have the standard value of *ou* (*bough*, *drought*, BrE *plough*). Variants are AmE *plow* and archaic *enow*, which was an alternative pronunciation of *enough*. (2) Other *-ough* spellings give *o* different values: short *o* in *cough*, *trough*; in RP, the *aw* sound in *ought*, *bought*; long *o* in *though*; schwa in *thorough*, *borough* in BrE, sometimes long *o* in AmE; and silent *o* in *tough*, *rough*, *through*.

**O and schwa.** (1) Unstressed *o* may be more or less reduced to the value of schwa, or elided altogether. In pronunciations of the word *police*, the full range can be heard, from long *o*, through short *o* and schwa, to zero value with initial consonants as in *please*. (2) There is also often variation between AmE, in which the *o* in *omit*, *cocaine*, *testimony*, *territory*, *phenomenon* (second *o*) may have one of its full values, and BrE where it is normally reduced. (3) Most typically, *o* (like other vowel letters) has the value of schwa after the main stress in polysyllables, especially in words ending in *l* (*petrol*, *symbol*), *m* (*fathom*, *bottom*), *n* (*cotton*; *cushion*, *fashion*; *ration*, and *-ation* words generally), *r* (*error*, *doctor*). (4) Homophones sometimes occur as a result of such reduction: *baron/barren*, *gamble/gamble*, *petrol/petrel*, *lesson/lessen*, *minor/miner*.

**O and stress shift.** In polysyllabic derivatives, the value of *o* may shift between long, short, and schwa (in unstressed position), as the spoken structure of the word changes: (1) *Atom* has schwa for its *o*, but in *atomic* has the short-*o* value. (2) *Colony* has the short *o* value for its first *o*, schwa for its second, but *colonial* has schwa for its first *o* and the long *o* value for its second. Such effects occur before suffixes like *-(i)al*, *-ic(al)*, *-y*, *-ety*, as in *colony/colonial*; *atom/atomic*; *economy/economic(al)*; *symbol/symbolic*; *tone/tonic*; *geology/geological*; *photograph/photographer/photographic*; *proper/propriety*; *social/society*. See SUFFIX.

**Agentive -or/-er.** The suffix *-or* is mostly used with Latin roots (*doctor*, *professor*), especially after verbs ending in *-ate* (*dictator*, *perpetrator*). It is normally pronounced with schwa, although occasionally the full value of *-or* is heard: *actor*, *vendor*. However, *-or* varies with *-er* in a number of patterns. BrE legal spelling may use *-or* where lay writing has *-er*: *grantor/granter*. A technical device may be distinguished by *-or* from a human agent with *-er*: *adaptor/adapter*, *conveyor/conveyer*. In other cases, *-or* and *-er* are in free variation: *advisor/adviser*, *impostor/imposter*, *investor/invester*. *Caster/castor* sometimes differ in meaning, and *ensor/censer* always do.

**Silent O.** (1) In *jeopardy*, *Leonard*, *leopard*, *people*, but the *o* in *yeoman* has long value and the *e* is silent. (2) The second *o* in *colonel*.

**American and British differences.** (1) The once widespread unstressed ending *-our* (as in *emperor*) has since the early 19c been increasingly rewritten *-or*: universally in *emperor*, *governor*, *horror*, *terror*, and in AmE in such forms as *ardor*, *behavior*, *candor*, *dolor*, *endeavor*, *vapor*, *harbor*, *labor*, *odor*, *parlor*, *rigor*, *savior*, *vapor*. *Glamour* and *saviour* are, however, still widely written with *-our* in AmE. AmE has *o* in all derivatives, while BrE has *o* alone in many (*honorary*, *vaporize*, *vigorous*), but not all (*behaviourism*, *favourite*, *honourable*, *colourist*). In many rarer forms, such as *torpor* and *stupor*, *-or* is universal. (2) AmE writes BrE *amoeba*, *foetus*, *oesophagus*, *moustache* without the *o* and *manoeuvre* as *maneuver* (but note the common spellings *onomatopoeia*, *subpoena*). (3) Contrast AmE *mold*, *molt*, *smolder*, BrE *mould*, *moult*, *smoulder*. (4) AmE has *plow* for BrE *plough*. See ALPHABET, LETTER<sup>1</sup>, SPELLING, [WRITING]. C.U., T.MCA., E.W.

**O & C.** See OXFORD AND CAMBRIDGE SCHOOLS EXAMINATION BOARD.

**OATH** [From Old English *āth*]. (1) A solemn pronouncement or pledge, as in taking an oath of allegiance, in Christian cultures often involving placing one's hand on a copy of the Bible

and/or stating that God is one's witness at the time of swearing the oath. (2) By extension, a blasphemous, irreverent, or foul expression. See **BLASPHEMY**, **MINCED OATH**, **SWEARING**, **SWEAR-WORD**. [STYLE]. T.MCA.

**OBELISK** [16c: from Latin *obeliscus*, Greek *obeliskos* a small spit, small pointed pillar]. Also **dagger**. Printer's terms for a mark like a downward-pointing knife or needle (†), used to indicate a reference or annotation, especially a second footnote, in which case it follows the word, phrase, or sentence being marked in a text, and is repeated before the footnote or other reference. See **ASTERISK**, **NOTES AND REFERENCES**. [WRITING]. T.MCA.

**OBFUSCATION** [16c: from Latin *obfuscare*, *obfuscatum* to darken, from *fuscus* dark]. A use of language that makes a subject obscure or difficult to understand, or complex to the point of confusion. The aim of obfuscation is to prevent communication, not to promote it. Government agencies often use such language. For example, in 1983 the US Department of Energy issued the following regulation: 'Nothing in these regulations precludes the secretary or his delegate from designating information not specifically described in this regulation as unclassified controlled unclear information.' Compare **DOUBLESPEAK**, **JARGON**, **OBSCURANTISM**. [STYLE, USAGE]. W.D.L.

**OBJECT** [14c: from Latin *obiectum* (something thrown down, (something) presented (to the mind))]. A major functional element in the structure of clauses, present in any sentence with a transitive verb. With verbs that can have two objects, the *indirect object* generally refers to the recipient of what is denoted by the *direct object*. In *I sent my bank a letter* (Subject/Verb/Object/Object), *my bank* is the indirect object, *a letter* the direct object. In the equivalent *I sent a letter to my bank*, some grammarians regard *to my bank* as also an indirect object. Pronouns in any object position must take their object forms, as with *I* and *they* in *Please send me them*. Despite the closer position of the indirect object to the verb in *I sent my bank a letter*, with most verbs it is the indirect object that is more easily omitted: *I sent a letter*, not \**I sent my bank*. Exceptions include *pay* (*You can pay me*), *teach* (*She teaches the top class*), and *tell* (*You can tell me, if you wish*), where such direct objects as *the money*, *French*, and *the news* are omitted. In such constructions, some grammarians see the retained object as the direct object, while others see it as the indirect object. Compare **SUBJECT**. [GRAMMAR]. S.C., S.G.

**OBLIQUE** [15c: through French from Latin *obliquus* sloping. Pronounced 'obLEEK'. Once pronounced 'OBLIKE']. Also **diagonal**, **oblique dash**, **oblique stroke**, **slash**, **solidus**, **virgule**. The punctuation mark (/), a forward-sloping line used in writing and printing. *Virgule* is the French term for *comma*; the virgule or oblique used in medieval English manuscripts and early printed works in black letter had more or less the value of a modern comma: see **PROSE STYLE** (Caxton). The mark was also once used as a precursor to the soft hyphen, to mark end-of-line word division. *Solidus* is Latin for 'shilling': in Britain, the name was extended to the mark used to separate shillings from pence in pre-decimal currency: 7/6 for *seven shillings and sixpence*. The device has six main uses: (1) To indicate vulgar fractions ( $23/24$  for *twenty-three twenty-fourths*) and ratios (*miles/hour* for *miles per hour*). (2) As part of certain abbreviations and related symbols, such as *c/o* care of, *i/c* in charge, and the percentage sign %. (3) To mark the ends of lines of poetry when set in a prose text (as in *Tyger Tyger, burning bright | In the forests of the night*). (4) To unite alternatives as in *and/or*, *colour/color*, *his/her*, and *s/he* (for 'she or he'). (5) To indicate routes, as in *London/New York/San Francisco*. (6) In phonetics, to mark off phonemic transcription, as in /wik/, denoting the pronunciation of the words *week* and *weak*. The reverse oblique (\), known as a *back-slash*, is used mainly in computing: for example, in forming the elements of a filename, such as *NB\MAIN\OC\A\AB* (for 'Nota Bene, Main Directory, Oxford Companion, Letter A, Section AB'). See **PHONETIC TRANSCRIPTION**, **PUNCTUATION**. [TECHNOLOGY, WRITING].

R.W.W.B., T.MCA.

**OBLIQUE RHYME**. See **HALF RHYME**.

**OBSCENE LIBEL**. See **CENSORSHIP**, **LIBEL**.

**OBSCENITY** [17c: through French from Latin *obscœnus* ill-omened, indecent]. The use of language generally considered repulsive and indecent, and an instance of such use. Although reference to sex is central to obscenity, excrement is also included. See **CENSORSHIP**, **SWEARING**. [STYLE]. R.F.I.

**OBSCURANTISM** [1820s: from French *obscurantisme* what tends to obscure, conceal]. A deliberate use of language that is obscure, vague, or lacking in clear meaning. Politicians and others who seek to avoid specific statements often use this style of language. For example, at the height of US involvement in Vietnam, Governor Nelson Rockefeller of New York was asked his position on the war, and replied: 'My

position on Vietnam is very simple. And I feel this way. I haven't spoken on it because I haven't felt there was any major contribution that I had to make at the time. I think that our concepts as a nation and that our actions have not kept pace with the changing conditions. And therefore our actions are not completely relevant today to the realities of the magnitude and the complexity of the problems that we face in this conflict.' See **DOUBLESPEAK**, **JARGON**, **OBFUSCATION**. [STYLE, USAGE]. W.D.L.

**OBSTRUENT**. See **CONSONANT**.

**OCEANIA** [19c: through Modern Latin from French *Océanie*, from Latin *oceanus*, Greek *ōkeanos* a vast stream believed to girdle the earth. Pronunciations: 'oh-she-AH-ni-a', 'oh-she-AY-ni-a', 'o-SHEE-ni-a']. (1) A general term for the islands of the Pacific Ocean, including Melanesia, Micronesia, and Polynesia, sometimes the Malay archipelago, and sometimes Australasia. The term is used in this volume to include Australasia but exclude the Malay archipelago, which is treated as part of Asia: see theme list below. (2) The name of a region of the world in George Orwell's dystopian novel *Nineteen Eighty-Four* (1949). See **NEWSPEAK**. [GEOGRAPHY, NAME]. T.MCA.

**OCTAVE**. See **SONNET**.

**OCTAVO** [16c: from the Neo-Latin singular masculine ablative phrase *in octavo* in an eighth (of a sheet of paper)]. (1) Abbreviated 8°, 8vo. A format for printed materials, for many centuries the commonest size for a printed book, made by folding a sheet three times, the folds creating a quire of eight leaves (16 pages). (2) The name for a book of this size. (3) Formerly, a size of cut paper 8 × 5 inches (20.3 × 12.7 cm). [TECHNOLOGY]. W.W.B.

**OCTET**. See **SONNET**.

**ODE** [16c: through French from Latin *oda*, Greek *oîdē* a song]. A long lyric poem that addresses a person, thing, or place, or celebrates a notable event. There are three principal forms in English: (1) *The Pindaric ode*. An elaborate Greek form imitating the style of Pindar (5c BC), who derived it from the *strophe*, *antistrophe*, and *epode*, the three movements of the dramatic chorus, which sang the strophe while dancing to the left, the antistrophe to the right, and the epode standing still. It has three stanzas, the first two identical in structure and without restriction of metre or length, the third taking a different structure. This sequence can be repeated several times to make a longer poem, as with Gray's 'The Progress of Poesy' (1754). (2) *The Horatian ode*. A form imitating the style of the Roman poet Horace. It keeps a constant stanza form throughout, often a quatrain rhyming *aabb* with the first two lines longer than the third and fourth, as in Andrew Marvell's 'Horatian Ode on the Return of Cromwell from Ireland' (1650). (3) *The irregular ode*. The most popular English form, introduced by Abraham Cowley in the 17c to imitate Pindar, but with greater freedom of structure; Wordsworth's 'Intimations of Immortality' (1807) is such a form. The ode, especially addressed to subjects in the natural world, was favoured by the 18c neo-classicists

and, with new attitudes and style, by the 19c Romantics: Shelley's 'Ode to the West Wind' (1819), Keats's 'On a Grecian Urn' (1820) and 'To a Nightingale' (1820), and Allen Tate's 'Ode to the Confederate Dead' (1928). See CHORUS, LYRIC. [LITERATURE].

R.C.

**OED.** See OXFORD ENGLISH DICTIONARY.

**OFFICIAL ENGLISH**, also **Official English Movement**. Collective names for campaigning groups whose aim is an amendment of the US Constitution, making English the official language of the republic. The organization *US English* belongs within this grouping. See ENGLISH LANGUAGE AMENDMENT, ENGLISH-ONLY MOVEMENT. [AMERICAS, MEDIA].

T.MCA.

**OFFICIALESE** [1880s]. A style common in statements and texts issued by the official representatives of governments and large institutions, especially civil servants. The term is usually pejorative and the style is particularly criticized for obscure, polysyllabic, pompous, and/or pedantic usage. See BUREAUCRATESE, -ESE, JARGON. [STYLE, USAGE].

T.MCA.

**OFFICIAL LANGUAGE**. A language used for official purposes, especially as the medium of a national government. English is not the statutory or *de jure* official language of either the UK or the US, but is the *de facto* official language. It is, however, the sole statutory official language of Namibia; with French, it is one of the two statutory official languages of Canada; with Mandarin Chinese, Malay, and Tamil, it is one of the four statutory official languages of Singapore; and with Arabic, Chinese, French, and Spanish, it is one of the five statutory official languages of the Food and Agriculture Organization of the United Nations (FAO). See ENGLISH, NATIONAL LANGUAGE. Compare OFFICIAL ENGLISH (MOVEMENT). [LANGUAGE].

T.MCA.

**OFF RHYME**. See HALF RHYME.

**OFFSET**. See PHOTO-OFFSET PRINTING.

**OLD COUNTRY, The**. A term for Great Britain applied by settlers in the former dominions and surviving among older people as an affectionately sentimental term. In the heyday of the British Empire, such terms were used, often with affection and without affectation, by many people who did not hail from Britain, had never been there, and were never likely to go there. The expression is paralleled by *the old sod* for Ireland and *the old dirt*, a term for Britain used in Australia and New Zealand, possibly formed

on an Essex dialect pronunciation of *dirt*. See HOME, MOTHER COUNTRY. [EUROPE, NAME, OCEANIA].

T.MCA., W.S.R.

**OLD ENGLISH**<sup>1</sup>, short form *OE*, *O.E.* Also **Anglo-Saxon** (short form *AS*, *A.S.*). From one point of view, the earliest stage of the single continuously developing English language; from another, the language from which two other more or less distinct languages successively evolved, first Middle English (ME), then Modern English (ModE); from a third point of view, the common ancestor of English and Scots, the two national Germanic languages of Britain. OE was spoken and written in various forms for some eight centuries (5–12c). Although its texts are as unintelligible to present-day English speakers as Latin to speakers of French, even after modest exposure they can begin to make progress, as with the following (from the OE version of Bede's *Ecclesiastical History of the English People*):

Breten is gārsecges īegland, þæt wæs gēo gēara Albion hāten.

Translated word for word and with the same word order, this sentence runs:

Britain is sea's island, that was ago years Albion called.

Translated more freely, it is:

Britain is an island of the sea that was formerly called Albion.

In the original sentence, word order in the main clause is the same as in ModE, but in the subordinate clause differs markedly from it (with echoes of German). Some words are the same as or very like ModE words (*is*, *Albion*; *Breten*, *wæs*), some are further removed but easily identifiable after translation (*īegland* island, *gēara* years), and some are alien (*gārsecges* of the sea, *gēo* formerly, *hāten* called).

**Background**. Old English consisted of several West Germanic dialects taken to Britain from the north-western European mainland in the middle centuries of the first millennium AD. Germanic settlement was very limited during the late Roman period, but expanded greatly after the departure of the Romans in the early 5c. The language was never fully homogenized as a literary and administrative medium, but nonetheless made greater progress in this direction (despite the primacy of Latin) than most other European vernaculars. Writing in Latin in the 8c, the Northumbrian historian Bede identified the settlers of three hundred years earlier as three peoples, the Jutes, Angles, and Saxons; the Anglo-Saxon Chronicle, written entirely in OE from the 9c to the 12c, described year by year, from the settlers' point of view, the progress of various leaders and groups as they

overcame the resistance of the Romano-Celtic Britons from the 5c to the 7c.

By the 8c, OE-speakers held territories roughly equivalent in size and distribution to the later kingdom of England. Four major varieties of the language can be distinguished in surviving documents: *Kentish*, associated with the Jutes, who probably migrated from what is now Denmark; *West Saxon*, in the southern region called Wessex, ultimately the most powerful of the Saxon kingdoms, whose founders originated in northern Germany; *Mercian*, the Anglian dialect spoken in Mercia, a kingdom stretching from the Thames to the Humber; and *Northumbrian*, the northernmost of the Anglian dialects, spoken from the Humber to the Forth. The Angles (in OE *Engle*) appear to have originated in Angeln, now in Schleswig, and gave their name to the language, *Englisc*, but it was the Saxons of Wessex who brought their dialect closest to a standard literary medium: see ALFRED. The last document in OE, an annal of the Anglo-Saxon Chronicle dated 1154, shows features of early Middle English, which was strongly influenced by the impact on OE of Danish during the 9-11c and Norman French from the 11c onward. The following sections, however, discuss OE without reference to such influences.

**Pronunciation and spelling.** OE had speech patterns similar to those of its fellow North Sea Germanic languages Old Frisian and Old Dutch. It was written first in runic letters then in an adaptation of the Roman alphabet that incorporated several such letters to represent distinctive OE sounds (see below).

**Stress.** In polysyllables, OE stress typically falls on the first syllable, as in ModE: *mōrgen* morning, *sēttan* to set. When the first syllable is a prefix, however, nouns and adjectives stress the prefix (*ándswaru* answer, *ándward* current, present), but verbs do not (*forgīefan* to forgive, *tōberstan* to burst). Two prefixes are never stressed, whatever the part of speech: *be-* (*beswillan* to soak), and *ge-* (*gefremed* done, from *fremman* to do; *geþolian* to tolerate, from *þolian* to endure; *gerēgnad* ornamented).

**Vowels.** The monophthongs of OE consist of seven pairs of short and long vowels: (1) Short *a*, phonetically /a/, as in *nama* name; long *ā* /a:/, as in *stān* stone. (2) Short *æ* /æ/, as in *glæd* glad; long *ǣ* /æ:/, as in *dǣd* deed. (3) Short *e* /e/, as in *etan* eat; long *ē* /e:/, as in *hē* he. (4) Short *i* /i/, as in *cwic* alive; long *ī* /i:/, as in *wīn* wine. (5) Short *o* /o/, as in *god* god; long *ō* /o:/, as in *gōd* good. (6) Short *u* /u/, as in *sunu* son; long *ū* /u:/, as in *nū* now. (7) Short *y* /y/, as in *cyning* king; long *y* /y:/, as in *ytmaest* utmost: compare French *tu* and *ruse*. The diphthongs of OE

consist of three pairs of short and long vowels in which the stress falls on the initial vowel: (1) Short *ea* /æa/, as in *eald* old; long *ēa* /æa:/, as in *ēast* east. (2) Short *eo* /eo/, as in *eorl* earl; long *ēo* /eo:/, as in *dēop* deep. (3) Short *ie* /iε/, as in *ieldu* age; long *īe* /iε:/, as in *hieran* to hear.

**Consonants.** The consonants of OE are mostly the same as those of ModE. Differences include: (1) The pronunciation of all consonants in all written positions, notably /r/ and initial /g/ as in *gnagan* to gnaw, initial /k/ as in *cnēo* knee, initial /h/ as in *hlāf* bread, and initial /w/ as in *writan* to write. (2) Double letters represent geminated sounds (as in Italian): for example, OE *biden* and *biddan* differ phonetically in the same way as ModE 'bidden' and 'bid Den'. (3) Two consonants are absent from present-day mainstream English. The sound represented by non-initial *h*, as in *niht* night, is a voiceless palatal fricative (compare German *ich*) or a voiceless velar fricative (compare German *ach*, ScoE *loch*, Scots *nicht*). The sound represented by *g* after or between back vowels is a voiced velar fricative (compare one pronunciation of German *sagen* to say). Initial *h* has the same pronunciation as in present-day general English; *g* in other positions is as shown below in point 7. (4) There are several distinctive letters: *ash* (*æ*), *eth* (*ð*), *thorn* (*þ*), *wynn* (*ƿ*), *yogh* (*ȝ*). For details, see the entries for each. (5) The letters *f* and *s* each have voiceless and voiced values, the letters *v* and *z* not normally being used. Such words as OE *fæt* (fat) and *fæt* (vat) are therefore pronounced as homophones with either /f/ or /v/, according to dialect: compare present-day West Country speech in England. Similarly, *thorn* may represent either a voiceless /θ/ or a voiced /ð/: compare the current use of the digraph *th* in *three* and *these*. (6) The letter *c* is used as follows: before the 'hard' vowels *a*, *o*, *u*, *y* and all consonants, it has the value /k/, as in *cald* cold, *clīpan* to summon, *cwic* alive, *cyning* king; before the 'soft' vowels *e*, *i*, it generally has the value /tʃ/, as in *ceaster* ('chester') town, *cirice* church. (7) Similarly, *g* is pronounced /g/ before *a*, *æ*, *o*, *u* and before consonants, as in *gāst* spirit, *god* god, *grim* fierce, and /j/ (as in ModE *yet*) before *e* and *i*, as in *gēac* cuckoo, *gif* if. (8) The letter combinations *sc* and *cg* are pronounced like *sh* and *dge* in present-day *shed* and *sedge* respectively: *scip* ship, *briccg* bridge.

**Grammar.** Textbooks of OE grammar distinguish eight parts of speech: nouns, adjectives, pronouns, verbs, adverbs, prepositions, conjunctions, and interjections. Unlike ModE, OE is highly inflected; the major aspects of its morphology are traditionally set out in paradigms, much as in textbooks of Latin, with declensions

for nouns, adjectives, and pronouns, and conjugations for verbs. Its morphology and syntax are too extensive and complex to cover here; the following sections present only highlights.

*Declensions.* To discuss nouns, pronouns, and adjectives, grammarians of OE use the three categories number, gender, and case, with three subcategories for number (singular, sometimes dual, and plural), three for gender (masculine, feminine, and neuter), and four or five for case (nominative, accusative, genitive, and dative, the last serving an instrumental function for nouns, while there is a distinct instrumental case in certain parts of the declensions of adjectives and pronouns).

Table 1. Declension of masculine weak noun *nama*

	Singular	Plural
Nom.	<i>nama</i> (name: subject)	<i>naman</i> (names: subject)
Acc.	<i>naman</i> (name: object)	<i>naman</i> (names: object)
Gen.	<i>naman</i> (of a name, name's)	<i>namena</i> (of names, names')
Dat.	<i>naman</i> (to/for/with a name)	<i>namum</i> (to/for/with names)

Table 2. Declension of masculine strong noun *stān*

	Singular	Plural
Nom.	<i>stān</i>	<i>stānas</i>
Acc.	<i>stān</i>	<i>stānas</i>
Gen.	<i>stānes</i>	<i>stāna</i>
Dat.	<i>stāne</i>	<i>stānum</i>

The paradigm given in Table 1 shows the declension of nouns ending in *-an* (generally referred to as 'weak' nouns). In this case, the noun (*nama* name) is masculine. Table 2 shows the declension of a 'strong' noun: in effect, any form other than with *-an* endings. Here, for convenience of comparison, the noun is also masculine.

Table 3. Declension of definite article *sē* (singular only)

	Masculine	Feminine	Neuter
Nom.	<i>sē</i>	<i>sēo</i>	<i>þæt</i>
Acc.	<i>þone</i>	<i>þā</i>	<i>þæt</i>
Gen.	<i>þæs</i>	<i>þære</i>	<i>þæs</i>
Dat.	<i>þæm</i>	<i>þære</i>	<i>þæm</i>
Inst.	<i>þȳ</i>	<i>þære</i>	<i>þȳ</i>

Table 3 gives the declension for the singular only of the definite article (a subclass of pronoun also translated as *that*). In ModE, the definite article is invariable (only *the*), while the demonstrative pronoun has two forms (*that/those*); in OE, however, the forms varied through three

genders, two numbers, and five cases. The plural forms are simpler: nominative and accusative *þā* for all genders; genitive *þāra*; and dative *þæm*. The OE for 'the/that name' as subject of a sentence is *sē nama*, as object is *þone naman*; 'the/those stones', as both subject and object, is *þā stānas*.

*Conjugations.* The tenses of the verb in OE are comparable to those of ModE, which contains remnants of the major distinction in OE verbs: between 'strong' and 'weak' forms. The main difference lies in the formation of the preterite (the simple past tense). The preterite of strong verbs is formed by changing the vowel of the root according to a series known as 'vowel gradation' (in ModE, for example, the change from *swim* to *swam*). The preterite of weak verbs is formed by adding a suffix containing *d* (as in ModE *walk* to *walked*). There are seven conjugations or classes of strong verbs and three of weak verbs. In Tables 4 and 5, the present and preterite paradigms of the indicative mood of the strong verb *bindan* (to bind) and of the weak verb *hieran* (to hear) are set out for comparison.

Table 4. Conjugation of strong verb *bindan*, indicative mood

Person	Singular	Plural
Present		
1st	<i>binde</i>	<i>bindað</i>
2nd	<i>bindest/bintst</i>	<i>bindað</i>
3rd	<i>bindeþ/bint</i>	<i>bindað</i>
Preterite (with vowel change)

1st	<i>hierde</i>	<i>hierdon</i>
2nd	<i>hierdest</i>	<i>hierdon</i>
3rd	<i>hierde</i>	<i>hierdon</i>

*Basic word order.* (1) In phrases, adjectives and genitives generally precede nouns: *micel flōd a*

great flood: *Westseaxna cyning* king of the West Saxons. Two coordinate adjectives are usually separated, one preceding and the other following the noun, after *and*: *gōða þēow and getrēowa* (good servant and faithful), good, faithful servant. Compare the fossilized ModE idiom 'twelve good men and true'. A title follows a proper name, the opposite of ModE: *Æþelred cyning* King Ethelred. (2) In sentences, inflection for case allows a certain freedom of word order, more or less as in Latin. There are, however, three common orderings in OE prose and verse: SV (Subject-Verb) and SVO (Subject-Verb-Object), as in *hēo beswāc hine* She betrayed him; S . . . V, especially in subordinate clauses, as in the clause which appeared above, *þæt wæs gēo geāra Albion hāten* (that was formerly called Albion); VS, which is used for both questions (*Hwær eart þū nū?* Where art thou now?) and statements, whether positive or negative (*Ne cōm se here* Not came the army: The army did not come).

**Vocabulary.** (1) The core OE wordstock was shared with the other West Germanic languages and like theirs was subject to the sound changes of Grimm's Law and Verner's Law (see entries). (2) Borrowing from non-Germanic languages was relatively rare, but there were significant loanwords from Latin and Greek. Some Latin words were acquired before the Anglo-Saxons settled in Britain, such as *stræt* street (from *strata* via paved way) and *w(e)all* wall (from *vallum* rampart); others were borrowed afterwards, such as *fēfor* fever (from *febris*) and *mægister* master (from *magister*). Greek loans usually came through Latin, as with *biscop* (from *episcopos* from *episkopos*) and *scōl(u)* school (from *schola* from *skholē*). (3) Because of inflection, the structure of OE nouns, adjectives, and verbs differs greatly from that of ModE; for example, whereas ModE has one form *drink* for both noun and verb, OE has two, the noun *drinc* and the verb *drincan*. (4) Compound words were common, including as personal names: *Ælfred* Elf Council (original form of *Alfred*), *Ætheldreda* Noble Strength (original form of *Audrey*), *bretwalda* ruler of Britain (a title for the foremost king of his time), *ealdormann* nobleman (ancestral form of *alderman*), *eallwealda* or *ælwalda* ruler of all, *Edwin* Prosperous Friend, *hēahgerēfa* high reeve (an official), *sāweall* sea wall, *stormsæ* stormy sea, *sweordbora* sword-bearer, *synnfull* sinful. (5) Derivation was also common: for example, with the prefix *be-* around, as in *berīdan* to ride around; with *for-* as an intensifier, as in *forlorenness* utter lostness, perdition; with *on-*, as in *onlūcan* to unlock; the suffix *-end* for an agent, as in *hælend* healer, saviour, *wigend* warrior; *-ing* son of, as in *Ælfred Æþelwulfing*

Alfred son of Ethelwulf, *hōring* son of a whore, fornicator; and *-ig*, as in *cræftig* strong (the ancestral form of *crafty*), *hālig* holy. (6) A range of compounds and derivatives was created as loan translations of Latin terms, such as *tōcyme* (to-come) to match *adventus* (advent), *gōdspel* (good news: the ancestral form of gospel) to match *evangelium*, and *þrīnnys* (threeness) to match *trinitas* (trinity).

**Texts.** The literary and other texts of OE are among the oldest specimens of vernacular writing in Europe: see ENGLISH LITERATURE. Below are two brief specimens, with modern translations. The verse was committed to writing c.AD 1000 but was composed much earlier; its layout shows the typical OE metrical unit, the half-line. The prose represents the style of 10c Saxon annalists.

(1) Verse: *Beowulf*, lines 710-13

þa cōm of mōre under misthleopum  
 Grendel gongan; Godes yrre bær;  
 mynte se mānscapa manna cynnes  
 sumne besyrwan in sele þām hēan.  
 Wōd under wolcnum to þæs þe hē winreced,  
 goldsele gumena gearwost wisse  
 fættum fāhne.

A CLOSE TRANSLATION

Then came out of the moorlands beneath the  
 mist-slopes  
 Grendel stalking; he bore God's ire;  
 The evil one meant of human kind  
 Someone to snare in the high hall.  
 He went on under the clouds till their wine-hall,  
 The gold-hall of men he could clearly make out  
 plated in gold.

A FREE TRANSLATION

Down off the moorlands' misting fells came  
 Grendel stalking; God's brand was on him.  
 The spoiler meant to snatch away  
 from the high hall some of the human race.  
 He came on under the clouds, clearly saw at last  
 The gold-hall of men, the mead-drinking place  
 nailed with gold plates.

(Michael Alexander, *Beowulf*, Penguin Classics, 1973)

(2) Prose: *The Anglo-Saxon Chronicle* (years 981, 982)

981. Hēr on þis gēare wæs Sancte Patroces stōw forhergod, and þy ilcan gēare wæs micel hearm gedōn gehwæ be þām scārīman ægþer ge on Defenun ge on Wēalum.

982. Hēr on þys gēare cōmon upp on Dorsætum iii scypu wīcinga and hergodon on Portlande. þy ilcan gēare forbarn Lundenbyrig. And on þām ylcan gēare forþferdon twēgen ealdormenn, Æþelmær on Hamtūnsceire and Eadwine on Sūpseaxum.

A CLOSE MODERN RENDERING

981. [Here in this year] St. Petroc's, Padstow, was ravaged, and in the same year much harm done everywhere along the sea-coasts, in both Devon and Cornwall.

982. [Here in this year] Three ships of vikings came up into Dorset, and ravaged in Portland the same year. Also that year, London was burnt, and [in that same year] two ealdormen passed away, Aethelmaer in Hampshire and Eadwine in Sussex.

(Ann Savage, *The Anglo-Saxon Chronicles*, Phoebe Phillips, 1982)

**OLD ENGLISH**<sup>2</sup>. The first English settlers in Ireland, dating from the late 12c, and their language; in Irish Gaelic, they were known as *Na SeanGhaill* (The Old Foreigners). The term *Old English* was applied to them by later settlers, from the 16c onward: 'Howbeit to this day, the dregs of the old ancient Chaucer English are kept as well there [in Wexford] as in Fingall [North Dublin]' (Holinshed's Chronicle, 1586); 'Their advice was always prefaced by profuse professions of the traditional loyalty of the Old English community to the Crown' (R. F. Foster, *Oxford Illustrated History of Ireland*, 1989, p.

117). See IRISH ENGLISH, YOLA. [EUROPE, HISTORY, VARIETY]. T.M.C.A., L.T.

**OMAN**. See ARABIC, ENGLISH.

**ONE-LINER**. A joke compressed into a single sentence that both proposes and resolves the matter of the joke: for example, 'Karl Marx's grave—another Communist plot', punning on *plot* as both conspiracy and burial ground. See GRAFFITI, JOKE. [STYLE]. W.N.

**ONIONS, C(harles) T(albut)** [1873-1965]. English grammarian and lexicographer, born and educated at Birmingham where, at Mason College, he obtained an external degree from the U. of London. In 1895, he joined James Murray on the staff of the *Oxford English Dictionary* at Oxford, later worked for Henry Bradley (passing, as he put it, 'from the practical professional teacher to the philosophical exponent'), and in 1914 began independent editorial work on the section SUB-SZ, with his own assistants. He was also responsible for WH-WORLING and the letters X, Y, and Z. With W. A. Craigie, he co-edited the 1933 Supplement. His work on the *OED* overlapped with much else: preparing *An Advanced English Syntax* (1904); re-editing Emil Otto's *French Conversation Grammar* (1905) and J. Wright's *Elementary French Grammar* (1905); compiling *A Shakespeare Glossary* (1911); after William Little's death in 1922, completing *The Shorter Oxford English Dictionary* (1933); and editing with H. E. Berthon *Advanced French Conversation* (1924). As a Fellow of Magdalen College, Oxford, from 1923, he was involved in university teaching and its concomitants, including a revision of Henry Sweet's *Anglo-Saxon Reader* (1922, and later editions), a textual reconstruction of parts of the medieval poem *The Owl and the Nightingale* (1936), and numerous etymological or explanatory notes in learned journals and in the tracts of the Society for Pure English, on phrases like *distance no object* and topics like the fate of French *-é* in English. His crowning achievement and enduring monument is *The Oxford Dictionary of English Etymology* (1966), published posthumously and considered by many to be the standard work on the subject. His scholarly work and other activities, including his period as Director of the Early English Text Society (1945-57) and as editor of the

journal *Medium Ævum* (1932-56), demonstrated the extent to which he was at home with all periods of the language. For much of his life, he was handicapped by a slight stammer. This endeared him to his friends and colleagues, as did his rueful reaction to the many people who pronounced his name as if it were spelt *O'Nions*. 'Pronounce it like the vegetable,' he would say. See index. [BIOGRAPHY, EUROPE, GRAMMAR, REFERENCE]. RO.W.B.

**ONOMASIOLOGY** [1930s: from Greek *onomasia* name, and *logia* speech or study]. The study of naming and of terminologies (systems of terms with related meanings) that vary geographically, socially, occupationally, or in other ways. In the UK, characteristic generic terms in street names are *avenue, close, crescent, drive, gardens, lane, mews, place, row, street, terrace*, but in the US are *avenue, boulevard, drive, place, street*. The adjective *onomasiological* is used in lexicography to describe and discuss works of reference such as thesauruses which proceed from concept to word, as opposed to *semasiological* works such as dictionaries which proceed from word to concept. See TERMINOLOGY. [LANGUAGE, NAME]. J.A., T.MCA.

**ONOMASTICS** [1930s: from Greek *onomastikós* related to names and naming]. The study of proper names, including their forms and uses, especially the names of persons (*Margaret, Thatcher, Margaret Thatcher*) and places (*Grantham, London, 10 Downing Street, the House of Commons*). Although a proper name may be given to anything, the *place-name* and the *personal name* have received most attention in onomastics. The study of place-names (*toponymy*) is closely allied to geography, history, and related disciplines. The study of personal names (*anthroponymy*) is related to genealogy, sociology, and anthropology. Another sub-discipline is *literary onomastics*, which examines the use of proper names in literature, and often focuses on the names of characters in fiction (*characteronyms*). A primary requirement of onomastics is the clarification of certain basic terms relating to the concept *proper name*. In casual usage, proper names, proper nouns, and capitalized words are often taken to be the same thing. That assumption, however, can mislead, because the three expressions refer to three different things which partially overlap. A distinction between them is fundamental to onomastics and can be discussed in terms of semantics, grammar, and orthography.

**Semantics.** A proper name is often said to be an expression designating a particular person, place, thing, etc. That traditional characterization is useful in a rough and ready way,

but poses two problems: (1) An expression like *the Prime Minister of the United Kingdom in 1989* designates a particular person, but would not usually be called a proper name. Some logicians have in fact so called it, because it does designate uniquely, but that is a technical, not an everyday, use of the term. (2) Expressions generally called proper names, such as *Margaret* and *Athens*, do not in fact designate particular persons. Many people have been and are now called *Margaret*, and in addition to the original Athens in Greece, many other locations now bear that name; in the US there are Athenses in Georgia, Ohio, and elsewhere.

What designates proper names semantically is not *what* they designate, but *how* they designate. *The Prime Minister of the United Kingdom in 1989* designates a particular person by describing characteristics that the person must have in order to be so designated, namely, 'holding the office of Prime Minister', 'holding that office in the United Kingdom', and 'holding that office in the year 1989'. On the other hand, the name *Margaret* designates any person who happens to be so called, without any characteristics being necessary. Even if no one has ever used the expression *the Prime Minister of the United Kingdom in 1989* to refer to Margaret Thatcher, she would still be the referent because she meets the characteristics specified in it. However, if a woman has not been named *Margaret* and no one has ever called her that, she cannot be so designated. Semantically, proper names are expressions used to designate a person, place, or thing that people have agreed to call by that name. It implies no characteristics beyond use of the name to designate its referent. The proper name *Margaret* serves to denote 'a person called Margaret' and nothing more.

**Grammar.** Most nouns in English are either countable (unit) or uncountable (mass) nouns. Countable nouns have plurals and denote individual items; when they are singular, they must be accompanied by a determiner and take modifiers denoting number: *a chair, many chairs*, but *\*chair* alone is normally ungrammatical. Uncountable nouns have no plural and denote a kind of thing; they may be used without a determiner and they take modifiers denoting amount: *furniture, less furniture, too much furniture*, but not in standard usage *\*a furniture* or *\*many furnitures*. Proper nouns are countable nouns, but are peculiar in that they are typically used (as most such nouns cannot be) in the singular without a determiner: *Margaret*, but also 'I know a *Margaret*' and 'There are many *Margarets* among my friends.' Most words that are semantically proper names are also grammatically proper nouns, but some proper names

must be used with a determiner (generally *the*) in the singular: 'I live in *the Bronx* and have visited *the Argentine*', not 'I live in *\*Bronx* and have visited *\*Argentine*.' Conversely, some grammatically proper nouns are not semantically proper names. *Wednesday* is a proper noun because it is countable but can be used in the singular without a determiner: 'There are five *Wednesdays* in this month' and 'We will visit you on *Wednesday*.' However, *Wednesday* can also be defined as the middle day of the week: that is, the word is defined by characteristics that its referents have relative to other things in the world, and not merely by the fact that they are called by the name *Wednesday*. So most semantically proper names are grammatically proper nouns and vice versa, but not all.

**Orthography.** Most proper names are capitalized in English, and many capitalized words are proper names, but initial capitals are also used for a great many ordinary words, including common nouns, and so are not a precise guide to the 'properness' of a name. Specifically, words derived from or related to a proper name are usually capitalized. *Plato* and *America* are proper names and nouns and are capitalized. *Platonist* and *American*, however, are capitalized because derived from proper names but are not themselves proper, either semantically or grammatically: 'She is a *Platonist* and an *American*, one of many *Platonists* and many *Americans* in the world.' Compare the French *Platon*, *platonicien(ne)* and *Amérique*, *américain(e)*, in which capitals are not used for the derivatives. Some common names and nouns in English are capitalized out of respect: *Prime Minister* and *President* are frequently given 'honorary' capitals, although they are common names and nouns by both definition ('chief executive officer of a government') and grammar ('It is time to choose a new *Prime Minister/President*', not 'It is time to choose *\*new Prime Minister/President*').

**Names and naming.** Anything may have a proper name, as long as people have felt the need of designating the thing by an expression that simply names rather than specifies its characteristics. People are almost invariably named; indeed, a human being without a name would be socially and psychologically less than fully human. When the Hollywood Tarzan meets his mate, their first conversation establishes name: 'Me Tarzan, you Jane.' With that introduction, the ape-man becomes less ape and more man. Animals have names, provided they are pets or have otherwise individually captured human interest. When they do have names, they are typically personified, referred to by the pronouns *who* and *he/she* rather than *which* and *it*. Places

are named, but only if they are of such interest to human beings that a proper way of designating them is thought fit. Mount Everest is named, but a Himalayan peak of medium height may not be.

Things of various kinds may also have names, always providing that they have been singled out as the objects of particular interest. Constellations have names, often quite diverse; one group of stars whose unity is that they appear to observers on earth to be close to one another, as well as to the North or Polar Star, is called *Ursa Major*, *Charles's Wain*, *the Plough*, *the Big Dipper*, among other names. A clock may have a name (*Big Ben* in London) and so may a bell (*the Liberty Bell* in Philadelphia). Houses may have names, especially if they are grand: *Longleat* in the UK, *the White House* in the US. In Britain in particular, private homes may be named in addition to or instead of having street numbers, because of location (*Braeside*: the side of a brae or hill), sometime use (*The Barn*), or an association which the owners wish to project (*Ocho Rios*, linking the owners with a town in Jamaica), or to indicate, often jocularly, the owners' situation (*Dunromin*, a pseudo-Celtic name disguising 'done roaming', that is, retired). A named residence often has, or is assumed to have, a social cachet. In North America, it is chiefly vacation homes that are named, often poetically and jocularly (*Mountainview*, *Dew Drop Inn*).

Ships, smaller boats, trains, cars, and bicycles can be named. Names for larger vehicles, especially of public transportation, are for convenience of reference, but may also be romantically evocative: the trains known as *the Orient Express* (Paris-Istanbul), *the Flying Scotsman* (London-Edinburgh), *the Frontier Mail* (India: North-West Frontier-Delhi-Bombay). Names for smaller, personal vehicles are generally the result of imitation of the grander names and/or involve playful animism and personification: 'Old Bess needs her valves ground, but then she's 12 years old next month.' Parts of the body, especially the sexual organs, are sometimes named, especially the penis, with hypocorisms like *dick* and *willie*; the long-established full name for the penis, *John Thomas*, appears in D. H. Lawrence's *Lady Chatterley's Lover* (1928). Trees and rocks can be named: *General Sherman* is the name of a particularly old, large redwood tree in California; *Pilgrims' Rock* is the point at which the Pilgrim Fathers are said to have stepped ashore from the *Mayflower* in 1620. Musical compositions, ballets, paintings, sculptures, poems, plays, novels, and other works of art have names that are referred to as titles.

**Fictional place-names.** Of necessity, authors invent names for the locales of their stories: Shakespeare's *Forest of Arden* in *As You Like It*; Samuel Johnson's *Happy Valley* in *Rasselas*; J. M. Barrie's town of *Thrums*, in *A Window in Thrums*, based on his home town of Kirriemuir in Scotland; Sir Arthur Conan Doyle's *Grimpen Mire*, an imaginary marsh on Dartmoor in England, in *The Hound of the Baskervilles*; Sinclair Lewis's *Zenith*, an archetypal Midwestern American city; William Faulkner's *Yoknapatawpha County*, the site of much of his fiction; Garrison Keillor's *Lake Wobegon*, made famous in radio and print. Fantasy literature is rich in invented names, since the author of a work about an imaginary world is faced with the necessity of naming all its features. The English writer and philologist J. R. R. Tolkien's *Middle-Earth* cycle (*The Hobbit*, *The Lord of the Rings*, *The Silmarillion*, etc.) has been the subject of intense onomastic study, because of the large number of its names and Tolkien's skill in inventing them. The American science-fiction writer Ursula LeGuin has herself written about the naming process in literature, in *Language of the Night*, a collection of essays.

**Characteronyms.** Whereas invented places and place-names are optional in literature, most writers invent characters and therefore personal names. The special feature of the *characteronym*, however, is that it usually represents its bearer in some appropriate way: traditionally, a hero sounds dashing and aristocratic (*Mr Fitzwilliam Darcy*, in Austen's *Pride and Prejudice*, 1797), a heroine romantic (*Jane Eyre*, in the novel of the same name, by Charlotte Brontë, 1847), a villain nasty (*Mr Wackford Squeers*, the bullying headmaster in Dickens's *Nicholas Nickleby*, 1838-9). It has been common to provide characters with names that indicate or hint at their qualities: *Justice Squeezum* (in Fielding's *Rape upon Rape*, 1730), *Lady Sneerwell* (in Sheridan's *The School for Scandal*, 1777). Such names are allegorical, their intent made more or less obvious to the reader. In allegory proper, little subtlety or indirection is employed. Characters personify types and qualities, and are named appropriately: *Christian*, *Faithful*, *Giant Despair*, and *Mr Valiant-for-Truth* in Bunyan's *The Pilgrim's Progress* (1678). Allegorical usage survives in the 20c, as in the James Bond novels of Ian Fleming, in which an evil Chinese superscientist is *Dr No*, a character who loves gold is *Auric Goldfinger*, and a sexually vigorous woman pilot is *Pussy Galore*.

Writers, and novelists in particular, generally choose the names of their characters with care, to achieve the right connotative effect. When Margaret Mitchell was drafting her novel *Gone with the Wind* (1936), she first named her female

protagonist *Pansy*, only later changing the name to *Scarlett O'Hara*. Although *Pansy O'Hara* captures some of the personality of the character, especially her youthful naivety, it does not suggest the unconventionality and resourcefulness that she eventually shows. *Scarlett*, with its connotations of brightness, explosiveness, vigour, strength, and disdain for conventional morality, better suits the character. The two central characters of Thackeray's *Vanity Fair*, *Becky Sharp* and *Amelia Sedley*, could hardly have their names exchanged. *Becky* is the sharp dealer; *Amelia* is the better (ameliorated) of the two.

**Associations and publications.** In the US the American Name Society treats all branches of onomastics, holding several meetings a year and publishing a journal, *Names*. In Europe, the study is active through the journal *Onoma*, published by the International Committee of Onomastic Sciences at the International Centre of Onomastics in Leuven/Louvain, Belgium. An International Congress of Onomastic Sciences is held every few years. See ALLEGORY, APTONYM, CHARACTERNYM, FANTASY, FICTION, -ONYM, SEMANTICS, TITLE, WORD. [LANGUAGE, NAME].

J.A.

**ONOMATOPOEIA** [16c: through Latin from Greek *onomatopoiia* making a name. Derived adjectives: both *onomatopoic* and *onomatopoetic*]. A figure of speech in which: (1) Words are formed from natural sounds: *ping*, *cock-a-doodle-doo*, *rat-a-tat-tat*, *ding-dong*. (2) Words are used and sometimes adapted, including visually, to suggest a sound: *snow crackling and crunching underfoot*, *trrring* (of a bell), *R-r-i-i-p-p!* (of cloth tearing). In onomatopoeic usage, sound and sense echo and reinforce each other, often using alliteration and assonance; hence the alternative but more inclusive term *echoism*. Onomatopoeia is common: (1) In children's stories: *Only a bee tree goes*, 'Buzz! Buzz!' (2) In comic books and cartoons: *WHAM! POW! KERSPLAT! KABOOM!* (3) In the language of advertising: *All 3 Kodak disc cameras go bzzt, bzzt, flash, flash. One goes tick, tock, beep, beep. And anyone who gets one for the holidays will go oooooohh!* (4) When writers want to build up a phonaesthetic effect: 'The childhood dreams of . . . the grinning Fe-Fi-Fo-Fum giant swinging his axe . . . the slush-slurp of the Creature emerging from the Black Lagoon' (James Herbert, *Shrine*, 1983); 'The very words which define flatterers have a kind of onomatopoeic cringe: sneaking sycophants; fawning adulators; lickspittling toadies; crumb-catching crawlers' (*The Listener*, 2 July 1987). See ALLITERATION, ASSONANCE, ECHOISM, PHON(A)ESTHESIA. [NAME, STYLE].

T.MCA.

**-ONYM** [through Latin from Greek *ónoma/ónoma* name]. A word base or combining form that stands either for a word (as in *synonym*) or a name (as in *pseudonym*). Words containing *-onym* have two kinds of adjective: with *-ous*, as in *synonymous* (having the nature or quality of a synonym: *synonymous words*) or with *-ic*, as in *synonymic* (concerning synonyms: *synonymic relationships*). The form *-onymy* indicates type, as with *synonymy* (the type of sense relation in which words have the same or similar meaning) and *eponymy* (the category of word-formation that concerns words derived from people's names). Because *-onym* begins with *o* (the commonest Greek thematic vowel, as in *biography*), the base form is sometimes taken to be *-nym*, an assumption reinforced by the initial *n* of the equivalent terms *nomen* in Latin and *name* in English. As a result, some recent technical terms have been formed on *-nym*: for example, *characteronym* and *paranym*. See ACRONYM/PROTOGRAM, ANTONYM, APTRONYM, CHARACTERNYM, EPONYM, HETERONYM, HOMONYM, HYPERONYM, HYPONYM, ONOMASTICS, PATRONYMIC, PSEUDONYM, RETRONYM, SYNONYM, TOPONYM. [NAME, WORD]. T.MCA.

**OPPOSITE.** See ANTONYM, SEMANTICS.

**OPPOSITION** [14c: from Latin *oppositio/oppositio* setting against, from *opponere/oppositum* to place against, oppose]. (1) Opposing, especially through protest and criticism; being on the opposite side in an argument or debate, etc. (2) In logic, the relationship between two propositions in which the truth or falsity of one determines the falsity or truth of the other. (3) In linguistics, a functional contrast between partially similar elements in a language system: for example, between the meanings and uses of the negative prefixes *un-* and *non-* in *unprofessional* and *nonprofessional*, where *un-* is judgemental and *non-* is neutral. (4) In phonetics, the nature of the contrast between a pair of phonemes: for example, /t/ is a voiceless alveolar stop and /d/ is a voiced alveolar stop. The two consonants agree in place and manner of articulation, but fall into the opposition of voicing. See MINIMAL PAIR, PHONEME. [LANGUAGE, SPEECH]. T.MCA., G.K.

**ORACY** [1965: from Latin *os/oris* mouth, and *-acy* as in *literacy*]. The ability to express oneself (fluently) in speech: 'The term we suggest for general ability in the oral skills is *oracy*; one who has these skills is *orate*, one without them is *inorate*' (Andrew Wilkinson, *Spoken English*, 1965). Compare LITERACY. [EDUCATION, LANGUAGE, SPEECH]. T.MCA.

**ORAL APPROACH.** See LANGUAGE TEACHING.

**ORALISM** [1880s]. The theory, practice, or advocacy of education for the deaf mainly or exclusively through lip-reading, and training in speech production and the use of any residual hearing ability, instead of by signing. See SIGN LANGUAGE. [EDUCATION, SPEECH]. T.MCA.

**ORALITY** [17c]. (1) A term for the quality of being oral or a tradition that is entirely oral, especially as discussed in *Orality and Literacy*, by Walter J. Ong (1982). Ong distinguishes two kinds: *primary orality*, the condition of humankind before the invention and spread of writing, and *secondary orality*, a recent development associated with such inventions as the telephone, radio, and television. (2) In psychoanalysis, the condition of being oral: that is, in the stage of infantile psychological and sexual development in which pleasure is obtained from eating, sucking, and biting. Compare ORACY, ORATURE. [MEDIA, SPEECH]. T.MCA.

**ORAL LITERATURE** [20c]. A term in literary criticism for forms of oral art in societies with little or no recourse to writing that nonetheless have the same qualities as literary texts. Strictly speaking, the elements of the term are incompatible, because literature is fundamentally the outcome of writing and not of speech, but it is widely used and has proved convenient on the assumption that *literature* is an artistic enterprise whose nature is not confined to writing and print despite the fact that these are its main vehicles. The American scholar Walter J. Ong has, however, argued that it is a 'preposterous term' that continues to circulate 'even among scholars now more and more acutely aware how embarrassingly it reveals our inability to represent to our own minds a heritage of verbally organized materials except as some variant of writing, even when they have nothing to do with writing at all' (*Orality and Literacy*, 1982). See ORAL TRADITION, ORATURE. [LITERATURE, SPEECH]. T.MCA.

**ORAL TRADITION.** The tradition of passing on by word of mouth (from person to person and especially generation to generation) oral art forms such as poems, songs, chants, genealogies, and proverbs, often incorporating information of importance for culture and livelihood. Genres such as folk-tales and ballads, that are usually eventually written down and 'fixed' in particular forms, are usually the products of long-established oral traditions. In present-day literate societies, word of mouth sustains, among other things, an 'underground' tradition of taboo or *risqué* anecdotes, jokes, and limericks. See BALLAD, COMMUNICATIVE SHIFT, FOLK, JOKE,

ORALITY, ORAL LITERATURE, ORATURE, PROVERB, SAYING. [LITERATURE, SPEECH]. T.MCA.

**ORATORY** [16c: from Latin (*ars*) *oratoria* (the art of) speaking]. The art and practice of speaking in public, especially if intended to be eloquent and in the grand style of traditional rhetoric. See ELOCUTION, ORTHOPEY, PUBLIC SPEAKING, RHETORIC. [SPEECH, STYLE]. T.MCA.

**ORATURE** [1980s: from Latin *os/oris* mouth and *-ature* as in *literature*, or a syncopation of *oral literature*, coined quite separately at around the same time and for slightly different purposes in Kenya by Micere Mugo and in Canada by Tom McArthur]. An occasional technical term for the poetic, dramatic, and other oral genres and traditions of pre- or non-literate peoples, either before the invention of writing or in parts of the world that have maintained non-literate traditions intact, such as in Africa and South America: 'Like the ancient Hindus, the Greeks had vast and complex oral heritages that might more accurately be called their "orature", since the other term implies letters and literacy' (Tom McArthur, *A Foundation Course for Language Teachers*, 1983); 'In Kenya, English became more than a language: it was *the* language, and all the others had to bow before it in deference. . . . Orature (oral literature) in Kenyan languages stopped. In primary school I now read simplified Dickens and Stevenson alongside Rider Haggard' (Ngugi wa Thiong'o, *Decolonising the Mind*, 1986). Compare ORAL LITERATURE. See COMMUNICATIVE SHIFT, ORALITY, ORAL TRADITION. [LITERATURE, SPEECH]. T.MCA.

**ORCADIAN** [17c: from Latin *Orcades* the Orkney Islands]. (1) A person born or living in Orkney. The term is gender-neutral and appears to be gaining over *Orkneyman/Orkney man* and *Orkney woman*. See *-MAN/WOMAN*. (2) Relating to Orkney: *Orcadian dialect*. See ORKNEY. [EUROPE, NAME]. T.MCA.

**ORGANS OF SPEECH**. See SPEECH.

**ORKNEY**, sometimes the **Orkneys** (short for the **Orkney Islands**); *Orkney* is preferred by Orcadians. A group of islands off the northern coast of Scotland, constituting with Shetland the *Northern Isles*. Of the two, Orkney is closer to the mainland. Capital: Kirkwall. Population: 19,000 (1981). See NORN, NORTHERN ISLES, ORCADIAN, ORKNEY AND SHETLAND DIALECTS, SCOTLAND, SHETLAND. [EUROPE, NAME]. T.MCA.

**ORKNEY AND SHETLAND DIALECTS**. The dialects of the Northern Isles of Scotland: conservative varieties of Scots heavily influenced

by the Norn which they superseded. The most similar mainland varieties are the most conservative of the Central Scots dialects: west Angus and east Perthshire.

**Pronunciation**. (1) Retention of the old front rounded vowel /ø/, written *ui*, *u-e*, or *ô*, as in *guid/gude/göd* and *scuil/scule/scöl*. (2) The preservation of the initial consonant clusters *kn-*, *gn-*, and *wr-*, as in *knee* /kniz/, *gnaw* /gnax/, and *wrong* /wraŋ/. (3) Due to the Norn substratum: the stopping of the voiced and voiceless dental fricatives (*this* and *blithe* pronounced 'dis' and 'blide'; *three* and *earth* pronounced 'tree' and 'eart'); unvoiced realizations of /dʒ/ ('chust' for *just*). (4) Shetland tends to simplify /tʃ/ to /ʃ/: 'sheese' for *cheese*. (5) Shetland, like Icelandic, merges /hw/ and /kw/, in most localities as /kw/ (*white* pronounced 'quite'), but in south Mainland as /hw/ (*quite* pronounced 'white'), or with the sounds interchanged ('kweel' for *wheel*, 'hween' for *queen*).

**Grammar**. (1) Familiar *thou/thee/ty* alongside respectful *ye/you/your*. (2) Probably of Norn origin is the use of gender-marked personal pronouns, especially *he*, for weather, time, and other natural phenomena: *He was blaain a gale* It was blowing a gale; *Whin he begood tae flou, sheu set on an teuk brawly* When he [the tide] began to flow, she [the fish] set to and took (the bait) splendidly. (3) Commonly, perfective *be* rather than *have*: *I'm walked a piece the day* I've walked a long way today. (4) Limited use of simple inversion to form questions, as an alternative to the use of an auxiliary: *Whit tinks du?/Whit does du tink?* What do you think? and - a further example of Grammar (3): *Is du heard aboot yun afore?* Have you heard about that before? (5) Characteristic reflexive usages, especially in the imperative: *Heest dee!* Hurry up!; *Dip dee a meenit!* Sit down for a minute!; *A'll geng an rest me whin a'm pitten da bairns ta da scöl* I'll go and have a rest when I've put the children to school.

**Vocabulary**. (1) The vocabularies of the Northern Isles are distinct from those of other Scots dialects, mainly in their massive borrowing from Norn, of which over a thousand items survive. Typical examples of those in everyday use are: *benkle* dent, crumple; *frush* splutter, froth; *gaan* gawp; *glaep* gulp down, swallow greedily; *oag* crawl; *peedie* (Orkney)/*peerie* (Shetland) little; *roog* heap, pile; *skoit* peep, take a look; *smucks* carpet slippers; *spret* rip open, burst; *tirn* angry; *trivvel* grope, feel one's way. (2) Some words are structurally unusual for Scots, such as *andoo* to row a boat slowly against the tide, *brigdie/brigda* a basking shark, *fluckra* snow in large flakes, *glimro* phosphorescence (Orkney), *hyadens*

animal carcasses (Shetland). (3) Some words fossilize Old Norse inflectional endings: the strong masculine *-r* in *ilder* fire (in the now-obsolete Shetland sea-language), *shalder* an oyster-catcher; the weak masculine *-i* in *arvie* chickweed, *galtie* a pig, boar, *hegrie* a heron; the weak feminine *-a* in *arvo* chickweed, *shaela* hoar-frost (Shetland); the vocative in the former Birsay terms of address *gullie* to a man, *gullo* to a woman; and the gender distinctions in the Shetland sea-terms *russia* a stallion, *russa* a mare. (4) Some nouns contain the Old Norse suffixed definite article (*i*)*nn*: *croopan* trunk of the body, *fyandin* the devil (Shetland), *knorin* boat (Shetland), and the Shetland sea-terms *birten* fire, *hestin* horse, *monen* moon, and *sulin* sun. (5) Unique to Shetland, though now mostly archaic, are words borrowed from Dutch fishermen, who have visited Shetland since the 17c: *blöv* to die, *forstaa* to understand, *kracht* energy, *maat* a friend, *stör* a penny.

**Literary texts.** Both regions have dialect literatures that date from c.1880. There is considerable local interest in the native dialects, as shown in *The Orcadian* newspaper and articles in *The New Shetlander* magazine. The following are representative:

*Orkney.* So Geordie gleppid the last grain o tea ooto his cup and meed fir the byre. Noo Geordie was bothered sometimes wae a sore back when he waas been sta'an bent ower fir a while. So when he caam tae 'Reed coo', the bonniest and most litesome o aa the kye in Orkney, he glammed a haad o her yurrie wae his great knaves and keeled her ower i' the oddlar so he could milk her waeoot bendan doon too muckle (Karen Drever, *Westray, Geordie o Pizzlewusp*, first prize, dialect competition for under-16s, *The Orkney View*, Feb./Mar. 1989). [*glep* swallow, *grain* drop, *meed* made, *noo* now, *wae(y)* with, *waas been sta'an* had been standing, *cool* kye cow/cows, *glam* grab, *haad* hold, *yurrie* udder, *knave* fist, *keeled her ower* threw her over, *oddlar* drain in a byre, *muckle* much. *Glep* and *oddlar* and probably *yurrie* are from Norn; *glam* and *knave* are Scots of Scandinavian origin]

*Shetland.* Twartree weeks later da story gaed roond at it wis a kist fae da Island a Hascosay, an it wisna a bonny story. Wan night lang fae syne a sailing ship had gone on a skerry in a storm dere an da men managed ta sweem ashore an wan o dem trailed his kist wi him and da folk on da Island cam doon ta da shoormel an murdered da whole lot an dis man wis sittin on his kist lid whin he wis struck doon (Joan M. Olsen, 'Da Hascosay Kist', *The New Shetlander* 168, Mar. 1989). [*twartree* two or three, *gaed* went, at that, *kist* chest, *fae* from, *wisna* was not, *lang fae syne* long ago, *skerry* reef, *shoormel* shoreline]

**ORNAMENTAL ENGLISH.** See DECORATIVE ENGLISH.

**ORPHANS.** See WIDOWS AND ORPHANS.

**ORTHOEPY** [17c: from Greek *orthóēpeia* right speech, correct diction, from *orthós* right, *épos* speech: compare EPIC, ORTHOGRAPHY]. A term used mainly in the 17-18c for the part of grammar that deals with 'correct' pronunciation and its relation to 'correct' writing (*orthography*). The principles of orthoepy influenced a number of pronouncing (*orthoepic*) dictionaries of the time, such as William Kenrick's *A new Dictionary of the English Language: containing not only the explanation of words . . . but likewise their orthoepia or pronunciation in speech* (1773) and John Walker's *A Critical Pronouncing Dictionary of the English Language* (1791). Orthoepy, although primarily associated with elocution, is ancestral to phonetics and its application to language teaching, as in Daniel Jones's *English Pronouncing Dictionary* (1917). See COMMUNICATIVE SHIFT, CORRECT, ELOCUTION, ORTHOGRAPHY, PRONUNCIATION. [EDUCATION, GRAMMAR, SPEECH]. T.MCA.

**ORTHOGRAPHY** [15c: through French from Latin *orthographia*, Greek *orthographía* correct writing, from *orthós* right, straight, *graphós* writer]. (1) A term for correct or accepted writing and spelling and for a normative set of conventions for writing and especially spelling. In the 15-16c, there was considerable variety and uncertainty in the writing and printing of English. Advocates of standardized spelling emphasized the importance of regularization by referring to it as *trewe ortografye*, *trew orthographie*, etc. (2) The study of letters and how they are used to express sounds and form words, especially as a traditional aspect of grammar; the spelling system of a language, whether considered 'true' and 'correct' or not. In linguistics, however, the name for the study of the writing system of a language and for the system itself is more commonly *graphology*, a level of language parallel to *phonology*. The earlier, prescriptive sense of the term continues to be used, but the later, more neutral sense is common among scholars of language. The orthography of English has standardized on two systems, British and American. While far from uniform in either system, it allows for much less variation than is possible, for example, in the orthography of Scots. See ABBREVIATION, ACRONYM/PROTOGRAM, COMMUNICATIVE SHIFT, COMPOUND WORD, CORRECT, GRAMMATOLOGY, GRAPHOLOGY, NAME, ONOMASTICS, ORTHOEPY, SENTENCE, SHAKESPEARE, SIMPLIFIED SPELLING SOCIETY, SPELLING, SPELLING REFORM, TECHNOSPEAK, TRADITIONAL ORTHOGRAPHY, WORD. [GRAMMAR, WRITING]. T.MCA.

**ORTON, Harold** [1898-1975]. English dialectologist, born in Byers Green, County Durham, son of a village schoolmaster. His experience as an Army officer in the First World War and then as a student at Oxford (after being wounded and invalided out of the Army) impressed on him a form of speech that seemed to go against his passionate interest in dialect: while able to switch into the Durham dialect at any time, he was an ardent promoter of Received Standard. Orton studied under both Joseph Wright and Henry C. K. Wyld. From 1924 to 1928 he taught as Lektor in English at Uppsala, Sweden; returning to England, he was appointed at Armstrong College (the future U. of Newcastle), where he began his *Survey of Northumbrian Dialects*, which gave him grounding in field research. His monograph on Byers Green dialect was published in 1932 and during the 1930s he discussed with the Philological Society the possibility of a linguistic survey of England. He was lecturer in charge of the Department of English Language at the U. of Sheffield (1939-46). During the Second World War, he was seconded to work at the British Council as Deputy Director of Education and then Acting Director. After the war, he became Professor of English Language at the U. of Leeds where, at first with the collaboration of Eugen Dieth of Zurich, he set up a unit for the collection of material for a *Survey of English Dialects*. He retired from Leeds in 1964 and taught in various American universities, including Kansas, Michigan, and Iowa, working on a *Word Geography of England* (with Natalia Wright, Seminar Press, 1974). He also laid the basis for an archive of tape-recorded dialects kept at Leeds. The *Basic Material* for the Survey was published in 12 volumes (E. J. Arnold, Leeds, 1962-72) and *The Linguistic Atlas of England* in 1978. The completion of this mammoth work under his direction is the sole major piece of language research completed in England since the Second World War. See index. [BIOGRAPHY, EUROPE, LANGUAGE, VARIETY]. S.E.

**ORWELL, George** [1903-50]. Pen name of *Eric Arthur Blair*, English novelist, journalist, and political thinker. The adoption in 1933 of the pen name, taken from the River Orwell in East Anglia, marked his transformation from a member of the establishment of the British Empire into a social, political, and literary radical. He was born in Montihari, Bengal, India, the son of a British civil servant, and educated at Eton (where Aldous Huxley was one of his masters). From there he went in 1922 to serve in the Indian Imperial Police in Burma, but resigned because he disliked imperialism 'and every form of man's dominion over man'. In England in 1927, he became a reviewer and columnist, living for a

time in the poverty described in the 'documentary novel' *Down and Out in Paris and London* (1933). Six more works appeared before the Second World War: the novels *Burmese Days* (1934), *A Clergyman's Daughter* (1935), *Keep the Aspidochelone Flying* (1936), *Coming Up for Air* (1939), and the non-fiction *The Road to Wigan Pier* (1937), *Homage to Catalonia* (1938). They range from reflections on his life in Burma and on class differences and unemployment in England to his experiences in the Spanish Civil War, in which he was wounded in the throat while fighting for the Republicans against Fascism. Orwell at first saw himself as an anarchist, then a socialist, but later sought to avoid political labels. He was opposed to totalitarianism in any guise. He died of tuberculosis, a disease from which he had suffered for many years. He is best known for his two post-war anti-totalitarian satirical novels, *Animal Farm* (1945) and *Nineteen Eighty-Four* (1949), the latter introducing the concept of *Newspeak*. From the same period comes the essay 'Politics and the English Language' (first published in *Horizon*, 1946), still frequently included in anthologies and widely admired for its advice on prose style.

**Attitude to English.** Like others of his time, background, and social position, Orwell was a polyglot: school Latin and Greek; school and colloquial French; Hindustani and Burmese as a police officer in Burma; Spanish as a soldier in Spain. He did not, however, accept contemporary standards for English; he often derided the variety of BrE common among his fellow Etonians, along with the variety employed on the BBC, seeing them as dangerous establishment tools. In its place, he advocated an artificial amalgam of lower-class varieties, including the *dropped aitch*, to be taught in schools. Orwell was not averse to the official promulgation of an invented variety of English. The *Newspeak* of *Nineteen Eighty-Four* is not, therefore, evil simply because it is artificial, but because its goals are untruth and mind control, and because its means to this end are the suppression of words for forbidden concepts (like *honour*, *justice*) and the ready conversion of parts of speech (like the verb *speak* as a noun, instead of *speech*). Orwell was in most ways a language conservative while he was a social individualist and a political adherent of 'democratic socialism', as he called it. His books sometimes champion those who speak non-standard English, but his essays severely oppose linguistic change and by implication condemn the diversity that change brings.

**Rules for writing English.** In 'Politics and the English Language', Orwell wrote that 'one can often be in doubt about the effect of a word or a phrase, and one needs rules that one can rely on

when instinct fails. I think the following rules will cover most cases: (1) Never use a metaphor, simile or other figure of speech which you are used to seeing in print. (2) Never use a long word where a short one will do. (3) If it is possible to cut a word out, always cut it out. (4) Never use the passive when you can use the active. (5) Never use a foreign phrase, a scientific word or a jargon word if you can think of an everyday English equivalent. (6) Break any of these rules sooner than say anything outright barbarous.' The double implication (that half a dozen rules would 'cover most cases', and that all writers worthy of the name would agree about what was 'outright barbarous') reveals Orwell's conservative stand on the complexities of language variety. Hence, the adjective *Orwellian* can describe either the totalitarian political control that Orwell opposed, or the stringent linguistic standards that he advocated. See index. [BIOGRAPHY, EUROPE, LITERATURE, STYLE, WRITING].

Bolton, W. F. 1984. *The Language of 1984: Orwell's English and Ours*. Oxford: Basil Blackwell.

Crick, Bernard. 1982. *George Orwell: A Life*. Harmondsworth: Penguin.

**OTTAVA RIMA** [19c: Italian, eighth or octave rhyme]. A form of stanza introduced into English in the 16c from Italian poetry by Sir Thomas Wyatt and at first used mainly in translations. It consists of eight iambic pentameters rhymed *ababacc* and has the effect of speed and vigour rather than dignity. Keats used it for a romantic story in 'Isabella, or The Pot of Basil' (1818). Its most successful extended use in English was Byron's 'Don Juan' (1819-24), where it proved effective for his wit and bravado:

What is the end of Fame? 'tis but to fill  
A certain portion of uncertain paper:  
Some liken it to climbing up a hill,  
Whose summit, like all hills, is lost in vapour;  
For this men write, speak, preach, and heroes kill,  
And bards burn what they call their 'midnight taper',  
To have, when the original is dust,  
A name, a wretched picture and worse bust.

See RHYME, STANZA. [LITERATURE].

R.C.

**OTTAWA VALLEY**. A distinctive dialect region of Canada that extends along the Ottawa River from north-west of Montreal through the city of Ottawa and north to Algonquin Park. While the speech of the major towns is standard spoken CanE, that of the rural districts is strongly influenced by IrE, both from Ulster and the South, with small pockets of Lowland and Highland ScoE, and Gaelic, German, and Polish influence. The stereotypical feature of the accent is the local place-name *Carp* as /kærp/. Syntax includes *for to* as an infinitive complement: *Mary*

*wants for to leave*. Vocabulary includes (*cow*) *byre* a cowshed, *cow barn*, *moolie* a cow without horns, *stye* a channel (from French *chenail*), and *weight-de-buckety* or *weighdee* a teeter-totter, *see-saw*. See DIALECT IN CANADA. [AMERICAS, VARIETY].

M.F.

**OVERSTATEMENT**. See EXAGGERATION, HYPERBOLE.

**OXBRIDGE** [19c: a blend of *Oxford* and *Cambridge*. The term *Camford* is also occasionally used]. A composite name for the universities of Oxford and Cambridge and their shared traditions and characteristics, especially in contrast to other universities in England (often subsumed under the dismissive contrastive term *Redbrick*): 'Rough and ready, your chum seems . . . Somewhat different from your dandy friends at Oxbridge' (W. M. Thackeray, *Pendennis*, 1849); 'Oxbridge philosophers, to be cursory, / Are products of a middle-class nursery' (W. H. Auden, *Homage to Clio*, 1960); 'The prayer was often offered by a clergyman who read the liturgy with an Oxbridge accent even though he was a product of southern Ontario' (Toronto *Globe & Mail*, 1 July 1976). See CAMBRIDGE ENGLISH, CAMBRIDGE UNIVERSITY PRESS, OXFORD ACCENT, OXFORD ENGLISH, OXFORD UNIVERSITY PRESS. [EUROPE, NAME, SPEECH, STYLE]. T.MCA.

**OXFORD ACCENT**. A form of Received Pronunciation regarded as typical of faculty and students at the U. of Oxford, as opposed to the townspeople of Oxford. It was widely regarded, especially before the Second World War, as affected: 'It might be said perhaps that the "Oxford Accent" conveys an impression of a precise and rather foppish elegance, and of deliberate artificiality' (*Society for Pure English* *Tract* 39, 1934); 'The Sultan's manner is very deceptive. . . . His Oxford accent and his slang are all a sort of parody of our civilisation' (P. Dickinson, *Poison Oracle*, 1974). See AFFECTATION, OXFORD ENGLISH, RECEIVED PRONUNCIATION. [EUROPE, SPEECH]. T.MCA.

**OXFORD ADVANCED LEARNER'S DICTIONARY OF CURRENT ENGLISH**. See ELT PUBLISHING, HORNBY, JAPAN, LEARNER'S DICTIONARY, OXFORD DICTIONARIES, OXFORD UNIVERSITY PRESS.

**OXFORD AND CAMBRIDGE SCHOOLS EXAMINATION BOARD**, short form *O & C*. A joint examining body set up by Oxford and Cambridge universities in 1876 to examine the pupils of 'highest grade schools', separately from the pupils at schools emerging as a result of the Education Act of 1870. These are currently

mainly the independent schools represented by the Headmasters' Conference. See EXAMINING IN ENGLISH, PUBLIC SCHOOL ENGLISH. [EDUCATION, EUROPE]. W.S.

**OXFORD DELEGACY.** A local examining body of England and Wales based on the U. of Oxford, founded in 1857 and responsible for school examinations in its own region and elsewhere. It operates currently as a member of the Southern Examining Group for the *General Certificate of Secondary Education (GCSE)*. A written examination at two levels for foreign learners of English is conducted by the board, to complement the ARELS/FELCO oral examinations. Although primarily designed with students at local language schools in mind, it has been promoted overseas. See ARELS, EXAMINING IN ENGLISH. [EDUCATION, EUROPE]. W.S.

**OXFORD DICTIONARIES.** A range of English dictionaries published by the Oxford University Press, the first and greatest of which is *The Oxford English Dictionary*. The extensive investigation of printed sources of all kinds remains the main basis of this work, with electronic methods becoming increasingly important as a means of storing and applying the material obtained. At the heart of the Oxford family lie the scholarly works produced in the wake of the *OED*, but not to be overlooked is Joseph Wright's *English Dialect Dictionary* (1896–1905). Work on the *OED* began in 1879 when an agreement was signed between James A. H. Murray and the Clarendon (Oxford University) Press. It was soon realized, especially by Charles Cannan, Secretary to the Delegates from 1898, that Murray's materials and work could serve as sources for smaller and more profitable works, the first of which was the Fowler brothers' *Concise Oxford Dictionary* (1911). By the 1930s, the range included the *Pocket* (1924), the *Little* (1930), and the *Shorter Oxford English Dictionary* (1933), the last an abridgement of the *OED*. New editions of the smaller dictionaries appear regularly, and a revision of the *Shorter* is in progress.

More recently, the dictionaries have been augmented with works having a less formal presentation and style of definition, such as the *Oxford Paperback Dictionary* (1979), the first of its kind to include systematic advice on usage. Dictionaries dealing with special aspects of language include *The Oxford Dictionary of English Etymology* (1966), *The Oxford Dictionary for Writers and Editors* (1981), which sets out the OUP house style, and *The Oxford Spelling Dictionary* (1986). There are also dictionaries for foreign learners of English, notably the *Advanced Learner's Dictionary of Current*

*English*, which first appeared in 1948, and dictionaries for children. To begin with, the smaller dictionaries were commissioned from outside editors such as the Fowlers; later revisions and new editions were done on the same basis. Editors had little if any direct contact with their users and it was the practice of the day for the publishers in Oxford to deal with correspondence from the public, consulting the editors as necessary.

In 1957, an in-house office was set up under the editorship of Robert W. Burchfield to produce a new *OED* Supplement, and this developed into an English Dictionaries department with Burchfield as chief editor until 1984. In addition to the *Supplement to the OED* (in four volumes, published 1972–86), the department has been responsible for new dictionaries and revisions of existing dictionaries, drawing on language data mainly in the form of several million citations of usage. ELT dictionaries, however, are published separately by the ELT Division. In recent years, there have been several adaptations of the smaller dictionaries to cater for English overseas, such as Australian, New Zealand, and South African editions of the *Pocket Oxford*, all produced by editors in or from the countries concerned.

In the 1990s, a chief concern is to develop dictionaries as computer databases, as editorial tools, and as marketable products. The interaction of computer methods and new approaches to the presentation of lexical information continues to influence developments in the compiling and revision of all the Oxford dictionaries.

See CONCISE OXFORD DICTIONARY, DICTIONARY, ENGLISH DIALECT DICTIONARY, FOWLER, LEARNER'S DICTIONARY, MODERN ENGLISH USAGE, MURRAY, OXFORD DICTIONARY OF ENGLISH ETYMOLOGY, OXFORD ENGLISH DICTIONARY, OXFORD UNIVERSITY PRESS, SKEAT, WRIGHT. [EUROPE, REFERENCE]. R.E.A.

**OXFORD DICTIONARY FOR WRITERS AND EDITORS.** See HOUSE STYLE, OXFORD DICTIONARIES.

**OXFORD DICTIONARY OF ENGLISH ETYMOLOGY,** short form *OED*. The last work of C. T. Onions, a co-editor of *The Oxford English Dictionary*, who died while the *OED* was going through the press. It was published in 1966, completed by G. W. S. Friedrichsen and R. W. Burchfield. The work was based on the *OED* and incorporated further research, notably from published parts (then A–F) of the *Middle English Dictionary*. A *Concise Dictionary of English Etymology*, edited by T. F. Hoad, was published in 1986. See ETYMOLOGY, ONIONS, OXFORD DICTIONARIES. [REFERENCE]. R.E.A.

**OXFORD DICTIONARY OF QUOTATIONS.**

See QUOTATION.

**OXFORD ENGLISH** [Early 20c]. (1) English spoken with an *Oxford accent*, widely considered, especially in the earlier 20c, to be 'the best' BrE usage, but also regarded by many as affected and pretentious. (2) A term used by Oxford University Press in recent years virtually as a trade name in the promotion of English-language reference books and ELT course materials. It also occurs in the title of *Oxford English: A Guide to the Language*, ed. I. C. B. Dear (1983). This work is presented as 'a guide to correct written and spoken English and an accessible introduction to the language in all its aspects'. It includes a range of essays on the written and spoken language, guides to proverbs, quotations, and writers, and to classical literature, and glossaries of technical terms (commercial and legal; scientific and medical; computing; literary). The Oxford editors R. W. Burchfield and E. S. C. Weiner write respectively on the history of the language and on aspects of word-formation, vocabulary, grammar, punctuation, and spelling. (3) A name for the teaching of English language and literature at the U. of Oxford: 'Meanwhile, what of Oxford, where the degree included a good deal of Old and Middle English, and literature stopped in 1830? Under the unadventurous guidance of George Gordon, Oxford English wanted no part in the Arnold-Newbolt-Cambridge line' (Bernard Bergonzi, *Exploding English*, 1990). See BBC ENGLISH<sup>1</sup>, CAMBRIDGE ENGLISH, OXFORD ACCENT, OXFORD UNIVERSITY PRESS, RECEIVED PRONUNCIATION. [EUROPE, MEDIA, SPEECH, VARIETY]. T.MCA.

**OXFORD ENGLISH DICTIONARY**, short form *OED*. The foremost dictionary of the English language, initiated by the Philological Society as *The New English Dictionary on Historical Principles (NED)* and published by Oxford University Press, 1st edition 1928 (12 volumes, with later Supplements), 2nd edition 1989 (20 volumes). Shortly after its founding in 1842, the Philological Society appointed an 'unregistered words committee' to collect English words not listed in existing dictionaries, and its members, Herbert Coleridge, Frederick Furnivall, and Richard Chenevix Trench, came to the conclusion that a large new work was required. In 1857, Trench read two papers to the Society, jointly entitled 'On Some Deficiencies in our English Dictionaries'. They covered the need to find better ways to manage obsolete words, describe derivational families, provide accurate and dated citations, list important senses of words, distinguish synonyms, cover literary sources, and eliminate redundant material.

For Trench and his associates, a dictionary was a factual inventory rather than a tool for selecting only the 'good' words of a language (however decided); a lexicographer was therefore a historian rather than a moralist, judge, or teacher. An adequate dictionary of the language would record all possible words, much as the botanist Linnaeus had sought to record all possible plants. As a result of his recommendations, the Society passed resolutions in 1858 calling for a new dictionary 'on historical principles'. It would follow the lead established in Germany by the classicist Franz Passow and the philologists Jakob and Wilhelm Grimm. In 1812, Passow had recommended, for the compilation of a Greek lexicon, that definitions should be supported by textual citations organized chronologically, and in 1838 the brothers Grimm had begun the *Deutsches Wörterbuch*, aiming to cover all the words of German 'from Luther to Goethe'. The Society resolved in its turn to cover all the words of English from AD 1000 onward, their definitions emerging from citations garnered by volunteers in many countries reading thousands of texts.

**Preparation.** Coleridge, as first editor, supervised the work of two committees, one dealing with literary sources, the other with etymology, and looked after the submission of citations, a process facilitated by the recent development of a good international postal system. On his premature death in 1861 at 31, the editorship passed to Furnivall, who realized that an efficient system of excerpting was needed. This meant that for the earlier centuries printed texts had to be prepared of manuscripts not hitherto easily available; he therefore founded in 1864 the *Early English Text Society* and in 1865 the *Chaucer Society*, preparing editions of texts of general benefit as well as immediate value to the project. None of this work, however, led to compilation; it was entirely preparatory and lasted for 21 years. There were in the end some 800 voluntary readers. Their enthusiasm was enormous, but in a process which depended on paper and pen alone a major drawback was the often arbitrary choices made by the relatively untrained volunteers regarding what to read and select, what to discard, and how much detail to provide.

**Compilation.** The first editor properly so called was the schoolmaster James A. H. Murray. When appointed in 1879, he took over from Furnivall nearly two tons of material, mainly slips of paper. The Society and Murray entered into an agreement with the Delegates of the Clarendon Press, Oxford U., that the Press would publish the Society's *New English Dictionary on Historical Principles*, often also known as 'the Society's Dictionary' and 'Murray's Dictionary'.

It was agreed that the work would take ten years to complete, be published at intervals in fascicles, and in its final form would consist of four volumes of some 6,400 pages. Its aim was 'to present in alphabetical series the words that have formed the English vocabulary from the time of the earliest records (c. AD 740) down to the present day, with all the relevant facts concerning their form, sense-history, pronunciation, and etymology', but excluding words and meanings that did not survive the Norman Conquest in the 11c; it would include 'not only the standard language of literature and conversation, whether current at the moment, or obsolete, or archaic, but also the main technical vocabulary, and a large measure of dialectal use and slang' (preface, 2nd edition).

**The editors.** The Dictionary had four cooperating editors between 1879 and 1928, each working with a staff of about six assistants. The first fascicle of 352 pages (*a-ant*) was published in 1884. In the same year, Henry Bradley joined Murray as one of his assistants, and the project moved from Mill Hill School, where Murray had been a master since 1870, to Oxford. There the work continued in two separate locations. Murray and his assistants worked in the famous *Scriptorium* (a garden shed fitted with pigeon-hole shelving in his home at 78 Banbury Road); the teams of Henry Bradley, William Craigie, and C. T. Onions, at the Old Ashmolean building in Broad Street. There were many setbacks during the long period of compilation, including Murray's death in 1915 and Bradley's in 1923. One problem concerned balance between writers before and after c.1900. Whereas it was feasible to aim at including all the vocabulary of earlier writers (insofar as their works were accessible in reliable editions), the operation needed to be scaled down for the later period because of the proliferation of published work, especially newspapers and academic publications. The collecting process began to falter in the 1890s, by which time the main task of evidence-gathering was deemed to be over.

**The First Edition.** Although the project continued to belong officially to the Philological Society, its presence in Oxford and the expense of sustaining it tended to make it more and more an Oxford undertaking. In 1895, this was reflected by the appearance for the first time, above the title on the cover of the fascicle *deceit-deject*, the words *The Oxford English Dictionary*. The new name was more distinctive than the old but was only established slowly; in the early 20c, it came more and more into use and eventually supplanted the old. When, after 71 years of preparation, the complete work appeared in 1928, it was *The Oxford English Dictionary*, consisting

of 12 volumes of 15,487 pages covering 414,825 words backed by 5m quotations of which some 2m were actually printed in the dictionary text.

**The Supplements.** In 1933, Craigie and Onions issued a *Supplement* of 867 pages, intended to include details of all words and meanings that had come into the language while the *OED* was in preparation, but it fell well short of that target. In 1933, the team was dispersed and the enterprise brought to a close for a quarter of a century. A new *Supplement* was set in hand in 1957, under the editorship of Robert W. Burchfield. This work followed the pattern of the original in taking approximately four times as long to compile as the initial forecasts suggested, and ending up as four volumes instead of the one proposed volume of 1,275 pages. *The Oxford English Dictionary Supplement (OEDS)* reached out to the vocabulary of all parts of the English-speaking world, approximate parity of treatment being given to the major forms of English in the United Kingdom, North America, Australia, New Zealand, and elsewhere. Volume A-G was published in 1972, H-N in 1976, O-Scz in 1982, and Se-Z in 1986. The independent existence of the *OEDS* was brought to a close by plans in the early 1980s for an electronic merging of the 12 volumes of the *OED* and the four volumes of the *OEDS*.

**The Second Edition.** Preparation for this began in 1983 and editorial work started the following year under the administrative direction of Timothy J. Benbow, and with John A. Simpson and Edmund S. C. Weiner as co-editors. An electronic system for integrating the original text and the supplements was created with help in the form of equipment and expertise from IBM (UK) Ltd. The U. of Waterloo in Ontario, Canada, helped develop the software for parsing the text, with a grant from the government of Canada. The project also received a grant from the UK Department of Trade and Industry. More than 120 keyboarders of International Computaprint Corporation in Tampa, Florida, and Fort Washington, Pennsylvania, USA, started keying in over 350m characters, their work checked by 55 proof-readers in England. There were four major changes to the text: Murray's system for indicating pronunciation was replaced by the International Phonetic Alphabet; all foreign alphabets except Greek were transliterated; the initial capital letter given for each headword was replaced by a system that reflected the normal facts of the language in respect to capitalization (for example, *American/amity*, *Lady day/lady-bird*); and important changes were made to the typographical layout. The two sets of information were merged in 1987, and some 5,000 additional

modern words and meanings were inserted. This edition was published in 1989 in 20 volumes. It has 21,728 pages and contains some 290,500 main entries, within which there are a further 157,000 combinations and derivatives in bold type (all defined), and a further 169,000 phrases and undefined combinations in bold italic type, totalling 616,500 word forms. There are some 2.4m illustrative quotations, some 6m words of text, and over 350m characters. The electronic base takes up 540 megabytes of storage.

**The electronic OED.** The text of the First Edition was made available on CD-ROM in 1988, and a CD-ROM version of the Second Edition appeared in 1992. Its electronic text, which has the capacity of indefinite adaptation and extension, is structured in such a way that it can yield any desired combinatorial information, such as all entered words of Arabic origin, all words or meanings first recorded in the year 1819, or all the illustrative quotations cited in the *Dictionary* from the works of a given author. Such information was previously obtainable only through a laborious and time-consuming page by page search of the printed work.

**OXFORD TEXT ARCHIVE.** See MACHINE-READABLE TEXT.

**OXFORD UNIVERSITY PRESS**, short form *OUP*. A publishing business that is a department of the U. of Oxford. In 1636, Charles I granted a charter to the University to print books, although printing in Oxford dates from some 150 years earlier and the appointment of a 'Printer to the University' can be traced to 1584. The printing of books became better established in 1690, when the University was bequeathed a

large collection of equipment and types by Dr John Fell (1625-86), Dean of Christ Church, to whom it had entrusted the exercise of its printing privilege some 18 years earlier. The University's role has been exercised since the 17c by the appointment of a board of delegates chosen from its members, with the Vice-Chancellor as ex-officio chairman. The main function of the Press has been to publish religious and learned books, including bibles and prayer books and books published under the academic imprint *The Clarendon Press*, named after Lord Clarendon (1609-74), whose works were its most profitable early publications. In more recent times, it has also produced an increasing number of general and non-specialist books, including novels, popular biographies and histories, general science and nature books, and books for children. Its profits are applied to financing scholarly books and large-scale publishing ventures, and it has the status of a charity.

The principal contribution of the Press to the study and use of English has been in its extensive list of language reference books, especially dictionaries and usage books of various kinds. The most notable and influential works are: *The Oxford English Dictionary* (1928, 1989); *The Concise Oxford Dictionary* (1911 and later editions); *A Dictionary of Modern English Usage* by H. W. Fowler (1926 and later editions), and A. S. Hornby's *Advanced Learner's Dictionary of Current English* (first published in 1948). The last of these is produced for foreign learners of English by the ELT Division (formerly a part of Overseas Education set up in the 1920s). The ELT and Education Divisions have produced a long list of dictionaries, usage books, and course books for students, children, and foreign learners.

At about the time James Murray and his colleagues were working on the early letters of the *OED*, the University Printer Horace Hart (appointed in 1883) was applying rules of style to the printing of the Press's books. He codified these in a booklet entitled *Hart's Rules for Compositors and Readers at the University Press Oxford*, circulated in 1893, published in its 15th edition in 1904, and in its 39th edition in 1983 (with corrections, 1984, 1986, 1987, 1989). This, together with *The Authors' and Printers' Dictionary* of F. Howard Collins, first published in 1905 and from the edition of 1981 known as the *Oxford Dictionary for Writers and Editors*, embodies the Oxford house style. This evolved largely from the needs of editors and printers to produce consistently presented text. Its best-known and most controversial features are: the *Oxford comma* (also called the *serial comma*), occurring before the word 'and' in a list of items

(as in *pens, pencils, and paper*); and the preference on carefully argued grounds for the letter *z* in verbs such as *generalize* (in which *-ise* is also possible), despite the strong counter-claims of BrE usage. The style is regularly revised: in 1978, for instance, full points were dropped from abbreviations such as *BBC* consisting entirely of capital initials. The publishing business has branches throughout the world (including New York, Toronto, Delhi, Bombay, Calcutta, Madras, Karachi, Petaling Jaya, Singapore, Hong Kong, Tokyo, Nairobi, Dar es Salaam, Cape Town, Melbourne, and Auckland), some of which publish in their own right. The UK business was consolidated in Oxford in 1976, and most of its London offices were closed. The printing business was largely closed down in 1989.

**OXYMORON** [17c: through Latin from the neuter form of Greek *oxímōros* sharp and dull, pointed and foolish. Stress: 'awk-si-MO-ron']. A term in rhetoric for bringing opposites together in a compact paradoxical word or phrase: *bittersweet; be cruel to be kind; a cheerful pessimist*. The term is often used for social comment, both humorously or cynically (such as calling *military intelligence* a contradiction in terms) and dramatically, as in 'It has become an oxymoron to speak of the Lebanese nation' (Jim Hoagland, *The Washington Post*, Apr. 1989). [STYLE].

T.MCA.

**OZ** [1900s: an adaptation of the abbreviation *Aus.*, perhaps influenced by the US journalist Lyman Frank Baum's *The Wizard of Oz*, 1900]. An informal term relating to Australia: *a trip to Oz, the Oz Olympic team*. The usage may be neutral or pejorative. It is first recorded in 1908, but only became popular in the 1970s, probably as a result of its use as the title of a satirical Sydney magazine, and attracts such epithets as *the Land of Oz* for Australia. Compare AUSSIE. [NAME, OCEANIA].

W.S.R.

# P

**P, p** [Called 'pee']. The 16th letter of the Roman alphabet as used for English. It originated in the Phoenician symbol *pe*, which was adopted by the Greeks as *pi* (*Π*), an earlier form of which the Romans adopted as *P*.

**Sound values.** In English, the letter *p* is normally pronounced as a voiceless bilabial plosive, as in *pip*. Phonetic variations in English include a less aspirated value after initial *s*, as in *spot*, and an unreleased plosive before other consonants, as in *slipped* (as opposed to the gently released *p* in *slipper*). In final position, spoken /p/ may or may not be released: *slip*, *snap*.

**Double P.** (1) Final *p* is normally single (*tap*, *step*, *tip*, *stop*, *cup*, *kidnap*, *worship*), the form *steppe* probably reflecting French or German spelling, as the original Russian has only single *p*. Monosyllables double the final *p* after a single short vowel before a suffix beginning with a vowel (*stopping*, *stopper*, *stopped*). Few polysyllables end in *p*; if they do, the *p* is generally not doubled before suffixes: *galloped*, *gossiping*, *syrupy*. However, BrE treats *kidnap*, *worship* as though based on monosyllables (*kidnapped*, *worshipping*), though AmE often follows the polysyllabic pattern (*kidnaped*, *worshipping*). (2) The doubling of medial *p* after stressed simple short vowels is inconsistent, as in the pairs *apple/chapel*, *pepper/leper*, *copper/proper*. In *coppice* there is doubling, whereas related *copse* has a single *p*. (3) When *p* is preceded by some Latin prefixes, it is doubled because of the assimilation of a consonant, as in *apparent* (ad-parent), *oppose* (ob-pose), *suppress* (sub-press).

**Epenthetic P.** (1) The nasal equivalent of *p* is *m*. The phonetic closeness of the sounds represented by these letters has prompted an epenthetic *p* after *m* in *empty* (earlier *emti*), and in the variants *sempstress/seamstress*, *Thompson/Thomson*, and *Hampstead/Hamstead* (part of London and

part of Birmingham, respectively). (2) Phonetically, there may be the same epenthetic *p*-quality in *dreamt* ('drempt') as in *empty*. (3) The *p* in related forms such as *redeem/redemption*, *consume/consumption* has been carried over from Latin etyma.

**PH.** (1) The digraph *ph* with the value /f/ originated as the Latin transcription of Greek *phi* (*Φ*), which originally had the value of a heavily aspirated /p/ (comparable to the sound in *uphold*). *Ph* pronounced /f/ occurs almost only in roots of Greek origin (*pharmacy*, *philosophy*, *photograph*), but has been adopted by analogy in occasional words of non-Greek derivation, such as *nephew* (compare French *neveu*, German *Neffe*), BrE *sulphur* (compare Latin and AmE *sulfur*). The *ph* in the name *Stephen* is pronounced /v/ and is alternatively *v* as in *Steven*. (2) *Ph* before *th* is often pronounced /p/, for example 'diphtheria' for *diphtheria*, 'diphthong' for *diphthong*, 'ophthalmic' for *ophthalmic*, and this leads to spellings without *h*. See F.

**Silent P.** (1) Initially, in words of Greek derivation before *n* (*pneumonia*), *s* (*psalm*), *t* (*ptero-dactyl*), producing combinations that, if pronounced, would be alien to English phonology. Middle English sometimes omitted *p* in *salme*, *salter*, but in Modern English it is seen in *psalm*, *psalter*, *pseudo-*, *psittacosis*, *psoriasis*, *psyche*, *Ptolemy*, *ptomaine*, etc. Of Gaelic origin, *ptarmigan* probably acquired its *p* by analogy with Greek derivations. (2) Occasionally, as when preceding a syllable beginning with its voiced equivalent *b*, the sound of *p* is assimilated, so effectively becoming silent, as in *cupboard* ('cubberd'), *raspberry* ('razb(ery)'). (3) The *p* of *receipt* is an etymologically motivated insertion and was formerly often also inserted in *conceit* and *deceit*, but Samuel Johnson kept it only in *receipt* on grounds of common usage. (4) Silent

## THE CAPITAL LETTER

EARLY FORMS			CURRENT FORMS		
Phoenician	Greek	Etruscan	Roman (Latin)	roman	italic
𐤀	Π	ϕ	P	P	<i>P</i>

## THE SMALL LETTER

EARLY FORMS			CURRENT FORMS	
Roman cursive	Roman uncial	Carolingian minuscule	roman	italic
ϣ	ϣ	p	p	<i>p</i>

*p* occurs in *sapphire*, whose first *p* was introduced to Middle English *safir* on etymological grounds. It also occurs in such French loans as *corps* and *coup*. (5) Whether *p* is pronounced after *m* in, for example, *empty*, *exempt*, *tempt*, *prompt*, *consumption* (as well as in *dreamt*) is unclear; at all events, the preceding bilabial *m* prepares the lips for *p* and is released as for /p/ with the following consonant. See ALPHABET, LETTER<sup>1</sup>, SPELLING, [WRITING]. C.U.

**PACIFIC JARGON ENGLISH**, also **South Seas English**, **South Seas Jargon**, **Jargon**. A trade jargon used by 19c traders and whalers in the Pacific Ocean, the ancestor of Melanesian Pidgin English. The whalers first hunted in the eastern Pacific but by 1820 were calling regularly at ports in Melanesia and took on crew members from among the local population. The sailors communicated in Jargon, which began to stabilize on plantations throughout the Pacific area after 1860, wherever Islanders worked as indentured labourers. See AUSTRALIAN PIDGIN, CHINA, JARGON, MELANESIAN PIDGIN ENGLISH. [OCEANIA, VARIETY]. S.R.

**PACIFIC RIM** [Late 20c]. A collective term for countries around the Pacific Ocean, widely regarded in recent years as of great potential economic importance in the 21c. Throughout the area, English is the language of business and technology and the primary language of international communication. See AUSTRALIA, CANADA, CHINA, EAST ASIAN ENGLISH, HAWAII, HONG KONG, INDONESIA, JAPAN, KOREA, MACAO, MALAYSIA, MELANESIA, MICRONESIA, NEW ZEALAND, PAPUA NEW GUINEA, PHILIPPINES, POLYNESIA, SINGAPORE, UNITED STATES. [AMERICAS, ASIA, OCEANIA]. T.MCA.

**PAGE** [16c: from French *page*, a reduction of *pagine*, from Latin *pagina* a vine trellis, column of writing, leaf, page, from *pangere*/*pa(n)ctum* to fasten, set]. (1) One side of a leaf or sheet of paper, especially in a book, pamphlet, newspaper, letter, etc. Technically, a page is either the *recto* side of a leaf (on the right as one looks at a book) or the *verso* (found when one 'turns the page'). (2) A leaf or sheet of paper. (3) In printing, the type as set up for printing a single page. (4) *Page* is often used as a verb, especially with prepositional and adverbial particles: if one *pages through* a book, one leafs through it; if one *pages up* or *pages down* on a computer screen, one shifts the displayed text up or down a screen at a time. If one *pages* a book, one paginates it (that is, provides the pages with numbers). See BOOK, LEAF, PAGINATION, PAPER. [TECHNOLOGY]. W.W.B.

**PAGE PROOF** [1880s]. A typeset page of text ready to be proof-read. Traditionally, page proofs are a second stage in preparing printed text, after the *galley proofs* have been corrected and divided. With recent innovations, they are now often the first proofs seen by proof-reader or author, because typesetting equipment can now automatically divide material and provide running heads and page numbers. Page proofs are often divided into two stages: in Britain *proofs*, in North America *first pages*; then *revises* (first revise, second revise, etc.). See GALLEY, PROOF-READING. [TECHNOLOGY]. W.W.B.

**PAGINATION** [1830s: from Latin *paginatio*/*paginationis* making pages: see PAGE]. Numbering pages in a book. The standard way is on both sides of a leaf, *recto* odd, *verso* even, a system that evolved in the 15-17c and the basis for finding information by means of indexes, contents lists, etc. (as opposed to such devices as paragraph and section numbers). The language of the text is located not by meanings or divisions in the text, but by spatial and material layout, which may change from edition to edition. See PAGE. [TECHNOLOGY]. W.W.B.

**PAKEHA** [1810s: from Maori. Both with and without an initial capital letter. Plural: *pakehas*, *pakeha*]. A widely used name in New Zealand for a white person or a European, in contrast to *Maori*: 'Rua came from Taupo to the coastal district to work on the farm of a Pakeha' (R. Finlayson, *Brown Man's Burden*, 1938); 'Most damaging of all, the treaty [of Waitangi] failed to safeguard the standing of the Maori in their own country, for they have become an underdeveloped minority surrounded by pakeha affluence in a society where pakeha values have become the measure of all things. Cultural assimilation has been the 20th century norm—the whites providing the culture and the Maoris the assimilation' (Robert Macdonald, *Guardian*, 3 Mar. 1984). The term *pakeha Maori* has been used for a European who adopts the Maori way of life. See ETHNIC NAME, MAORI, NEW ZEALAND. [NAME, OCEANIA]. T.MCA.

**PAKISTAN**. Official title: Urdu *Islāmi Jamhūriya-e Pākistān*, English *Islamic Republic of Pakistan*. A country of South Asia. Capital: Islamabad. Currency: the rupee (100 paisa). Economy: mixed. Population: 105.7m (1988), 150m (projection for 2000). Religion: 97% Muslim, 3% others. Ethnicity: 61% Panjabi, 21% Sindhi, 8% Pathan/Pashtun, 3% Baluchi, 3% Mohajir (Muslims who migrated from India in 1947-8), 2% Kashmiri. Languages: Urdu, English (both official), and such indigenous languages as Panjabi, Sindhi, Pashto, Baluchi, Kashmiri. English

used as a second language by 2-3m people. Education: primary 49%, secondary 17%, tertiary 5%, literacy 25-30%. The name *Pakistan* (Urdu: Land of the Pure) was coined during the struggle for independence by Chaudhary Rahmat Ali and some other Muslim students at Cambridge in 1933. It is also an acronym of *Punjab, Afghanistan* (the North West Frontier), *Kashmir*, perhaps *Islam, Sind*, and the last syllable of *Baluchistan*. Before independence it was a collective term for the predominantly Muslim regions of British India. Mohammed Ali Jinnah's Muslim League adopted it in 1940, while bargaining for a separate Muslim state.

The Indian Independence Act of 1947 created two post-imperial states: India and Pakistan. In the first phase of its existence, Pakistan was a federation with two wings: *West Pakistan* in the north-west of the subcontinent (consisting of Baluchistan, North West Frontier, Sind, and West Punjab), *East Pakistan* in the north-east (consisting of East Bengal). In 1948, Pakistan occupied part of Kashmir, in the Indian state of Jammu and Kashmir, and called it *Azad Kashmir* (Free Kashmir). In 1956, Pakistan became an Islamic republic. In 1971, civil war in East Pakistan led to the independent state of *Bangladesh*. The influence of Islam, an uneasy relationship with India (including three wars since independence), close military ties with the US, and the alternation of military and civilian governments have been significant factors in the development of the country. See BANGLADESH, ENGLISH, INDIA, INDIAN LANGUAGES, PAKISTANI ENGLISH, PANJABI, SOUTH ASIAN BROADCASTING, SOUTH ASIAN ENGLISH, SPELT, TESL, URDU. [ASIA, NAME]. T.MCA.

**PAKISTANI ENGLISH**, short forms *PakE*, *PE*. The English language as used in Pakistan, a variety of South Asian English close to that of northern India. English has had co-official status with Urdu since independence in 1947, but the constitution of 1959 and the amendments of 1968, 1972, and 1985 recognize Urdu as pre-eminent and restrict the use of English, the aim being its eventual replacement. Both are minority languages. In 1981, the president appointed a study whose report recommended that 'Urdu should continue to be the only medium of instruction at the school level, with no exception' (1982), but that English and Arabic be introduced as additional languages from class six (sixth grade: age 11); a federal agency should ensure that the policy is implemented. English is an important medium in a number of leading educational institutions. It is the main language of technology, international business, and communication among a national élite, and a major element in the media. The constitution and the

laws of the land are codified in English, and the *Pakistan Academy of Letters* recognizes works in English for its literature award. It also has a considerable influence on the vernacular languages; S. Hands notes that in personal interaction, 'the use of an English word is believed to add a note of refinement and elegance to conversation in the "lower" languages' (*Pakistan: A Country Study*, 4th edition, The American University, Washington, DC, 1983).

**Pronunciation and grammar.** (1) *PakE* is rhotic, tends to be syllable-timed, and shares many features with northern Indian English. (2) Some pronunciation features are typical of speakers of regional languages: for example, speakers of Panjabi have difficulty with such initial consonant clusters as /sk, sp/ (saying 'səport' and 'səkool' for *sport* and *school*); Urdu speakers also have difficulty with initial consonant clusters (saying 'isport' and 'iskool' for *sport* and *school*); Pashto-speakers have no such difficulty, but use /p/ for /f/ ('pood' for *food*). (3) Distinctive grammatical features relate to uses of the verb, article, relative clause, preposition, and adjective and verb complementation, all shared with IndE. Features of the indigenous languages influence use of English and code-mixing and code-switching are common, including among the highly educated.

**Vocabulary.** (1) Borrowings from Urdu and the regional languages: *atta* flour, *tehsil* district, *ziarat* religious place. (2) Loan translations from these languages: *cousin-brother*. (3) Terms shared with Indian English: *crore* ten million, *lakh* one hundred thousand, *-wallah* a word element denoting 'one who does something as an occupation', as with *policewallah*. (4) Hybrids of English and local languages: *biradarism* favouring one's clan or family, *gheraoed* surrounded by protesters in an office or similar place and unable to leave, *goondaism* hooliganism, thuggish behaviour. (5) English words, especially compounds, adapted for local use: *age-barred* over the age for (particular work), *load-shedding* intermittently shutting off a supply of electricity, *time-barred* referring to loss of validity after a specific period.

**Media and literature.** Pakistan has a strong English-language press. Most major cities have daily and weekly newspapers; in all, there are 20 dailies, 35 weeklies, 33 fortnightlies, 152 monthlies, and 111 quarterlies. They include *The Muslim*, *Daily News*, *Dawn*, *Morning News*, *Star*, *Pakistan Times* and *Khyber Mail*. Pakistani literature in English is developing in various genres and several writers have acquired national and international recognition, such as Ahmad Ali, Bapsi Sidhwa, Zulfikar Ghose, A. Hashmi, and Hanif Kureishi. The educated variety used by

Pakistan radio and television serves as the model for teaching and learning English throughout the country. The British connection has with the passage of time become fragile, as in other parts of South Asia; RP and other exonymatous standards are used only for academic reference. See INDIAN ENGLISH<sup>1</sup>, PAKISTAN, PANJABI, SOUTH ASIAN ENGLISH, SOUTH ASIAN BROADCASTING, URDU. [ASIA, VARIETY].

**PALATE** [14c: from Latin *palatum*]. An anatomical term for the roof of the mouth, behind the alveolar ridge, often described as having two parts: the *hard palate* (the roof of the mouth proper) and the *soft palate* (the *velum*). The adjective *palatal* is used to describe sounds made by raising the front of the tongue towards the hard palate. See ALVEOLAR, CONSONANT, VELUM. [SPEECH].

G.K.

**PALE** [14c: from Old French *pal*, Latin *palus* a pointed stake, fence: compare *impale*, *palings*]. A territory with distinct boundaries and distinctive laws, especially one in which a group of colonists maintains itself against alien pressures (as in Ireland) or one to which an oppressed group is confined (the *Pale of Settlement* to which Jews were restricted by law in 18–19c Russia). There have been three English Pales: in Ireland (12–16c), in France (the *Calais Pale*, 1347–1558), and briefly in southern Scotland (1545–9). In Ireland, the name was applied in the 14c to the area in which English rule was most secure. At its most extensive, it included Dublin, Kilkenny, Louth, Meath, Tipperary, Trim, Waterford, and Wexford, but by the later 15c had shrunk to Dublin, Louth, Meath, and Kildare. The Pale continued to diminish until the 16c conquest reversed the trend and the name became irrelevant. The term survives in such idioms as *beyond the pale* (beyond what is socially acceptable or considered decent). However, pales as such still exist; they include the British colonies of Gibraltar and Hong Kong, and until recently

West Berlin. See WILD IRISH. [EUROPE, HISTORY, NAME].

T.MCA.

**PALI** [17c: from Sanskrit *pāli* line of text, canon]. A scriptural language of Buddhism, a Prakrit (vernacular language) with a structure close to that of Sanskrit. A major collection of scriptures written down c.1c BC is known as both the *Tripitaka* and the *Pali Canon*. The Buddha's preference in the 6c BC for Prakrit rather than the Sanskrit of the brahmins crystallized Pali as the classical language of Theravada Buddhism in India, Burma, Cambodia, Laos, Thailand, and Vietnam. Pali and English are comparable in that both vernaculars developed international significance and regional varieties: the rise of Burmese Pali, Thai Pali, etc., can be compared with that of CanE and IndE, etc. The few Pali loanwords in English relate to Buddhism: for example, *dhamma* (religious law and duty) and *kamma* (action), cognates of Sanskrit *dharma* and *karma*. See CLASSICAL LANGUAGE, INDIAN LANGUAGES, PRAKRIT, SANSKRIT, SCRIPTURE, SINHALA. [ASIA, LANGUAGE].

T.MCA., R.S.

**PALINDROME** 17c: from Greek *palindromos* running back again]. (1) A word, phrase, or longer expression that reads the same backwards as it does forwards: for example, the words *level* and *noon*, and the phrases *Madam, I'm Adam* and *Able was I ere I saw Elba*. Palindromes range from the concise (*Sad? I'm Midas*) to the long-winded (*Live dirt up a side-track carted is a putrid evil*), from the clever (*A man, a plan, a canal—Panama*) to the near-meaningless (*Harass sensuousness, Sarah*). The *OED* contains, among others, the palindromic words *Malayalam* (a language of South India) and *Ogopogo* (a Canadian water-monster). *Word palindromes* are sentences in which the order of the words can be reversed to read the same, as in *What? So he is dead, is he? So what?* and *Stout and bitter porter drinks porter, bitter and stout*. (2) Also *reversal*, *semordnilap* (a backward palindrome). A word that spells another word when reversed: for example, *doom*, *evil*, *warts*, and the trade names *Serutan*, *Trebor*. See REVERSAL, WORD GAME. [WORD].

T.A.

**PALMER, Harold E.** [1877–1949]. English language-teaching methodologist, born in London and educated privately in Hythe, Kent. In 1902, he went to teach at the Berlitz School in Verviers in Belgium, where he subsequently started his own experimental language school. He was closely associated with the International Phonetic Association and worked with the phonetician Daniel Jones at University College London after the outbreak of the First World War (1914). The lectures he gave were published as

*The Scientific Study and Teaching of Languages* (1917). His next work, *The Principles of Language-Study* (1921), related language-teaching methodology to psychology. In 1922, Palmer went to Japan to work for the Ministry of Education, a year later becoming director of the *Institute for Research in English Teaching (IRET)* in Tokyo. He developed teaching methods based on oral activity and vocabulary selection, in collaboration with A. S. Hornby and Michael West. His major concerns, teaching the spoken language, controlled vocabulary, and grammar based on the spoken language, laid the foundations for the distinctively British approach to EFL that dominated the years after the Second World War. See index. [ASIA, BIOGRAPHY, EDUCATION, EUROPE]. C.J.B.

**PAMPHLET** [15c: probably from 14c Anglo-Latin *panfletus*, French *pamphilet* and/or Dutch *panflet*, names given to a 12c romantic comedy in Latin verse called *Pamphilus* (named after its hero, in Greek the 'All-Beloved'). With *-et*, the name means 'the little thing about Pamphilus', extended to cover any light or brief publication]. A short and short-lived publication, usually with a paper cover. In the 15-16c, versions of romances, dramatic scripts, popular tracts, and newsletters were all called pamphlets. By the 17c, the word referred to controversial texts aimed at influencing opinion, a sense that has remained powerful, especially in *pamphleteer* (noun and verb). Polemical pamphlets were written and distributed for immediate ends, such as Milton's tracts and the satires of the Scriblerians (Pope, Swift, and others). Although apparently light, they often had more influence than larger works. Until the mid-20c, the pamphlet was a common medium of protest and propaganda. Currently, although the media generally leave little room for pamphlets, they continue to be used for social, political, and commercial messages. Where a state repressively controls publishing, pamphlet-style writing has been distributed through the underground system known as *samizdat* (Russian: self-published). Desktop publishing may offer a new lease of life. See BOOKLET, DESKTOP PUBLISHING, JOHN BULL, LEAFLET, NEWSLETTER, PRINTING, QUARTO. [MEDIA, TECHNOLOGY]. W.W.B.

**PANAMA**. Officially *República de Panamá*. A state of Central America. Capital: Panama City. Currency: balboa (100 centésimos); US dollar also legal tender. Economy: Canal services, petroleum products, sugar, coffee, cocoa, fruit. The US maintains a military and civilian presence in the Canal Zone, to protect and maintain the Panama Canal. Population: 2.3m (1988), 2.9m

(projection for 2000). Ethnicity: 70% Spanish-Amerindian, 14% African, 10% Caucasian, 6% Amerindian. Languages: Spanish (official), English (a common second language because of US influence), and Chibcha. Education: primary 90%, secondary 59%, tertiary 26%, literacy 89%. The region was under Spanish control from 1538 to 1821, was part of Colombia until 1903, and with US backing has been a distinct entity ever since. See CARIBBEAN, CARIBBEAN ENGLISH CREOLE, CENTRAL AMERICA, ENGLISH. [AMERICAS, NAME]. T.MCA.

**PANGRAM** [1930s: from Greek *pan* all, *gramma* a letter]. A sentence or series of words that contains all the letters of the alphabet. The ideal pangram contains each letter only once, but it is difficult to compose a meaningful sentence of this kind. The nearest that seems possible is an enigmatic statement like *Quiz my black Whigs—export fund or Blowzy night-frumps vex'd Jack Q*. The most familiar pangram is *The quick brown fox jumps over the lazy dog*, which typists have traditionally used to check their typing of the alphabet, but it contains 35 letters. See QWERTY, WORD GAME. [WORD]. T.A.

**PANJABI**, also **Punjabi**. An Indo-Aryan language, indigenous in the Punjab, a region divided since 1947 between India and Pakistan. It is spoken by c.12m in India and c.40m in Pakistan, and by emigrants to the UK, Canada, Singapore, and the US. It is the state language of Punjab in India and is a regional language of Pakistan. It is the language of the Sikhs, whose multilingual scripture, the *Guru Granth Sahib* (compiled in 1604), includes its earliest literary works. Panjabi is written in two scripts, Lahanda and Gurmukhi, both derived from Brahmi. In grammar, it is similar to Hindi, of which some consider it a dialect. See CODE-MIXING AND CODE-SWITCHING, INDIA, INDIAN LANGUAGES, PAKISTAN. [ASIA, LANGUAGE]. Y.K.

**PANTOMIME** [16c: from Latin *pantomimus*, Greek *pan̄tómimos* all-imitator]. (1) An actor in the Roman theatre who, with a triple-faced mask, mimed the parts in an acted fable. (2) A popular theatrical entertainment at Christmas time, derived from the 18c harlequinade, which had developed a set of stock characters and burlesque situations from the Italian *commedia dell'arte*. In the earlier 19c, pantomime proper emerged with a plot loosely drawn from a fairy tale or other story for children, as in *Cinderella*, *Dick Whittington*, *Aladdin*, and *Puss in Boots*. Pantomime includes song and dance, visual spectacle, and broad farcical humour, in a framework of romance and adventure in which good

triumphs. A woman is cast as the hero or *principal boy* and a male comedian as the comic *dame*. Characters have been imported into traditional tales, such as the Widow Twankey in *Aladdin* (named from *twankay*, a variety of tea from China) and Buttons in *Cinderella*. The non-realist tradition of pantomime is reflected also in the language of the script, where prose is mingled with verse, usually doggerel with forced rhymes. A recent example is: 'Who may you be who makes so free with other people's poverty?'

The language may include attempts to match the pseudo-historical setting by occasional use of features like the second person singular (*thou*, *thee*, etc.), but jokes and catchphrases have a modern, and often local, reference. The combination of spoken dialogue with songs, dance, slapstick, and visual spectacle makes pantomime a popular form of 'total theatre'. It is mainly confined to the UK, though also performed in the US. The pantomime adapts texts, many of which first came through an oral tradition, and are probably more familiar today through the stage than through reading. The audience is encouraged to serve as a chorus, to hiss and boo the villain, and engage in exchanges with characters: *Actor*: 'Oh no, I didn't.' *Audience*: 'Oh yes, you did.' The colloquial BrE phrase *a proper pantomime* is used to suggest a chaotic and mismanaged situation: Compare FARCE. See DRAMA, MIME. [LITERATURE].

R.C.

**PAPER** [14c: from Anglo-Norman *papir*, Old French *papier*, Latin *papyrus*, Greek *pápuros*]. For about five centuries, the principal material for the recording and storage of written language. Paper is cheap, light, thin, and, depending on its manufacture and storage, relatively durable. It is made mainly from cellulose, and can in principle be produced from any kind of vegetable fibre. Linen, wood, flax, hemp, straw, and grasses of various kinds can all be ground down and cooked in a water base to produce a pulp that is then spread over a thin surface, pressed, and dried. Cotton blue jeans, properly prepared, make excellent paper.

**Papyrus and paper.** Although the term *paper* comes from the Greek *pápuros*, which may in turn come from an Egyptian original, there was no paper as such in ancient Mesopotamia (where clay tablets were used), in Egypt (where the reed *papyrus cyperus* was used for rolls), or in Greece and Rome (where papyrus and parchment predominated). The Egyptian technique of pressing together vertical and horizontal wet strips of fibre from the core of the papyrus plant shares with modern paper-making the bonding of cellulose, but was otherwise very different. Paper as such is believed to have originated in China.

About 200 BC, sheets were made from silk waste, then in AD 105 an official of the Imperial Court named Ts'ai Lun made a new kind of material from mulberry and other fibres, pieces of old fish net, hemp waste, and rags. Later, linen and cotton rags provided the base for this material, a technology which lasted virtually unchanged everywhere until the 19c. The first Western paper-making mill was established in Spain about 1150.

**Paper and print.** Paper did not immediately replace parchment as a writing surface, but by the mid-15c and the beginning of printing, it had become the standard surface for writing. Though the first mill in England was established at Hertford at the end of the 15c, most paper came from France or the Low Countries until the late 17c. The first paper mill in North America was founded in 1690 in Philadelphia. Clean rags of linen were placed in piles to rot, then stamped and cooked; a resulting watery pulp was taken up in screen-like moulds from which the water was drained with care; the damp sheets were transferred from the moulds and repeatedly pressed between felts for drying. The sheets were *sized* (coated with animal gelatin), so as to inhibit ink from bleeding into the paper. Woven into the mould was a *watermark*, a slightly raised wire design that registered on the sheet and could be seen in the final product. These watermarks were like trademarks and are now examined by scholars for evidence of the origin of sheets of paper or of the way a particular book was manufactured. Some of the watermarks were simple (a two-letter initial, a bull's head, a bunch of grapes); others (especially by the 18c) were elaborate heraldic designs. A variation on *mould paper* was introduced in the mid-18c; *wove paper* was made with fine screens and the lines of the watermark were eliminated.

**Paper and pulp.** At the beginning of the 19c, paper-making underwent some important changes. Machinery was developed that allowed the pulp to be picked up, formed, dried, pressed, and sized all in one linked procedure that produced a continuous roll or web at the end. The web could then be cut into sheets or fed directly into a web-fed press. Watermarks, especially useful in money to inhibit forgery, and even false wire lines can be introduced on this paper by the continuous action of a dandy roll (a light, open cylinder of wire gauze that smooths the wet pulp and impresses a watermark on it). At the same time, the increasing need for materials led to experiments, one result of which was the introduction of chlorine as an acidic bleach for the pulp. Another, from the mid-19c, was the adoption of wood pulp to replace linen.

**Lignin and acid.** Although wood pulp is a good source of cellulose fibre, it contains *lignin*, an impurity which can cause paper to degenerate. Airborne industrial pollutants such as sulphur dioxide are absorbed by lignin. In addition, the fibres of wood-based paper are much shorter than those of cotton or linen. Much modern paper therefore contains the seeds of its own destruction: the unneutralized acids, the residual lignin, and the quality of the fibre cause disintegration, especially under conditions of pollution. The paper loses its resiliency, becomes brittle, and finally falls apart. Millions of books produced since the mid-19c are subject to this steady decay. Newspapers, magazines, and mass market paperbacks (most of the latter held together by adhesives) begin to fall apart virtually from the moment they are manufactured. By contrast, in former times, the enemies of paper were fire, heat (cellulose needs some residual moisture), dampness (leading to fungus growth and internal rot), and general ignorance: how many early copies of Shakespeare's plays were used to wrap fish or wipe bottoms?

**Acid-free paper.** Early kinds of paper did not suffer from the problem of lignin and acid, and it is ironic that older books are likely to have a longer life than many recent publications. However, durable, acid-free papers are available and are increasingly used for books considered worth saving (although there may be disagreement about the criteria involved in selecting such books in advance). There are also procedures for the preservation of paper and some large libraries (notably the US Library of Congress) have undertaken huge and costly programmes of restoration of 19c materials.

**Alternatives.** The storage of books and other documents on microfilm is only a partial solution. The medium is changed and ancillary information lost: early texts contain evidence about their manufacture and provenance that is important to the scholar but is not preserved on film. Storage on laser disc, the dream of many librarians and certainly promising for information retrieval, removes the reader even further from the actual form of the original work. In addition to the matter of storage, with the development of word processing and databases, electronic equivalents to paper are now widely available, such as discs of various kinds, especially the CD-ROM (compact disc: read-only memory). These take up much less room and are not subject to the risks discussed above, but are dependent on a regular supply of electricity and can become subject to interference, such as through editing or computer viruses. Despite the great attraction of such devices, paper remains the primary medium for writing and printing,

including computer printouts, and if anything the use of the 'electric word' has meant the consumption of more rather than less paper.

**Properties.** Paper is the vehicle for most writing, yet by and large only such professionals as designers, publishers, and printers pay much attention to its properties. These include: (1) *Permanence*: certain documents will have a predictably longer life than others. (2) *Toughness*: in relation to how often and in what way the document is handled. (3) *Weight*: especially in items sent by mail. (4) *Opacity*: whether show-through affects legibility. (5) *Folding capacity*: some papers, manufactured to be used flat, will crack on folding. (6) *Stiffness*: important for covers and for brochures that are to be displayed standing. (7) *Receptivity to writing materials*: pen, pencil, typewriter, and printing ink are all differently received by different surfaces and the paper should have proper and rapid absorption for the kind of ink used. (8) *Finish*: a heavily coated paper, useful for photographic images, can have a glare that makes it unsatisfactory for sustained reading of type. (9) *Sheet size*: careful estimation of final sizes, including trimming and folding, affects the sheet size to be chosen. (10) *Grain*: paper, especially made by machine, has a distinct grain; a book folded against this grain will be hard to close. (11) *Colour*: very few papers are a pure white and the shade of white influences legibility. See BOOK, CARTOON, CROWN, DEMY, DOCUMENT, FOLIO, FOOLSCAP, IMPERIAL, LEAF, -MO, PARCHMENT, PRINT, QUARTO, ROYAL, VELLUM. [MEDIA, TECHNOLOGY]. W.W.B.

**PAPERBACK.** See BOOK, PUBLISHING.

**PAPUA NEW GUINEA**, also **Papua Niugini**. A state in the south-west Pacific, occupying the eastern half of the island of New Guinea and some 600 islands, the largest of which are New Britain, New Ireland, and Bougainville. Capital: Port Moresby. Population estimated in 1988 at 3,579,000, projected for 2000 at 4,600,000. Prior to independence in 1975, the southern half (Papua) was an Australian colony and the northern part (New Guinea) was administered by Australia under a mandate from the United Nations given after the First World War, when it ceased to be a German colony. The island of New Guinea was peopled by different waves of

migrants, whose history is largely unknown. The terrain is rugged. Many villages have no road or river links with other settlements and some can be reached only by walking for up to two weeks. Travel by air is more important than by road. Port Moresby is not connected by road to any other urban area. The coastal population is thinly clustered in villages, but over one-third of the total population live in highland valleys. While settlement by Europeans has extended over a century, contact with many internal regions is fairly recent. Most of these communities were not known before 1930, when the discovery of gold encouraged further exploration. Even in the 1950s, Australian administrative patrols were still establishing contact with people in remoter areas. These conditions have fostered cultural and linguistic diversity; there are some 700-750 languages belonging to two families, Papuan and Austronesian, as well as an indigenous pidgin, Hiri Motu, and an English-based pidgin, Tok Pisin. Both serve as lingua francas and share official status with English. See ENGLISH, HIRI MOTU, MELANESIA, MELANESIAN PIDGIN ENGLISH, PIDGIN, TOK PISIN. [LANGUAGE, OCEANIA]. S.R.

**PAPUA NEW GUINEA PIDGIN.** See TOK PISIN.

**PARABLE** [13c: from Old French *parabole*, Latin *parabola*, Greek *parabolḗ* ('something cast alongside') an analogy, an extended simile]. A short narrative with an oblique style and a moral meaning, widely used by philosophers and religious teachers in antiquity. It generally uses plausible events and situations, of a kind familiar to listeners or readers, in order to present or illustrate a profound truth or teaching, and typically begins with a simile: 'The kingdom of heaven is like unto a certain King, which made a marriage for his sonne' (The Authorized Version of the Bible, 1611: Matthew 22: 2). Because of its very obliqueness, it may need an explanation afterwards, relating it part by part to aspects of the truth being imparted. The most famous parables are those of Jesus Christ recorded in the Synoptic Gospels which, through the King James version, have given English such phrases as *fall on stony ground and kill the fattened calf*; two of the best known, the Prodigal Son and the Good Samaritan, are not so named in the text but only in page headings. The parable differs from the *fable* in dealing with human beings and everyday events, and from *allegory* in having a single point of teaching and not a set of correspondences with the real world. See ALLEGORY, ANALOGY, BIBLE, BIBLICAL ENGLISH, FABLE, SIMILE. [LITERATURE]. R.C., T.MCA.

**PARADIGM** [15c: from Latin *paradigma*, from Greek *parádeigma* something set beside something else, a pattern, an example, a basis for comparison; stress: 'PA-ra-dime']. (1) In grammar, a set of all the (especially inflected) forms of a word (*write, writes, wrote, writing, written*), especially when used as a model for all other words of the same type. Paradigms serve as models for word forms in Latin and Greek (in which key words represent the patterns of numbered groups of nouns, adjectives, verbs, etc.) and to a lesser extent for such other languages as French and Spanish (principally for verbs). Their use is limited in English, because it is not a highly inflected language. See CONJUGATION, DECLENSION, DERIVATIONAL PARADIGM, SUFFIX. (2) In general usage, a model or stereotype, as in the phrase *a paradigm case*, a typical specimen of something. In such studies as the philosophy of science, comparative religion, and social science, a paradigm is an overriding viewpoint that shapes ideas and actions within a particular field or group. From time to time, a *paradigm shift* occurs, so that ideas and practices taken more or less for granted under the old paradigm are reassessed under the new. Such a shift occurred in the 16c when Copernicus claimed that the earth went round the sun, and in the 19c with Darwin's theory of natural selection. See ANALOGY, MODEL, OLD ENGLISH<sup>1</sup>, PARADIGMATIC AND SYNTAGMATIC, STEREOTYPE, WORD-FORMATION. [GRAMMAR, LANGUAGE]. T.MCA., S.G.

**PARADIGMATIC AND SYNTAGMATIC** [17c and 20c: from Greek *paradeigmatikós* serving as a pattern, and *suntagmatikós* arranged together]. Contrasting terms in (structural) linguistics. Every item of language has a *paradigmatic relationship* with every other item which can be substituted for it (such as *cat* with *dog*), and a *syntagmatic relationship* with items which occur within the same construction (for example, in *The cat sat on the mat*, *cat* with *the* and *sat* on *the mat*). The relationships are like axes, as shown in the accompanying diagram.

		<i>syntagmatic</i>		
	The cat	sat	on	the mat.
<i>paradigmatic</i>	His dog	slept	under	that table.
	Our parrot	perched	in	its cage.

In this way, it is possible to build up a picture of the role of a linguistic item within a language at any level of structure and these relations of substitution and co-occurrence are crucial to linguistic analysis. Paradigmatic contrasts at the level of sounds allow one to identify the phonemes (minimal distinctive sound units) of a language: for example, *bat, fat, mat* contrast with one another on the basis of a single sound, as do

*bat, bet, bit, and bat, bap, ban.* Stylistically, rhyme is due to the paradigmatic substitution of sounds at the beginning of syllables or words, as in: 'Tyger! Tyger! burning *bright* / In the forests of the *night*.' Syntagmatic relations involving sounds reveal the syllable and morpheme structure of the language concerned: the combinations *str, spr* as in *string, spring* are possible word beginnings in English, but *stl, sbw* are not (no \**stling, \*sbwing*).

On the lexical level, paradigmatic contrasts indicate which words are likely to belong to the same word class (part of speech): *cat, dog, parrot* in the diagram are all nouns, *sat, slept, perched* are all verbs. Syntagmatic relations between words enable one to build up a picture of co-occurrence restrictions within syntax, for example, the verbs *hit, kick* have to be followed by a noun (*Paul hit the wall*, not \**Paul hit*), but *sleep, doze* do not normally do so (*Peter slept*, not \**Peter slept the bed*). On the semantic level, paradigmatic substitutions allow items from a semantic set to be grouped together, for example *Angela came on Tuesday* (Wednesday, Thursday, etc.), while syntagmatic associations indicate compatible combinations: *rotten apple, the duck quacked*, rather than \**curdled apple, \*the duck squeaked*. Frequent collocations are regarded as clichés: *furrowed brow, grin and bear it, good old days*, and as idioms when the meaning cannot be easily worked out from the component parts, as with *get the sack, kick the bucket, live on a shoestring*. See COLLOCATION, PARADIGM, SYNTAX. [GRAMMAR, LANGUAGE]. J.M.A.

**PARADOX** [16c: from Latin *paradoxum/paradoxon*, from Greek *paradoxos* contrary to opinion or expectation]. A term in rhetoric for a situation or statement that is or seems self-contradictory and even absurd, but may contain an insight into life, such as *The child is father of the man*. Rationally, a child cannot be a father, but one can propose in this figurative way that the nature of one's early life affects later ideas and attitudes:

My heart leaps up when I behold  
A rainbow in the sky:  
So it was when my life began;  
So it is now I am a man;  
So be it when I shall grow old,  
Or let me die!  
The Child is father of the Man.  
(Wordsworth, 'My Heart Leaps Up', 1807)

A series of paradoxical statements that involve antithesis, climax, metaphor, and repetition, opens Charles Dickens's *A Tale of Two Cities* (1859):

It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness, it was the epoch of belief, it was the epoch of incredulity,

it was the season of Light, it was the season of Darkness, it was the spring of hope, it was the winter of despair, we had everything before us, we had nothing before us, we were all going direct to Heaven, we were all going direct the other way. . . .

Some writers, such as Oscar Wilde, have made an art of the paradoxical and epigrammatic: for example, through the cynical Lord Henry Wotton, Wilde observed: 'Nowadays people know the price of everything, and the value of nothing' (*The Picture of Dorian Gray*, 1891). Compare ANTITHESIS, IRONY. [STYLE]. T.MCA.

**PARAGRAPH** [16c: from French *paragraphe*, Latin *paraphrasis* and *paragrammum*, Greek *parágraphos* ('at the side of writing')]. (1) Formerly, a short, horizontal stroke below the beginning of a line in which a break of sense occurs; a passage so marked. (2) Currently, a piece of writing or print of variable length and having a variety of internal structures, arranged as a single block of text. It can contain only one sentence, but generally consists of two or more sentences presenting an argument or description. The beginning of a paragraph is usually *indented* in print, unless preceded by an interlinear space, but not always in handwriting or word processing, nor in display material. Sometimes, both indenting and extra line space are used to make each paragraph stand out strongly.

The layout of texts in European languages has changed considerably since the Middle Ages, when the paragraph was not a consistently organized unit of prose, and prose was not a highly developed form of writing. The development of printing in the 15c encouraged the use of paragraphs as blocks of lines that could be manipulated easily by the printer and helped break up the appearance of page after page of print. However, balance in the presentation of lines of print, whole pages, and the effect of the message has been a minor consideration in teaching composition and in the development of print. Nonetheless, the general view has arisen that just as a chapter (with or without a heading) is a section in the progression of an argument or a story, so within the chapter a paragraph (with or without a subheading) is part of the same orderly progression.

By and large, until the 19c, paragraphs tended to be long and to consist of periodic sentences, one period sometimes taking up a paragraph running over one or more pages. In manuals of instruction, however, especially where sections have been logically ordered (and numbered), paragraphs have tended to be shorter. The scripts of prose plays have always had marked-off sections opening with characters' names (on a par with verse drama). In novels and other works of fiction, along with the increasing use

of separated-off dialogue (similar to the style of scripts), 19c writers reduced the lengths of their paragraphs, a process that has continued in the 20c, particularly in journalism, advertisements, and publicity materials, where paragraphs are often short and built out of sentence fragments. Writers of fiction often use the same effect to present swift action, changes in thinking, and the like.

Traditionally, teachers of composition have taught students to begin a new paragraph when beginning a new topic or subtopic in an essay or other piece of prose. The aim has been to produce logically ordered sentences, the first of which is a *topic* or *key sentence* that sets the scene. This ideal continues to be widely valued, but is not the only basis, or even a principal basis, on which paragraphs are constructed by professional writers. In the process of drafting their material, they may combine and recombine paragraphs. Two influences are: relationships with material in preceding and following paragraphs, and the 'eye appeal' of different lengths of paragraph arranged in relation to the size of page and typeface used. Paragraph construction is therefore as much a matter of layout and visual balance as of content and logical relationship between preceding or subsequent paragraphs. For purposes of highlighting or emphasis, longer paragraphs may be divided up, sometimes turning a proposed topic sentence into a *topic paragraph*. Paragraphs in academic works, works of reference, religious scriptures, specialist journals, consumer magazines, quality newspapers, and tabloid newspapers all follow different rules of thumb in their construction. See CHAPTER, COMPOSITION, DIALOG(UE), INDENTING, PERIODIC SENTENCE, PROSE, PUNCTUATION, SENTENCE. [STYLE, WRITING]. T.MCA.

**PARALANGUAGE** [1950s: from the Greek prefix *para-* alongside, and *language*]. Adjective paralinguistic. A term used variously in the study of human communication to refer to aspects of vocal or bodily expression that convey meaning, but in a less structured or systematic way than properties of speech as such. The main paralinguistic phenomena are: (1) Tones of voice, such as the nasal, breathy, and creaky vocal effects used to convey everyday emotions or to express social, psychological, or occupational states: for example, the flat tones of a person suffering from depression; the gruff tones of a drill sergeant. (2) Aspects of body language, such as gestures and facial expressions. The study of paralanguage is *paralinguistics*. See BODY LANGUAGE, COMMUNICATION, GESTURE, SPEECH-READING. [LANGUAGE]. D.C.

**PARALINGUISTICS**. See PARALANGUAGE.

**PARALIPSIS**, also **paraleipsis** [16c: through Latin from Greek *paráleipsis* leaving aside, omitting]. A rhetorical device in which something is emphasized by suggesting, often as if in an aside, that it is too obvious to discuss. In the Epistle to the Hebrews, St Paul says, 'And what shall I more say?', before proceeding for nine verses to say it. Some common phrases are paraliptic: *leaving aside, not to mention, to say nothing of, without considering, without taking into account*. [STYLE]. T.MCA.

**PARALLELISM** [17c]. A rhetorical device in which a formula or structural pattern is repeated, as in the Latin sequence *veni, vidi, vici* and its English translation *I came, I saw, I conquered*. It occurs in sayings and proverbs (such as *Now you see them, now you don't* and *Out of sight, out of mind*), and in verse and poetic prose ('My mother groaned, my father wept— / Into the dangerous world I leapt' (William Blake, *Songs of Experience*). Such balancing is common in both the titles and content of literary and other works: for example, Blake's *Songs of Innocence* and *Songs of Experience*, combined in 1794 as *Songs of Innocence and of Experience*. See ANTITHESIS, REPETITION. [STYLE]. T.MCA.

**PARALOGISM** [16c: from Latin *paralogismus*, Greek *paralogismós* ('something to the side of a statement') a defective argument]. False reasoning, an argument that violates the principles of logic, and a conclusion reached by such an argument. See FALLACY. [LANGUAGE]. T.MCA.

**PARAPHRASE** [16c: through French from Latin *paraphrasis*, Greek *paráphrasis* ('speaking alongside') saying the same in other words]. Also, more technically, *paraphrasis*. (1) The (more or less) free rewording of an expression or text, as an explanation, clarification, or translation: 'Paraphrase, or translation with latitude, where the author is kept in view . . . , but his words are not so strictly followed as his sense' (John Dryden, preface to his translation of Ovid, 1680). (2) An act or result of rewording, such as a simplified version of a legal document: a plain-English paraphrase of *The contractor shall have a general lien upon all goods in his possession for all monies due to him from the customer is We have a right to hold some or all of the goods until you have paid all our charges*. (3) To make a paraphrase; to translate or define loosely: the compound *teapot* can be paraphrased or explained by the phrase *a pot for tea* but not by *a pot of tea*. See COMPOUND WORD, DEFINITION, GLOSS, TRANSLATION. [STYLE, WRITING]. T.MCA.

**PARASITIC** [17c: from Latin *parasiticus*, Greek *parasitikós*, from *parásitos* ('feeding beside') one

who eats at another's table (and pays for the food with flattery)]. (1) Relating to or characteristic of a parasite of any kind. (2) Also *excrecent* [17c: from Latin *excrecere* to grow out]. In phonetics and philology, terms referring to an 'added' sound or letter caused by the interaction or impetus of other sounds in a word: for example, the /t/ sometimes heard in *sense*, making it sound like *cents*. Many English words have sounds and letters that were once parasitic but are now considered normal, such as the *d* in *thunder* (Old English *thunor*) and the *e* in *flower* (Middle English *flour*). Such an added element is sometimes called a *parasite*. Compare EPENTHESIS. [LANGUAGE, SPEECH]. T.MCA.

**PARATAXIS** [1830s: through Latin from Greek *parátaxis* arrangement in order (of battle)]. Stress: 'pa-ra-TA-xis'. (1) Placing together phrases, clauses, and sentences, often without conjunctions, often with *and*, *but*, *so*, and with minimal or no use of subordination. A paratactic style is common in orature (oral literature) and in fast-moving prose, especially if intended for young listeners or readers:
